Another frustrated constituent summarized the problem with ironic hyperbole:

> You have to be a millionaire to be poor enough to receive a guaranteed student loan.

Third, rising unemployment and shortage of jobs reduces outside work for students. Reports from college aid officers and several newspaper articles in Boston and other papers have confirmed that many students simply cannot find work this summer to support their education in the fall.

Fourth, with growing deficits, colleges themselves have less money available for scholarships. Since 1962, the debt level for all private institutions of higher education in Massachusetts has more than tripled, to $191.8 million in 1969. Non-Federal sources have simply not been able to keep pace with rising enrollments and costs. Without increased Federal student assistance, colleges and universities will simply have to cut off aid to needy and deserving students and let them drop out of school.

In short, Mr. President, especially in this time of economic pressure, Federal student assistance is critically needed. Inflation means family budgets are more strapped than usual. It is becoming more difficult to obtain guaranteed student loans from banks and lending institutions. The current shortage of jobs is cutting students out of outside work to help finance their studies. Rising deficits and growing enrollments leave colleges with less money available for scholarships.

We have come part way down the road to meeting the needs for Federal student assistance. But we still have a long way to go. I am distressed, for example, that the conferees rejected increases in the college work-study program, and in grants to students from the most poverty-stricken families. If necessary, I would hope that Congress will be pre-

pared to add money to these two programs in a supplemental appropriation.

For under the present bill, even with the $14 million increase in direct loans, we are appropriating for the three direct Federal programs—national defense student loans, college work-study, and educational opportunity grants—only 58 percent of the amount authorized and only 72 percent of institutional requests actually approved by regional panels of the Department of Health, Education, and Welfare.

Mr. President, every citizen in the United States should have a full and fair opportunity to pursue a higher education without regard to his financial need or that of his family. But we are a long way from achieving that goal today. Meanwhile, the financial needs of our families with children in college have reached crisis proportions.

We must continue to press for further increases in student aid when subsequent appropriations bills come before the Senate. When we consider that for every $1 spent on student aid the Federal Government receives an estimated $14 return through taxes on the recipient's higher income from the college education, this is a sound and worthy investment.

Mr. President, I am disappointed that the conferees decided to drop the additional $10 million which the Senate added on the floor for new Teacher Corps programs authorized earlier this year. The conferees also dropped carrying the Teacher Corps as a separate line item in the bill. But I gather that this was done with the clear understanding that the full $30.8 million allocated for the Teacher Corps in both the House and the Senate committee reports will not be diverted to other use. The Teacher Corps continues to be an extremely effective program both for interesting qualified persons to teach in poverty-area schools and for increasing the quality of education in those schools. I expect the Department of Health, Education, and Welfare and the Office of Education to pursue this program with the vigor reflected in the congressional increase this year.

The conferees decided to drop the additional $1 million which had been added in the Senate specifically for Indian bilingual education in title VII of the Elementary and Secondary Education Act. But I think that the need for priority on these programs was fully established in the debate, and I expect and am confident that HEW and the Commissioner of Education will expand these programs as part of the expansion of title VII generally.

I am also disappointed that the conferees dropped the $4 million added on the Senate floor specifically for grants to State and local education agencies for planning and evaluation under the new authority added earlier this year in title V of the Elementary and Secondary Education Act. Unfortunately, this authority was added after the House had acted on the education appropriations, so the matter was not the subject of hearings and action on the House side. I would hope that at a later point the House will have a full opportunity to consider this critical need and determine—as the Senate already has—that this new authority should be promptly funded.

Finally, Mr. President, I would like to discuss the so-called Whitten amendments which have been retained in the conference report. For this year they have undergone a facelifting and a change which we should all clearly understand.

The amendments have been modified in such a manner that they comport with the existing requirements of title VI of the Civil Rights Act of 1964.

Both sections 209 and 210 provide that no funds may be used to force the busing of students, the closing of schools, or obligatory pupil assignment, with respect to a desegregated school district as that term is defined in title IV of the Civil Rights Act.

Under title IV, "desegregation" is defined as "the assignment of students to public schools and within such schools without regard to their race, color, religion, or national origin, but desegregation shall not mean the assignment of students to public schools in order to overcome racial imbalance."

Now, this provision of title IV—section 401(b)—has not been interpreted by the courts as compelling anything less than the disestablishment of the former dual school system. The nondiscrimination requirements of title VI have been applied in the context of Supreme Court decisions interpreting the reach of the 14th amendment, and this has held true regardless of the provisions of title IV.

Similarly, when title IV prohibits the Government from requiring the transportation of students "in order to overcome racial imbalance," the restriction does not negate the affirmative duty to desegregate when segregation has come about through the deliberate acts of responsible authorities.

The Federal courts have long subscribed to this view. In *U.S.* v. *Jefferson County Board of Education* (372 F. 2d 836 (1966), the U.S. Court of Appeals for the 7th Circuit ruled:

> It is clear . . . that Congress equated the term (racial imbalance) . . . with *de facto* segregation, that is non-racially motivated segregation in a school system based on a single neighborhood school for all children in a definable area.

In short, section 401(b) of title IV does not affect the responsibility of school districts to correct de jure segregation or discrimination under the provisions of title VI.

The new Whitten amendments cannot alter the constitutional requirements to desegregate and the regulations and guidelines which have been published to enforce those requirements. It is important to fully understand this, so that passage of sections 209 and 210 will not deceive school districts as to their legal obligations under the law.

There is altogether too much confusion and ambiguity in this difficult area.

School districts which have not yet moved to comply with the law should not seize these amendments as a way out. These amendments should not open the door to another round of resistance and court litigation. They should not complicate the task of the Departments of Justice and HEW which are responsible for enforcing the mandates of the courts. For we are not changing substantive law.

And so, in accepting these amendments, we must be clear that Congress in no way intends to pull back or reduce the effort to end unconstitutional discrimination. The amendments do not change the obligations of communities faced with a court order to desegregate. They cannot change HEW's desegregation guidelines.

Mr. President, I strongly support Senate adoption of the education appropriations conference report.

UNANIMOUS-CONSENT AGREEMENT

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that time on the conference report be limited to 1 hour, to be under the control of the able manager of the conference report, the Senator from Washington (Mr. MAGNUSON), and that the vote occur on the conference report at 2 o'clock today, with the understanding that the following Senators will be given at least these amounts of time: The Senator from New Hampshire (Mr. COTTON), 10 minutes; the Senator from Alabama (Mr. ALLEN), 10 minutes; the Senator from Mississippi (Mr. STENNIS), 15 minutes; and the Senator from Wisconsin (Mr. NELSON), 5 minutes; and as I have said, all time to be under the control of the Senator from Washington (Mr. MAGNUSON).

The PRESIDING OFFICER (Mr. CRANSTON). Is there objection to the request of the Senator from Washington (Mr. MAGNUSON)? The Chair hears none, and it is so ordered.

Mr. BYRD of West Virginia. Mr. President, I ask for the yeas and nays on the the conference report.

The yeas and nays were ordered.

Mr. HOLLAND. Mr. President, will the Senator from Washington yield me 2 minutes?

Mr. MAGNUSON. Let me say, before I yield to the Senator from Florida, that he suggests I yield him only 2 minutes. That is a very modest request because he has spent hundreds of hours on the bill and just 2 minutes is not quite sufficient to make up for all of the work the distinguished Senator from Florida has done on this education appropriations bill.

Mr. HOLLAND. I thank my distinguished chairman. I rose primarily to thank him and the distinguished minority ranking member, the Senator from New Hampshire (Mr. COTTON), for their arduous efforts throughout the consideration of this bill, the hearings, and the floor work, as well as the marking up of the bill in committee and their conference work which was the roughest of all.

I want to say just this one thing, that the distinguished Senator from Virginia (Mr. SPONG) put his finger on the one matter of legislation which I think most needs attention—the impacted school law—and while he did call attention to the difference between class A and class B students, which is one of the big points of argument, he did not mention the fact

that last year we put a third class into the bill, that is of children coming from public housing homes, which I think was a mistake; but whether a mistake or not, it calls out loudly for complete reexamination of this particular legislation by the legislative committee.

I wanted to emphasize that point in commending the distinguished Senator from Virginia (Mr. SPONG).

Mr. MAGNUSON. I appreciate that statement and, of course, we excluded the public housing entitlement mainly because of what the Senator from Florida just suggested, the reason that here we were again embarking upon something new. We have got to take a new look at this whole business of impacted aid. I like to call it a payment in lieu of taxes, because that is what it is. I think that is a good way to do these things for the local school districts that have these have these problems, but the public housing entitlement could have added as much as $289 million to the bill.

Mr. HOLLAND. Mr. President, if the Senator will yield me 1 more minute, I think the Senator and his ranking minority associate were so wise in going along with the committee. The committee as a whole thought it would be unwise to venture into that field which was put into the authorizing legislation last year.

The point of my rising was to say that this new issue adds to the necessity for a complete revision of the impacted school legislation which I think is one of the first "musts" that is ahead for Congress.

I thank the Senator from Washington and again commend him.

Mr. MAGNUSON. I thank the Senator from Florida.

Mr. President, the distinguished Senator from Missouri (Mr. EAGLETON) is away on a personal matter. In fact, he is attending his father's funeral. He asked me to have his statement on the conference report printed in the RECORD, as he made such a strong plea to the Senate on this year's bill; and I ask unanimous consent to do so.

There being no objection, the statement by Senator EAGLETON was ordered to be printed in the RECORD, as follows:

Mr. EAGLETON. Mr. President, I wish to thank the senior Senator from Washington, as well as the senior Senator from New Hampshire and all members of the Education Appropriations Subcommittee for the fine job they have done on the fiscal 1971 education appropriations bill. Certainly, most members of this body are in full agreement that the education needs of this country should have top priority, and it is a pleasure to support a measure which in most respects recognizes the problems faced by our schools and provides the type of assistance that is desperately needed.

One of the areas, however, for which I feel we have not provided adequate funds is higher education. Despite the praiseworthy efforts of some of my colleagues, who were successful in having amendments approved on the floor, the conference did not go along with this body's recommendations that increased funds be put in certain higher education programs.

This, I feel, is extremely unfortunate. If our country is to move forward, it must continue to rely in large measure on the output of our institutions of higher learning. To cut funds in this area at a time when the number of students in our colleges is at a peak is, in my opinion, short-sighted.

Some of the specific programs which I feel have not been given the funds they deserve are Titles II and VI of the Higher Education Act (which provide funds for college libraries and for instructional materials and equipment) and the land grant colleges appropriations.

Taking first the programs under the Higher Education Act, the Senate appropriated $20,750,000 for Title II (college libraries), which was the same amount as originally approved in fiscal 1970, although the 1970 appropriation was reduced to $9,816,000 following the President's veto of the first appropriation bill. The conference committee has recommended a reduction of the Senate appropriation to $15,325,000. For Title VI (instructional materials), the Senate approved $14.5 million, which was the same amount appropriated from 1966–1969 (no funds were appropriated in 1975). This figure was slashed to only $7 million in conference.

I think it is important to stress the fact that these programs are not designed to cover, in any substantial way, the financial needs of our colleges and universities. They are basically seed programs; they provide the yeast that it is hoped will result in an improved end product. Thus they are not divisible.

The administration costs alone often make it uneconomical for schools to fill out the forms required to apply for these funds, and this will be especially true at the new low levels. Simply because these programs are small it does not follow that they should be regarded as insignificant. They have been instrumental over the years in upgrading the quality of instruction in our colleges, and they are even more important now when most of our higher education institutions are making desperate efforts to maintain quality levels.

Both Title II and Title VI have been capably administered at State and Federal levels, and each dollar allocated has served to give the recipient institution the little extra amount needed in these vital areas of instruction.

I urge that we do not forget these important programs over the coming weeks. There is no better way we can spend this nation's money than to give our children a better education. This means not only providing buildings and teachers, but also making available the innovative technology required to maintain the quality of instruction at the level we demand.

I want to comment also on the appropriations for the nation's land grant colleges. This is another item which is small in dollars but which has great significance in terms of America's educational resources.

The President saw fit to recommend that no funds be appropriated for this program. Nevertheless, the House approved $8 million and the Senate voted $12.1 million, the Senate figure being at the same level as fiscal 1970 appropriations. The conference committee has recommended a compromise figure of $10,080,000.

I, for one, want the record to show that it is my view that this reduction below last year's funding level does not mark the beginning of a phase-out of appropriations for this program, but rather it simply marks a recognition of constraints imposed by this year's difficult fiscal situation.

We should keep in mind that the land grant colleges were the nation's first real "peoples' colleges"—and they continue to fill that role. Both the Administration and the Congress have committed themselves to the principle that higher education opportunities must be expanded, particularly for those who are economically disadvantaged. If we are to make these real opportunities and not merely empty promises, our land grant universities must necessarily play a major role. Federal financial support, such as that offered through this appropriation item, is necessary to enable the land grant colleges to educate these additional students while at the same time keeping fees sufficiently low so that they do not impose a major obstacle to the poor but otherwise qualified student.

It should be pointed out that in these programs involving small amounts of money the purpose of federal support is not economic but educational. The Federal Government provides incentives and leadership—fostering the innovation, the new curriculums, and the educational change and reform necessary to provide quality instruction for an ever-increasing number of students. The demands of our society, both culturally and economically, oblige us to improve and upgrade the educational process at all levels. This is why we must be attentive to these smaller, less costly programs and realize that they are important to education. Only by using the power and prestige of the federal government can we hope to foster the educational progress which is the precondition to all progress in a civilized society.

Mr. NELSON. Mr. President, I should like to make a brief point here, and then ask a question of the manager of the bill who has been a most influential Member of the Senate in terms of supporting the National Teacher Corps, as well as the Senator from New Hampshire (Mr. COTTON). They have both endorsed and supported an increase of $10 million in the request of the administration to add to the Student Teacher Corps, the Indian reservation program, sponsored by the Senator from Massachusetts (Mr. KENNEDY), and the corrections programs sponsored by the Senator from New York (Mr. GOODELL).

My understanding is that the conference found it necessary to recede and eliminate the $10 million added by the Senate, and to return to the $30,800,000 requested by the administration, and that it was necessary to remove the National Teacher Corps as a line item within the budget, the line item having been put in by the Senator from Washington (Mr. MAGNUSON).

I pose this question for legislative clarification to the Senator from Washington: The Senate approved $40.8 million for the Teacher Corps, and the programs which I have mentioned; and the House voted $30.8 million for the Teacher Corps which was the amount requested by the administration.

I just wanted to ask the manager of the bill, for purposes of being clear about the legislative intent, both as approved and appropriated as high or higher than the administration requested for the Teacher Corps, the fact that in conference we eliminated the earmarking does not evidence an intent not to spend the $30.8 million approved by both houses, does it?

Mr. MAGNUSON. No; it was my understanding—the Senator for New Hampshire is not here at this moment, but I am sure it is his, too—that after lengthy discussion in conference, we had an agreement that it was mandatory to spend it for the Teacher Corps, or at least that is the intent of conference and it is the intent of Congress.

I had mixed views about whether it

should be a line item or put in the education professions development line item, which is a very large item in the bill. One side pointed out that last year, we had $21,737,000, and that the budget estimate came up to $30,800,000, and when it was within the amount of the new Teacher Corps it fared better without being a line item than it did last year. I would prefer to keep the line item. I would personally like to do so. But the House was insistent that it be put in the education professions development, with the understanding that the $30,800,000 be used for this specific purpose.

Mr. NELSON. I thank the Senator.

Mr. MAGNUSON. If there is any indication they are not going to do this, that would be violating the intent of both House and Senate conferees.

Mr. NELSON. I thank the Senator for that clarification.

Mr. MAGNUSON. Now, Mr. President, I yield the floor to the Senator from New Hampshire, unless there are some further questions.

I might say one other thing, as I pointed out in my introductory remarks, we did have the so-called Whitten and Jonas amendments in the bill, in the House bill, and it was cut out by the Senate. We finally agreed to the so-called Whitten amendments and removed the Jonas amendment.

There were four of us, including the chairman, who signed the conference report with the exception of the so-called Whitten amendments, merely to be on record.

We had a good, long discussion about these amendments. That is the usual thing every year. Finally the House members in all sincerity said that they did not think they could go back to the House and sustain a deletion of the Whitten amendments.

So the Senator from New Hampshire and I felt that we wanted to get a bill out as soon as possible since this involves the whole educational process of the country. The House was fairly amenable to compromising with us and having a real compromise on the money items. We had to accept the so-called Whitten amendments.

The House conferees in the beginning said this was one of the important things, and that they did not feel they could go back to the House without the so-called Whitten amendments.

There were four members of the committee—the Senator from Washington, the Senator from New Jersey, the Senator from Hawaii, and the Senator from Delaware—that make exceptions to the Whitten amendments.

Mr. COTTON. Mr. President, I would like to take 1 minute of my 10 minutes to express my appreciation and admiration for the effective and able leadership that the distinguished chairman of the subcommittee, the Senator from Washington, characteristically displayed this year, as he has in the past. Without his guidance and without his ability and skill in negotiating with the House conferees, we would not have been able to achieve as much as we did.

The Senator from Washington is perfectly correct when he says that not one breath of partisanship had been involved in any of the deliberations either in the subcommittee, the full committee, or the conference committee.

If partisanship were to have been displayed, it could have well been displayed by the majority members in allowing the bill to stay large enough so that it might invite a Presidential veto which, in an election year, might be good politics from the standpoint of some. That was not done. It was characteristic of the Senator from Washington that we went to conference to get the best results we could and to get as much money for education as we could and, at the same time, try to avoid going through the donnybrook we went through last year after a Presidential veto and trying to reform our lines and produce a new bill.

As the Senator from Washington has indicated very clearly, we went into the conference with a Senate bill that was $966 million—practically $1 billion—over the budget. That amount included $150 million that the President himself had asked for for emergency school assistance. We came out with that amount reduced by almost $363 million—$453 million over the budget figure.

Mr. President, I hope and believe that the President will not veto this bill. I am informed by staff members of another subcommittee that another conference report that is likely to come to the Senate in a very short time will run $500 million to $600 million over the budget. That bill is not for education.

Considering that this bill is pinpointed for education in this Nation, I am hopeful that the President will go along with us. We exercised our duties and he will exercise his. I think our duty is to adopt the conference report.

Mr. President, if anything should happen to the bill, the first thing we would have to do would be to put back into any bill that came through advance funding in the amount of $1,339,000,000, to take care of the school districts that have to make their plans, hire teachers, and do their work before the opening of the school year.

The HEW appropriation was split. Education was made a separate bill so that we could get it through and get the assurance of money for the school districts soon enough so that they could make their plans.

A good deal has been said about the impacted area funds. Every year, of course, that has been a bone of contention. That is probably one of the chief objections of the administration to the bill.

Mr. President, since the impacted area funds started in 1951 until this year, the amounts have been increased every year. In 1951, it was $29 million. In the pending bill it is $536 million.

The total that we have paid in impacted area funds over the years since we started is $5,220,237,000.

Mr. President, this situation must be dealt with by the legislative committee because I think that every member of our committee and every Member of the Senate knows that these moneys are appropriated and administered under an outmoded and distorted formula.

One reason, however—and I think the main reason—that our school districts and school officials are insisting and urging and begging for every cent they can get of impacted area funds is that these funds are the only funds they can spend for their own individual needs in their localities and in their districts.

This is something that has troubled me ever since I have served on the subcommittee, and I have been on the subcommittee for many years. The Office of Education and the Federal authorities in the HEW insist on having their fingers on every single cent that is spent.

Striving and struggling as has the Senator from Washington, I, and others have to prevent duplications and to see that the money necessary for the disadvantaged children in this Nation, both city and rural, shall go to them and not be spent for overhead and administration. Trying to be fair has been an extremely difficult matter.

I hope that the Department of Health, Education, and Welfare, and more particularly, the Office of Education, will get themselves straightened out so that we have a more incisive and clearcut policy. I also hope that the legislative committees in the Senate and the House will review and give us a modernized, streamlined, equitable method of aiding the school districts of the Nation. The Senator from Washington was correct in his statement that it is necessary that this be done so that we will not have this constant difficulty over impacted area funds.

Mr. President, I ask unanimous consent to have printed in the RECORD appropriations for impacted areas running from 1951, the year of the inception of the program, to the present bill.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Public Law 874 appropriations—School assistance in federally affected areas

1951	$29,080,788
1952	51,570,000
1953	60,500,000
1954	72,350,000
1955	75,000,000
1956	90,000,000
1957	113,050,000
1958	127,000,000
1959	157,362,000
1960	186,300,000
1961	217,300,000
1962	247,000,000
1963	282,322,000
1964	320,670,000
1965	332,000,000
1966	388,000,000
1967	416,200,000
1968	507,165,000
1969	505,900,000
1970	505,400,000
1971 [1]	536,068,000
Total	5,220,237,000

[1] Conference agreement.

Mr. COTTON. Mr. President, as the bill left the Senate we were nearly $1 billion over the budget. We are now only $453,321,000 over the budget. We think, or at least the Senator from New Hampshire thinks and I think other members of the subcommittee concur, that this is all we could hope to get without running the risk of going through another Presidential veto. I cannot speak for the President. I have no intimation of what he may do. I simply think and believe that

after all due consideration he will not choose the educational funds to veto when these other appropriations for much less important purposes than education are coming on the heels of the measure.

Again I commend the distinguished Senator from Washington and members of the subcommittee. We have listened to much testimony and we have gone through to the end of the road, or what we hope is the end of the road.

Mr. President, I hope the Senate will adopt the conference report.

Mr. JAVITS. Mr. President, will the Senator yield to me for 3 minutes?

Mr. MAGNUSON. I yield.

Mr. JAVITS. Mr. President, I shall address myself to amendment 38, which was reported in disagreement and which relates to emergency school assistance, in which we carried $150 million here. As I understand it now, that amount was cut by 50 percent in conference, or to $75 million; and the other body has now concurred in that amendment so that it remains but for us to concur and the $75 million will be appropriated. Is that correct?

Mr. MAGNUSON. The Senator is correct.

Mr. JAVITS. Is it correct the limitations with respect to utilization of these funds specified in the Senate amendment remain as part of the bill, now that the conference report has been completed?

Mr. MAGNUSON. Those provisions do remain in the bill.

Mr. JAVITS. The only thing changed was the amount of money?

Mr. MAGNUSON. The amount of money.

Mr. JAVITS. I would like to state to the manager of the bill that we thought the $150 million could be extremely well used in respect of the desegregation effort. We were deeply concerned that the limitations should remain in the bill, as they are such as to prevent a defeat of the very effort which the $75 million or $150 million originally was designed to promote, to wit, desegregation. Those who would attempt to avoid the effect of desegregation by unlawfully utilizing public property by transferring it to private segregated schools, are discouraged from doing so by the first limitation. The other limitations prevent the use of Federal funds to supplant available non-Federal funding and assure that the financial assistance provided is available in all sections of the country where similar problems have created similar needs.

I consider the precedent of the retention of the limitations in the amendment of such overriding importance that I am even willing to accept the disappointment of the 50-percent cut provided that the limitations are included.

I would be the first to affirm, because I have been a member of the Committee on Appropriations and served with the Senator from Washington (Mr. MAGNUSON) on conference committees, the tremendous effort which I know it took to get even the $75 million. The chairman did extremely well under the circumstances.

But, Mr. President, the real danger we face, aside from a lagging desegregation policy anywhere in the country—and I emphasize that because it needs to be emphasized—is that we are seeking to bring about a better educational system through exercising the spectre of segregation wherever it may be present.

One of the fine points brought out in debate was the fact that so-called de facto segregation and racial imbalance are exactly the same thing. I hope very much, as this educational process goes on, people will understand that so-called racial imbalance is just as capable of depriving children of a sufficient education as so-called de jure segregation.

The only question is, Can we reach racial imbalance, and if we can, what can we do about it intelligently?

We all agree we would prefer not to bus our children over long distances. But I deeply believe, if you want to give children the best in education, they are entitled to an education which is integrated. While we may not prefer busing, we know often there is no other way—just as we discovered with the little red school house—to provide a decent education without the use of busing.

So I think it should be noted very specifically that a real achievement is incorporated in this conference report in these terms. I am the first to affirm that I hope very much this legislation will be used with intelligence to deal with situations in the North, and West, as well as in the South. But there are two caveats: First, that should not divert our attention from areas where there is unlawful segregation which has already been identified by the courts and HEW; this appropriation will not substitute for fair law enforcement in many areas of the South; and second, we should not be scared away by the catch words of "neighborhood schools" and "forced busing" from giving the children, who cannot represent themselves and for whom we are speaking, the very optimum we humanly can in education.

I am a member of the Select Committee on Equal Educational Opportunity which the Senator from Minnesota (Mr. MONDALE) heads and a member of the Education Subcommittee, chaired by the Senator from Rhode Island (Mr. PELL). We will be coming in with a substantial bill. The administration has asked for $1.5 billion. This is a beginning.

I say to the administration that the easiest way to kill a program which has much promise around here, is to ruin it when you start, or waste money in respect to it, or engage in experiments which are footless, just because you do not know what to do with the money.

Nobody is asking the administration to spend money. If they do not want to spend it, that is all right, but if they do, they should bear in mind they have to spend it intelligently and effectively. Everything they do about the expenditure of this $75 million will have a direct and decisive effect on our chances for getting the whole program enacted into law. I think this is critically important, and I hope the administration will take it very much to heart.

I note with great regret that the so-called Whitten amendments, which also relate to desegregation problems in the schools, are carried over in the conference report. We all knew, and we knew it when we debated the question, that they are of no legal effect, unlike the so-called Jonas amendment, which fortunately is left out of the bill; but the Whitten amendments are still an albatross around the neck of this measure.

I know the other body insisted on them because they did go back in disagreement. To the great credit of a number of Senate conferees, they signed the conference report—and that includes the distinguished chairman, the Senator from Washington (Mr. MAGNUSON)—with the exception of amendment No. 39, which related to the so-called Whitten amendments. This effort to act as King Canute to stem the tide of our doing our utmost to remove the color factor from the education of children of the United States is doomed to failure. It is vestigial, it is archaic, it is bound to go. The tenacity with which it hangs on in amendments like these is really appalling in this country. Yet the very same people who advocate this kind of amendment are the people who talk about neighborhood schools and being against busing, when the worst expressions of segregation came under the heading of busing, and black children were bused 20, 30, and 40 miles a day, right past the doors of white schools which were their neighborhood schools, in the name of segregation.

I sympathize with the Senator from Washington (Mr. MAGNUSON). I know how he feels. We live in a working world. There is a heavy responsibility borne by the other body for its persistence including this kind of amendment. It is amazing to me to see it, since it does not, in my view, represent the prevailing view in the country. We can only hope to continue the fight and to urge our brethren in the other body to be more decisive and vigorous in their opposition to such amendments. It is unfortunate that we are at the point of having or not having a massive bill for education which is absolutely essential to the school districts of our country, at the price accepting an amendment like this, which is not going to turn the world over, I agree——

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. JAVITS. But which is nettling and disagreeable, considering the state of the times, and the laws enacted by Congress and the decisions of the courts. It is depressing and sad and distressing. I sympathize, however, with the manager of the bill and the ranking Republican Member, the Senator from New Hampshire (Mr. COTTON), who has certainly expressed his feelings on many occasions. So I say that while these amendments are most regrettable, I shall vote for the conference report.

Mr. MAGNUSON. Mr. President, I yield to the Senator from Alabama (Mr. ALLEN).

The PRESIDING OFFICER. How much time does the Senator yield?

Mr. ALLEN. May I have 10 minutes?

Mr. MAGNUSON. Very well.

Mr. ALLEN. Mr. President, I wish to commend the distinguished Senator from Washington and the other conferees on this bill for the splendid work which they did in conference. I appreciate his spirit of compromise, the spirit with which he came back with the conference report, which does embody what he has called the Whitten amendments.

I ask unanimous consent that sections 209 and 210 of the bill be inserted in the RECORD at this point.

There being no objection, the sections were ordered to be printed in the RECORD, as follows:

SEC. 209. No part of the funds contained in this Act may be used—

To force any school or school district which is desegregated as that term is defined in title IV of the Civil Rights Act of 1964, Public Law 88-352, to take any action to force the busing of students;

To force on account of race, creed, or color the abolishment of any school so desegregated; or

To force the transfer or assignment of any student attending any elementary or secondary school so desegregated to or from a particular school over the protest of his or her parents or parent.

SEC. 210. No part of the funds contained in this Act shall be used—

To force any school or school district which is desegregated as that term is defined in title IV of the Civil Rights Act of 1964, Public Law 88-352, to take any action to force the busing of students;

To require the abolishment of any school so desegregated; or

To force on account of race, creed, or color the transfer of students to or from a particular school so desegregated as a condition precedent to obtaining Federal funds otherwise available to any State, school district or school.

Mr. ALLEN. Mr. President, I am glad that for the first time since the Congress has been considering the Whitten amendments—and that consideration goes back for several Congresses—this is the first time, I believe, that the Whitten amendments in their original form as presented to the House, as approved by the House, have ended up in that same original form as presented to the Senate now, in the conference report under consideration.

The two amendments taken jointly make provision for four prohibitions. They provide that no portion of the funds appropriated by this education bill can be used to force any school or school district to take any action to force the busing of students; or to force, on account of race, creed, or color, the abolishment of any school so desegregated; or to force the transfer or assignment of any student attending any elementary or secondary school so desegregated to or from a particular school over the protest of his or her parents or parent; or, to force on account of race, creed or color the transfer of students to or from a particular school so desegregated as a condition precedent to obtaining Federal funds otherwise available to any State, school district or school.

There is a very definite field of operation for these amendments, because we see massive busing ordered by HEW and ordered by district courts. We see school buildings abandoned, schools closed, all over the South. In my own State of Alabama the rulings of the Federal courts and the edicts of the Department of Health, Education, and Welfare have caused our State to close school buildings valued at more than $100 million.

So we would like the protection of the Whitten amendments, and we believe these amendments will be effective if they are implemented by action by HEW, if HEW will be bound by the provisions of these amendments.

Soon after coming to the Senate I wrote Mr. Finch, the Secretary of the Department of Health, Education, and Welfare, calling attention to the massive busing that was being required by HEW and pointing out that that was in opposition to and in direct contravention of the provisions of the Whitten amendments then in force and effect.

There were three aspects of the Whitten amendments at that time: that the funds could not be used to require busing and could not be used to require the closing of a school or could not be used to force a child to go to any school other than one approved by his or her parent or parents. But as finally enacted it had the clause that these things could not be done in order to overcome racial imbalance.

So the Secretary informed me that these provisions gave protection to districts where they had de facto segregation, and provided that the districts were protected from this action, or from the requirement of these actions, whereas segregation in the South, which they called de jure segregation, was not protected.

So they could require these things in Southern school districts. I was very much interested in the remarks of the distinguished Senator from New York, in which he said that these are onerous provisions, the provisions of the Whitten amendments, and that they hang like an albatross around this bill.

He could say that because, his school districts in New York are protected under existing law from the very things that we want protection from under the terms of the pending conference report embodying the Whitten amendments.

Yes, this is an anomalous situation, Mr. President, that in the South, desegregation is rapidly taking place, whereas in the North—and I speak with particular reference to the great State of New York, because I have the report of the regents of the University of the State of New York pointing this out—segregation is on the increase. It is increasing in the North, whereas in the South it is on a rapid decline. All we are asking is the same type of protection that the law gives to the school districts that have de facto segregation.

Mr. President, I do not see how, in fairness, we can have a Federal school policy which demands immediate desegregation in the South, and at the same time outside the South encourages and fosters segregation. But that is the exact situation that we have under existing law.

Possibly we will get some relief if the conference report embodying the Whitten amendments is accepted. I favor the adoption of the conference report, and I ask unanimous consent to have printed in the RECORD at this point the remarks that I made on June 24 in the Senate, and the colloquy in connection with those remarks, appearing in the RECORD at pages 21224–21227.

There being no objection, the remarks and the colloquey were ordered to be printed in the RECORD, as follows:

Mr. ALLEN. Mr. President, earlier this evening, the junior Senator from Alabama discussed at considerable length the Scott amendment which was agreed to by the Senate by roughly a 2-to-1 vote. It struck out section 211 of the bill.

Now the distinguished Senator from Maryland seeks to strike out sections 208 and 209 which, as the distinguished Senator from Maryland referred to the sections, are the 1970 version of the Whitten amendment.

I assume by that that the distinguished Senator from Maryland is calling attention to the fact that for a number of years, for years before the junior Senator from Alabama came to the U.S. Senate——

Mr. MATHIAS. Mr. President, would the Senator yield?

Mr. ALLEN. I yield.

Mr. MATHIAS. Mr. President, perhaps they would be more accurately referred to as the retreaded 1970 version. It is the second time that we dealt with them this year.

Mr. ALLEN. Mr. President, I thank the Senator for his revision of his original remarks which the junior Senator from Alabama is seeking to quote.

Starting apparently with the Civil Rights Act of 1964, at least that far back the word "desegregation" was being defined. And it was expressly provided that desegregation should not mean the transfer of a student from one school to another in order to overcome racial imbalance.

So, then, as far back as 1964 at least, the thrust of the civil rights legislation and of a majority of the Senators and Representatives in Congress, was to protect de facto segregation because, as the distinguished Senator from Maryland clearly understands, the words "racial imbalance" are used interchangeably for de facto segregation.

All through the legislative history of the Whitten amendments and the civil rights provisions, an attempt has been made to protect de facto segregation, which is segregation as it exists outside of the Southern States.

The Whitten amendment, as it appears for the first time, I believe, in the 1968 HEW appropriation bill—possibly at a period before that; it may have appeared in 1966—but at any rate, in the 1968 appropriations bill the Whitten amendment, as it passed the House, provided that no portion of the funds appropriated by the HEW appropriations should be used for the purpose of forcing the busing of students or forcing the closing of schools or forcing any child to attend a school other than the school chosen for him by his parents.

As the junior Senator from Alabama understands, in the legislative process the words were added that these things could not be done in order to overcome racial imbalance, which deprived the segregated schools, which are said to exist in the South, of the protection of these prohibitions. But at the same time it gave to those areas which had so-called de facto segregation the protection of these prohibitions against busing, against the closing of schools, and against requiring any child to attend a school other than the school of the choice of his parents.

The Whitten amendment started out one way. And when it came to the Senate, somewhere in the legislative process, either in the

Senate or in the conference committee, it was so diluted, so watered down, and so changed as to deprive the southern school systems of any of the protections provided by the amendment. But at the same time it gave that protection to the schools outside the South where they had so-called de facto segregation.

Instead of doing what the amendment sought to do, they did just the opposite and afforded protection to de facto segregation and deprived those school districts that had de jure segregation of any protection whatsoever.

How ironic and hypocritical can we act or can we be?

Then when the Whitten amendments came over from the House last year and were approved by the Senate committee and came to the floor of the Senate, as the junior Senator from Alabama recalls, the distinguished junior Senator from Maryland (Mr. MATHIAS) added the interesting phrase that became something of a hallmark for this type of legislation: "except as required by the Constitution," which gave the HEW the supposed right to say that the Constitution required the protection of de facto segregation and that it provided for the stamping out of de jure segregation.

There again the Whitten amendments were changed in the Senate to provide something entirely different from what they provided when they started out in the House, when they passed the House and when they cleared the Senate committee.

This time they go one step further and say, "We are not even going to have any language of that sort in here. We are going to eliminate every single vestige of language of this sort."

The present amendment is to strike both of these sections, 209 and 210.

All that these sections do is to seek to give to the southern school districts the protection that is already afforded to districts outside of the South that already have this protection.

All that the Whitten amendment seeks to do is to give the southern school districts some little piecemeal start toward achieving some type of equal protection of the laws, equal application of the laws, and equal enforcement of the laws.

Mr. President, it is hard for the junior Senator from Alabama to accept a Federal school policy that demands immediate desegregation of the public school systems in the South and at the same time, by every single piece of legislation enacted by Congress that the junior Senator from Alabama has been able to located dealing with the matter of desegregation, de facto segregation has been protected, it has been fostered, and it has been preserved. Now, as we have immediate desegregation in the public school systems of the South what is happening in States outside the South? Is segregation being eliminated there? What are these Senators and these Representatives who twist the language of the Whitten amendment around so that it means exactly the opposite of what it started out to provide, doing to eliminate segregation in their areas?

Mr. President, I have excerpts before me from a study made by the regents of the University of the State of New York, the first one being dated January, 1968, entitled "Integration and the Schools." I would like to read an excerpt from that study on page 9:

"PROBLEM GROWS

"Despite the determination and significant accomplishments of many in education, the growth of the problem has outstripped the efforts to deal with it:

"Racial imbalance *within* school districts is increasing in both suburban and urban communities."

This is segregation in the State of New York:

"Racial census reports show that between 1961 and 1966, in the 41 school districts with the highest percentage of Negro pupils (exclusive of New York City).

"* * * the number of elementary schools with more than 50 percent Negro pupils increased from 60 to 72; the number with more than 90 percent Negro pupils increased from 25 to 33.

"Racial isolation *among* school districts is also increasing. In this same period, the percentage of Negro pupils in one suburban district rose to 82 and in another, to 71. In three other districts, the percentage surpassed 50."

Then, in December of 1969, working on this problem, trying to do something about it supposedly, there was a review of the revised studies taken some 2 years before, a restatement of the policy, in which it is stated by the regents of the University of the State of New York:

"The efforts of the State of New York to eliminate segregation and to speed integration must be increased.

"* * * * * *

"Racial and social class legislation in the public schools has increased substantially during the past two years despite efforts to eliminate it."

So, Mr. President, there in this great State of New York we have segregation increasing, whereas in the southern school districts the administration boasts that they are going to require the desegregation of every school system in the South—not in the North; every school system in the South—by September of this year.

That is going to wreck the public school system of the State of Alabama and in most of the South.

It is not only the white citizens of our State that disapprove of this policy of closing the schools, of busing students, of refusing to allow a child to go to the school of his choice; the black citizens, the black students also object to this in the most decisive and in the strongest fashion that they can.

Mr. President, it is a matter of record that it is the black students of our State whose school buildings in the main are being closed by order of HEW, and they object to that. One of the best school buildings in my hometown of Gadsden, Ala., is the black high school with about 1,000 students. That school was ordered closed to the dismay of the pupils, the black pupils, the faculty, the families and the friends of those students. Throughout the State it is the black students that are bearing much of the brunt of this policy of forced desegregation now in the southern school districts. They do not like being bused into the white high schools in order to desegregate the white schools. They do not like that. This is not only a complaint of white citizens of the State of Alabama and the white citizens of the South. But is is destroying the public school system in my State and in other Southern States. Bond issues are being defeated; proposed taxes which are being submitted to the people are being defeated in tax referendums; taxes already imposed, coming up for renewal, are being defeated; and public support is being withdrawn from the public school system in our State.

What we are interested in doing is not in having sociological experiments with our children, white and black. We want to see every schoolchild in our section, every schoolchild in the Nation given the advantage of having a quality education. So we think it is unfair to have a Federal school policy that requires this immediate desegregation in the South and that fosters, encourages, and promotes segregation in the North that is every bit as pronounced and more so in some instances than segregation that exists in the South. All we are asking is equal protection of the laws and we believe that the Whitten amendment, not diluted, not changed in meaning, but passed as it passed the House, will give us some small measure of equality of enforcement of the law and equality of treatment under the law.

Mr. President, I have been interested in the fact that this bill has been under consideration now for parts of 2 days. It is a bill that appropriates some $4.5 billion for the cause of education.

Many Senators have amendments they want to offer, I am told. I have been told that the distinguished Senator from New York (Mr. JAVITS) has an amendment he wants to offer having to do with the appropriation of $150 million to aid in easing the shock in southern school districts of the demand for immediate desegregation.

That amendment has not been offered. There are a number of other amendments on Senators' desks.

Why was it so important to rush in here? The distinguished Republican leader, the able and distinguished senior Senator from Pennsylvania, rushes in with an amendment, just as soon as the bill is brought up, to strike section 211, the Jonas amendment. They do not consider any of the advisability of this $4.5 billion appropriation. They do not consider the merit of that.

Is it wise to appropriate $4.5 billion? Is it properly allocated? Do the proper services get the correct amounts? Are the proper priorities being maintained? Have we spread out the $4.5 billion properly? Should not some adjustment be made in this amount? Does one agency get more money than perhaps it should?

It is easy to make reference to this tremendous sum of $150,000,000 when $4.5 billion is involved. Is that what is considered by the Senate? Is that why Senators rush in with amendments, reallocating the $4.5 billion?

No; it is not. The two items given priority are not those amendments. There seems to be a general feeling of consent in this matter. No Senator rushed in. I did not see three or four Senators on their feet with amendments asking for recognition. The Senator from Pennsylvania was recognized. He did his work. He put his amendment in to knock out the Jonas amendment.

Now the distinguished junior Senator from Maryland has no trouble getting recognition, because no other Senator has an amendment. Let us get this possible relief from the southern school systems knocked out before we do anything else—that seems to be the opinion. That seems to be thought to be most important—the knocking out of those three amendments, the two Whitten amendments and the Jonas amendment. They have top priority. Let us see that no protection, let us see that no guaranty, let us see that no equality, let us see that no equal enforcement of the law, is made available to southern school districts. Let us place as the top priority the knocking out of those three items. But at the same time let us make sure that these sections are not turned against de facto segregation as it exists in the North. That is the attitude of many Senators.

Is anything ever going to be done about de facto segregation? Are we always going to say that where a black child is required to go to an all black school, he is being denied a good education in the South, that he is being denied equal protection of the law, but prevent that statement from being made about a black child in the North in a segregated school? Do you suppose that black child in the North, with a protected de facto segregation staring him in the face, says to himself, "Well, the black students of the South are getting to go to White schools down there because they have de jure segregation, but that is all right with me. I like this black school that I go to in the North because this is de facto segregation, and that is all right"? As long as segregation is

de facto, that is fine, it does not have to be broken up; but if it is de jure, if it is that type which exists in the South, it has to be broken up.

Well, if segregation is unlawful in the South, it should also be unlawful in the North.

Mr. President, early in this session the Senate, in an all too rare display of statesmanship, voted for the Stennis amendment. A total of 56 votes were cast for it, and 30-odd cast against it

That amendment, of course, provided for uniformity of enforcement of Federal guidelines in implementing Federal policy regarding desegregation of the public schools.

I do not know what happened to that amendment or why the Senate apparently changed its mind when the conference committee brought out its version of the amendment and did just the opposite of providing for uniformity. It provided for two uniformities—the uniformity of application of desegregation policies as regards de jure segregation, and uniformity of desegregation policies as regards de facto segregation.

Certain Members of the Senate were apparently aghast at what they had done. They had voted for uniformity in the application of a Federal policy regarding desegregation of public schools. So when they got the opportunity to go back to a dual policy—one policy for the North, one policy for the South—they were quick to jump at it; and that is what happened.

But the Stennis amendment had served its purpose. It had pointed out to the public that segregation exists in the North, in many cases to a far greater degree than it exists in the South; and that while segregation is ending in the South, it is increasing in the North.

Many people throughout the country did not realize that that was the case. Of course, at the bar of public opinion, Mr. President, the Stennis amendment won a great victory for the cause of right and justice, because of its insistence on giving to each citizen of our country equal protection and equal application of our laws.

The effect of shining the light of public notice on this condition will be of great influence for many years to come, and I want again to commend the able and distinguished Senator from Mississippi (Mr. STENNIS) for his untiring efforts in connection with the Stennis amendment and in connection with the Whitten amendments and the Jonas amendment.

Mr. President, as we seek to speak for the public schools in our area, and as we seek to speak for the schoolchildren in our area and the people of our area, we wonder where our help is to come from, in seeking to solve this problem.

If these 2 amendments are left in—and I will say frankly that I do not expect them to be left in, and I am not going to seek to prevent this amendment from coming to a vote; I certainly am not trying to extend any discussion unduly, but the feeling of the people of Alabama and the people of the South needs to be expressed in this matter, and it is for that reason that those of us who are interested in this amendment are addressing our attention to it—where is our help to come from?

We passed the Stennis amendment. If we back up on it, and go back to the old double standard, HEW offers no encouragement. They say, "Yes, we have double standards; we protect de facto segregation in the North, and we seek to stamp out de jure segregation in the South." So there is no hope there.

What about the Republican leadership here in the Senate? Is there any hope there? Well, no; no hope there. The Republican leader (Mr. SCOTT) killed the Jonas amendment. If he were here now, he would vote against the Whitten amendment also, I am sure.

Mr. ERVIN. Mr. President, will the distinguished Senator from Alabama yield to the Senator from North Carolina for a question?

Mr. ALLEN. I am delighted to yield.

Mr. ERVIN. Does the distinguished Senator from Alabama not recall that during the late campaign, when President Nixon was seeking the votes of the people of the South, he stated, in an interview at Charlotte, N.C., that he was opposed to the busing of children to achieve racial balance in the public schools?

Mr. ALLEN. Yes, he did, according to the press accounts.

Mr. ERVIN. Does not the Senator from Alabama also recall that on one or more occasions during the late campaign, President Nixon stated that he was in favor of the preservation of the neighborhood school?

Mr. ALLEN. Yes. He still states that.

Mr. ERVIN. Can the distinguished Senator from Alabama inform me of any action taken in Congress at the instance of or on the recommendation of the President of the United States to carry into effect either one of those campaign promises?

Mr. ALLEN. In answer to the question of the distinguished Senator from North Carolina, I will state that I know of no initiative taken by the President himself; but I will have to express deep appreciation to individual members of his party for standing with us on these principles. We have received splendid support from many members of the, shall I say, opposition party in this regard.

Mr. ERVIN. I share the gratitude that is expressed by the Senator from Alabama on that point, and I know that the Senator, from Alabama and North Carolina are both deeply grateful for the support we have received from individual Senators here in the Senate of the United States. But does the Senator from Alabama recall any occasion since President Nixon made those campaign promises to the people of the South when the Republican leadership, either in the Senate or in the House of Representatives, has supported any bill that was calculated to prevent busing of schoolchildren to achieve racial balance, or to correct racial imbalance, or to preserve the neighborhood schools?

Mr. ALLEN. In answer to that question, I will have to say that the nearest approach that the junior Senator from Alabama recalls was the fact that in connection with the Stennis amendment, the distinguished Senator from Pennsylvania, the Republican leader (Mr. SCOTT), produced a letter from one of the White House people, I believe Mr. Harlow—I am not sure that it was Mr. Harlow but he produced a letter from someone over there—saying that the President was opposed to the Stennis amendment; and another member of the group from across the aisle either produced a letter or reported a conversation with someone of equal rank over there saying that the President was for the amendment. So we had conflicting reports on that.

Mr. ERVIN. Has not the Senator from Alabama, in times past, heard of politicians who tried to work both sides of the street?

Mr. ALLEN. Not only heard of them, but observed them.

Mr. ERVIN. I will ask the Senator from Alabama if the Secretary of the Department of Health, Education, and Welfare is not an appointee of the President, and if that Department was not created to assist the President in carrying out his program.

Mr. ALLEN. Yes, sir, I so understand.

Mr. ERVIN. I ask the Senator from Alabama if the distinguished minority leader of the Senate, the able Senator from Pennsylvania did not read or refer to a letter from the Secretary of Health, Education, and Welfare during the consideration of the Jonas amendment, in which the Secretary of Health, Education, and Welfare expressed, in substance, his disapproval of the Jonas amendment.

Mr. ALLEN. Yes, sir; that is true.

Mr. ERVIN. Does the Senator from Alabama agree with the Senator from North Carolina that all the President has to do to control a member of his Cabinet is to tell that member of his Cabinet what to do?

Mr. ALLEN. I would say that the President's request would probably have considerable influence on the Cabinet member.

Mr. ERVIN. Does not one of the Whitten amendments expressly provide that the Department of Health, Education, and Welfare shall not use any of the funds appropriated by this bill to bus schoolchildren to achieve a variation in racial composition of any school?

Mr. ALLEN. That has been in the amendments in the past. I believe this one has been revised a little bit at that point. Yes, sir.

Mr. ERVIN. It is still, in substance, in the amendment?

Mr. ALLEN. Yes, sir, that is correct.

Mr. ERVIN. And if the President wished to implement his campaign promise he made in Charlotte, N.C., to the effect that there should be no busing to achieve a racial balance in the schools of the country, he could very well restrain his Secretary of Health, Education, and Welfare from writing a letter advocating a course of action which permits busing, could he not?

Mr. ALLEN. I believe he could have considerable influence over him, yes, sir.

Mr. ERVIN. Has the Senator from Alabama heard of what we call the President's southern strategy?

Mr. ALLEN. I have seen reference to that in the press.

Mr. ERVIN. Does the Senator from Alabama think that it is a part of the President's southern strategy to encourage or permit the Secretary of Health, Education, and Welfare to write a letter to the Senate, asking the Senate, in substance, not to carry out one of the campaign promises which the President made during the campaign?

Mr. ALLEN. I do not believe that would contribute to a successful strategy along that line.

Mr. ERVIN. I thank the Senator.

Mr. ALLEN. I thank the distinguished Senator from North Carolina.

I wonder whether I might ask the distinguished Senator from North Carolina a question. The letter from Secretary Finch was read by the distinguished Republican leader. Of course, we all know that Mr. Finch is no longer the Secretary, and the junior Senator from Alabama is wondering whether possibly remorse over the ruin and havoc that Mr. Finch has visited on the southern school systems might have contributed to his resignation as Secretary of the Department of Health, Education, and Welfare.

Mr. ERVIN. If I may make an observation by quoting an expression of Shakespeare, without the Senator from Alabama losing his right to the floor, I would like to say:

"Tis a consummation devoutly to be wish'd."

Mr. ALLEN. I thank the distinguished Senator.

Mr. EASTLAND. Mr. President, will the Senator yield?

Mr. ALLEN. I yield.

Mr. EASTLAND. Is there any difference in the policies of the Nixon administration toward the South from those of President Lyndon Johnson?

Mr. ALLEN. Does the Senator have reference to the public schools?

Mr. EASTLAND. Of course.

Mr. ALLEN. I would say, in answer to that question, that we have received much better statements and expressions of policy.

Mr. EASTLAND. Lipservice.

Mr. ALLEN. If the Senator would like to refer to it as that. We have received con-

siderably more expressions of looking with favor on our problems under the pesent administration than we received under the other.

Mr. EASTLAND. What has been the difference in policy?

Mr. ALLEN. The policy might be hard to define. Does the Senator mean the policy that has been implemented?

Mr. EASTLAND. That is right. The present administration is promoting school integration.

Mr. ALLEN. The administration is making their boast that they have desegregated more school districts than have ever been desegregated during a like period in the past, and I believe that is correct. It certainly will be by September.

Mr. EASTLAND. What were the promises that were made?

Mr. ALLEN. I believe the distinguished Senator from Mississippi heard the distinguished Senator from North Carolina outline them, and I would refer the Senator to his remarks. I would hesitate to speak in that regard, as to just what he did promise.

Mr. ERVIN. I would like to ask the distinguished Senator from Alabama whether the words which the President used during the late campaign are not quite different from the words which the Department of Justice is using in allegations it is making in complaints it is filing in the respective school districts down South.

Mr. ALLEN. Quite different.

Mr. President, we hope that relief can be had in time through the courts. At one time, it looked as though there was no possibility or hope of getting relief from the courts.

In that regard, I was questioned earlier about the actions of the President and his policies. I feel that his appointments to the Supreme Court have been excellent—all four of them, I might say—certainly the Chief Justice, and Justice Blackmun, as well as Judges Haynsworth and Carswell who were denied confirmation by the Senate.

I should like to call attention, as a possible basis for some hope along this line, to a portion of an opinion written by Chief Justice Burger with regard to some of the gray area having to do with the construction of the Constitution in the matter of our schools. He had this to say:

"As soon as possible, however, it is well to resolve some of the basic practical problems when they are appropriately presented, including whether, as a constitutional matter, (1) any particular racial balance must be achieved in the schools; (2) to what extent school districts and zones may or must be altered as a constitutional matter; and (3) to what extent transportation may or must be provided to achieve the ends sought by prior holdings of the court, and other related issues that may emerge."

Mr. President, that indicates a willingness on the part of the Chief Justice, and a welcoming on his part, of the acceptance of cases for review by the Supreme Court touching on these problems.

Also, in a Fourth Circuit Court of Appeals case, recently decided, Swann against the Charlotte-Mecklenburg Board of Education, the Circuit Court of Appeals for the Fourth Judicial District, in commenting on their adoption of the rules of reasonableness, said:

"We adopted the test of reasonableness—instead of one that calls for absolutes—because it has proved to be a reliable guide in other areas of the law."

They also said:

"Nevertheless, school boards must use all reasonable means to integrate the schools in their jurisdiction."

Certainly, we hope that the Supreme Court of the United States will go along with that policy and that ruling.

Mr. President, it seems to me that the two Whitten amendments do only this: They give to the southern school districts and the patrons of the southern school districts just a small amount—just a short step in the direction—of equal enforcement of the law, because what is granted to the citizens of the South, the patrons of the schools, is something that other areas of the country already have. There would be no need for an amendment if we had equal protection of our laws. If the people in the South, the patrons of the southern schools, had equal enforcement of the law accorded to them, equal application of the laws, there would be no need for these amendments. Lacking that equal enforcement of the law, and in the face of a dual standard for desegregating the public schools throughout the country, the Whitten amendments are needed. It is to be hoped that, for once, in the long history of these amendments, coming over to the Senate from the House, we will leave the amendments intact, that we will not strike them out, and that we will not dilute them, as has been done in the past.

Mr. President, I hope that the amendment of the distinguished Senator from Maryland will be rejected.

Mr. President, I yield the floor.

Mr. ALLEN. Mr. President, if the Whitten amendments are adopted by agreeing to the conference report, it will be the first time that these amendments have not been changed during the legislative process. Let us see what relief will be afforded under them to school districts in the South by the executive and judicial branches.

The PRESIDING OFFICER. The Senator's time has expired.

Mr. ALLEN. I thank the Chair.

The Senator from Mississippi has been allocated 15 minutes.

Mr. STENNIS. Mr. President, I am sure that most Senators recall that we have had these amendments before us in one form or another before, and they have been well debated. They have always received a very respectable vote in this body. I know they have been voted out of our subcommittee and our full committee three times, and I think perhaps this was the fourth. This time, these amendments have been before the House of Representatives, were voted into the bill and approved by the full Appropriations Committee of the House of Representatives, and came here and were approved by the full Appropriations Committee of the Senate. After debate on this floor, however, they were stricken out.

The Whitten amendments, as contained in this bill, then went back to the House of Representatives, where a motion was filed that, in effect, instructed the conferees to yield from the House's former position. That motion was tabled on a rollcall vote by an appreciable margin, I have forgotten just what it was, and that is the way the situation was when we went to conference.

After fullest consideration by the conferees of the House and the Senate, the Jonas amendment was dropped out and these two amendments were put back in. The matter then went back to the House of Representatives, and this conference report was agreed to there by a vote of 357 to 30. That is overwhelming support, Mr. President. So they come here after fullest consideration and the utmost debate. They have been debated in the press, and have been shown to have strength, firmness, and meaning, and represent a very definite contribution, I think, to the quality of education in those schools that are having to undergo this process of massive immediate desegregation.

With all respect to Senators who live in other parts of the country, outside the area that is being thus desegregated, I am sure they cannot realize the chaos, the confusion, the uncertainty, and the impact of this change on the faculties, the parents, and the students. I repeat, it is a situation of chaos and confusion, and, with all defiance, the court decisions are conflicting. The Supreme Court has never gone anything like as far, in my opinon, as have some of the courts of appeals; and the courts of appeals decisions conflict somewhat.

These amendments are not designed to stay and will not stay the hand of the court, or interfere with or defeat the action of any court, any decree or any court order. They are not intended for that purpose. The courts will function as usual.

These amendments mean exactly what they say, and I have great expectations of and great respect for the executive branch of the Government. Of course, if this becomes firm law, they will obey it. They cannot do otherwise. And the courts, I know, will respect it.

Mr. President, the Senator from Maryland requested some time. I ask unanimous consent that I may yield to the Senator from Maryland.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MATHIAS. Mr. President, I want to express my appreciation to the distinguished Senator from Mississippi for letting me respond very briefly to his remarks. He and I have discussed the Whitten amendments on a number of occasions, and I feel that he has stated to the Senate very fairly and very accurately the position in which we find ourselves today, and the way that we got here.

But, Mr. President, I would characterize that position a little differently.

I think Congress is acting in this matter as the old song said the kings of France used to act. In some ways, we have marched up the hill, and now we are marching down again.

Mr. BYRD of West Virginia. Mr. President, will the Senator yield for a unanimous-consent request?

Mr. MATHIAS. I yield.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the time, except for voting, on the pending conference report be extended until 10 minutes past 2 o'clock today.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. MATHIAS. Mr. President, I am dismayed that sections 209 and 210, the so-called Whitten amendments, remain in the conference report. The Senate has rejected the premise on which they are based on three separate occasions during the last 7 months. On June 24, the Senate struck sections 209 and 210 of H.R. 16916 by a vote of 47 to 33.

Because of the impending enactment of these sections into law, I rise today

in an effort to clarify their legal effect. As I pointed out last month, the Whitten amendments in their present form do not purport to modify constitutional responsibility for dismantling dual systems.

Let me quote sections 209 and 210 in their entirety:

Sec. 209. No part of the funds contained in this Act may be used—

To force any school or school district which is desegregated as that term is defined in title IV of the Civil Rights Act of 1964, Public Law 88-352, to take any action to force the busing of students;

To force on account of race, creed, or color the abolishment of any school so desegregated; or

To force the transfer or assignment of any student attending any elementary or secondary school so desegregated to or from a particular school over the protest of his or her parents or parent.

SEC. 210. No part of funds contained in this Act shall be used—

To force any school or school district which is desegregated as that term is defined in title IV of the Civil Rights Act of 1964, Public Law 88-352, to take any action to force the busing of students;

To require the abolishment of any school so desegregated; or

To force on account of race, creed, or color the transfer of students to or from a particular school so desegregated as a condition precedent to obtaining Federal funds otherwise available to any State, school district or school.

The key phrase here is "school or school district which is desegregated as that term is defined in title IV of the Civil Rights Act of 1964."

The relevant portion of title IV of the 1964 act reads as follows:

(b) "Desegregation" means the assignment of students to public schools and within such schools without regard to their race, color, religion, or national origin, but "desegregation" shall not mean the assignment of students to public schools in order to overcome racial imbalance.

This provision of the 1964 act, and a similar provision relating to suits by the Attorney General, were intended to prevent Federal agencies from requiring that a school district do more than fulfill its constitutional obligation to desegregate. But they were not intended as an attempt to sanction less.

The provision originated in debate in the other body, of which I was then a Member, in 1964. My colleague, Representative CRAMER, of Florida, called our attention to a newspaper article concerning a desegregation case in Manhasset, N.Y. He later offered the amendment to section 401(b) which added the words "but 'desegregation' shall not mean the assignment of students to public schools in order to overcome racial imbalance."

Representative CRAMER explained that the purpose of the amendment was "to prevent any semblance of congressional acceptance or approval of the concept of 'de facto' segregation or to include in the definition of 'desegregration' any balancing of school attendance by moving students across school district lines to level off percentages where one race outweighs another."

In explaining section 407 of the proposed 1964 act, which denies authority for any official or court "to issue any order seeking to achieve a racial balance," Senator Humphrey stated that the section would "preclude an inference that the title confers new authority to deal with the 'racial imbalance' in schools, and should serve to soothe fears that title IV might be read to empower the Federal Government to order the busing of children around a city in order to achieve a certain racial balance or mix in the schools."

This legislative intent has been consistently recognized by the executive and judicial branches. In a letter of July 20, 1970, to the distinguished minority leader, HEW Secretary Richardson reiterates that "it is the position of the Department, based upon an analysis of the language by general counsel, that section 209 and 210 would not, if enacted, alter school desegregation requirements under title VI of the Civil Rights Act of 1964."

In a recent decision of the fourth circuit court of appeals, this interpretation was upheld. In dismissing an argument that sections 401(b) and 407(a)(2) of the Civil Rights Act of 1964 forbade the order of the district court, the fourth circuit stated:

This argument misreads the legislative history of the statute. Those provisions are not limitations on the power of school boards or courts to remedy unconstitutional desegregation. They were designed to remove any implication that the Civil Rights Act conferred new jurisdiction on courts to deal with the question of whether school boards were obligated to overcome *de facto* segregation.

The fifth circuit court of appeals has agreed. In United States against Jefferson County Board of Education, it held that—

Some of the difficulty in understanding the Act and its legislative history arises from the statutory use of the undefined term "racial imbalance." It is clear however from the hearings and debates that Congress equated the term, as do the commentators, with "de facto segregation," that is, non-racially motivated segregation in a school system based on a single neighborhood school for all children in a definable area.

The seventh circuit court of appeals has made a similiar holding in United States against School District 151.

Indeed, upon reading the July 16, 1970, debate in the other body on adoption of the conference report, I find nothing which derogates from this interpretation. Congressmen MICHAEL, for example, the distinguished ranking minority member of the Labor-HEW Subcommittee of the House Appropriations Committee, referred to his statement in April that "the so-called Whitten amendments did not really change basic law nor did they really require a change in HEW requirements." Mr. MICHEL's position, which was reiterated by Congressmen CONTE and COHELAN, went unchallenged in the House debate.

Mr. President, on June 24, I stated the basis for my opposition to the Whitten amendments:

The reason that these sections are objectionable is that their legal redundancy will not be evident to many Americans who are engaged in the process of bringing our school systems into accord with the Constitution; these citizens will only be confused by the passage of this latest version of the Whitten amendments. Regardless of their purpose, their effect will be that of further unsettling an already difficult situation.

The administration and the President favor the striking of this language. President Nixon recently stressed the importance of community leaders on March 24, when he stated:

"In those communities facing desegregation orders, the leaders of the communities will be encouraged to lead—not in defiance but in smoothing the way of compliance. One clear lesson of experience is that local leadership is a fundamental factor in determining success or failure. Where leadership has been present, where it has been mobilized, where it has been effective, many districts have found that they could after all desegregate their schools successfully. Where local leadership has failed, the community has failed and the schools and the children have borne the brunt of that failure."

These words of the President are measured and wise. We in Congress must aid the President in encouraging responsible leadership by defining as clearly as possible the role of the Federal Government in helping to dismantle dual school systems.

In view of the inclusion of the Whitten provisions in the conference report, I think we have a responsibility to make it abundantly clear that sections 209 and 210 of H.R. 16916 in no way diminish the constitutional obligation of school districts to eliminate dual school systems or the responsibility of HEW to assist in that effort.

The PRESIDING OFFICER. The Senator's 5 minutes have expired.

Mr. MATHIAS. Mr. President, will the Senator from Mississippi yield me 1 additional minute?

Mr. STENNIS. Mr. President, how much time do I have remaining?

The PRESIDING OFFICER. The Senator from Mississippi has 8 minutes.

Mr. STENNIS. I yield 1 additional minute to the Senator from Maryland.

Mr. MATHIAS. I thank the Senator.

Mr. President, I ask unanimous consent that the full text of Secretary Richardson's letter of July 20, 1970, to the distinguished minority leader, be reprinted in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE SECRETARY OF HEALTH, EDUCATION, AND WELFARE,
Washington, D.C., July 20, 1970.

Honorable HUGH SCOTT,
U.S. Senate,
Washington, D.C.

DEAR SENATOR SCOTT: This is in response to your request of July 16 for a reiteration of the Department's views concerning the legal effect of adoption of Sections 209 and 210, the so-called Whitten Amendments, to H.R. 16916, the Fiscal Year 1971 Office of Education Appropriations Bill.

As my predecessor, Secretary Robert H. Finch, testified before the Senate Committee on Appropriations on April 21, 1970, and as I stated in my letter of June 23, 1970, to Senator Mathias, it is the position of the Department, based upon an analysis of the language by General Counsel, that Sections 209 and 210 would not, if enacted, alter school desegregation requirements under Title VI of the Civil Rights Act of 1964.

The proposed provisions neither change basic law nor affect HEW regulations. The

Department's obligation and commitment to conduct the school desegregation program in accordance with the nondiscrimination requirements of Title VI and constitutional standards, therefore, would remain unaffected by adoption of Sections 209 and 210.

With kind regards, I am

Sincerely,

ELLIOT L. RICHARDSON,
Secretary.

Mr. STENNIS. Mr. President, I yield 1 minute to the Senator from Pennsylvania.

Mr. SCOTT. Mr. President, I agree with the sentiments expressed by the distinguished Senator from Maryland, without further reviewing them. I am familiar with the letter.

I believe that the Department can live with the language and that there is, therefore, no need to press for a change or an amendment. I think we can, therefore, accept the language, while we would prefer that there be no such language whatever in section 209 or 210, as the case may be.

I thank the distinguished Senator from Mississippi.

Mr. STENNIS. I thank the Senator.

Mr. President, how much time do I have remaining?

The PRESIDING OFFICER. The Senator has 6 minutes.

Mr. STENNIS. I thank the Chair.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD the text of the two Whitten amendments together with the section of the Civil Rights Act to which those amendments refer.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

SEC. 209. No part of the funds contained in this Act may be used to force any school or school district which is desegregated as that term is defined in title IV of the Civil Rights Act of 1964, Public Law 88-352, to take any action to force the busing of students; to force on account of race, creed, or color the abolishment of any school so desegregated; or to force the transfer or assignment of any student attending any elementary or secondary school so desegregated to or from a particular school over the protest of his or her parents or parent.

SEC. 210. No part of the funds contained in this Act shall be used to force any school or school district which is desegregated as that term is defined in title IV of the Civil Rights Act of 1964, Public Law 88-352, to take any action to force the busing of students; to require the abolishment of any school so desegregated; or to force on account of race, creed, or color the transfer of students to or from a particular school so desegregated as a condition precedent to obtaining Federal funds otherwise available to any State, school district or school.

[Public Law 88-352, July 2, 1964]

TITLE IV—DESEGREGATION OF PUBLIC EDUCATION

DEFINITIONS

SEC. 401. As used in this title—

(a) "Commissioner" means the Commissioner of Education.

(b) "Desegregation" means the assignment of students to public schools and within such schools without regard to their race, color, religion, or national origin, but "desegregation" shall not mean the assignment of students to public schools in order to overcome racial imbalance.

Mr. STENNIS. Mr. President, I ask unanimous consent to have printed in the RECORD a very brief, one-column statement by Representative WHITTEN, of Mississippi, which he made in the House on July 22.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Mr. WHITTEN. Mr. Chairman, I rise in support of the bill.

(Mr. WHITTEN asked and was given permission to revise and extend his remarks.)

Mr. WHITTEN. Mr. Chairman, on the 14th day of April 1970, the House adopted the provisions which I had offered, and which had been accepted in committee, to the bill making appropriations for the Department of Education, after refusing to strike them out by instructing the conferees by a vote of 191 to 157. These amendments are as follows:

"SEC. 209. No part of the funds contained in this Act may be used to force any school or school district which is desegregated as that term is defined in title I of the Civil Rights Act of 1964, Public Law 88-352, to take any action to force the busing of students; to force on account of race, creed or color the abolishment of any school so desegregated; or to force the transfer or assignment of any student attending any elementary or secondary school so desegregated to or from a particular school over the protest of his or her parents or parent.

"SEC. 210. No part of the funds contained in this Act shall be used to force any school or school district which is desegregated as that term is defined in title IV of the Civil Rights Act of 1964, Public Law 88-352, to take any action to force the busing of students; to require the abolishment of any school so desegregated; or to force on account of race, creed or color the transfer of students to or from a particular school so desegregated as a condition precedent to obtaining Federal funds otherwise available to any State, school district or school."

Subsequent to this vote, in conference with the Senate these provisions were retained and when the matter came back to the House, the conference report, containing the language, was approved by a vote of 357 to 30.

Mr. Chairman, this makes quite clear the feeling of the Congress with regard to the use of force in the areas which these amendments cover, as well as the use of the power of the purse to withhold funds truly needed for education, which the Congress has provided, in order to force schools to voluntarily do that which is not required by the Civil Rights Act of 1964, a right not even claimed to be provided by the administration or the courts.

After consultation with members of the Committee on Appropriations, these amendments are not offered here because they are quite clear and for the Secretary of HEW or other officials to use funds in this bill, appropriated for other purposes, to attempt to evade the intent of the Congress as expressed in these provisions of the bill making appropriations for the Department of Education would be to break faith with the Congress and would certainly not be in line with the reputation for integrity which the Secretary enjoys.

After discussing this matter with members of the committee, it has been decided that, whatever we have provided or should provide, we have to rely on the good faith of the executive department and the courts to carry them out; for, if they cannot be relied on, it is to be doubted if any language could be written which could force them to leave the schools alone or parents and students alone where schools are completely desegregated, as that term is defined in the Civil Rights Act of 1964, because, after all, it is to the executive department that we must look for the carrying out, and the Federal courts to support, these provisions which are set out above and which appear in the conference report of the bill making education appropriations.

Any reading of these provisions would clearly show that they are completely sound and I feel will be followed by this administration not only because of commitments but because the system of education is essential to any organized society; and, unless we return again to putting education first, as these amendments would do, soon we will go down the drain as have other societies in years past.

Mr. Chairman, I thought it well to call these facts to the attention of the Members of the House at this time.

Mr. STENNIS. Mr. President, with reference to this amendment—it is reported in amendment No. 38 in the report of the managers on the part of the House—this matter came up as a part of the $150 million which was in the Senate amendment to the bill. We had the Jonas amendment and the two Whitten amendments in the House bill. This matter was settled in the conference. They agreed to drop the Jonas amendment and we agreed that they would keep the Whitten amendments, and the amount of money was split as a matter of adjustment, in conference, wholly within the meaning of the conference concept. There is no diminution or understanding or anything else about what they meant. They speak for themselves, of course.

Mr. President, here is a part of the rub. This amendment will do a great deal of good. The educators, the trustees, the parents who are trying to keep our public schools in operation and keep the doors open, who are trying to deal with court orders and HEW orders, have no hope for the future. It is an overbearing situation. They are not just integrating the schools. They are demanding racial balance of the faculty and the students. They do not deny it. Every judge knows it is true. Every HEW employee knows it is true. These court decrees are based on racial balance. In effect, they say, "Down with education. Our goal is to have racial balance." That is what is killing the spirit of this entire endeavor. You will never get education back to the foremost objective until some kind of reality is brought about, and these amendments will bring it. You cannot be withholding money and you cannot be busing children all over the district, from county side to county side, in order to bring about theoretical racial balance. It has never been required by the Supreme Court. It has never been required by Congress in the Civil Rights Act. It is only required in the minds and the practice of those who are trying not only to integrate the schools and the faculties but also to balance them off on some kind of racial proportion.

This amendment is designed to stop things short of going that far—not to try to defeat the law, but to carry out the real purpose and spirit of the law in the beginning.

I thank everybody for their consideration of this serious problem, all the way down the line. I am confident that these amendments will be carried out if

they become law and that they will help the situation and be a path in the future. Someday, the country outside the South will want to find its way through this jungle of readjustment, and they can look back to this law as one that lit the path, and with its help they will find their way.

I yield back the remainder of my time.

Mr. MAGNUSON. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. CASE). Without objection, it is so ordered.

The question is on agreeing to the conference report.

On this question the yeas and nays have been ordered, and the clerk will call the roll.

The bill clerk called the roll.

Mr. KENNEDY. I announce that the Senator from Connecticut (Mr. DODD), the Senator from Missouri (Mr. EAGLETON), the Senator from Tennessee (Mr. GORE), the Senator from Minneapolis (Mr. MCCARTHY), the Senator from Arkansas (Mr. MCCLELLAN), the Senator from West Virginia (Mr. RANDOLPH), the Senator from Georgia (Mr. RUSSELL) are necessarily absent.

I further announce that, if present and voting, the Senator from West Virginia (Mr. RANDOLPH) would vote "yea."

Mr. GRIFFIN. I announce that the Senator from New York (Mr. GOODELL) and the Senator from California (Mr. MURPHY) are necessarily absent.

The Senator from Idaho (Mr. JORDAN) is absent on official business.

The Senator from South Dakota (Mr. MUNDT) and the Senator from Maine (Mrs. SMITH) are absent because of illness.

If present and voting, the Senator from New York (Mr. GOODELL), the Senator from Idaho (Mr. JORDAN), the Senator from South Dakota (Mr. MUNDT), the Senator from California (Mr. MURPHY) and the Senator from Maine (Mrs. SMITH) would each vote "yea."

The result was announced—yeas 88, nays 0, as follows:

[No. 250 Leg.]

YEAS—88

Aiken	Ellender	Mansfield
Allen	Ervin	Mathias
Allott	Fannin	McGee
Anderson	Fong	McGovern
Baker	Fulbright	McIntyre
Bayh	Goldwater	Metcalf

NAYS—0

NOT VOTING—12

Dodd	Jordan, Idaho	Murphy
Eagleton	McCarthy	Randolph
Goodell	McClellan	Russell
Gore	Mundt	Smith, Maine

So the report on H.R. 16916 was agreed to.

Mr. MAGNUSON. Mr. President, first, I am very grateful, on behalf of the committee, for the vote of confidence on this conference report, with no "nay" votes and 88 "yea" votes. I do not know when this has happened on an appropriation bill of this magnitude, but the Senator from New Hampshire and I are pleased.

Mr. COTTON. Mr. President, I join in those sentiments.

Mr. MAGNUSON. Mr. President, before I make a motion, I am sure the Senator from New Hampshire, as well as the members of the subcommittee and the full committee will join me, in commending the staff for the splendid work done on this very complicated bill. For the long, hard work that was done on the bill, in the hearings, during the mark-up, the floor action, and the conference by Mr. Harley Dirks of the committee staff and Mr. Bill Kennedy, on the minority side of the staff.

The PRESIDING OFFICER. The amendments in disagreement will be stated.

The legislative clerk read as follows:

Resolved, That the House recede from its disagreement to the amendment of the Senate numbered 3 to the aforesaid bill, and concur therein with an amendment as follows: In lieu of the matter stricken and inserted by said amendment, insert the following:

"That this appropriation shall not be available to pay local educational agencies pursuant to the provisions of any other section of title I until payment has been made of 90 per centum of the amounts to which such agencies are entitled pursuant to section 3(a) of said title and 100 per centum of the amounts payable under section 6 of said title: Provided further, That $8,800,000 of this appropriation shall be available to pay full entitlement under section 3(a) of said title to a local educational agency where the number of children eligible under said section 3(a) represent 25 per centum or more of the total number of children attending school at such local educational agency during the preceding year."

Resolved, That the House recede from its disagreement to the amendment of the Senate numbered 38 to the aforesaid bill, and concur therein with an amendment as follows:

Strike the sum of $150,000,000 named in said amendment, and insert in lieu thereof "$75,000,000."

Mr. MAGNUSON. Mr. President, I move the Senate concur in the amendments of the House to the amendments of the Senate numbered 3 and 38.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Washington that the Senate concur in the amendments of the House to the amendments of the Senate numbered 3 and 38.

The motion was agreed to.

ORDER FOR RECOGNITION OF SENATOR FANNIN TOMORROW

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that tomorrow, upon disposition of the reading of the Journal, the distinguished Senator from Arizona (Mr. FANNIN) be recognized for not to exced 20 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR ADJOURNMENT TO 11 A.M. TOMORROW

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that when it completes its business today, the Senate stand in adjournment until 11 o'clock tomorrow morning.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF SENATOR BYRD OF WEST VIRGINIA ON THURSDAY NEXT

Mr. BYRD of West Virginia. I ask unanimous consent that upon the disposition of the reading of the Journal on Thursday next, July 30, 1970, I be recognized for not to exceed 1 hour.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR ADJOURNMENT FROM TOMORROW UNTIL THURSDAY, JULY 30, 1970, AT 11 A.M.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that when the Senate completes its business on tomorrow, it stand in adjournment until 11 a.m. on Thursday next.

The PRESIDING OFFICER. Without objection, it is so ordered.

U.S. COMMITMENTS ABROAD AND THE MILITARY PROCUREMENT AUTHORIZATION BILL

Mr. SYMINGTON. Mr. President, nearly 18 months ago—on February 3, 1969—the chairman of the Senate Foreign Relations Committee, Senator FULBRIGHT, announced on the Senate floor the creation of a new subcommittee, the job of which he said would be to "make a detailed review of the international military commitments of the United States and their relationship to foreign policy."

As the chairman said at that time, it was hoped this subcommittee would develop facts on the "relationship between foreign policy commitments and the military capacity to honor them."

Some months later a distinguished member of the Senate Armed Services Committee, Senator GOLDWATER, declared on the Senate floor that factual information from "an exhaustive investigation of this Nation's treaty commitments around the world was essential to our efforts to reach any kind of sound judgment and legislative conclusions regarding the projected level of our military expenditures." I agree with that statement, for it focuses on exactly what the Foreign Relations Committee had in mind in establishing this subcommittee.

On the eve of the debate on this fiscal year 1971 military authorization bill, I believe it incumbent of me, as a ranking member of the Senate Armed Services Committee and chairman of that Foreign Relations Subcommittee on commitments, to offer a few observations on the investigation conducted by the latter, and its relationship to the upcoming legislation.

In the past year and one-half, our two-man staff traveled to 23 countries for on-the-scene investigation. We have thereupon held 37 days of hearings, with 48 major witnesses covering U.S. military forces, facilities, and security programs in 13 countries, plus NATO.

As of today, our subcommittee has published sanitized versions of hearings on the Republic of the Philippines, Laos, and Thailand; and last week on Taiwan.

With less than one-third of the transcripts released, the published record already has run over 1,000 pages.

The press, both here and abroad, and also officials of our Government as well as those of other countries have taken notice—perhaps they have learned something—from the factual material developed in the published records.

I regret that apparently there are some—even within the Senate—who do not consider ours a serious study. I regret also that others have complained we have gone too far. We will let our published transcripts, along with our report—which will be made public within a few months—speak for themselves.

Today, however, I would direct myself to some immediate points, particularly those raised by the chairman of the Senate Armed Services Committee in his interesting statement on defense requirements that he delivered on the floor of the Senate a week ago last Thursday.

Senator Stennis said, in part:

> We are committed to more than 40 nations by solemn, formal treaties or other formal agreements.

He also observed that:

> Congress should be well aware that our defense requirements are based in part on the need to be prepared to help defend other nations with whom we have mutual defense agreements approved by the Congress or whose defense is vital to our own national security interests.

Mr. President, one needs only to look at the situation in Laos where every year we are spending hundreds of millions of American dollars and—more important—the lives of our men fighting a war in the north—far from the Ho Chi Minh Trail—on behalf of a foreign country with whom we have no treaty of any kind whatsoever; with whom in fact the State Department has actually testified that we have no commitment.

Prior to these subcommittee hearings of the Foreign Relations Committee, the war in north Laos was actually a tightly held secret from most of the Congress. We on the Foreign Relations Committee were not informed of the pertinent facts. We on the Armed Services Committee were not informed of the pertinent facts. Prior to the publication of our transcript, this war in and over northern Laos was a secret from almost all of the American people.

The continuing attempts currently being made to keep much of this information secret are now a matter of public record.

In line with the thoughts of the Senator from Mississippi before we authorize more military spending in Laos; before we appropriate money to send more of our flyers to fight and die over that country, the American people deserve to know in more detail the truth about that war and the direction in which it is going. For as President Nixon told a nationwide audience last November:

> The American people cannot and should not be asked to support a policy which involves the overriding issues of war and peace unless they know the truth about that policy.

There are various other countries where Congress has never endorsed any military commitment through a treaty, but where—as our inquiry has established—commitments do exist.

Senator Stennis referred to some in his statement—those with whom he said we have bilateral agreements which impose military obligations on our part to come to their assistance in the face of aggression. There are additional ones, however, as our published records will show.

These records also show that the level of commitment varies even among nations with whom we have solemn treaties.

With some countries, our word alone is sufficient to insure that we will come to their assistance. With others, our commitment requires extensive military assistance. With others, not only our assistance, but also the physical presence of our own forces and bases are required. With others, joint military operations have secretly been agreed upon and are actually undertaken.

With still others, relations are deepened through clandestine agreements that permit us to store nuclear weapons on the land of the country in question, a policy which greatly increases chances for nuclear war.

As the subcommittee tries first to find out just what are our commitments, and then seeks to reassess them, our studies have demonstrated conclusively that not only the basic treaties and/or agreements need review, but also the level of military cooperation which has stemmed from those basic commitments. The latter should be examined in detail.

Senator Stennis noted in his Senate address:

> When we look at the military arsenal which we must build and maintain, we cannot afford to think only of defending our own shores but we have to think of what is needed in order to give some reasonable assurance that we will be able to meet the extensive commitments we have assumed so freely.

Now a few words of caution with regard to that statement.

There are commitments which we the Congress, the executive, and the American people have not "assumed so freely"; and the significance of that observation is the fact that the Congress cannot tailor the defense budget to commitments about which it knows nothing.

Is it not a proper question to ask—how can the Congress limit or end commitments at the same time the executive branch, either openly or in secrecy, creates new commitments on its own?

These are but a few of the thoughts I believe we should be considering incident to the taking up of this defense legislation.

An additional question comes to mind: Will the Congress—and hopefully the executive branch—realize that the primary commitment is to the American people; and that to honor some of these executive agreements—and even treaties—in the manner considered appropriate in recent years would bankrupt the Nation; and in the end, therefore, do irreparable harm to our own national security?

Surely there must be limits to what this Nation can do for other countries, particularly those nations which seem to want to do so little for themselves.

I believe that for this reason, if for no other, the Senate should face up to its responsibility in working with the executive branch to establish those limits. Is this not a legitimate and responsible role for the Senate?

In any case, it is a responsibility the Foreign Relations Committee has undertaken with the commitments resolution; and this action was followed last December, with administration support, by a bipartisan group of Senators first drafting and then passing into law the Laos-Thailand amendment.

It was a responsibility which was again recognized by Senators Cooper and Church in their Cambodian amendment to the Military Sales Act; and it is in that role I see the recent Armed Services Committee amendment to limit free world force equipment to the sanctuary area—lacking new authority—rather than in support of the Cambodian Government.

The Senate need not look to any future decision to meet, head on, the difficult question of what this Nation should do with its increasingly limited manpower, resources and assets. That has already begun, and my hope is that it will continue.

I believe it will continue if the responsible committees of the Congress obtain the same type and character of information about our worldwide military commitments that has been demanded, and in most cases thereupon obtained by the Senate Foreign Relations Committee. The political, military, and economic positions in which the taxpayers of this Nation now find themselves demand no less.

Several Senators addressed the Chair.

The PRESIDING OFFICER. Does the Senator yield, and if so to whom?

Mr. SYMINGTON. Mr. President, I yield to the distinguished chairman of the Committee on Foreign Relations.

Mr. FULBRIGHT. Mr. President, I commend the Senator for this statement. It is a very succinct and significant statement, in my opinion, and deserves a little elaboration.

First, I wish to say that the Senator, as chairman of his subcommittee, has done a remarkable job. He has been very thorough and his subcommittee has a

most able staff. Much of the information which he has developed was certainly not known by me, and I do not think it was known by the other members of the Committee on Foreign Relations or the Senate as a whole, as the Senator has so well stated.

I wanted to ask the Senator about one or two specifics in his statement. On page 3, the Senator says:

> The continuing attempts currently being made to keep much of this information secret are now a matter of public record.

The Senator has reference, I presume, to the deletions from some of the hearings of his committee, does he not?

Mr. SYMINGTON. Yes; that is correct; and in addition, as the Senator knows as chairman of the committee, for the first time in the history of the Foreign Relations Committee an ambassador has refused to testify, on instructions of the State Department, unless all stenographic tapes incident to his testimony were burned, and the only printed record would be kept by the State Department, with no record retained by the committee.

Mr. FULBRIGHT. That is the first time this has happened. I would remind the Senator that, in addition to that, on two other occasions ambassadors were told not to discuss certain questions with the committee, particularly as to nuclear weapons and some other areas.

Mr. SYMINGTON. The Senator is correct.

Mr. FULBRIGHT. However, they reconsidered the matter concerning the question of the pay to the Thai troops, and so on, and we finally got that information. But there has been a disposition to refuse to make public, or even to divulge in executive session, a good deal of very pertinent and important information.

With regard to publication of the subcommittee records of sworn testimony taken in executive session, the administration insisted on deleting a great deal of that information, did they not?

Mr. SYMINGTON. That is right.

Mr. FULBRIGHT. It took about 6 months to clear some of the testimony because of the difficulty in getting agreement on what was to be published; is that not correct?

Mr. SYMINGTON. That is correct.

Mr. FULBRIGHT. The Taiwan hearings, which have just been published, were held how long ago?

Mr. SYMINGTON. Last November, a good many months ago.

Mr. FULBRIGHT. That brings me up to the pending issue, which is the Spanish bases agreement. The first time this matter was gone into was by the Senator's subcommittee last year. There have been two agreements, an agreement in 1953 with an extension in 1963, and then last year they were considering a further extension, originally, I believe, of 5 years, and then it was compromised—largely because of the work of the Senator's subcommittee—to a brief period, I think, of 18 months. Those were executive agreements.

The executive branch is now negotiating another agreement about which we had a hearing last week. We urged the Department of State and the administration to submit this new agreement as a treaty, so that the Senate would have an opportunity to pass upon it.

What does the Senator think about that? Should it be a treaty, or should it be an executive agreement?

Mr. SYMINGTON. Mr. President, unfortunately I was not here when the latest executive hearing on the Spanish bases, and the proposed agreement with Spain, was held; but I do not see how formal arrangements which involve money, troops, and very possibly the lives of Americans can be agreed upon without any knowledge on the part of the proper committees of Congress, this in order that they can be voted on under the advice and consent clause, which gives the Senate authority to approve treaties.

Mr. FULBRIGHT. They have not positively decided on the proposal, I believe. Mr. Alexis Johnson, the Under Secretary, appeared before the committee and I urged him and other members of the department submit this as a treaty, to give the committee and the Senate as a whole the opportunity to study and to develop the meaning of this agreement, and then to approve or disapprove it.

It seems to me that is the only proper way to meet the suggestion that has been made by the Senator from Mississippi and the Senator from Arizona.

These Senators talk about tailoring our commitments to our necessities and to our capacities to pay for them. If the administration executes it as an executive agreement, then we will be confronted with a situation in which they will say, "We have made the agreement, we have promised to pay all of this, now we call upon you to pay it. If you do not, you will renege upon an agreement made by our President and the administration."

This would be a wholly intolerable procedure, and certainly inconsistent with the views expressed by the Senator from Arizona and the Senator from Mississippi; would the Senator not agree with that?

Mr. SYMINGTON. I would agree. I do not see how we can appropriate money—authorize it first and then appropriate it—for honoring commitments when we do not know what those commitments are.

Mr. FULBRIGHT. Even if the executive agreement is published in the newspaper—assuming that is done—then we have a situation in which the meaning of this agreement—the commitment, in effect—has not been developed in hearings in the normal way and in debate on the Senate floor.

I use this as a current example of what we have been talking about. This executive agreement with Spain, which I have seen—the administration has submitted it to the committee to look at; not for its approval, but simply because we requested it—is very ambiguous, I would say. There is some language in it which I have never seen in any executive agreement or treaty. What it means is very unclear.

The Under Secretary may interpret it one way today. He says that when the document uses language to the effect that we will support each other Defense Establishment it does not amount to a security commitment. I submit that reasonable men could have different views on this. I would interpret the language, plus the actual disposition of troops, as a commitment in the nature of a security treaty. If we station several thousand men there, with quantities of airplanes and other equipment, and we have a joint planning staff—all the usual arrangements which go with a security treaty—then I would say it is clearly in the nature of a security treaty.

So there is perhaps a basis for a reasonable difference of opinion about it. But this is exactly a classic case. What it actually means and what the nature of the commitment is, ought to be developed in hearings and in debate on the floor of the Senate and the agreement passed on by the Senate. I submit to the Senator that here is an example of trying to tailor our commitments with our capacities bearing in mind the needs of the country. We should do this now while the commitment is under consideration and not 2 or 3 years or several years later, when a commitment such as this has already been undertaken.

I would hope that the Senator would agree and that the Senate would agree that this kind of agreement should be submitted for the Senate's approval. I believe it is the only possible way in which the Senate can regain some control over the worldwide commitments which this country has undertaken in the past 20 or 25 years.

Mr. SYMINGTON. I appreciate the remarks of the able Senator.

As everyone knows, Spain is not a member of NATO; therefore, we have no treaty with Spain under NATO. It has been our policy to maintain airfields, naval bases and thousands of troops in Spain. I do not necessarily object to this; but, on the other hand, as the able Senator knows, we have been paying a tremendous amount of money, in effect, to defend Spain. It seems to me that if we are going to be there at all, it ought to be on a mutual basis; because everybody knows about the problems in the economy of the United States. In addition, any agreement with respect to the Spanish bases ought to be in the form of a treaty and not an Executive agreement. As the Senator will recall, at one time it was strictly a military agreement which was expanded upon later by people in the State Department.

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial published in today's New York Times entitled "Vague Pledge to Franco," which discusses this matter.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

VAGUE PLEDGE TO FRANCO

After the long and divisive debates about the legal and constitutional bases for United States military actions in Indochina, the last thing the Nixon Administration ought to be considering is another vague overseas defense commitment. It appears ready, however, to sign a pledge to "support the defense system"

of Spain in return for continued use of air and naval bases there.

Some members of the Senate Foreign Relations Committee say they are not clear, even after briefings from high-ranking State and Defense Department officials, just what would be involved in such a commitment. Neither are we. Nor is it clear exactly what is meant by the pledge that "both Governments will make compatible their defense policies"—more language from the draft agreement expected to be signed in a few weeks.

On one interpretation, the pledge of support for Spain's defense system could be considered stronger than the statement in all Spanish-American military agreements since 1953 that an attack on either country would be "a matter of common concern." In any case, before the agreement is signed, the Foreign Relations Committee ought to insist on clarification of its meaning and consider whether such a commitment should not be made in the form of a treaty, subject to Senate approval.

In fact, Congress should go further and raise the question whether the long-run interests of the United States are served by any renewal of military arrangements with the regime of Generalissimo Franco, now 77 and facing increasing opposition. A group of 120 members of this opposition argued in a petition to Secretary of State Rogers in May that it was unwise for this country to sign this kind of agreement with a regime that made such decisions without consulting its people.

Many among these opponents may be influential in future Spanish governments. Congress should weigh their arguments against the short-run military advantages of the bases in Spain while there is still time to reconsider the agreement with the Franco regime.

Mr. FULBRIGHT. I think the Senator's remarks are especially appropriate to the debate on the bill which is under consideration. I do hope the Senate will take seriously what he has said and also the findings or his subcommittee in this field.

This is entirely in line with the sense of the Senate as expressed in the commitments resolution. If we do not take action now on the current measure as well as the proposed agreement with Spain, I think it will be extremely difficult for us ever to regain control of the appropriating process of our Government.

One further remark: In the course of the Senator's hearings, there also have been other secret agreements, some of them verbal, which obligate us in countries other than Spain. I think these agreements should be submitted as treaties and thus give the Senate an opportunity to pass upon their wisdom and to decide whether or not we should undertake the responsibilities of paying rather large sums of money to other countries.

I congratulate the Senator on his statement.

Mr. SYMINGTON. I thank the chairman for his observations.

As far back as 1965, I became very worried about the nature and degree of our commitments all over the world, which even today, counting Europe and all the other parts of the world, are costing the American taxpayers some $100 million a day.

If we build a house or a road or a hospital or a school in this country, whether it is right or wrong, at least work would be created. One of the sad things that have developed recently in our country, incident to trying to pay for all these foreign adventures, is the high interest rates, along with the inflation, plus rising unemployment, due in part to the exporting of jobs.

Mr. HART. Mr. President, will the Senator yield for a question?

Mr. SYMINGTON. I am glad to yield to the distinguished Senator from Michigan.

Mr. HART. First, may I thank the Senator from Missouri for again attempting to bring to our conscience the obligation that rests on us to be informed before we act, whether it is on military procurement, commitments in defense of other nations, or the adequacy of our school lunch program. In all these programs, he has given us this leadership.

May I ask a question which indicates that I got an impression from the Senator's remarks that I would not want to labor under if I were wrong.

Does the Senator from Missouri suggest that the Senate, as of today, cannot intelligently act upon the military procurement bill that is now pending, for the reason, among others, that the extent of our commitments is not yet known?

Mr. SYMINGTON. I believe that we do not have the information before the Senate that any board of directors of any business—and I say this as a former businessman—would have before, in the interest of the stockholders—in this case, the American people—they would feel they had the right to approve or request funds to be spent by the management.

I know that some particular things cannot be discussed in the Senate because they involve the security of the United States. As one who spent many years in the Defense Department I understand that. But what we are talking about are the hundreds of millions of dollars—in fact, the billions of dollars—that we have been expending around the world under the guise of military authorizations and appropriations—some for wars that we have been fighting in countries like Laos, which not only were not approved by the Senate, but also, to the best of my knowledge, nobody in the Senate knew about in any detail.

Mr. HART. As a businessman, would not the Senator from Missouri agree that stockholders recognize the sensitivity of certain corporate information because, if treated too casually, it could wreak havoc with the company by feeding information to the company's competitors?

Mr. SYMINGTON. Yes, indeed. For example, a secret formula that made a product.

Mr. HART. Exactly. But, notwithstanding that problem, corporate law holds the director responsible for expenditures of money if all effort short of disclosing to the competitor has not been made before he makes the decision.

So that the suggestion of the Senator from Missouri in his remarks today is that until, perhaps in executive session, this board of directors—the Senate—knows more fully the extent of our commitments, this board of directors—the Senate—should not act to authorize or expend moneys?

Mr. SYMINGTON. That question is pretty direct. There are many people who believe, and have so stated, that before we vote on this bill, we should have an executive session just as we had last year on one component of the bill.

I would not criticize that suggestion and see many reasons to praise it; because, having been in business for many years, I know that the chance of making the right decision, especially when using other people's money, is almost invariably directly in proportion to one's knowledge of the facts.

Mr. HART. I thank the Senator from Missouri very much.

Mr. SYMINGTON. I thank my able colleague from Michigan.

Mr. PROXMIRE. Mr. President, I join in the general commendation of the Senator from Missouri on a most important and helpful speech.

However, I was especially depressed at the fact that although the Senator's subcommittee has held extremely comprehensive hearings, and his team investigated and visited 23 countries and held hearings on our responsibilities with regard to 13 of them, I am sure he would agree that this just scratches the surface in view of the commitments we have already made, so that a great deal more will need to be done before we can even investigate, let alone ascertain or determine the degree of our commitments.

Furthermore, the Senator from Missouri has told us that we have a big operation costing hundreds of millions of dollars with many lives having been lost in Laos, with no agreement at all. Is that not correct?

Mr. SYMINGTON. We have no formal treaty with Laos nor—the State Department tells us—do we have any commitments with Laos; yet, we have spent billions of dollars in Laos and many American boys have died fighting in and over Laos.

Mr. PROXMIRE. So it apears we have a situation which is about as open-ended as anyone can imagine, which can cost us literally billions of dollars to meet the specific commitments implied, or even where there is lack of commitments but situations which some President may construe necessary to help a country east, north, south, or west of another country with which we may have commitments.

Mr. SYMINGTON. The Senator is correct; these commitments and "noncommitments" are not only costing us money, but perhaps can draw us into a far greater war.

Take the case of the Philippines. The impression I had as a member of the Armed Services Committee and the Foreign Relations Committee was that the Philippine Government was anxious to support us in South Vietnam.

However, as a result of the hearings of the subcommittee, we found that the Philippine Government did not want to send any of its troops to Vietnam but finally agreed to do so under two conditions: the first one was that they would not have to fight as our boys fight there;

the second was that they would be heavily paid in addition to their normal salaries.

Then it turned out that the money for noncombatant soldiers who went from the Philippines to Vietnam apparently was never received by them. This matter was therefore turned over to the General Accounting Office and after extensive investigation they finally found the checks which showed that the money had been delivered to the Secretary of Defense of the Philippines, although apparently it never reached the Philippine soldiers for whom it was intended.

As a result of the disclosures of the subcommittee, open hearings were held in the Philippines about this matter, so that the Philippine people—as is the case so many times in other countries—today know so much more about what the United States was doing in their country than the people here know about what is going on in those countries.

We have waited many months in the hope of clearing up this matter after the revelations by the General Accounting Office, but we are now told by the State Department that they will not agree to have anyone appear before the Foreign Relations Committee, except in executive session. Thus, I think it is fair to say that——

The PRESIDING OFFICER (Mr. BELLMON). The time of the Senator from Missouri has expired.

Mr. SYMINGTON. Mr. President, I ask unanimous consent that I may proceed for such additional time as I may require.

The PRESIDING OFFICER. Without objection, is is so ordered.

Mr. SYMINGTON. I think it is fair to say that the people of the Philippines find out this information in public session of their Senate, but the people of the United States, unless State's policy is changed, will never know what happened to the money.

Mr. PROXMIRE. What I am trying to get at is, What do we do about the situation the Senator so well described in his speech? How do we meet it? The investigations by the Senator from Missouri have been enormously helpful, of course, and I hope that they will continue. I am sure that they can give us the kind of intelligence and understanding which will enable us to make better decisions in the future. But, meanwhile, we have a bill before us and a military budget this year asking us to commit $72 billion, overall $75 billion, for defense. How do we know how much to commit?

I say to the Senator from Missouri that if we try to do this on a basis of attempting to meet our obligations, and the Senator from Mississippi tells us we have commitments to 40 countries, for whatever kind of military costs that may involve—50, 60, 70—any number of countries, in terms of what secret agreements we do not know about, perhaps, or other commitments involved, as we did via South Vietnam, an obligation that spread into Laos. It is endless. Therefore, I would hope that the Senate would seriously consider—and I think that the Senator's speech goes quite a way to support this position—putting a limit on the amount of funds that will be made available.

It seems to me to return to the analogy of a board of directors, that when they feel the officers of a company are being extravagant and wasteful, not knowing what their obligations are and their limits, and are spending the funds they have in a way that the board of directors feel is not fully responsible, then they tell the officers of the company to cut the amount they can spend.

We in the Senate have this within our power. It is our responsibility to do it.

I would like to say to the Senator, furthermore, that in the event we took the administration seriously on its assertion that it will now proceed on a 1-plus war strategy and give it all the funds they say this needs—for strategic considerations, including the ABM, phase 1 and 2, the B-1 bomber, including $100 million which is more than the committee asked, and all the other weapons systems like MIRV, the Minuteman, and so forth, and give the Defense Department all of that, and assume that we have no reduction in the Vietnam level of activity below that planned by the Nixon administration, but if we would cut off funds on a general purpose basis that the Senator is talking about, that is, simply conform general purpose forces to the 1-plus war strategy plans, we can save $9 billion.

In other words, the cost of the general-purpose program will go down from $43 to $34 billion, and the cost of the overall budget will go down from $72 to $63 billion. This is pertinent and germane to what the Senator has been talking about. Because I do not know how long we can keep up the situation where we are committing ourselves to fighting all over the world, sometimes simultaneously.

One way to stop this effectively would be to say that we, as public officials, charged under the Constitution with the responsibility of spending money, will spend only so much and that is it.

The Defense Department is going to get along on the basis of obligations that will be limited and will involve 1-plus war maximum.

Mr. SYMINGTON. Mr. President, that is a very interesting idea. I would not say that I agree with it at this time; I would like to study it carefully.

I do think that we have to take steps today that a business takes before it gets into a situation such as the Penn Central did.

The man who in this century inspired the American people most to mobilize for adequate defense under a logical and efficient program was Mr. Bernard M. Baruch.

I think that we need more facts. I think that Mr. Laird has done a constructive job in reducing defense expenditures. But the main point was made in the speech of the Senator from Arizona (Mr. GOLDWATER) and again by the Senator from Mississippi (Mr. STENNIS)—that we tailor the Defense budget to our commitments.

It is essential, therefore, to find out what those commitments are. As the Senator from Arkansas (Mr. FULBRIGHT) just pointed out, no one in the Congress knows what all these commitments actually are. And I have found cases in the executive branch where people whom we would think, on the basis of trying to do their jobs, would know the commitments, did not know them.

My primary purpose in having this discussion this afternoon was to point out that before we proceed to spend tens of billions of dollars of the taxpayers money, we should do our best to get all the facts possible with respect to our commitments.

Mr. PROXMIRE. Mr. President, I congratulate the distinguished Senator from Missouri. Although I am very hopeful that in the next few weeks we can get this information, on our commitments I am very doubtful that we can.

I would appreciate any alternative suggestions that the Senator might have. I do not necessarily think that we should propose a $9 billion cut in the overall defense budget. That may or may not be realistic. However, this issue of the cost of our international commitments ought to be one of the questions that ought to go into the determination of how much money we permit the Defense Department to spend. We will have to make some kind of a decision based on very imperfect, limited, and unsatisfactory knowledge. Under the circumstances, it would seem to me that now is the time for a sharp, decisive reduction.

Mr. SYMINGTON. Mr. President, the Senator from Wisconsin, in his work on the Joint Economic Committee, is interested in the problem of waste. There is not a Member of the Senate who is more anxious to see that whatever money is necessary to spend for the security of the United States should be spent and that we should be taxed in order to do so. However, waste is another matter. Waste has destroyed some of the greatest of all corporations. Waste could destroy the United States.

In this connection I pay tribute to the Senator from Wisconsin who through his committee could well be the person who saves more money for the taxpayers of the country than any other Member of Congress.

Mr. JAVITS. Mr. President, will the Senator yield?

Mr. SYMINGTON. I yield.

Mr. JAVITS. Mr. President, I first compliment the chairman of the subcommittee on which I have the honor to serve. He has been indefatigable in his work and has been tremendously useful to our country in making this inquiry.

I ask the Senator whether the problem we face is not a very deep, fundamental issue of Government which the people must help us to decide.

Mr. SYMINGTON. There is no question about that.

Mr. JAVITS. Mr. President, we are being told that for the health and security of our democracy, many of these things should be secret.

Indeed, the supposition is that we who pry into this matter are busybodies and that we would be better off as a nation if we did not pry into these matters—the

matter of the Spanish bases or the war in Laos which is an undeclared war.

Do we not need the support of the people? We are adult enough so that we will make an agreement even with Franco if we think it is in the interest of our Nation. We do not need any government to tell us about it or to spare us the trouble because they do not think we will consider the matter or are not interested enough or sophisticated enough to do it.

I ask the Senator whether he does not think there should be an appeal to the people of the country so that Congress and the people of the United States, as a result, will be cut in on the action. And, of course, if we do not think something should be done, it will not be done.

Mr. SYMINGTON. There is no question. A few years ago in an open hearing the Secretary of Defense testified that we had over 7,000 nuclear warheads in Europe. Yet for some reason, information with respect to country-by-country location of all U.S. nuclear weapons overseas is highly classified.

Everyone knows that the more nuclear weapons are spread around, the greater the danger of nuclear war. If anyone has any doubt about such danger they ought to look at the pictures in Life magazine this week of Hiroshima and Nagasaki. They should then recognize that we have hundreds of weapons that are 50 times more powerful than that.

I believe there is more protection of the world through disclosure in this field than less. Certainly the other superpower does not want to see a nuclear confrontation which they know would destroy them.

I hope the administration follows the thinking of the Senator from New York and realizes that in a democracy it is often better to tell the people more than less.

Mr. JAVITS. Mr. President, I point out that the Russians are also faced with a crisis in the Mideast as well as on the border of Red China.

Is it not a correct answer to the pertinent question of the Senator from Wisconsin to state that we would have a right to say to the executive branch, "We will give you money for everything you have disclosed. We are satisfied and will adjudge the amount. We will give you money for everything you have not disclosed if you give good reason for not having disclosed it. It is a fact that democracies may have to have some secrets. But we will not give you money in a very selective way for what you have not disclosed and for what you cannot give us good reason for not having disclosed."

Is that not a good rule in accord with Senate Resolution 85, the commitments resolution and the first in this whole direction adopted by the Senate?

Mr. SYMINGTON. The Senator from New York is one of the most able parliamentarians and debaters it has ever been my experience to be associated with.

He is in effect asking me the same question that the senior Senator from Wisconsin asked me but in a different way.

Mr. JAVITS. That is exactly right.

Mr. SYMINGTON. I would rather not answer that question immediately. I would rather answer it as a member of the board of directors of a corporation.

I would like to get as many facts as possible with respect to what I was going to do with stockholders' money before I agreed the money should be put up for the management to spend.

Mr. JAVITS. I think the Senator is correct, but I do think the Senator could answer me. I do not think I asked the same question that has already been asked, and I think the Senator could answer. I shall rephrase my question.

We are perfectly willing to appropriate money for what we know. There are many things the administration says we cannot know. I say if they give us a good reason why we should not know, then we should appropriate the money, but we have the right to judge if that reason is valid. Therefore, the only weapon available to us is to say no if they do not disclose to us or give us a good reason.

Mr. SYMINGTON. We have a right to ask. In certain fields I am not sure that they do not have the right to refuse and I am not completely sure that if they refuse we should, in turn, refuse to give them the money. But those cases would be very minute, and less than one-half of one percent of what we are talking about in the budget.

Mr. JAVITS. I thank the Senator.

Mr. CHURCH. Mr. President, will the Senator yield?

Mr. SYMINGTON. I am delighted to yield to the distinguished Senator from Idaho.

Mr. CHURCH. Mr. President, I rise to commend the Senator for the very able address he has given.

The most basic question the Committee on Foreign Relations faces is the one to which the Senator has addressed himself today.

Ever since the end of the Second World War, we have regarded the world as our oyster. No country in history has formally undertaken to defend more foreign governments than the United States. No major power since Pearl Harbor has engaged in more active warfare than the United States. No country today has as many troops stationed in foreign lands as does the United States.

In the face of this situation and the calamity which has befallen our own policy in Southeast Asia, it is the responsibility of the Committee on Foreign Relations to review our commitments abroad to ascertain whether they are or are not vital to the interests of the United States. Also, we must find out whether we can afford them. These twin objectives have been very much in the mind of the distinguished senior Senator from Missouri; his subcommittee has given not only great attention to these two central questions, but has undertaken the most thorough and probing examination of American involvement abroad that any committee of Congress in either House has given to this fundamental question since the conclusion of World War II.

Mr. SYMINGTON. I thank the Senator for his kind remarks.

Mr. CHURCH. I hope the Senator will continue to pursue the examination of this question until all aspects have been probed and until all committee reports have been released. I hope the Senator will continue to insist on the maximum disclosure of information by the administration; I hope he will persist in his determination to see to it that the American people are fully informed. If he does that, as I am sure he intends to do, we shall have strengthened our democratic institutions and we shall have formed the basis for appropriate legislative action.

The Senate has already taken the first step by repealing the Gulf of Tonkin resolution. Hopefully, the House of Representatives will see fit to repeal that resolution as well. There are many other resolutions, passed in haste by Congress conferring carte blanche authority to the President to conduct our foreign affairs, that need to be reviewed and possibly repealed.

In fact, some of our formal treaties should be reviewed in light of current circumstances. SEATO is such a treaty, honored more in the breach than in the observance by major signatories such as the United Kingdom, France, and Pakistan.

SEATO no longer reflects the power structure that now exists in Southeast Asia. Indeed, it has been rendered obsolete by the events of recent years. It is our responsibility, therefore, to raise the question whether or not such treaty obligations, undertaken in years past, are of continuing pertinence.

Mr. SYMINGTON. If the Senator will yield at that point, the Senator could not be more right because under the SEATO treaty—and the able Senator knows because he is an authority on these treaties—no country is required to act unless it decides at the moment of the "crunch" to do so is in its national interest. In previous administrations, however, the Secretary of State justified going into South Vietnam on the basis of the SEATO treaty and not a single other signatory of the SEATO treaty agreed he was right and not a single other signatory of the SEATO treaty provided help proportionate to ours.

Mr. CHURCH. The Senator is correct. The United Kingdom, France, Pakistan, and others, including the United States, are signatories to SEATO. The time has come to ask if this treaty is or is not excess baggage.

Mr. SYMINGTON. We paid heavily to get the support of some of those signatories.

Mr. CHURCH. I agree. The amount we paid and the arrangements we made would not have come to light, in my judgment, but for the persistence of the press and the investigation the senior Senator from Missouri has undertaken in his subcommittee.

The time has come for us to remind the Senate and the country as a whole that we are at work in the Committee on Foreign Relations on the basic question, What role shall we play in the world at large? When the final record is written regarding this important matter,

great credit will be given to the senior Senator from Missouri. I again commend him on his address this afternoon, and I join him in the position he has taken.

Mr. SYMINGTON. I thank the distinguished Senator from Idaho. There is no one from whom I would rather have such tribute.

I would like to give credit to the relatively small staff I have had on this subcommittee: Mr. Walter Pincus and Mr. Roland Paul, of the Committee on Foreign Relations. They did not sit home and read the cables and listen to the discussions. They went out for weeks and months in these countries and talked to people high up and people not nearly so high up. They came back fortified with the facts. I would like to state for the RECORD, in all sincerity, that if it had not been for the superb work they did in preparing for the hearings we have held in executive session, and some of which we have been able to release to the public, it would not have been possible to get the information I think is so important before making decisions incident to national policy.

Mr. PELL. Mr. President, will the Senator yield?

Mr. SYMINGTON. I am glad to yield to the able Senator from Rhode Island.

Mr. PELL. I, too, would like to congratulate the senior Senator from Missouri not only on his speech but on all the excellent work that has been done by the Subcommittee on National Commitments. I have been privileged to sit in for a short time at some of those hearings.

Mr. SYMINGTON. The Senator is always welcome.

Mr. PELL. I thank the Senator. One of the points he made today concerning secrecy struck me particularly. I happened to be out of town when there was an executive hearing of the Foreign Relations Committee. Later, I wanted a record of exactly what had occurred at that meeting. I asked the staff for a copy of the record, and I was told that it was so secret that the executive branch of the Government had declined even to permit a stenographic record to be made of the hearing. Senators' memories are no different from those of other people, and if we are not at a committee meeting, we should have a record at which to look to refresh our memories and, particularly, to examine in the event we could not be there.

I think the tendency of the executive branch to overclassify is a very real one, and I think the Senator from Missouri has done a real job in pointing it out.

One other thought: I am wondering if the Senator would agree that there is a sort of chicken-and-egg relationship between military potentials and military commitments. There are some countries, like Israel and Portugal, whose military potential is not up to what they judge is their national needs, in one case for their self-defense and in the other case for the carrying out of their objectives in Africa. On the other hand, there are countries like the Soviet Union and the United States with tremendous military potentials, and there we find that the commitments start to catch up to those potentials.

I think we must bear in mind that in Egypt, one of the reasons why the Russians are there is that the Egyptians have been inviting them in with open arms. They have not forced themselves on the Egyptians. One of the reasons we have our commitments is that we had such similar potentials, there was a vacuum area, and we filled up the vacuum in the days of the Dulles treaties. Those areas were filled in to the point where right now our national commitments and our military potentials are out of balance, in fact the commitments may have passed our potentials.

Mr. SYMINGTON. That is a difficult question to answer "yes" or "no." From the standpoint of the fiscal, economic stability of the United States, it worries me that this Nation, with all its problems at home, and with the increasing strength of the other superpower, has the tremendous expense of 374 major military bases abroad and over 3,000 minor installations, along with thousands of nuclear warheads placed in other countries. I think this is one of the reasons why it is important for the Foreign Relations Committee, as has been suggested by the chairman of the Senate Armed Services Committee, and for all committees involved in this matter to find out just what these commitments are, because we are having very serious troubles throughout the world today. We are spending a great deal of money and, what is far more important, we are losing many of the best young men we have.

Mr. PELL. In other words, the Senator believes that there is a very real relationship between, first, a nation's wealth, second, its military commitments abroad, and, third, its military potentials. And, when that balance gets out of line, the country starts to get in trouble?

Mr. SYMINGTON. I would think so. If it does not get in physical trouble, it certainly gets in economic trouble.

MESSAGE FROM THE HOUSE

A message from the House of Representatives by Mr. Berry, one of its reading clerks, announced that the House had passed a joint resolution (H.J. Res. 1328) making further continuing appropriations for the fiscal year 1971, and for other purposes, in which it requested the concurrence of the Senate.

HOUSE JOINT RESOLUTION REFERRED

The joint resolution (H.J. Res. 1328) making further continuing appropriations for the fiscal year 1971, and for other purposes, was read twice by its title and referred to the Committee on Appropriations.

APPOINTMENTS BY THE VICE PRESIDENT

The PRESIDING OFFICER (Mr. BELLMON). The Chair, on behalf of the Vice President, appoints the Senator from Rhode Island (Mr. PASTORE) and the Senator from Utah (Mr. BENNETT) to attend the 14th session, General Conference of International Atomic Energy Agency, to be held at Vienna, Austria, September 22–29, 1970.

AUTHORIZATION OF APPROPRIATIONS FOR MILITARY PROCUREMENT AND OTHER PURPOSES

The PRESIDING OFFICER. The Chair lays before the Senate the unfinished business, which will be stated by title.

The LEGISLATIVE CLERK. A bill (H.R. 17123) to authorize appropriations during the fiscal year 1971 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and other weapons, and research, development, test, and evaluation for the Armed Forces, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes.

U.S. COMMITMENTS ABROAD AND THE MILITARY PROCUREMENT AUTHORIZATION BILL

The PRESIDING OFFICER. The Senator from Mississippi is recognized.

Mr. STENNIS. Mr. President, I yield to the Senator from Arkansas for a question. I understand he has a time commitment.

Mr. FULBRIGHT. Mr. President, I shall not detain the Senate. I wanted to ask a question relative to what I was saying a moment ago. Has the committee had an opportunity to consider the proposed agreement with the Spanish Government?

Mr. STENNIS. No; we have not. I know, in a general way, about it, but we have not had.

Mr. FULBRIGHT. In that connection, does not the Senator believe it is very difficult to tailor our military appropriations if the Senate, and especially the Senator's committee and the Senate Foreign Relations Committee, have never had an opportunity to ask questions about it and discuss it and develop what it really means?

Mr. STENNIS. I know, in a general way, about the substance of it, but we have never had hearings on it or taken any formal action on it. I do not think there is any commitment there, frankly, as I understand it, that is of any shocking consequence one way or another, and it is not expected to involve a great deal of commitment on our part.

We have a continuing operation of bases, and we will have some consideration. I do not think it is a major matter, frankly.

Mr. FULBRIGHT. The Senator does not think it is a major matter?

Mr. STENNIS. No; I do not.

Mr. FULBRIGHT. If it were a major matter, does not the Senator believe the Committee on Foreign Relations and the Senate ought to approve of it, if it were a major matter?

Mr. STENNIS. Yes; that would suit me fine. But there is no doubt or suspicion, now, to be thrown on this bill

that is before the Senate, just because the Committee on Foreign Relations has not gone into the Spanish agreement.

Mr. FULBRIGHT. Well, they have not submitted it to the Senate for approval. That is the point.

Mr. STENNIS. It is up to the Senator and his committee to assert themselves on that. I do not think it has any substantial bearing on the military procurement bill.

Mr. FULBRIGHT. I am soliciting the support of the Senator from Mississippi. If we make commitments, if Spain is a commitment, then they should be submitted to the committee and the Senate for approval. The support of the Senator from Mississippi for this principle would be very important.

Mr. STENNIS. I am depending on the Senator from Arkansas to go into that. I am certainly not going to pass on the matter prematurely. I think the Senator's committee has jurisdiction over it, and has an interest in it, the way it looks to me.

Mr. FULBRIGHT. I thank the Senator.

Mr. STENNIS. Mr. President, the Senator from Missouri and I have sat side by side on the committee for a good number of years, and no one has profited any more than I have from his advice and counsel and association. The association has been very pleasant in a personal way, and his counsel and advice have been very pleasant and also very helpful in an official way. So my kind feeling toward him is constant and steady.

I know also that he has done a lot of hard work and he has done a lot of fine work as chairman of this subcommittee. He has worked on it and deserves credit, that is the way I look at it.

Mr. SYMINGTON. Mr. President, will the Senator yield?

Mr. STENNIS. Yes, I yield to the Senator.

Mr. SYMINGTON. I fully reciprocate with my respect and regard, for the distinguished Senator from Mississippi.

Mr. STENNIS. I thank the Senator for his very fine and generous words. I value his statement.

I would just say this: This is a matter that I am interested in and concerned about, and it is a matter, if the Senator will remember, that we got into a little once, and started some hearings, several years ago, and had Secretary of State Rusk before us for two appearances, that I recall.

The war worsened about that time, and we did not get into it further. I mention that just as an expression of interest in this broad subject matter.

But at the same time, now, I do not want the Senator's concern—and he is sincere in it—and the concern of the Senator from Wisconsin about waste, and the Senator from Idaho mentioned haste—I do not want there to be built up here an atmosphere that will obscure anything about the merits of this military procurement bill. This is an important matter. It is a bill that we have to pass; and, as I said today in the presence of some Senators, I wish it were two bills, one for this military procurement which is so important, and the other about the war in Southeast Asia. That is important, too. But I think really they ought to be handled separately, and if I have anything to do with it next year, I am going to recommend that we bring it in in the form of two bills.

But now back to the main point. As to the discussion, here, about waste, I am sure there is some, but everything does not always come out just right in running a railroad, or running, a business, or running a military department, particularly with an important weapon that has to be created from the mind of someone on into a perfected instrument. There are going to be stops and starts and backs and fillings, and disappointments, and it is going to cost a lot of money. It is going to cost more and more money. If we are not going to have those weapons until we are certain there is not going to be any waste, we just will not have the weapons.

But I wish to address myself principally here to the idea that the people are entitled to know. That is a good sounding sentence, and generally speaking, it is good logic and commonsense.

But I think the people, for who have thought about this matter, there are a lot of things they do not want to know. They want it taken care of here, the best we can, so as to be effective, and they are willing to not be told all these matters. I am going to give an illustration.

In my humble opinion, of all the things we have had save us the most money since I have been at the Armed Services table, the most important is the U–2. I think the U–2 saved us billions of dollars. I shall not go into details on that, but if 537 Members of Congress had been told all about that instrument from the date it was started until, as time went on, it was almost shut down, there would not have been a chance for it to have been so effective, to have brought us so much information that, just in terms of money, was worth literally, as I see it, billions of dollars.

That is a mild illustration. I am not one who is possessed of a great deal of knowledge. What is in my mind is not more important than what is in anyone else's. I do not have a great many things in my mind that the average Senator does not know about. But it is just a part of the commonsense situation that somebody has to know about some of these secret matters, and I never have turned down any Senator, to tell him, if we were talking head to head, what I know about some of these matters that have not accrued.

But that is altogether a different situation from telling a roomful of men. In sitting down, as I see it, and talking to a person, and confiding with him about some plans that the military or any other department has, that you think are valuable—and many of them are—he will understand a whole lot better the seriousness of it, than to have a hearing of some kind, with people coming in and leaving the room, and having to have some staff members around. Some things just have to be kept quiet for a while. That is my attitude toward it. I shall be glad to surrender what special obligation I have in this connection. It is not something I solicit nor particularly like, but I know that we have to keep some of these things on the quiet.

I think that is what the people want us to do. I think they think we talk too much, rather than too little. I think sometimes what I need is more judgment to pass on the facts I already have, than just to be accumulating more and more facts. What we need to do is make the best judgment we can and then, when it comes our turn, we can make another judgment on what it before us.

It seems as though there is a suggestion that somebody is doing something wrong, that they are witholding matters.

Who are these malefactors? Who are these wrongdoers? Mr. Johnson was President of the United States for 5 years. Mr. Nixon has been President a year and a half. Mr. Laird has been over the Pentagon a year and a half, and Mr. McNamara was there before. We could name a great number. What is the source of these wrongdoings?

I know Senators are not accusing them of being traitorous, or anything like that.

Mr. SYMINGTON. Mr. President, will the Senator yield?

Mr. STENNIS. I yield.

Mr. SYMINGTON. I am not accusing anyone of anything. The Senator from Mississippi mentioned the fact that he thinks we talk too much. Sometimes the American people think we spend too much.

Mr. STENNIS. Well, that is correct, too. I think myself I vote too many dollars sometimes.

But this bill is here, based on the best knowledge that we know anything about, and I think even though they do wear military uniforms, as the Department of Defense, it pretty well represents the best they can do; and we all know Mr. Laird, we knew Mr. McNamara, and we knew these Presidents.

I think it represents a lot of hard work and a lot of hard effort, and is the best they could do under the circumstances. I disagree with them myself on some points, but that is just a part of life here. The bill is a must to pass, I mean, and we have to make a start on it.

We will have a good debate, but I just do not want it to be beaten to death here on the grounds of just a difference of opinion about a weapon. The Senator from Missouri knows more about weapons than I do .

Mr. SYMINGTON. Mr. President, will the Senator yield?

Mr. STENNIS. I yield.

Mr. SYMINGTON. The reason for my talk this afternoon is that the able Senator from Mississippi delivered an address before the Senate last week in which he said that the military budget was tailored to our foreign commitments. In that speech he suggested—in the original copy I received—that the Committee on Foreign Relations look into these commitments. Inasmuch as I am chairman of a subcommittee that has been looking into this matter for a year and a half, I appreciated the fact that later when he delivered the statement on the Senate floor he said we have to look into it more than we already are.

Let me assure the Senator that in no way am I criticizing any action on his

part. I would not have made this talk this afternoon if he had not gone into great detail as to the nature and character of the treaties we have and the importance of looking into the commitments arising from them.

Inasmuch as he, himself, advanced the idea of tailoring our defense budget to our commitments and inasmuch as apparently he was unaware of the extent of the efforts that had been made, I felt it was advisable to set the record straight about the work that has already been done.

Mr. STENNIS. I think the Senator's speech was relevant and very fine. I was addressing my remarks to the questions that were built up here to cast a doubt about the solidarity of this bill.

I understand that the Senator from Wisconsin would like me to yield. I yield to the Senator.

Mr. PROXMIRE. I am not sure that I understand what the Senator from Mississippi is saying. He is such a logical and thoughtful and considerate man, that I want to be sure that I do not misunderstand him.

The Senator from Mississippi seems to be saying that the American people do not want to know some of this information. I assume he is not saying that the American people do not expect their U.S. Senators and Representatives, when they vote on expending money, do not know fully the reason why they cast that vote, why it is necessary for us to spend over $19 billion in this procurement bill and, overall, more than $70 billion for the Defense Department, when a very vital reason for our spending so much as the Senator from Mississippi pointed out in the speech he made the other day, is that we have obligations not only on our own shores but all over the world as well.

Is it the position of the Senator from Mississippi that the American people do not want Congress to know fully about what these obligations are and the extent to which they require us to appropriate more funds to produce more weapons?

Mr. STENNIS. No. I did not make any statement to that effect. I said that sometimes the people want us to use our judgment and do the best we can on the facts we have; and I believe we have a good bill here, and we want to move on. The people know. They get plenty of this. The news media do a very good job. We have access to most of what we need here, I believe, as their representatives, and we must keep it that way.

Mr. PROXMIRE. I was disturbed by the reference the Senator from Missouri made to the Laotian situation, when he said that members of the Committee on Armed Services were not informed and members of the Committee on Foreign Relations were not informed of the pertinent facts, although we are spending hundreds of millions of dollars in Laos. This information had not been disclosed or revealed. This is the kind of information, it seems to me, that we, as U.S. Senators, have an obligation to insist on if we are going to appropriate funds.

Mr. STENNIS. The Senator certainly can get that information, too, I think. There are some matters which by their nature have to be handled by some committees. Some matters about which he is talking were not handled by the Armed Services Committee but some were.

Mr. PROXMIRE. The Senator from Mississippi would understand—and perhaps he would strongly disagree—that some Members of the Senate might feel that to the extent they are not given information, under those circumstances they have a right and a duty not to appropriate the full funds that are requested.

Mr. STENNIS. I have never discouraged them. There are many things I cannot say on the floor, for publication to our adversaries, weaponwise. But I said before that I have never refused to talk to a Senator in full about any matter about which he inquired; and I say that here again to the Senator.

Mr. PROXMIRE. I thank the Senator from Mississippi.

Mr. STENNIS. The Senator is entitled to anything I know.

Mr. PROXMIRE. The problem is that none of us really seems to have the answers on the extent of our obligations overseas to the many countries, which could involve the expenditure of billions of dollars. We do not have that information. It does not seem to be available. That is why I think the Senator from Missouri's speech was valuable today in delineating how vast our ignorance is.

Mr. DOMINICK. Mr. President, will the Senator yield?

Mr. STENNIS. I yield to the Senator from Colorado.

Mr. DOMINICK. I have been listening to this colloquy with great interest, and have read the statement of the distinguished Senator from Missouri.

I was struck particularly by the reference to Laos, to which Senator PROXMIRE has just made reference. I recall that the Members of the Senate, as a whole, were briefed on this subject by President Johnson during his tenure in office. I also recall that a number of Senators went to Southeast Asia and received briefings there on what was going on in Laos. In fact, some of them, including the Senator from Missouri, as I recall, actually went into Laos during that period.

I also know that some Senators have requested briefings on this subject before and have always received them. So far as I know, no briefings have been turned down either by our committee or by members of the Defense Department or other agencies.

I do not understand why, simply because this information was not made public—which might have had an adverse effect on national relationships around the world—somehow it is deemed to be culpable in the public eye. As the Senator has said, it seems to me that there are inferences which are unsaid, but they are inferences, which should not come into play in this bill and probably should not come into play at all, unless we are arguing about a whole change in foreign policy and a different bill. In that case, I think it is legitimate.

Mr. SYMINGTON. In reply to the able Senator from Colorado, let me say that in 1965 I requested approval to go to Laos. I have had a good many briefings in this town; some of them provided a great deal of information; some not very much.

It was requested by a representative of the State Department that I not go into Laos; so I went up to Udorn, in northern Thailand, and met the Ambassador.

As a result, the next year I was determined to go into Laos, and did arrange to go in, despite the fact that further objections were raised.

I can say to the Senator from Colorado, that some of the information as to just what we were doing in Laos I did not learn until we had witnesses under oath before our subcommittee of the Foreign Relations Committee. Perhaps I would not even have received that information if it had not been for information obtained by the staff when they went to Laos some time after I had been there.

Once again, it is important, as I see it, to go out in the field and get the facts in a case of this character.

I would be glad to talk to the Senator off the record about the details of what I never knew, even though I spent a great deal of time in Laos, particularly northern Laos.

Mr. DOMINICK. I shall be brief. This has been an interesting colloquy. It does one thing, if nothing else, it points out the results and the problems that the military and the Armed Services Committee have in trying to perform their functions when commitments have been made by other people elsewhere.

Mr. SYMINGTON. I could not agree more.

Mr. DOMINICK. Yet, all over the country we hear criticism of the military when, in fact, it has been in large part due to the civilians who have made the commitments which we have asked the military to fulfill.

Mr. SYMINGTON. There is no question about that. I fully agree with the Senator on that observation.

Mr. STENNIS. Mr. President, I shall conclude my remarks quite quickly now, if I may. The Senator from Missouri mentioned the Philippines and the Philippine Government and their soldiers in South Vietnam. We were also talking about Laos. I tell you, Mr. President, that the attitude of all of us has been to get all the help we can in this war in Southeast Asia. We have lamented the fact that we could not get very much help anywhere. I asked everyone in Western Europe that I talked to there in an official way about this thing years ago, and as late as 2 years ago. We were also trying to get people in the Asian part of the world to come in and help us and bring in men or send in men. I thought everyone knew that we were paying some soldiers from the Philippines. I did not know that that was secret. However, I did know a good deal about Laos.

Mr. SYMINGTON. We put the money out for the Philippine soldiers, that was the sworn testimony of the Acting Ambassador. But the General Accounting

Office investigation cannot prove it and the Philippine Government says that the soldiers did not get it.

Mr. STENNIS. My point is, we were trying to get all the help we could. I was pleased that they were there. We were trying to get the situation in Laos favorable. It might have been there was not any more said about it, and maybe some of those governments did not want any more said about it. That question is all mixed up in it, but we have not been successful in getting any help over there—at least any appreciable help. We do appreciate the help we did get, so that perhaps what money we did spend, even if it did not reach all of its destination, was worth something to us.

I want to be sure that the Senator understands this. I have paid my respects to the hard work of the Senator from Missouri. He never stops. He is after things that are important and things that count. I am glad that he is working on this subcommittee. However, I do not believe that we can create foreign policy here in opposition to a military bill, or even in support for it, so much. These problems are already on us, those that are in the bill. We have to move forward. I want to revise our foreign policy. I said so in the speech to which the Senator from Missouri referred. I have said that before. It is something that I think is the most serious matter now before the country outside of the war in Southeast Asia.

I hope that this will continue, but, we have got to create a foreign policy that is based on foreign policy and not just on a few weapons here and there. Thus, I hope that this debate can proceed. The Senator has made a great contribution. I hope that we can get down to some amendments and I expect good debate on them.

Mr. President, those are my remarks and observations on this subject, and I am glad now to yield the floor.

Mr. SYMINGTON. I am certain that all Members of the Senate and the American people know of the dedicated work of the distinguished Senator from Mississippi. As the Senator from Colorado (Mr. DOMINICK) points out, when we get into military matters, we automatically seem to get into matters of foreign policy and vice versa. As a result I think, inasmuch as the able Senator from Mississippi has been so gracious this afternoon, and in pointing out last week that the military budget is based on our foreign commitments, that the analysis and the details of these foreign commitments will be, in the long run, of great service to the American people.

I think it is clear the security of the Nation depends not only on our physical capacity to destroy an enemy, but also on a viable economy and the faith of the people in their government.

Let me assure the chairman of the committee, that nothing I have said this afternoon is in any way critical of the fine work he does in the interest of the armed services.

Mr. STENNIS. I thank the Senator and I fully understand his remarks and the spirit in which he made them. I believe he does mine as well. Again, his speech was relevant and pertinent and very helpful.

Mr. President, I yield the floor.

ORDER FOR RECOGNITION OF SENATOR SPONG TOMORROW

Mr. BYRD of West Virginia. Mr. President, following the remarks of the able Senator from Arizona (Mr. FANNIN) on tomorrow, I ask unanimous consent that the able Senator from Virginia (Mr. SPONG) be recognized for not to exceed 30 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR THE TRANSACTION OF ROUTINE MORNING BUSINESS AND CONSIDERATION OF UNFINISHED BUSINESS TOMORROW

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that, following the orders under which speeches by Senator FANNIN and Senator SPONG will be made tomorrow, there be a period for the transaction of routine morning business, with statements therein limited to 3 minutes; and that, upon completion of the transaction of routine morning business, the unfinished business be then laid before the Senate.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF SENATOR CANNON TOMORROW

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that, when the unfinished business has been laid before the Senate on tomorrow, the able Senator from Nevada (Mr. CANNON) be, at that time, recognized for not to exceed 1 hour.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF SENATOR McINTYRE TOMORROW

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that, following the statement by the Senator from Nevada (Mr. CANNON) on tomorrow, the Senator from New Hampshire (Mr. McINTYRE) be recognized for not to exceed 1 hour.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER OF BUSINESS

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF SENATOR GOLDWATER TOMORROW

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that on tomorrow, following the remarks of the able Senator from New Hampshire (Mr. McINTYRE), the able Senator from Arizona (Mr. GOLDWATER) be recognized for not to exceed 30 minutes.

The PRESIDING OFFICER (Mr. BELLMON). Without objection, it is so ordered.

SENATOR RANDOLPH SPEAKS ON PRIORITIES AND PLANS FOR FUTURE DEVELOPMENT OF APPALACHIA

Mr. BYRD of West Virginia. Mr. President, earlier today my colleague from West Virginia, Senator RANDOLPH, spoke in our State at Charleston to approximately 400 citizens from several areas of the Appalachian region.

My colleague had hoped to return to Washington in time to be in the Senate for the vote on the conference report on education, which was agreed to by a unanimous vote of 88 to 0.

Senator RANDOLPH is a member of the Senate Subcommitee on Education and has labored constructively to develop legislative programs to strengthen our educational effort. He was, in fact, addressing his remarks in West Virginia to an audience of educators of the Appalachian region.

I ask unanimous consent to have printed at this point in the RECORD the speech of Senator RANDOLPH given in our State this morning which caused him to be absent for the conference report vote, which he would have supported by voting aye had he been able to be present.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

PRIORITIES AND PLANS FOR FUTURE DEVELOPMENT OF APPALACHIA

(Address by Senator JENNINGS RANDOLPH at the annual membership meeting, Appalachia Educational Laboratory, Morris Harvey College, Charleston, W. Va.)

In recent weeks there has been much interest in the census reports as released by the Federal Government. In some instances predictions have been proven correct and in others the forecasters have again been shown to possess the usual human shortcomings.

It was 10 years ago that the last census pointed up in rather dramatic terms many of the problems of the Appalachian region. At that time cold, hard statistics showed clearly that the freewheeling days of careless dependence on a largely one-industry economy had come to a halt.

There was an awakening to the past neglect, at least in part, of Appalachia and a new realization that something unique was needed if this region were not only to compete economically with the rest of the Nation but to provide a good life for its citizens.

The result was new thinking and new institutions, such as the Appalachian Regional Commission and the Appalachia Educational Laboratory.

Now we are beginning to see the fruits of these innovations and can look more hopefully to the future. Those of you who heard Ralph Widner on Sunday night know what has been going on in the Appalachian region and have a good idea of the direction in

which we are going—not, I stress, without your very real contributions.

The 1970 census and what it means for Appalachia, both in terms of what has transpired in the past decade and the indications it gives for future action, is of concern.

First, it is obvious that many of those involved in the affairs of Appalachia missed their mark with predictions of a significant population growth in the past decade. It is apparent that several governing factors, notably a lower birth rate, were not properly considered. Accordingly, the regional population increase of only about one per cent was below estimates.

And while the ten-year population trend as a whole looks discouraging, particularly in states like West Virginia, a closer analysis softens this blow. We are told that two or three years ago a turning point was reached at which the net outward migration virtually stopped.

Portions of Southern Appalachia now are actually areas of in-migration and the trend appears to be moving northward. Information indicates that the out-migration movement should stabilize in Central Appalachia within the next year or two.

This is encouraging news and is indicative that our efforts have not been in vain.

Meanwhile, however, there has been concern and considerable wounded civic pride over the greater-than-expected population loss in West Virginia. To a degree, I can understand this. We have accepted the notion that big is best and population growth is a mark of progress. It is therefore damaging to our collective ego to find that, despite all our labors, there continue to be fewer people within our boundaries.

I hope preoccupation with numbers will not become so compelling that the real goals of Appalachian development are obscured. Producing a larger population is not an end in itself. What we must strive for is a happier, more secure and productive life for the people who live here, however many of them there may be living in this state.

Yes, there must be opportunities and encouragement for people to stay here if they want to remain in their homeland, and for those persons who come into the area from other sections of the country. And if this good life is available in our mountains, then there is a lesser need to worry about declining populations.

Population shifts, though, do give added emphasis to the necessity for altering existing institutions and creating new mechanisms whereby the wishes and needs of citizens can be met effectively.

Prominent among these is the need in many instances for government revision. The population decline in West Virginia, for example, strengthens what I believe are already real reasons for thinking about serious alterations to the structure of government.

As you know, many of the ways we act today are the end products of historical development that may bear no rational relationship to contemporary needs. In West Virginia, to take the situation with which I am familiar, there are 55 counties, each with its own courthouse and full set of local officials and government organization. This may have been necessary 30 years ago when travel was difficult, particularly in these mountainous areas, and county seats needed to be reasonably accessible.

Today, of course, public affairs can be conducted over a large area, and the local government structure under which West Virginia operates is probably ripe for serious revision. The same holds true, I hardly need tell you, for educational systems, operating as they do under the same restrictions not only of geography but of laws and regulations tailored for an earlier day. With new and improved roads we have strengthened our educational system through consolidated schools.

There is movement—slow, but real—toward consolidation of local governments and, perhaps just as important, cooperative efforts among local governments with common problems. This trend, I believe, needs to be nurtured and expanded, especially in Appalachia where we acknowledge that the resources are inadequate to realistically cope with the accumulated demands for public services.

I am aware of the practical problems involved in any consolidation of governmental units. There is, however, a challenge to which cooperative effort and increased efficiency can contribute to the strengthening of local institutions.

I am glad that organizational streamlining has been encouraged through the Appalachian development program and educationally through the laboratory. The local development districts organized under the sponsorship of the Appalachian Regional Commission are, in my thinking, an important breakthrough in getting varying groups to join ranks in a common cause.

This movement has not progressed as far in West Virginia as in some other states or as I would have hoped, but this state has moved in other areas, including the creation under Appalachian sponsorship of a central information system on Federal grants coming into the state. This type of government modernization is an important part of the entire Appalachian development effort.

There is also another, perhaps less apparent, need in Appalachia. This is the requirement for capital funds with which to finance economic development.

The problem is not necessarily a shortage of money in the region. It is, instead, a question of pooling these funds and encouraging their investment in Appalachia. A recent study by the Appalachian Regional Commission disclosed that in a 60-county area covering parts of West Virginia, Virginia, Kentucky and Tennessee, $51 million in local capital was invested outside the area in one year.

This problem is recognized, and steps are being taken to correct the situation. Again using this state as an example, the West Virginia Housing Fund was created by pooling money from 74 banks in the state. This money, much of which was leaving the state, is now being used to build much-needed housing in West Virginia.

I think we all recognize that Appalachia's greatest resource is its people. And the people often receive their greatest strength from the land—a land we have scarred to too deep a degree. This fact is coming more and more to be generally accepted. It is evident in what I see as a new spirit among the people of Appalachia, to correct abuses and create a more wholesome climate and condition to rebuild, and to build anew.

Hope and enthusiasm are rapidly replacing the despair and resignation that we accepted as the norm not too many years ago. I am convinced that the creative nature of the Appalachian efforts and the results they have produced have released and fostered the growth of this spirit.

Citizens have rejected the notion that failure and deprivation are their fate. With the encouragement of you and people like you, people, including youth, are coming to know that a better life is available, but it can be had only if we are willing to work together.

We in government and industry and business can provide the tools and the assistance, but in the final analysis the future of Appalachia rests with the people. I do not pretend we have done much more than make a good start, but we now have a base on which to build.

The Appalachian development in which we are engaged is already having an impact outside the region. This unique form of Federal-state relationship has proven to be a viable concept and is being scrutinized throughout the country.

President Nixon's recent meeting with the Appalachian governors in Louisville is indicative that our work is being studied in the highest circles of government. What is going on here in Appalachia could well be the pattern for changing certain government operations throughout the United States.

Much good has been accomplished in Appalachia, and I know we will have even greater accomplishments ahead.

ORDER OF BUSINESS

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

AIRPORT OPERATORS COUNCIL QUESTIONS APPROPRIATIONS FOR THE SST

Mr. PROXMIRE. Mr. President, there are new cracks in the SST's armor. The growing opposition to the SST now includes some of the most respected voices within the industry itself. In a letter to the Subcommittee on Transportation Appropriations dated July 24, 1970, the Airport Operators Council International has asked the Senate not to appropriate any more funds for the SST until it can be demonstrated that the SST can meet the stringent noise standards now in effect for subsonic jets.

A copy of the council's letter to the subcommittee was sent to me with a covering letter by Mr. J. J. Corbett, the council's vice president for Federal affairs. I ask unanimous consent that both letters be printed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. PROXMIRE. Mr. President, the concern expressed by the Airport Operators Council should not be lightly regarded by the Senate. The council comprises the operators of airports which handle 90 percent of U.S. domestic traffic, and nearly 100 percent of international traffic in this country. If any group should be attuned to the problems of aircraft noise, and what should be done to control it, it is the Airport Operators Council. Indeed, the council's letter notes that:

> We are ever mindful of the fact that new aircraft must be compatible with existing airports and with the communities near them.

The council's unequivocal recommendation: Postpone any funds for the SST until Congress and the public can be assured that the SST will meet existing noise criteria:

> We therefore respectfully urge the Senate to approve the expenditure of public funds for further development of the SST only if the Congress and the country can be assured beyond doubt that the SST will meet the stringent noise standards necessary to permit it to operate at existing airports.

Mr. President, under the recently enacted Aircraft Noise Abatement Act—Public Law 90–411—the FAA has set airport noise limits of 108 decibels for new jet aircraft. To date, these limits apply only to subsonic aircraft. As the council's letter notes:

> We have no assurance as yet that the SST will meet this requirement.

In fact, it is likely the SST will not even come close to meeting these limits. The only question is, how much noisier is it going to be?

All the experts are in pretty close agreement on the number of decibels the SST registers. These include Boeing technicians, Department of Transportation officials, and Government science advisers. They agree upon a range of 124 to 130 decibels of sideline—airport—noise for the SST. The dispute on this issue, such as it is, centers on what this noise will sound like.

Dr. Richard Garwin, science adviser to Presidents Kennedy, Johnson, and Nixon, told the Joint Economic Committee in May that:

> The SST will produce as much noise as the simultaneous takeoff of 50 jumbo jets.

Russell Train, Chairman of the Council on Environmental Quality, told the committee that:

> In terms of . . . annoyance, the SST would be 3–4 times louder than current FAA sideline noise standards and 4–5 times louder than the 747. And William Magruder, who directs the Office of Supersonic Transport Development, simply stated to the Committee that "we have a problem on the sideline."

Mr. President, I am in no position to predict whether the SST's sideline noise will be 50 times as great as existing jets, or "only" four to five times louder. It is not particularly significant who has the better of this argument. What is significant is that the SST on the ground will produce far more noise than any presently existing aircraft, and will exceed present FAA noise standards by several multiples at a minimum. On this point there is no dispute.

In light of this, the recommendation of the Airport Operators Council is hardly surprising:

> The magnitude of the appropriation now considered by your subcommittee for further development work on the SST requires that the key question of noise be settled *before the expenditures are authorized. We do not believe that the Department of Transportation should be authorized to spend funds for the SST project in the hope that the noise level will be limited at some future date by the FAA,* another branch of the same department. We urge the Senate to get the necessary assurance on noise performance now or to write noise limitations on the SST into law as a condition of any future appropriations. (Emphasis supplied.)

Can we avoid these problems by building new airports? The council's letter also sets this notion to rest:

> It is completely unrealistic to believe that the public would permit or tolerate the introduction of an SST which requires new and larger airports. On the contrary, we think the public will demand that any new aircraft represent a meaningful improvement in the noise level for community acceptance.

Mr. President, whenever the question of noise, or other environmental pollution, is raised, the SST's proponents tell us that we have no way of knowing whether the SST will be compatible with the environment until we go ahead and build it. They argue:

> Let's go ahead and build it, and we're confident that American ingenuity will somehow solve these problems. If it can't, then we'll just scrap the whole thing.

Aside from the tremendous waste of money and resources implicit in this argument, there is good reason to believe that the FAA, in its dual role as overseer of construction and arbiter of noise standards, may be less than exacting in setting and enforcing SST noise standards. Under Secretary of Transportation Beggs tipped the Government's hand on this when he testified before the Joint Economic Committee this spring. He told the committee that the Department's concern was with the "total footprint" made by the SST. He then told the committee that when the time comes to certify the SST, if the total footprint made by the plane is acceptable, then "even though it does not quite meet one of the criteria, then we will modify the rule."

Mr. President, that is precisely my concern. And that is precisely the concern of environmentalists everywhere. Once this plane is built, whether or not it can satisfy the various environmental standards, the FAA will be forced to "modify the rule" in order to protect the Government's huge investment in this plane.

The Department of Transportation is extremely vague on this point. Just what does Mr. Beggs mean by "not quite" meeting noise criteria? Is 125 to 130 decibels acceptably close to the 108 decibel standard? Does three to four times existing standards qualify as "not quite" measuring up?

Mr. President, it is clear, to this Senator at least, that we cannot go ahead and build this plane and then rely on the FAA to set appropriate standards.

I urge the Senate to heed the council's advice that no funds be provided until we are "assured beyond doubt" that the SST will meet existing noise standards. Judging by the testimony of all the experts we have heard, such assurance will be a long time in coming.

Mr. President, I ask unanimous consent that in addition to the two letters I mentioned earlier, an article on this subject from the July 24, 1970, edition of the New York Times be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AIRPORT MEN URGE CAUTION BY SENATE ON NOISE OF SST

RED BANK, N.J., July 23—The Airport Operators Council International urged today that the Senate get assurances on noise limits before authorizing further expenditures on the United States supersonic jetliner.

The directors of the council, representing executives of all major airports in the country, released the text of a letter to Senator John C. Stennis, the Mississippi Democrat who is chairman of the Appropriations subcommittee on the Department of Transportation.

It was signed by Matthias E. Lukens, president of the council, who is executive director of the Port of New York Authority. The authority operates the major airports in the metropolitan area.

It recommended further funding of the supersonic transport "only if Congress and the country can be assured beyond doubt" that it will meet "the stringent noise standards necessary to permit it to operate at existing airports."

The letter said it would be "completely unrealistic to believe that the public would permit or tolerate introduction of an SST which required new and larger airports."

It said the council had no assurance as yet that the SST would meet the noise standards recently adopted by the Federal Aviation Administration. The council added that it saw no reason for exemption from these standards.

In view of the magnitude of the appropriations required, the council said, "the key question of noise" should be settled first.

The three-day council meeting at the Molly Pitcher Inn here will end tomorrow.

EXHIBIT 1

AIRPORT OPERATORS COUNCIL INTERNATIONAL, INC.,
July 24, 1970.

Hon. WILLIAM E. PROXMIRE,
Washington, D.C.

DEAR SENATOR PROXMIRE: For your advance information we are enclosing a copy of our letter of this date to Senator Stennis, Chairman of the Senate Department of Transportation Appropriations Subcommittee, with regard to the views of major U.S. airport operators on the proposed Fiscal Year 1971 appropriation for U.S. civil supersonic transport.

As you will note, this policy recommendation of the AOCI General Board of Directors urges the Senate to approve the expenditure of public funds for further development of the SST *only if* the Congress and the country can be assured beyond doubt that the SST will meet the stringent noise standards necessary to permit it to operate at existing airports. In addition, the Board policy suggests that the key question of the aircraft noise characteristics of the SST be settled before the requested expenditures are authorized.

Sincerely,

J. J. CORBETT,
Vice President, Federal Affairs.

AIRPORT OPERATORS COUNCIL INTERNATIONAL, INC.,
July 24, 1970.

Hon. JOHN STENNIS,
Chairman, Subcommittee on Transportation, Committee on Appropriations, U.S. Senate, Washington, D.C.

DEAR SENATOR STENNIS: The General Board of Directors of the Airport Operators Council International would like to submit for your consideration some thoughts on the appropriation now pending before your subcommittee for further development of the supersonic transport.

As the operators of the airports which enplane 90 percent of the country's domestic passengers and virtually all of its international airline travelers, the members of AOCI are vitally interested in the continued progress of aviation, including the development of new aircraft. But we are ever mindful of the fact that new aircraft must be compatible with existing airports and with the communities near them. In view of the fact that local opposition to aircraft noise is one of the most serious problems facing aviation today, it is apparent that community acceptance of new aircraft must

be the key to continued aviation progress and growth.

We therefore respectfully urge the Senate to approve the expenditure of public funds for further development of the SST only if the Congress and the country can be assured beyond doubt that the SST will meet the stringent noise standards necessary to permit it to operate at existing airports.

During the early stages of the development of the SST, airport operators, airlines and the public were told that compatibility with existing airports would be one of the major design criteria. More recently, the Federal Aviation Administration, as directed by the Congress in Public Law 90–411, has adopted a requirement that new aircraft must not exceed a noise level of 108 EPNdB (effective perceived noise decibels). But we have no assurance as yet that the SST will meet this requirement.

It has taken all the energies and resources of the world airport operators to provide adequate airports for existing aircraft. Our efforts to do so have been hampered because the overwhelming public reaction to excessive aircraft noise has resulted in restrictions to operations and opposition to expansion of existing airports and development of badly needed new airports. Under these circumstances, it is completely unrealistic to believe that the public would permit or tolerate the introduction of an SST which requires new and larger airports. On the contrary, we think the public will demand that any new aircraft represent a meaningful improvement in the noise level for community acceptance.

The new Federal standard of 108 EPNdB is an important step forward. We see no reason why an aircraft should be given special exemption from the Federal maximum noise regulations, no matter how great a technological advance it may represent.

The magnitude of the appropriation now considered by your subcommittee for further development work on the SST requires that the key question of noise be settled *before* the expenditures are authorized. We do not believe that the Department of Transportation should be authorized to spend funds for the SST project in the hope that the noise level will be limited at some future date by the FAA, another branch of the same department. We urge the Senate to get the necessary assurance on noise performance now or to write noise limitations on the SST into law as a condition of any future appropriations.

Sincerely,

MATTHIAS E. LUKENS,
President.

Mr. PROXMIRE. Mr. President, I conclude by pointing out that a number of expert competent witnesses with a great deal of experience in this area told the Subcommittee on Economy in Government of the Joint Economic Committee that even though the FAA should certify a higher noise standard, that the airport authorities would be in a position to refuse to let the plane land. In my judgment, on the basis of this latest information from the Airport Operators Council there is every reason to expect that the airport authorities would preclude the SST from landing and they would start, in my view, when the British-French Concorde SST comes. Of course, the British-French Concorde people feel the Federal Government is supreme and could overrule airport authorities. This is not the case.

We have had the testimony of top officials in the FAA who admit it is not only possible but very likely that the airport authority itself would and could have every right to exercise any judgment they want on what planes would land. To expect them to submit the community in which the SST would operate to this terrific noise is to expect a most unlikely situation.

Mr. HANSEN. Mr. President, will the Senator yield?

Mr. PROXMIRE. I yield.

Mr. HANSEN. Mr. President, I am very pleased that the distinguished Senator from Wisconsin raises the questions he does at this time. I have been concerned for some time. I have written to officials I considered appropriate expressing some very grave doubts and anxieties that are held by me and many other people in Wyoming.

We happen to be in one of those corridors throughout the United States wherein jet aircraft are permitted to fly at supersonic speeds. As the Senator knows, all of this aircraft has to be military aircraft. There are no commercial aircraft flying at supersonic speeds in the United States.

The impact on the environment is not yet known but there is certainly adequate reason now to question the wisdom of further appropriations to fund this project that has been launched by the Federal Government.

I refer specifically to the impact it can have on our environment. As the distinguished Senator from Wisconsin knows, I live in an area of Wyoming that is very mountainous and which is characterized throughout several months of the winter with heavy snowfalls.

Dr. D. G. McCloud, of Wyoming, who was trained as a forester and who has had considerable experience in the outdoors, tells me he personally mapped and traced out the extent of avalanches in one small area of the Teton forest, Granite Creek. This is a tributary of the Hoback River, which is a tributary of the Snake River, which flows into the Columbia River. In this area last year, or the winter before last, whichever it was, he found areas of avalanche activity extending to more than 3,000 acres on this small part of the Teton forest. These avalanches swept away trees, some more than 400 years old, as they moved down those steep mountainous slopes. The evidence clearly indicated something triggered the snow slides that had not happened for at least that length of time. As a consequence, he is greatly disturbed that if we go ahead and build the SST we may find the adverse impact on our environment will be far greater than any of us realize now.

To be more specific, we do not know what effect supersonic booms will have on wildlife. They tell me the path that will be struck by the SST will be 50 miles wide. The effect it may have on this delicate ecological balance, which is of such concern to us, is not known.

Drs. Frank and John Craighead, two eminent Western biologists, are concerned with what effect it will have on the endangered species—what it will do to the grizzly bear, bird life such as the bald eagle, and other birds in this area. No one knows. But this much can be said. There is no question what it can do to fish life. On Granite Creek alone there were a sufficient number of avalanches blocking that stream so that for a 12-mile area there were no fish in any part of it. Snow slides of sufficient magnitude blocked the stream flow sufficiently long to destroy all the fish within the 12-mile strip of Granite Creek.

Now is the time to stop and further explore the damage that may result not only to man but to plant and other animal life before we proceed with something that may be much more than we bargain for.

I propose not to support further funding of the SST until we have better and more complete answers than we now have to a problem I think is of supreme importance to us.

I know also in this area it is a common thing for plateglass windows to be broken. I was talking to the superintendent of the Grand Teton National Park. I said, "I notice the plateglass is broken behind your desk." He said, "Yes, we have replaced it a number of times and invariably it is broken almost every time there is a sonic boom."

I know the distinguished occupant of the chair at the moment, the distinguished junior Senator from Oklahoma (Mr. BELLMON), told me that when he was Governor, Oklahoma City was chosen as a place where the people would be subjected to constant supersonic booms to see how well they could withstand that constant banging on their ears and other side effects that can be very disturbing. I have not had an opportunity recently to know what has been concluded there. But I can say this based on the experience people have had in Jackson Hole: We have had enough of the sonic booms. We do not need any more up there. And I do not think it has been fully determined what may be the effect on wildlife, what may be the effect on the flora of the area, what it can do to the profile of the country. We have a very beautifully timbered area. I am sure the Senator will excuse me evidencing a little pardonable pride in a part of the country that is truly majestic. To subject it to the type of external pressures which could bring about a marked change in it is something we should do only on very careful reflection and be certain that the advantages that could be gained from the few minutes' time we could save would be worth the cost. At the present time I have very serious reservations about the wisdom of going ahead with these very costly experimental programs and withstanding the damage to property, animals and natural beauty in order to bring that plane into production.

While it has been contended that in time enough of these planes will be sold to repay the investment the Government has made in them, based upon the experience that I personally have had in western Wyoming, my guess is the planes will not be much more popular in any other part of our country than they are in those areas which have experienced the constant barrage of the booms that follow every overflight.

I join my distinguished colleague in

saying that I think now is the time to stop, to look, and to listen before we decide further to pursue this very costly investment.

Mr. PROXMIRE. I thank the Senator from Wyoming. The Senator has made a remarkable impromptu speech, without notes or previous preparation. He spoke with great authority, and I think with very great persuasiveness, on the impact that the SST has on the environment. On the basis of his detailed experience in Wyoming, I think the Senator from Wyoming has made a most moving statement.

I may state that in Milwaukee we had the same experience they had in Oklahoma City. Milwaukee was chosen to see what impact the supersonic B–58 Hustler bomber would have as a result of sonic booms. Believe me, the mail I got from Milwaukee was "something else." If it had not been a military plane—and the people of Milwaukee, like people in other parts of this country, are patriotic, and will put up with what they have to in our defense and for our military strength—but if it had been a commercial plane, the protest would have been overwhelming.

The proposal now by the FAA is not to fly over land or populated areas. However, the Senator from Wyoming has pointed out what the problem will be there. The FAA now says they will not be permitted to fly over land, but every economic analysis shows that the only way this plane can pay off is to fly over land. The payoff is not in the glamorous flights to Paris or Tokyo, but in the flights from Philadelphia, New York, Chicago, to the west coast, and back. Those are overland areas. So, if we continue to provide funds, the pressure is going to be constantly to have the SST pay off the investment made in its development by allowing it to fly over land. We are going to have that pressure before us constantly. The FAA, which is in the position of having promoted the plane and also serving as the agency which will determine whether it can fly over land or not, is very likely to cave in under that pressure.

I thank the Senator from Wyoming for his comments. The question is whether we should appropriate this year $290 million, which is by far the biggest appropriation of any year, and which makes the total appropriation we have made through this year $1 billion, with the great likelihood that we are not going to get much, if any, of that investment back.

Mr. HANSEN. Mr. President, just let me say that I appreciate the very generous observations made by my distinguished colleague from Wisconsin. Permit me to add one further word. I have received a considerable volume of mail in my office from people in western Wyoming wanting to know how they ought to go about filing claims for damages from sonic boom.

Anyone familiar with the widespread damage that has resulted from those overflights cannot help but be aware of, and be concerned with what would happen if we were to bring in a plane capable of delivering the sort of decibel count the Senator referred to, I think in the magnitude of 135. Was that it?

Mr. PROXMIRE. Yes; 124 to 130 decibels, because this is ground noise. As one scientist testified, equal to the sound of 50 jumbo jets taking off together. The sound would be literally deafening. It would not surprise me if people had their hearing seriously damaged as a result of this kind of noise.

In addition, it would have a devastating effect on the surrounding area.

Mr. ALLOTT. Mr. President, I am happy that I happened to get to the floor while this discussion was going on. The views of the Senator from Wisconsin on the SST are well known. He has opposed it for many years. I remember doing my best about 5 years ago to get him to go with me to the west coast and study the two companies that were then in the course of competing for the SST contract. Those were Boeing and Lockheed. At that time the Senator had already advanced arguments against the SST.

I am reminded of the sign I see in many little country offices around the Nation which reads:

Don't confuse me with the facts. I have already made up my mind.

I offered to make myself available to the Senator on any one of several weekends, but I could not prevail on him to go to the source and discuss the facts.

I am fully aware that, with the power of his committee, he can bring in people day after day who are willing to voice opinions to fortify the opinion he arrived at about 8 years ago.

When we get into this matter, we will discuss some of the facts. I want to say, for example, that there is no justification for the statement he recently made here that nobody knows what effect the possible SST pollution is going to have on the environment. When the engine is already designed, when the number of gallons that will go into the jet in order to achieve flight is already known, with the very advanced technology we have in this area, I am sure the Senator is not saying they do not know what the engine is going to emit into the air. I do not intend to make a long discussion of this matter—I did not come to the floor for that purpose—but the fact is that in terms of passenger miles, there will be less emission from the SST than takes place from any plane in operation today.

Mr. PROXMIRE. Mr. President, if the Senator will yield at that point——

Mr. ALLOTT. I am happy to yield.

Mr. PROXMIRE. When I talked about the pollution of the atmosphere, I was talking about the testimony of Russell Train, former Undersecretary of the Interior who indicated that the supersonic plane, flying at the height it would fly, in the stratosphere, would affect the moisture content of the upper atmosphere very seriously and severely—so severely that it could have what he called—and I think the Senator would agree that Russell Train is a very competent environmentalist—a disastrous effect.

Mr. ALLOTT. He is a competent environmentalist. I would not say he is an authority on the SST.

Mr. PROXMIRE. Well, he is an authority on the environment. That is more important when we are talking about what the SST would do to the environment.

Mr. ALLOTT. I will say this, Mr. President: You cannot contend, when you are carrying x number of passengers through the sky, and the SST emits less per passenger per mile than our present planes, that it is going to increase the presently existing antienvironmental qualities in the atmosphere.

Mr. PROXMIRE. No; what I am saying is something entirely different. That is that the kind of pollution you would get with the supersonic transport, at the height it would fly, the speed it would fly, and the kind of emissions it would provide, and its effect on the environment, would be entirely different from subsonic jets, in degree as well as in kind, on the stratosphere and on the environment in general. The SST could have an effort on the ozone that could increase ultraviolet radiation on earth with an unknown but potentially disorder effect. This is not true of subsonic planes.

You cannot simply compare the number of passengers that would fly in each plane and the amount of emission that would come out of each plane, because this is an entirely different kind of effect.

Mr. ALLOTT. Mr. President, I do not agree with the Senator. They do come out at a different altitude. It is a difference of 25,000 feet over what is presently being utilized; depending on what altitude they fly, between 15,000 and 25,000 over what our planes are flying today. I do not know whether the Senator is aware that we do have planes flying at 45,000 feet over this country today. But I do intend to look into this.

Mr. President, there are many other arguments about this matter. Of course, my good friend from Wyoming—I do not know where he went—had to leave the floor. But it is not contemplated that these planes will be used over the land areas of the United States at all. I am fully acquainted with the tests that were conducted over Oklahoma City, in the great State of the present occupant of the Chair (Mr. BELLMON); but the truth of the matter is that while there are certain arguments, I think, that can be made against the SST, I do not think that some of those propounded by the Sierra Club are completely accurate.

Mr. PROXMIRE. Mr. President, if the Senator will yield, I did say, and the Senator from Wyoming agreed, that they will not be used over land areas at this time. But in order to obtain the full economic benefit, the FAA will be under great pressure to come to that, and eventually we will have to permit flights of these planes over land. There will be a great deal of pressure to bring that about.

Mr. ALLOTT. I suppose there will be pressure, but this is not primarily the responsibility of Congress. It is the responsibility of the FAA and the CAB. In the first instance, the CAB would be the agency that would have to certificate the routes, and they certainly could not fly unless they receive this certification. Later, the actual flights of the airplane would be under the authority of the FAA.

Mr. President, I wish to say that I intend to discuss this matter at great length. We are being subjected, in this area, to a propaganda barrage from the Sierra Club. As with many previous issues, I believe that the position of the Sierra Club is extreme. They would have us stop all development in the West and preserve it for future generations—what the rest of us would do for a living in the meantime I am not sure; but that is the attitude of the Sierra Club, and it has been consistent all the time.

Mr. HANSEN. Mr. President, will the Senator yield at that point?

Mr. ALLOTT. I am happy to yield.

Mr. HANSEN. Mr. President, let me say to my distinguished colleague from Colorado, he is certainly one of the most respected Members of the Senate, and I yield to no man in my high regard for him, for his integrity, and for his championship of things important to the West.

I did say more than a year ago, in quite another vein, that it was difficult for me to support a program that would bring about the investment of Federal dollars in the development of a supersonic transport while, at the same time, we were witnessing a phase-out of local service airlines.

My good friend from Colorado, I know, feels as I do that what we need in order to open up the West and make full use of the important contribution that potentially we can make to this country, to better living and to fuller enjoyment of these most unique areas found in such abundance in the States of Colorado and Wyoming, is better local service airlines, in addition to the transcontinental lines that we have. So in that respect, the Senator and I stand shoulder to shoulder.

I would like to say that I have not been on the side of the Sierra Club as many times, I suspect, as I have been on the other side, and what I said insofar as environmental damage went does not reflect the urgings of the Sierra Club. It does reflect my trust in the discernment, and the honesty of an old friend, Dr. D. G. McLeod of Jackson, Wyo., who is a most astute observer. He is an ecologist. Certainly his training as a forester complements the experience he has had.

He is concerned, as am I, about what sonic booms can do to a mountainous area with some people living in it, and that was as far as I meant to go, I say to my good friend from Colorado.

Mr. ALLOTT. Mr. President, I am not critical of anyone. I just feel very strongly that some people in the Senate made up their minds years ago, without even taking the trouble to have access to the facts; others of us have tried to study the matter through the years, and I think that is the situation.

Mr. President, the real problem here is how long are we going to keep exporting jobs?

There was a paper sent from Mr. Shriver, when he was Ambassador to France, to the State Department saying that the British and the French were not going to proceed with the second version of the Concorde. In the few months since he left there, a new communication has come to the State Department saying that they are.

We are talking about a minimum of 300 airplanes, at $35 million to $40 million per plane to be made in American plants. We can keep on exporting jobs, as we have done with regard to textiles, shoes, many of our radios, many of our TV's and many of our automobiles. How long are we going to be such utter fools as to keep exporting jobs to every country in the world, while at the same time making it tougher for the American workman?

The only place we are really competing in the world market today, is in the area of advanced technology. The minute we come up with something that is copied and produced in Japan or someplace else, at wages below what we have to pay in this country, we export jobs. And if we are such utter fools as to export the market and the jobs that are represented by this development in the next 10 years, then I say that Congress deserves to be criticized.

One other aspect of this matter, Mr. President, is that, on the most conservative estimate, it means a $16 billion trade advantage in the next 10 years—$16 billion—that means whether the money comes into the United States for sales, or whether we sell it in other countries. Both the Russians and the French-British version, the Concorde, are ready to move ahead.

So I would say to people who oppose this on environmental grounds—and I am also for preserving and improving the environment, and in this regard I think I have done more than some of the breastbeaters who do not have to assume responsibility for what happens—that we have to look at all aspects of this matter. I am thinking about the many thousands and thousands and thousands of jobs—if the Senate does not act favorably on the SST—not for a day, not for a month, not for a year, but over a period of years, which are going to be exported to Russia and France and England. If somebody wants to participate in that, they can do it, but I do not think the Senator from Colorado will.

Mr. HANSEN. Mr. President, will the Senator yield?

Mr. ALLOTT. I yield.

Mr. HANSEN. Mr. President, let me pay my sincere respects to the distinguished senior Senator from Colorado. He has very accurately and appropriately characterized himself as one concerned with jobs in this country. I agree completely, and I would go beyond what he has said and observe that few Senators, so far as I know, have been more ardent advocates of the development of American industry through the protection of American jobs, through the development of processes and materials and machines that will make possible a higher standard of living for all of us. I take my hat off to him, because his leadership has been truly noteworthy.

I agree with him. Insofar as I have been able, it has been my intention to support the distinguished Senator from Colorado.

Let me say in this regard that the question I meant to raise was simply this. The last time the appropriation came before the Senate, I voted for the SST. Since that time, I have had reason to question the long-time desirability of an aircraft which would fly for commercial purposes at a speed in excess of sound, and with that in mind I said what I did.

My feeling is that it could very well be that the Boeing 747 version of aircraft may in time prove to be far more popular than the SST. As I note the relative speeds of these planes, it does occur to me that the economies that would go with a plane flying at subsonic speeds, able to carry more passengers, might have much greater appeal to the average traveler than would the more costly ticket on a plane flying at supersonic speeds.

Nevertheless, I would like the RECORD to indicate the very high regard I have for the distinguished Senator from Colorado. I hope he will not take personal umbrage from what I have said.

one of us has to protest our friendship that I just happen to disagree with him on this. We have worked in common in so many things that I do not think either one of us has to protest our friendship or our respect. If we do, we will be paraphrasing an excerpt from Shakespeare and saying:

Methinks thou dost protest too much.

But it is a fact that we have that great mutual respect, and it is one of the great satisfying things of the Senate that we find people like the Senator from Wyoming for whom we can entertain that respect.

THE O'NEILL STUDY PANEL: SAFEGUARD EVALUATED IN REPORT

Mr. ALLOTT. Mr. President, last Sunday the Baltimore Sun published an Associated Press dispatch that accurately and briefly summarizes the O'Neill panel report, a study prepared through the Department of Defense by a team of independent experts on ballistic missile defense.

The study itself is now of minor consequence. It was originally commissioned by Dr. John Foster, Director of Defense Research and Engineering, because the Pentagon wanted "expert technical opinions on the Safeguard before President Nixon made a decision to go ahead with a second phase of the project."

The study became the subject of some controversy in the Senate not because its conclusions were themselves controversial, but, rather, because there was some disagreement by two of the panel members over the characterization of the study made by Dr. Foster in a remark before the Foreign Relations Committee. The result of the disagreement was to convey the impression that the study made recommendations unfavorable to the further deployment of Safeguard. The study has now been declassified, and it is clear that this was not the case.

Mr. President, because of the interest in this matter shown by a number of Senators, I ask unanimous consent that the Associated Press article, entitled

"Safeguard Evaluated in Report," be printed in the RECORD at this point.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SAFEGUARD EVALUATED IN REPORT—PHASE II WOULD PROVIDE THIN AREA COVERAGE, MINUTEMAN DEFENSE

WASHINGTON, July 25.—A report censored for security reasons on the Safeguard antimissile defense system says the full Phase II program would provide protection against a limited Red Chinese missile attack and some defense of U.S. Minuteman missiles from a Russian blow.

"It provides thin area coverage and some defense of Minuteman," said the report by seven civilian scientists to Melvin R. Laird, Secretary of Defense.

The January report, secret until now, was the center of a dispute before the Senate disarmament subcommittee last month.

WILL DO THE JOB

Dr. John S. Foster, the Pentagon's research and engineering director, told the subcommittee the report said equipment proposed for the Safeguard system "will do the job the Department of Defense wants to do."

Two members of the panel—Sidney D. Drell, a professor at the Stanford Linear Accelerator Center, and Marvin L. Goldberger, a Princeton physics professor—disagreed with Dr. Foster.

They testified that the report's conclusions were misstated.

The 14-page report resulted from a study requested by Dr. Foster who, Pentagon officials said, wanted expert technical opinions on the Safeguard before President Nixon made a decision to go ahead with a second phase of the project.

RANGE OF VIEWS

The document notes that "Although members of the group hold a range of views concerning the desirability of a BMD [ballistic missile defense] deployment and concerning the interactions between a deployment and diplomatic, strategic and political factors, it was not asked for and did not offer advice based on such things."

The censored version of the report contained no explicit criticism of any of the Safeguard's components. Defense officials said no criticisms were contained in the sections kept from public view.

The group did say it believes a more cost-effective system can be devised for terminal defense of the Minuteman and urged an approach featuring smaller, less costly and "less technically formidable" radars.

The panel said "it is necessary to proceed vigorously" with developing better components for the system, which defense authorities say they are doing.

The advisory committee seemed to imply that there are not enough short-range Sprint missiles provided in the first phase of Safeguard, which was limited to protecting two Minuteman intercontinental ballistic missile bases in Montana and North Dakota. Pentagon officials noted this year's Safeguard proposals put more Sprints at these sites.

The report, signifying it was approved by all members, was dated January 27. Nearly a month later, on February 24, the Nixon administration came up with its modified Phase II program.

Falling short of the 12-site plan, it calls for one additional Safeguard site at Whiteman Air Force Base in Missouri to protect more Minuteman missiles, and preliminary work on five additional sites as the administration once again took account of prospects that the Red Chinese may deploy an ICBM system in the 1970's.

The scientific group analyzed the Safeguard system in the light of President Nixon's three stated objectives announced last year:

1. To protect key elements of the U.S. retaliatory deterrent, the missile and bomber forces.

2. To shield the U.S. population against the potential Chinese atomic threat.

3. To protect the country against damage from an accidental missile launch against the United States.

Among other things, the group called for a policy decision "on whether to give emphasis to Minuteman terminal defense or to divide effort between Minuteman defense and area defense in the next step."

CHOSE BOTH

The Nixon administration, in moving into a modified Phase II, made a decision on the side of both deterrent protection and population defense.

A couple of suggestions dealing with fund obligations differed from the route the administration took.

There were no clear indications of major differences within the scientific group.

However, the report at one point noted that estimates within the panel of the effectiveness of a feasible thin area defense against a Chinese ballistic missile attack varied.

The opinions were said to range between a belief that there was a high probability a thin area defense would be highly effective and a belief that the Chinese would respond to a U.S. area defense by using penetration aids to get missiles through or bypass the defense entirely by using such devices as clandestine weapons.

WHAT STUDENTS ARE TAUGHT

Mr. ALLOTT. Mr. President, yesterday's Wall Street Journal contained an editorial which speaks with uncommon good sense on a subject that is generating a lot of nonsense these days.

The editorial concerns students and their manifold and manifest problems. It is entitled "What Students are Taught," and its thesis is straightforward. The editors of the Journal believe—correctly, I think—that the way students behave has something to do with the ideas they ingest in their roles as students. In short, the behavior of students reflects the ideologies of their professors.

This thesis is simplicity itself. It is also obviously true—so true and obvious that only professional academics seem unable to comprehend it.

As the Journal says:

To an important extent, surely, student disruption grows out of the intellectual currents of our time. In this and other ways we are only beginning to understand, these currents have grown extraordinarily perverse to the interests of society.

The Journal adds this:

For our part we are quite convinced that disruption by students has deep roots in the attitudes of professors. This is not merely a matter of an academic fringe actually advocating anarchy, though that plays a certain part. Nor is it merely a matter of the typical faculty lacking the courage and cohesion to discipline unruly students. For a faculty could hardly be expected to expel students for an excess of zeal in expressing the very attitudes the faculty is so proud to have instilled in them.

Mr. President, the Journal is dead right in stressing the importance of the fact that a tedious, suffocating orthodoxy is holding sway on American campuses. And I must say that this orthodoxy is depressingly evident in some of the recent news here in Washington.

The President's Commission on Campus Unrest—the Scranton Commission—is hearing a seemingly unending series of academic witnesses anxious to say that the universities' problems are the fault of war, poverty, disease, greed, pestilence, and other sins that are attributable to society, the military-industrial complex or almost anything other than the men who today are proving so strikingly inept at the business of running academic affairs.

Worse still, the President recently received from Vanderbilt University's Chancellor Alexander Heard a report which was just what the Journal editorial describes it as being a "typical apology for students."

With so much faulty diagnosis and bad advice being merchandised in this town in recent days, it is especially useful for the Journal to give us the benefit of its customary good sense.

Mr. President, so that all Senators may benefit from this good sense, I ask unanimous consent to have the Journal editorial printed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. ALLOTT. Mr. President, today's Washington Post contains an illuminating column that tends to confirm the views of the Journal. The column is by Joseph Kraft and its thesis is stated in its headline: "Attitude of Educated Elite Is Causing Social Tensions."

So that all Senators may profit from this remarkably sensible column, I ask unanimous consent that it too be printed in the RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 2.)

EXHIBIT 1

[From the Wall Street Journal, July 27, 1970]

WHAT STUDENTS ARE TAUGHT

With due respect for the distinguished individuals involved, we doubt that especially penetrating insights into the causes of campus disruption are likely to result from either the typical panel investigation being run by former Governor Scranton or the typical apology for students offered last week in Vanderbilt Chancellor Heard's report to President Nixon.

Not that it's difficult to list some of the obvious factors in student unrest—the war, the draft, student boredom, the tortured course of the decade that has been the whole of a 20-year-old's politically conscious experience. Yet when you have said all that an unsatisfied feeling remains; you are left still wondering why all those things worked themselves out the way they did.

What these explanations leave out is the power of ideas. This is also an area most inquiries are likely to overlook, though one would think examining events at universities without reference to ideas would be like examining events in banking without reference to money. To an important extent, surely, student disruption grows out of the intellectual currents of our time. In this and other ways we are only beginning to understand, these currents have grown extraordinarily perverse to the interests of society.

A number of scholars have in various ways touched on this malaise among the intellectually oriented elite. To take only the academic luminaries, we think of Daniel P. Moynihan, Nathan Glazer, Edward C. Banfield, Zbigniew Brzezinski, Daniel Boorstin. We might also add Michael Lerner, for his article on "elite bigotry" in The American Scholar, and Andrew M. Greeley, for his recent witty and perceptive contribution to the New York Times Magazine, "Intellectuals as an 'Ethnic Group'." It might pay Governor Scranton's group to ask such people whether student disruption might be related to the current mood of the adult intelligentsia.

For our part, we are quite convinced that disruption by students has deep roots in the attitudes of professors. This is not merely a matter of an academic fringe actually advocating anarchy, though that plays a certain part. Nor is it merely a matter of the typical faculty lacking the courage and cohesion to discipline unruly students. For a faculty could hardly be expected to expel students for an excess of zeal in expressing the very attitudes the faculty is so proud to have instilled in them.

Chief among these is the notion that the ills of the nation and the world would prove quite tractable if only everyone listened more to the intellectuals. The intellectual has always felt himself uniquely qualified to run society, but never before the 1960s had this feeling found such support: A growing social class oriented to the intellectual, almost complete penetration of the media, acceptance at court during the Kennedy era.

As the intellectual class grew in prestige and influence though, the content of its thought grew only in dogmatism. The Vietnam war became not only mistaken but immoral; American society became irredeemably racist. The dogma carries a suspect tinge.

Too many of the mistakes in Vietnam were made by representatives of the intellectual class that gave the State Department its undersecretaries, the White House its basement advisers and the Pentagon its civilian whiz-kids. Too often the denunciations of racists served mostly to make the denouncer feel virtuous. But no matter, the conclusions became part of the intellectual classcreed, and history may yet view the 1960s as the decade in which the prevailing liberal orthodoxy reduced itself to an absurdity.

For many students, university experience during this decade amounted to a force-feeding in these doctrines: That intellectual prescriptions can solve all problems (even those that have resisted solution for a millennium), that the proper prescriptions are those favored by the intellectual class (no matter how narrow a social stratum it occupies), that failure to adopt these "obvious" prescriptions must mean political leaders are stupid or venal (never that they are sensitive to a broader range of society or a broader range of reality).

There are of course outstanding professors who apply their critical skills even to this creed, but they are few. The intellectual class is remarkably inbred; a sample survey of political scientists finds, for example, that only 12% of them voted for President Nixon. Given an intense and one-sided socialization in this narrow class, students not surprisingly develop a sturdy sense of self-righteousness, which is the stock-in-trade for those who would occupy buildings, close campuses and bully professors who dissent from the dogma.

The recent outbreak of disruption is not too surprising in light of the intellectual trends on campus, but it certainly is ironic. For the notions of intellectual preeminence that did so much to foster the disruptions have also proved their first casualty. How will serious men take an intellectual class that is unable to govern a university, but presumes to govern the whole society?

[From the Washington (D.C.) Post, July 28, 1970]

ATTITUDE OF EDUCATED ELITE IS CAUSING SOCIAL TENSION

(By Joseph Kraft)

BERKELEY, CALIF.—Social tension in the United States, being a subject usually studied by the educated, is generally blamed on the less educated. But every day announces that a main source of trouble is an overconfident attitude of snobbish contempt on the part of the American elite. Some underlying reasons for this attitude are now explained in the fascinating study of American universities conducted by Dr. Harold Hodgkinson for the Carnegie Commission on Higher Education here in Berkeley.

The starting point of the study is the diversity that used to characterize higher education in this country. Most colleges were started on the principle that led to the establishment of Yale as a barrier against the dangerous thoughts of certain Harvard divines.

Throughout the South, the Midwest, and the West thousands of institutions were set up to build provincial elite, vaccinated with local spirit and old-time religion against the sophisticated viruses distilled by the Eastern Babylons. College graduates, as a result, tended to differ widely from region to region. They had ties with local people and local institutions. They had roots.

But in the past two decades professional and graduate schools have become the dominant feature of higher education in America. Colleges exist not to turn out local gentry, but as way-stations on their route to higher learning. The standards of the biggest and best graduate schools—at Berkeley, Harvard, Columbia, Chicago, and Michigan—have come to dominate the system.

The domination of these few centers has as a first consequence the elimination of diversity among colleges. Hodgkinson found only slight regional differences in a wide variety of educational categories including student body composition, faculty attitudes, teaching effectiveness, and administrative methods. Even student protests, supposedly concentrated most heavily on the two coasts, turned out to run across the board.

"The data," Hodgkinson observed, "refute the commonly held assumption that there are major differences in educational institutions in different sections of the country . . . The monolithic status system exists in American higher education and pervades all colleges and universities."

This "monolithic status system" has a marked effect on the student body at most universities. The signals that come down from the great cosmopolitan graduate schools have led to a tremendous drop in the racial and religious barriers that used to limit the higher educational opportunities for Jews, blacks, browns, and other minority groups. "The most widespread change," Hodgkinson reports in his survey, "was the increased heterogeneity in the ethnic composition of the student body."

But the sympathies generated in the great educational centers for racial minorities did not extend to those on the lower rungs of the economic ladder. The colleges open their doors wider to middle-class members of ethnic minorities, but not to low-income groups—particularly low-income whites.

As Hodgkinson puts it: "Institutions appear to be more racially open than in the past, but they have become less open to social classes than they have to races . . . A black middleclass male may have a better chance of getting into . . . a college or university than would a lower-class person of any race . . . Higher education is fundamentally a middle-class institution that has little dedication to those who are simply poor and do not represent any particular minority group."

The social effects of all this are visible every day. Student groups, newly infused with ethnic minorities, tend to be highly sensitive to discrimination and prejudice. That is one reason for the hostility to all kinds of superiority and authority—whether at the university, in the society, or the government.

At the same time, there is no great concern for the economic problem of getting along. That is one reason why there is so much contempt for those who have to grub for a living—mainly low-income whites in the blue-collar jobs.

Finally, the students have a burgeoning sense of exuberant strength. Not only do they think they are right morally, but they keep encountering their own likeness all over the country. They have the illusion of great numbers and of power and they tend to indulge their beliefs and inflict their feelings without the restraint that comes from the awareness of being weak.

In fact, however, the American elite is probably weaker now than at any time in the past. It is aligned with unloved minority groups. It has lost the camouflage that comes with being the champions of local interests. The college-educated in particular are out in the open as never before. They are marked men, set apart from others. And unless the students restrain themselves, unless they curb their exuberantly different life style, they are going to find out the hard way what it is like to be a visible elite in what is basically an egalitarian country.

ENVIRONMENTAL CONCERN IN COLORADO

Mr. ALLOTT. Mr. President, the summer 1970 issue of Action Report—a newsletter by the Chase Manhattan Bank and described as "a digest of corporate approaches to public problems"—contains an interesting and encouraging article about the high sense of responsibility demonstrated by a firm operating in Colorado.

The firm is Climax Molybdenum Co., which is currently constructing a $200 million mine at Red Mountain in Colorado.

As Action Report explains, the company is going to considerable expense to be a responsible developer of natural resources. So that all Senators may read this story, I ask unanimous consent to have it printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FROM 9-MILE TUNNEL TO COLORED BUILDINGS, ENVIRONMENTAL CONCERN MARKS COLORADO MINE

At Red Mountain in the heart of the Colorado Rockies, Climax Molybdenum Company, a division of American Metal Climax, Inc. (AMAX), is constructing a mine that will play a key role in satisfying the free world's future needs for molybdenum.

But construction of the $200 million Henderson mine is proceeding in ways that would have puzzled engineers in the 1950's. Facilities are being put in out-of-the-way places by traditional standards, some of the work being done is not essential to strict operating efficiency and certain expenses be-

ing incurred are equally inessential to efficiency.

Max Gelwix, chief engineer for the company's western operations, explains the reasoning succinctly in terms of rising public demand for protection of the environment. "An engineer has to recognize the needs of the country and the temperament of the times," Gelwix says. "And there's been a tremendous change in temperament in the last 10 years."

Some of the actions taken by AMAX have been "little" steps. Instead of using ordinary galvanized steel for buildings at the mine site, it is installing colored siding which blends with the local setting. It has planned the culverts and trestles of a surface railroad in such a way that it does not cut off wild animal trails. It has piled up and saved the topsoil and dirt removed from the mine site so that the land can be restored when the site is no longer needed. It has kept construction operations as compact as possible to minimize effects on the terrain.

Around a smaller mine recently completed at nearby Urad, as well as at the Henderson mine, slopes that have been cut are being reseeded by means of a truck-mounted hydromulcher that throws a stream of water, mulch fiber, seed and fertilizer onto the soil.

The Public Service Company of Colorado adopted a similar philosophy when it brought in power lines to the mines. Instead of bulldozing a swath through the forests, it cut just a few trees selectively and had them pulled out by horses, which could weave their way through the woods without doing the damage that a bulldozer would do. The utility also brought in the transmission towers by helicopter. The towers are made not of shining aluminum but of green-painted wood designed to weather and blend into the setting. The telephone poles also are painted forest green.

Other steps taken by AMAX have been bigger, more expensive ones. When company officials began working closely with representatives of the Colorado Open Space Council back in 1966, the major problem to solve was disposal of rock tailings, the finely ground waste material which comes from the mill. More than 300 million tons of rock tailings are expected to be produced before the Henderson mine is exhausted.

Ideally from an economic standpoint, AMAX would have placed the mill and tailing disposal area next to the mine site. But, since this would have put the operation very close to a major highway through the Rockies, the company investigated possible alternative sites with a 25-mile radius. It finally chose a location on the opposite side of the Continental Divide, 14 miles from the mine. Hidden from public view, the site could be connected with the mine by driving a 9.3-mile long railroad tunnel beneath the Divide. This is being done—at a cost of $25 million.

The mill where ore will be processed, after the mine's scheduled opening in 1975, is located next to the tailing pond and will use water recycled from the pond. A series of canals will be built above the pond so that water running down the mountain will not flood into the pond, become polluted by the tailings and sweep on down the mountainside.

Company officials continue to meet frequently with members of the Open Space Council in an effort to work out problems "before they happen." James Gilliland, director of environmental control for Climax Molybdenum, has also arranged for experts in outside firms to make several new environmental studies before heavy construction work starts at the mill site. Assuming a company can learn to make multiple use of the land, insists Ian MacGregor, chairman of the board for AMAX, "the goals of conservation are compatible with full utilization of our mineral resources."

Mr. President, among the things that Climax Molybdenum did over a period of years was to make very careful plans to conduct the mine and operate it in such a way that it would not disturb the environment in the least degree. They have also spent a considerable amount of money to construct a 17-mile tunnel through the mountains of Colorado. They also expended many hours, weeks, and months in working with environmental experts in Colorado. This is truly a great step forward in the type of development that we hope to see in this Nation.

Mr. President, I yield the floor.

MRS. OGDEN REID—A REMARKABLE WOMAN

Mr. JAVITS. Mr. President, I state to the Senate tonight, with sadness, that a very remarkable woman, Helen Rogers Reid, of New York, former president of the New York Herald Tribune, and mother of Representative OGDEN REID of New York, who represents Westchester County, has passed away.

Mrs. Reid was a woman of unique character who made a great contribution to her time. The wording of the 1935 Medal of Award, given to her by the American Womens Association, states: "For professional achievement, public service, and personality."

That fully described Mrs. Reid. She was an inspiration to me and to many others who knew her during her lifetime. I suppose she numbered as friends in her lifetime as widespread a galaxy of the great of the world, including this country, as can be imagined, as well as the most humble, who loved her equally.

Her life and activities will inspire our time, particularly women.

She was certainly in inspiration to her children, Ogden and Whitelaw, to whom Mrs. Javits and I extend our deepest sympathy.

Mr. President, I know that on the floor of the Senate we do not speak of the passing of every prominent person, but Mrs. Reid had such an important influence on journalism in New York as president of the New York Herald Tribune, and such a distinguished life as a person and on the whole of the community that surrounded her, as to deserve a front page obituary in the New York Times this morning, as well as a deep place in my heart, and in the hearts of her fellow countrymen.

Mr. President, I ask unanimous consent to have printed in the RECORD the obituary notice published in the New York Times today, which is entitled "Mrs. Ogden Reid Is Dead at 87; Ex-President of Herald Tribune."

There being no objection, the obituary was ordered to be printed in the RECORD, as follows:

MRS. OGDEN REID IS DEAD AT 87; EX-PRESIDENT OF HERALD TRIBUNE

Mrs. Helen Rogers Reid, former president of The New York Herald Tribune, died of arteriosclerosis yesterday at her home, 834 Fifth Avenue.

Mrs. Reid who was 87 years old, was the widow of Ogden Reid, president of The Herald Tribune until his death in 1947.

In her 37 years on The Herald Tribune and its predecessor, The Tribune, Mrs. Reid was an unflamboyant but powerful force in the newspaper world and in the city's civic and social life.

Her business acumen, first displayed as an advertising salesman, and her editorial judgment, in making the paper attractive to women and suburban readers, helped to transform The Herald Tribune into a modern newspaper.

Entering journalism as a by-product of her marriage to Ogden Mills Reid, whose father Whitelaw, had acquired The Tribune from Horace Greeley, its founder, Mrs. Reid gradually established herself as a newspaper personality in her own right. Never overtly aggressive, she won her reputation by quiet tenacity, dowagerlike charm, and a clear and orderly mind.

There was little in Mrs. Reid's appearance to suggest the influence she wielded, nor the force of her character. She stood only an inch over 5 feet; and she looked as fragile as a piece of expensive china. Her hair, at first brown, then gray and later white, was a fine soft fuzz that curled close to her head. Her large green eyes, however, were alert and probing. According to advertising salesmen who dealt with her, they could be quite unnerving.

In dress Mrs. Reid was feminine but not fancy. Her taste ran to bright colors, with various shades of purple predominant. Day in and day out she wore a plain beret-like hat embellished with pearls, a diamond clip, sequins, flower petals or feathers.

Although she was pleasant and informal in conversation in the office or at dinner, her talk did not run much to chit-chat, and she did not encourage it in others for long. For many years Mrs. Reid included her editors and columnists at luncheons, dinners and weekend parties she gave for guests notable in national and world affairs.

A gathering might include a Presidential aspirant, an international statesman, a best-selling author, an economist, an editor and a few couples from the Reids' social circle on the upper East Side. With dessert, Mrs. Reid would swizzle a glass of champagne with a piece of melba toast and throw out a general question on current affairs.

DINERS SUMMONED TO SPEAK

Going around the table, she would call on the diners, one by one, for their views. According to one account of these affairs, some gave their opinions seated, but a number were wont to rise and address Mrs. Reid as though she were a public meeting.

Mrs. Reid's interest in the political and economic forces that shaped the world about her was reflected in the establishment, in 1930, of The Herald Tribune's annual Forum on Current Problems. Although the Forum was at first a promotional device aimed at club-women, it was expanded to include the public generally.

With Mrs. William Brown Meloney, the Forum director for many years, Mrs. Reid took a hand in choosing and obtaining prominent speakers, many of them from abroad. She presided at the big sessions in the Waldorf-Astoria, and published the proceedings in a special supplement for high school and college students.

Mrs. Reid's own politics were Republican, but the forums were nonpartisan and dispassionate presentations of world news and issues. They were discontinued after 1955, for emphasis on the paper's Youth Forum.

At The Herald Tribune Mrs. Reid raised her voice for moderate Republicanism and for internationalism. In 1952 she supported Dwight D. Eisenhower for the Presidency; she had backed Thomas E. Dewey in 1948.

Mrs. Reid was a leader in civic affairs. She served for nine years as chairman of the board of trustees of Barnard College, her alma mater. A dormitory built in 1963 with funds she helped to raise is named for her. She was

a trustee of the Metropolitan Museum of Art. She was active in the New York Newspaperwomen's Club, and she was president of the Reid Foundation, established by her husband in 1946 to give fellowships to journalists for study and travel abroad.

NEEDY CHILDREN HELPED

Another of Mrs. Reid's civic interests was her newspaper's Fresh Air Fund, which raised public contributions to send needy children to summer camps and homes in the country.

As a society figure Mrs. Reid was far less formidable than her mother-in-law, a vigorous matriarch who died in 1931. Mrs. Reid's style in entertaining was informal—and indefatigable. There was a constant round of guests at her 15 East 84th Street apartment, at 30-room Ophir Cottage in Purchase, N.Y., at a summer place in the Adirondacks and at a hunting lodge in North Carolina.

To those who sought to assay her career, Mrs. Reid appeared as a Cinderella who became Queen Helen. She was born in Appleton, Wis., on Nov. 23, 1882, the youngest of 11 children of Benjamin Talbot Rogers and Sarah Louise Johnson Rogers. Her father died when she was 3. Although the family was not poverty-stricken, she was obliged to earn part of her way through boarding school and then through Barnard, which she entered in 1899.

EARNED DEGREE IN ZOOLOGY

She enrolled to study Latin and Greek and perhaps to become a teacher, but she shifted her interest to zoology and took her degree in that. She established a reputation among her classmates as a crisp, attractive, enterprising girl who could even turn a profit on the senior yearbook. The class poet summed her up in this quatrain:

"We love little Helen, her heart is so warm
And if you don't cross her she'll do you no harm.
So don't contradict her, or else if you do
Get under the table and wait till she's through."

In June, 1903, when Helen Rogers received her Bachelor of Arts degree, she heard that Mrs. Whitelaw Reid, one of the city's grande dames, was seeking a social secretary. She applied, was accepted and went to work in the Reids' sumptuous Florentine fortress on Madison Avenue, across from St. Patrick's Cathedral. Mrs. Reid, who had a dinner table seating 80 people and the wealth to festoon it with elegant viands, never lacked for social engagements; a secretary to handle this facet of her life had few idle moments.

SECRETARY FOR 8 YEARS

Helen Rogers was in Mrs. Reid's employ for eight years, dividing her time between the United States and London, where Whitelaw Reid was Ambassador to the Court of St. James's from 1905 to his death in 1912. During this time she met the Reids' only son, Ogden Mills Reid, fresh out of Yale. The couple were married in Wisconsin March 14, 1911.

Tall, handsome, genial and convivial, Oggie Reid was deeply interested in swimming, tennis, shooting and sailing—activities in which his wife learned to excel by putting her mind to them.

She at first took only a passing interest in The Tribune, which her husband inherited on his father's death. In the first six years of her married life she devoted herself to her children, Whitelaw, Elisabeth, who died in childhood, and Ogden. Her chief outside concern was women's suffrage. She helped raise $500,000 for suffrage campaigns in New York.

"When I was at Barnard, working my way through," she explained later, "the necessity for complete independence of women was borne in on me."

JOINED PAPER IN 1918

Mrs. Reid's newspaper career began in 1918, when she became an advertising solicitor for the palsied Tribune, into which the Reid family was reported to have poured $15 million since 1898. "Come down to the office," Ogden Reid asked his wife, "and work the paper's success out with me." Within two months she was its advertising manager, a post she held under slightly different titles on The Herald Tribune until she became its president in 1947.

Immensely loyal to the Reid name and eager to make The Tribune a great, self-supporting paper, Mrs. Reid channeled enormous energy into advertising salesmanship. Between 1918 and 1923 the paper, competing in the morning field with The Times, The World, The American and The Herald, more than doubled its linage.

Then and later she was relentless in pursuit of space buyers.

"She had the persistence of gravity," an associate once remarked. She called on advertisers or had them to luncheon. Banter, deft flattery and an array of voluminous and precise facts constituted her arguments.

ADVERTISING STAFF DRIVEN

She was as unsparing of the paper's other ad solicitors as she was of herself. "You get so you sneak up the back stairs rather than confess you're not a wonder boy," a member of her harried but admiring staff once said.

On The Herald Tribune in the nineteen-thirties and forties, Mrs. Reid was accustomed to hold advertising staff meetings on Mondays at 9 A.M. sharp to get an accounting of each salesman's work. At one point she presided from a platform decorated with a cardboard apple tree and red cardboard apples. Each apple represented an account the paper was seeking.

She called up the salesmen by turn, and whenever one announced a new account she would remove the appropriate cardboard apple from the tree with a ceremonious flourish to the accompaniment of the assemblage's applause.

By means of this and other encouragements to salesmanship, including at one time impromptu choral singing, Mrs. Reid kept the advertising flowing in. For her doggedness and for her conviction that The Herald Tribune was the finest advertising medium in the city she was much admired by her sales staff.

INFLUENCE ON PAPER STRONG

Mrs. Reid had a pervasive influence on the paper's news and editorial content, although its precise demarcations were a matter of speculation.

One story is that Mrs. Reid once protested to her husband about a news article and that he retorted:

"Helen, will you get the hell back to your department and run it while I run mine."

She is said to have departed meekly.

Mrs. Reid always denied the story. "In the first place," she once explained to an interviewer, "my husband wouldn't speak to me that way. In the second, I wouldn't leave meekly. Besides, nothing like that ever happened."

Actually, when Mrs. Reid put her mind to it, she usually got her way. One exception was in trying to make the paper dry during Prohibition. On this point her husband was unyielding.

SPURNED DEAL FOR HERALD

Mrs. Reid's editorial presence was felt especially after the Tribune, at her prompting, acquired Frank Munsey's Herald in a $5-million deal in 1924.

Shortly after the purchase, The Herald Tribune moved uptown from Nassau Street to quarters at 230 West 41st Street, and began to expand its news coverage and increase its circulation.

Mrs. Reid was generally credited with being responsible for its concentration on the suburban, middle-class field of circulation. She frequently suggested story ideas and advised on coverage of others. The paper devoted, under her stimulus, much space to the news of gardening and allied interests of suburban dwellers and women.

STAFF MEMBERS RECRUITED

Mrs. Reid's influence was also reflected in the appointment of the late Mrs. Irita Van Doren as editor of Books, the Sunday literary supplement, and of the late Mrs. Maloney as editor of This Week, the Sunday fiction and articles supplement. She added the late Dorothy Thompson and Walter Lippman, the commentator, to the staff. She was also responsible for the paper's Home Institute, a widely known experimental kitchen that devised and tested recipes for publication.

When Ogden Reid died in 1947 his widow succeeded him as president of The New York Herald Tribune, Inc. She became chairman of the board of directors in 1953. Her elder son, Whitelaw, who had joined the staff in 1940 and had been named vice president in 1947, succeeded to the presidency.

In 1955, at the age of 72, Mrs. Reid resigned as chairman but continued as a member of the board. Whitelaw succeeded her as chairman, and her other son, Ogden, who had joined the staff in 1950, became president, publisher and editor.

RETIRED IN 1958

For some time The Herald Tribune had not been gaining sufficient circulation and advertising in a period of rising costs and intense competition. A loan of $2.5-million from the Massachusetts Life Insurance Company in the fall of 1954 proved insufficient to restore the paper to prosperity. In September of 1957 John Hay Whitney, the financier, invested $1.2-million in the paper with an option to buy. He took up the option a year later, leaving the Reid family with a minority interest. Mrs. Reid retired at that time from the board of directors.

Mr. Whitney ran The Herald Tribune until 1966, when it merged with The Journal-American and The New York World-Telegram and The Sun. The new paper, The World Journal Tribune, expired in May, 1967.

In retirement, Mrs. Reid lived quietly in her apartment at 834 Fifth Avenue, entertaining her friends and members of her family and venturing out socially from time to time.

Many organizations honored Mrs. Reid. In 1935 she received the medal of award of the American Women's Association "for professional achievement, public service and personality." The Cuban Red Cross gave her the Commendador Cross of the Order of Honor and Merit for her "helpful understanding of world problems and friendliness toward Latin America."

At the annual dinner of the Hundred Year Association of New York, an organization of business institutions with more than a century of unbroken existence in New York, she was awarded a gold medal in 1946 for services in behalf of the welfare and prestige of the city. The 1949–50 seal of the Council Against Intolerance was presented to her for "outstanding service in the cause of tolerance and equality."

ELECTED TO ARTS ACADEMY

She was selected by the editors of "The Book of Knowledge" as one of 12 women who are "inspiring examples of intelligence and accomplishment." She was one of four women elected fellows of the American Academy of Arts and Sciences in 1950. In 1951 she was listed among 10 notable women in industry, communications, labor and the professions in New York State.

Mrs. Reid was also the recipient of a number of honorary degrees, and she was a member of the Colony Club, the Women's City Club, the Women's University Club, the New

York Newspaperwomen's Club, the River Club, and, in Paris, of the University Women's Club.

She is survived by her sons, Whitelaw Reid and United States Representative Ogden Reid of Westchester, and by 10 grandchildren.

A funeral service will be held Thursday at 10 A.M. at St. Thomas Episcopal Church, Fifth Avenue and 53d Street.

DEATH OF HON. MICHAEL J. KIRWAN, OF OHIO

Mr. YOUNG of Ohio. Mr. President, I ask the Chair to lay before the Senate a message from the House of Representatives on House Resolution 1161.

The Presiding Officer laid before the Senate a resolution of the House of Representatives (H. Res. 1161), which was read as follows:

Resolved, That the House has heard with profound sorrow of the death of the Honorable Michael J. Kirwan, a Representative from the State of Ohio.

Resolved, That a committee of fifty-four Members of the House, with such Members of the Senate as may be joined, be appointed to attend the funeral.

Resolved, That the Sergeant at Arms of the House be authorized and directed to take such steps as may be necessary for carrying out the provisions of these resolutions and that the necessary expenses in connection therewith be paid out of the contingent fund of the House.

Resolved, That the Clerk communicate these resolutions to the Senate and transmit a copy thereof to the family of the deceased.

Resolved, That as a further mark of respect the House do now adjourn.

Mr. YOUNG of Ohio. Mr. President, I send to the desk a resolution and ask for its immediate consideration.

The PRESIDING OFFICER. The resolution will be stated.

The resolution was read, as follows:

S. RES. 434

Resolved, That the Senate has heard with profound sorrow the announcement of the death of Hon. Michael J. Kirwan, late a Representative from the State of Ohio.

Resolved, That a committee of two Senators be appointed by the Presiding Officer to join the committee appointed on the part of the House of Representatives to attend the funeral of the deceased Representative.

Resolved, That the Secretary communicate these resolutions to the House of Representatives and transmit an enrolled copy thereof to the family of the deceased.

Resolved, That, as a further mark of respect to the memory of the deceased, the Senate do now adjourn.

The PRESIDING OFFICER. Is there objection to the present consideration of the resolution?

There being no objection, the resolution (S. Res. 434) was considered and unanimously agreed to.

The PRESIDING OFFICER. Under the second resolving clause, the Chair appoints the two Senators from Ohio (Messrs. YOUNG and SAXBE) as the committee on the part of the Senate to attend the funeral of the late Representative Kirwan.

ADJOURNMENT UNTIL 11 A.M. TOMORROW

Mr. BYRD of West Virginia. Mr. President, I move, in accordance with the previous order, and, pursuant to Senate Resolution No. 434, as a further mark of respect to the memory of Representative Michael J. Kirwan, of Ohio, that the Senate now adjourn.

The motion was unanimously agreed to; and (at 5 o'clock and 3 minutes p.m.) the Senate adjourned until tomorrow, Wednesday, July 29, 1970, at 11 a.m.

EXTENSIONS OF REMARKS

AUTHORIZE CRIMINAL PENALTIES FOR MERCURY POISONING

HON. JOHN S. MONAGAN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1970

Mr. MONAGAN. Mr. Speaker, on July 24, the Department of Justice announced plans to bring suits under the Refuse Act of 1899 to prohibit the discharge of mercury into navigable waters. I previously urged the Department to use the Refuse Act together with the Federal Water Quality Act to protect the public's health and safety from mercury poisoning. I commend the Department for apparently revoking its previous guideline—an indefensible position—to only utilize the 1899 Refuse Act in cases of "accidental and infrequent" pollution and to ignore cases to continuous day-to-day dumping of potentially poisonous wastes.

Interior Secretary Hickel warns that the presence of mercury in much of the Nation's waters "constituted an imminent health hazard." He now terms mercury contamination of water "an intolerable threat to health and safety of Americans." He disclosed that the polluters were requested to act voluntarily to end mercury pollution. Their failure to comply forced Mr. Hickel to recommend that the Department of Justice initiate legal proceedings. Mr. Hickel appears to have acted reasonably and constructively.

Because mercury pollution is a very serious matter, where the evidence indicates it may be threat to the health and safety of Americans, and the polluter fails to attempt to comply voluntarily after request, the Department of Justice should authorize and seek criminal penalties as well as civil injunction proceedings under the Refuse Act of 1899 against polluters. To do otherwise is an attempt to defend the intent and strength of the 1899 Refuse Act and to possibly ignore Government responsibility for existing law.

SPECIAL DOCUMENTARY PROGRAM WILL APPEAR ON ABC

HON. ROY A. TAYLOR

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1970

Mr. TAYLOR. Mr. Speaker, I take special pride in calling to the attention of my colleagues in the House and Senate a special documentary program entitled "Help," which will appear on the ABC Television Network this coming Monday, August 3, 1970, at 10:30 p.m., as part of ABC's "Now" series.

This hour-long, prime-time color film will portray the phenomenal success story of AFRAM, Inc., a black owned and operated business located in the congressional district which I represent at Asheville, N.C. Asheville, incidentally, was designated earlier this year as an "All America City," due in part, the judges said, to the progress which the city has made in improving race relations.

AFRAM, which manufacturers a variety of disposable paper garments, is truly an example of what can be done when people of all races in a community combine their resources to achieve a mutually beneficial goal.

The film, which I hope every Member of Congress will have an opportunity to see, will show what the blacks in Asheville have done to help themselves in a unique and enterprising industry.

Special credit must be given to Mr. Robert V. Mathison, of Asheville, a prime mover in initiating and helping to organize AFRAM, and to Mr. Mort Cohn, vice president and general manager of WLOS–TV in Asheville, who had much to do with arranging the documentary.

Mr. Cohn recently expressed the belief that the film will serve to provide ideas for similar projects elsewhere in the Nation.

MEDICAL CARE BENEFITS FOR DISABLED COAL MINERS

HON. RICHARD S. SCHWEIKER

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, July 28, 1970

Mr. SCHWEIKER. Mr. President, this morning I received, as did a number of other Members of Congress, a letter from W. A. "Tony" Boyle, president of the United Mine Workers of America.

Mr. Boyle proposes in his letter that Congress enact legislation to provide medical and hospital benefits to disabled coal miners who are too young to qualify for either medicare or their retiree's pension from the UMW Welfare and Retirement Fund.

Mr. Boyle's letter raises an issue that is becoming critical not only among coal miners but among every group of industrial workers in the Nation. This issue is: When a worker becomes disabled several years before he could draw medicare benefits, how can he cope with the enormous expense of medical and hospital care for himself and his family?

As a Senator from a major coal producing State in which many disabled coal miners and their families have experienced acute need for a program of the type proposed by Mr. Boyle, I certainly favor action to solve this problem. At the same time it must be recognized that this problem is shared by workers and their families in every State and in practically every industry. It is time that Congress began to give serious study to such a proposal.

I ask unanimous consent that Mr. Boyle's letter be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

UNITED MINE WORKERS OF AMERICA,
Washington, D.C., July 28, 1970.

HON. RICHARD S. SCHWEIKER,
U.S. Senate,
Washington, D.C.

DEAR SENATOR SCHWEIKER: Disabled coal miners under 65 years of age face a serious problem of medical and hospital care which must be assumed by the nation. These miners have suffered disability as the result of employment under hazardous conditions in an industry vital to the nation's health, comfort and economic welfare. They richly merit assistance from the nation in their hour of need.

The United Mine Workers of America has sought to meet the hospital and medical care needs of these disabled workers through the UMWA Welfare and Retirement Fund which it negotiated with the coal industry. The Fund expended more than $55 million of a total income of $163 million, for hospital and medical care for mine workers during the fiscal year ending June 30, 1969. In the fiscal year ending June 30, 1970 the Fund spent over $65 million out of a total income of $174 million for hospital and medical care.

Because of the ever-escalating costs of medical and hospital care, the UMW Welfare and Retirement Fund has been forced to limit medical and hospital benefits to one year following disability for mine workers too young to qualify for a pension. Our union fully recognizes that this is inadequate to the needs of mine workers.

The UMW intends to win a much higher industry contribution to the Welfare and Retirement Fund in its 1971 negotiations. Even if the present forty cents per ton contribution were doubled, it would not be sufficient to provide indefinite hospital and medical benefits to disabled miners because of the need to increase pensions, survivors benefits and other benefits.

During recent weeks, mine workers who have been unemployed for more than one year because of disability have picketed and disrupted production of vitally needed coal in several mine fields. We recognize that the disabled miners' needs are urgent and very real. The UMW Welfare and Retirement Fund, however, cannot provide indefinite medical and hospital care for these disabled miners without denying benefits to other working and retired members and survivors.

The real answer to this problem, especially in the face of soaring medical and hospital costs, is a program of hospital and medical benefits for disabled miners similar to Medicare which would become applicable one year after disability. Such a program should provide uniform benefits for continuing medical and hospital care costs resulting from disability. The UMW Welfare and Retirement Fund now provides certain supplemental benefits to retired members over 65 who are enrolled in the Medicare program and would attempt to provide similar benefits under a federal program for disabled mine workers who have exhausted benefits now paid from the Fund.

In the view of the UMW, such a program would best be supported from general taxation. We urge the immediate introduction of legislation to meet the health care needs of disabled mine workers following one year of disability. We will be more than pleased to work with your office in shaping a satisfactory legislative measure.

Sincerely yours,

W. A. BOYLE,
President.

THE FLAG—JUST "A PIECE OF CLOTH"?

HON. ODIN LANGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1970

Mr. LANGEN. Mr. Speaker, 1 year ago this week our Nation was, for an all too brief moment, united in pride when Neil Armstrong planted the U.S. flag on the moon. The astronauts returned home from that hostile and airless foreign soil with additional flags to present to Congress as symbols of man's first great step beyond the limits of his planet. A flag remains on the moon as the sacred symbol of the freedom, equality, justice, and humanity for which our country stands.

In remembrance of that glorious moment and others, such as the planting of the flag at Iwo Jima, where brave men put their lives on the line for the defense of our national symbol, we can only feel anger and grief when we see what is happening to and being done to that flag today. We only have to pick up our daily newspaper to read of new burnings and other atrocities committed against the flag and then turn inside to see hideous advertisements urging us "to show our colors" and wear starred and striped pants, flag shirts or ties, and liven the interiors of our living rooms with flag pillows. The degradation of our national emblem reached new depths when one manufacturer even offered flag toilet paper. Time magazine recently wrote with astonishment of the manner in which, what Woodrow Wilson referred to as the "emblem of our unity" has been widely abused. To quote Time:

> Some . . . blow their noses on it, sleep in it, set it afire, or wear it to patch the seat of their trousers. In response, others wave it with defensive pride, crack skulls in its name, and fly it from their garbage trucks, police cars and skyscraper scaffolds. In pride or put-on, Pop or protest, Old Glory's heraldy blazons battered campus and Indianapolis 500 races, silver pins and trash bins, glittering cowboy vests and ample bikinied chests. The flag has become the emblem of America's disunity. (*Time*, July 6, 1970, p. 8).

It is time that Congress acted decisively to remove the flag from the political arena of flamboyant protest and from the botique marketplace to restore it as the symbol and property of the entire Nation. Congress took a step in this direction by enacting the Federal Flag Anti-Desecration Statute in 1968. It provides a penalty of not more than $1,000 or imprisonment for not more than 1 year, or both, for any person who "knowingly casts contempt upon any flag of the United States by publicly mutilating, defacing, defiling, burning, or trampling upon it." At the time that this bill was under consideration by the 90th Congress, I argued that the penalties provided would prove to be inadequate.

Time has proved my belief that the threat of a minimal fine or jail term would not be taken seriously by those who would take the flag from us and use it for their own narrow purposes to degrade our national honor. Typical of the flag burners is one young lady from Berkeley, Calif., who was quoted by Time as saying:

> Desecrating the flag is just fun. It's burned, torn or worn for the sheer joy of doing something naughty and getting away with it. (*Time*, July 6, 1970, p. 21)

If we have failed to teach our youth the joy of patriotism and the meaning of our flag, we must make the burning and other forms of desecration a painful experience. To save the flag from those who would degrade it and to restore it to a place of national honor for all Americans, I am today introducing a bill to amend the present flag desecration law and provide for imposition of a maxmum fine of $2,000 with possible imprisonment for a term of up to 2 years, or both. My bill will punish not only wanton acts to desecrate the flag but also will include acts of disrespect. By using the definition already provided by the flag code, acts of disrespect will come under the penalty provisions of this bill and will be enforceable in the courts.

There will be those who will argue that the Federal Government cannot take away the flag burners' "freedom of expression" as if they could not express their twisted sense of dissatisfaction with America in any other way. Since 1905, the Supreme Court has recognized that State and Federal Governments have an interest in promoting patriotism and protecting the flag as an emblem of national power and national honor. Justice M. Harlan wrote in that first flag desecration case, Halter against Nebraska:

> A State will be wanting in care for the well-being of its people if it ignores the fact that they regard the flag as a symbol of their country's power and prestige and will be impatient if any open disrespect is shown towards it . . . [Commercial use of the flag] tends to degrade and cheapen the flag in the estimation of the people, as well as to defeat the object of maintaining it as an emblem of National power and National honor. 205 U.S. 34, 42.

While the Supreme Court has not ruled on the question of whether flag burning or desecration is a form of symbolic speech that would come within the protection of the first amendment, recent opinions from that Court and other Federal courts give us every reason to believe that even if flag burning is a form of speech, the Government can prohiibt this form of "expression" since there are other forms of protest or speech available to the desecrators with which they could express the same thoughts. Abbie Hoffman was convicted under the present Federal flag desecration law when he arrived at hearings of the then House Un-American Activities Committee wearing a flag shirt and playing with a yo-yo. The District of

Columbia Court of Appeals upheld the conviction and found that the Federal flag desecration statute is a reasonable regulation limited to prohibiting certain defined acts of conduct and does not necessarily impinge upon a citizen's right to protest. The Court found that the first amendment protects freedom of speech and not of conduct and held that a sufficiently important interest in regulating the nonspeech element, such as here, can justify incidental limitations on first amendment freedoms. *Hoffman* v. *United States*, 256 A. 2d 567 (1969).

The U.S. District Court for the Northern District of California has also upheld the flag desecration law. This case involved the burning of the flag in front of a Federal courthouse. The Court found that even if burning of the flag was to be considered a form of speech, prohibition of this act would not prevent the defendant from seeking an audience or reaching an audience by other means. The Federal Government's powers of sovereignty were found to include the power to select a national flag or symbol and the power to select a flag, the Court said, carries with it the power to do whatever is necessary and proper for carrying into effect this selection including the power to protect it from contemptuous destruction.

The Supreme Court found in *United States* v. *O'Brien*, 391 U.S. 367 (1968), that Congress has the power to punish any person who burns his draft card. The Court held that when "speech" and "nonspeech" elements are combined in the same course of conduct, a sufficiently important governmental interest in regulating the nonspeech element can justify incidental limitations on first amendment freedoms. All of the opinions that I have mentioned and others have found that protection of our national flag is a substantial and important governmental interest. Incidentally, several of the more liberal present and former Justices of the Supreme Court indicated that they agree, in their dissenting opinions in *Street* v. *New York*, 394 U.S. 576 (1969). This was a flag burning case under a New York State statute in which the majority of the Supreme Court sidestepped the main question of the case—whether the State could punish flag burning—because of a finding that the State might have punished the defendant's words in addition to his act. Four of the Justices condemned the Court's failure to face up to this issue, a failure which Chief Justice Warren warned "encourages others to test in the streets the powers of our States and National Government to impose criminal sanctions upon those who would desecrate the flag." 394 U.S. at 605. The former Chief Justice concluded:

> I believe that the States and Federal Government do have the power to protect the flag from acts of desecration and disgrace. But because the Court has not met the issue, it would serve no purpose to delineate my reasons for this view. However, it is difficult for me to imagine that, had the Court faced this issue, it would have concluded otherwise. *Ibid.*

Another liberal, Justice Black, also found that the Government can punish the flag burners:

> It passes my belief that anything in the Federal Constitution bars a State from making the deliberate burning of the American flag an offense. It is immaterial to me that words are spoken in connection with the burning. It is the *burning* of the flag that the State has set its face against . . . . The talking that was done took place "as an integral part of conduct in violation of a valid criminal statute" against burning the American flag in public. 394 U.S. at 610.

Justice Fortas most eloquently defended the flag in his dissenting opinion and succinctly stated why desecration of it should be punished and defenses of the desecrators as dissenters dismissed:

> [T]he flag is a special kind of personality. Its use is traditionally and universally subject to special rules and regulations . . . A person may "own a flag, but ownership is subject to special burdens and responsibilities. Certainly . . . these special conditions are not *per se* arbitrary or beyond governmental power under our Constitution.
>
> One may not justify burning a house, even if it is his own, on the ground, however sincere, that he does so as a protest. One may not justify breaking the windows of a government building on that basis. Protest does not exonerate lawlessness. And the prohibition against flag burning on the public thoroughfare being valid, the misdemeanor if not excused merely because it is an act of flamboyant protest. 394 U.S. at 616–617.

Let us remember the warning that Justice Harlan issued 65 years ago in the first flag desecration case and provide penalties for flag burners as are provided to deter draft-card burners. Justice Harlan wrote:

> A State will be wanting in care for the well-being of its people if it ignores the fact that they regard the flag as a symbol of their country's power and prestige and will be impatient if any open dissent is shown towards it. *Halter* v. *Nebraska*, 205 U.S. 34, 42.

The people are rightfully "impatient" and angered to see their national flag degraded by protester and manufacturer alike. It is time for Congress to show that it cares.

MICHAEL J. KIRWAN

HON. EMILIO Q. DADDARIO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1970

Mr. DADDARIO. Mr. Speaker, with deep sadness and great respect, I take this opportunity to mark the passing of our honored colleague, Congressman Michael J. Kirwan of Ohio. Mr. Kirwan will long be remembered by all of us as a legislative leader whose record of 33 years in the House of Representatives is distinguished by his vigorous leadership of the Democratic Party's Campaign Committee and of the House Public Works Committee. Mr. Kirwan further served his country and his constituency as an ardent conservationalist and a champion of the cause of the too often forgotten American Indian.

As the self-educated son of an immigrant coal miner, Mr. Kirwan typified the American spirit, lifting himself out of poverty to become the representative of Ohio's 19th district in Congress in 1937.

His flamboyant personality and long service to society will serve as his memorial for many years to come. Dozens of dams, powerplants, and parks can be attributed to his personal efforts. For these, and his many other accomplishments, we in the Congress and all Americans are indebted to Michael Kirwan.

AMERICAN INDIAN MAKING SIGNIFICANT PROGRESS THROUGH HIS OWN EFFORTS

HON. W. R. HULL, JR.

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1970

Mr. HULL. Mr. Speaker, it is common and cruel knowledge among Americans that the American Indian has been often mistreated or ignored by his fellow citizens and by his Government. Words spoken about this national disgrace would fill many volumes but a chronicle of effective action taken to rectify it would scarcely fill a notebook.

Happily, one encouraging trend is developing. Now Indian leadership is coming to the fore and significant progress is being made by the American Indian through his own efforts.

One unique situation is occurring—one that deserves special recognition. Recently, four tribes, the Potawatomi, Kickapoo, Iowa and the Sac and Fox have formed their own corporation, owned and operated by American Indians. They have opened an Employment Assistance Center at 101 West 11th Street in Kansas City, Mo.

Indians from all over the United States will be traveling to Kansas City to be interviewed and have their skills and potential skills evaluated. This employment activity will be conducted in an office staffed by 100-percent Indians. If an individual from a reservation is desirous of acquiring certain skills and desires to improve his economic status, he will be sent to school, trade school, or a service school. When he is capable of moving into a higher job classification, the Kansas City office will assist him in finding better employment.

This unique arrangement has been worked out through a new concept approved by the Bureau of Indian Affairs.

Several Kansas City companies, including Trans World Airlines, have already been making plans to cooperate with the Kansas City office of Indian Enterprises, Inc. One Indian girl is now in the new TWA Hostess Training Center. Others will be trained by the company in the near future.

I would like to include the remarks of Marvin L. Franklin, director of special cooperative projects, Phillips Petroleum Co., before the Kansas City

Chamber of Commerce. Mr. Franklin has been a member of the Iowa Tribal Council and executive committee for the past 10 years, a member of the Oklahoma Bar Association, and president of Indian Enterprises, Inc:

THE EMERGING AMERICAN INDIAN

I am grateful to you on behalf of Indian Enterprises for the invitation to share this great hospitality of the Kansas City Chamber of Commerce.

While Indian Enterprises is a relatively new business organization in Kansas City, it brings with it a story of progress and challenge. A story that I think you will be thrilled to hear. It is the story of the emerging American Indian!

Too often we are exposed to the sensational writer who dramatizes one-day forays to isolated reservation areas and portrays the Indian as a creature to be pitied! True, there are an unproportionate number of depriving circumstances for the Indian when considered in comparison to other ethnic groups. But this is changing—changing through progress—changing, because the Indian leadership with the assistance of the Bureau of Indian Affairs is developing a new horizon for the American Indian.

Indian Enterprises is just one of those examples.

In 1961, President Kennedy assigned a task force on Indian Affairs to make recommendations for policy changes. The Chairman of that group was W. W. Keeler, now Chairman of the Board of Phillips Petroleum Company, a most respected business leader as evident by his election as Chairman of the National Association of Manufacturers—but most of all, a cherished Indian leader, who, since the late 1940's has been the Principal Chief of the Cherokee Nation.

The Task Force made these recommendations:

1. Maximum Indian economic self-sufficiency
2. Full participation of Indians in American life
3. Equal citizenship privileges and responsibilities for Indians

Considerable progress has been made in bringing about the attainment of these objectives.

As business leaders, you are fully aware that government alone cannot marshall all the forces of economic change. To create a condition that brings about self-sufficiency, full participation and citizenship privileges and responsibilities, required the attention of our country's private business sector.

About five years ago, Phillips undertook a program as a business organization to see what might be done in cooperation with government to overcome some of the problems in economically disadvantaged areas. Experience has dictated that it has been most effective in those areas in which is provided technology and management capability to assist in developing viable business organizations which would bring job opportunities, economic self-sufficiency and individual growth to those in a local area.

One of the great privileges I enjoy is serving on the management board of the Navajo Forest Products Industries—wholly owned by the Navajo Tribe. Built with their own capital and retained earnings, the organization now operates a very modern fifteen million dollar sawmill which process some fifty million board feet of lumber per year, taken entirely from their forested mountain ranges in New Mexico and Arizona which contain about five hundred thousand acres of timbered area. But most of all—this operation provides gainful employment for approximately five hundred Navajo people and is building a modern city to provide the needs of their families. Few people know of this gigantic undertaking by the Navajo Tribe—and still fewer people know that it has been possible only because the Bureau of Indian Affairs maintains a highly qualified and efficient staff in their Branch of Forestry—and because a handful of dedicated men from the private sector furnished without compensation, the management leadership to build a viable industry. The Navajo workman has responded well, not only in the trade classifications, but in management, and except for some thirty non-Navajo employees, he now performs all the functions of running the forest and mill operations. Other similar operations, some in partnership with commercial organizations, are evident on Indian-owned lands. But think for a moment what might be done, if you as business leaders, analyzed the potentials for growth in the light of your particular expertise as applied to the tremendous resources of Indian-owned lands. It takes not only the involvement of the Indian in the dominate society—it takes a conscientious involvement by society with the Indian in order to mutually benefit from his latent talents.

Speaking of land areas, I am told that some ninety percent of our population in the United States lives on only two percent of the lands in the continental areas. The American Indian still controls two percent of the land areas much of which contains untapped natural resources or is capable of productivity through agriculture, livestock or recreational development. I think it is safe to say, the American Indian, equipped with the proper tools can become the wealthiest ethnic group the nation has ever known.

Let us turn our attention to the most important aspect—the human resource. In spite of the popular literary trend to create a best seller based upon degrading both the so-called "establishment" and the disadvantaged in society, by ridicule, my experience with graduates of schools operated by the Bureau of Indian Affairs is one that commands respect. Because there are limitations on Indian education enrollment based upon certain needs, far too many in society have an impression that an Indian School is a reformatory rather than an educational institution. Some have asked that same question about Haskell Institute at Lawrence and it is pleasing to note that school has been renamed Haskell Indian Junior College. Thousands of Americans of Indian derivity have graduated from our universities and colleges throughout the nation, and indeed, the world. Mr. Robert Bennett, for example, a Haskell Graduate and George Washington University, not only became the Commissioner of Indian Affairs, but is now associated with the Law School at the University of New Mexico. And my experience with loyalty, dedication and devotion on the part of the American Indian toward a job to be done or a goal to be reached, is unexcelled irrespective of his educational opportunities when guided by concerned leadership.

About a year ago, Phillips was instrumental in creating a company wholly-owned by the Cherokee Tribe of Oklahoma. It is called Cherokee Nation Industries and has its principal operation in a small Northeastern Oklahoma town situated in a county with the lowest per capita income in the entire state. A very generous company, Western Electric, shared its technology, management, and requirements for assembled communications equipment to start this manufacturing firm. On June 16, 1969, it opened its doors in a rented five thousand square foot building and began with eight employees. Today, this plant is not wholly-owned—but totally managed by Cherokee people recruited from that area, mostly, former students of schools operated by the Bureau of Indian Affairs. Today, that plant employs almost a hundred people, has a branch operation which contracts with a major airline and is developing other operations that will serve contracts in diversified business areas.

Your next question might well be "How successfully do they manage?".

I might answer that by stating that the community in which Cherokee Nation Industries operates now enjoys—not just gainfully employed people with a steady payroll, but an economic turnover in excess of one million dollars annually. Liquid assets of the corporation have reached 600% of their initial capital investment and payrolls generated for members of the Cherokee Tribe for the yast year were 700% of their invested capital. Profits for the first year have created a federal income tax liability, for the corporation alone, of approximately $45,000. Here again, the Bureau of Indian Affairs, through its Branch of Employment Assistance was most helpful in developing a program of employment counselling and training which contributed substantially to the success of the enterprises, or consider the earnings last year for Navajo Forest Products Industries when it had a profit in excess of $1.4 million, plus stumpage of $840,000 and a payroll of $2.25 million.

As a business leader, you are familiar with these indicators and can measure their management capabilities for yourselves.

This brings us to Kansas City—and the organization we call Indian Enterprises, Inc.

In October, 1969, the four Indian Tribes of Northeastern Kansas were asked what might be done by the Bureau of Indian Affairs to assist in bringing opportunities to their tribal members. Two things were described by their leaders as necessary elements—job opportunities and business ownership. The Bureau of Indian Affairs had under consideration an Employment Assistance Center in Kansas City to serve individual Indians from all areas of the nation in securing direct employment with existing business organizations and to provide a means for Adult Vocational education. The challenge was—can you as an Indian group, organize a business corporation capable of contracting with government to operate such a center. From the date of the challenge to the formation of a corporation and signing of a contract was less than thirty days. Creation of an office and staffing was accomplished promptly—and on March 1, the facility was available and in operation. The organization is in full operation, serving those referred to this area, and we are continuing our efforts to become acquainted with employers and their personnel staff as well as vocational, technical and academic schools of this area.

Here again, it took the assistance of the local community—people like Mr. Dick Challinor, formerly associated with Chamber who gave generously of his time and valuable background of your city, Leonard Staples of H. D. Lee Company and Charles Koester of City National Bank, both long-time friends of Phillips who came to our aid in getting established.

Not unlike other projects, the most important element was the people we found to run the organization—and with the help of the Branch of Employment Assistance of the Bureau of Indian Affairs who counselled our efforts to create a viable organization. In support to my prior statement concerning the quality of education although coming from different geographical areas, have been students at Haskell. In addition to their Indian education, many on the staff have successfully attended other schools of higher learning, but it is significant to note the important role BIA schools have played in preparing the Indian to assume his position in society.

The function of Indian Enterprises, Inc., whose directors and stockholders are repre-

sentatives of the four tribes of Northeastern Kansas, the Iowa, Kickapoo, Sac and Fox, and Potawatomi is to create opportunities for individual Indian entrepreneurship or tribally-owned businesses. All the earnings of the corporation are destined to be loaned or invested for building businesses and none are to be distributed as dividends. It is, however, and I think this important, that all recognize the corporation as a taxable, profit generating entity, capable of teaching people to be competitive, and yet, structured in such a manner that it does not destroy existing businesses established in our free enterprise system by seeking tax shelters.

We will grow, just as Cherokee Nation Industries has grown, because the innate "esprit de corps" of the American Indian knows how to meet challenges under controlled conditions. His fears are most apparent as an individual when confronted with those of society whose "aggressiveness" is just as natural as the Indian tendency to be reticent.

I regret time does not permit an opportunity to relate to you the successes experienced in bringing established industries at locations on or near areas of concentrated Indian population. They are varied in structure and product lines. It is a thrilling story of success—but one must fall before the public hears of the building of the staircase to the future.

Thank heavens—the Emerging American Indian is a positive, progressive, humble American with an unequalled empathy for his fellowman—and one who believes the future is filled with brightness.

AMERICAN CAN CO. EARNS RECOGNITION OF EQUAL EMPLOYMENT OPPORTUNITY COMMISSION

HON. ROBERT McCLORY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1970

Mr. McCLORY. Mr. Speaker, it was a source of satisfaction to receive the recent news release of the Equal Employment Opportunity Commission announcing establishment of a program to benefit black employees of American Can Company at Bellamy and Whitfield, Ala.

This announcement represents further evidence of this enlightened industrial concern to assure its black employees that they will be provided with opportunities for self-improvement, for better jobs and for better housing.

The joint program established by the Equal Employment Opportunity Commission in conjunction with American Can Company will provide immediate benefit to 75 black employees of the company at Bellamy and Whitfield, Ala. The details are set forth in the news release of Sunday, July 5, 1970, as follows:

EQUAL EMPLOYMENT OPPORTUNITY COMMISSION ANNOUNCES HOUSING FOR AMERICAN CAN COMPANY EMPLOYEES

William H. Brown III, Chairman of the Equal Employment Opportunity Commission announced today the establishment of a program developed in cooperation with American Can Company that will offer 75 Black employees of the company at Bellamy and Whitfield, Alabama, an opportunity to purchase new homes that will be built for them in the area.

The joint American Can Company-Equal Employment Opportunity Commission program could bring substantial immediate and long-range savings to the residents of the communities.

Seven Black employees have already purchased homes that were built as prototypes in the integrated community. The housing program has been under study and test since the summer of 1969.

A three bedroom home will be sold to the employee for $7,475. The four bedroom homes will be priced at $9,875.

Both three and four bedroom homes, which will be built by a Black contractor in the area, will be sited on 15,000 square foot lots. American Can Company will exchange 15,000 square foot lots at no cost for Black employees whose current lots fail to meet the 15,000 square foot minimum.

The Farmers Home Administration of the U.S. Department of Agriculture, which is making no-down-payment financing available to the southern families for the program, estimates that houses of similar construction are being sold in Alabama's Sumter County for at least $2,000 more than the Bellamy and Whitfield homes.

If all 75 Black employees take advantage of the American Can Company offer, the potential savings in the initial cost of the housing alone will be substantial. Additional long-range savings can be realized because of the lower interest rate possible under FHA financing than would be available over the 33-year loan period from conventional sources.

Construction plans and schedules were developed within American Can; wood products and engineering services of the company are being used wherever possible to save money.

The three bedroom home affords 960 square feet of living area and the four bedroom, 1,120 square feet. Both have decorative landscaping. Construction includes full bath, built-in kitchen cabinets and both front and back porches. The owner has his choice of exterior color schemes and interior paneling.

In announcing the program Mr. Brown said, "These attractive, well-built and efficient homes represent a positive self-help thrust. The homes that already have been built have created a new pride in their owners and a desire by their neighbors to participate in this upgrading of the individual family and the community.

"This cooperative program has been established after months of work by representatives of the American Can Company and Andrew C. Muse, Chief of Conciliations, and Richard A. Grossman, Senior Conciliator, of EEOC, together with representatives of a number of other government agencies. We believe that its successful completion will offer valuable guidelines to other companies that have accepted the responsibility of working with their minority employees as they achieve their deserved standards of life and human equality."

American Can's program to promote employment opportunity—without regard to race, color, religion, sex or national origin—has produced new promotional opportunities for Black employees in the Bellamy plant. For example, two Black employees at the company's lumber facility have been promoted to foreman and Blacks now hold five of seven assistant foreman positions. In the Company's program that advances workers from "helper" categories into skilled positions, eight of the ten workers currently classified as helpers are Black.

The EEOC also announced that a cooperative store at Bellamy is now in successful operation. The cooperative, whose Board of Directors is composed of four Black and three white Bellamy employees, was established with the guidance and assistance of the Farmer Cooperative Service of the Agriculture Department.

The Equal Employment Opportunity Commission was established under title VII of the Civil Rights Act of 1964. This Title of the Act prohibits discrimination based on race, color, religion, sex, and national origin in hiring, upgrading, and all other terms and conditions of employment.

WHAT DOES OUR FLAG AND OUR INDEPENDENCE DAY MEAN TO US?

HON. GLENN R. DAVIS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1970

Mr. DAVIS of Wisconsin. Mr. Speaker, Independence Day ought to serve to remind us of the struggles of our Founding Fathers and the simple truths of the ideals and the traditions which those Founding Fathers and succeeding great Americans in all the four corners of our land have given to us.

A patriotic merchant in my home town of Waukesha, Wis., sponsored a full-page advertisement in the Waukesha Freeman which contains, in simple but moving Independence Day ought to serve to reminders of our American heritage.

I commend the reading of these passages to my colleagues:

WHAT DOES OUR FLAG AND OUR INDEPENDENCE DAY MEAN TO US?

What's a flag? What's the love of country for which it stands? Maybe it begins with love of the land itself. It is the fog rolling in with the tide at Eastport, or through the Golden Gate and among the towers of San Francisco. It is the sun coming up behind the White Mountains, over the Green, throwing a shining glory on Lake Champlain and above the Adirondacks. It is the storied Mississippi rolling swift and muddy past St. Louis, rolling past Cairo, pouring down past the levees of New Orleans. It is a lazy noontide in the pines of Carolina, it is a sea of wheat rippling in Western Kansas, it is the San Francisco peaks far north across the glowing nakedness of Arizona, it is the Grand Canyon and a little stream coming down out of a New England ridge, in which are trout.

It is men at work. It is the storm-tossed fishermen coming into Gloucester and Provincetown and Astoria. It is the farmer riding his great machine in the dust of harvest, the dairyman going to the barn before sunrise, the lineman mending the broken wire, the miner drilling for the blast. It is the servants of fire in the murky splendor of Pittsburgh, between the Allegheny and the Monongahela, the trucks rumbling through the night, the locomotive engineer bringing the train in on time, the pilot in the clouds, the riveter running along the beam a hundred feet in the air. It is the clerk in the office, the housewife doing the dishes and sending the children off to school. It is the teacher, doctor and parson tending and helping, body and soul, for small reward.

It is small things remembered, the little corners of the land, the houses, the people that each one loves. We love our country because there was a little tree on a hill, and grass thereon, and a sweet valley below; because the hurdy-gurdy man came along on a sunny morning in a city street; because a beach or a farm or a lane or a house that might not seem much to others were once, for each of us, made magic. It is voices that are remembered only, no longer heard. It is parents, friends, the lazy chat of street and store and office, and the ease of mind that

makes life tranquil. It is summer and winter, rain and sun and storm. These are flesh, bone of our bone, blood of our blood, a lasting part of what we are, each of us and all of us together.

It is stories told. It is the Pilgrims dying in their first dreadful winter. It is the Minuteman standing his ground at Concord Bridge, and dying there. It is the Army in rags, sick, freezing, starving at Valley Forge. It is the wagons and the men on foot going westward over Cumberland Gap, floating down the great rivers, rolling over the great plains. It is the settler hacking fiercely at the primeval forest on his new, his own lands. It is Thoreau at Walden Pond, Lincoln at Cooper Union, and Lee riding home from Appomattox. It is corruption and disgrace, answered always by men who would not let the flag lie in the dust, who have stood up in every generation to fight for the old ideals and the old rights, at risk of ruin or of life itself.

It is a great multitude of people on pilgrimage, common and ordinary people, charged with the usual human failings, yet filled with such a hope as never caught the imaginations and the hearts of any nation on earth before. The hope of liberty. The hope of justice. The hope of a land in which a man can stand straight, without fear, without rancor.

The land and the people and the flag—the land a continent, the people of every race, the flag a symbol of what humanity may aspire to when the wars are over and the barriers are down; to these each generation must be dedicated and consecrated anew, to defend with life itself, if need be, but, above all, in friendliness, in hope, in courage, to live for.

THE REAL CAUSE OF INFLATION

HON. EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1970

Mr. BOLAND. Mr. Speaker, President Nixon has accused the Congress of profligate spending in exceeding the budget figures he set for the country's social programs. Increases the Congress has made in his budget, Mr. Nixon contends, threaten to fuel inflationary trends.

I disagree—and disagree emphatically.

The money we spend on social programs—programs for education, for health care, for housing, for job training—is piddling when matched against the staggering sums lavished on the military. The cost of the Indochina war and the Pentagon's whimsically visionary arms projects—the ABM, carrying a pricetag in the tens of billions, is a striking example—dwarf the cost of the programs we have developed to answer the country's pressing social needs. Military spending devours the lion's share of our yearly budget, leaving only scraps for social programs.

The real cause of inflation is military expenditures. Ending the Indochina war, and tightening rein on the Pentagon, will stop inflation.

The cost of social programs has only the most trivial effects on inflation. The Congress is merely honoring its social responsibilities by seeking adequate funding for such programs.

A newspaper column by William V. Shannon, published yesterday in the New York Times, eloquently discusses this issue. I insert Mr. Shannon's column in the RECORD at this point.

MR. NIXON ON SPENDING

(By William V. Shannon)

As both a politician and a football fan, President Nixon knows that an aggressive offense is the best defense. He has taken the offensive against critics of his economic strategy who believe that with high prices, high unemployment, and no economic growth, this Administration has managed simultaneously to combine several of the worst effects of inflation and deflation.

In a statement issued a week ago, President Nixon focuses on inflation and warns that prices cannot come down if Congress insists upon appropriating more money than he requested in his budget. He attacks frontally the argument that what is needed is a cut in defense expenditures and a change in national priorities. Mr. Nixon asserts: "Let's set the record straight. We have changed our national priorities."

In support of his assertion, the President points out that for the first time in twenty years, his budget provides more spending for human resources (41 per cent) than for defense (37 per cent). He compares his budget in this regard with the budget of President Kennedy in 1962 and of President Johnson in 1968.

These comparisons are significant because they at least reveal the Administration's sensitivity to the debate over national priorities. Without quibbling over these comparative statistics, two important qualifications have to be made with regard to the Kennedy budget of 1962. First, since Congress had not acted upon a long list of President Kennedy's educational and social welfare proposals, it was obviously not possible to spend money on programs that had not yet been approved. Secondly, the nation's economic performance in 1962 was decidedly unsatisfactory. The gross national product was rising but unemployment was even higher than it is now. That is why President Kennedy eventually proposed a major tax cut the following year.

JOHNSON'S RECORD

The comparison with President Johnson's record in 1968 is also instructive in a way in which Mr. Nixon did not intend. By then, Congress had approved the far-reaching social program which the Kennedy Administration had sought, as well as others formulated by Mr. Johnson. By then also, the economy had benefited for four years from the stimulating effect of the tax reduction which President Kennedy requested. Because of the enormous growth of the economy in the Kennedy-Johnson years, President Johnson could fight a sizable war in Vietnam and yet devote a smaller percentage of the national budget to defense than Mr. Kennedy had six years earlier.

THE EISENHOWER YEARS

Both the Kennedy and Johnson Administrations made errors in managing the economy, but by correctly concentrating on economic expansion, they helped bring about real increases in living standards and in educational and welfare programs. The Eisenhower Administration, preoccupied with the perils of inflation, especially during its second term, achieved a dismal record of slow growth and two recessions in its last four years.

President Johnson and the Democratic-controlled Congress of 1967–68 share the blame for inducing inflation by fighting a war without promptly imposing sharply higher taxes. Although President Nixon now talks of facing "hard figures" and possible "painful measures," his statement shows no evidence that he is any more willing than his predecessor to choose either of the two grim options—to end the war or to run a war economy.

Vietnam and the inflated military budget are the true breeders of inflation, not only in direct budgetary costs but in the even larger invisible costs of diverted manpower and wasted resources. Niggling cuts in social programs cannot reach the source of the economy's troubles. Indeed, with the population steadily growing and unmet urban needs accumulating, the nation has to have more schools, more hospitals, more housing and more people to man the social services. These requirements grow as inexorably as interest on the national debt.

To attack Congress for spending money for schools and hospitals may be good politics if the President is only concerned with shifting the blame for inflation. But if he is interested in raising real living standards and reducing the scandalous level of unemployment, he will join Congress in approving higher social expenditures. If he is interested in reducing inflation, he will do so by stopping the war in Vietnam and materially cutting back on military programs. Wars and stable prices do not go together. Not even the most adept economic juggling or facile rhetoric can conceal that fundamental incompatibility.

NECESSITY FOR BOXCAR LEGISLATION

HON. ANCHER NELSEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1970

Mr. NELSEN. Mr. Speaker, I must once again stress the necessity for boxcar legislation. As an indication of the severity of the boxcar shortage in the Second Congressional District, the four major rail lines serving our section of Minnesota have just reported to the Interstate Commerce Commission that anywhere from 13 to 40 percent of available cars are now being detained on other lines. The breakdown follows:

	Number of own cars on line	Percent on own line	Percent on other lines
Burlington Northern	30,516	59.5	40.5
Chicago & Northwestern	22,816	83.2	16.8
Soo Line	4,983	87.3	12.7
Milwaukee Road	12,736	78.7	21.3

The August, September and October grain harvest in the Midwest will be on its way to market soon, worsening this situation. Wheat, corn, and soybean production for this year is predicted to be 7.3 billion bushels, an increase of 145 million bushels over the last year. Much of this huge crop will move by rail, but the delay in receiving cars is certain to hamper the shipment of the grain. The elevators and other facilities will soon be filled to capacity, and the fight to get our grain to market has already begun.

In the 1968 ICC hearings on ex parte No. 252 dealing with the boxcar shortage it was pointed out that there were over 273,000 unequipped boxcars delivered after delays of 2 or more days, 36,000 of which were delivered after delays of more than 12 days. During harvest time this is too long. The grain accumulates at

the elevators. When storage space is no longer available, it is dumped outside where it is subject to damage by the elements. This situation has resulted in the loss of millions of bushels of grain, and prolonged storage charges for all concerned. For the farmer and the elevator operator, the delay in receiving needed cars to ship the grain to market can be disastrous.

In the 10-year period 1960–70, as the following table shows, the number of plain, serviceable, unequipped boxcars has dropped a total of 233,816 units.

Date and available supply of plain, unequipped, serviceable boxcars

Jan. 1, 1960	608,275
Jan. 1, 1962	559,588
Jan. 1, 1963	532,469
Jan. 1, 1964	505,273
Jan. 1, 1965	474,632
Jan. 1, 1966	444,485
Jan. 1, 1967	427,404
Jan. 1, 1968	397,501
Mar. 1, 1969	374,459

The need for more unequipped boxcars is critical.

In the ICC hearings on Ex parte No. 252, the Commission arrived at a plan that is intended to give those who own boxcars an incentive above the basic per diem rate during the critical shipping period between September and February. The purposes are to stimulate the quick return of cars to the owners, the building of new cars and the rebuilding of old unequipped boxcars.

With the basic per diem rate and the incentive charge combined, the rate of return on the rolling stock of the owning companies was expected to increase to 18 percent during the time of greatest need for boxcars, compared to a 6 percent return on the cars during the off season. That would be an average return of 12 percent per annum. It was hoped that by pursuing such a policy the debtor roads, that is, those using other roads' stock, would be encouraged to return cars and through the incentive payments receiving roads would be encouraged to build more cars.

I introduced a boxcar bill, H.R. 16890, on April 9th of this year to vest in the ICC additional authority to alleviate freight car shortages. At that time I stated that "a system of compensation for the use of any type of freight car, by other roads, should contribute to sound car service practices, including utilization and distribution of cars, and encourage the acquisition and maintenance of a car supply adequate to meet the needs of commerce and the national defense." I am now introducing another bill to authorize acquisition of boxcars by the Department of Defense to meet its rail shipment needs.

The Department of Defense, during the period October 1968 to September 1969, the most recent figures available, utilized 120,941 unequipped boxcars. Broken down into quarters, beginning with October 1968, the use of cars was as follows:

Date and number of unequipped boxcars

Oct. 1, 1968–Dec. 31, 1968	28,165
Jan. 1, 1969–Mar. 31, 1969	26,214
Apr. 1, 1969–June 30, 1969	36,543
July 1, 1969–Sept. 30, 1969	31,019

The average requirements per month of the Department of Defense was 10,078 cars. It is the purpose of this bill to appropriate $120 million for the purchase of not less than 10,000 boxcars by the Department of Defense to meet its car needs. After the purchase of the cars, the Department would enter into agreements with the railroads on exchanges of rolling stock between the Government and the private rail owners. The maintenance of the Government-owned stock by the rails would be at rates that would recognize the U.S. capital investment in such cars. Thus the per diem and demurrage charges would be less, saving dollars for the taxpayers.

This bill and H.R. 16890 together would represent a broad effort to alleviate the boxcar shortage. The Nation's farmers and shippers need this assistance, and by the adoption of such legislation a great step toward solving the problem will have been taken.

HEARINGS HELD BY THE EQUAL EMPLOYMENT OPPORTUNITY COMMISSION REGARDING THE CIVIL RIGHTS ACT OF 1964

HON. JOHN H. DENT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1970

Mr. DENT. Mr. Speaker, on June 4, 1970, the Equal Employment Opportunity Commission held regional hearings in Houston, Tex. I am submitting for the information of my colleagues a statement presented at those hearings. The statement is in support of an amendment to section 703(h) of title VII of the Civil Rights Act of 1964 which provides that the professionally developed ability test should be "directly related to the determination of bona fide occupational qualifications reasonably necessary to perform the normal duties of the particular position concerned."

The statement follows:

STATEMENT ON PERSONNEL TESTING AND SELECTION

(By William H. Enneis)

It is an old American belief that a person should be hired on the basis of his or her ability to do a particular job. Few people oppose that idea, and many endorse it—even though favoritism manifesting itself in a variety of forms often mocks the ideal.

A basic problem, however, is that existing employment methods and standards are rarely known to produce a better work force than might be obtained by other techniques. Only a small fraction of employers rigorously apply business principles to the operation of their personnel selection programs.

Thus, most top corporate officials do not know whether their firm's personnel practices, including those related to psychological testing, produce a financial return on their annual expenditures. It is commonly accepted in business circles that funds should not only be recovered by the activities or items for which they are allocated but that there should be a reasonable profit on whatever investment is incurred. The application of this principle is commonly demanded in the production, sales, advertising, and research and development of services and goods. This is not the case with most employment testing programs. They are frequently installed uncritically without evidence that they will help produce a more efficient work force. Indeed, many employers not only fail to achieve a return on the cost of their testing programs but also fail to recover even their basic expenditures because the tests have no validity for employee selection. Therefore, it cannot be argued that tests are "good, economically-sound selection procedures" (as they have been represented) unless they have been proved to be so within the context of hard-nosed business and professional standards.

During the past decade, there has been a notable increase in testing procedures of doubtful utility. Some companies in Houston have even installed elaborate and expensive personality and temperament inventories for routine production jobs in the face of repeated industrial research that shows them to be completely useless for most employee selection but just dandy for psychological Peeping Toms and the personnel office that wants to reject an applicant on any phony pretense of an ostensibly "objective" nature. An official of the Atomic Energy Commission has said that ". . . the artificial, non-job-related entrance requirement hides more bigotry than all the white pointed hoods in the country," [1] and he suggested that our nation would have never developed into the world power it is now if some present-day psychological testing standards of acceptability had been applied to screen persons who settled here.

Tests though are not the sole employment hurdle. Educational standards—notably, demands for a high school diploma—are often set far higher than indicated as necessary by job analyses. In its recent "Guidelines on Discrimination Because of National Origin," [2] the Equal Employment Opportunity Commission said that it will "examine with particular concern" situations involving testing of English language skills and height and weight standards for employment where they are not required for the work to be performed. In these respects, the National Origin Guidelines are quite similar to the Commission's earlier "Guidelines on Employment Testing Procedures," issued August 24, 1966, in which a professionally developed ability test was interpreted as "a test which fairly measures the knowledge or skills required by the particular job or class of jobs which the applicant seeks, or which fairly affords the employer a chance to measure the applicant's ability to perform a particular job or class of jobs."

The confusion of standards of personnel selection and promotion with standards of employees' job performance has a catastrophic effect on the employment opportunities of minorities and women. The structure and content of contemporary recruiting and applicant evaluation methods result in disproportionately high rejection rates among these groups, usually without any supporting evidence of their business necessity. In the absence of validity evidence, an employer may be using a screening procedure whose only known function is rejection of minorities and women in greater proportions than of minorities and men. Disproportionately high rejection of minorities is a serious social problem by itself; and when no useful business function of the employment procedure has been demonstrated, there are many Title VII problems as well.

[1] H. T. Herrick, "Civil Rights, Gradualism, and the Established Order of Things". Speech at the AEC Industrial Relations Conference, Kansas City, Missouri, October 4, 1967.

[2] *Federal Register*, Vol. 35, No. 8, p. 421, January 13, 1970.

The vast majority of employment tests in use today are measures of achievement, usually those of an academic nature. The assumption that present achievement will predict future job performance is the basic premise for the use of most employment tests. Furthermore, the use of such achievement tests as potential predictors of job performance is based on the additional assumption that applicants have been exposed to the same general opportunities for learning, since, on the basis of the "equal exposure" concept, those persons who have the greater capacities for learning will have achieved more, as measured by tests, and may be the persons more likely to learn, for example, job skills.

Given the past and present conditions of our educational systems, this "equal exposure" or "equal opportunity" principle for learning and achieving, as measured by most employment tests, is completely false. Under these circumstances, the fact that a large segment of minority groups have not learned test-taking skills does not mean that they are unable to learn job-related skills, including those of a highly complex nature. Thus, so-called "aptitude" tests given to assess employability are often nothing more than indicators of previous opportunity to learn—not future job potential.

On the other hand, many employers say, "We cannot lower our standards," in defense of their continued low utilization of minorities. This argument is particularly frequent among employers who have experienced significant technological change. There is a widespread notion that internally complicated and sophisticated equipment must be operated by the most intelligent persons available. This belief has yet to be universally proven; and, in fact, there is quite a bit of evidence to show that as manufacturing processes become more and more automated, general intellectual requirements actually decline. Has anyone ever claimed that it requires greater intelligence, learning ability or mechanical aptitude to operate a zipper than to button up a coat? Certainly not. And everyone knows that a zipper is far more intricate than a simple button and buttonhole.

The Equal Employment Opportunity Commission has never advocated that an employer lower productivity standards among members of his work force. However, the Commission has consistently urged that *hiring standards* or qualifications be systematically validated against employee job performance and has often insisted that applicant screening methods and test cutoff scores be changed when these selection methods result in disproportionately high rejection rates among minority applicants or present employees and have no demonstrated validity for the employer's jobs. Only in this way can the employer establish that his selection procedures serve a real business need and that the qualifying level established for hiring or promotion is one below which a greater proportion of applicants ultimately fail to meet *standards of productivity* normally expected from experienced employees. After all, if scores derived from a screening procedure are not related to employees' performance, absolutely no level of qualification for employment can be set that will result in a better work force, as determined by relevant measures of employee productivity and effectiveness.

Thus, it is high time that employers, unions, and employment agencies stop confusing tests, education, interviews, and application blanks with job requirements when they think of the "qualified" employee. Standards of employee performance are derived from job requirements and duties. They do not reside in test scores, years of schooling, and data from application blanks and interviews. In this respect, psychological tests have been highly touted by their publishers and their users on the basis of "objectivity" and freedom from the bias or prejudice which can operate, for example, during an interview. This is a highly specious argument because, from an equal employment opportunity viewpoint, no test is objective unless results from it are known to be directly related to measures of employee effectiveness for a particular job or class of jobs.

Perhaps too much attention has been directed to employment tests as "discriminatory" and "culturally-biased" instruments. The attack on tests has tended to obscure the fact that *it is people, not tests*, that practice employment discrimination. People can discriminate; and some do. Tests do not screen out or screen in applicants for employment; people do. Tests do not exercise judgment or make personnel decisions; people do. Tests do not hire and promote; people do.

In conclusion, irrelevant and unreasonable standards for job applicants and upgrading of employees pose serious threats to our social and economic system. The results will be denial of employment to qualified and trainable minorities and women, creation of labor costs, and erection of job barriers that are incompatible with both the necessities of American industry in particular and the goals of American society in general. The commission will not stand idle in the face of this challenge. It will fight employment discrimination in whatever form it occurs. The cult of credentialism is one of our targets.

CAMPUS DISORDERS PART OF A RED PLOT?

HON. JOHN G. SCHMITZ

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1970

Mr. SCHMITZ. Mr. Speaker, under consent to extend my remarks in the RECORD, I wish to include an interesting article by Henry J. Taylor entitled "Campus Disorders Part of a Red Plot?" I believe it deserves wide attention.

The article follows:

CAMPUS DISORDERS PART OF A RED PLOT?

(By Henry J. Taylor)

Are part of the campus disorders a Red plot? You be the judge. For a perilous feature of our day is that too many people are either too civilized, too inexperienced, too distracted or too dense to grasp the documented truth.

CENTER IN PRAGUE

We are being brainwashed whenever we are told that the thrust here is not organized. The CIA and FBI both know that the center for it is in Prague, within the shadow of the Ruzyne Airport. There the immense so called International Union of Students, financed and brain-trusted by Moscow, is supporting university anarchists here and throughout the free world.

The Kremlin departmentalizes this place into "country desks." Each section supervises a country. Cunningly, each tailors the "issues" for each country. Naturally, the IUS drums on the Vietnam issue here and "Peace! Peace! Peace!" to further a Red victory in Southeast Asia.

A Pole, Vlod Konarski, a man with a bite like a saber tooth tiger, supervises the British thrust. The IUS vehicle there is the militant Radical Student Alliance in London. Two subdivisions are supervised by Jean Bourgareau, a Frenchman, and Martin Abeln, who is Dutch.

In Erie the IUS thrust, locally called the International Movement, is based at Trinity College, Dublin. The IUS supervisor is Hardial Sinh Bains, a naturalized Canadian born in India.

A Bains sidekick is Ralph Schoenman, 34, the student shepherd of the Bertrand Russell Peace Foundation—the man who concocted the mock trial of President Johnson in Stockholm in protest against Vietnam ironfisted Schoenman served a "martyr" stretch in Montjoy Prison, Dublin. Britain banned Schoenman and Scotland Yard caught him. To the dismay of the CIA and FBI. Schoenman had an American passport.

In West Germany the Berlin police documented the IUS's control of Rudolph Dutschke ("Red Rudi") when Dutschke was arrested on April 11, 1968, during riots in nearly all the West German universities.

In France the IUS thrust is supervised by Daniel Cohn-Bendit ("Before you can build you must destroy"), who is not even a Frenchman. He's German. The success, typified by the March 3 Natarre campus mayhem which saw Dean Paul Ricouer kidnapped and 125 policemen injured, has all but paralyzed French education. University faculty members are brutalized and kidnapped almost daily.

The French Parliament has enacted a university reform law. In it the campuses are supposed to be autonomous. But by staging demonstrations identical with those here the continued attacks have forced Education Minister Oliver Quichard to open France's campuses to police jurisdiction by declaring university grounds to be public thoroughfares.

President Georges Pompidou himself has stated, in desperation, that "there is no security on many major campuses in France."

SITUATION IN ITALY

I had lunch in New York not long ago with Italian Foreign Minister Aldo Moro. Italy, too, has enacted a new university reform law. Moro, himself a professor, sponsored it. "But what can we do?" he asked. "In my country, as in France, your country and throughout the free world, the Reds' technique is always to up their demands with every concession they gain."

Japanese Premier Eisaku Sato spoke similarly on his visit here. He said that last year student arrests in campus disorders exceeded 14,000 (ours exceeded 3,600) and that the IUS thrust has reduced Japanese educators to a shambles. The IUS vehicle there is the immense Zengakuren student organization along with five other factions.

There's no Alfred Hitchcock mystery in what is happening here, nor the brainwashing that accompanies it. Of course, none is so blind as one who will not see. But, wake up, America!

Our enemies are promoting a civil war in the United States. "It can't happen here" is a totally dangerous philosophy. It will happen if we still refuse to wake up and call a spade a spade.

QUESTIONS REGARDING RECURRING ANNUAL GRANTS TO COLLEGES AND UNIVERSITIES FOR RESEARCH ARE ANSWERED BY THE SECRETARY OF THE INTERIOR

HON. JULIA BUTLER HANSEN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1970

Mrs. HANSEN of Washington. Mr. Speaker, on July 22, 1970, when the House was considering the conference

report on H.R. 17619, the Department of the Interior and Related Agencies Appropriations Act for fiscal year 1971, certain questions were raised with regard to recurring annual grants reportedly made by the Department of the Interior to various colleges and universities for research.

I have brought this matter to the attention of the Secretary of the Interior, and under general leave granted to revise and extend my remarks on the conference report, I would like to place in the RECORD a letter received by me from Secretary Hickel in this connection.

It will be noted that the only annual recurring research grants made to colleges and universities are those authorized by Public Law 88-379, under the Office of Water Resources Research.

UNITED STATES DEPARTMENT
OF THE INTERIOR,
OFFICE OF THE SECRETARY,
Washington, D.C., July 23, 1970.

Hon. JULIA BUTLER HANSEN,
Chairman, Subcommittee on Interior and Related Agencies Appropriations, House of Representatives, Washington, D.C.

DEAR MRS. HANSEN: This will refer to your request for information concerning annual recurring grants to colleges and universities for research.

The only program that the Department administers which makes annual recurring grants to colleges and universities for research is the program authorized by Public Law 88-379, under the Office of Water Resources Research.

Under this program, which is known as "Assistance to States for Institutes," the Office of Water Resources Research makes annual grants of $100,000 to a State university in each of the 50 States and in Puerto Rico. The request for funds to finance this program is set out as a line item under the appropriation for the Office of Water Resources Research in the President's budget and is justified annually to the Congress. Each State university receiving a grant submits to the Office of Water Resources Research for review, a list of its proposed research projects.

The appropriation items, Salaries and Expenses, Office of the Secretary, does not include grant funds for colleges and universities. The funds provided under this appropriation, as you know, are used to finance the immediate Office of the Secretary, the Under Secretary, the Assistant Secretaries and related departmental direction.

Sincerely yours,

WALTER J. HICKEL,
Secretary of the Interior.

REPRESENTATIVE WHALLEY PRESENTED DISTINGUISHED SERVICE MEDAL BY THE AMERICAN LEGION

HON. ALBERT W. JOHNSON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1970

Mr. JOHNSON of Pennsylvania. Mr. Speaker, in recognition of Congressman J. IRVING WHALLEY'S long, distinguished service to the Nation and especially to the people of Pennsylvania, he has been honored with the Pennsylvania Department of American Legion's highest award, the Distinguished Service Medal. I certainly agree with the choice and am happy to join in this expression of appreciation to my friend and colleague for his devoted years of service to our country. Congressman WHALLEY has spent many years representing the 12th Congressional District of Pennsylvania and has been a true friend to the causes of his district and his State. My fullest congratulations to Congressman WHALLEY for his great service in the past, and appreciation for his continued personal friendship, and best wishes for his good health in the future.

The letter informing Congressman WHALLEY of this distinctive award is as follows:

THE AMERICAN LEGION,
Harrisburg, Pa., July 7, 1970.

Congressman J. IRVING WHALLEY,
Windber, Pa.

DEAR CONGRESSMAN WHALLEY: I am very pleased to inform you that you have been selected to receive the highest award that the Department of Pennsylvania American Legion bestows to an individual, the "Distinguished Service Medal."

The selection committee has selected you to be the recipient of this award for this year because of your great service that you are rendering to mankind.

This award in past years has been given to Dr. Jonas Salk, Dr. Milton Eisenhower, Richard King Mellon, Governor Edward Martin and Mrs. Clifford Heinz.

It is requested that you be present at the 52nd Annual State Convention of the Pennsylvania American Legion session on Friday, July 17, 1970 at 1:00 p.m. in the Educational Forum Building (capital complex) in Harrisburg, Pa. for the presentation of this award by State Commander Henry R. Woods.

Looking forward to seeing you at that time, I am

Sincerely,

EDWARD T. HOAK,
State Adjutant.

PARABLE FOR A DIVIDED NATION

HON. CHARLES H. WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1970

Mr. CHARLES H. WILSON. Mr. Speaker, there are, on occasion certain public addresses which succinctly constitute profound statements on the current state of our Nation and of those who live within its borders. Such a statement, I believe, was delivered last fall during the first October anti-Vietnam war moratorium on October 15, 1969. This address has recently come to my attention and I wish to commend it to my colleagues, not because it is still another peace polemic, necessary as they may be while the war goes on, but because it is a relatively timeless statement concerning a divided Nation that very much needs to pull itself together and engage in a productive dialog which gives a fair hearing to all of the many points of view which are today present.

Warren H. Schmidt, assistant dean at the Graduate School of Business Administration of the University of Southern California at Los Angeles, delivered this parable at a conference on adult education at Asilomar in California. Although the Vietnam war was not on the agenda, and although the parable is not specifically concerned with the war, he felt that he wanted to discuss the shattering divisiveness within our Nation. He was rewarded with a standing ovation following his talk. I believe, since his remarks, that my colleagues will see the reason for the warm response. I include his presentation at this point in the RECORD:

IS IT ALWAYS RIGHT TO BE RIGHT?

SOME REFLECTIONS ON TENSIONS AND HOPES

(By Warren H. Schmidt)

There once was a land where men were always right, they knew it . . . and they were proud of it.

It was a land where a man was proud to say, "I am right" and "You are wrong."

For these were words of conviction, of strength and of courage.

No one was ever heard to say, "I may be wrong" or "You may be right," for these were words of weakness, uncertainty and cowardice.

When differences arose among the people of this land they sought not to re-examine and explore, but only to justify and persuade.

When differences arose between the old and the young, the older would say:

"We have worked hard to build this great and prosperous land.
We have produced cars and highways that permit us to move quickly from place to place.
We have built planes that surpass the speed of sound.
We have produced computers which solve complex problems in milliseconds.
We have even touched the moon.
We expect those who inherit this good land to appreciate what we have accomplished and to build on the heritage we have given to them."

These older people were right, of course, and they knew it and were proud of it.

But the younger people of that land would respond:

We see around us a land that has been befouled and exploited.
People starve where food is plentiful.
Laws and practices prevent some from having an equal chance to develop and to influence.
Noble and moral words are matched by selfish and sordid deeds.
Leaders urge us to fight wars to preserve peace—and the fighting does not end.
The whole scene is phony and polluted and inhuman and out of control.
We want no part of this money-mad Establishment.

These younger people were right, of course . . . and they knew it and were proud of it. . . . and the gap between the generations grew wider.

When differences arose between men of different races, those from the majority race would say:

We are working steadily to build a land of justice and equality for all of our citizens.
We have made considerable progress—but social progress does not come swiftly.
Those whom we seek to help and lift can only hurt their own cause when they push and intrude and pressure us.
Let them show some patience—and let them use more fully the opportunities we have already supplied.
Then we will feel like doing even more for them.

These people of the majority were right, of course . . . and they knew it and they were proud of it.

But those from the minority group would reply:

We have been pushed around too long and we are angry.
We have been confined to a ghetto.
Our children's education has been stunted in second-rate schools.
We have sen jobs go to less qualified while our people are rejected or shunted into menial tasks.
We see a thousand subtle signs that brand us and our children as second-class citizens in this land.
We will tolerate lofty promises and meagre deeds no longer.

These people from the minority were right, of course . . . and they knew it and were proud of it. . . . and the gap between the races grew wider.

And so it went in this land . . .

Group after group defined the right
And took their stand
And upheld their position against those who opposed them.
It happened between those who taught in the school and those who provided the funds.
It happened between those who gave priority to a strong defense and those who gave priority to better cities.
It happened between those who pleaded for peace at almost any price and those who argued for national honor at almost any cost.

Everyone was right, of course . . . and they knew it and were proud of it . . . . and the gaps between the groups grew wider.

Until the day came when the rigidity of rightness caused all activity to come to a halt.

Each group stood in its solitary rightness, glaring with proud eyes at those too blind to see their truth, determined to maintain their position at all costs (For this is the responsibility of being right).

Now the quality of life in the land declined
And grew more grim
And the people became more angry
And violence increased.

People had more things, but their sense of well-being and personal fulfillment diminished.

Some measured the cost in tasks undone and energy wasted.

Others in loneliness and fear.

Most felt powerless and without hope.

But through the tense days of confusion and gaps of all kinds, some maintained their vision of a time when men would again value their differences . . .

As a source of richness
As a stimulant to learning
As a base for creativity.

Then . . .

One day a strange new sound was heard in the land.

Someone said, "I may be wrong . . . You may be right."

The people were shocked that anyone could be so weak and so confused.

But the voice persisted.

And when the people looked, they saw that it came from one who was known for his strength and wisdom.

And some people began to listen in a different way.

It now seemed safe to listen to opposing—and even "wrong"—views.

As they listened, they discovered common beliefs they had not known before.

They even began to see signs of humanity and noble purpose in those whom they once only knew as adversaries.

Here and there men expressed their common desires in deeds—and bright examples of joint action were seen in the land.

With each new effort, men's faith in one another grew . . . and their faith in the future . . . and in their ability to shape their own destiny.

They stated these beliefs in a Declaration of Interdependence which read in part . . .

All men are created equal—but each develops in a unique way.

All men are endowed with certain inalienable rights—but each must assume certain inevitable responsibilities.

For the happiness and fulfillment of all depends on the commitment of each to accept and support equality and uniqueness, rights and responsibilities.

In this land men had learned how two rights could make a costly wrong.

That it may take less courage to point a finger than to extend a hand and less wisdom to defend a narrow right than to search for truth.

Most important of all, the people of this land had learned that the quest for truth is never over; that the challenge is always the same . . .

To stop fighting long enough to listen.
To learn from those who differ.
To try new approaches.
To seek and test new relationships.
And to keep at a task that never ends.

WHY DID DAVID HAVE TO BE KILLED?

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1970

Mr. SIKES. Mr. Speaker, the story of war is replete with sadness and personal heartbreak, yet there seems always to be gallant and noble expressions of confidence and belief in our country which help to compensate for the tragedy of war. A young man from Fort Walton Beach in my district, whose name was David A. Hickman, was killed in service. Another brother Ronald, also in the service, wrote a letter to his 11-year-old sister about the death of their brother. I don't think many communications have been penned which express patriotism more clearly. How good it would be if every young man and woman could read this letter and heed its contents. I submit it for publishing in the RECORD, for indeed it is a touching letter. David Hickman was a son of retired Lt. Col. and Mrs. John E. Hickman:

[From the Playground Daily News, May 28, 1970]

WHY DID DAVID HAVE TO BE KILLED? AS EXPLAINED TO AN 11-YEAR-OLD

(EDITOR'S NOTE: A Navy petty officer, 22, from Fort Walton Beach, wrote to his 11 year old sister, explaining why their older brother was killed in Vietnam, explaining maturity.)

Dear Lori, first I will explain why I am writing this letter. I do not intend this to be a one-sided lecture, nor is it meant as advice; the only advice I can give you is "Decide for Yourself." What this is, is simply an explanation, for I believe I owe this to those whom it concerns. This concerns you, as well as each one of our family, including myself.

David was killed last December. We wondered how it happened, where it happened, when; but mostly we asked why. Why? Why did David join the Army? Why did he go to Vietnam? Why was he killed?

Perhaps, I can explain; to you and myself.

Why did David join the Army? The answer to this question is the same as the answer to the question: "What is the difference between a child and an adult?" A child is someone who wishes all the time, and wishes that his wishes come true. An adult is a person who realizes that wishes accomplish nothing, and only through productive achievement can he achieve his desires. In other words, an adult is someone who works for his own living, and refuses to "sponge" off others.

Every child, some sooner than others, comes to a point in his youth when he must decide whether he wishes to be fed, clothed, and protected by others, or whether he works to feed, clothe, and protect himself. Some never make this decision, and live their life in a state of constant dreaming or childish nightmares. They live in the world of Peter Pan and never grow up. They "hope" and "wish" and "dream" and that's all they do. In reality, this accomplishes nothing.

Those that do decide to become adults, to support their own life, no longer dream the impossible dream or reach for the unreachable star. They struggle to realize the possible dream and reach for the reachable star. For those reasons—and many more—David joined the Army.

Why did he go to Vietnam? He did not go there to sacrifice his life. A sacrifice is when you give something up and receive nothing. He went there to live and to fight for the way of life he wanted, along with those who believe the same. So he did indeed expect to gain something by going there. He sought to attain his values and to stop those who tried to destroy them. He did not sacrifice his life. It would have been a sacrifice if he was willing to live under the conditions of those whom he opposed. He was not.

He did not go there on a simple mission: destroy, kill. He went there to stop those who seek to destroy our way of life and our lives. He was trying to destroy destruction. He was fighting to keep values he believed in: freedom of thought, freedom of work, freedom of happiness, independence, of the spirit. All these ideas are exactly what Communism is opposed to. Too many people believe that while Communist methods are evil, their goals are noble. It is this belief among the men who are still free that is responsible for every Communist victory in history. Their methods are ghastly, their goals are inhuman.

We do not exist for the State's pleasure, but for our own; we do not work where and in what manner we are told to but do the work we choose; we don't buy what is dictated to us, but instead, we buy what we want. We do not shackle our minds and believe everything that is told us, but we free our minds and decide the truth by reason. This is their reason for hating us, their reason for trying to "bury" us. David chose not to let them do it.

Maybe conditions aren't as they should be in this country or as ideal as we want. But wishing will not change these conditions and tears won't stop them. When people are dying of hunger around you, your heart will be of no earthly use to them. It is only with your mind and your creative labor can you change things. This is why David was killed, because he fought to change things into the way they ought to be, and can.

But you and I look on and say "What can I do to match what he did? What can I do to equal his effort?"

By remembering what values he strived for; by remembering what he lived for; by giving yourself value to the same ideals he held as valuable. But only if you decide to, and not because "I said so."

There are many things I see and do not like. I have chosen to build as I think they ought to be and can. It takes very little

knowledge and skill to tear a building down. It takes creative thinking, determination and labor to construct the building and keep it standing.

The same holds true of any system, government organization, or way of life. It takes very little imagination to gripe about it, mock it, and destroy it. But think of the effort, creativity and purposefulness of the men who constructed that government and its ideals. Such men are responsible for all the good that has ever appeared on earth.

Yes, you may choose to remain a child, and dream of gumdrops hanging from trees, and beds of clouds, sidewalks of gold, and Peter Pan wishes, but don't be surprised when you have nightmares of Captain Hook or wicked witches of the North.

Or you may create with skill of your hands and the confidence of your mind, and feel a warmth of pride and accomplishment. In this manner, childish fears can be easily overcome, and enemies easily defeated.

Your decision may not come for many years, but when it does, don't evade the necessity of decision; it will not change the fact that there is a choice. And that choice is yours. Make the best of it.

Your brother,

Ron.

PATRIOTISM

HON. WILLIAM L. DICKINSON

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1970

Mr. DICKINSON. Mr. Speaker, it is my pleasure to call to the attention of the Members of the House of Representatives a fine young person, Miss Kate Keifer. Miss Keifer is one of my constituents and quite an orator. She is presently a junior majoring in history in the school of education at Auburn University. Upon graduation, she plans a career as a teacher.

The following speech was her entry in the "Miss Patriotism Contest" sponsored by the Classified Service Clubs of Montgomery for the July 4 celebration:

PATRIOTISM

(A similation of burning the American flag)

What if I were to actually burn this American flag? What would be your reactions to this act? First, you would probably feel hostile toward me; then you would think "why would she burn this flag, this is a symbol of my freedom, my life. Why, that is almost like burning my country." Do you know what these feelings are? They are what some people call Patriotism.

Patriotism is not a new thing—why, it's as old as man, because as long as man has been on this earth, he has had pride. Pride in himself, his home, community and now his country. Patriotism today is not as it was in 1776, even if we would like it to be that way. Yet, it is not dying, it is not twisted out of sort as some people think. Why, just the other day I was riding down a residential street and five out of ten houses I saw had American flags flying from the front of their homes. Now why in this day of no morals, drug abuse, and political conflict, why would these individuals fly this symbol of Americanism? Because this is America and only in America does a flag mean so much to a country. Only in America does your heart jump into your throat when you see Old Glory raised or hear the National Anthem. Patriotism is working, thinking, doing what is best for mankind, and when you do, you will have done it for your country.

As you know, the Pledge of Allegiance is made up of several phrases—all having a meaning that touches all mankind. They are meanings of unity, of brotherhood, of a God-fearing nation—in essence, a symbol of love. In the Bible in 1 Cor., verse 13, in part it reads:

"Though I speak with the tongues of men and of angels, and have not Love, I am become as sounding brass, or a tinkling cymbal. And though I have the gift of prophecy and understand all mysteries, and all knowledge; and though I have all faith, so that I could remove mountains, and have not Love, I am nothing."

Aren't we "nothing" without pride of home, family, and country; in other words, aren't we "nothing" without Patriotism?

ENVIRONMENTAL TECHNOLOGY AND VOCATIONAL EDUCATION

HON. J. J. PICKLE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1970

Mr. PICKLE. Mr. Speaker, industry is crying for technically trained manpower.

While society has the philosophy that the student must obtain a 4-year degree, only about 20 percent of any age group, although not necessarily the top 20 percent in ability, secure such a degree. What about the other 80 percent? Are they to be left with little or no preparation for today's and tomorrow's technological society in which they are expected to become productive, useful citizens? The answer, of course, must be no.

What is being done about this problem?

We support a number of remedial programs. But the National Advisory Council for Vocational Education has reported that some of these cost as much as $12,000 for every man or woman placed in a job. This is compared to an estimated figure of $1,000 to $2,500 if a student were enrolled in a Federal, State, or local vocational program included in a mainstream secondary or postsecondary school system.

Mr. John Vaclavik of the office of the Governor of Texas tells of the efforts of our State to follow this less expensive—and more effective—route, which begins at the ninth grade level.

I am pleased to insert his comments in the RECORD at this time:

I am proud to report that my home state of Texas this past September initiated a demonstration project in 16 secondary schools with 1,000 students enrolled. This program will prepare the students for the "world of work." The Environmental Technology Program, as it is called, was born in 1968 when the Mechanical Contractors of Texas and allied industry groups through the medium of the Construction Industry Council conducted a manpower survey in Texas. In every category the study revealed a shortage which was expected to rapidly accelerate.

Shortly after taking the survey, the Texas Education Agency was approached by industry to assist the public schools to train students for this manpower shortage. Out of these discussions came the Environmental Technology Program which includes air/water pollution control; air/water distribution; air/water treament; as well as the manufacturing, distribution and service related job descriptions that supplement and make the environmental control industry possible.

The curriculum for the Environmental Technology Program begins in the 9th grade where the student is introduced to the world of work through lectures, readings, and visits to plant sites. In the 10th grade, he studies, plumbing, pipe fitting, and welding. The 11th grade is devoted to heating and air conditioning, and in the 12th grade the student spends half a day in the classroom and the other half working for industry in his chosen field.

Since the courses of the Environmental Technology Program are electives, the student also takes regular academic subjects. Consequently, upon graduating from high school, he is prepared for college entry. However, if he does not go to college he can enroll in a technical school, enter an apprenticeship program, or enter the labor market. Nevertheless, wherever his educational training ceases, he will have a saleable skill and will be a taxpayer as opposed to a welfare recipient.

After reviewing the Environmental Technology Program, which has been well received by the Texas Education Agency and cooperating local schools, the United States Office of Education called a meeting on December 11, 1969 here in Washington with a cross-section of interested governmental agencies and national industry representatives. The purpose of the meeting was to gain a better understanding of how the program was originated, its potential, and possible use of the pattern by other states. As a result of the December 11 meeting, a follow-up session was held in February 1970 to explore the matter further.

I am pleased that Texas has assumed a leadership position in offering solutions to our various educational problems rather than wringing their hands and waiting for the inevitable explosion. It should be noted that the Environmental Technology Program in Texas is one of many attacks on the manpower problem and is not the only solution. However, it is one of the most interesting and innovative projects being undertaken in our state.

I commend my Governor, the Honorable Preston Smith, for his outstanding work for the improvement of technical-vocational education and support him in his objectives. Governor Smith has long been a friend of technical-vocational education.

I submit, with Mr. Vaclavik, that it is now the joint responsibility of the Congress with the several States to provide the funds and the leadership to streamline the public education system to accomplish the vital function of preparing every child to earn a wage and to find a responsible and useful place in his community. It is only through such creative activity that we can undergird our basic concept of the dignity of work and the right of every person to reach for his own destiny.

POWER (PRISONERS OF WAR EFFECTIVE RELEASE) DRIVE

HON. MANUEL LUJAN, JR.

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1970

Mr. LUJAN. Mr. Speaker, the following article appeared in "The Enchanted News", second quarter. This magazine is a quarterly publication of the Penitentiary of New Mexico:

POWER (PRISONERS OF WAR EFFECTIVE RELEASE) DRIVE

The stereotyped image of a convict is a variable thing. It seems to depend upon the immediate purpose of its use. The image can be frightening, comical, or even pathetic. But it remains exactly that only—an image.

In fact, convicts are people . . . human beings . . . individuals. And it may come as a surprise to find that they possess the same emotions and capacities as their free-world counterparts. Convicts think, worry and regret. They get hungrey, cold, sick, happy and lonesome. They work, play, laugh, and even cry. In other words they feel every single emotion that non-convicts do. Maybe they feel some things even deeper.

Recently, Mrs. James L. Hughes met with Warden Felix Rodriguez and Deputy Warden H. R. Herrera at the Penitentiary of New Mexico to discuss the possibilities of having the penitentiary art department design and layout art work concerning release and humane treatment of prisoners of war. Mrs. Hughes' husband is a prisoner of war in North Vietnam.

Mrs. Hughes told of many fruitless efforts to find out about her husband's status and welfare, including a trip to Thailand to visit the North Vietnam Embassy in Bangkok. She heard from her husband only after purchasing a full-page ad in the BANGKOK POST to appeal her situation. She has heard nothing since.

It became apparent to Mrs. Hughes, and many other families who have men held as a prisoners of war, that appeals through paid advertisements in neutral countries would be their greatest hope in securing word about their men. As a result, Rescue-Line was established toward that aim. The creation of Rescue-Line was a sort of last resort to effect the release—or at the very least, some news—of these men. The organization has been attempting to raise the funds necessary to accomplish their goal, but these efforts have not met with the success of which such a campaign is worthy. As an example, an advertisement soliciting funds was run in an Albuquerque newspaper at a cost of more than one hundred dollars. The ad drew some thirty dollars in contributions! This, and other experiences, moved Mrs. Hughes to seek assistance in other—some might say peculiar—places. With the idea of prisoners helping prisoners, Mrs. Hughes sought assistance at the Penitentiary of New Mexico. She felt that men at the penitentiary, being prisoners themselves and locked away from their families and loved ones, might be able to offer some suggestions in art and other ideas that would bring the situation concerning the men held as prisoners of war to the attention of the world.

Mrs. Hughes pointed out that some 1,406 families—including some 4,000 children—await anxiously some news, day by day, that their husbands or fathers are safe. But that word never comes. The men are held without even the privilege of communication.

Well now! What would you expect a bunch of "cons" to do? After all, they are convicts, aren't they? Well here is what they did. Are doing!

With the approval of Warden Felix Rodriguez and Deputy Warden H. R. Herrera, a committee was formed to organize ideas for a concentrated campaign. The name power drive was coined—standing for Prisoners of War Effective Release Drive—and to prevent anyone from taking part through the hope of personal gain or recognition, an agreement was made that there would be no names involved. All work would be performed anonymously. With this understanding, the planning got underway. Special art work was done and posters prepared. These have been designed for use anywhere in the world. Publicity and advertising ideas were worked out. Service clubs and other inmate groups were contacted and told the story. Ideas for an effective campaign began to take shape. And money started to come in; money from convicts.

Needless to say, convicts aren't among the nation's high income groups, but contributions ranging from $1.00 to $10.00 have been received. And through the combined cooperation of the administration and officials of the blood plasma program, arrangements have been made whereby inmates without money can give blood and have $5.00 deposited to the account of Rescue-Line. At the time of this writing well over $300.00 has been received, and money continues to come in.

Those inmates active in power drive hope to spread the campaign from the Penitentiary of New Mexico to other penal institutions, and through inside service clubs, to the outside. It is their hope that enough money can be raised, enough publicity generated, to aid in the release of—or at least the establishment of communications with—those Americans held as Prisoners of War.

One of the interesting aspects of the power drive campaign is that personal feelings about American involvement in the Vietnam conflict seem to have little effect on the willingness of inmates to help. One of the men summed up the general feeling when he said, "No matter why a man is locked up, he should be treated like a human." That seems to be the whole idea. Humanity. And right now, at this moment, for the first and probably only time, many of the inmates of the Penitentiary of New Mexico can say, I'm proud to be a convict.

STOPPING THE SWING TOWARD PROTECTIONISM

HON. CHARLES W. WHALEN, JR.

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1970

Mr. WHALEN. Mr. Speaker, the Ways and Means Committee's announcement of its tentative decisions on a trade bill has brought about a somewhat belated reaction by those of us who fear the overall economic impact which a return to protectionism will inflict upon the Nation.

Since 757 trade and tariff bills have been introduced in this Congress alone, it perhaps would have been appropriate if the effort to educate the public had begun sooner. Nevertheless, in an effort to stem the protectionist tide here at almost the 11th hour, I am inserting another editorial in the RECORD. This one is from the July 25, 1970, issue of Business Week. The editorial is concerned particularly with the myth that the United States is an open market and with the assumption that foreign competition is "unfair" because pay scales are lower than in the United States:

STOPPING THE SWING TOWARD PROTECTIONISM

After almost 40 years of progress toward freer international trade, the U.S. suddenly is threatening to retreat once again into protectionism. The trade bill now taking shape in the House Ways and Means Committee would mark a definite reversal of the policy the nation has pursued since the time of Cordell Hull. In fact, it would enjoy the dubious distinction of being the most restrictive trade legislation since the Smoot-Hawley tariff of 1930.

President Nixon is absolutely right to serve notice on Congress early in the game that he will veto this bill if it succeeds in getting through the House and Senate. But it will take more than just the threat of a veto to stem the rising protectionist sentiment in Congress and among a disturbing number of U.S. businessmen. The Administration must take the lead in explaining the vital stake that the U.S. has in an expanding system of international trade. At the same time, it must take firm action to deal with the legitimate complaints of American businessmen.

Ways and Means Committee hearings revealed widespread misunderstanding—as well as some deeply cherished myths—about the role that trade plays in the U.S. economy. Underlying much of the testimony were mistaken assumptions: for example, that foreign competition is "unfair" because pay scales are lower than in the U.S.; or that the U.S. is the only "open market" on earth.

Actually, low wages abroad are associated with lower productivity. The U.S. can maintain its wage differential—and its higher standard of living—provided its workers continue to be more productive. Curbing imports of textiles, shoes, and other products would remove the spur of competition, which is one of the most important factors promoting increased productivity. Workers in the protected industries might benefit—but at the expense of consumers who would pay more for the goods.

The notion that the U.S. is an open market is pure myth. More than 20% of U.S. imports are controlled by quotas (such as those on oil and farm products); the average U.S. tariff level on industrial goods is above the Common Market average.

American businessmen, however, do have some ground for arguing that they are not getting a fair shake in world trade. While the U.S. has its own nontariff obstacles to trade, Japan bristles with a far greater array of quotas and other barriers to U.S. products and investment. These violate the rules of both the General Agreement on Tariffs & Trade (GATT) and the International Monetary Fund.

The Common Market is creating a discriminatory trading bloc through preferential trade agreements with other countries—also in violation of GATT. And Japan and European nations alike provide aids to exporters that in many cases amount to subsidies.

The U.S. can maintain its commitment to feer trade and still refuse to be a patsy for nations that want to play a double game. The President has extensive powers under existing laws to retaliate against unfair practices and to protect American producers by such means as countervailing duties.

At the same time that he fights to stop the protectionist swing at home, the President should use these powers aggressively to force our trading partners to play a clean game and open their markets to U.S. goods. By making sure that U.S. producers are on equal footing with foreign competitors, the President will undermine one of the chief arguments that the protectionists have used in Congress.

A TRIBUTE TO THE HONORABLE JOHN C. KUNKEL

HON. J. IRVING WHALLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 27, 1970

Mr. WHALLEY. Mr. Speaker, it is with a deep sense of sorrow and regret that I call to the attention of the House the passing of a former colleague and fellow Pennsylvanian, the Honorable John C. Kunkel, who served in this Chamber from 1939 through 1951, and

again from 1961 until his retirement in 1966.

John Kunkel descended from a family which had produced many Congressmen before him, extending back to the Continental Congress. He carried his family heritage boldly and gallantly; he was a tribute to his ancestry.

While serving in Congress, John Kunkel distinguished himself for his capabilities, and was often called upon to handle the most difficult assignments. Although serving in the minority party for most of his congressional career, he was able to command the respect and admiration of all who knew him.

John Kunkel was a scholar and a statesman. His contributions to the 16th District, which he represented, and to the State and to the Nation, will long be remembered. He was true to the American principles and gave of himself completely in all his endeavors.

Mrs. Whalley and I offer our deepest and most sincere condolences to his wife Kitty and his family. John will be sadly missed by all, but will live forever as a monument to the heritage and traditions from which he came.

"YOU'RE OLD ENOUGH TO REMEMBER THE REAL AMERICA IF YOU CAN REMEMBER . . ."

HON. DEL CLAWSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1970

Mr. DEL CLAWSON. Mr. Speaker, a letter in this morning's mail aptly summarizes the reaction of many Americans to the nightmarish events which have become a part of our daily experience. I would like at this point in the RECORD to include the statement "You're Old Enough To Remember the Real America if You Can Remember . . ." together with the letter from Mr. Ken Fitzpatrick of Bellflower, Calif., who sent it to me. The statement and letter follow:

YOU'RE OLD ENOUGH TO REMEMBER THE REAL AMERICA IF YOU CAN REMEMBER . . .

When you never dreamed our country could ever lose.

When you left the front door open.

When people knew what the Fourth of July stood for.

When you took it for granted that women, the elderly and the clergy were to be respected.

When a girl was a girl.

When a boy was a boy.

When you didn't feel embarrassed to say that this was the best darn country in the world.

When socialist was a dirty word.

When taxes were only a nuisance.

When the poor were too proud to take Charity.

When you weren't afraid to go out at night.

When ghettos were neighborhoods.

When you knew the law meant justice, and you felt a little shiver of awe at the sight of a policeman.

When young fellows tried to join the Army or the Navy.

When songs had a tune.

When criminals went to jail.

When you bragged about your home state and your home town.

When politicians proclaimed their patriotism.

When clerks and repairmen tried to please you or else.

When a Sunday drive was an adventure, not an ordeal.

When you could always find someone willing and able, whenever you wanted something done.

When riots were unthinkable.

When the clergy talked about religion.

When you took it for granted that the law would be enforced, and your safety protected.

When the flag was a sacred symbol.

When our government stood up for Americans, anywhere in the world.

When a man who went wrong was blamed, not his mother's nursing habits or his father's income.

When everyone knew the difference between right and wrong, even Harvard Professors.

When things weren't perfect, but you expected them to be.

When you weren't made to feel guilty for enjoying dialect comedy.

When people still had the capacity for indignation.

When you considered yourself lucky to have a good job.

When you were proud to have one.

When people expected less and valued when they had more.

When college kids swallowed goldfish, not acid.

When America was the land of the free, and the home of the brave.

DEAR MR. CLAWSON, I had intended to write you regarding some of the issues confronting us today, when someone handed me this piece of paper, and I found on it many of the things I really wanted to say.

The "real America" is still here, but we have to dig a little harder to find it. The news media tries desperately to hide it in many instances by attempting to make the abnormal appear normal, the "bad guys" seem like "good guys", etc., and now more than at any time we need men of national stature to make news telling the good things about our great country.

My wishes as one of your constituents are quite simple—support the President—fight for a Supreme Court which will uphold the Constitution, not re-write it—support programs which protect the would be victim, not the criminal—talk about the good things about America at every opportunity and you could have the longest filibuster ever heard in the House!

Best personal regards,

KEN FITZPATRICK.

NEWSPAPERS ARE THE MEN AND WOMEN WHO MAKE IT

HON. JOHN W. WYDLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1970

Mr. WYDLER. Mr. Speaker, the weekly newspaper is truly a reflection of the community it serves. As such it is an important part of that community and has enormous power and responsibility. As Heywood Broun said many years ago, "A newspaper is a rule unto itself. It has a soul for salvation or damnation. The intangibles of a newspaper are the men and women who make it. A newspaper can neither rise nor fall below its staff." This statement is particularly true of those weekly newspapers which are small businesses in our community. The dedication of their staffs makes the paper fail or succeed.

In the southwestern part of Nassau County N.Y., in what will soon be part of my Fourth Congressional district, there is an outstanding weekly newspaper called the Nassau Herald. Its publisher is Robert Richner and its editor, Leatrice S. Spanierman. It is the official newspaper for the village of Lawrence and of Hewlett Neck. This past week the paper ran a particularly interesting editorial entitled "Sounding Off." The editorial concerned jet noise, one of the real plagues of this area and one against which every level of government must be mobilized, including the local communities. This can so well be done by local newspapers. The editorial follows:

SOUNDING OFF

The Five Towns, long plagued by jet noise, must sympathize with other besieged areas and welcome a North Shore ally as well as one in the Hamptons to our long-time fight against the thundering above us.

The mayor of East Hills which is located near Roslyn has called upon his villagers to campaign against the noise of jets flying overhead. Although the village is not situated in close proximity to an airport, traffic patterns for Kennedy have affected East Hills and residents are complaining that the noise is "intolerable."

In East Hampton, a small three runway airport tucked away in 600 acres of woodland has created controversy although there are only about 30,000 take-offs and landings there per year, and certainly no commercial jets on this relatively quiet installation. However, a group has formed called the Aircraft Noise Control Council of the Hamptons, concerned about a proposed lengthening of a runway. A leader of the organization has taken a delegation to the East Hampton Village Board to ask for a ban on all flights over the village.

Well, we here, have really heard it all before. We too tried to ban flights over Hempstead Town and were unsuccessful in court. We too tried to rouse citizens to ban together to fight this menace that plagues us. We were on the noise pollution wagon long before the term "ecology" was a household word . . . to no avail.

Now, once again we have hope. Our residents cooperated with a letter of complaint campaign. The multitude of responses were then forwarded to Attorney General Louis J. Lefkowitz who has filed suit in State Supreme Court to force airlines and the Port of New York Authority to take immediate steps to reduce the noise of the jets.

We who are bombarded by health-affecting noise nuisances must endure the ear-splitting tumult low above our homes, our offices, hospitals, schools . . . but perhaps, in the near future . . . we will be mercifully relieved of the intensity of the jet noise . . . by the courts declaring the screaming planes a legal nuisance.

INSPIRING MESSAGE FOR YOUTH

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1970

Mr. RODINO. Mr. Speaker, last month a young man with roots deep in the community of Montclair, N.J., a man who has traveled far since he graduated from his high school, and a man with a great future, returned to deliver a commencement address.

Every spring, of course, the countryside is deluged with commencement speeches. But this one was really special.

I did not have the privilege of hearing it, nor do I have a long personal acquaintance with the speaker. But after reading it, I think I know very clearly the kind of drive and determination to overcome hardships and obstacles that propelled this outstanding citizen, Mr. Aubrey C. Lewis. His message is truly an inspiring one for our youth:

COMMENCEMENT ADDRESS DELIVERED BY AUBREY C. LEWIS

Rev. Gray and Friends, I believe that covers everyone here.

When I was asked to participate in today's commencement exercises, the invitation was a particularly welcomed one. It is a real privilege for me to return to Montclair high school some sixteen (16) years after I moved through these hallowed halls receiving instructions from many of the same teachers here today. In that sixteen years, many of the fundamentals grasped in the classroom and on the athletic field at Montclair High have been used and utilized in my daily life and for that specific educational discipline I am quite pleased.

You know—I consider you the luckiest graduating class of all times—anywhere—for many reasons, namely:

You were involved in a now situation. Montclair High is a microcosm of America—its people—action and events. You have had failures, demonstrations, boycotts and even a scheduling breakdown, when you finally had to put the module system in moth balls. All of us have learned a great deal from these experiences and this exposure has prepared you for the many confrontations you are apt to face in the future. The decisions you make often times will be based on the exposure you've had here at Montclair High School.

During the course of your past twelve (12) academic years I know the thoughts have occurred—why am I doing it? Where do I want to go? What is it all about? Is it worth it? But most of you, by the very nature of your presence here today have exercised intestinal fortitude or just plain guts. You realized that you just can't turn back—you must keep on moving. Work towards! Fight for! You can't cop out! You have to dedicate yourself to something!

You are lucky too because you have had the opportunity to rub elbows with the rich, the poor, the black, the white, the gifted, the concerned, the pushers and the passive.

This is what it is all about!!!

There have been many academic changes at Montclair High School in the past sixteen (16) years, with the result being that approximately 80% of the graduates now attend major colleges, junior colleges or specific skill institutions. These have all been brought about as a result of a realization on the part of you, on the part of the generation sitting behind you, and because someone, somewhere, realized that there was a need. A problem existed and collectively a solution was reached.

I say again you are the luckiest graduating class of all times and I say this simply because you are faced with more challenges than any other preceding graduating class in history. Oh yes, that marvelous generation sitting out there with tears of parental joy in their eyes had challenges also, and we must recognize the fact that they, who could be considered part of the establishment or the system, have had a reasonable amount of success.

As a result of their efforts, small pox no longer exists, diphtheria, which used to destroy many children at birth, no longer is the killer. Many other medical research projects and inventions have been made from removals to transplants and thus human life has been prolonged.

Many of the people out there heard the first radio, saw the first television, of course I was among that group. Saw the tallest buildings erected, the Woolworth, the Chrysler, the Empire State and now you are seeing the Twin Towers-Port Authority Building in New York City going up. Bridges and roads, communication facilities and they even created a system which landed a 1947 Montclair High School graduate on the moon.

Yes, they have had some success. However, they leave a lot of additional challenges for each and everyone of the 499 beautiful people sitting before me. I guess we could break it right down into getting along with each other. But let's not do that—let's specifically mention "drug abuse", "air and water pollution", and yes—wars. These are problems that you will have to face and solve if the prolonged life that that generation out there so admirably established is not to have been in vain.

I suggest that starting tomorrow "you beautiful people"—get up early! Make your day longer! Because there are so many things, so many challenges, so much to be done—and now you have to respond to the call. Remember along with recognition comes responsibility.

Doors—we have all talked about closed doors from a racial standpoint, from an economic standpoint and even from a woman's opportunity standpoint. Tear down the shackles—anytime just one person is denied because of the aforementioned, then we are all being denied. Remember, you must reach out and touch somebody's hand.

We still have cancer—sickle cell anemia, and there is a great need for social and business professionals with insight. Can you bridge this gap?

Have you ever seriously thought about compromise? I can see the results of compromise here today. Many of you have shortened your hair due to the desires and wishes of those proud people behind you. You might call them "hang-ups"—but don't. Let's call it the beginning of a great understanding between two marvelous generations and also, the lighting of the candle—the realistic relevant compromise! You're never going to have your way completely. There is give! And there is take!

In just thirty years, in the United States alone, there will be approximately 330 million people, a tremendous increase—which means that a major challenge will be for you to create a system which will better utilize the talents of each person and also to better utilize the natural resources of our land. Is there a point of no return?

Communications—your ability to communicate with your fellowman, with your peers and with your associates is a vital one. The next five (5) years should be dedicated and a plan must be adopted by each person with certain intermediate objectives and ultimate goals, and in doing so, emphasize the art of communicating, of selling yourself, of selling your program, of selling your idea and sometimes selling intangible goals to concrete, practical thinking people. In order to do that, certain fundamentals, certain basics must be acquired.

You can lead me only if you are fundamentally sound. There are no instant leaders. Sound thinking and sound judgment are generally based on involvement, experiment, trial and error and access to living situations. This is where our educational system excels—but could be improved.

Imagine yourselves walking along a desert area, diseased and afflicted with leprosy and suddenly a voice appears saying "put sand in your pocket and tomorrow you will be both happy and both sad" and because you obey—tomorrow you look into your pockets and there find miracle medicine which completely cures you from this terrible affliction along with many of your friends and associates and as the line grows longer and longer, and grains of sand which have been turned into miracle medicine diminishes until finally you have used up the last portion. What a terrible feeling to look at a line of a thousand anxious, hopeless people, waiting for the cure and there is no more because you didn't put enough sand in your pocket.

I ask you at this point "How much sand are you putting in your pockets? Have you mastered the basics? Have you acquired the fundamentals?

To the older generation and to you beautiful people—(Whitney Young) was right when he said, "We may have traveled in different ships, but we are all in the same boat now".

"Hang in there tough".

Thank you very much.

[From the Montclair Times (N.J.), July 2, 1970]

MHS HEARS A. C. LEWIS

In a commencement address to the graduates of Montclair High School, teachers, parents and guests, Aubrey C. Lewis characterized the class of 1970 as "the luckiest graduating class of all times" citing the educational and social experiences which have crossed their lives. Mr. Lewis, assistant vice president-career development F. W. Woolworth, shared the stage of Montclair High with the Rev. William H. Gray III, pastor of Union Baptist Church who delivered the invocation.

The text of Mr. Lewis' speech given June 17 follows:

"Rev. Gray and friends, I believe that covers everyone here.

"When I was asked to participate in today's commencement exercises, the invitation was a particularly welcomed one. It is a real privilege for me to return to Montclair High School some 16 years after I moved through these hallowed halls receiving instructions from many of the same teachers here today. In that sixteen years, many of the fundamentals grasped in the classroom and on the athletic field at Montclair High have been used and utilized in my daily life and for that specific educational discipline I am quite pleased.

"You know—I consider you the luckiest graduating class of all times—anywhere—for many reasons, namely:

"You were involved in a now situation. Montclair High is a microcosm of America—its people—action and events. You have had failures, demonstrations, boycotts and even a scheduling breakdown, when you finally had to put the module system in moth balls. All of us have learned a great deal from these experiences and this exposure has prepared you for the many confrontations you are apt to face in the future. The decisions you make often times will be based on the exposure you've had here at Montclair High School.

"During the course of your past 12 academic years I know the thoughts have occurred—Why am I doing it? Where do I want to go? What is it all about? Is it worth it? But most of you, by the very nature of your presence here today have exercised intestinal fortitude or just plain guts. You realized that you just can't turn back—you must keep on moving. Work towards! Fight for! You can't cop out! You have to dedicate yourself to something!

"You are lucky too because you have had the opportunity to rub elbows with the rich, the poor, the black, the white, the gifted, the concerned, the pushers and the passive.

"This is what it is all about!

"There have been many academic changes at Montclair High School in the past sixteen years, with the result being that approxi-

mately 80% of the graduates now attend major colleges, junior colleges or specific skill institutions. These have all been brought about as a result of a realization on the part of you, on the part of the generation sitting behind you, and because someone, somewhere, realized that there was a need. A problem existed and collectively a solution was reached.

"I say again you are the luckiest graduating class of all times and I say this simply because you are faced with more challenges than any other preceding graduating class in history. Oh yes, that marvelous generation sitting out there with tears of parental joy in their eyes had challenges also, and we must recognize the fact that they, who could be considered part of the establishment or the system, have had a reasonable amount of success.

"As a result of their efforts. Small Pox no longer exists; Diphtheria, which used to destroy many children at birth, no longer is the killer. Many other medical research projects and inventions have been made from removals to transplants and thus human life has been prolonged.

"Many of the people out there heard the first radio, saw the first television, of course I was among that group. Saw the tallest buildings erected, the Woolworth, the Chrysler, the Empire State and now you are seeing the Twin Towers—Port Authority building in New York City going up. Bridges and roads, communication facilities and they even created a system which landed a 1947 Montclair High School graduate on the moon.

"Yes, they have had some success. However, they leave a lot of additional challenges for each and everyone of the 499 beautiful people sitting before me. I guess we could break it right down into getting along with each other. But let's not do that—let's specifically mention 'Drug Abuse,' 'Air and Water Pollution,' and yes—wars. These are problems that you will have to face and solve if the prolonged life that that generation out there so admirably established is not to have been in vain.

"I suggest that starting tomorrow 'you beautiful people'—get up early! Make your day longer! Because there are so many things so many challenges, so much to be done—and now you have to respond to the call. Remember along with recognition comes responsibility.

"Door—we have all talked about closed doors from a racial standpoint, from an economic standpoint and even from a woman's opportunity standpoint. Tear down the shackles—anytime just one person is denied because of the aforementioned, then we are all being denied. Remember, you must reach out and touch somebody's hand.

"We still have cancer—Sickle Cell Anemia, and there is a great need for social and business professionals with insight. Can you bridge this gap?

"Have you ever seriously thought about comprise? I can see the results of compromise here today. Many of you have shortened you hair due to the desires and wishes of those proud people behind you—you might call them "Hang-Ups"—but don't. Let's call it the beginning of a great understanding between two marvelous generations and also, the lighting of the candle—the realistic relevant compromise! "In just thirty years, in the United States alone, there will be approximately 330 million people, a tremendous increase—which means that a major challenge will be for you to create a system which will better utilize the talents of each person and also to better utilize the natural resources of our land. Is there a point of no return?

"Communications—your ability to communicate with your fellowman, with your peers and your associates is a vital one. The next five years should be dedicated and a plan must be adopted by each person with certain intermediate objectives and ultimate goals, and in doing so, emphasize the art of communicating, of selling yourself, of selling your program, of selling your idea and sometimes selling intangible goals to concrete, practical thinking people. In order to do that, certain fundamentals, certain basics must be acquired.

"You can lead me only if you are fundamentally sound. There are no instant leaders. Sound thinking and sound judgment are generally based on involvement, experiment, trial and error and access to living situations. This is where our educational system excels—but could be improved.

"Imagine yourselves walking along a desert area, diseased and afflicted with leprosy and suddenly a voice appears saying "Put Sand in Your Pocket and Tomorrow You Will Be Both Happy and Both Sad" and because you obey—tomorrow you look into your pockets and there find miracle medicine which completely cures you from this terrible affliction along with many of your friends and associates and as the line grows longer and longer, the grains of sand which have been turned into miracle medicine diminishes until finally you have used up the last portion. Hopeless people, waiting for the cure and there is no more because you didn't put enough sand in your pocket.

"I ask you at this point "how much sand are you putting in your pockets? Have you mastered the basics? Have you acquired the fundamentals?

"To the older generation and to you beautiful people—(Whitney Young) was right when he said, "we may have traveled in different ships, but we are all in the same boat now."

"Hang in there tough."

CONGRESSIONAL REPORT SENT TO NINTH DISTRICT RESIDENTS

HON. LEE H. HAMILTON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1970

Mr. HAMILTON. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following:

CONGRESSIONAL REPORT

Crime—the fact of it and the fear of it—continues to erode the quality of American life. The FBI reports the rate of increase of serious crimes in the United States for the first three months of 1970 was up 13 percent over the first three months of 1969.

Throughout the Nation, nine serious crimes are committed each 60 seconds. The tragic timetable includes a murder each 36 minutes . . . a robbery every two minutes . . . a burglary every 16 seconds . . . forceable rape each 14 minutes. The annual cost of crime is estimated to be $31 billion. Yet, the statistics measuring the frequency and cost of crime failed to indicate the extent of the tragedy, sorrow and mental anguish experienced by the victims of crime.

While the public rightfully demands action, many citizens still believe that crime in all its forms is the responsibility of the Federal government. Enforcement of criminal law is the primary responsibility of State and local governments. The Federal government's role is to supply the strongest possible support to State and local law enforcement agencies.

Congress has moved to provide this support, and Federal aid to the State and local governments is the fastest growing item in the Federal budget. Because crime continues to be a growing menace at all levels of society, a broad-based attack must be pressed along the following lines:

1. Adequate funding—The Law Enforcement Assistance Administration (LEAA), created by the Omnibus Crime Control and Safe Streets Act of 1968, provides financial and technical support for local and State police agencies. It has never received adequate funding, however. For example, Indiana, with a comparable crime rate to the National rate, received about $1 million in LEAA funds last year. The State could have used 10 times that amount to launch an effective anti-crime effort.

The Administration has recommended $480 million for LEAA in fiscal year 1971, an increase of $212 million over the previous fiscal year. Given the great need to accelerate efforts by state and local anti-crime agencies, I introduced legislation authorizing $750 million for FY 1971. Ultimately, a bill authorizing $650 million for LEAA passed the House.

2. Reform of Court and Penal Systems—With a recidivist (or "return") rate of 70 percent among our criminal offenders, it is apparent our penology system has serious shortcomings. We must improve archaic and inadequate penal facilities and systems at State, local and Federal levels. New controls must be placed over probationers, parolees and those found not guilty by reason of insanity. I have introduced legislation to bring about these reforms.

I also have introduced legislation to require quicker trials for those charged with Federal criminal violations, and to strengthen the control over defendants with criminal records while they await trial. We need also to ease the load on over-burdened criminal court judges, and apply pressure for sound court management.

3. Juveniles—New efforts and new emphasis must be placed on controlling and preventing juvenile crime. Crime rate increases among those under 18 are nearing 10 percent each year. The Juvenile Delinquency Prevention and Control Act of 1968 authorizes block grants to States to combat this growing menace.

4. Dangerous Drugs—The District of Columbia Police Department reports that 45 percent of those arrested in 1969 had a history of drug use. Obviously, more education on drugs is needed across the country; trafficking in drugs has to be curtailed, both in the U.S. and internationally, and the root causes of drug abuse must be brought under increased scrutiny.

5. Organized Crime—Statistics indicate that nearly $100 billion annually is reaped by organized crime in gambling and loan sharking alone. The Organized Crime Bill of 1969, which has passed the Senate, would do much to cut into these lucrative, but vulnerable, activities of organized crime. I support and urge its passage.

6. Social Problems—Anti-crime programs do not, in themselves, eliminate the conditions which foster crime. Continued attention must be given to the social problems which create these conditions and to a variety of actions to make crime inconvenient.

MAN'S INHUMANITY TO MAN—HOW LONG?

HON. WILLIAM J. SCHERLE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1970

Mr. SCHERLE. Mr. Speaker, a child asks: "Where is daddy?" A mother asks: "How is my son?" A wife asks: "Is my husband alive or dead?"

Communist North Vietnam is sadistically practicing spiritual and mental genocide on over 1,500 American prisoners of war and their families.

How long?

FFA "BUILDING OUR AMERICAN COMMUNITIES"

HON. DON FUQUA

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1970

Mr. FUQUA. Mr. Speaker, the Future Farmers of America are today embarking on a new and dynamic program for America and its future.

It is a new and innovative community action program—"Building Our American Communities."

Quite frankly, I am excited about this program and its potential. As you know, the Future Farmers of America is an organization of young men studying vocational agriculture in the schools across the Nation.

Upon its inception, the FFA took upon itself the equally challenging task of attempting to transform American agriculture. The fantastic strides which have been made in the production of our food and fiber owe a debt of gratitude to the FFA for the success which has been attained.

Now the FFA plans to do something about the problems which confront our crowded urban areas.

The program is a new national effort which has been conceived in conjunction with the Farmers Home Administration. Again, the young men of the FFA and their advisers intend to do something about the problems of modern urban living.

The overcrowding of our cities and their arteries, the urban blight, and the other problems of an urban population can be met in part, they feel, if sufficient jobs, adequate housing and municipal facilities could be secured for rural and semirural America.

In working jointly with the Farmers Home Administration, it was decided that a program involving both study and action would be the most effective method of involving the young men of the FFA in this challenging new venture. Instructional material is being made available to the 12,000 instructors of vocational agriculture across the length and breadth of our land. Beginning with the 1970–71 school year, this information will be taught in vocational agriculture classrooms in 9,000 American communities. These classes will devote a portion of their instructional period to the discussion of the problems of their local communities.

In addition to the instructional phase, FFA members will be involved in actual community improvement projects dealing with seven rural problem areas.

In my opinion this is but a beginning for I feel confident that tens of thousands of individuals will become interested because of the concern of these young people. A useful dialogue will result, and I am equally certain that new innovations to implement the intent of the program will be rapidly forthcoming. The FFA will serve as a model for other organizations to become involved.

This is a marvelous example of constructive youth involvement in the problems of modern America.

We often use the phrase about everybody talking about the weather but not doing anything about it.

Well, the FFA is not just talking about the problems of this Nation in the seventies, they are going to do something about them.

They have my support. The 450,000 Future Farmers of America are going to make a contribution equal to that which its members have made and are making to agriculture.

ASSISTANCE PLAN

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1970

Mr. BOGGS. Mr. Speaker, there is no more important task before this Congress than that of helping our poor to become productive, taxpaying citizens. The welfare reform bill which this House has passed and sent to the other body would be a major step in that direction. It would assist our poor to contribute, rather than detract, from the life of our Nation.

The New Orleans States-Item recently published an excellent editorial on this subject. I am inserting it in the RECORD and calling it to the attention of my colleagues:

[From the New Orleans States-Item, July 20, 1970]

ASSISTANCE PLAN

Congress should approve President Nixon's Family Assistance Plan as an alternative to the existing inadequate welfare system.

Louisiana and the South have a tremendous stake in the plan, which places a floor under incomes and gives individuals a chance to get off the dole. The act offers a chance for the breadwinner in thousands of families to become a productive part of the economy.

The South should favor the legislation for purely selfish reasons.

By increasing incomes of the poor—tripling or even quadrupling them in some cases—The Family Assistance Plan would provide a boost to the economy of the South. It is estimated that additional federal revenues totaling $102 million annually would flow into Louisiana alone.

The South would benefit in disproportion to the balance of the country.

Accepting the Census Bureau's 17-state definition of the South, 52 per cent of the 20 million persons covered by the bill would be Southerners. Figures cited by Fortune Magazine show that a surprising one out of five persons in the South would be covered. More than half of those qualifying for the program would be white.

We believe the Family Assistance Plan offers a chance for individuals living without hope to shake loose from the tradition of miserable housing, inadequate diets, and an early termination of schooling.

It offers a chance for those living at the poverty level to get the type of job training and acquire the kind of motivation required if they are to break the poverty cycle.

The Family Assistance Plan already has been approved by the House and is now before the Senate. The Senate should not forget that the present welfare system is a national disgrace. It is both unresponsive and degrading.

ABM'S, MIRV'S, AND DETERRENCE

HON. WILLIAM S. MOORHEAD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1970

Mr. MOORHEAD. Mr. Speaker, I have argued for 2 years now that the gravest threat to our national security is being posed by our own deployment of the ABM and the MIRV. I must confess that this struggle has been at times a disheartening one, so I was especially pleased to see an editorial in yesterday's New York Times, supporting the positions I have taken and suggesting that any funds voted for these systems be placed in escrow until the administration implements the Senate resolution—passed overwhelmingly—urging the administration to propose a halt in ABM and MIRV deployment on both sides while SALT talks proceed. The blatant disregard of this resolution by the President and his subsequent deployment of the Minuteman III MIRV was equally disappointing and I frankly feel it makes his objectives at SALT suspect.

I include in the RECORD both the Times editorial and a paper on strategic policy developed recently by my office. This paper argues in somewhat more detail the position that these technological "advances" will serve our Nation poorly. Not only will they decrease strategic stability and expose us to a heightened risk of war, but they are also extremely costly.

The essential requirement that U.S. strategic forces must meet is an assured destruction capability—the capability of absorbing a Soviet first strike and inflicting a level of assured destruction on the Soviet Union defined as 20 to 25 percent of the population and at least 50 percent of Soviet industry. This is the essence of nuclear deterrence.

The United States can now deliver over 4,200 strategic nuclear warheads against the Soviet Union. Based on extremely conservative estimates, 400 warheads would destroy over 30 percent of the Soviet population and 75 percent of its industrial capacity—thus more than adequately meeting the requirements of assured destruction. The Soviet Union has a similar overkill capability with respect to the United States. In other words, we have a deliverable force of 10 times as many warheads as we need for sufficient deterrence of potential attack.

By MIRV'ing both our Minuteman and Polaris—Poseidon—missile forces we more than double the number of nuclear warheads, from 4,200 to 9,600, to achieve the same objective of delivering 400 warheads.

It is also inconceivable that, now or

at any time in the foreseeable future, any enemy will be able to destroy all our ICBM's, all our bombers, and all our Polaris—soon to be Poseidon—submarines simultaneously. Nevertheless, we are continuing to increase both in number and accuracy of our strategic weapons beyond any reasonable response to the Soviet threat.

Nor, Mr. Speaker, can our deployments be justified as bargaining "chips" for the SALT talks. To the contrary, as the Times quite properly suggests, the headlong pace with which they have been carried out seems better calculated to foreclose any meaningful agreement at all. The Congress should not allow such policies to carry the day, nor should we be scared into silence lest we weaken our SALT position. I earnestly commend this editorial and paper to my colleagues' attention.

The articles follow:

SALT AND SAFEGUARD

The Administration's claim that success in the Strategic Arms Limitation Talks (SALT) with Russia requires Congressional authorization of an expanded Safeguard program is the least credible of the many unconvincing arguments made for this antiballistic missile (ABM) system in the past year.

The Soviet Union has suggested that ABM's could be limited at "zero level," rather than at low or higher levels. This apparent readiness to ban missile defense entirely opens an attractive prospect. The hypothetical Pentagon thesis that the Soviet Union might clandestinely "upgrade" its thousands of antiaircraft missiles into an effective antimissile defense is based on the theory that they would be secretly linked to the giant ABM radars. If those radars and the rest of the embryo Soviet ABM system around Moscow are dismantled, that would also demolish the argument that Russia could alter the power balance quickly by deploying secretly manufactured ABM launchers around those radars, which take five or six years to construct.

If missile defense were entirely banned, the Pentagon's argument for deploying MIRV multiple warhead missiles at this time would also collapse. MIRV (multiple independently targeted re-entry vehicle) is sought to insure penetration of a heavy Soviet missile defense if Moscow should build one. With a "zero ABM" agreement at SALT, no one could argue that the Sovet Union could deploy a missile defense in the future faster than the United States could increase its offensive capability to overcome it.

Yet the Nixon Administration, in its new Vienna proposals, reportedly has not proposed a MIRV ban; on the contrary, it has made unnecessary demands for intrusive on-site inspection, something it knows is anathema to Moscow, in discussions at SALT of a possible MIRV deployment halt. For eighteen months the Pentagon has been permitted to press ahead on testing and, more recently, deployment of the American MIRV.

The Soviet suggestion of an ABM ban evidently has not been rejected; it reportedly remains among the alternative "low level" ABM limits presented in the American proposals. But there are indications that the Administration prefers, and will seek at SALT, an ABM agreement that would permit both sides to have systems equal to or larger than the obsolete 64-missile defense the Soviet Union has deployed.

The agreement the Administration now projects at Vienna would not halt the strategic arms race, but would continue it in a seemingly controlled form. The degree of control, however, would be an illusion.

AND THE FUTURE

With ABM systems deployed on both sides, even at a low level, there would be a continuous race for qualitative improvement and, every few years, replacement of the system with a new generation of antimissiles, radars and computers. Far more dangerous, absence of limits on MIRV would permit a rapid multiplication of separately-targeted nuclear delivery vehicles in the strategic offensive missile forces of both sides. A fivefold increase is now under way in the American forces, from 1,700 to about 8,000 nuclear delivery vehicles.

Moreover, a race to improve the accuracy of MIRV warheads would also be beyond control, giving each side at some point the capability of destroying the other's fixed land-based ICBM's. Fixed land-based missiles would be made obsolete by this development and both countries would be forced to replace them with sea-based or mobile land-based ICBM's.

The tens of billions of dollars that would be devoured in this post-SALT arms race is reason enough to seek to avoid such an evolution. But even more important would be the dangerous instabilities that would be repeatedly introduced by permitting the stable nuclear balance that now exists to give way to a new kind of missile race.

The issue that confronts the Senate as it opens debate on the defense authorization bill, which includes funds both for ABM expansion and the rapidly growing MIRV deployment program, is not how to help the Administration achieve the SALT agreement it seeks. The real issue is how to influence the Administration to seek the kind of SALT agreement the country and the world needs. That would be an agreement banning both ABM and MIRV.

The Senate has already overwhelmingly voted a resolution urging the Administration to propose a halt in ABM and MIRV deployment on both sides while SALT talks proceed. The need now, in voting the defense authorization bill, is to put "in escrow" whatever funds are voted for ABM and MIRV deployment until the Administration, which has ignored the moratorium vote, implements the Senate resolution.

It may be inconvenient to permit the ABM and MIRV programs to grind to a halt pending the outcome of the SALT negotiations. But no strategic necessity requires that they go forward at this time, while every imperative of arms control demands that they be halted before it is too late.

TOWARD A STRATEGY OF DETERRENCE

U.S. nuclear strike forces are designed to be able to survive an enemy first-strike, to be missioned on command and to penetrate enemy defenses with a resulting nuclear damage, the anticipation of which should be sufficient to deter aggression.

The degree of damage that can be inflicted on Soviet targets was disclosed by Defense Secretary McNamara in a damage table published in January 1968.

SOVIET POPULATION AND INDUSTRY DESTROYED

[Assumed 1972 total population of 247,000,000; urban population of 116,000,000]

1 MT equivalent delivered warheads	Total population fatalities		Industrial capacity destroyed (percent)
	Millions	Percent	
100	37	15	59
200	52	21	72
400	74	30	76
800	96	39	77
1,200	109	44	77
1,600	116	47	77

Note: The U.S. strike forces designed to implement the policy of nuclear deterrence have been variously designated in Defense Department posture statements as follows:

	Oct. 1, 1966	Oct. 1, 1967	Sept. 1, 1968	Sept. 1, 1962
	(1)	(2)	(3)	(4)
ICBM launchers	934	1,054	1,054	1,054
SLBM	512	656	656	656
Total	1,446	1,710	1,710	1,710
Intercontinental bombers	680	697	646	581
Total force loadings approximate number of warheads		4,500	4,200	4,200

It is not clear why column (4) does not reflect fewer than 4200 warheads since 65 fewer bombers are listed. Using a reduction factor proportionate to the decrease of 300 warheads for 51 bombers in the previous year, one would expect 3818 warheads rather than 4200.

Since it is now known that the Polaris A–3 throws a cluster of 3 warheads (multiple reentry vehicles or MRV's). Twenty eight of the total force of 41 Polaris submarines are equipped with A–3 warheads at 16 missiles per boat. This means an additional force loading of 896 on these 28 boats. It is probable that the 4200 figure understates the actual number of force loadings. A total force loading of 6,000 warheads may be attributed to the present U.S. nuclear strike force. A Minuteman II configured to throw 3 MRV's would lead to an even larger figure for total throwable warheads.

If we accept the 4200 warhead total, it is 21 times larger than a figure of 200 on-target warheads required to kill 52,000,000 Soviets in a retaliatory raid. The fewer than 70 Galosh ABM's deployed around Moscow would not materially alter this factor of overkill. Bomber defenses would be more significant possibly knocking out 50% of the heavy bombers, this would still leave more than 3,000 warheads to be targeted. Heavy bomber losses could be compensated for many times over by missioning fighter-bombers and carrier-based planes which hold up to 4,000 with a force loading of ———.

Given this assessment of the strategic retaliatory prospect, it becomes evident that the survivability of U.S. strike forces must be the rationale for such a degree of overcapacity. The Secretary of Defense maintains that the vulnerability of 1,000 land-based Minuteman ICBM is so endangered by the continued deployment of Soviet SS–9 ICBMs that it is essential to have Phase I of SAFEGUARD to provide ABM protection of the missile silos. The Congressional debate on SAFEGUARD examined the adequacy of the U.S. nuclear deterrent; it demonstrated that the Defense Department's case for the vulnerability of U.S. nuclear strike forces to a Soviet first strike focused on one component—the land-based ICBMs—of the total strategic forces. If one accepts the contention that 950 Minuteman missiles might be knocked out in a first-strike, one may still rely on the varied and widely-dispersed aircraft and missiles making up the rest of the U.S. strike forces.

The 1,000 Minuteman missiles, if each is credited with a single warhead, make up only 24% of the 4,200 warheads specified by the Posture Statement. To strike at the remaining 76% of the strategic warheads, the enemy would face an impossible strategic assignment. Given the geographic distribution of the aim points represented by these 3,200 warheads, it would be impossible to so time-phase a first strike as to impact nuclear blows simultaneously on all targets. Here one is even forced to make the far-out assumption that the enemy could somehow or other manage to know where the U.S. Polaris submarines were located—or even, more im-

plausibly, where these aim points would be at the exact time of missile launch—and, finally, where the Polaris submarines would be at the exact time of warhead impact. Soviet missile warheads could not simultaneously strike NATO aircraft bases, carriers at seas, B–52 bases, Polaris subs at sea and U.S. based ICBMs. This is simply a physical impossibility. The planning for such a coordinated attack must also remain undetected by our various intelligence networks. A consequence of this fact is that the Soviets always face the dilemma of risking return fire from those elements of the U.S. strike force unstruck by the initial wave of a first strike.

The fact is that Soviet planners could never be sure that a first strike, even if technically possible, would be effective in knocking out the Minuteman fields because of the prime uncertainty about the U.S. decision to keep Minuteman missile in silo when early warning systems signal the detection and identification of a massive attack. *This is not a matter of U.S. policy specifying launch-on-warning.* It is simply that Soviet planners could not be sure that the multidepth U.S. system of early warning would not trigger such a decision. We note, for example, that the present budget contains provision for $219 million for "Development and Deployment of new satellite strategic surveillance system." This is in addition to existing systems; namely, BMEWS Ballistic Missile Early Warning Systems, OTH (Over the Horizon Radar) Systems, PAR (Perimeter Acquisition Radars), SLEM Warning System.

At least $3 billion has been committed to development and deployment of five independent systems for giving early warning of ballistic missile attack.

It can rightly be argued that in a matter of such critical importance as maintaining the nuclear balance of terror, the Department of Defense is justified in erring on the side of caution. After all the nation's security is at stake. But too heavy a hand on the nuclear scales can have an adverse effect. It can motivate the enemy to respond with an ever-mounting deployment of more weapons that adds greater weights of armaments to both sides of the balance. No greater measure of security is achieved and each nation is the proorer in having diverted urgently needed funds and resources from satisfaction of domestic needs. *The radically new feature of the nuclear arms race is that more weapons do not necessarily mean more security.*

The entire issue of determining relative strategic strength on each side has been thoroughly confounded by two technical developments the ABM, antiballistic missile) and MIRV (multiple, independently targeted, reentry vehicle). Of these the ABM issue is at present of less significance in terms of balance of nuclear power than MIRV. For example, little sustained momentum. Its impact on the balance of nuclear power i.e. some 60 launchers must be reckoned as meaning the interception of perhaps 30 strategic warheads. In anticipation of the expansion of this ABM–1 system to other target complexes, the U.S. has decided to deploy its Poseidon MIRV SLBM force on 31 submarines. This represents an increase of some 3000 warheads in the U.S. offensive force—a hundred times that interceptable by the existing Moscow defense system.

MIRV's impact on the arms race is extremely destablizing because it introduces a complex mathematics into arms control and into the exercise of judging nuclear sufficiency in the absence of adequate arms control. An arms accounting or balance becomes exceedingly difficult when one missile can no longer be counted as one unit of offensive fire-power. For example, the heavy throw weight Soviet SS–9 ICBM can hurl a single warhead of 25 megatons in power i.e. 25 million tons of TNT or more than a thousand times the power of the Nagasaki A-bomb of 1945 vintage. If the single warhead is split up into three individual warheads each falling in a triangular pattern on closely spaced aim points (i.e. Minuteman silos) then the separate warheads can each be as much as 5 megatons in a weapon yield. Split-up of the single warhead package into six MIRVs would decrease the individual weapon yield to 1.5 megatons. Such a six-fold MIRV (sextex) weapon would have to achieve a modest 0.2 mile accuracy to knock out a missile silo of the Minuteman type. On the other hand, the Minuteman III will have far less MIRV potency because of its lower throw weight. Minuteman III has a triplet MIRV each of which has approximately 0.2 megatons of yield. Thus in any arms limitation of strategic weapons the United States and the Soviet Union are trying to bring into balance asymmeric missile systems.

Asymmetry in weapons would not preclude striking a balance for arms control provided that each side could be confident that the other lived up to the letter of the agreement. However, verification through inspection is a necessity for any SALT treaty. Here the MIRV development profoundly perturbs the situation since orbital cameras cannot look inside a silo and determine how many MIRVs are on board each SS–9 or Minuteman III. Almost continuous on-site inspection would be required to verify the MIRV quality of each missile.

The United States leveled off the deployment of strategic systems at the 1,000 level for land-based launchers and at the 656 level for sea-based launchers. However, the MIRV test program designed to alter the quality of the strike force of these launchers has proceeded to a point where the Air Force has announced plans to deploy Minuteman III (MIRV) in June, 1970. The Soviets have not as yet tested a true MIRV system. It is hardly likely that they would agree to a MIRV test ban and accept a position of MIRV-inferiority. On the other hand, in the absence of a test ban, the Soviets would have to assume that the United States will proceed to convert Minuteman I's and II's into Minuteman III's. By 1974 the U.S. plans to have 500 Minuteman III's deployed, but the Soviets might make the worst assumption that every one of the 1,000 Minuteman silos contains a Minuteman III. The U.S. Navy has eight of its Polaris submarines under conversion to a Poseidon configuration and the first of these will undergo sea trials this fall and be Poseidonized as of January 1971.

Although the MIRV weapon revolution has not yet run its course, there appears to be no way to moderate this phase of missile power escalation short of a SALT agreement to limit missiles to a non-MIRV configuration—a limitation which would have to be subject to stringent on-site inspection to be verifiable. The military zeal to embrace a new weapons technology appears to have severely compromised the possibility of reaching agreement at the SALT discussions. If so, then the Congress must conclude that the failure to perceive the significance of a new military technology constitutes a critical deficiency in the U.S. decision-making process on weapons systems.

The MIRVing of Minuteman III and Poseidon will result in the following force loadings for 1974–75:

Missiles (ICBM's plus SLBM's):	Warheads
500 Minuteman III	1,500
500 Minuteman II	500
160 Polaris A–3	480
496 Poseidon	4,960
ICBM's plus SLBM's total	7,440
Aircraft (heavy bombers):	
B–52 C–F 3 Sqdr= 45	2,160
B–52 G–H 17 Sqdr= 255	
FB–111 4 Sqdr= 60	
Total force loadings	9,600

In other words, the Defense Department is programing an increase of 5,400 warheads or 129% for strategic offensive weapons systems. This is the probable program but it is by no means the maximum force loading that could be achieved. For example, this ignores the force loading that could be delivered by 4,000 tactical aircraft.

The Defense Secretary states in his Posture Statement that the FY71 budget is transitional and that restraints are imposed on the present budget. Yet he requests $4 billion in FY 1971 for development and deployment of major strategic programs. There is little evidence of restraint. Indeed, the Posture Statement contains requests for funding of major new weapons development like the AMSA (B–1) strategic bomber, the SCAD (Subsonic Cruise Armed Decoy), the ULMS (Undersea Long-range Missile System) and programs to rebase Minuteman in a mobile or superhardened silo form. It is implied that if the SALT talks do not succeed in limiting strategic weapons, then the United States will undertake a new round of armaments.

The comparative record of U.S. and Soviet missile deployments shows that the U.S. has always enjoyed both a quantitative and qualitative superiority in ICBMs and SLBMs. The U.S. initiative in fielding large numbers of Minuteman missiles may have stimulated a response by the Soviets which they might not otherwise have made. In describing the decision to make a massive missile build-up, Defense Secretary Robert S. McNamara later explained:

"Since we could not be sure of Soviet intensions—since we would not be sure that they would not undertake a massive build-up—we had to insure against such an eventuality by undertaking ourselves a major build-up of the Minuteman and Polaris forces."

Here we see evidence of the fact that decision-making in the Defense Department is keyed to making the worst assumptions about enemy intent and capability—patterning our future forces on estimate of what the enemy *might* do, not what he is actually doing. This is not a cycle of action-reaction, but rather a one way street for defense planners. It is a result of the closed system in which those charged with defense planning also have responsibility for interpreting and evaluating threats to our national security. The U.S. Congress has been either unwilling or unable to subject this decision-making to judgments in which some risks are taken on the side of peace-planning.

The decisions on the Minuteman force illustrates the failure of the Congress to inquire incisively into the quantity and quality of the missiles. For example, the decision to deploy missiles on U.S. soil failed to take into consideration the fact that an enemy strike at such missile sites would contribute a massive attack on U.S. population centers. Any serious attempt to first-strike the Minuteman silos would involve many thousands of megatons of warheads, the fallout from which would envelop the densely populated regions of the United States. Furthermore, fixed ICBMs bases would in time become targets attracting enemy fire once missile accuracy became adequate for this purpose. (A Congressional investigation in March 1960 did in fact raise this vulnerability issue, but it was not taken seriously by the U.S. Air Force.) The relative military worth of fixed land-bases vis-a-vis sea-bases for missiles was not properly studied by the U.S. Congress. The result is that some $17 billion has been committed to Minuteman missile forces (research, development, test and engineering plus silo-construction and deployment of Minuteman I, II and III). If nuclear warhead costs and operations are included this adds up to over a $20 billion national investment.

Last year the Secretary of Defense claimed it was essential to protect the Minuteman bases against a first-strike threat by deployment of Phase I and then Phase II of Safeguard. If we consider amortization of ABM research and development and Safeguard costs, this adds at least $8 billion more to the Minuteman system costs. Costly as this Air Force program has been, perhaps even more costly is the fact that the quality of the missile system renders it hostile to strategic arms limitation. The fixed coordinates of land-based missiles serves to haunt them with the constant fear of a first-strike.

Congressional debate over the Safeguard program last year served to involve many members in the study of nuclear deterrence—a subject previously more or less left to the members of the special committees dealing with defense issues. As a result the Congress is in a better position to assess the defense choices of the Seventies. This report, in effect, symbolizes a determination on the part of some members of Congress to take an active role in making sure that these defense choices are soundly-based.

We should not expect instant agreement at the SALT discussions in Vienna nor should we be discouraged if no agreements seem possible this year. The important fact is that both the great nuclear powers are siting down at the same table to talk over the most serious issue on the world agenda—the arresting of the nuclear arms race. The Soviets, for their part, could ease the nuclear tensions gripping the world if they would curtail deployment of their land-based missiles. For our part, we can exercise moderation in adding to our strategic weaponry. Both sides should be motivated to prevent spiraling upward the arms race in another costly cycle of weapons which will in the end assure neither of any improvement in its security posture.

Our negotiators at the SALT table must not only strive to reach an agreement on limiting arms that is militarily and technically sound, they must bring back one that will be acceptable to the American people. It is not sufficient that the Congress understand the issues involved; this comprehension must be broadly based and extend to the grass roots of America. H. G. Wells once wrote that: "Human history becomes more and more a race between education and catastrophe." (1920). Fifty years later we find that the forces of destruction have multiplied, seemingly out of control, while men inch along on a plateau of limited understanding.

If our strategic armaments are to be brought under control, it becomes necessary for the great issues involved to be fully examined in the public forum—that crucial intersection of national interest and public policy.

ALBERT SUPPORTS WOMEN'S RIGHTS AMENDMENT

HON. CARL ALBERT

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1970

Mr. ALBERT. Mr. Speaker, the House will soon have before it House Joint Resolution 264, which proposes an amendment to the Constitution of the United States relative to equal rights for men and women. I strongly support and endorse that resolution. Its passage by the House will be an important step down the road for equality for women.

In the past, some of the steps along that road such as the right to vote and the Civil Rights Act which includes provisions against sex discrimination, were taken only after long and arduous efforts by our women. We men, on the whole, were mostly followers. We are followers today, but I think more ardent followers than in the past, because of the dogged determination of our leader on this issue, the distinguished gentlewoman from Michigan (Mrs. GRIFFITHS).

The gains already made by women are many, yet today they are still not accorded either full legal equality in the eyes of the law nor are they accepted on a fully equal basis in our society generally. There are many States with laws which still prohibit women from working in certain occupations. There are many accepted practices which prohibit women from participating fully in our educational processes. Dual pay schedules are common in schools and in private business. Discrimination still exists against women in many local, State, and Federal government jobs. Women continue to be denied simple basic legal rights in many States.

There are many arguments for approving House Joint Resolution 624, the strongest of which is that it is the right thing to do. Discrimination in any form has no place in our modern society, and we simply cannot afford to waste the vast talents of any group of citizens in these demanding times. Full equality before the law, as well as acceptance of women's full and equal rights, must be granted if we are to realize the potential of all members of our society.

Equal rights for women have been a part of the party platforms of both Democrats and Republicans for a generation. It is time that we fulfill that pledge. House Joint Resolution 264 deserves the full support of every Member who wants to erase discrimination for over half of the citizens of the United States. When it comes before this House, I urge its adoption by an overwhelming vote.

VA OBSERVES 40TH ANNIVERSARY

HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1970

Mr. SCHWENGEL. Mr. Speaker, last week the Veterans' Administration observed its 40th anniversary of dedicated service to our veterans and their families. As stated in the quote engraved on the Veterans' Administration Building, ". . . for him who shall have borne the battle and for his widow and his orphan."

Donald E. Johnson, the Administrator of Veterans' Affairs, spoke in Des Moines on the 40th anniversary of the founding of the Veterans' Administration. I would like to share the text of his remarks with my colleagues:

TEXT BY THE HONORABLE DONALD E. JOHNSON

Today the Veterans Administration observes its 40th anniversary. Those of us . . . nearly 170,000 in number . . . who are privileged to work for VA . . . are indeed pleased and grateful that our friends and neighbors here in Iowa . . . and VA employees from Des Moines, Iowa City and Knoxville . . . are also gathered here in this birthday celebration.

Executive Order 5398 . . . signed by President Hoover on July 21, 1930 . . . was a very practical document . . . economical . . . as befit the times . . . in its use of language establishing the Veterans Administration.

It read in part . . . and I quote:

". . . the United States Veterans' Bureau, the Bureau of Pensions, and the National Home for Disabled Volunteer Soldiers are hereby consolidated and coordinated into an establishment to be known as the Veterans' Administration, and the duties, powers, and functions vested by law in the United States Veterans' Bureau, the National Home for Disabled Volunteer Soldiers, and in the Bureau of Pensions . . . are hereby transferred to the Veterans' Administration."

Today it is appropriate that we review the changes that have occurred since the issuance of that Executive Order 40 years ago.

Growth . . . of course . . . has been the biggest change.

However . . . even as we acknowledge this obvious fact . . . we should also remember two fundamental truths often quoted by poets and philosophers.

All change is not growth.

And the art of progress is to preserve order amid change and to preserve change amid order.

What should these truths mean to us?

Very simply . . . I think that they tell us that we should give credit where credit is due . . . that we should recognize and commend the imagination and dedication and hard work of General Frank Hines . . . the first Administrator of Veterans Affairs . . . and the 31,576 men and women who were transferred from former bureaus to become the VA's first employees . . . in serving more than 4.6 million veterans and their dependents who were living when the VA was founded.

We should also recognize and commend the ability and devotion of thousands of other VA employees who succeeded them . . . and who are now retired or deceased.

To pay them this deserved tribute is not to diminish in the slightest the care we have provided . . . in our time . . . for him who shall have borne the battle and for his widow and his orphan.

For there is credit aplenty . . . and more than enough challenge . . . remaining for you and me . . . even after we affirm that the compassionate, efficient, dedicated service which we seek to render to America's veterans, their dependents and survivors . . . is a tradition we are but carrying on . . . not a precedent we have established.

Obviously . . . the constituency we serve today . . . the number of veterans and their dependents eligible for benefits and services the Veterans Administration exists to provide . . . has multiplied many times over since 1930.

But so have the resources . . . in personnel . . . in dollars . . . in modern computer and business equipment . . . and in experience . . . to meet this increased need.

I give you this background . . . not to minimize the magnitude of the Veterans Administration's responsibilities and operations now . . . in 1970 . . . but rather to emphasize that the VA is what it is . . . a vital segment of American society today . . . largely because of what other, earlier members of the VA family accomplished before us.

History has always fascinated me. This isn't to suggest that I am even a good student of history. But at least I fared better than the student who received consistently poor grades and tried to explain them to his irate father.

"You just can't beat the system, Dad," he said.

"Last year I decided to take basket weaving. It was a snap course and I figured I would sail through it.

"Know what happened?"

With a sigh of resignation his father said, "No, what happened?"

"Well," the boy replied, "two Navajo Indians enrolled, raised the class average, and I flunked."

"History" . . . Ellsworth Kalas reminds us . . . "is a good teacher, but in one respect inadequate. We can learn what to avoid from history's bad examples, and from her finest men we can learn what goals to seek; but we are not warned of the dangers of inactivity because history does not record the story of those who never tried."

To know the history of the Veterans Administration is to realize how hard so many dedicated and able Americans have tried during the past 40 years to redeem Abraham Lincoln's pledge for this nation . . . for all time . . . "to care for him who shall have borne the battle and for his widow and his orphan."

Our children's generation of Americans has been born and grown to adulthood knowing only an America at war . . . hot or cold.

This generation would find it difficult . . . if not impossible . . . to believe that when the Veterans Administration became a reality in 1930 . . . America still dreamed that the World War . . . which had ended but 12 years before . . . would truly be the war to end all wars.

Let me digress for a moment to recognize that while our children's generation . . . and indeed, our generation of veterans . . . have not known peace . . . we have not abandoned hope for a just and lasting peace. As a veteran . . . but especially as Commander-in-Chief . . . President Nixon knows the cost of war . . . and the priceless value of peace. I am certain that you great and good Americans join me today in praying that the President's goal of peace with freedom . . . to which he is totally committed . . . will soon be realized.

On July 21, 1930 . . . General Hines and his first associates in VA . . . if they shared America's dream of peace . . . also had reason to dream that . . . in their time . . . with no more wars and no more war veterans . . . the medical, compensation and pension, vocational rehabilitation, and insurance needs of 4,664,000 living veterans . . . including approximately 94,000 here in Iowa . . . would be finally and fully met.

Certainly . . . they had no reason then to envision World War II, Korean, Vietnam . . . and today's America of 28 million living veterans.

You and I now know . . . of course . . . that not in our lifetime . . . not even in the lifetime of the newest and youngest VA employee . . . will the needs of veterans still living . . . let alone the widows and children eligible for VA benefits and services . . . be fully and finally met.

We can be confident . . . however . . . that the experience the VA has gained in 40 years of service to those who served . . . and to their dependents and survivors . . . will enable us to meet both the nation's obligation to our veterans and their current needs during the next 40 years.

A poet once described an anniversary as that vital moment which links the past and the future.

On this . . . the Veterans Administration's 40th anniversary . . . let us briefly, but proudly, look at the VA's past accomplishments . . . before we adjourn to face confidently the future and its challenges.

In taking this look . . . however . . . we should not compare . . . out of context . . . the budget figures, for examples, which we must consider.

Most important . . . we should never forget that the real story of the Veterans Administration today . . . and for the past 40 years . . . is people . . . not dollars or programs or regulations.

Comparative statistics dramatically demonstrate the tremendous growth in the magnitude of the VA's responsibilities and activities between 1930 and 1970.

But we must go beyond mere figures to appreciate the reasons and the need for an increase in the VA's budget from three quarters of a billion dollars in fiscal year 1931 to almost $9 billion for fiscal year 1971.

These reasons . . . in themselves . . . capsule and highlight the changes that have taken place in the past 40 years.

Permit me to enumerate just a few.

Our living veteran population has increased more than six-fold.

The number of hospitals operated by the VA has tripled.

Nearly three times the number of patients are being treated in our VA hospitals.

Six times as many employees now work for VA.

When the Veterans Administration was established in 1930 . . . it inherited from predecessor bureaus and agencies four major veteran benefit programs . . . hospital and medical care . . . compensation and pensions . . . vocational rehabilitation training . . .

These programs have been continued and expanded and improved during the past four decades.

To them . . . however . . . have been added other major benefits which further account for the nearly 12-fold increase in the VA budget between fiscal years 1931 and 1971.

I refer . . . of course . . . to America's $21 billion investment in the G.I. Bill education and training of 12 million veterans.

To the $77 billion in home loans guaranteed by VA for more than 7 million veterans.

To the nearly 4.5 million National Service Life Insurance policies valued at almost $30 billion still held by World War II veterans.

To the education and training program for the sons and daughters, widows and wives of veterans who died or are permanently and totally disabled as the result of military service.

To "wheel chair" homes and specially equipped automobiles for severely disabled veterans.

To special coronary and intensive medical and surgical care units in almost half of our 166 VA hospitals . . . including, of course, our VA hospitals here in Des Moines.

And . . . most important . . . to the change in the VA's fundamental philosophy regarding veteran benefits.

From its beginning in 1930 until very recently . . . the Veterans Administration operated on the premise that it would provide veterans with the benefits to which they were entitled . . . but it was up to them to learn about and apply for these benefits.

Today . . . however . . . as you know . . . the VA is guided by the principle that our veterans are not only entitled to know about their benefits . . . but must know about them . . . and must be given every possible assistance in obtaining them.

I think you will agree that this change alone makes the Veterans Administration of 1970 a better vehicle than the 1930 model for delivering the benefits and services to our veterans, their dependents and survivors which a grateful nation has provided them . . . and wants them to use.

Some of my associates in our Central Office in Washintgon have come to the conclusion during the past year that the present Administrator of Veterans Affairs has a "thing" about statistics . . . particularly when it comes to overloading a speech with them.

They are right . . . primarily I think because . . . for all their value . . . I cannot help but remember Emil Frankel's words whenever "statistics" are mentioned.

"Statistics," he said . . . "is the art of drawing a crooked line from an unproved assumption to a foregone conclusion."

So I won't burden you with a lot of statistics today.

However . . . I would like to give you a brief mathematical history of the VA here in Iowa during the past 40 years.

Having asked some of our statistical experts in Central Office to work up these figures . . . I would not dare not use them.

Actually . . . I found this data very interesting.

In the VA's first fiscal year . . . 1931 . . . there were approximately 94,000 living veterans here in Iowa. For various benefits and services on their behalf . . . and on behalf of their dependents and the survivors of deceased veterans . . . the VA expended almost $12 million that year.

Today . . . in fiscal year 1971 . . . there are 375,000 living veterans in Iowa . . . or four times as many as 40 years ago.

For them, their dependents and survivors . . . the VA this fiscal year will spend approximately $115 million in benefits and services . . . or nearly 10 times as much as in fiscal year 1931.

In the past 40 years . . . VA expenditures in the Hawkeye State have totaled almost two-and-a-quarter billion dollars.

Today . . . at least in our nation's capital . . . one can't even get into a budget conference . . . let alone participate . . . it seems . . . unless he is prepared to talk in "billionese."

Being a farm boy from Iowa . . . however . . . I am still amazed at such facts as these.

VA's requested fiscal year 1971 budget of approximately $9 billion is $1.5 billion more than the appropriation to run the entire federal government just 35 years ago.

The $5.4 billion in compensation and pension benefits which VA will pay out this year exceeds by more than three quarters of a billion dollars the appropriation for the entire federal government for the fiscal year which ended just three weeks before the Veterans Administration was established.

One final figure.

In 1915 . . . fiscal year 1915, that is . . . the United States was still neutral. Even then . . . however . . . our ultimate involvement in World War I was foreseen by many. Certainly . . . no American questioned our potential might. To run the entire federal government of this fledgling giant of a nation . . . in fiscal 1915 . . . the Congress appropriated a sum that is $630 million less than the requested 1 billion 752 million dollar medical care budget of the Veterans Administration this fiscal year.

Earlier I said that the real story of the Veterans Administration today . . . and for the past 40 years . . . is people . . . not dollars or programs or regulations.

Today . . . we do not commemorate the VA Center here in Des Moines . . . or the VA's other hospitals in Iowa . . . or any other concrete, steel and glass asset of the VA.

Rather . . . we are met here . . . and in other ceremonies through America . . . to honor the dedicated men and women who have devoted their lives . . . and are doing so today . . . to helping America's veterans, their dependents and survivors.

We are met here . . . and throughout America . . . to express our heartfelt gratitude to the thousands of compassionate men and women who unselfishly forewent opportunities to leave the VA for substantially higher paying jobs in private industry . . . and are doing so today . . . because the welfare of our nation's veterans was . . . and is . . . more important than their own well being.

We are met here . . . and throughout America . . . to pay tribute to . . . and express our overwhelming pride in . . . our

nation's veterans . . . who have given us such a noble purpose for being.

We are met here . . . and throughout America . . . to acknowledge gratefully the unselfish devotion to the welfare of sick and disabled veterans of tens of thousands of volunteers in the Veterans Administration Voluntary Service.

We are met here . . . and throughout America . . . to thank the Congress of the United States . . and through the Congress . . . the American people . . . for giving practical, beneficial, dignified meaning to Abraham Lincoln's pledge to "care for him who shall have borne the battle and for his widow and his orphan."

We are met here in Iowa to contribute a momento of our esteem for the great American . . . Iowa's most famous and revered citizen . . . Herbert Hoover . . . whose heart and hand brought the VA into being.

To succeeding Presidents . . . of course from Roosevelt to Truman to Eisenhower to Kennedy to Johnson, and now to Nixon . . . we owe thanks for sustaining and strengthening the VA through the years to ensure that it was always a viable, creative force equal to the challenges of the time.

Finally . . . we are met here . . . and throughout America . . . to ask God's continued blessing . . . so that we will have the wisdom and the strength to serve well for the next 40 years and more America's finest and most deserving citizens . . . our veterans, their dependents and survivors.

I am grateful for the privilege of being with you on this historic and nostalgic occasion.

And now it is my honor and pleasure to present to Mr. Thomas Thalken, director of the Herbert Hoover Library in West Branch, Iowa . . . for permanent placement in the library . . . this plaque on which is engraved the text of Executive Order 5398 . . . including President's Hoover's signature . . . establishing the Veterans Administration.

CAPTIVE NATIONS WEEK: A SECOND LOOK

HON. JAMES A. BURKE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1970

Mr. BURKE of Massachusetts. Mr. Speaker, the other week marked the 12th observance of Captive Nations Week. I was pleased to note the rising support this cause has achieved both here and in 17 foreign countries since its conception. Nevertheless, for all the heads shaken in studied and united sorrow concerning the 27 nations that have fallen under Communist domination only one of my colleagues, Congressman HOGAN, asked the most important question. Who is next? Certainly, no one here will contend that Communist Russia has discontinued its quest for world domination especially after such undaunted success in its relatively short existence.

What is the reason for their success? It is best explained by columnist Kurt Luchmann in the recent July 27 issue of U.S. World News & World Report when he said:

> The Kremlin's goal is the same as ever; domination of the World by stepping into power vacuums, by exploiting rivalries among other nations and by carrying on subversion while systematically adding its own military might.

It is a familiar story for those of us who watch in disgust and anger at Red repression. We can only offer our sympathy for the millions of people whose lives are tormented and barren of any freedom. For them, the phrases, freedom of speech, freedom of press, and freedom of religion which pass our lips so freely are not uttered openly. Keeping the plight of these people in mind, we must look to help those free nations which might fall prey to Communist aggression. In doing so, we will offer hope to those people who wish to be free and help those who are, remain so.

We do not have to look far for an area which needs our help. The Middle East is just such a place and a more perfect example of Luchmann's theory one could not find. If we act now, the Middle East need not be another sphere of Russian influence. No heads need to be shaken over the loss of the nations of the Middle East. We must restore the balance of power to Israel and also convince Communist Russia that a confrontation with the United States is both real and prohibitive. The situation now seems to have taken a turn for the better if Nasser is truly sincere. It might well be that he has heeded the unofficial demands of some of the Members of Congress. Let us not miss the opportunity for a peaceful settlement in the Middle East. But, at the same time, we should remember that the Red strings attached to Nasser's mouth are not the ones attached to his hands and feet. We should not be fooled into losing the initiative by well-timed yet false murmurs for peace.

Hindsight has no redeeming qualities especially in foreign policy. Our play-it-by-ear policy has not proven to be successful against the aggressive force of Communist Russia. This point of argument is well contended by Dr. Leo E. Dobriansky, chairman of the National Captive Nations Committee, in his article "Captive Nations in the 1970's," which appeared in the July 15 issue of the CONGRESSIONAL RECORD, at page 24501. I also heartily agree with him that a special House committee should be formed to investigate, record, and inform the House and the American public as to the nature and the methods of Communist aggression around the world. Communist aggression continues while we remain bickering. We must continue to support freedom wherever it flowers.

WALT WHITMAN

HON. RICHARD T. HANNA

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1970

Mr. HANNA. Mr. Speaker, Walt Whitman was a great poet and one whose prose rang and sang with the beauty and excitement of America. In the June issue of Saturday Review, Arnold Auerbach restructures the poem, "I Hear America Singing," to reflect the unhappy environmental conditions our modern industrial society has created.

Should we not be mindful of the America we inherited and the one we are about to pass on as our legacy? Painful these words are as they string together, whereas the original flowing description was pure pleasure. Pride and gratitude were in the original theme where there is dismay and disaster in the threads of the reconstructed version.

Read and reflect, my colleagues:

WALT WHITMAN TODAY, OR WHAT I'M SMELLING IS DROWNING OUT WHAT I HEARD

I smell America smelling, the varied odors I smell,
Those of exhaust pipes, each one belching fumes as it should belch, blue and fierce,
The factories smelling strong as their smokestacks fill the air,
The abattoir smelling as it makes ready for work or leaves off work,
The cities smelling what belongs to them in their streets, the glue works smelling in the Jersey swamp,
The riverbed smelling as it flows to the sea, the dump heap smelling as it stands,
The brewery's smell, the garbage truck's on the way in the morning, or at noon intermission or at sundown,
The pervasive smelling of the gasworks, or of the sausage plant at work, or of the plane jetting and wooshing,
As we inhale what belongs to you and me and to none else,
Effluvium belongs to us all—we're a country of numbed noses, smog-filled, groggy,
Smelling with weary nostrils our strong malodorous smells. (Arnold M. Auerbach.)

PUBLIC POLICY IN THE 1970'S

HON. LAURENCE J. BURTON

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1970

Mr. BURTON of Utah. Mr. Speaker, developing policies which bring about significant changes in the operation of complex systems requires a great deal of planning, expertise, and good judgment. It also requires a broad encompassing of the largest possible range of phenomena and concerns. In a speech at Hendrix College on April 6, 1967, Daniel P. Moynihan, counselor to the President, stated that too often in the past we have defined public policy in forms of program and in consequence have inhibited the development of true policy. Mr. Moynihan said:

> The source of the difficulty lies not in the malfeasance of individuals, but in the limitations of the program approach to issues that in fact demand the disciplined formulations and elaborations of public policy.

In other words, in our rush to solve a specific problem, we may not have taken into consideration what was good for the larger society, or for the individuals involved, or both.

Mr. Moynihan offers the example of the Federal Government establishing the Office of Economic Opportunity to help in abolishing poverty. Until this year almost a third of the expenditures of OEO were provided, in effect, by income taxes collected from the poor. Since it has been in the nature of the services strategy so much in evidence in early OEO pro-

grams to hire middle-class persons to be of assistance to poor persons, the actual income transfer effect of many of these OEO programs was to take money from farm laborers and give it to college graduates. No one intended it that way, but that was the unintended consequence of programs being operated in the absence of policy. Almost the first measure President Nixon proposed in this area upon taking office was to abolish taxes for the poor, and this was done with the completely willing cooperation of the Congress once the absurdity of the previous arrangement was pointed out.

I think that this speech makes a significant contribution in assisting the making of public policy decisions and I commend it to the attention of my colleagues:

THE CONCEPT OF PUBLIC POLICY IN THE 1970'S

(By Daniel P. Moynihan, Counsellor to the President)

President Shilling, Dean Christie: I have been emboldened in my remarks today by the appearance on the Hendrix College campus just a week ago of The Honorable Wilbur D. Mills, nothing if not a man of consequence in American public life, who spoke to you of the values and purposes of a liberal arts college in terms that would have been thoroughly familiar to your grandparents, and will some of us dare to hope be not less comprehensible to your grandchildren. He cited Jerome Bruner, a friend and colleague at Harvard, who has with characteristic economy dismissed the ever more widely held view that there is a radical disjunction between means and ends in education. "The process and goal of education," Professor Bruner observes, "are one and the same thing. The goal of education is disciplined understanding; that is the process as well."

My purpose today is to speak of the concept of public policy in the 1970's, and I should like at the outset to lay down my own parallel beliefs with respect to means and ends in the conduct of public affairs. Here too the idea of dichotomous, almost unrelated worlds of *action* as against *objective* is very much in the air, indeed is near to being an intellectually dominant position. A strangely Orwellian idea: however little its practitioners would like to think, they were accurately anticipated. War is peace, and such like. In our time, on the campuses, it can take the form that coercion is persuasion. It is not, of course, it is simply coercion, a process of which it may be said that its most objectional aspect is that it works. Practices not dissimilar are diffusing into public life, and unless we are uncommonly disciplined and understanding in the face of this phenomenon we are likely to find it works with us as well. That is to say, the perpetrators of coercion, whatever their particular politics, become the principal actors in the society, leaving to others the residual role of reacting or overreacting, but in either event deprived of that measure of autonomous self-direction which we rightly associate with both intellectual and political freedom.

It is for this reason I should like to talk of the idea of policy. One of the anomalies of the 1960's is that a period of such extraordinary effort at social improvement should have concluded in a miasma, some would say a maelstrom, of social dissatisfaction.

What went wrong?

If I may be allowed first to state that I really don't know and don't expect ever to have any final views, let me say that I believe one of the reasons is that the structure of American government, and the pragmatic tradition of American politics, has too much defined public policy in forms of program, and in consequence has inhibited the development of true policy. Certainly, in simpler times a simple programmatic approach was an efficient way to go about the public business. The problem comes with complexity. More specifically, the problem comes when society becomes ambitious and begins to seek to bring about significant changes in the operation of complex systems such as the society itself. There is nothing the least wrong with such ambitions. What is wrong is a pattern in which the ambitions are repeatedly proclaimed, and just as repeatedly not achieved. That is much of what went wrong in the 1960's. The source of the difficulty lies not in the malfeasance of individuals, but in the limitations of the program approach to issues that in fact demand the disciplined formulations and elaborations of public policy.

These are terms that rightly call for definitions. Here I think the temptation is to be too clever. As increasingly we perceive, and begin to understand the social system as just that, a system, it is possible, and for many purposes necessary, to be meticulous about classifying various forms of system intervention. My rough purpose is more readily served by a simple distinction. Programs relate to a single part of the system; policy seeks to respond to the system in its entirety.

The idea of policy is not new. We have for long been accustomed to the idea of foreign policy, including defense policy. Since 1946 Congress has mandated an employment and income policy more or less explicitly based on a "general theory" of the endlessly intricate interconnections of such matters. Yet our ways of behavior resist this: only great crises, great dangers seems to evoke the effort. Or have seemed able to do so in the past. I believe, however, that a learning process of sorts has been going on. Increasingly the idea of system-wide policies commends itself to persons of responsibility in public affairs as an approach both desirable and necessary. There is no sharp discontinuity here. *One* of the reasons it is seen to be desirable and necessary is that the intensely programmatic approach to social problems in the 1960's has produced so much dissatisfaction. But let us also give ourselves some credit. We have been *learning* from our experience, not just reacting to it. But whatever the case, it can, I believe, be said that the idea of policy is very much in the air just at this moment, and that we can expect it to be one of the formative ideas of the 1970's.

As in most times, it is the style, the approach of the incumbent administration that has most to do with such matters, and here I believe it is clear that the concept of policy has emerged as a distinguishing feature of the administration of President Nixon.

The first official act of the new President, taken his third day in office, was to establish the Urban Affairs Council, a cabinet level body presided over by him and the Vice President. The first task assigned the council was to "advise and assist" the President in the formulation of a National Urban Policy.

This was something new. It had not been done before; no one was certain it could be done. Certainly there did not exist anything like Keynes' General Theory which guided our development of national policy on employment and income. Nor were there any Admiral Mahan's or George Kennan's to provide a master theory of an urban policy comparable to previous formulations of foreign and defense policy. Even so, the process went forward with fair dispatch, such that anyone today caring to know the general outlines of the urban policy of the present administration has only to ask and will be presented a document. Not a definitive one, nor even perhaps a comprehensive one. Certainly not a fixed one. But it is against all the rules of policy formulation ever to be fixed or final. The point is that a document does exist, and anyone so disposed can make what he will of it.

It is not my purpose to discuss urban policy, but rather to suggest some of the principles which govern policy formulation, and which distinguish it from program formulation.

The rules of the latter are, I should think, fairly well laid out in the descriptive political science of our time. The defining characteristic of a program is that it is directed to a specific situation with the purpose of maintaining or changing that situation in some desirable fashion. We have programs to build roads, subsidize the growing cotton, cure cancer, retrain the unemployed. To be sure there are programs that are quite general in their outlook but here, with respect to the Federal government and to all levels and forms of government within the United States with which I am familiar, any tendency toward universality is immediately constricted by the structure of government. Doubtless there are even programs that would wish to evolve into policies, but reality is quickly enough imposed on them by the fact that one bureau in one department is responsible for performing the function involved; that one branch of one division in the Bureau of the Budget handles the appropriation request; that one super specific subcommittee of one special committee of the Congress handles the substantive legislation, and an equivalent subcommittee handles the provision of funds. These are the constituencies of the program, and also its masters. It is a wise program that knows its place, and does not aspire beyond its station.

It would be very unwise to grow disdainful of such enterprises. Burke's dictum that the law sharpens the mind by narrowing it may be usefully applied to the program approach to social problems. Social commitments are not easy to sustain, certainly not over the long span of time which most social problems require. The program approach is designed to enhance the capacity of the enterprise to survive by narrowing its range of activity and intensifying the support for it. Come hell or high water, Republicans, Democrats, or Free Silverites, the Bureau of Disabled Appalachian Urban Agronomists gets its appropriation and does next year the job it did last year. A quality, I repeat, not to be dismissed.

But for all the plain-as-a-stick practicality about such arrangements, in the end they are self-defeating. They are realistic, but they do not reflect reality. More accurately, they distort reality. This is the essence of the problem.

By contrast, a policy approach to government does at least begin by seeking to encompass the largest possible range of phenomena and concerns. This has its dangers, its difficulties. But I shall argue that increasingly there is not respectable alternative. Knowing what we do about the nature of society and of social interventions, we have no option but to seek to deal in terms of the entire society, and all the consequences of intervention. One might wish for a simpler time when such knowledge was not available, but the loss of innocence is an old experience to mankind, and not perhaps to be avoided. Certainly not to be reversed.

Let me then propose three propositions—I shall call them master propositions—that relate to a concept of government by policy, which, I shall argue, distinguish it from government by program. First is the familiar proposition that everything relates to everything.

This is the fact that defines a system. Taken too literally it can be a bit traumatizing, but as I have remarked with respect to the formulation of a national urban

policy, both the logic and the experience of co-variance analysis demonstrate that while everything relates to everything, some things relate more than others. It is usually possible to identify those components that in fact have the greatest influence.

The second master proposition is that from the fact that everything relates to everything it follows that there are no social interests about which the national government does not have some policy or other, simply by virtue of the indirect influences of programs nominally directed to other areas. These are the hidden policies of government.

This is a not so familiar proposition. The interconnections of programs directed to one area with outcomes in another are sometimes seen. Most of us have not got it fairly straight that agricultural research can lead to the migration of farm populations, which has consequences for cities. But by and large these connections need to be fairly evident for much note to be taken of them, and ability to detect them is much influenced by fashion.

Some activities are held to be interesting; others not. And if a subject is not interesting, it can have consequences all over the place and no one is likely to take much heed. I know this to be the attitude of the academy, and suspect it to be nigh universal.

Permit me an example. One of the receiving truths of contemporary liberal history is that no domestic initiatives of any consequence occurred during the Eisenhower Presidency. I will not contest the general point. That was a period of relatively low governmental profile, as the phrase now goes, following twenty years of the alarums and exertions of the New Deal and Fair Deal. Even so a goodly number of genuinely historic initiatives were taken by the Federal government during that period. The National Defense Education Act would be such an example. But there was one program of truly transcendent, continental consequence. This was a program which the 21st Century will almost certainly judge to have had more influence on the shape and development of American cities, the distribution of population within metropolitan areas, and across the nation as a whole, the location of industry and various kinds of employment opportunities (and in all these, immense influence on race relations and the welfare of black Americans) than any initiative of the middle third of the 20th Century. This was, of course, the Interstate and Defense Highway System. It has been, it is, the largest public works program in history. Activities such as urban renewal, public housing, community development and the like are reduced to mere digressions when compared to the extraordinary impact of the highway program. One learns that President Eisenhower regarded it as the most significant domestic achievement of his administration, and he was surely correct in doing so. The program was conceived during the New Deal, and only slowly made its way to enactment, but once approved and begun one would imagine it would have become the object of extraordinary interest, comment, and critique.

If I may be allowed to assert that nothing of the sort occurred, let me next ask why. The answer would seem evident. Highways have never been a subject of any very great interest among persons given to writing or speculating about government interest. Certainly they have rarely been associated with social welfare issues, save in the early days of "getting the farmer out of the mud." Further, the politics of getting the Interstate Highway program enacted decreed, or at least indicated, the narrowest possible definition of its purposes and impact. This was altogether agreeable to the Bureau of Public Roads, the slightly obscure organization established as a unit of the Department of Agriculture, and shifted by degrees to the shadowy recesses of the Department of Commerce. The permanent staff of the Bureau of Public Roads had neither the inclination or training to assert that they were doing anything more than the narrow terms of their project descriptions. As bureaucrats, their instinct was faultless. Had anyone realized what they were in fact doing, the sheer magnitude of the interests they were affecting, it is nigh impossible to imagine that they would have won acceptance. Indeed a bare fifteen years after the Interstate program commenced, it is near impossible to get a major highway program approved in most large American cities. But it is too late: most systems have been built. In the process—such at least would be my views—quite appalling mistakes were made, but they were mistakes having to do with issues nominally altogether unrelated to the highway program itself, and so no one was responsible for them. (Perhaps I should insist that if the mistakes began under an administration of one party, they continued under that of the other. Parties come and go. Programs persist.)

Surely it is possible to hope for something more. Government must seek out its hidden policies, raising them to a level of consciousness and acceptance—or rejection—and acknowledgment of the extraordinary range of contradictions that are typically encountered. (To the frequent question "Why don't government programs work?" it is often the answer that they do work. It is just that so often the effect of a "hidden" program cancels out the avowed one.) Surely also it is possible to hope for a career civil service that is not only encouraged, but required to see their activities in the largest possible scope. To know what they are doing, even if they go on doing it anyway. There are few things that ought more to annoy us than the misuse we make of such splendidly competent organizations as the Bureau of Public Roads. It is fully capable of the most complex calculations of the effects of its programs (and increasingly does just that) but for many a long decade the word from the political world on high was to stick to building roads and to see that not too much sand was used in the concrete.

The third master proposition is clearly the least familiar of all; the one least likely of acceptance. It is not a matter that can be confidently demonstrated, or so at least would be my impression. It is rather the best available explanation for recurrent phenomena which increasingly demand such explanation. I refer to what Jay Forrester has termed the "counter-intuitive" nature of social problems. We learn to think, Forrester assures us, in simple loop systems. Social problems arise out of complex systems. The two are not alike, so it is asserted by men who ought to know. There are fundamentally different properties, such that good common sense judgment about the one will lead with fair predictability to illusions about the other. Thus Forrester: "With a high degree of confidence we can say that the intuitive solution to the problems of complex social systems will be wrong most of the time." Whatever the absolute nature of a proposition such as that, one surely can agree with Forrester that social systems have internal regulatory mechanisms that are, in effect, incentives to behave in various ways. (This would include disincentives with respect to undesired behavior.) Just as surely, changing those incentives is an extraordinarily complex job. Surely also, too many programs of social intervention in the 1960's went about this extraordinarily complex task in a fairly simple minded manner, usually adding a few counter-incentives to the system, but rarely if ever removing the previously existing ones. Stated perhaps too simply, the Federal government has typically entered a situation in which most actors manifestly had strong incentives to act in ways which were not thought good for the larger society, or for the individuals involved, or both. Incentives were offered to reverse the undesired behavior. But too commonly these incentives proved weak and ineffective when compared to the original set. They could dilute the original incentives, but rarely could they overpower them. (There will, also, be those who will reply to this general assertion with the even more general one that we did not spend enough money. The fact is that we spent a lot of money. The problem was we never identified those original incentives.)

We should be clear, I think, that if this third proposition should prove to be unavoidably the case there are contained within it rather serious implications for the democratic direction of society. It is the old—or new—question of the expert again. I have a certain suspicion of pointy-headed intellectuals myself, and I think we all should, whatever the shape of our heads. We have grown accustomed to depending on experts in science, and have developed ways of translating what it is the experts think into forms of public action. (Although not without tragedies, as in the Oppenheimer case.) But most everyone knows that he or she doesn't know much about implosion. Everyone, on the other hand, knows a lot about what makes a good school. Now men of unquestioned competence and good will are coming along with the information that what everyone knows is almost precisely what is *not* the case. What do we do about that? How do we treat that expert? What confidence are the people to have in their own judgment if such events multiply, as almost certainly they will.

I believe there is an answer to this. We must develop a public service, and a political leadership, capable of handling such information and of translating it into valid terms of public debate. But this will not be easy. I cannot imagine it happening inside a generation, and in the meantime the knowledge is unavoidable, and it implicates us. The one thing most likely to help us through the period of transition is the practice of thinking in terms of policy rather than of program. The policy-frame-of-mind may not grasp all the interrelations and surprises implicit in social problems, but it does at least start out with the expectation that there are such, and so is not only more on the alert for signals of such problems, but also is least resistant, least unbelieving in the face of the evidence. That is no small thing.

Neither is it any small thing that we should begin to try to take this large view of events. If there is a tendency in our land, as in any, to complacency about many of the conditions of our lives, there also, I would submit, is an almost equal and very nearly opposite tendency to alarm. If man is a problem solving animal, *homus Americanus* is a problem discovering one. (So much so that in the mid-1960's when Congress was turning out social programs by the yard, Meg Greenfield was moved to discourse on the "problem problem." What, she asked a nervous national capital, would happen if we solved all our problems and suddenly there were no problems. The prospect of mass unemployment in the capital was not generally thought a proper subject for irony, even in hands so deft as Miss Greenfield's.) The fact is that in our eagerness to draw attention to problems, we do frequently tend to make them seem worse than they are. In particular we tend to depict things as worsening when in fact they are improving. This tendency arises from any number of sources. Three at least come to mind. There is surely a Protes-

tant tendency to be dissatisfied with what might be called normal human behavior. On top of this we have of late had to learn to live with the burden of affluence. Robert Nisbet frequently reminds us that boredom is the most underrated force in history. Heaven protect the land whose privileged classes get bored with their privileges, as clearly ours has done. And there is also the tyranny of fashion: a mysterious force, but an open enough one. Fashions of thought get set, and for a period at least they prevail. Evidence to the contrary is treated not as information but as wrongdoing, and woe betide the bearer of such news. The more then should we welcome a policy approach to social issues, simply because it insists on setting all specifics in a general context.

An example of surpassing importance—or so it would seem to me—concerns the state of race relations in the United States at this moment. Are things getting better as most of us would define that term—namely, are we moving away from a past of racism and caste exclusion—or are they getting worse? I would believe it fair to say that the fashion of late has been to believe things are getting worse, and I can attest that it is costly to argue otherwise. And yet the data, such as they are, argue that indeed things are *not* getting worse. To the contrary. The Newsletter of the University of Michigan Institute of Social Research recently summarized the findings to this effect of the University's Survey Research Center, which we would all, I think, acknowledge as one of the four or five leading institutions of its type in the world.

The white backlash and the deterioration of white and black attitudes toward integration which have been noted by many social observers do not show up in the findings of a recent Survey Research Center nationwide survey.

"There is evidence that, in some respects, blacks and whites are in closer contact and more friendly contact than they had been four years earlier." Angus Campbell, director of SRC, reports.

The SRC data, gathered during the 1964 and 1968 election studies, represent possibly the only carefully designed academic study of national attitudes before and after the 1967 riots. They stand in marked contrast to the conclusion drawn by the Kerner Commission appointed by President Lyndon Johnson to study the riots. The Commission reported in March of 1968 that, "Our nation is moving toward two societies, one black, one white—separate and unequal."

In comparing racial attitudes over the four-year period, the SRC survey notes that whites favoring desegregation in 1968 outnumbered strict segregationists by a ratio of nearly two to one (31 and 16 percent respectively). Four years earlier whites had been about evenly divided on the question of desegregation or strict segregation (27 and 24 percent).

Although the doctrine of black separatism has been increasingly voiced by some members of the black community, it still has only minority support; and there has been little change in black attitudes toward desegregation over the four-year period. For example, in 1964 some 72 percent of the blacks questioned said they were in favor of desegregation (with only 6 percent favoring strict segregation) and four years later 75 percent were favoring desegregation (with only 3 percent for strict segregation).

Campbell indicates that not only were the attitudes toward desegregation more positive, actual contact between the races seems to have increased. Whites and blacks were less likely in 1968 than in 1964 to say their neighborhoods or their schools were completely segregated. And whites were less likely to work and shop in all-white areas.

Ten percent of whites who said they live in all-white neighborhoods dropped from 80 to 75 percent, while the number of blacks living in all-black neighborhoods went from 33 percent to 25 percent.

In 1964, forty-three percent of whites reported that the high school nearest them was all white. That figure had dropped to 27 percent by 1968. Similarly, blacks reporting their nearest high school as all black dropped from 36 percent to 21 percent over the four years.

Whites who reported working in an all-white environment totaled 54 percent in 1964, but that number had dropped to 42 percent by 1968.

One might account for the reported increases in contact between the races on the grounds that they don't represent real shifts in neighborhood and school population—just more awareness of each other's presence. The increase in publicity surrounding racial issues mght have changed people's perception.

Campbell doesn't think so: "People now are more sensitive than they were four years ago but it's highly unlikely that the figures represent purely imaginary increased contact."

Similarly, a policy approach to government has profound consequences on the kinds of programs which are supported and pursued. I would suggest to you that this has been the case with respect to the problem of poverty and racial isolation in the nation. During the 1960's a quite extraordinary commitment was made by the national government to put an end to poverty. Yet the effort to do so went forward in entirely too fragmented a manner. In effect a collection of programs was put together and it was hoped these would somehow add up to a policy. I don't believe they did. Nor do I believe there was any way we were likely to have found this out save by the route we did in fact follow. But after a point this became evident enough, and it became possible for the government to respond in terms of a large scale policy, and to fit programs to that policy.

The two basic networks of a modern society are the family structure and the occupational structure. A stable society attends to each. The preeminent arbiter of family stability is income. If social science has taught us anything it is that. Income typically derives from employment, but also typically there are individuals and on occasion groups in the society whose income is not sufficient either because their employment is spasmodic, or their skills insufficient to earn an adequate wage. Whatever the case, an effective war against poverty requires a strategy that deals first of all with problems of jobs and income. Once that became clear, it was relatively easy for the national government to develop programs in respose.

Let me offer you an almost absurdly simple example. The Federal government has had since 1965 a formal policy of abolishing poverty. The Office of Economic Opportunity was established with that purpose in mind. But until this year almost a third of the expenditures of OEO were provided, in effect, by income taxes collected from the poor. Since it has been in the nature of the services strategy so much in evidence in early OEO programs to hire middle class persons to be of assistance to poor persons, the actual *income transfer effect* of many of these OEO programs was to take money from farm laborers and give it to graduates of Hendrix College. No one intended it that way, but that was the unintended consequence of programs being operated in the absence of policy. Almost the first measure President Nixon proposed in this area upon taking office was to abolish taxes for the poor, and this was done with the completely willing cooperation of the Congress once the absurdity of the previous arrangement was pointed out.

In a similar vein the administration has pressed forward on programs such as the Philadelphia Plan which will significantly increase the number of minority workers in skilled construction employment. Comparable reforms in the area of manpower administration, unemployment insurance coverage, and minimum wage coverage have equally flowed naturally from the prior adoption of a jobs and income strategy.

Finally, in a list of examples, is the Family Assistance Plan which has, properly I would think, been termed the most important piece of domestic legislation to come before the Congress in four decades. The principle of the program is simple and it derives from policy. Families must have an adequate income, and this should be provided them with a minimum change in their status as stable, self-determining units in society, and with maximum incentive to earn by their own efforts as much a proportion of their needed income as they possibly can. The President has accordingly proposed to place a floor under the income of every American family with children, to provide within that context a specific incentive to work, specific opportunities for work training and placement, and the absolutely crucial provision that this assistance will not be conditioned on dependency. A family does not have to be down and out, busted and broken to get help, when often as not all that was needed was relatively little help on the margin.

Will FAP succeed? None of us could say at this moment. But there is one essential aspect to such a question directed to a program that derives from a policy. Namely that the question can be answered. Family assistance will have succeeded if over the course of the 1970's the steadily rising number of dependent families in the nation begins to level off and then to turn down in terms of actual numbers and overall proportions. It is as simple as that to define success. Yet this is the one thing that often defies efforts when applied to programs.

This is the final point I would make about the concept of national policy with respect to social outcomes. It is a concept most explicitly outlined in the President's recent message to the Congress on Elementary and Secondary Education. The test of a program is not input but output. It is interesting, and at times important to know how much money is spent on schools in a particular neighborhood or city. But the crucial question is how much do the children learn. (We can pursue the current test score mania to the point of defining learning to an absurdly narrow fashion, but we can surely also learn to define learning in broader and more relevant terms.) *Output* is what matters. Programs are for people, not for bureaucracies. This is the final, as I say, and probably also the most important policy approach to government.

It will be evident enough that we are only at the beginning of this process. Doubtless we shall in time come to view our beginning efforts as crude, and even misconceived. Still it is an important beginning. We have begun to think in important new ways about the problems of our society, and we are entitled to hope that from this new approach there will emerge a more effective and achieving society.

SP4C. OSBORNE MATTINGLY, JR.

HON. M. G. (GENE) SNYDER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1970

Mr. SNYDER. Mr. Speaker, I rise today to pay tribute to Sp4c. Osborne Mattingly, Jr., who was killed in Vietnam on June 25.

Osborne was the 113th northern Kentucky fighting man to give his life for his country in Southeast Asia.

Though the Nation is experiencing dissent over America's commitment, Osborne Mattingly answered the call to duty. He paid the supreme sacrifice for his country and for those of us whom he died defending.

He gave his life upholding his patriotic beliefs and it must be our hope and prayer that Osborne Mattingly, Jr. died so that others could live—and remain free. I know I speak for the people of the fourth district of Kentucky—and for Americans—when I convey my deep sense of loss and sympathy to the Mattingly family.

The front page story reporting Osborne's loss, which appeared in the Kentucky Post, June 29 (by Mike Farrell), and an editorial which appeared June 30 in the Kentucky Post follows:

KILLED IN WAR ON 21ST BIRTHDAY

(By Mike Farrell)

Osborne Mattingly Jr. reached the age of manhood—21—last Thursday.

But he couldn't celebrate that special occasion with his parents, family and friends. He had answered the call to arms for his country in the Southeast Asia conflict.

Today, Spec. 4 Mattingly's presents are still wrapped, his birthday cards unopened.

Army officials yesterday informed his parents that Spec. Mattingly had been killed in Vietnam . . . on his 21st birthday.

"He didn't say what he (Mattingly) was doing," his father, Osborne Mattingly Sr., said today. "Said he'd been fighting about every day. He was in a hospital for a while with bronchitis."

The senior Mattingly clutched in his hand the last letter the family received from their soldier son.

"He said they'd made a big change over there, but he couldn't tell us what it was. He said he'd be home by Christmas. He hoped everybody was well and he was worrying to get out of there and get back home . . ."

"That boy worked hard," his father said. "He didn't know when to quit working."

Osborne Mattingly Jr. quit Pendleton County High School at age 18 and went to work in Covington as a machine tender for Duro Paper Bag Co.

In May, 1969, he was drafted, and sent to New Jersey for basic training. He returned home in September and was sent to Vietnam in October, to serve in the 199th Infantry.

The family was unsure of details of their son's death.

Army officials were expected to return today with the story surrounding the event.

Mattingly said he thought his son had been in Cambodia, but he isn't sure where he had died.

Besides his parents, northern Kentucky's 113th Asian war victim is survived by three sisters, Mrs. Linda Ferrel, of California; Mrs. Betty Nagel, of Newport, and Mrs. Debora Bishop of Butler.

Also five brothers, James, of Newport; Edwin of Falmouth; John, Thomas and Rodney, all of Butler, and his maternal grandfather, Frank Harrison, California.

Mattingly Sr. is a ticket writer at Cincinnati Stockyards.

The youth is Pendleton County's fourth Vietnam casualty.

Alexandria Funeral Home is in charge of arrangements.

[From the Kentucky Post and Times-Star]

BIRTH AND DEATH OF A KENTUCKIAN

The limited-objective war to which Lyndon Johnson committed the lives of thousands of young Americans is a war that mocks its victims and those who mourn them.

Army Spec. 4 Osborne Mattingly Jr., fighting under the command of the United States armed forces in the Communist-overrun Indochina Peninsula, was killed in combat on his 21st birthday.

How utterly tragic that on the very day this brave young Pendleton County man reached his majority he was required to lay down his life with patriotism in a war this nation's leaders have never meant to win!

We who count the bloody casualties of this war at The Kentucky Post find that Osborne Mattingly was the 113th serviceman from northern Kentucky to be sacrificed in the Vietnam conflict. This is a melancholy duty that we perform with sadness and deep regret.

We salute Osborne Mattingly for the heroism with which he fought and died, uncomplaining, during the last year of his once-promising life. We offer his heartbroken parents, sisters and brothers our profoundest sympathy, inadequate though it be to comfort them in their terrible loss.

And we raise our voice once again in bitter protest to the confused and misguided leadership in Washington that permits the slaughter of American youth to continue in a political and diplomatic war that this leadership dares not even attempt to win. Yet a war that it is tragically reluctant to end.

OMNIBUS DISTRICT OF COLUMBIA CRIME BILL

HON. WM. JENNINGS BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1970

Mr. DORN. Mr. Speaker, the Congress has now given final passage to the omnibus District of Columbia crime bill. This legislation directly affects only the District of Columbia, but it is of national concern in that this legislation indicates how we in the Congress will respond to the local manifestation of the national problem of crime.

Mr. Speaker, no one can deny the need for strong action by the Congress. The appalling climate of lawlessness that terrorizes this Nation's Capital is all too familiar a story. A few statistics illustrate the point: Among cities of comparable size Washington has the highest crime rate; of the 51,419 felonies reported in fiscal year 1969, arrests were made in only 11,504 cases and of these only 2,583 were indicted and 1,461 convicted. Thus, only 2½ percent of the felonies reported in fiscal year 1969 resulted in convictions. When one considers that a large proportion of felonies go unreported to police due to the despair of the victims, the percentage of convictions is sickenly low.

Mr. Speaker, our law-enforcement officials need our strongest support, whether they work in our home States or here in Washington. This legislation gives added tools to law-enforcement agencies in the District of Columbia, but it also signals to law-enforcement officials all over the Nation that we in Congress are determined to do all within our jurisdiction to give them the tools they need and the respect they deserve to carry out their essential task.

This legislation is long and complex. It is a tribute to the great House Committee on the District of Columbia. Ninety percent of this legislation is noncontroversial: for example, the court system of the District of Columbia will be reorganized, as will the bail agency and the public defender system. Other, more hotly debated provisions greatly strengthen the hand of law-enforcement officials, while still providing the necessary protective safeguards for the innocent citizen. Among these new law-enforcement tools are sections that authorize wiretaps under certain circumstances, impose mandatory prison terms in certain instances, allow under certain circumstances a 60-day preventive detention of a suspect adjudged dangerous to the community, and allow under certain circumstances the police to make entry into a building without giving notice of their identity or purpose. The last mentioned quick-entry provision has been subjected to much debate, but it merely puts into the statutes certain procedures which had already been condoned by the courts.

I have always been sensitive to the potential danger of legislation which would increase the power of government vis-a-vis the individual citizen. For this reason I have in the past opposed certain legislation which I believed constituted unwarranted intrusions by government into the day-to-day life of our citizens. In the case of this legislation I have noted the opposition to a very limited number of its provisions. However I am convinced that the appropriate constitutional safeguards have been written into this legislation. This legislation is a reasonable and realistic response to a national disgrace. It strikes the proper balance between the rights of the accused and the rights of the community to enjoy law and order. I was happy to support this legislation. I believe it will benefit law-enforcement officials, the residents of Washington, and the millions of tourists who visit the Nation's Capital each year.

ADDRESS BY AFL–CIO SECRETARY-TREASURER LANE KIRKLAND TO THE CONVENTION OF THE INTERNATIONAL BROTHERHOOD OF BOOKBINDERS IN DETROIT, MICH.

HON. WILLIAM D. FORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1970

Mr. WILLIAM D. FORD. Mr. Speaker, on July 14, 1970, Mr. Lane Kirkland, secretary-treasurer of the AFL–CIO, delivered an excellent address to the convention of the International Brotherhood of Bookbinders in Detroit, Mich. In this address he vividly points out how the national economic policy in effect under this administration is keeping us from achieving basic goals and is creating untold hardships for workers because of widespread unemployment and inflated prices.

The text of this speech follows and I

commend it to the attention of all who are concerned for the economic welfare of our Nation:

I appreciate very much this opportunity to speak to this convention of one of the oldest and most stalwart members of the family of labor. I have been fortunate in enjoying the personal friendship of your officers for many years. I have had the privilege of working with the International Brotherhood of Bookbinders and its officers many times on many issues, and you have never failed to do your part in the advancement of the rights and interests of all working people.

I want to review, as briefly as I can, some of the major trade union events of recent months. These events show—I believe—that despite our detractors and critics, labor has lost none of its vigor or vision—and continues to be the most effective free force in a democratic society.

I want also to emphasize and underscore some of the hard tasks and some of the challenges that face us today—tasks and challenges that will require the best efforts of every element of the trade union movement.

Owing to the solid, nationwide support of brother organizations like yourselves, the unions representing the employees of the nation's fourth largest corporation—the General Electric Company—emerged from a long, bitter and costly strike with flying colors and with a historic victory.

General Electric forced those unions, joined together in an AFL–CIO Coordinated Bargaining Committee, to strike by declaring that it would never change its totally unacceptable, take-it-or-leave-it first offer. The tactics used to enforce that position have come to be defined by the term "Boulwarism".

A hundred days later that offer was changed and improved in every major area. And the strike was settled on reasonable, honorable terms through the collective bargaining process.

Boulwarism was buried by 150,000 trade unionists in 34 states who refused to be shaken by any weapon the company could use against them.

The strikers won the victory, but they could not have done it alone. They asked for—and they got—the total, unified support of all their trade union brothers and sisters. Millions of dollars and millions of man hours were poured out more freely than ever before. Labor launched—and won—the first truly national boycott of consumer products in labor's history.

And when GE admitted that it had made a mistake, on the hundredth day, the picket lines were stronger than they were on the first. American trade unionists had demonstrated their solidarity, their brotherhood and their determination more convincingly than ever before.

Let me mention some other evidence of labor's vitality—just a few of the developments since your last convention:

Both farm workers and government workers, who have been denied the right to collective bargaining, are breaking through the barriers.

Americans can now buy union-label grapes, for the first time in history. The people who pick them, aided by the rest of the labor movement, are winning their long battle for union contracts and all the improvements that go with them.

Postal workers have become the first government employees in history to win the right to bargain collectively with the federal government on their wages and working conditions.

Both of these battles will go on until they are completely won, and until farm workers everywhere, and workers in every federal, state and city agency, have the same right to union representation that other workers have enjoyed for generations.

In the United States Congress and in state legislatures and city councils, labor is representing the interests of all the plain people of America.

There is a union label on last fall's Tax Reform Act, as there is on nearly every piece of progressive social legislation passed by Congress in the 20th Century.

Because of labor's efforts, along with those of our allies in the Civil Rights movement, Judge Haynsworth is not sitting on the Supreme Court today, and neither is Judge Carswell. The AFL–CIO accepted the duty to do its best to assure that the new associate justice of the highest court in the land would be a fair-minded man, worthy of that post, so vital to the Constitutional guarantees of the basic rights of all free men.

The labor movement will continue to fight harder than ever before for social and economic progress for all of the people of the United States.

Sooner or later, this nation is going to have a decent, comprehensive, prepaid system of National Health Insurance for all of its people—and you can bank on that. Our job is to see that it comes sooner than later.

This nation is going to have more and better education for both youngsters and adults.

This nation is going to have cleaner air and water. It is going to have equal rights and equal opportunity in every area of life for all its people, no matter what their color or origin. It is going to have a truly fair system of taxation.

These are the tasks that lie ahead. These things demand the best that is in the labor movement—the only effective People's Lobby there is. We intend to achieve them.

But there is one stark, overriding danger before us that can jeopardize everything we have done and everything we hope to do.

The health of the labor movement and of the United States is tied to the health of our national economy.

And right now the economy is sick, and it is getting sicker every day.

Unemployment is rising steadily, and so are prices. Production is steadily declining, and so are family incomes.

And the only medication the Administration has prescribed is to encourage speculation on the stock market, send interest rates even higher and increase further the already astronomical profits of the moneylenders.

The free-enterprise system is supposed to work for the benefit of all our citizens. But the bitter truth is that it is not doing so.

The present Administration undertook to halt inflation and to stabilize the economy. It undertook to do so fairly, without putting the whole burden on any one part of the American people.

But the way it set about that task, using classical economic theories that have never worked in fact, is having the opposite effect.

The theory is that inflation is caused by too much money chasing too few goods, and that the way to solve it is to reduce the supply of money and make it harder to get by raising interest rates.

That is not what was happening. There were plenty of goods, all through the 1960s. Money was being siphoned off, during those years, by the greatest profit boom in living memory. Manufacturers and merchants raised their prices steadily, charging all the market would bear, to push profits still higher. The stock market became so accustomed to higher and higher profit rates that it could not stand the shock of a slowdown in their escalation.

And all along labor was being warned not to price itself out of the market.

We tried to price ourselves back into the market. But the push for higher wages never kept up with the constantly spiraling profits.

During the last 10 years, corporate profits rose by 93 percent. And wages rose 34 percent. In terms of real buying power, wages rose during all that time by no more than 10 percent.

You don't have to be an economist to understand these things. There isn't anybody in this room, any worker in this land, who can't compare his wages and his bills and tell whether he's making it or not. There isn't anybody who can't compare today's wages and living costs with those of 10 years ago and see exactly what has happened, and where the problem lies.

We have inflation, but it's a profit-caused inflation. Wages are not a cause of this inflation; they are a victim of inflation.

The Administration did not make that crucial distinction. It simply closed its eyes and fired blindly at the entire economic structure by tightening up money.

Money is very tight indeed. Interest rates have been pegged at the highest rate since the Civil War. But inflation has not been stopped. There is plenty of money for the rich and for the giant corporations, who have the best pipelines to the money market. They are cheerfully paying high interest rates and passing the cost to the consumer.

The banks are gladly lending money to their most powerful customers, but they have nothing but empty hands and pious talk about inflation-fighting when it comes to workers or consumers or small business or the housing industry or state and local governments.

In short, money is available to the rich and the greedy, for the financing of business mergers and conglomerate takeovers and for building gambling casinos and overseas production facilities. It is not available for public or private housing, or for schools or hospitals, or for other socially useful purposes.

Tight money means a bonanza to the banks and those who rent out money rather than goods and services. It means disaster to everybody else.

So private housing construction is nearly at a standstill, the homes and public facilities this nation needs so badly are not being built, and skills, manpower and resources vital to the welfare of the nation are idle.

The story is the same elsewhere. Industrial production has fallen below 80 percent of capacity, which means one machine in five is standing idle.

Those who have jobs are working shorter hours. In May, the average American worker had just $104.02 to take home at the end of a week's work to feed a family of four. And it bought less than it did last year. It bought less than it did *five* years ago.

And the number of those who do *not* have jobs is increasing ominously. At this point one out of every 20 Americans who need and want jobs cannot get one.

In our mid-year economic report to the Congress last week, the AFL–CIO quoted some words spoken by President Nixon in October of 1968, when he was a candidate for the White House. He said:

"In the next four years, we must help create 15 million new jobs . . . Economic growth is the best assurance for a working man that his job will be secure, his real earnings on the rise, his route to advancement open."

Then, in February of 1969, in a letter to President Meany, President Nixon said this:

"We must find ways to curb inflation . . . without asking the wage earners to pay for the cost of stability with their jobs."

But that is exactly what is happening. The workers of this nation, who did not by any means share equally in the "affluence" we kept reading about in the 1960s, are expected to pay the full penalty for an economic squeeze they did not create.

And as we told the Congress last week, it isn't only the Administration that feels

workers and their families are expendable in the fight against inflation.

Even before the Administration took office, in October 1968, the Business Advisory Council agreed that the new President should act quickly to stem inflation, even if it meant an increase in unemployment to as much as 5½ percent of the work force.

It is safe to say that the people who coldly decide that such casualties are acceptable have no fear that they will ever find themselves among that 5½ percent.

Percentages only hide the fact that we are talking about human beings—more than four million individual persons—heads of families struggling to meet their responsibilities, or youngsters who want to come in off the street, find a decent job and build themselves a better world.

We in the labor movement believe that no human being is expendable. We understand that for the person who is unemployed, this nation and its society and its economic system are a failure. We will never admit that failure is any more acceptable when it involves one person—or four million persons—than it would be if it involved us all.

Workers have a right to protest when they are singled out to bear the brunt of what should be a national problem. I think it is more than a right. It is our duty to protest it, and to demand that other, more reasonable, more humane and more equitable solutions be found.

Labor intends to do just that, and to keep on doing it until the financiers and politicians begin to act on the principle that every American citizen has a right to a place in society, a right to earn his way and provide for his family, and a right to a productive job.

We will, as we have so often done in the past, search for candidates who will seek ways to even the burden and put America back to work. We will support such candidates and work to see that they are elected.

This is something labor knows how to do, and of course the Bookbinders know it as well as anybody. So the AFL–CIO does not doubt that in the coming months you and your members will be doing the hard and necessary house-by-house and shop-by-shop canvassing to make sure all of your families and friends and neighbors are registered to vote, that they know the issues and the truth about the candidates' position and track record, and that they go to the polls on Election Day.

There are economic analysts who predict that the present state of affairs will last well into next year. If we do our part, we can see to it that the task of putting America back to work begins no later than Election Day, Tuesday, November second, 1970.

Thank you.

HON. MICHAEL KIRWAN

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1970

Mr. TEAGUE of Texas. Mr. Speaker, with the passing of Michael J. Kirwan, the Nation lost a great public servant. Ohio lost one of its finest Representatives. The Congress lost a dedicated and progressive Member. The Democratic Party lost a stalwart leader. I lost a true friend.

Mike Kirwan always made his own way, from his boyhood days as an adventurer and laborer in young America to the days of substantial power in his party and in the Congress. His code of treating others as he liked to be treated gained him vast admiration and a host of true friends. It also gained him a few enemies, but he even took pride in them, noting that his enemies always told as much about a man as his friends.

The contributions of Mike Kirwan to the preservation of America's resources and the conservation of her lands and her waters will be his monument. His 34 years of active service in Congress spanned many eras, and he was in the forefront of most of the legislative movements which changed America from a frontier land into the world's mightiest industrial nation.

Mike Kirwan was always there when his country needed him, and when his friends needed him. He served his Nation well. His memory will long sustain many in this body; would that we all leave as great a legacy as Mike Kirwan.

A GREAT LADY AND A GREAT AMERICAN

HON. JONATHAN B. BINGHAM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1970

Mr. BINGHAM. Mr. Speaker, it is with sorrow that I take note of the death of Helen Rogers Reid. Mrs. Reid was a great lady and a great American.

I will not take the time of the Members to recount the facts of her long and full life and many achievements, which were duly recorded in the New York Times article which I shall append at the end of my remarks.

I do want to express to the members of her family, including particularly her sons, our colleague, the gentleman from New York and Mr. Whitelaw Reid, both of whom have been my friends for many years, the profound sympathy of my wife and myself. The end of a life is never easy to accept, even when it comes, as in this case, many years after the allotted Biblical span.

I have only the fondest personal recollection of Mrs. Reid. Among her many interests was her great involvement in the activities of young people. Mrs. Reid twice gave me the opportunity to serve as a space-rate correspondent for the New York Herald Tribune, a very great newspaper, writing articles for the Sunday edition on youth movements in Germany, Italy, and the Soviet Union in 1935 and on conditions in Japanese occupied China in 1938. I am grateful to her for that, as well as for many other kindnesses.

Helen Rogers Reid will be sorely missed by a host of friends in New York and around the world.

The article follows:

MRS. OGDEN REID IS DEAD AT 87; EX-PRESIDENT OF HERALD TRIBUNE

Mrs. Helen Rogers Reid, former president of The New York Herald Tribune, died of arteriosclerosis yesterday at her home, 834 Fifth Avenue.

Mrs. Reid, who was 87 years old, was the widow of Ogden Reid, president of The Herald Tribune until his death in 1947.

In her 37 years on The Herald Tribune and its predecessor, The Tribune, Mrs. Reid was an unflamboyant but powerful force in the newspaper world and in the city's civic and social life.

Her business acumen, first displayed as an advertising salesman, and her editorial judgment, in making the paper attractive to women and suburban readers, helped to transform The Herald Tribune into a modern newspaper.

Entering journalism as a by-product of her marriage to Ogden Mills Reid, whose father, Whitelaw, had acquired The Tribune from Horace Greeley, its founder, Mrs. Reid gradually established herself as a newspaper personality in her own right. Never overtly aggressive, she won her reputation by quiet tenacity, dowagerlike charm, and a clear and orderly mind.

There was little in Mrs. Reid's appearance to suggest the influence she wielded, nor the force of her character. She stood only an inch over 5 feet; and she looked as fragile as a piece of expensive china. Her hair, at first brown, then gray and later white, was a fine soft fuzz that curled close to her head. Her large green eyes, however, were alert and probing. According to advertising salesmen who dealt with her, they could be quite unnerving.

In dress Mrs. Reid was feminine but not fancy. Her taste ran to bright colors, with various shades of purple predominant. Day in and day out she wore a plain beret-like hat embellished with pearls, a diamond clip, sequins, flower petals or feathers.

Although she was pleasant and informal in conversation in the office or at dinner, her talk did not run much to chit-chat, and she did not encourage it in others for long. For many years Mrs. Reid included her editors and columnists at luncheons, dinners and weekend parties she gave for guests notable in national and world affairs.

A gathering might include a Presidential aspirant, an international statesman, a best-selling author, an economist, an editor and a few couples from the Reids' social circle on the upper East Side. With dessert, Mrs. Reid would swizzle a glass of champagne with a piece of melba toast and throw out a general question on current affairs.

DINERS SUMMONED TO SPEAK

Going around the table, she would call on the diners, one by one, for their views. According to one account of these affairs, some gave their opinions seated, but a number were wont to rise and address Mrs. Reid as though she were a public meeting.

Mrs. Reid's interest in the political and economic forces that shaped the world about her was reflected in the establishment, in 1930, of The Herald Tribune's annual Forum on Current Problems. Although the Forum was at first a promotional device aimed at clubwomen, it was expanded to include the public generally.

With Mrs. William Brown Meloney, the Forum director for many years, Mrs. Reid took a hand in choosing and obtaining prominent speakers, many of them from abroad. She presided at the big sessions in the Waldorf-Astoria, and published the proceedings in a special supplement for high school and college students.

Mrs. Reid's own politics were Republican, but the forums were nonpartisan and dispassionate presentations of world news and issues. They were discontinued after 1955, for emphasis on the paper's Youth Forum.

At The Herald Tribune Mrs. Reid raised her voice for moderate Republicanism and for internationalism. In 1952 she supported Dwight D. Eisenhower for the Presidency; she had backed Thomas E. Dewey in 1948.

Mrs. Reid was a leader in civic affairs. She served for nine years as chairman of the board of trustees of Barnard College, her alma mater. A dormitory built in 1963 with funds she helped to raise is named for her. She was a trustee of the Metropolitan Museum of Art. She was active in the New York Newspaperwomen's Club, and she was president of the Reid Foundation, established by her husband in 1946 to give fellowships to journalists for study and travel abroad.

NEEDY CHILDREN HELPED

Another of Mrs. Reid's civic interests was her newspaper's Fresh Air Fund, which raised public contributions to send needy children to summer camps and homes in the country.

As a society figure Mrs. Reid was far less formidable than her mother-in-law, a vigorous matriarch who died in 1931. Mrs. Reid's style in entertainment was informal—and indefatigable. There was a constant round of guests at her 15 East 84th Street apartment, at 30-room Ophir Cottage in Purchase, N.Y., at a summer place in the Adirondacks and at a hunting lodge in North Carolina.

To those who sought to assay her career, Mrs. Reid appeared as a Cinderella who became Queen Helen. She was born in Appleton, Wis., on Nov. 23, 1882, the youngest of 11 children of Benjamin Talbot Rogers and Sarah Louise Johnson Rogers. Her father died when she was 3. Although the family was not poverty-stricken, she was obliged to earn part of her way through boarding school and then through Barnard, which she entered in 1899.

EARNED DEGREE IN ZOOLOGY

She enrolled to study Latin and Greek and perhaps to become a teacher, but she shifted her interest to zoology and took her degree in that. She established a reputation among her classmates as a crisp, attractive, enterprising girl who could even turn a profit on the senior yearbook. The class poet summed her up in this quatrain:

We love little Helen, her heart is so warm
And if you don't cross her she'll do you no harm.
So don't contradict her, or else if you do
Get under the table and wait till she's through.

In June, 1903, when Helen Rogers received her Bachelor of Arts degree, she heard that Mrs. Whitelaw Reid, one of the city's grande dames, was seeking a social secretary. She applied, was accepted and went to work in the Reids' sumptuous Florentine fortress on Madison Avenue, across from St. Patrick's Cathedral. Mrs. Reid, who had a dinner table seating 80 people and the wealth to festoon it with elegant viands, never lacked for social engagements; a secretary to handle this facet of her life had few idle moments.

SECRETARY FOR 8 YEARS

Helen Rogers was in Mrs. Reid's employ for eight years, dividing her time between the United States and London, where Whitelaw Reid was Ambassador to the Court of St. James's from 1905 to his death in 1912. During this time she met the Reids' only son, Ogden Mills Reid, fresh out of Yale. The couple were married in Wisconsin March 14, 1911.

Tall, handsome, genial and convivial, Oggie Reid was deeply interested in swimming, tennis, shooting and sailing—activities in which his wife learned to excel by putting her mind to them.

She at first took only a passing interest in The Tribune, which her husband inherited on his father's death. In the first six years of her married life she devoted herself to her children, Whitelaw, Elisabeth, who died in childhood, and Ogden. Her chief outside concern was women's suffrage. She helped raise $500,000 for suffrage campaigns in New York.

"When I was at Barnard, working my way through," she explained later, "the necessity for complete independence of women was borne in one me."

JOINED PAPER IN 1918

Mrs. Reid's newspaper career began in 1918, when she became an advertising solicitor for the palsied Tribune, into which the Reid family was reported to have poured $15-million since 1898. "Come down to the office," Ogden Reid asked his wife, "and work the paper's success out with me." Within two months she was its advertising manager, a post she held under slightly different titles on The Herald Tribune until she became its president in 1947.

Immensely loyal to the Reid name and eager to make The Tribune a great, self-supporting paper, Mrs. Reid channeled enormous energy into advertising salesmanship. Between 1918 and 1923 the paper, competing in the morning field with The Times, The World, The American and The Herald, more than doubled its lineage.

Then and later she was relentless in pursuit of space buyers.

"She had the persistence of gravity," an associate once remarked. She called on advertisers or had them to luncheon. Banter, deft flattery and an array of voluminous and precise facts constituted her arguments.

ADVERTISING STAFF DRIVEN

She was as unsparing of the paper's other ad solicitors as she was of herself. "You get so you sneak up the back stairs rather than confess you're not a wonder boy," a member of her harried but admiring staff once said.

On The Herald Tribune in the nineteen-thirties and forties, Mrs. Reid was accustomed to hold advertising staff meetings on Mondays at 9 a.m. sharp to get an accounting of each salesman's work. At one point she presided from a platform decorated with a cardboard apple tree and red cardboard apples. Each apple represented an account the paper was seeking.

She called up the salesmen by turn, and whenever one announced a new account she would remove the appropriate cardboard apple from the tree with a ceremonious flourish to the accompaniment of the assemblage's applause.

By means of this and other encouragements to salesmanship, including at one time impromptu choral singing, Mrs. Reid kept the advertising flowing in. For her doggedness and for her conviction that The Herald Tribune was the finest advertising medium in the city she was much admired by her sales staff.

INFLUENCE ON PAPER STRONG

Mrs. Reid had a pervasive influence on the paper's news and editorial content, although its precise demarcations were a matter of speculation.

One story is that Mrs. Reid once protested to her husband about a news article and that he retorted:

"Helen, will you get the hell back to your department and run it while I run mine."

She is said to have departed meekly.

Mrs. Reid always denied the story. "In the first place," she once explained to an interviewer, "my husband wouldn't speak to me that way. In the second, I wouldn't leave meekly. Besides, nothing like that ever happened."

Actually, when Mrs. Reid put her mind to it, she usually got her way. One exception was in trying to make the paper dry during Prohibition. On this point her husband was unyielding.

SPURNED DEAL FOR HERALD

Mrs. Reid's editorial presence was felt especially after The Tribune, at her prompting, acquired Frank Munsey's Herald in a $5-million deal in 1924.

Shortly after the purchase The Herald Tribune moved uptown from Nassau Street to quarters at 230 West 41st Street, and began to expand its news coverage and increase its circulation.

Mrs. Reid was generally credited with being responsible for its concentration on the suburban, middle-class field of circulation. She frequently suggested story ideas and advised on coverage of others. The paper devoted, under her stimulus, much space to the news of gardening and allied interests of suburban dwellers and women.

STAFF MEMBERS RECRUITED

Mrs. Reid's influence was also reflected in the appointment of the late Mrs. Irita Van Doren as editor of Books, the Sunday literary supplement, and of the late Mrs. Meloney as editor of This Week, the Sunday fiction and articles supplement. She added the late Dorothy Thompson and Walter Lippmann, the commentator, to the staff. She was also responsible for the paper's Home Institute, a widely known experimental kitchen that devised and tested recipes for publication.

When Ogden Reid died in 1947 his widow succeeded him as president of The New York Herald Tribune, Inc. She became chairman of the board of directors in 1953. Her elder son, Whitelaw, who had joined the staff in 1940 and had been named vice president in 1947, succeeded to the presidency.

In 1955, at the age of 72, Mrs. Reid resigned as chairman but continued as a member of the board. Whitelaw succeeded her as chairman, and her other son, Ogden, who had joined the staff in 1950, became president, publisher and editor.

RETIRED IN 1958

For some time The Herald Tribune had not been gaining sufficient circulation and advertising in a period of rising costs and intense competition. A loan of $2.5-million from the Massachusetts Life Insurance Company in the fall of 1954 proved insufficient to restore the paper to prosperity. In September of 1957 John Hay Whitney, the financier, invested $1.2-million in the paper with an option to buy. He took up the option a year later, leaving the Reid family with a minority interest. Mrs. Reid retired at that time from the board of directors.

Mr. Whitney ran The Herald Tribune until 1966, when it merged with The Journal-American and The New York World-Telegram and The Sun. The new paper, The World Journal Tribune, expired in May, 1967.

In retirement, Mrs. Reid lived quietly in her apartment at 834 Fifth Avenue, entertaining her friends and members of her family and venturing out socially from time to time.

Many organizations honored Mrs. Reid. In 1935 she received the medal of award of the American Women's Association "for professional achievement, public service and personality." The Cuban Red Cross gave her the Comendador Cross of the Order of Honor and Merit for her "helpful understanding of world problems and friendliness toward Latin America."

At the annual dinner of the Hundred Year Association of New York, an organization of business institutions with more than a century of unbroken existence in New York, she was awarded a gold medal in 1946 for services in behalf of the welfare and prestige of the city. The 1949–50 seal of the Council Against Intolerance was presented to her for "outstanding service in the cause of tolerance and equality."

ELECTED TO ARTS ACADEMY

She was selected by the editors of "The Book of Knowledge" as one of 12 women who are "inspiring examples of intelligence and accomplishment." She was one of four women elected fellows of the American Academy of Arts and Sciences in 1950. In 1951 she was listed among 10 notable women

in industry, communications, labor and the professions in New York State.

Mrs. Reid was also the recipient of a number of honorary degrees, and she was a member of the Colony Club, the Women's City Club, the Women's University Club, the New York Newspaperwomen's Club, the River Club, and, in Paris, of the University Women's Club.

She is survived by her sons, Whitelaw Reid and United States Representative Ogden Reid of Westchester, and by 10 grandchildren.

A funeral service will be held Thursday at 10 a.m. at St. Thomas Episcopal Church, Fifth Avenue and 53d Street.

OPPOSITION TO PROPOSED APPOINTEE TO EEOC

HON. SHIRLEY CHISHOLM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1970

Mrs. CHISHOLM. I would like to express my opposition to the Nixon administration's consideration of Mrs. Irene Witan Walczak for appointment to the Equal Employment Opportunity Commission. Although I do not base my opposition on a critical evaluation of Mrs. Walczak's capabilities or motivation, I do feel strongly that her experience is incongruous with membership on a Board such as the Equal Employment Opportunity Commission. Membership on the Commission should not be arbitrarily chosen. The responsibility of participation on the Commission can only be fulfilled through a long developed sensitivity to prejudicial discrimination. Such sensitivity, and the capacity to apply it to the injustices of society, evolve from a direct experience with discriminatory practices.

It is necessary to express my opposition to the possible appointment of Mrs. Walczak in the context of the function of the Equal Employment Opportunity Commission. In elaborating on the Commission, I would like to add that its small size of a five-member Board, by no means indicates an ineffective role. One the contrary, the Commission fulfills a unique function in the process of eliminating the legal condonement of prejudicial discrimination. The Commission reviews complaints of job discrimination based on race, color, religion, sex, or national origin. The function of review includes resolving cases through conciliation. Although the Board lacks the power of judicial review, it does have the power to refer cases to the Justice Department. Without pressure, the Justice Department can easily slip into a lax role in combating discrimination.

In the above context, the experience of Mrs. Walczak is incongruous. According to reliable newspaper sources, Mrs. Walczak has been active in Republican campaigns. In 1964 she worked for Barry Goldwater, who as Senator voted against the Civil Rights Act. During 1968 she was a Republican chairman of the Citizens for Nixon-Agnew for three New York counties, and contributed upward of $1,000 to the GOP. On a nonpolitical level, Mrs. Walczak has completed 1 year of college, and has never held a salaried position. Her experience has included such activities as membership on the development board at the State University College at Buffalo, and support for the Buffalo Philharmonic.

In contrast to the background of Mrs. Walczak is the direct involvement of Commissioner Kuck in the problems of labor. Miss Kuck previously served as personnel director for the International Harvester Co. of Chicago, and in the assembly line of that company. Her concern over discrimination is evident by her contact with the Justice Department in confronting sexual discrimination. The result of her action was that the Civil Rights Division initiated a brief in support of a woman filing charges on the grounds of job discrimination. The case is now pending before the Supreme Court. While Commissioner, Miss Kuck was praised by various organizations for her competence. The White House recently gave their approval of her term as Commissioner, but withheld renewal of her appointment.

The contrast between the experiences of the prospective Commissioner Walczak and the expired Commisisoner Kuck is clearly evident. The prospective appointment of Mrs. Walczak cannot help but weaken the confidence of victims of discrimination in our system of government. The mounting crisis in the credibility of leadership is based on all levels of leadership, this being no exception.

I call to your attention this discrepancy between qualification and appointment to a position of responsibility, in the hope that the administration will withdraw its consideration of Mrs. Walczak for appointment to the EEOC. I expect that if the House of Representatives had the power of approving appointments, they would not do so in this case.

IN MEMORIAM: PETER V. ROVNIANEK

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1970

Mr. DERWINSKI. Mr. Speaker, the eyes of Slovaks in America will turn toward Chicago next week when the 25,000 member National Slovak Society of the United States of America assembles for its 25th national convention. The National Slovak Society, with headquarters in Pittsburgh, Pa., is in its 80th year of existence and is the oldest Slovak-American fraternal organization. The Society, through its membership, national officers and convention delegates from all parts of the country, will honor its founder, the late Peter V. Rovnianek with graveside memorial services at Bohemian National Cemetery on Sunday afternoon, August 2.

Following are excerpts from an article written by Dr. Stephen J. Hletko, national director of activities for the National Slovak Society:

IN MEMORIAM: PETER V. ROVNIANEK

Peter Vitazoslav Rovnianek was born on June 27, 1867 in Dolny Hricov, county of Trencin, Slovakia, and migrated to the United States in September 1888.

Rovnianek was proud of his Slovak ancestry and maintained a deep love for the land of his birth. During his student days abroad, and later in this country as a student and then as a journalist and author, he was a consistent supporter of Slovak nationalism and independence and encouraged the downfall of the Austro-Hungarian empire. He was a loyal son of his adopted country, and continuously encouraged the Americanization of Slovak immigrants.

He was the first to recognize the need of organizing a fraternal beneficial society of Slovaks in America which became a reality on February 15, 1890 when the National Slovak Society of the U.S.A. was born and he was elected its first president. The organizational meeting took place at Walther's Hall in Allegheny, Penn., (now a part of Pittsburgh) and the motto, "Liberty, Equality and Fraternity," was adopted by the original membership which totalled 25.

Mr. Rovnianek believed in fraternalism, and helped organize other Slokak-American societies, particularly Zivena Ladies Beneficial Society and Slovak Gymnastic Union Sokol (now known as Sokol USA.) A number of other Slovak-American societies are actually offshoots of the society that he organized and therefore he is rightfully referred to as "The Father of Slovak-American Fraternalism."

He was a true patriot, fraternalist, author and journalist, businessman and a brilliant orator with a dynamic style and personality. Unfortunately, as it so often occurs, he did not always receive the recognition he deserved and encountered complications in his fraternal activities. Mr. Rovnianek died in virtual obscurity on November 16, 1933 in Hornitos, California. Later his Chicago area friends arranged to have his remains moved to Bohemian National Cemetery in Chicago and also arranged for the erection of an imposing monument in his memory.

Rovnianek was a dedicated genius who had foresight and was obviously years ahead of his time. His ideas and successful methods were later imitated by others Although Slovak history has neglected Rovnianek, the architect of Slovak Fraternalism and unity, it is becoming clearer and time will properly vindicate him and the National Slovak Society and the Slovak-American fraternalistic system will serve as a living monument to him and will credit the success of his walk through life.

Mr. Speaker, Dr. Hletko is a resident of Oak Lawn, Ill., in my district, and it is appropriate that we make mention of the great contributions to American life that fraternal organizations such as the National Slovak Society have provided.

HOW LONG, MR. PRESIDENT, BEFORE YOU REPLY?

HON. WILLIAM (BILL) CLAY

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1970

Mr. CLAY. Mr. Speaker, on July 23, Congressmen STOKES, HAWKINS, and I wrote to President Nixon indicating our concern for the President's failure to give audience to black representatives or consideration to the problems of black

Americans. We are concerned, Mr. Speaker, that neither by word nor by deed has the President indicated anything but premeditated indifference toward 25 million black citizens. The policies of this administration have served to accelerate the tragedy of separate and unequal societies moving steadily and dangerously apart.

The July 18 edition of The New Republic magazine carries a comment by the editors entitled "Nixon and Blacks: Substance and Symbol." Since this comment addresses itself to the effect of Nixon policies upon the aspirations of black Americans for equal opportunities and rights, I submit it for the attention of my colleagues in order that they may review some of the reasons for the alienation of black America.

The article follows:

NIXON AND BLACKS: SUBSTANCE AND SYMBOL

Is the Nixon Administration "anti-Negro," as alleged by the chairman of the NAACP, Stephen G. Spottswood? It does not think itself so. The President's Special Consultant, Leonard Garment, cites evidence that it is not, in an aggrieved telegram to Bishop Spottswood. And in a sense Mr. Garment is right. George Wallace is not the symbol of this Administration; the Attorney General is. And Mr. Mitchell does not hate blacks; he hardly knows them. He is not a bigot, he defends the law and order that underpin his own success and that of his friends. He is an expert on municipal bonds, intelligent, self-assured, provincial. Mr. Garment is broader-gauge, but, with all the goodwill in the world he cannot close the great divide between the government and the blacks. It is beyond his reach. So if he comes off worse in his interchange with NAACP, it is not because he is insincere, or because the Administration is hard-hearted, but because government, business, unions, schools, philanthropies *are* run by whites, primarily for the benefit of whites, and the blacks rightfully resent it.

What does a black man see? He sees a man nominated for the Supreme Court who once pledged himself to white supremacy. He sees the President sign a Voting Rights Act only after having lobbied in the Congress, and failed, to sap its strength. He sees a persistent income differential: in 1968, 58 percent of white families earned $8000 or more, 32 percent of nonwhite families. He sees 29 percent of black families existing below the poverty line. He sees white unemployment drop in June from May's 5 percent to 4.7 percent of the labor force; and the black jobless rate rise from 8 to 8.7 percent. He knows that "Black Capitalism" is a fraud. "Under programs announced last fall," *The New York Times* (June 28) reported, "hundreds of companies, in partnership with the federal government, were to make millions of dollars available to minorities by June 30 . . . So far only nine companies have kept their commitment of $150,000 each with two-to-one federal matching money [and] not all of the nine have yet granted loans . . . Some banks still refuse to finance minorities, even with 100 percent guaranteed government loans."

Seventy percent of black America is in the metropolitan areas, and if all the words written to deplore the impoverishment of poor blacks in cities were translated into renewal dollars, the ghettoes would bloom—and no longer be ghettoes. The most recent Bureau of Labor Statistics data (1968) showed that 24 percent of black housing is substandard. Not much can be done about that now; too inflationary—though a brand-new US-financed program for Vietnamese soldiers' families will produce 20,000 new houses in Vietnam, built in each of the next five years, according to *The Washington Post* of July 7. Two years ago, Congress enacted a historic fair housing law which decreed, in essence, that any American of any color or religion had the legal right to rent or buy a place to live, assuming he could afford it. And about the same time, the Supreme Court upheld an 1886 statute which gave a man the right to sue if he was kept from buying a home because of race. Since the Act became effective on January 1, 1969, the Housing Section of the Justice Department Civil Rights Division has filed only about 50 cases. (HUD has received more than a thousand discrimination complaints.) Restrictive covenants are honored in practice, if not in theory, in every section of the country. The Department of Housing and Urban Development has not yet issued regulations spelling out the details of how the Open Housing Act should be enforced, how HUD field offices will handle grievances, how the department should fulfill its statutory obligations to coordinate federal programs in a way to best further the 1968 Act's objectives. This February, the US Commission on Civil Rights recommended that the Administration prohibit federal agencies from moving into communities without adequate housing for low income or minority group employees; it asked President Nixon to issue an executive order to that effect. No order has been issued. The Commission charged that the government has been "inadequately concerned" with the impact of relocation on blacks.

TRB in his report this week cites testimony from Senator Mondale's investigation of prolonged, protected Southern evasion of school desegregation. On June 26, the director of the Civil Rights Division of Justice, Jerris Leonard, promised to file a single suit against the state of Mississippi if the 27 districts in that state not in compliance failed to act within three days. "We're going to be disinterested in discussing it after next week," he said. Three days came and went; there was no suit. Two weeks passed; the Department was not disinterested in further discussion. HEW estimates there are 150 hold-out school districts which have neither submitted desegregation plans to the Department nor led the Department to believe they intend to. Only 43 of these districts have had their federal funds for education cut off, and that does not tell the whole story. Many school districts make promises in order to meet September deadlines for compliance and thus qualify for funds—only to let those promises lapse in the ensuing 12 months, until the next deadline has to be met. Many districts under court orders to desegregate are assumed to be in compliance with the law (and so are not included in the 150), but they are not. Monitoring is spotty, review inadequate.

This is the substance of the NAACP's indictment. In the background there are other, unspoken thoughts. The NAACP, too, has constituents, an impatient membership to which is must answer, militant pressures before which it must bend or give way. Bishop Spottswood's is a cry for help—help us help blacks to believe they can make it! The NAACP criticism goes beyond the Nixon record; it is a condemnation of the Administration's thinness of dedication; the White House is *not* hospitable to black hopes, or to black spokesmen.

The Administration responds by trying to recruit Whitney Young of the Urban League as its ambassador to the black community. The gesture is not exactly a slap in the face, for Mr. Young is an excellent man. But it does not east the pain of a smarting NAACP, whose executive secretary, Roy Wilkins, has been the black elder statesman, the leader of established civil rights groups.

No one has to tell the NAACP that society does not move at the speed of light. But the Administration—the next one if not this—can and must convey to black America, moderate and militant, that it *wants* to move farther, faster—away from poverty and toward equality. It does not convey that when the President vetoes a hospital construction bill as "inflationary," and subsequentaly plans an additional $100 million in economic aid to the Saigon government—on top of the $365-million already allocated for fiscal '70. It cannot convey that when the President welcomes to the White House a delegation of "hard hats" who are anything but sympathetic to black aspirations; or when the Vice President twice attacks the credentials of the single young black selected by the President to serve on an advisory committee on campus unrest. Symbols count; John F. Kennedy rode a long way by a single telephone call in 1960 to Mrs. Martin Luther King, when her husband had been arrested. And it is ironic that a White House so amply staffed with advertising talents, so sensitive to "image," so quick to see the political advantage in any situation, fails to grasp this desperate need of the black community for true signs of concern. It is ironic, unless one believes the President *has* embraced a "Southern strategy," and that he is investing his political capital in the presumed loyalty of those whites who resist and fear black emancipation.

Black America's confidence in the national government has rapidly, dangerously diminished. When, 30 years ago this summer, Walter White, who was "Mr. NAACP," was asked whom the Negroes would vote for that year for President, he replied, "FDR, of course, for if they don't, Mrs. Roosevelt won't be in the White House, and I'm going to tell them so." He didn't need to tell them anything. They *knew* then that they had friends and allies in the highest places.

NEW SEARS BUILDING IN CHICAGO PLANNED AS THE WORLD'S TALLEST

HON. DAN ROSTENKOWSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1970

Mr. ROSTENKOWSKI. Mr. Speaker, today, I would like to inform my colleagues of a very interesting situation which is growing—in a manner of speaking—in my own city of Chicago. One of America's largest corporations, Sears, Roebuck & Co., has announced plans to add still another dimension to Chicago's position as America's No. 1 city. Sears, Roebuck & Co. is going to construct the world's tallest building, a 110-story structure which will rise over 1,450 feet above the Loop in downtown Chicago.

For those of you who might be unfamiliar with the finer aspects of the great battle of the sky, our building will soar some 200 feet over its only eastern rival, the Empire State Building.

New York's hasty attempt to gain some degree of its former prestige through the construction of its twin tower world trade center will, at last report, fall some 100 feet short of our magnificent edifice.

So, Mr. Speaker, at this time, I must commend the Sears, Roebuck & Co. for undertaking this tremendous feat and offer my condolences to my colleagues

from New York for losing still another one to the great city of Chicago.

I include in the CONGRESSIONAL RECORD a copy of the article in today's Chicago Tribune which announced the good news to the people of Chicago, and a copy of the article in the New York Times which released the sad facts to the people of that city.

The article follows:

NEW SEARS BUILDING IN CHICAGO PLANNED AS THE WORLD'S TALLEST

CHICAGO, July 27.—Sears, Roebuck and Company, the world's largest retailer, announced today that its new central headquarters in downtown Chicago would be the world's tallest building and the largest private building in the world.

Gordon M. Metcalf, chairman and chief executive officer of the company, said at a news conference that the 110-story Sears tower would be 1,450 feet tall, surpassing the twin towers of New York's World Trade Center by 100 feet and the Empire State Building by 200 feet.

The gross floor space, he said, will total 4,400,000 square feet, equal to 101 acres, with actual commercial and office space of 3,700,000 square feet. Only the Pentagon, which houses the Defense Department near Washington and has about 6,500,000 square feet, will be larger.

Mr. Metcalf said that the building's cost, not yet determined, would exceed $100-million. The building is to be financed through Sears' earnings. Excavation at the site has already started. Originally, Sears officials talked of providing 3 million square feet, then, last December, of 4 million square feet. The enlargement of the project became known as details were announced today.

Mr. Metcalf said completion of the building was scheduled for 1974.

Sears initially plans to occupy 2 million square feet of the building, leasing 1.7 million square feet to office and commercial tenants. It will take over more of the building as its requirements increase.

NEAR TRANSIT LINES

The site of the building, on the west side of the downtown business district near major commuter railroad stations and other transit lines, includes 129,000 square feet, about the equivalent of a normal downtown city block.

This site is bounded by Wacker Drive, Jackson Boulevard and Adams and Franklin Streets. One block of Quincy Street, which bisected the site, was purchased from the city last December for $2,767,500 and this portion was vacated to permit the construction of a single building instead of two.

From a base 225 feet square, the building will rise with a series of setbacks and will have a 20-story rectangular top. A curtain wall of black duranodic aluminum will give the building a "black-heath effect." Mr. Metcalf said. The windows will be bronze tinted.

There will be 102 high-speed elevators, including 14 double-deck units, and 16 escalators serving the lower levels and "sky lobbies" at the 33d and 34th floor levels and at the 66th and 67th floor levels.

16,500 IN BUILDING

The building was designed by the Chicago architectural firm of Skidmore, Owings & Merrill. The general contractor will be Diesel Construction; a division of Carl A. Morse, Inc.

Initially, about 16,500 persons, including 7,000 Sears employes, are expected to work in the building.

The company's main offices are now are in a Sears complex of 17 buildings in a slum area on the city's West Side, with headquarters personnel scattered in several buildings in Chicago and its suburbs.

This complex, which is much less accessible than the downtown site, is to be retained principally for centralizing catalogue order processing and a retail store.

Last year, Sears had net sales of nearly $8.9-billion and a net income of $441-million. It has more than 355,000 employes, including 31,200 in the Chicago area, and 826 retail stores, 11 catalogue order plants and more than 2,100 sales offices and independent catalogue merchants. There are subsidiaries and affiliates in 23 foreign countries.

SEARS BUILDING TALLEST, COST IS PLACED AT $100 MILLION

Sears, Roebuck & Co. announced yesterday it will build the world's tallest building on South Wacker Drive.

The building will be 1,450 feet high, as tall as the tip of the antennas on the John Hancock Center.

It will have 109 floors on the Wacker Drive side and 110 floors on the Franklin Street side. It will contain 4.4 million gross square feet of space on the two-block site between Jackson Boulevard and Adams Street from Wacker Drive to Franklin Street.

More than 16,000 persons will work in the building, which is scheduled for completion in 1974. Work is expected to start next week.

Mayor Daley said: "On behalf of the people of Chicago, I thank Sears for the confidence they are showing in the future in the planning and designing of the building . . . which will adorn the west side and stimulate growth of the west side."

MAYOR IS ENTHUSIASTIC

Mayor Daley said he was particularly enthusiastic because there has been concern about companies moving out of the city.

"I want to thank Sears again for the confidence they are showing in the city," he said.

Warren Skoning, Sears vice president-real estate property, said the building will be called Sears Tower. It follows company tradition in naming the first mail order store building in the west side complex the Tower Building

Skoning said building will cost $100 million. Financing has not been arranged but "Sears has no problem financing the expansion; it will come out of earnings," he said.

In 1969 Sears had net sales of nearly $8.9 billion and earnings of $441 million.

Skoning said there will not be a Sears store in the building.

HIGH AS FAA LIMIT

Skoning said the building will be as high as the Federal Aviation Administration would permit. He said he believes Sears officials should say it would have 110 stories so that it has the same number of floors as the World Trade Center in New York City.

Sears Tower will be second in size in number of square feet only to the Pentagon in Washington.

DESIGNED BY SKIDMORE

Skidmore, Owings & Merrill, Chicago architect, designed Sears Tower. It will rise in a series of setbacks at the 50th, 66th, and 90th stories, creating various floor arrangements as the height increases.

The exterior will be black aluminum with bronze tinted windows. An observation level at 1,350 feet above the street is planned for the 103d floor.

Sears will occupy initially less than 2 million square feet of space. About 1.7 million will be available to outside tenants.

ASSEMBLED OVER 5 YEARS

The Sears building will be on a two-block tract assembled by private developers over a five-year period starting in 1964

A jumble of 15 grime blackened buildings, similar to those which once stretched the length of North and South Wacker Drive, had to be purchased from 100 owners.

Quincy Street bisected the tract between Franklin Street and Wacker Drive. To consolidate its holdings, Sears paid the city $2.7 million for the street.

Sears is moving into one of the fastest growing sections of the Chicago central city. Altho the redevelopment of both banks of the south branch of the Chicago River is already underway, real estate men say the Sears building is generating new enthusiasm for the area.

STARTED IN EARLY 1960

Sears will be across the river from Gateway Center which started the redevelopment movement in the early 1960s. Tishman Realty & Construction company has built two 20-story office buildings and has a 35-story tower under construction.

The Sears site is flanked by two buildings under construction and several more are planned.

The Sears tower will be close to the commuter trains in Union and North Western railroad stations, and near the main post-office, making it a prime office building.

Sears will continue to occupy its sprawling plant of 17 buildings at Homan Avenue and Arthington Place. It is expected to be used mainly for catalog orders and a retail store.

The first phase of the west side plant was built in 1905. Altho there have been additions, expansion has not kept pace with the growth of the giant retailing chain.

BIRMINGHAM HOUSING AUTHORITY: A JOB WELL DONE

HON. JOHN BUCHANAN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1970

Mr. BUCHANAN. Mr. Speaker, there seems to be much attention given in our time to various things which are wrong with our society and which need changing. It is a pleasure to include herewith an article from the Birmingham News about the Birmingham Housing Authority which is clearly doing a lot of things right. Under the competent leadership of Mr. Hugh Denman, executive director, and his able and energetic assistant, Mrs. Melba Moebes, the authority is doing an excellent job not only in providing housing itself but in working toward providing a full and rich life for the people who live in its various housing projects. Recreation for the project's more than 17,500 children, activities for the elderly, and adult education occupy the time for attention of the housing authority staff as well as providing adequate housing for low-income families in the Birmingham area. The people of Birmingham are proud of the excellent work the Birmingham Housing Authority is doing and it is a pleasure to call it to the attention of my colleagues:

[From the Birmingham (Ala.) News, July 19, 1970]

6,471 FAMILIES HELPED: NEW HOUSING BRINGING HAPPINESS

(By Harold Kennedy)

Happiness is . . . the Birmingham Housing Authority.

It is a youngster swinging precariously from a monkey bar, hitting a home run, zipping down a slide.

It's a basketball gym, a ping pong table, a dash through a stream of cold water in the heat of summer.

Happiness is a quilting bee, dominoes or bingo to help the elderly pass the time. It's an adult first learning to read and write, a course in charm and modeling for a young girl, a Boy Scout camping trip.

And perhaps most of all, happiness is having enough to eat, a good roof over head and adequate health attention.

Aspects of happiness, perhaps better than anything else, tell about the Birmingham Housing Authority.

The authority's overwhelming success in obtaining rent subsidy housing for low-income families has been splashed across newspapers, blared over radio and depicted on TV.

But the real story does not begin until the brick-and-mortar stage is over. It lies in the people.

Some 6,471 low-income families will be living in the authority's 14 housing projects after completion of two complexes now under construction. And, as one official put it, these people are the Housing Authority.

Declared Mrs. Melba Moebes, assistant executive director: "We feel that we are in the people business, and that housing should pay human dividends."

The best way to reap human dividends, she added, is to create happiness. To this end, the authority already has been assured of almost $4 million in federal grants during 1970 and 1971.

The money will finance a host of projects, ranging from replacing old appliances and plumbing to maintaining a broad recreational and educational program for adults and youngsters alike.

The authority has concentrated most of its recreational efforts around the projects' more than 17,500 children. The reason, said Mrs. Moebes, is that "a happy child is more apt to grow up to be a happy and well-adjusted adult."

To carry out this philosophy, the authority during the next two years will purchase $96,000 in playground equipment, such as swings and slides, along with barbeque pits and picnic tables for family enjoyment.

Another $64,000 will be invested in special playground equipment for smaller children. The equipment, which looks like creations of a modern sculptor bent on futuristic designs, is engineered to let each child develop his own talents and abilities at his own rate—and have fun.

And there are such things as "spray pools," which shoot streams of water aloft as children gleefully dash through them, and tetherball and little league baseball.

The authority supports 34 little league teams, 13 girls' and women's softball teams and five men's softball teams. All the equipment and fields are furnished by the Housing Authority, with the exception of the uniforms. This year, the little league players earned the money to buy their own uniforms.

Several hundred youngsters also take advantage of authority-sponsored Boy and Girl Scout troops, and a Boy Scout workshop is backed annually in Birmingham by the authority with the help of the National Boy Scout Council.

Yet, perhaps the most impressive recreational program maintained by the housing agency is the chain of community centers strung throughout the projects. Aimed at serving project residents as well as surrounding communities, the centers are headquarters for an almost unlimited flow of recreational, health and educational programs.

Each center has a full-size gymnasium which can be used for everything from basketball for youngsters to squaredancing for the elderly.

More than 93,000 persons attended functions at the centers last month alone.

They came to play ping pong, checkers, dominoes, bingo and any number of other table games, as well as to attend free courses and classes on subjects of vital importance to youngsters preparing for that adult world.

To help the girls capture—and keep—that boy of their dreams, there are instructions in charm, modeling, sewing and cooking.

Courses in radio and electronics are available for teenagers, as well as classes in arts and crafts, which saw some 2,196 in attendance last month.

There also are courses in ceramics, losing weight, and food-buying and meal-planning to help families prepare better meals. Elementary reading and writing classes for the illiterate are available.

Each center has a health clinic attended by doctors and registered nurses from the Public Health Service two days a week.

One of the most prideful accomplishments of the Housing Authority is its system of child day care centers. There already is day care service at most projects, but due to the demand the authority is building three new ones at a total cost of $750,000 and have requested $1 million for four more, each of which will take care of about 100 youngsters while their mothers work.

Job training and employment opportunities are another service offered free to project tenants. A special program with the Department of Housing and Urban Development in job training will begin before September.

The one-year program will train 30 tenants in such trades as refrigeration, carpentry, landscaping, auto mechanics and small motor repair. It will be given by the Jefferson County Schools' Vocational Department.

"What we're after is total development for the children, and at the same time to give the adults advantages they would not have outside the projects," Mrs. Moebes explained.

REVERSING THE TREND

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1970

Mr. RODINO. Mr. Speaker, last week the Evening News of Newark ran a full page statement sponsored by civic minded Newark citizens offering congratulations and support to our newly elected mayor, Kenneth Gibson.

My own city of Newark is one of the oldest urban centers in the United States. It has seen the coming and the going of millions of American families. The spirit of Newark's citizens has been, throughout the years, often tested. Therefore, it is altogether fitting that Mayor Gibson, should receive support and be reminded of an earlier call to restore the city to a proud position among the municipalities of America.

I can only add my own fervent hope that together and united the mayor and the people will reverse the trend of blight and renew the city to a position of greatness.

The statement follows:

REVERSING THE TREND

By way of congratulating, and supporting, our newly elected Mayor Gibson, we call upon the people of Newark, as well as those whose interests are entwined with those of our City, to walk with and sustain our Mayor in his difficult and dedicated journey toward the accomplishment of the restoration of our City to the proud position it once held among the municipalities of America.

To this end, both as an inspiration and as a guide, we refer to a set of New Year Resolutions, made by the City, itself, and which were promulgated at the request of the Sunday Call, and carried in its issue of January 1st, 1928, as follows:

The New Year brings with it, as always, a group of resolutions made by thousands of Newarkers, with more or less seriousness of purpose. But what of the City itself; cannot it, too, make resolutions on behalf of its citizenry?

The question was put up to Judge Nicholas Albano of the Newark Police Court. It was felt that he, perhaps better than anyone else in Newark is in a position to know, from his close official contact with those unfortunates on the fringes of the law abiding citizenship, just what Newark needs most in the way of resolutions.

The resolutions that he suggested for the City of Newark are as follows:

As a great American municipality, viewing with thankful retrospection the magnificent progress of the past year, and hopefully expectant of the blessings of the coming year, I resolve:

"To summon to peaceful council, at my broad fireside, all who dwell within my household, for calm deliberation of common aims and needs;

"To invoke, to the full measure of their ideals, the active co-operation of all my agencies, Social, Fraternal, Institutional, Educational and Religious—for the relief, protection and enlightenment of my people;

"To foster a spirit of universal brotherhood, based upon the solid foundation of patriotism, charitableness and kindness;

"To engender among those who are new on our soil a true love for their adopted country, a just appreciation of the benefits of free government, and an honest respect for constituted authorities, by viewing their habits traditions and opinions with sympathy and understanding;

"To inculcate in the minds and hearts of those who are just beginning to tread the broad highway of life a higher regard for home—a deeper love and a more sincere respect of parents;

"To treat the erring with a justice which listens to mercy—a mercy which seeks causes, and, where possible, is healing, a mercy which recognizes misery and want and understands their problems through contact and experience, rather than theoretic surmises, and takes pains to mend where, perhaps, society has crushed;

"To banish hatred of race and criticism of creed;

"To be tolerant and broad visioned and to criticize impartially, and dispassionately, but constructively;

"To erect even greater houses of industry, but intermingle them with houses of God;

"To build even more pretentious temples of art and amusement, but match them with hospitals and homes where the stern realities of life may be softened;

"To seek an atmosphere of religion, not dominantly Protestant, nor Catholic, nor Jewish, but dominantly God-fearing;

"And, withal, to press my claim for a place in the leading ranks of the cities of the Nation, not as a vain achievement, but in justification of the foresight and judgment of those of my sons who have rendered years of faithful service in order that my doors might be opened to the shipping of the great seas; that my merchandise might be sold upon the markets of the world; that my industries and business might flourish and progress, and that my school systems and municipal deparements might be held out as models for the other municipalities of the Country."

It is our conviction, and, undoubtedly that

of all the people of our City, that the hopes and aspirations of the Newark of 1928, are envisioned in the mind and heart of Mayor Gibson, and that he is entitled to and should receive universal encouragement and support in his announced intention to reverse the trend of our City toward the greatness it deserves.

RESOLUTION SUPPORTING SERVICEMEN CAPTURED AND MISSING IN ACTION

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1970

Mr. DERWINSKI. Mr. Speaker, the plight of our prisoners of war of the Vietnam conflict deserve our constant attention. We must continue efforts to see that they receive the treatment to which they are entitled to under the Geneva Conference.

Therefore, I was pleased and impressed when I was advised that the city council of the city of Hometown, Ill., in its meeting of June 9 adopted a resolution in support of captured American and allied fighting men and those missing in action in the Vietnam conflict. The resolution signed by Mayor Francis E. Anderson follows:

RESOLUTION 8 1970

In support of captured American and allied fighting men and those missing in action in the Vietnam conflict

Whereas article VI of the United States Constitution specifically states that provisions of treaties ratified by the United States Government become the "supreme law of the land", notwithstanding contrary limitations of the Constitution itself; and

Whereas, notwithstanding solemn promises ratified at the international conference at Geneva that all prisoners of war captured would be given the respect of humane treatment; that Article 2 of the convention provides that it "shall apply to all cases of declared war or any war or any other armed conflict which might arise between two or more of the High Contracting parties, even if the state of war is not recognized by one of them."

Whereas, the government of North Vietnam acceded to the convention on June 28, 1957, and the government of South Vietnam acceded to the convention on November 14, 1953, and the government of the United States acceded to the convention on August 2, 1955; no pretense of compliance has been advanced by North Vietnam or the National Liberation Front (Viet Cong) despite a request to do so on June 11, 1965, by Jacques Freymond, Vice President of the International Committee of the Red Cross and numerous appeals by the international humanitarian organizations subsequently, and

Whereas repeated appeals on the part of wives, parents, relatives, and dependents of those unfortunate victims of Communist inhumanity have proven ineffective through diplomatic, military and humanitarian channels.

Now, therefore be it resolved that we, representing the City of Hometown 8000 people condemn in the strongest terms the repressive and cruel treatment of American and allied prisoners and petition that the government of North Vietnam act as follows to:

1. Observe the international accords of the Geneva Convention in the same manner the government of South Vietnam accords to captured troops of the North Vietnam government and their allies.

2. Release names and physical condition of all prisoners held.

3. Immediately release sick and wounded prisoners.

4. Provide for impartial inspections of prisoners of war facilities by the international humanitarian organizations.

5. Provide for medical treatment of all prisoners.

6. Provide for regular flow of mail, food and comfort items.

7. Cease using prisoners for purposes of public degradation, political propaganda and mental torture of prisoners and their innocent families.

8. Agree to immediately negotiate through international humanitarian organizations for the fair and equitable exchange of prisoners of both sides.

Adopted by the City Council of the City of Hometown in meeting this 9th day of June, 1970.

This Resolution was approved by me this 9th day of June, 1970.

FRANCIS E. ANDERSON, *Mayor*

Attest:

MAE L. RANDLE, *City Clerk.*

TEACHERS OPEN DRIVE TO SELL UNIONISM

HON. JOHN G. SCHMITZ

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1970

Mr. SCHMITZ. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

[From the U.S. News & World Report, May 18, 1970]

TEACHERS OPEN DRIVE TO SELL UNIONISM

Unionized teachers are starting a drive to tell the story of public-employe unions in the classrooms of the nation's public schools.

Plans for the campaign were announced by the American Federation of Teachers (AFT) on May 4, in Washington, D.C. AFT President David Selden said that teaching materials are going out to 200,000 members of the union and to school superintendents.

It will be optional with each member, Mr. Selden explained, as to whether he or she uses the AFT lessons. He said teachers will not be under pressure to join in the campaign.

"Lesson 3" of the printed material suggests that the instructor might use a series of questions to get the points across to pupils. The teacher is told to "remember, the rhetorical question is not an academic crime!"

Among the suggested questions are:

"Should strikes be prohibited? For *all* workers? For all *public* workers, regardless of their work? If so, how? If not, should there be conditions imposed by law before a strike can be called by public workers?"

The instructions also suggested that "the teacher should attempt to tie up loose ends of the discussion, pointing out areas where there is no common agreement as well as where concensus seems possible."

GOAL: OPEN MINDS

The teacher also is told to "take special care to sweep away as many cobwebs of mythology as possible" and to "let your students go forth with at least an open mind on the subject."

Members of AFT are offered ideas for class activities, listed as useful at "almost any grade level or group."

One suggestion: "Students should be given the opportunity to march on a picket line with public employes, if a strike occurs in your neighborhood and if students decide they want to support the strikers."

Making picket signs is another possibility. The material states that "a good sign has bold lettering suitable for TV-camera pickup and with no more than six or seven words."

A suggested writing project would have the student describe "what would you do if you

were the leader of a teacher union and (a) the school board wouldn't meet with your union; (b) you hadn't received a raise in four years; and (c) class sizes had increased by five students each over the past three years?"

AFT officials said the teaching material is geared to high-school, college and possibly junior-high students. The union says its teaching aides are balanced and objective.

Union President Selden said that if any teachers are disciplined or fired for using the AFT lessons, the union is prepared to assign lawyers to defend them. Mr. Selden said AFT will defend the members' right to use the material without approval of the school board.

[From the U.S. News & World Report, July 6, 1970]

THE RESULT OF FORCED UNIONIZATION OF TEACHERS'

Teachers' agency shop.—The Detroit Board of Education on June 23 fired, at least temporarily, 52 teachers for refusing to comply with the board's agency-shop contract with the Detroit Federation of Teachers. This requires nonunion instructors to pay a fee equal to union dues of about $77 a year. Some 1,200 other teachers are not complying but are protected against discharge because they are testing the clause in court.

SOUTH FLORIDA WINNERS OF "SPEAK UP FOR AMERICA" CONTEST

HON. DANTE B. FASCELL

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1970

Mr. FASCELL. Mr. Speaker, it is my pleasure to offer my congratulations to five south Florida youths, Gloria Davis, Debbie Renuart, Paul Bockting, Joan Ziegler, and Richard Lee Grimm, who are winners of the "Speak Up for America" contest sponsored by the Certified Plumbers of South Florida.

Miss Davis, the first prize winner, lives at 19645 NW. 12th Court in Miami; she is a junior at Miami Norland Senior High School. The second prize winner, Miss Renuart, is in the 10th grade at Our Lady of Lourdes Academy, and lives at 11111 Killian Road in Miami, Fla. Third prize winner, Mr. Bockting lives at 9656 Dominican Drive in Miami. He attends Southwest Miami Night School and hopes to become a medical missionary. Miss Ziegler, the fourth prize winner, is a straight "A" student at Southwest Miami Senior High School and lives at 6310 SW. 93d Court in Miami. A senior at Miami Senior High, the fifth prize winner, Mr. Grimm, lives at 1360 SW. Street, Miami, and plans to attend the University of Miami.

These five young men and women, and others like them all across the country, have "spoken up for America" through local and State "Speak Up for America" essay contests. In a time when the youth of America is demanding to be heard, programs like these are providing forums for responsible dialog on America.

These youths and their program should be encouraged and commended. They do not take the irresponsible road of destruction but, rather, turn toward the future with a firm constructive commitment to America. I can only agree with the sentiments of one educator who wrote:

It is great to see young people who belong to the construction gang when usually we hear only about the "wrecking crew."

Mr. Speaker, I commend these outstanding young people for participating in this program. Likewise, great credit should go to the sponsors, the Certified Plumbers of South Florida for making the program possible and encouraging young, able, and articulate Americans to "Speak Up for America."

COLUMBUS, IND., POST OFFICE DEDICATION SPEECHES

HON. LEE H. HAMILTON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1970

Mr. HAMILTON. Mr. Speaker, on July 19, 1970, the Columbus, Ind., post office was dedicated. I would like to bring to my colleagues' attention several speeches made upon that occasion. The speeches follow:

REMARKS BY POSTMASTER GENERAL WINTON M. BLOUNT

I am delighted that we have such good representation from Members of Congress today. Some stories would have you believe that Members of Congress and I have been constantly fighting over postal reform. The truth is that while there have been differences of opinion, I have found the cooperation of Congress excellent—and particularly on the part of the Congressional members here today.

Senator Hartke, a member of the Senate Post Office and Civil Service Committee, has a thorough understanding of the postal problems we are facing and he and his committee have worked hard this last year.

Congressman Hamilton, a member of the House Post Office and Civil Service Committee, has been extremely helpful to the Department during this past year and we relied heavily on his expert advice in solving the many legislative problems concerning the Post Office reorganization. I believe most of you know that he has also worked closely with the Department on this new Columbus Post Office. Lee, I want to thank you for all your help.

Many of our postal employees are veterans and no one in Congress has worked harder for veterans than Congressman Dick Roudebush. In addition, he has been a strong supporter for postal reorganization. Dick, I'm happy you could be with us.

It is a great pleasure for me to be here in Columbus—"the Athens of the Prairie"—to dedicate this new post office.

This structure is a handsome addition to a city already famous for its architecture. I can tell you it is certainly the most beautiful and the most modern post office I've ever seen, and I think it is especially appropriate now when the Post Office Department is about to acquire a modern look of its own.

As you know, we have been trying for some time to change the direction of the postal service. This effort was begun by the Kappel Commission in 1968, and I think it is important to note that Mr. Miller was a very able member of this Presidential Commission. It is known in Washington as the hardest working Commission ever appointed by a President. When President Nixon asked me to be a member of his Cabinet and take this job, he asked me to study the report of this Commission and if I agreed, to recommend legislation to put it into effect.

Today the basic proposals of the Commission are on the verge of becoming law. We are about to leave behind the outmoded, inefficient operation of the past to become a self-supporting independent system, serving the public efficiently and effectively.

But while this dedication reflects the spirit of progress in our nation, it also reflects the spirit of community service which has played such an important role in the history of this city. Here in the best American tradition, the interests of business and the interests of the community are one, and out of this unity of purpose has come an environment which is unique and beautiful, and which is an inspiration and an example to the rest of the nation.

In his Inaugural Address, President Nixon called upon private citizens to dedicate themselves to community service. I think there is nothing more central to the President's philosophy of government than the belief that the greatness of America rests not with its government but with is concerned and committed citizens.

The accomplishments I see all around me in this city bear witness to the President's wisdom. The architecture of Columbus is more than a pleasure to the eye. It is a promise to the future. It shows most clearly what private enterprise can do to reshape the land in which we live.

Too many of our people have become accustomed to thinking that there must be a government program for every problem the nation encounters. Ask what we should do about our dead lakes and rivers, ask what we should do about the murdered old mountains of Appalachia, or forests we have destroyed, or the wild life we have driven to extinction, ask about poverty, prejudice, pollution. Almost automatically, most Americans will say these are problems that the government in Washington must solve.

But this is wrong. Throughout our history, democracy has meant much more than a big government stretching out along the Potomac. It has involved the notion that leadership comes not from an elite in Washington, but from the individual American citizen. To every man belonged the right to assert his own ideals and the obligation to act on them. While other nations entrusted their government to an aristocracy, in America it was always the private citizen who possessed the power.

Yet today, too many Americans have relinquished this power. While the problems multiply, too many of our people, out of cynicism, frustration, or fear, do nothing.

This attitude does not reflect the spirit of America. In his call for voluntary citizen service, President Nixon looked to those thriving, vital, restless people who are anxious for the opportunity to push this country forward again, anxious to use their abilities, to display their independent spirit, and exert their individualism. These qualities are the bedrock of what the President calls voluntarism.

Voluntarism is the idea that the best approach to the problems of America is not through the Federal government but through the people. And where government action is essential, it must come through those organs of government as close to the people as possible at the lowest levels. It is at these levels that self government functions.

With this faith in America restored to the highest levels of government, I believe we are witnessing a rebirth of citizen concern in this country. All over the nation, Americans are asking what they can do to make their towns or cities a better place to live.

A Gallup Poll taken two years ago esti-

mated that 61 million adult Americans would be willing to contribute 245 million man-hours every week to voluntary activities. This is a phenomenal resource waiting to be tapped. It needs only that spark of leadership that translates will into action.

Such leadership can be found today in the business community. When business leaders become involved in programs to improve our cities, as so many of them are, they find that people everywhere are eager to help. A good example of this is Mills Lane, a banker from Georgia who founded the Community Development Corporation. His Savannah Plan, aimed at raising the standards of Georgia's underprivileged citizens, is a dramatic example of what voluntarism can accomplish. Ten thousand volunteers went into the slums of Savannah in 1968 and cleaned them up. The effort that began there has been extended to eleven other cities in Georgia.

But you don't have to be a banker. The same principle is at work when a college youth decides to go into a ghetto and tutor children. And our young people are doing this all over the country. Quietly. Effectively. Voluntarily.

Even within the government we can see voluntarism at work. In the Post Office, we are experimenting with a program of storefront postal academies in six cities. For the project, we are using qualified postal employees who have offered to teach skills to dropouts from city schools, and we expect to train around 2,000 young people by the summer of 1971. We're proud of the program and it's showing good results. We're proud of the volunteers who are making it work.

There are many other examples that I could use. But they all have one thing in common: that someone makes a decision. That individuals give leadership.

President Nixon has provided this leadership on the national level. But it is neither the duty nor the desire of the President to shoulder the full burden of leadership in America. It is his duty to make government perform its proper function, and it is the function of government in this regard to create an atmosphere in which people can do for themselves what needs to be done.

Here in Columbus, you have effective leadership. And I don't have to tell you that one of the finest leaders this country has is Irwin Miller.

As a businessman, as a philanthropist, and as a man concerned about the urban problems of this nation, Irwin Miller has given Columbus the leadership that changed the face of this city. His leadership built not only schools and churches, it built pride and community spirit, and self-reliance and independence. His leadership is a reaffirmation of the meaning of America.

Today it is with a sense of success and accomplishment that we dedicate this new building. The story of this city has given America something to think about. For while it is easy to talk about voluntarism as an abstraction, it is much more difficult to make it a reality. In Columbia, we have seen the abstraction become a reality.

Remarks of Senator Vance Hartke

Here today is a building worthy of this community of Columbus, illustrating the strength and influence of the genius of the leaders of Columbus.

Today is a part of the renaissance of Columbus: the exciting, exhilarating adventure of the reconstruction of the city of Columbus.

I have had the good fortune to participate in reconstruction and renewal efforts on a local level as a citizen and as Mayor of Evansville. And, on the national level as U.S. Senator. From this experience I am convinced that the problems of our cities in America and Indiana will be met when—and not until—we recognize that a joint public trusteeship must be responsibly committed to such private reconstruction efforts. Both private enterprise action plus public action are required.

And I take personal pride in the fact that in my home city of Evansville—urban renewal—public housing—a new post office—civic center—stadium and public olympic size swimming pool are not only words but good words.

These problems of the cities demand shoulder-to-shoulder, two-fisted attack; their success depends entirely on an alliance of private and public agencies—with each respecting its own limitations and the capacities of the other; and with each acting in support of the other.

The new Columbus Post Office fits this formula precisely. Communications is the nerve network of a nation and a city, and the Columbus Post Office is a vital part of this network. The Columbus Post Office is a part of the public participation in the rebuilding—reconstruction—renaissance of Columbus. It is a public participation on the national level. As we appreciate this fact it is equally essential to recognize that the public involvement should operate at three levels—Federal, State, and local—each of these must be equipped and ready to do its appointed part.

America has the resources, the wealth, the raw material, the intelligence, the technical know-how, the pressing need and the driving desire to solve all the problems of our cities.

The question is not—*what* to do—but *who* is to do it, and how to make an alliance among the agencies involved—as you have evidently done with such spectacular success here in Columbus.

To support a program of renaissance of Columbus is not to be softhearted (which is sin), it is also to be hardheaded. I am not a budget buster. *But* I do believe in America's greatness, and I believe that this greatness can be traced to bold leaders and bold enterprises and the basic idea that—as you are doing here in Columbus—money invested properly and adequately will multiply wealth—and provide for human needs.

Bold leaders and bold enterprise exist here in Columbus. You stand out as a shining example for other cities. It will be left to the citizens of those other cities, acting through their own governments, to settle their own issues—following your example.

I leave you with this thought: Solving the problems of the City of Columbus (as with other American and Indiana cities) demands the exercise of what is perhaps the most difficult are of democratic governments: the effective mobilization of all the forces which make up the free body politic and the free body economic—not just to make the right decisions—but also to carry them out.

So the new Columbus Post Office is a part of a New Columbus of tomorrow in which every person of Columbus can share in the renewal of our combined faith in our selves—and our combined ambition for a better life for the people of Columbus.

So on this Sunday—the Lord's day—let us never forget—the earth is the Lord's and the fulness thereof; the world and they that dwell therein.

Remarks by Congressman Lee H. Hamilton

This day has been a long time aborning.

It began, so far as I know, when local businessmen over cups of coffee decided Columbus needed a new Post Office and that it could be a major part of downtown development.

Often, it appeared that this day would never come—

When there was a long and agonizing struggle over the site, with the Post Office Department insisting it be on the outskirts of town and most of Columbus wanting it downtown, (and General Blount, one reason we celebrate this day is because it proves the Post Office Department doesn't win them all).

And again it appeared this day would never come when in a few harrowing, suspense-filled days, the intricate financing for this building was being worked out. And at one point, I can recall putting the phone down after a pessimistic report and saying to myself, "Well, it's all over, we lost it."

It can be said without equivocation, that without the negotiating skills during that period of Richard C. Stoner, this building simply would not have been built.

And no one who took part will forget the painful debates, the agonizing deliberations, and the summit conferences on whether to build a wall around the entire Post Office Grounds. The Post Office Department said "no" for security reasons. The designers said "yes" for aesthetic reasons, and as you can tell from looking about you, that's one the Post Office Department won.

Of course, there have been bright spots along the path to this day too.

The generous offer to pay the fee of one of the Nation's finest designers and the acceptance of a unique and untried venture by the Post Office Department—the patient, cooperative attitude of four Postmaster Generals:

General Grounoski gave original approval.

General O'Brien gave support during the painful early planning.

General Watson gave the final go ahead, and General Blount gave support during the critical building period.

As the doctor would say, however, the gestation and birth of this building was accompanied by "severe complications."

That is all behind and this is a happy day as the city of Columbus, with this building of grace and distinction, adds another jewel to its architectural crown.

This Post Office is no ordinary building.

Perhaps no building is more intimately related to the lives of all the people of a community than the Post Office. By reason of the work that goes on here, friendships are maintained, business transacted, families united. This building will measure the heartbeat of Columbus. Through its doors will pass messages of joy and happiness, sadness and grief, information and education, business and commerce.

Without it, Columbus would be—not an Athens of the prairie—but a prairie of dry bones.

This building stands as a symbol of gratitude for all who labor in the postal system and especially those who labor at the Columbus Post Office. You and I often take for granted the employees of the postal service. I doubt very much whether any service, public or private, operating on so large a scale as the Postal Service has a comparable record of honesty in dealing with the public's property or of faithfulness to duties.

And this building serves a mighty purpose: the exchange of ideas and information. No Nation has ever achieved greatness without a strong, dependable postal system. Without it, this Nation could not remain united, and our economy would collapse.

I walk into many post offices and see often the battered, gray canvas bag full of mail. It is as mundane and commonplace a thing as I can imagine. And yet, what concerns it contains: Life and death—love and hate—success and failure—drama, romance, tragedy, comedy.

They are all in that bag—serious and frivolous—the important and the inconsequential—news to gladden and news to sadden.

All brought with equal impartiality to the designated recipient and all carried in that gray, undistinguished mail bag.

For me, the significance of this day lies not just in the dedication of an important building. Rather it lies in the privilege of working with one's friends, toward a common and worthy goal. There is an abiding satis-

faction in the experience citizens in a free society may have as they hope, strive, work, and accomplish in their associations one with the other.

This post office—fervently pursued and successfully achieved—has been such an experience for many of us.

Very close to the heart of what this Nation is all about is the opportunity to work with one's friends to accomplish shared goals. In Columbus, we have had that fine experience and we celebrate it today.

It is fitting, then, to add a final adornment to this building of purpose and elegance—a flag of the United States of America which has flown over the Nation's Capitol. It symbolizes the nation that has permitted us this deep privilege of common endeavor.

I present it to the Postmaster of the Columbus Post Office with the hope that when we see it wave, we will see not just a flag, but a Nation—its power, its purpose, and its people, and its dedication to liberty and justice for all.

THE 50TH ANNIVERSARY OF THE POLISH LEGION OF AMERICAN VETERANS

HON. LUCIEN N. NEDZI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1970

Mr. NEDZI. Mr. Speaker, the good work of the Polish Legion of American Veterans has spanned more than two generations already, with special service and sensitivity to the problems of veterans.

An anniversary celebration is by its nature both a sad and a cheerful occasions, sad because of the memory of those friends who are no longer with us, cheerful because we see one another once again.

The Polish Legion of American Veterans had its beginning in my home town of Hamtramck, Mich., in 1920. It has maintained its vitality while building an extensive membership, including 24 posts in the State of Michigan. Recently, the State senate of Michigan commended the P.L.A.V. on the occasion of its 50th anniversary and its forthcoming national convention in Detroit. Under leave to extend my remarks in the RECORD the resolution follows:

SENATE RESOLUTION No. 277

(Offered by Senators Stanley Rozycki, Stanley Novak and Joseph Mack)

A resolution commending the Polish Legion of American Veterans on their Golden Jubilee Celebration

Whereas, The Polish Legion of American Veterans, Post No. 1, will celebrate their Golden Jubilee at a dinner in Hamtramck on June 6, 1970, and will also observe their 50th Anniversary with a national conventional in Detroit, in August; and

Whereas, During May of 1920, a group of veterans in Hamtramck, Michigan, met to re-live some of their military experiences and to celebrate the Third Anniversary of their volunteering for service in World War I. From this group the Polish Legion of American Veterans was formed, which selected its first officers on May 19, 1920, and operated as the "Polish American Veterans Club" and continued to use this name until 1923, when the Polish Legion of American Veterans came into being as a national organization, with Posts in ten states; and

Whereas, At the present time the P.L.A.V. has twenty-four posts in the state of Michigan, the group of young men who met in Hamtramck in 1920, are now known as Post No. 1 of the P.L.A.V. and was the first organization in the city Hamtramck to own its own building. Their purpose is to uphold patriotism and to assist members and their families who may be in financial need. They have assisted and actively carried out a patriotic program in sponsoring essay contests in high schools, and have been strong supporters of the Red Cross, receiving a certificate for its extensive blood donation campaign during World War II; and

Whereas, During World War II, P.L.A.V. Post No. 1, collectively, through its members, purchased over a third of a million dollars worth of United States Savings Bonds, with the result that a B-24 Bomber was named "The Spirit of the Polish Legion of American Veterans"; and

Whereas, Since its inception fifty years ago, P.L.A.V. Post No. 1, has spent more than $100,000 of its money for charitable work, including help to veterans, whether members or nonmembers of the organization, as well as aid to the widows and orphans of veterans; now therefore be it

Resolved by the Senate, That a sincere and warm welcome is extended to the Polish Legion of American Veterans and to P.L.A.V. Post No. 1, on the occasion of their 50th Anniversary, and offer best wishes for their continued success and prosperity; and be it further

Resolved, That copies of this resolution be transmitted to the officers of the Polish Legion of American Veterans, National Convention, and to P.L.A.V. Post No. 1.

Adopted by the Senate, June 3, 1970.

BERYL I. KENYON,
Secretary of the Senate.

CONGRESSMAN JOHN C. KUNKEL

HON. ALBERT W. JOHNSON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 27, 1970

Mr. JOHNSON of Pennsylvania. Mr. Speaker, it was with the deepest regret that I learned today of the untimely death of my dear friend, former Congressman John C. Kunkel, of Dauphin County, Pa.

Congressman Kunkel was one of my very best friends when I came to Congress in November of 1963—no one in the Congress was nicer and friendlier, and more willing to guide me through the first few months of service than Mr. Kunkel.

I always enjoyed discussing matters of current interest with him. I was amazed at his keen analytical mind and tremendous storehouse of knowledge on almost any subject. He was a real asset to the Congress of the United States, and made a valuable contribution to its work.

Mr. Kunkel also possessed a keen sense of humor and no matter how tense a given situation he always came up with the pleasanter side of the argument and made everyone feel at ease.

We in the Pennsylvania delegation were very disappointed when he chose voluntarily to retire from the Congress. He was one member of our delegation that we were all very proud of. He added distinction and honor to our group. It was a real loss to Pennsylvania and the Nation when he decided to return to private life.

And now may I extend to his dear wife and family my deepest sympathy and I want them to know that I considered John Kunkel one of the great men of this century from Pennsylvania.

TEXTILES ALREADY IN TRADE WAR

HON. WM. JENNINGS BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1970

Mr. DORN. Mr. Speaker, I commend to my colleagues' attention a perceptive editorial from the Greenville, S.C., News of July 25, 1970. As the title of the editorial suggests, the MILLS' textile-shoewear import bill is designed to remedy the effects of a current trade war, not to initiate a trade war. Free trade is a worthy goal, but it requires cooperation among the major trading partners. Unfortunately, with respect to textiles, the free-trade policies of the U.S. Government have been taken advantage of unfairly rather than reciprocated.

The editorial follows:

TEXTILES ALREADY IN TRADE WAR

Nobody, least of all the textile industry, wants to set off an international trade war. Traditionally the Southern states, now the home of most of the textile industry in this country, have been free trade territory.

But the fact is that so far as the textile industry is concerned, it already is involved in a deadly international trade war with Japan and other low-wage countries. American textiles did not make this war, and tried to avert it by agreeing to cooperate with the General Agreement on Tariffs and Trade. The textile industry's landmark decision on international trade back in the 1960's was a key factor in getting this country to lead the attempt to lower tariffs and other trade barriers around the free world.

The fact is that American barriers have been lowered, but many other nations, Japan included, have not reciprocated in good faith. Tariffs and non-tariff measures all but prohibit many foreign goods from entering numerous countries which enjoy almost limitless access to American markets. This is war against the American industry.

The result is that the domestic textile industry has been injured in recent years, is hurting badly now and can be virtually destroyed unless something is done to save it.

Since all efforts at voluntary control agreements have failed, it is necessary to get some relief by unilateral action in the form of legislation to impose reasonable restrictions on textile imports.

The word "reasonable" is emphasized. The American textile industry does not seek to cut off imports. Neither would it limit them excessively. All the industry asks is a mild restraint which would give it a chance to plan its own production and to expand enough to keep abreast with population and economic growth in this country.

That certainly is not too much to ask. All the industry seeks is a reasonable opportunity to compete in its own markets. Unless it has that opportunity, this country must prepare to phase out domestic textile production because American companies inevitably will move operations overseas in order to survive.

The result will be loss of jobs and economic disaster for wide areas, especially in the already hard-pressed South. It also will involve costly restraining of workers and disruptive population movement to provide other jobs for displaced textile workers.

The need for a thriving textile industry to assist the upward economic movement of minority groups in the South ought to be apparent to anybody. Preservation of the textile industry should be one of this country's top socio-economic goals. Instead, the flood of imports threatens to destroy the industry.

The pending textile quota measure as proposed by Representative Mills, Ways and Means Committee chairman, is a reasonable proposition. In and of itself it should not set off a trade war or escalate the one already being waged against this country by foreign textile producers.

Neither would the Mills proposal pose any sort of threat to American consumers, as some opponents charge. Textile imports would continue, giving consumers adequate protection against price-fixing by the American industry. The widely-distributed textile industry is just about the last that could be accused of price-fixing in this country anyway.

But the Mills proposal is threatened by a combination of factors. There is the danger it will become a Christmas tree bill if import quotas on other products are added. If that happens, the bill will be vetoed by President Nixon.

Whether the measure as now being written, with quotas on footwear and stand-by authority for other quotas, is acceptable to the President is not clear at the moment. It is clear, however, that the textile quota measure is in dire danger of being overloaded.

The textile industry and its workers are not out of the woods by any means. They still are in a political thicket in which textile relief can be lost while the Democratic Congress and the Republican administration blame each other.

JACOBS ARRESTS DISTRICT OF COLUMBIA CRIME

HON. LEE H. HAMILTON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1970

Mr. HAMILTON. Mr. Speaker, my distinguished Indiana colleague, ANDREW JACOBS, JR., recently set an example for each of us to follow in our capacities as individual citizens concerned about rising crime rates.

In a letter of July 23, 1970, to Congressman JACOBS the District of Columbia Chief of Police commended him for his "alertness and assistance" which produced the arrest of a robbery suspect whom he had observed exchanging gunfire with a special police officer at the scene of the robbery.

The letter from Chief Jerry V. Wilson, as well as an Indianapolis Star article describing the incident, follow:

DISTRICT OF COLUMBIA METROPOLITAN POLICE DEPARTMENT,
OFFICE OF THE CHIEF OF POLICE,
Washington, D.C., July 23, 1970.

Hon. ANDREW JACOBS, JR.,
Longworth Building,
Washington, D.C.

DEAR CONGRESSMAN JACOBS: The Commander of the First District has brought to my attention your commendable action and assistance in obtaining the tag number of the vehicle in which robbery suspects made their escape from the scene of a robbery (hold-up) at the Acme Supermarket, 45 "L" Street, S.W. on June 12, 1970.

The official report indicates that about 11 a.m., Friday, June 12, 1970, while in a private auto westbound in the unit block of "K" Street, S.W., you and Mr. Chris Fager observed the exchange of gunfire between Special Officer Adams and two subjects getting into a maroon Ford parked at the curb and then driving off at a high rate of speed.

Realizing that a very serious crime had been committed, you directed Mr. Fager to drive around the block back to South Capitol Street to get behind the getaway car. While pursuing the suspects into the southeast area, you copied the tag number before they made good their escape in the area of Alabama Avenue and Stanton Road, S.E.

Your swift action at the time of this crime saved our officers many hours of investigative police work and assisted in the arrest of one of the hold-up men and a warrant being obtained for the driver of the getaway car.

It is very encouraging to know that there are citizens like yourself in our community who abhor criminal acts and respond to assist the police in the solution of serious crimes.

In recognition of your alertness and assistance, I am pleased to congratulate you and extend my personal thanks for your help.

Sincerely yours,

JERRY V. WILSON,
Chief of Police.

[From the Indianapolis (Ind.) Star, June 20, 1970]

JACOBS HELPS IN PURSUIT OF BANDITS AT WASHINGTON

WASHINGTON.—When the bullets started flying, ex-deputy sheriff Andrew Jacobs, Jr. forgot he was a congressman and started chasing the hoods.

Detective Hermann Steiner of the Metropolitan Police Department credited Jacobs with helping catch the robbers of an Acme Supermarket on Washington's southwestside.

Jacobs and Chris Fager, a congressional intern from Indianapolis, had gone to a filling station June 12 to have Jacobs' car serviced. Fager was driving and protested when Jacobs urged him to make a left turn on a busy street.

"I know what I'm doing," Jacobs said, as the car turned into a hail of bullets.

Jacobs later complained that Special Officer Freddy N. Adams, an Acme employe, wasn't so good with his hand gun. "He grouped his shots, all right," ex-Marine Jacobs said, "but he was hitting a row of parked cars and not the fugitives."

Moments before Jacobs and Fager happened upon the scene, three men had entered the supermarket and disarmed Adams. The robbers scooped the money from a cash register, grabbed up three bags of newly-delivered coins and fled.

The getaway car was driven by a woman. Adams grabbed another gun from the manager's office and was busy trying to shoot the culprits when Jacobs and Fager came along.

After driving through the hail of lead, Jacobs and his young assistant pursued the getaway car.

The robbers fled over a bridge and into a remote Washington residential neighborhood. At Stanton and Alabama streets, southeast, the fugitive car turned into a housing project and came to an abrupt halt.

Jacobs ducked into a phone booth and called for police help.

When a cruiser arrived, he gave the policemen District of Columbia License No. 662-938 and a description of the car.

Subsequently, detectives interviewed a young woman who said her father's car with that license number had been stolen.

Questioning gave the detectives the name of the young woman's boy friend, Landin Mozon, who was listed in police files. They later went to pick Mozon up at his address and found his girlfriend and two other men taking narcotics.

Mozon was identified by Adams and others who were in the robbed grocery store. The young woman was arrested for narcotics violation and a warrant was issued for her on a robbery charge.

SENATE—*Wednesday, July 29, 1970*

The Senate met at 11 a.m. and was called to order by Hon. WILLIAM B. SPONG, JR., a Senator from the State of Virginia.

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

Eternal God, before the mountains were brought forth, or ever the world was formed—from everlasting to everlasting, Thou art God. Grant us now an awareness of Thy presence that shall brace us for new tasks. Empower us to work with sensitive spirits and sharpened minds. When evening comes may we be at peace with Thee and with one another.

Remember, O Lord, all those who labor under the danger of death that others may be comforted and protected. Sustain those who represent the Nation in the Armed Forces and those who by diligent service and constant sacrifice enforce the law and keep the peace.

Bless all who work in the laboratory, at the bench, on the farms, or in offices, and grant that we may so hallow daily toil as to make it a divine vocation. Unite our endeavors to make us a better people and a better Nation.

In the name of the Craftsman of Nazareth. Amen.

DESIGNATION OF ACTING PRESIDENT PRO TEMPORE

The PRESIDING OFFICER. The clerk will please read a communication to the Senate from the President pro tempore of the Senate (Mr. RUSSELL).

The assistant legislative clerk read the following letter:

U.S. SENATE,
PRESIDENT PRO TEMPORE,
Washington, D.C., July 29, 1970.

To the Senate:

Being temporarily absent from the Senate, I appoint Hon. WILLIAM B. SPONG, JR., a Senator from the State of Virginia, to perform the duties of the Chair during my absence.

RICHARD B. RUSSELL,
President pro tempore.

Mr. SPONG thereupon took the chair as Acting President pro tempore.

THE JOURNAL

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the reading of

the Journal of the proceedings of Tuesday, July 28, 1970, be dispensed with.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ORDER FOR TRANSACTION OF ROUTINE MORNING BUSINESS

Mr. MANSFIELD. Mr. President, I ask unanimous consent that, at the conclusion of the remarks of the distinguished Senator from Virginia (Mr. SPONG), there be a period for the transaction of routine morning business with statements therein limited to 3 minutes.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

ORDER OF BUSINESS

Mr. MANSFIELD. If the distinguished Senator from Arizona (Mr. FANNIN) would allow me, without losing any of his time, I should like to bring up a few unanimous-consent requests at this time.

Mr. FANNIN. I am happy to yield to the Senator from Montana.

EXECUTIVE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate go into executive session to consider nominations on the Executive Calendar.

There being no objection, the Senate proceeded to the consideration of executive business.

The ACTING PRESIDENT pro tempore. The nominations on the Executive Calendar will be stated.

NOMINATIONS PLACED ON THE SECRETARY'S DESK—IN THE COAST GUARD

The assistant legislative clerk proceeded to read sundry nominations in the Coast Guard, which had been placed on the Secretary's desk.

The ACTING PRESIDENT pro tempore. Without objection, the nominations are considered and confirmed en bloc.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the President be immediately notified of the confirmation of these nominations.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

LEGISLATIVE SESSION

Mr. MANSFIELD. Mr. President, I move that the Senate resume the consideration of legislative business.

The motion was agreed to, and the Senate resumed the consideration of legislative business.

COMMITTEE MEETINGS DURING SENATE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that all committees be authorized to meet during the session of the Senate today.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

HOOD RIVER COUNTY, OREG.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar No. 981, H.R. 914, and that the Pastore rule of germaneness not apply in this instance.

The ACTING PRESIDENT pro tempore. Without objection, the bill will be stated by title.

The ASSISTANT LEGISLATIVE CLERK. H.R. 914, for the relief of Hood River County, Oreg.

The ACTING PRESIDENT pro tempore. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill.

Mr. PACKWOOD. Mr. President, the Senate has an opportunity today to clear up a long-standing controversy concerning 160 acres of land in Hood River County, Oreg.

The problem stems from a misunderstanding regarding the ownership of a 160-acre tract of land located immediately south and east of the Hood River County Forest. This area was mistakenly designated a part of the Hood River County Forest in September of 1950 and was managed as a part of the county forest. In 1961, however, the county's ownership of the land came into question. Inquiries by the Bureau of Public Land Management resulted in a determination by the Government that the land was a part of the Mount Hood National Forest. The Hood River County Commissioners were notified of this determination in November of 1963.

Prior to that notification, the county, quite understandably, regarded itself as the sole owner of the land. Based on this assumption, the Forest Service, acting under contracts with the county, planned, supervised, and carried out five separate sales from the property between 1946 and 1961. Hood River County received a total of $84,841.36 from those sales. The amount claimed by the United States is based on this payment to the county.

As a result of this unusual set of circumstances, Hood River County is faced with the very real problem of having to potentially repay the Federal Government $84,841.36. I find the prospects of forcing payment on the taxpayers of Hood River County to be unacceptable. Officials of Hood River County, representing the taxpayers of that county, acted in good faith. An honest mistake was made—a mistake which Uncle Sam must share. The money was not wasted—it was used for valid purposes to better serve the citizens of Hood River County.

Let me also say something about the economic conditions of Hood River County. They are not good. The latest unemployment figures show that as of May 1970 there was an 8.3 percent unemployment rate in the county. In addition, the county's fruit crop suffered substantial damage earlier this year. So at this particular time, when economic conditions are far from the best, it seems ill-advised to ask Hood River County taxpayers to pick up the tab for a mistake of the Federal Government.

I believe that H.R. 914 will solve the problem. It would relieve the county of the obligation of paying the United States the $84,841.36 claimed by the Government. Considering the tremendous burden that repayment would impose on the county, it seems to me that H.R. 914 offers a fair and equitable solution to an unfortunate situation.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91-977), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE

The purpose of the proposed legislation is to relieve Hood River County, Oreg., of all liability to the United States, based on the proceeds of timber sales from 160 acres of land considered to have been a part of the Hood River County Forest in the period 1946 through 1961, which land was subsequently held by the United States to be Federal land.

STATEMENT

In its favorable report on the bill, the House Judiciary Committee set forth the facts of the case as follows:

During the 90th Congress a similar bill, H.R. 3165, was favorably reported and passed the House on June 3, 1968. That bill was the subject of a subcommittee hearing on Wednesday, April 24, 1968. At that time, representatives of Hood River County, Oreg., and of the Forest Service of the Department of Agriculture appeared and testified concerning the circumstances which gave rise to the claim by the United States against the county. At the hearing a map was submitted which shows the 160-acre tract to be immediately south and east of a tract of forest land which is part of the Hood River County Forest. The 160-acre tract was designated a part of the Hood River County Forest in September of 1950 and was managed as a part of the county forest. It was discovered in 1961 that there was a question concerning the county's ownership of the tract. The report of the Department of Agriculture indicates that at that time, the State's title to this particular land was challenged in private litigation and, in connection with that litigation, inquiries were made to the Bureau of Public Land Management concerning the status of the tract. These inquiries resulted in a determination by the Government that the land was a part of the Mount Hood National Forest. The Forest Service notified the Hood River County Commissioners of this determination in November of 1963.

At the hearing, the representatives of the county testified that prior to these developments, the county, in good faith, regarded itself the owner of the 160 acres of forest land. The county had regarded itself as the owner of the land for more than 40 years since the county had received a sheriff's deed to the property after delinquent tax foreclosure proceedings against the tract in 1922. The basis for the Government's determination that the land belonged to the Federal Government involved the discovery of an 1892 communication in the files of the Department of the Interior indicating that this particular property had been included in a large block of land that was intended for later designation as the Cascade Forest Reserve. This is the action referred to in the Department of Agriculture report when it states that on March 28, 1892, all of section 9 was withdrawn from entry under the public land laws for the purpose of creating the Cascade Forest Reserve.

This particular letter was dated a few months before the State of Oregon selected the 160 acres as "lieu" lands by filing Indemnity Selection List No. 226 on December 27, 1892. Hood River County traced its title from this selection for the State conveyed the 160 acres to a private owner, Mr. Edward Jones, on January 2, 1893. As has been outlined above, the county subsequently acquired the land as the result of foreclosure of delinquent taxes which had accrued subsequent to its conveyance to private ownership and prior to 1922. The Government's position is, in substance, that, notwithstanding the selection by the State, its subsequent conveyance to a private individual, and the acquisition of title by tax foreclosure proceedings by the county, and the subsequent 40 years during which the county asserted its rights as owner of the land, the U.S. Government still had title to the land and further never parted with title to the property.

In the report of the Department of Agriculture, it stated that prior to discovery of the question concerning title in the county, the Forest Service assisted the county in the management of this particular property along with more than 26,000 acres of the Hood River County forest lands. At the hearing on the bill, in the last Congress the representative of the Forest Service stated that at that particular time, the Forest Service relied on county records in determining the title and boundaries of forest land subject to management. On the assumption that Hood River County was the owner of the 160-acre tract, the Forest Service, acting under contracts with the county, planned, supervised, and carried out on behalf of the county five separate sales of timber from the property between 1946 and 1961. The Hood River County received from those sales a total of $84,841.36. The committee is advised that the amount claimed by the United States is based on this payment to the county.

The committee was further advised that the Government also in 1965 claimed title to the property and has sold timber off the property in 1965–67 for which it has received some $102,000 in revenues. These revenues are, of course, not involved in the amended bill.

The inequity to which H.R. 914 is addressed arises out of this assertion of rights by the Federal Government in the light of the particular circumstances concerning title and ownership of this specific tract. As a practical matter, no one was aware of the technicalities of the title situation until late 1961, after Hood River County had been considered the winner of the property for over the 40 years which elapsed since the 1922 tax foreclosure. It is also clear that the Government acted after five timber sales had been made on that assumption by the U.S. Forest Service acting for Hood River County. The amended bill will grant relief which, as a practical matter, is unavailable through judicial proceedings. The claim of the Government against Hood River County arose under circumstances demonstrating complete good faith upon the part of Hood River County which treated the 160 acres as its own property for over 40 years after 1922.

The testimony at the hearing indicated that Hood River County, in a court proceeding, probably could not successfully defend against the timber trespass claim of the U.S. Government based on the five timber sales between 1946 and 1961, and therefore could not legally establish its title to the subject property as against the U.S. Government.

The committee has further been advised that payment would impose a substantial economic hardship to Hood River County if the U.S. Government would force a payment of $84,841.36. The total budget of this small county for the previous fiscal year was $1,686,313, of which $351,744 was raised from taxes imposed directly on its citizens and their property. A timber trespass judgment for $84,841.36 would represent approximately 5 percent of Hood River County's total annual budget. Since any such judgment would have to be paid from additional tax revenue, a judgment for $84,841.36 would mean a 1-year increase of almost 25 percent in the total direct taxes imposed on the citizens of Hood River County. If the judgment was for double damages (approximately $169,000), this would represent 10 percent of the county's total annual budget, and a 1-year tax increase of almost 50 percent over the present level of taxation.

The bill, as amended by the committee, would relieve the county of the obligation to pay the United States the $84,841.36 claimed by the Government but would not grant the other relief originally included in the bill. In the 90th Congress identical amendments were made to the bill H.R. 3165 and the bill passed the House so amended on June 3, 1968. The bill H.R. 914, as introduced in the current Congress, would have also provided for a conveyance of the disputed 160 acres and would have further required a payment to the county of an amount equal to the money paid the United States as the result of sale of timber from the property since assertion of title by the Federal Government. The committee deleted the other provisions so that the bill does not alter the position of the parties as regards ownership of the land. As has been noted, the repayment would impose a heavy burden on the county and it is felt that the amended bill provides for an equitable adjustment of the matter and is fair in the light of all the circumstances which have been detailed in this report. While the Department of Agriculture has questioned relief, the committee feels the amended bill meets most of the Department's objections.

In this connection it should be noted that the General Accounting Office in its report to the committee on the bill has indicated it would have no objection to relief as is now provided in the amended bill if it is determined that repayment would work such a hardship. Accordingly, it is recommended that the amended bill be considered favorably.

The committee, after a review of the foregoing, concurs in the action taken by the House of Representatives and recommends favorable consideration of H.R. 914, without amendment.

The bill was ordered to a third reading, was read the third time, and passed.

DISCOVERY OF MERCURY CONTAMINATION IN OUR STREAMS, RIVERS, PONDS, AND LAKES

Mr. SCOTT. Mr. President, many Americans are alarmed about the discovery of mercury contamination in our streams and rivers, ponds, and lakes. My friend, the distinguished Senator from Vermont (Mr. PROUTY), is doing something about this problem.

In testimony before the Environmental Subcommittee of the Committee on Commerce, Senator PROUTY laid the problem on the line and outlined ways of responding to mercury contamination.

I think they will find Senator PROUTY's testimony one of the most compelling to date on the problem of mercury pollution. I think that they will agree with his observation that:

What we have learned about mercury recently indicates that what we see and know about pollution is not as frightening perhaps as the unknown and unseen.

Mr. President, for the benefit of my colleagues, I ask unanimous consent that Senator PROUTY's testimony be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR WINSTON PROUTY, REPUBLICAN OF VERMONT, TO THE ENVIRONMENTAL SUBCOMMITTEE OF THE U.S. SENATE COMMITTEE ON COMMERCE, JULY 29, 1970

Mr. Chairman, as we all know, at least 20 states are now experiencing major problems with mercury contamination. We are rudely confronted with the product of either our ignorance or inattention, or both.

Although it took us in the United States somewhat by surprise, we should have been prepared because mercury poisoning is not a totally new phenomenon. In the last decade Japan has suffered two crises of mercury poisoning, resulting in nearly 100 deaths and many cases of birth defects. Mercury poisoning in the past six years has left 35 dead in Iraq, 4 in Pakistan, and 20 in Guatemala. In December of last year, three children in New Mexico suffered permanent brain damage after eating pieces of a hog bred on mercury-treated seed grain.

In 1965, the Swedish Royal Commission on Natural Resources established the relationship between mercury pesticides and a large decrease in the bird population. In 1968, it was the Swedish delegation to the Codex Committee on Food Additives which presented concrete evidence of how mercury effluent from industrial production contaminates fish.

The toxicological, or poisoning, process of contamination is similar to that of DDT. Inorganic mercury (of which the U.S. annually dumps over 6 million pounds into its waters) is highly insoluble in water, and, therefore, of little danger to fish. However, it is taken into the food chain by microorganisms, which are in turn eaten by predators and so on up the food chain, until the mercury, now in a methylated organic form, is taken into the systems of the perch, walleye, carp, et cetera, and finally on to man, last link in the food chain. At each stage, the mercury is more concentrated.

When the highly compounded methyl mercury finally does reach man, it can cause neurological and brain damage, as well as injury to the liver and kidneys. Studies have shown the ease with which mercury in its methylated form can penetrate both the placental barrier and brain barrier, causing severe birth defects. In all cases, 10% of all the mercury we ingest goes to the brain; it is lethal to brain cells.

The mercury effluent remains in the environment from 10 to 100 years after dumping. This fact must not be lost on those who would urge delay in implementing mercury control.

Some states have now been forced to ban all commercial fishing in their waters due to actual or suspected mercury poisoning in fish. Michigan is one, Vermont is another. It is not necessary for me to describe the unavoidable hardships imposed by this ban. But several aspects of the Vermont case will, I think, interest you.

Following the ban on fishing, the State Agency of Environmental Conservation instituted a task force to undertake a complete study of the mercury problem.

After becoming aware of the troubles experienced along the Great Lakes, we were not surprised that our own Lake Champlain should have substantial amounts of mercury contamination. The figures show poisoning in fish as high as 1.4 parts per million in the Outer Mallets Bay zone, and 2.0 parts per million in the Mississquoi River (The Food and Drug Administration says that .5

parts per million of mercury is dangerous to human life and must be dealt with). These are areas which we checked first, as they have a certain amount of industrial concentration, and so were considered most probably to contain mercury.

But, as a matter of course, the task force checked Lake Memphremagog. I am sure that you can appreciate our amazement at finding levels of mercury in excess of .5 parts per million, since we are unaware of any industry now or in the past that has used any appreciable quantities of mercury in that region of Vermont or Canada.

Then it became apparent that we had a new ballgame. Consider an area like Silver Lake. It is located in the Green Mountain National Forest, atop a mountain and accessible only by four-wheel drive vehicles or by pack trip. It has no industry whatever—but it does have mercury contamination.

When Joe's Pond in Danville, Vermont produces fish contaminated eight times beyond the level set by the FDA, *we are warned that the issue is far more complex than we had supposed.* Presently, fish from all bodies of water 20 acres or larger are being analyzed. In almost every case, the findings show substantial amounts of mercury poisoning.

Vermont is not a heavily industrial state, and has none of the chemical industries usually identified as the prime polluters. Almost no agricultural mercury seed grain is used. The orchards discontinued use of mercury years ago. So did most milk testing plants and paper processors. So where does the mercury come from?

Mr. Chairman, we realize now more than ever that this is no simple matter and that mercury pollution must be attacked from a number of fronts.

There are numerous other areas in which further research is urgently needed. One of the possible sources of pollution cited by our task force in Vermont is fallout—but, this is just a hypothesis. We know, too, that there is mercury naturally present in the environment, but are not sure how this affects our ecological balance. We in Vermont are doing all that we can, assisted by the facilities of our universities. Additionally, at my request, a program of sampling is now being undertaken by the U.S. Public Health Service. Yet the resources of a single state cannot solve all aspects of this nationwide problem.

Finally, we have come to realize that we can no longer afford to let these problems sneak up on us. With each day's dumping leading to some mercury contamination for 10 more years, we must anticipate the next ecological crisis. In Vermont, once we finish our investigation in mercury, we shall study lead, and continue with other minerals, until we are satisfied that we are not sacrificing permanent health to present convenience. After fish, we shall move to study muskrats, ducks, and other aquatic animals. Again, there is too much to do.

At the moment, we are stunned by our lack of knowledge. We cannot even identify all the sources of mercury contamination. Vermont is only a small state, but we are doing, I feel, a truly outstanding job of research to combat mercury pollution. I hope that other states which do not feel themselves threatened by the problem will take a hard second look. I hope states which mistakenly feel that by stemming the flow of mercury effluent they will end their troubles will learn from our experience in Vermont. And most of all, I hope that our state efforts will now be complemented by increasing concern from the Federal Government. Vermont's predicament is now the nation's problem.

Nationwide it is apparent that action is essential in three areas—assurance that (1) no contaminated fish are sold in the marketplace, (2) prevention of industrial effluent of mercury, and (3) development of a long-range problem of information, analysis and transfer which will be adequate to prevent unintentional pollution.

First, we must be sure that all contaminated fish are removed from the market. It is the responsibility of the Federal Government to ensure that dangerous food fish are not introduced into interstate commerce, by co-operating with state authorities to sample and test for contamination.

While removal of the adulterated fish solves the short-term health hazard, secondly industrial effluence of mercury must also be halted. The Department of Interior is moving hard against mercury pollution. Two weeks ago, Secretary Hickel threatened court action against mercury polluters, and ordered the Federal Water Quality Administration and the U.S. Geologocial Survey to seek out polluters. He also wired the governors of 17 states where mercury pollution has become a major problm to urge them to take action at the state level. Last week he asked the Department of Justice to move against companies which have refused voluntary self-restraint.

Justice now says that they will bring suits against eight of these corporations, under the Refuse Act of 1899. The Administration has thus taken a large step forward. Establishment of minimum levels at which the government will act frees the states from the competition for business which sometimes causes ecological havoc. However, President Nixon also has the power, granted in the Water Quality Improvement Act, to designate mercury a "hazardous substance" and to recommend methods and means for the dealing with them when they become a problem? Before the crisis becomes more alarming, this should be done.

But the Administration must also realize that an end to an effluent is not an end to contamination. In view of Vermont's problems, and with the realization that Vermont is not an industrialized state, I feel that the present Federal concentration on large industries may in the end be misleading. Unless the larger industrialized states are aware of the findings we are getting in Vermont, they may very well end up in a complacent mood feeling that if they only zero in on large industrial users and figure once they correct that situation, all is well. (How many industries are there in Detroit compared to Vermont?)

Finally, we need to assure the acquisition and exchange of information on all matters of environmental pollution. To begin with, the present level of contamination labelled "dangerous" set by the FDA at .5 parts per million is only an "interim guideline" based on a safety factor of only 10 instead of the more usual 100. More study is needed to determine how much mercury we can allow the human body to consume. The formation of the Environmental Protection Agency will be an important step forward in researching and administering pollution control.

Should we fail to remove the contaminated items, fail to plug the sources of pollution, and fail to establish the means for interrelated study and legislative review of the problem, the consequences are staggering. As mentioned previously, once dumped, mercury will remain present in the environment from 10 to 100 years. Further, it concerns me that we have developed no practical way to remove mercury from our river-beds. At present, scientists are at work on various types of absorbent clays which might be introduced into our waters to tie up mercury and eliminate it from the food chain without altering the ecological balance. But as yet they have found nothing workable. In the meantime, what options are open to us in those states so heavily burdened with mercury pollution?

First, the mud from the river-bottom containing the mercury can simply be removed. This would of course be terribly expensive, and result in unknown dangers to the whole environment.

Second, particularly offensive areas could be diked off. But aside from the resulting imbalances, this is only a partial measure. No matter where the mercury itself is dumped, it soon becomes generalized throughout the area as it is passed through the food chain. In bodies of water which have no known source of industrial effluent mercury, this method is useless.

In short, awaiting further scientific progress, we have no recourse against mercury already present in our waters. The mercury dumped while I am speaking will plague us for decades, and will probably end up in our own system.

What we have learned about mercury recently indicates that what we see and know about pollution is not as frightening perhaps as the unknown and unseen.

Perhaps it is wise to interject an optimistic note. I believe there is some reason for optimism. We have seen a change in the basic approach of government from the day it was only a referee among interests competing for resources to the day when government must be considered the trustee of the environment for all the people.

It must administer this trust not with stop-gap measures to halt specific abuses but with a clear top priority national goal of a quality environment for all. We must channel our wealth into protecting our future. If we fail to do this, we must be confronted by an environmental catastrophe that would render our wealth meaningless and which no amount of money ever could cure.

ORDER OF BUSINESS

Mr. MANSFIELD. Mr. President, both the Republican leader and I wish to thank the distinguished Senator from Arizona (Mr. FANNIN) for his courtesy and consideration in yielding to us at this time.

Mr. FANNIN. It was a pleasure to yield to the majority and minority leaders.

The ACTING PRESIDENT pro tempore. Under the previous order, the Chair now recognizes the distinguished Senator from Arizona (Mr. FANNIN) for a period not to exceed 20 minutes.

THE PROBLEM OF INFLATION

Mr. FANNIN. Mr. President, the people of this Nation are challenged by many vexing problems—lawlessness and disorder in our streets, the war in Vietnam, the apparent alienation of the young, the expansionist policies of Russian communism in the Middle East, and the erosion of the purchasing power of the dollar resulting from inflation. This last, in my view, is the most persistent and the most pressing.

Each month the Nation's newspapers headline every change in the cost of living. The workers win a wage increase and then watch their gains evaporate in the heat of higher prices. The process is particularly cruel for those on fixed incomes, retired producers living on pensions or savings.

There is a great divergence of opinion among the economists over many aspects of our present commercial and business structure. Some voices contend that a small amount of inflation contributes a beneficial influence on the Nation's economic health. But there is almost uni-

versal agreement condemning the escalated inflationary rates of recent years.

Various critics place some of the blame for the dangerous erosion of the purchasing power of the dollar on a variety of causes. But, Mr. President, I think there is almost unanimous agreement on the proposition that uncontrolled Federal spending, financed by borrowing, is the major cause of the inflation threatening our economic stability.

Mr. President, since the election of President Franklin D. Roosevelt Federal spending has exceeded Federal income in all but 4 of those years.

Deficit spending, which was inaugurated in an effort to overcome the great depression, was further accelerated during World War II and the Korean conflict. Even President Eisenhower, who was dedicated to balancing the budget, was able to achieve that objective in only 3 of the 6 fiscal years for which his policies were responsible. Without interruption, there has been a deficit—an excess of expenditures over income since fiscal 1960.

During this period many rational voices have argued the virtues of a balanced Federal budget. The leaders of both political parties have professed to be dedicated to bringing an end to deficit spending.

Most recently the Nixon administration hopefully projected a balanced budget for the fiscal year just concluded—a projection which failed to materialize because the Congress appropriated and spent more than the Government received in income.

Mr. President, every Member of Congress is painfully exposed to demands for increased spending. The Nation's unmet needs, some of them very real, are unlimited. Perhaps there are times when deficit spending can be justified. The tragedy is to be found in the truth that deficit spending has become a habit. The pattern has been established. Reasons, both personal and political, have destroyed the ability of the Congress to break the habit of deficit financing.

It is not my intention to condemn the Members for their actions. Each one of us, where our own particular constituency is involved, has on occasion stubbornly resisted every attempt to reduce some particular appropriation or curtail some particular program.

Indeed, it can be said with some certainty that a Member who adamantly refused to advance the claims of his constituency for some special governmental financing would arouse such voter wrath as to be replaced at the next election.

I shall not enlarge on this theme. It is, I think, a truth which must be recognized.

Must we then continue to borrow against the future? To commit our children's children to repay the funds borrowed today to indulge our own desires?

History is littered with the ruin of nations destroyed as a consequence of reckless governmental spending.

The well-intentioned Members of Congress, recognizing the danger which threatens us—and I say all Members of Congress are well intentioned in this particular—are unable to escape the established pattern and resolutely bring a halt to deficit financing.

Therefore, Mr. President, it is our responsibility to find a remedy, a rescue method which can work to halt the evils which now hold us prisoner.

It is, therefore, my intention, Mr. President, to offer as a practical, workable solution the adoption of an amendment to our Constitution.

This amendment would require that the Federal Government expenditures in any fiscal year be limited to the Federal Government's income from sources of taxation, with two exceptions provided: First, in the case of a declared war and the need for defense outweighing the need for fiscal restraint; and second, to provide more latitude in a time there was a Presidentially declared national emergency—for example, such as the great depression which paralyzed our society in the early 1930's.

The effect of such an amendment, Mr. President, would be to require the Congress and the administration in the preparation of the national budget and appropriation bills to either forgo the spending or to increase the taxes.

In my experience, Mr. President, the Members of Congress have always exhibited an admirable reluctance to increase taxes. Yet there have been tax increases when the need for increased income was clearly justified.

Mr. President, the prudent householder is required to live within his income or face bankruptcy. Confronted with this unpleasant alternative, the housewife manages her expenditures within the limits of the family income.

Every family in America, every wage earner, has a desire to acquire certain material things which are beyond his income. Reality requires the establishment of essential priorities, and those items, sometimes purely luxury items and sometimes near necessities, must await acquisition until the money is available.

Mr. President, we all know that money is easy to spend and difficult to earn. The Congress in many cases behaves in the manner of an indulgent father with an inexhaustible reservoir of resources, catering to the whims of all his children. This has been possible because the Congress has not been under any restraint to earn the money it spends.

Mr. President, we can no longer postpone a decision. We have hopefully indulged in wishful thinking that one day the economic productivity of the people of the United States would produce sufficient tax revenue to catch up with our spending habits.

A continuation of our present course will increase the hardship threatening all of our people, will contribute to the tension between labor and management, will add to the discontent of the consumer, and will, in my judgment, if unrestrained, eventually destroy the Government of the United States.

Both prudence and our responsibility to the office we serve requires us to recognize the truth of our present unpleasant situation.

Such an amendment as I propose would not mean an end to those social programs which consume such a great percentage of governmental income at the moment.

Such an amendment as I propose would not cripple our ability to provide for the national defense. Such an amendment would only require a more careful appraisal of the needs as they are presented to us. If the need for this program or that activity, or this governmental financial support upon examination is determined to be truly paramount, then there would be justification for increasing the tax rates.

I suspect, Mr. President, that if such an amendment were in effect today, the Congress would give much closer scrutiny to many of the spenders' demands.

I suspect, Mr. President, we would discover the people could be quite happy and very properly cared for at a level of Federal spending within the limits of Federal income.

And I suggest, Mr. President, there is no more urgent need confronting this Nation today than the need to restructure the fiscal policies of the United States, and bring a halt to the cruel destruction of the purchasing power of the dollar.

Inflation is the thief invading the bank vaults to destroy the savings of the prudent.

Inflation is the thief robbing the pay envelopes of America's working men.

Inflation is the silent partner of America's enemies determined to destroy our freedom and our Government.

Let us then, as Members of the Congress, recognizing our own inability to cure this difficulty, provide the people with an opportunity to impose limitations on spending which will be effective and bring an end to the miseries caused by inflation.

ORDER OF BUSINESS

Mr. FANNIN. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. SPONG. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. ALLEN). Without objection, it is so ordered. The Senator from Virginia is recognized in accordance with the previous order for not to exceed 30 minutes.

STRETCH JETS AT NATIONAL

Mr. SPONG. Mr. President, since reversing its longstanding policy against larger jets at Washington National Airport, the Federal Aviation Administration has been laying down a smoke screen of rationalizations and misinformation designed to obscure the importance of the issues involved.

Appearing before the Senate Aviation Subcommittee last month, FAA Administrator John Shaffer professed to be at a loss to explain public opposition to the decision. Specifically, he denied that the larger jets would help to perpetuate the overutilization of National, advancing

the ingenuous argument that "a bigger airplane will not bring greater numbers of customers into the terminal" and that "all the people who want to use the airport are already using the airport."

The point, of course, is not that more people will want to fly because there are stretch jets at National, but that more people will be able to fly out of National and presumably will fly out of National rather than Dulles or Friendship Airports as the air travel market experiences an expected threefold growth over the next decade.

That is the significance of the stretch jet decision and Mr. Shaffer is fully aware of it as is indicated in his March 18, 1970, letter to me explaining why it was unlikely that stretch jets would ever be allowed to operate at National:

> In my opinion, we are getting close to the day when the quota restriction at Washington National Airport will prompt the carriers to transfer service, particularly Chicago service, from National to Dulles Airport and any different action today, particularly during a "soft" period in passenger load factors, might postpone air carrier actions on this matter.

The point was made even more forcefully in a report prepared for the Administrator by his own top experts in the National Capital Airports Bureau which operates National and Dulles:

> The hard, cold facts are that the stretch 727 cannot be employed profitably at National without substantially altering the prospects for growth of Dulles and Friendship. Under present circumstances, the critical point in the growth of Dulles will occur when restrictions at National force transfer of significant service, particularly Chicago service, from National to Dulles Airport and any that day is not far off now . . . But the decision to admit the stretch 727 to National (possibly setting the precedent for the even larger air bus) will postpone that day indefinitely.

In light of that warning, it is instructive to note how many of the new stretch jets have been put into service on the Chicago route.

In April, the first month of their operation, 40 of the Boeing 727–200's flew to and from Chicago. That was about 16 percent of the total of 242 stretch 727's using National that month.

In May, the number on the Chicago route increased to 100, or 20 percent of the 487 total, and in June, the number was 196, or 27 percent of the 702 stretch jets using National.

For the first 12 days of July, when a total of 372 stretch jets operated out of Washington National, 127 or 34 percent were on the Chicago schedule.

Mr. President, these figures, which I obtained from the FAA, make clear beyond question what was involved in the stretch jet decision and why the air carriers lobbied so hard to get it. Without it, they would have been forced to begin leveling off their use of National and making better use of Dulles Airport. But with approval of larger aircraft, that day can be put off indefinitely and National Airport can continue as the principal base for commercial jet operations in this region.

The stretch jet decision virtually nullifies any passenger-limiting effect of the 40-flights-per-hour quota at National, for if you can pack up to 40 percent more passengers in a stretch jet, who needs additional flights? For that matter, with three-engine stretch jets and air buses, who needs four-engine aircraft, which is another of the now meaningless restrictions at National.

Contrary to the testimony of Mr. Shaffer that the stretch jet would be admitted only on a "rare basis," it appears that the air carriers are substituting the new equipment as rapidly as they can. In April, the average number of stretch jet flights each day was 11. By May that had risen to 15.7 and in June to 23.4. In the first 12 days of July, the daily average was 31, with as many as 39 using the airport on 2 days of the month.

Administrator Shaffer has attempted to downplay the critical report of his own experts by contending that it is based on unrealistic assumptions about the number of stretch jets that ultimately will use National and their passenger-carrying capacity.

In fact, the report assumed that the airlines would substitute stretch jets on only about 30 percent of their flights at National for a daily number of 134. Moreover, it was assumed that it would take until mid-1971 to reach that figure. In roughly 3 months' time, the air carriers are already a quarter of the way there.

The report went on to predict that this level of usage would result in an additional 1 million passengers a year at National. That calculation was based not one some wild and fanciful assumptions about passenger load factors, as Mr. Shaffer has suggested, but on the actual seating configurations and load factors of jets in operation today.

Mr. President, the stretch jet is only the beginning of what can be done to expand the use of National Airport by expanding the capacity of the aircraft permitted to operate there. Just around the corner are the DC–10 and the Lockheed 1011 air buses, three-engine giants which are fully capable of using the runways of National Airport. These jumbo jets can carry between 250 and 270 passengers in mixed seating, and up to 345 in all-economy flights.

Moreover, both of these aircraft themselves can be "stretched" or lengthened to increase the maximum capacity of the DC–10 to 475—or about the same capacity as the Boeing 747—and of the L–1011 to about 375.

Mr. President, the FAA is now assuring the public and the Congress, in much the same way that it assured them about stretch jets, that it has no plan to permit the introduction of air buses at National when those jets begin operating next year.

But there is not a doubt in my mind that these jumbo jets will be permitted to use National Airport and that the FAA will invoke the precedent of stretch jets to justify its action.

Already, the manufacturers of the air bus engines are engaged in a national advertising campaign to win public acceptance of these jets as no more polluting or noisy than smaller jets now flying. If that is true, I congratulate the industry on the progress it has made.

But that is far from saying that the noise and pollution caused by the operation of these jet planes in the midst of a heavily congested residential area is tolerable. It is not. Nor would it be if it were reduced to half the present level.

Of even greater concern to me is the potential safety hazard represented by this outmoded and congested airport. While it is true that National enjoys a good record in this regard to date, I believe we are tempting the fates to continue overtaxing and expanding its facilities. It should not take a fatal crash such as occurred off National's runway a few weeks ago to make us realize the potential that exists for a major disaster at that airport.

The introduction of larger and heavier aircraft will compound the safety hazards that already confront light planes using the airport. The turbulence that rolls off the wings of such big jets is quite capable of upsetting smaller planes following in the wake and I would not be surprised that with the continued buildup of stretch jets and the introduction of air buses to see the airport closed to most general aviation.

That, of course, would permit the FAA to allocate an additional number of flights per hour to commercial air carriers, something Administrator Shaffer has indicated in correspondence with the airlines he is anxious to do.

Mr. President, of all the objections that can be raised to the stretch jet decision, the most disturbing is what it tells us of the relationship of the FAA with the air carriers it is supposed to regulate. It could not be put more strongly than it was in the report of FAA's own National Capital Airports Bureau:

> The Bureau and FAA have a responsibility to foster the operation of Dulles as a successful airport serving the public interest. The taxpayers have a right to expect that it will fulfill that role. Economic self-sufficiency for Dulles even if it could be totally achieved as a price for the increased use of National will not serve that right or fulfill that duty. Moreover, there is every reason to believe that financial self-sufficiency for Dulles cannot be attained as the price for this decision.

Dulles Airport was built at the expense of $110 million to the American taxpayers for the express purpose of relieving congestion at National which as far back as 1949 was judged by the Commerce Department to be "taxed to the utmost" by the then existing air traffic. But, despite that investment of taxpayers funds, and the clear intent of the Congress in appropriating the money, the FAA has allowed the airlines to continue making National Airport their primary base in this region.

Since fiscal year 1957, National Airport has consistently operated at a profit considering all costs. Dulles, on the other hand, has been grossly underutilized. Operations for fiscal years 1963 through 1969 resulted in total revenues of $20.4 million while total expenses, including depreciation and imputed interest on investment, amounted to approximately $76.6 million. The taxpayer has had to make up the difference.

The FAA is fond of quoting passenger growth percentages at the two airports

in an attempt to show that Dulles is not doing too badly. Those percentages, however, obscure the true picture since they obviously favor the airport which started from a zero base.

The facts are these:

From fiscal year 1964 through 1969, passenger traffic growth at Dulles expressed in percentages, averaged 21.9 percent per year. During the same period, passenger traffic growth at National averaged 11.4 percent.

However, the total passenger traffic at Dulles increased by only 1.2 million. For the same period, National passenger traffic increased by 4 million.

The FAA also contends that with a little more than 19 percent of the region's air traffic, Dulles Airport's development is about on schedule. Yet, at the time of Dulles' construction the FAA concluded that a proper distribution of the region's air traffic would give Dulles 45.8 percent and National only 3.9 percent percent and National only 33.9 percent instead of the 65 percent it accommodates today.

Mr. President, from the very opening of Dulles it was clear that the air carriers preferred to stay at National and that the FAA was not prepared to assert its responsibility to bring about a balanced use of the two facilities. That is reflected in the original Dulles use agreement which, in establishing the landing fee formula, provided that the new airport would be operated at a planned deficit in this major cost area for at least 10 years.

In justifying that unprecedented agreement, the FAA argues that it has no real authority to require the air carriers to use Dulles notwithstanding the intent of Congress in building the airport. For the record, the FAA made this observation:

> The air carriers did not ask for Dulles and saw no need for it when it was proposed. They already had staffing and equipment at two airports to serve what they considered (with CAB concurrence) to be a single market. They were reluctant to duplicate this investment at a third airport which they felt would not be needed for some time to come.

Even accepting that plea of regulatory impotence, the FAA might have used its proprietary power in such ways as setting higher use fees at National in order to encourage a greater utilization of Dulles. It might have, that is, until 1966 when the FAA signed another agreement with the air carriers tying the fees at the two airports together. It is what is known in the FAA as the rig.

That agreement effectively ruled out any possibility of a fee differential and over the short run at least, actually had the effect of giving the FAA an incentive to limit the growth of Dulles and to continue heavy use of National. While it appears that this reverse incentive would have been corrected over a longer term, what is most significant about the agreements is that they contracted away one of the powers available to the FAA to manage these airports in the public interest.

I might add here that this agreement also makes it impossible for the FAA to share measurably in any profit that may result from the admission of stretch 727's at National, profits which the FAA has indicated could be quite substantial.

Mr. President, I can well understand the desire of the air carriers to continue to make the maximum possible use of National Airport which is unrivaled anywhere in the country for its proximity to the major city it serves. The air carriers have been allowed by the FAA to invest a great deal of their own money in expanding the terminal facilities of National and it is natural that they would want to make full use of them.

Someone, however, must represent and protect the public interest in seeing that rational limits are placed on the use of National and that the investment of tax dollars in Dulles is not wasted as it has been up until now. The airlines themselves will not and cannot be expected to do this voluntarily as General Quesada, former FAA Administrator, observed in recent testimony on this subject:

> The fact remains that one should not expect and certainly should not hope for the solution to National's problems to be reached by agreement among the airlines. The competitive instincts are such that this is not a hopeful solution.

Certainly, those problems will not be solved by an agency whose attitude too often seems to be what's good for the airlines is good for the country.

Mr. President, in testifying on a bill I have introduced to take the management of National and Dulles Airports away from the FAA, Administrator Shaffer conceded that the management of these facilities was inconsistent with the FAA's principal function of promoting the development and safety of civil aviation.

I would add only that it is a promotional role the FAA has grown too used to and that it is time for a change.

TRANSACTION OF ROUTINE MORNING BUSINESS

The PRESIDING OFFICER. Under the previous order the Senate will now proceed to the transaction of routine morning business, with a limitation of 3 minutes on statements.

HOW OUR POW'S ARE TREATED—A BLACK RECORD

Mr. PACKWOOD. Mr. President, through ages past war has been the ultimate expression of intransigence. When the ambitions of one nation or one ruler ran counter to those of another—and are nonnegotiable—a war has almost always resulted. An inevitable result has always been untold suffering and loss to the defeated army, their dependents and, indeed, to all the inhabitants of the defeated nation. Because the demands of war are traditionally greater than self, war becomes a justification for all the otherwise inhibited cruelties with which man's nature is endowed.

As the years have marched onward, however, and the ideals of civilization grew, men undertook to reduce the horrors of war insofar as they have affected the innocent victims. They have gone so far as to recognize that even the soldiers themselves are in a very clear sense merely victims of the war. And it has become customary among civilized nations, a part of international law in fact, that captured warriors are to be treated with compassion.

By mutual agreement of ages past, the leaders of warring nations have generally been immune from the direct personal effects of war. Of recent years this has been less so, but in the meantime the growing humanity of man has extended this understanding to the common soldiers who, by no stretch of the imagination, deserve to be blamed for the war or its effects.

Mr. President, the measure of a civilized nation these days is clearly determined by the manner in which it treats the unfortunate soldiers, seamen, or airmen who, through the fortunes of war, have fallen into the hands of their enemies. The world should know that Hanoi but convicts herself by the way she treats these men. The black record which that nation is forging for itself will lie in the scales of international justice for many years to come.

ORDER OF BUSINESS

Mr. PACKWOOD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. SPONG). The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. TOWER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

TRUTH IN TAXATION

Mr. TOWER. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "Truth in Taxation," published in the Washington Post of July 18, 1970.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TRUTH IN TAXATION

In case you haven't noticed, the airlines no longer advertise that the fare from here to the West Coast (coach fare) is $135 *plus federal tax*. Instead, they say the fare is $145.80 *including federal tax*. The reason is that Congress, in its wisdom, has made it a federal crime for any airline to say in its advertising how much it charges for transportation and how much the government adds to that in taxes.

In fact, this tax-hiding law of 1970 goes even further. It bars airlines and travel agencies from breaking down the total fare into its two parts on the tickets they sell. Just the other day, for instance, we were teasing an airline ticket clerk about this and she said, "Oh, I can tell you what the tax is. I just can't write it down." Now she may be carrying the law a little far but who can blame her? Nobody wants to be dragged into criminal court and fined up to $100 for telling you the truth about air fares and taxes.

There is, of course, an argument for this new practice and it is the one Senator Long adopted in explaining on the Senate floor what this is all about. This, he said, "will give assurance that the public will know the total airfare for a particular domestic flight and not be misled into assuming that the fare alone represents the total cost." Un-

doubtedly, some people have been misled by the $135 *plus federal tax bit*. But we suspect that Senator Tower also caught some of the seasoning behind this new criminal law in his complaint that its purpose is to conceal from the taxpayers the tax increase on airline tickets that went into effect July 1.

Laying aside, for the moment, all the arguments about the First Amendment and the peoples right to know (we may haul them out later on this issue if nothing else works) we would remind Congress of the Truth in Lending Act and all the recent speeches about truth in advertising. There ought to be something in the slogan, Truth in Taxation. If Congress were really concerned about keeping people informed of the full cost of travel, it would not have barred airlines from mentioning taxes but would have required simply that they state the total fare as well as their share of it. That's what the gasoline stations have been doing on their pumps for years and we've never seen an effort in Congress to stop them from talking about federal taxes.

ORDER OF BUSINESS

Mr. TOWER. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. HARRIS). The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. ALLEN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. MAGNUSON, from the Committee on Commerce, without amendment:

S. 3766. A bill to authorize appropriations to carry out the Fire Research and Safety Act of 1968 (Rept. No. 91-1040).

By Mr. ELLENDER, from the Committee on Appropriations, without amendment:

H.J. Res. 1328. Joint resolution making further continuing appropriations for the fiscal year 1971, and for other purposes (Rept. No. 91-1041).

FLAMMABLE FABRICS ACT AMENDMENTS OF 1970—REPORT OF A COMMITTEE—INDIVIDUAL VIEWS (S. REPT. NO. 91-1039)

Mr. MAGNUSON. Mr. President, from the Committee on Commerce, I report favorably, with amendments, the bill (S. 3765) to authorize appropriations for fiscal years 1971, 1972, and succeeding fiscal years to carry out the Flammable Fabrics Act, as amended, and I submit a report thereon. I ask unanimous consent that the report be printed, together with the individual views of the Senator from New Hampshire (Mr. COTTON) and the Senator from Kentucky (Mr. COOK).

The PRESIDING OFFICER (Mr. MILLER). The report will be received and the bill will be placed on the calendar; and, without objection, the report will be printed, as requested by the Senator from Washington.

BILLS INTRODUCED

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. SAXBE:

S. 4138. A bill to amend the Federal Water Pollution Control Act to promote the purposes of such act by authorizing loans to industry to abate and prevent water pollution; to the Committee on Public Works; and

S. 4139. A bill to amend the Internal Revenue Code of 1954 to authorize an incentive tax credit allowable with respect to facilities to control water and air pollution, to encourage the construction of such facilities; to the Committee on Finance.

(The remarks of Mr. SAXBE when he introduced the above bills appear later in the RECORD under the appropriate heading.)

By Mr. ERVIN:

S. 4140. A bill for the relief of Fan Zu Ming; to the Committee on the Judiciary.

By Mr. PASTORE:

S. 4141. A bill to amend the Atomic Energy Act of 1954, as amended, to eliminate the requirement for a finding of practical value, and for other purposes; to the Joint Committee on Atomic Energy.

By Mr. SPARKMAN (for himself and Mr. JAVITS):

S. 4142. A bill to establish a National Development Bank to provide loans to finance urgently needed public facilities for State and local governments and to help achieve a full employment economy by providing loans to business and industry when adequate loan funds at reasonable rates cannot be obtained from conventional lending sources, and to provide needed capital for other socially useful purposes; to the Committee on Banking and Currency.

(The remarks of Mr. SPARKMAN when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. HARTKE:

S. 4143. A bill to provide that certain expenses incurred in the construction of a school in Jeffersonville, Ind., shall be eligible as local grants-in-aid for purposes of title I of the Housing Act of 1949; to the Committee on Banking and Currency.

By Mr. MONDALE:

S. 4144. A bill for the relief of Seela Samarakoon; to the Committee on the Judiciary.

By Mr. MONDALE (for himself and Mr. JAVITS):

S. 4145. A bill to authorize loans under title I of the Housing Act of 1949 to aid in the development of the United Nations Development District; to the Committee on Banking and Currency.

(The remarks of Mr. MONDALE when he introduced the bill appear later in the RECORD under the appropriate heading.)

By Mr. MONDALE:

S. 4146. A bill to amend the Federal Trade Commission Act to prohibit certain unfair sales practices in the copper industry; to the Committee on Commerce.

(The remarks of Mr. MONDALE when he introduced the bill appear later in the RECORD under the appropriate heading.)

S. 4138 AND S. 4139—INTRODUCTION OF BILLS DIRECTED AT POLLUTION ABATEMENT

Mr. SAXBE. Mr. President, I introduce two bills directed at pollution abatement.

The first amends the Water Pollution Control Act and makes available to industry a revolving loan fund for the acquisition, construction, and installation of water pollution control equipment and facilities. This bill is directed at small- and medium-sized businesses. Its dollar limitation is $350,000, paralleling the statutory limit of federally guaranteed small-business loans. These direct loans will be made only if other sources are not available for industry to borrow at reasonable terms and conditions.

The thrust of this bill is to allow industries the financial means to clean up the discharge into our Nation's rivers and streams. The bill will allow smaller businessmen to acquire and install pollution equipment that has already been developed. This is not to say that additional funds should not be directed into the research and development of new pollution control equipment, rather it is to prevent businessmen from using the excuse of financial hardship as a reason for not installing pollution abatement equipment.

The small businessman today finds himself in a position where much-needed Federal, State, and local pollution standards have forced him into installing pollution control equipment. He usually has to borrow for this equipment and has a difficult time finding a bank who will lend him enough money for the installation and operation of nonproductive equipment. If such a businessman cannot find pollution control financing he is forced either to run the risk of being enjoined and penalized by Government for polluting the streams or going out of business and consequently putting his employees out of work.

Simultaneously, I am introducing a bill providing for an incentive tax credit for the taxpayer who undertakes construction programs for pollution abatement facilities.

This legislation permits a 20-percent tax credit to all business taxpayers installing pollution control equipment. The tax credit applies to all costs of the pollution control facility, including buildings, improvements, machinery, equipment, and total land cost.

As an alternative, the taxpayer is permitted at his election to amortize these expenditures over a 5-year period as provided in section 169 of the Internal Revenue Code.

For the taxpayer to qualify for the benefits of the incentive tax credit, he must obtain approval from an appropriate State agency that the facility, when constructed, will meet Federal-State standards for control of air and/or water pollution. The provisions of this legislation encourage the construction by industry of pollution abatement facilities to help solve some of the Nation's critical pollution problems.

The money expended for these projects would be put into nonproductive facilities. These are costly facilities to construct and require high nonproductive operating costs which must be charged against future earnings. An incentive tax credit will enable the business and industrial sector of our economy to take prompt action, in cooperation with Federal, State, and local governments, to solve the grave pollution problems facing our Nation.

This legislation allows the Government and industry the opportunity to share equally the cost of pollution abatement. Government has long been lax in enacting laws setting forth adequate standards to prevent pollution. Industry has taken advantage of the lack of action by our Congress and the legislatures of the several States. It is only fair that Government and industry participate in

tandem to abate and clean up the ravages of industrial pollution.

Industrial discharge certainly does not account for all our water pollution problems. Sewage from residential dwellings and inadequate municipal treatment plants contribute greatly to pollutants in our rivers. For example, the Potomac River has almost no industry along its banks but is one of the dirtiest rivers in America.

President Nixon's proposed legislation, introduced by the distinguished minority leader from Pennsylvania, Senator SCOTT, thoroughly attacks these pollution problems. I am a cosponsor of these measures and I hope they will be reported soon for consideration by this body.

Mr. President, the bills I introduce today are geared to work in cooperation with the administration's programs and existing Federal pollution legislation. They provide realistic incentives and financial means for industry to control the discharge of pollutants into our atmosphere and waterways.

The PRESIDING OFFICER (Mr. SAXBE). The bills will be received and appropriately referred.

The bills, introduced by Mr. SAXBE, were received, read twice by their titles and referred as indicated:

S. 4138. A bill to amend the Federal Water Pollution Control Act to promote the purposes of such act by authorizing loans to industry to abate and prevent water pollution; to the Committee on Public Works; and

S. 4139. A bill to amend the Internal Revenue Code of 1954 to authorize an incentive tax credit allowable with respect to facilities to control water and air pollution, to encourage the construction of such facilities; to the Committee on Finance.

S. 4142—INTRODUCTION OF THE NATIONAL DEVELOPMENT BANK ACT OF 1970

Mr. SPARKMAN. Mr. President, on Monday of this week the senior Senator from New York (Mr. JAVITS) spoke to this body in regard to the "liquidity crisis" which has resulted because of inflation and tight money. This liquidity crisis, Senator JAVITS points out, caused one of the Nation's largest corporations to go into bankruptcy.

In his speech the able Senator from New York pointed also to the other large corporations which reportedly have moved frantically under today's economic conditions to seek short-term money. In addition, he declared other corporations have either postponed or delayed public offerings because of the high interest rates presently being demanded.

In his statement he said, and I quote:

It is clear that the continued ability of certain large businesses to operate is very much in the national interest. It would have been tragic for our economy and for the national security of the United States if the Penn-Central bankruptcy had seriously disrupted the essential commercial paper market—and paralyzed companies dependent on it for operations.

There is much to be learned and much for which to be concerned when one studies Senator JAVITS' remarks. I commend him on his statement, and I commend him for the position he has taken in introducing his bill, S. 4127, to provide emergency authority for the guarantee of loans to aid business enterprises to meet temporary and urgent financial needs.

Certainly, I share the same concern as do Senator JAVITS and others for the financial stability of our large corporations as well as for our Nation.

But, Mr. President, as always there is another side to this coin. Very frankly, I have equal concern for our towns and cities, for our small businessmen—corporations, partnerships, and individuals—and for the people in rural and urban areas who find themselves in just as great a personal financial dilemma as does the Penn Central.

Inflation and the high cost of money, in fact, the inability of our towns and cities, small businessmen, and individuals to obtain funds they urgently need at any cost, is a very serious matter.

Inflation and high interest costs, which have continued to spiral upward for some time now, some months ago drove many of our communities as well as our large cities completely out of the money market. These entities, as both State and local governments, have simply been unable to finance urgent and necessary public works and facilities and, as a result, there has been an accelerated deterioration in existing facilities to the point where in many areas the health and welfare of our people are materially being affected.

Plans and programs to expand water and sewer systems, to build new schools or add additions to existing schools, hospitals, and airports have had to be shelved, simply because financing for such facilities is just not available or available at such a price that it is economically unfeasible to undertake these programs. In addition, plans to combat water pollution and air pollution have also had to be shelved or postponed indefinitely for the same reasons.

Tax and other financial sources available to our State and local governments are strained beyond capacity and yet, as times goes on, the demand for funds to provide the programs of which I am speaking will multiply many times in the near future.

Small businessmen; that is, the smaller corporations, partnerships, and individuals were among the first to be cut out of the money supply because of inflation and the high cost of money. Whereas, the bankruptcy or demise of the small businessmen certainly does not create or generate on a national basis a near economic crisis as did the bankruptcy of the Penn Central, the effects and implications in local economies—especially in rural economies—are just as severe as were the effects and implications of the Penn Central bankruptcy on the national economy.

When a person is laid off—is unemployed and cannot find a job—it makes little difference to him personally whether he worked for a major corporation or for a small businessman. In general, the implications and effect of unemployment are all the same. We are all aware that unemployment figures in the Nation have been on the rise for several months now. In summation local problems add up to national problems.

I agree with Senator JAVITS that the time has come when legislative steps are needed so that we can avoid the economy skirting the edges of economic disaster. I am not convinced, however, that our legislative efforts should be solely for the purpose of assisting "necessitous borrowers."

In fact, Mr. President, had a leadership position been taken and moral suasion and other powers of the President's office been used at an early date with some of our "necessitous borrowers" as well as with labor organizations and others, I wonder if we would now be looking for legislative means to avoid near misses to economic crisis.

I feel that if Federal exposure is to be used to provide liquidity that is not now obtainable on reasonable terms and conditions that such exposure must be made available on a loan or guaranteed loan basis to all those who are eligible and who urgently need this type of assistance not only to continue in business but also to provide essential public works and facilities and full employment for the unemployed as well as the underemployed.

It is in this connection then, Mr. President, that I introduce a bill to provide for the establishment of a National Development Bank. I ask unanimous consent that the bill be printed in full in the RECORD at the conclusion of my remarks.

Very generally, my bill would establish a banking facility at the Federal level for the purpose of making or guaranteeing long-term loans to State and local governments for public works and facilities to provide urgent and vital public services to safeguard the health and welfare of our people. In addition, the bank to be established by my bill could make or guarantee loans to businesses and commercial concerns for expansion and for the purpose of achieving a full employment economy for our people.

My bill provides that the interest rate on loans to State and local governments and public agencies would not exceed per annum the Federal Reserve discount rate which is presently 6 percent. This interest rate for those public entities which cannot find funds at any price would be extremely helpful in letting programs that have been shelved proceed.

Loans made or guaranteed to businesses and commercial concerns would be made at an interest rate no less than the Federal Reserve discount rate and no more than one and a half percentum added to that rate.

The bill further provides as a prerequisite of obtaining loans from the bank that the borrower must show he is otherwise unable to obtain funds on reasonable terms and conditions.

Among the other usual and necessary powers provided to this new banking facility, the bill would authorize the bank to have capital stock of $500 million to be subscribed by the U.S. Treasury. The outstanding indebtedness of the bank at any one time, including contingent liabilities on outstanding guarantees, could not

exceed 20 times the paid in capital stock of the bank at that time.

Mr. President, my bill in essence establishes a reconstruction finance corporation for this era of our economic plight. A companion bill is being introduced by my counterpart, Mr. PATMAN, the chairman of the Banking and Currency Committee in the House of Representatives. We both feel that if our proposal is enacted into law, the legislation will overcome many of the problems for State and local governments, businessmen, and the people—problems brought about by inflation, and the tight-money, high-interest rate conditions in our present economy.

The PRESIDING OFFICER (Mr. HARRIS). The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 4142) to establish a National Development Bank to provide loans to finance urgently needed public facilities for State and local governments and to help achieve a full employment economy by providing loans to business and industry when adequate loan funds at reasonable rates cannot be obtained from conventional lending sources, and to provide needed capital for other socially useful purposes, introduced by Mr. SPARKMAN, was received, read twice by its title, referred to the Committee on Banking and Currency, and ordered to be printed in the RECORD, as follows:

S. 4142

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SHORT TITLE

SEC. 101. This Act may be cited as the National Development Bank Act of 1970.

FINDINGS AND DECLARATION OF PURPOSE

SEC. 102. (a) The Congress hereby makes the following findings:

(1) Inflation and tight money-high interest rate conditions make it impossible to achieve sound and orderly development of the Nation's communities to accommodate our growing population. Adequate and timely provision of a wide variety of public works and community facilities, such as streets, water, sewers, schools, hospitals, airports, mass transit, recreation as well as facilities to reduce and eliminate air and water pollution are immediately needed to provide required social services, safeguard the health and welfare of the population and halt rising unemployment.

(2) Tax and other financial sources currently available to State and local governments to finance such public works and facilities are strained beyond capacity yet the demand for such funds will multiply many times in the near future.

(3) Public investment in our Nation's communities, when efficiently planned and carried out, will add to the wealth of individual communities as well as the wealth of the Nation as a whole.

(4) It is necessary to provide an adequate source of loan funds at reasonable rates to help finance expansion and development of businesses and industries in order to achieve a full employment economy, especially for those Americans trapped in depressed urban and rural areas.

(b) It is the purpose of this Act to establish a National Development Bank to make and guarantee long term loans to State and local governments for public works and facilities and for business and industrial expansion and development to provide urgent, vital public services, safeguard the health and welfare of our people and to achieve a full employment economy for our citizens.

DEFINITIONS AND RULES OF CONSTRUCTION

SEC. 103. (a) The definitions and rules of construction set forth in this section apply for the purposes of this Act.

(b) The term "public facility" means the structures and equipment owned and operated by State and local governments to provide medical, social, education, transportation, pollution control and other services.

(c) The term "supporting public facilities" means those facilities which are usually publically owned and are necessary for the operation of businesses and industries, such as roads and sewer and water systems.

(d) The term "effective interest rate" means the total amounts paid on a loan for interest, commissions, bonuses, discounts, premiums and other similar charges.

ESTABLISHMENT

SEC. 104. There is hereby created a body corporate to be known as the National Development Bank (referred to in this Act as the Bank).

BOARD OF DIRECTORS

SEC. 105. The management of the Bank shall be vested in a Board of Directors consisting of the Secretary of the Treasury, the Secretary of Commerce, the Secretary of Labor, Secretary of Agriculture, and eleven other persons who shall be appointed by the President with the advice and consent of the Senate. Persons so appointed shall include representatives of State or local governments, private enterprise, organized labor and rural organizations dealing with economic and social problems of depressed areas. In making such appointments the President shall (1) seek to achieve a balanced representation of the interests of urban and rural areas, and (2) select persons who, among other relevant considerations, are knowledgeable in the social and economic problems of low income persons. The terms of directors appointed by the President shall be two years, commencing with the date of enactment of this Act. Any director appointed to fill a vacancy shall be appointed only for the unexpired portion of the term. Any director may continue to serve as such after the expiration of the term for which he was appointed until his successor has been appointed and has qualified.

APPOINTMENT OF OFFICERS AND EMPLOYEES

SEC. 106. The Board of Directors of the Bank shall appoint a president of the Bank and such other officers and employees as it deems necessary to carry out the functions of the Bank. Such appointments may be made without regard to the provisions of title 5, United States Code, governing appointments in the competitive service, and persons so appointed may be paid without regard to the provisions of chapter 51 of subchapter III of chapter 53 of such title relating to classification and General Schedule pay rates. The president of the Bank shall be an ex officio member of the Board of Directors and may participate in meetings of the board except that he shall have no vote except in case of an equal division. No individual other than a citizen of the United States may be an officer of the Bank. No officer of the Bank shall receive any salary or other remuneration from any source other than the Bank during the period of his employment by the Bank.

CONFLICT OF INTEREST

SEC. 107. (a) No director, officer, attorney, agent, or employee of the Bank shall in any manner, directly or indirectly, participate in the deliberations upon or the determination of any question affecting his personal interests, or the interests of any corporation, partnership, or association in which he is directly or indirectly personally interested.

(b) The Bank shall not engage in political activities nor provide financing for or assist in any manner any project or facility involving political parties, nor shall the directors, officers, employees, or agents of the Bank in any way use their connection with the Bank for the purpose of influencing the outcome of any election.

GENERAL CORPORATE POWERS

SEC. 108. Except to the extent inconsistent with the provisions of this Act, the Bank shall have the general corporate powers of a corporation organized and existing under the laws of the District of Columbia.

PRINCIPAL OFFICE; BRANCHES

SEC. 109. The principle office of the Bank shall be located in the District of Columbia, and it may establish agencies or branch offices in any city of the United States.

CAPITAL STOCK

SEC. 110. (a) The Bank shall have capital stock of $500,000,000 subscribed by the United States, payment for which shall be subject to call in whole or in part by the Board of Directors.

(b) The Secretary of the Treasury is authorized to, and upon request of the Board of Directors shall, purchase stock in amounts designated by the Board of Directors up to a total of $500,000,000.

BORROWING AUTHORITY

SEC. 111. (a) The Bank may issue notes, debentures, bonds, guarantees, and other evidences of indebtedness in such amounts and on such terms and conditions as the corporation may determine subject to the limitations prescribed in this Act.

(b) The aggregate outstanding indebtedness of the Bank at any time, including contingent liabilities on outstanding guarantees, may not exceed twenty times the paid-in capital stock of the Bank at that time.

(c) The obligations of the Bank under this section shall be fully and unconditionally guaranteed both as to interest and principal by the United States and such guarantee shall be expressed on the face thereof.

(d) In the event that the Bank is unable to pay upon demand, when due, any of its lawful obligations, the Secretary of the Treasury shall pay the amount thereof and thereupon to the extent of the amount so paid by the Secretary of the Treasury shall succeed to all the rights of the holder of the obligations.

PURCHASE OF ASSETS BY TREASURY

SEC. 112. The Secretary of the Treasury is authorized to purchase from the Bank any asset of the Bank at such price as may be agreed upon between the Secretary and the Bank.

INVESTMENT STATUS OF OBLIGATIONS OF BANK

SEC. 113. All obligations issued by the Bank shall be lawful investments for, and may be accepted as security for, all fiduciary, trust, and public funds the investment or deposit of which is under the authority or control of the United States or of any officer or officers thereof.

LIMITATIONS ON LOANS AND GUARANTEES

SEC. 114. (a) No loan may be made or guaranteed by the Bank if the borrower is otherwise able to obtain funds on reasonable terms.

(b) The Bank may not make or guarantee any loan to finance any enterprise or activity outside the United States, its territories and possessions.

LOANS FOR COMMUNITY DEVELOPMENT

SEC. 115. (a) The Bank may make or guarantee loans or purchase obligations to finance capital expenditures for comprehensive land use planning, public works, community facilities, land for housing development, public transportation, and similar community facilities, such projects and fa-

cilities to conform with comprehensive area land use plans. Whenever possible such facilities and projects are to be of direct and substantial benefit to residents of urban slum and depressed rural areas, or provide other benefits specified by the Bank to carry out the purposes of this Act.

LOANS TO COMMERCE AND INDUSTRY

SEC. 116. (a) The Bank may make or guarantee loans for the purchase of real and personal property, for working capital, and for training purposes to assure that existing businesses and industries have adequate funds and skilled manpower resources to compete in the market place for establishment of new businesses and industries. Any such loan shall me made upon such of the following conditions as the Bank may require:

(1) That the borrower agrees to fill a specified number of job openings to be determined by the Bank with people who, prior to such employment, were unemployed and underemployed.

(2) That the borrorwer agrees to conduct training courses for a specified number of unemployed and underemployed persons to be determined by the Bank with the result that these persons will, within a period of time to be determined by the Bank, be employed full time by the borrower.

(3) That the borrower agrees to any other requirements laid down by the Bank to carry out the purposes of this Act.

LOANS FOR SUPPORTING PUBLIC FACILITIES

SEC. 117. (a) To carry out the purposes of this Act, the Bank may make or guarantee loans or purchase obligations to finance the purchase or construction of roads, sewer and water systems, power and similar facilities necessary for the operation of businesses and industries or the operation of public facilities providing social, health, welfare, educational and other services to residents of urban slum and depressed rural areas.

(b) The effective interest rate for such loans shall not exceed the Federal Reserve discount rate.

TECHNICAL AND OTHER ASSISTANCE

SEC. 118. (a) The Bank may provide to borrowers whatever assistance, technical or otherwise, it considers necessary to protect its investment and to carry out the purposes of this Act.

(b) To assure fulfilling the purposes of this Act, the Bank shall direct an adequate number of staff members to seek out and confer with representatives of State and local governments, public agencies, nonprofit private organizations, companies, corporations, partnerships and individuals, in order to provide information about the services furnished by the Bank and to provide whatever assistance is necessary for utilization of such services.

SECURITY REQUIRED

SEC. 119. The board of directors of the Bank shall when practicable make whatever arrangement it considers adequate to secure loans made by the Bank.

MAXIMUM MATURITY

SEC. 120. (a) Each loan made by the Bank to any State or local government may be made for a period not exceeding twenty years, and the Bank may from time to time extend the period of payment.

(b) Each loan made by the Bank to any private corporation, company or individual may be made for a period not exceeding ten years, and the Bank may from time to time extend the period of payment until the loan is retired or until the loan is refinanced through another lending institution and the borrower's obligation to the Bank is extinguished.

GUARANTEED LOANS

SEC. 121. The Bank may fully guarantee the entire principal of any loan made by any bank, savings bank, trust company, building and loan or savings and loan association, insurance company, mortgage loan company or credit union, if

(1) the loan is made to carry out the purposes of this Act; and

(2) the effective interest rate for the loan is not less than the Federal Reserve discount rate, or more than such rate plus 1½ per centum per annum.

DIRECT LOANS

SEC. 122. To carry out the purposes of this Act, the Bank may make direct loans to State and local governments, public agencies, nonprofit private organizations, corporations, companies, partnerships and individuals. The effective interest rate for such loans (1) in the case of State and local governments and public agencies, shall not exceed the Federal Reserve discount rate; (2) in the case of other eligible entities and individuals, shall not be less than such discount rate, or more than such discount rate plus 1½ per centum per annum.

TAXABLE STATUS

SEC. 123. The Bank, its property, its franchise, capital, reserves, surplus, security holdings, and other funds, and its income shall be exempt from all taxation now or hereafter imposed by the United States or by any State or local taxing authority; except that (1) any real property and any tangible personal property of the Bank shall be subject to Federal, State, and local taxation to the same extent according to its value as other such property is taxed, and (2) any and all obligations issued by the Bank shall be subject both as to principal and interest to Federal, State, and local taxation to the same extent as the obligations of private corporations are taxed.

AUDIT BY GENERAL ACCOUNTING OFFICE

SEC. 124. The General Accounting Office shall audit the financial transactions of the Bank, and for this purpose shall have access to all its books, records, and accounts.

AUTHORIZATION OF APPROPRIATIONS

SEC. 125. (a) There is hereby authorized to be appropriated, to remain available without fiscal year limitation, the sum of $500,000,000 for subscription to the capital stock of the Bank.

(b) There are authorized to be appropriated such sums as may be necessary to pay the difference, if any, between the interest paid by the Bank on its obligations and interest received by the Bank on its loans, and to reimburse the capital of the Bank to the extent of any defaults.

(c) There are authorized to be appropriated such sums as may be necessary for payments of $125 a day to members of the board of directors for each day they are engaged in the performance of their duties to the Bank together with such sums required for travel expenses by members of the board of directors when the performance of their duties requires them to be away from home.

COSPONSOR

Mr. JAVITS subsequently said: Mr. President, a very interesting and important bill was introduced today by the chairman of the Committee on Banking and Currency (Mr. SPARKMAN), together with the chairman of the Committee on Banking and Currency in the other body. The bill is S. 4142. The bill endeavors to deal with the question of a present-day RFC and the problem of dealing with the present and long-term liquidity crisis in the American corporate field.

This is also the subject of a bill I introduced on Monday seeking an extensive program of loan guarantees to deal with the very same crisis. I think it is urgently desirable that action take place on such legislation.

This proposal seeks a National Development Bank. I have discussed this matter with the Senator from Alabama and he is agreeable to my name being added as a cosponsor of his bill. Inasmuch as I think action in this field is urgently required in the economic interests of our country, I ask unanimous consent, with the consent of the sponsor of the bill, which I have already obtained, that my name may be added as a cosponsor of S. 4142.

The PRESIDING OFFICER. Without objection, it is so ordered.

S. 4145—INTRODUCTION OF A BILL PROVIDING FOR THE FEDERAL GUARANTY OF BONDS TO BE ISSUED BY THE UNITED NATIONS DEVELOPMENT CORP.

Mr. MONDALE. Mr. President, I am pleased to introduce legislation which serves a vital national interest—the continued ability of the United Nations to pursue its role of promoting progress and maintaining peace throughout the world. Specifically, this legislation would provide for a guaranty by the Federal Government of taxable bonds sold to private investors for the purpose of financing the much needed construction of United Nations related facilities opposite the U.N. site in New York City.

In 1945 the U.S. Government invited the United Nations to make its headquarters in New York City. When it did this, the United States assumed both a legal and moral obligation to assure that adequate facilities are provided for the world organization. A contemporary report of the House Foreign Affairs Committee which considered the headquarters argeement recognized this obligation:

> The United States is under special responsibilities to assure that the arrangements made suffice for the efficient functioning of the United Nations. . . .

The House report went on to underscore that the United States has a peculiar relationship in that it is more deeply involved—than other member nations—domestically in the nature of the arrangements and the manner of their working.

Recognition of this obligation was expressed in the June 26, 1947, agreement between the United States and the United Nations which established U.N. headquarters in New York City. That agreement also provides that the United States will "take all reasonable steps to insure that the amenities of the headquarters district are not prejudiced and that the purposes for which the district is required are not obstructed by any use made of the land in the vicinity of the district."

The present situation at the U.N. is as follows: The member nations have more than doubled from the original 51. There are now 126. Annual visitors to the U.N. have quadrupled since 1946. Last year there were 2 million. This same scale of

growth applies to the number of U.N. personnel.

The practical consequences of this growth are severe crowding and congestion which adversely affect the city, U.N. personnel, and visitors to the U.N., 90 percent of whom are Americans.

More specifically, there is a severe shortage of office space for missions and related U.N. organizations. Housing for international personnel, always a sensitive issue, presents greater problems than ever. Pedestrian and vehicular traffic is heavy, mixed, and dangerous. There is still no convenient hotel space for visiting dignitaries and other visitors, official and private. This creates unusual security problems whenever visiting heads of state come to the U.N.

The current inconvenience, expense, and congestion irritate diplomats, staff and visitors, and interfere with the effective operations of the U.N. One example is the crush of visitors who can hamper the normal business workings of the U.N. There are no adequate cafeterias and auditoriums, no bus terminals for the visitors or educational facilities. Unlike the excellent visitor facilities provided at national parks, the United States ironically provides nothing for the U.N. which is one of the Nation's top tourist attractions. This makes it difficult for visitors to understand the work of the United Nations, and the vital U.S. role in maintaining world peace.

The importance of having the U.N. in this country, the obligations of being host nation, the responsibilities explicit in the original headquarters agreement, the inadequacy of current U.N. visitor facilities and its effect on our citizens, and the obvious impact of U.N. overcrowding on our foreign relations all serve to make a program offering relief a matter of prime national interest.

In order to provide these vitally needed facilities, a United Nations Development Center has been planned to develop a two-block area adjacent to the U.N. Building. The United Nations Development Center will be constructed by the United Nations Development Corp., a nonprofit public benefit corporation created by special act of the New York State Legislature. Its income and its obligations are exempt from New York State and city income taxes, and it is exempt from Federal income tax. Its purpose is to assist the United Nations with its related space needs through a comprehensive and coordinated development project next to the present United Nations Headquarters.

The planned development includes office space for U.N. missions and related nongovernmental organizations; housing units for members and staff of missions to the U.N.; a hotel for visitors and dignitaries attending the U.N.; and a visitors center for assembly, orientation and education of groups touring the U.N. The U.N. center is designed to meet the need for facilities of this type in connection with U.N.-related activities for the next 25 years. The total projected cost, including land acquisition, is currently estimated at $308 million.

This plan has been developed with the aid and consultation of the Secretary General to the United Nations, the United Nations Secretariat and the U.S. mission to the United Nations. It has also had the benefit of advice and support from New York City and State officials, and from congressional and administrative figures. Secretary of State Rogers, for example, found the purpose and program of the corporation to be "in the national interest" and important "to the effective functioning of the U.S. mission to the U.N. and to the successful pursuit of the U.S. interests in the U.N." The Secretary has given "strong and wholehearted endorsement" to the legislation I am introducing today which is so crucial to the realization of this program.

The corporation consists of nine members who also constitute its board of directors. Two directors serve by virtue of their offices as heads of the New York City Housing and Development Administration and the New York City Planning Commission. Two of the others are appointed by the Governor of New York and five by the mayor of the city of New York after consultation with the Secretary General of the United Nations and the U.S. Ambassador to the United Nations. The chairman of the board of directors is John J. McCloy. The remaining directors are key local citizens and officials. The corporation was organized in January of 1969. Since that time, it has undertaken studies of the needs of the United Nations and related organizations, and has prepared a development plan to meet them.

The activities of the corporation will be comparable to those of a local public agency operating in an urban renewal area with assistance under the 1949 Housing Act. The corporation is a special-purpose public agency and will conduct specific activities of a public nature. Its plan for a U.N. center has been approved by three local public authorities: namely, the New York City Housing and Development Administration, the New York City Planning Commission, and the New York City Board of Estimate after the required public hearings. The activities and the expenditures of the corporation are subject to annual fiscal review by the city and State of New York.

The proposed legislation would add a new section 119 to the Housing Act of 1949 authorizing the Secretary of Housing and Urban Development to make commitments for loans to the corporation to finance the acquisition and clearance of real property, and the development and construction of buildings and other facilities within the United Nations Development District in New York in accordance with the approved development plan.

Commitments for loans under section 119 would be the same as those which the Secretary is authorized to make for urban renewal projects assisted under the 1949 Housing Act. It is not anticipated, however, that any loans would in fact be made because the Corporation, using the security of the commitment, will be able to obtain such funds from private investors. The effect of this arrangement is a federal guaranty of the payment of interest and principal of the corporation's obligations.

Before the Secretary can make any commitment under section 119, he will be required to receive assurances that the corporation will provide an adequate relocation program and assistance for those displaced by its activities, as is required in connection with any urban renewal project assisted under the 1949 Housing Act, and he is authorized to impose any additional conditions he may deem advisable.

No advances for planning are authorized under section 119 and the corporation will bear all such costs which, subject to the approval of the Secretary, may be included in the cost of the project. In addition, no project grants or capital grants would be made by the Secretary to assist the corporation. In contrast the Federal Government makes project capital grants to finance the Federal share of urban renewal projects and pays the full cost of relocating persons and business concerns displaced from these projects. Under section 119, these costs would be borne by the corporation and not the Federal Government.

Section 119 expressly provides that section 102(g) of the Housing Act which exempts interest on obligations issued under title I from Federal taxation, as well as section 103 of the Internal Revenue Code will not apply to bonds sold to finance the development—although the corporation will have exemption from New York City and State income tax. Under existing law, interest on all or a portion of the corporation's bonds—depending on the use of the proceeds—would be exempt from Federal income tax. The proposed amendment would make all interest on the corporation's bond fully taxable for Federal income tax purposes.

It is rare a project of this kind can be constructed without the use of public funds for direct grants or loans. All the proposed legislation involves is a Federal guarantee of the U.N. Development Corp.'s obligations which imposes only a contingent liability on the Federal Government in the event of a default. The likelihood of such a default occurring is extremely remote since the projected net revenues are more than adequate to meet annual debt service requirements.

I respectfully submit the proposed legislation serves a fundamental national interest—the maintenance of international peace—and I urge its prompt enactment by the Congress.

The PRESIDING OFFICER (Mr. BENNETT). The bill will be received and appropriately referred.

The bill (S. 4145) to authorize loans under title I of the Housing Act of 1949 to aid in the development of the United Nations Development District, introduced by Mr. MONDALE (for himself and Mr. JAVITS), was received, read twice by its title, and referred to the Committee on Banking and Currency.

S. 4146—INTRODUCTION OF A BILL TO RESTORE COMPETITION TO THE COPPER INDUSTRY

Mr. MONDALE. Mr. President, I am introducing today a bill to restore a sembalance of free competition to a basic industry which is vital both to domestic and defense needs.

I began looking at the copper industry last year when it was revealed that domestic copper prices were rising at a 25-percent annual rate.

Such a price rise, of course, does not in itself absolutely prove anticompetitive behavior in the industry—even though copper happens to be one of our most concentrated industries, with four firms controlling some 70 percent of all domestic mining and 80 percent of all domestic refining capacity. In fact, the increase in the price of refined copper is, at least to some degree, a reflection of a worldwide shortage of copper which has driven up prices throughout the world.

But my examination soon made me aware of an anticompetitive situation even more insidious than the typical oligopolistic price management. This situation—I think unique to the copper industry—is the existence of a "two-tiered" pricing system.

Under this system, the giant domestic producers, which mine, smelt, and refine the copper that is then sold to the fabricators, have maintained a price which, since 1964, has generally been at least 30 to 40 percent below the world market price for refined copper as reflected for the London Metal Exchange. At first glance, this would seem to be a strange but fortuitous situation—a domestic price in a heavily concentrated industry which is actually lower than it seemingly could be. And, in a limited sense this is so: In spite of the astronomical increases in the domestic price of refined copper, the current price of about $0.60 a pound is indeed below that price which would probably prevail in a truly open and competitive world market.

However, since there is not enough domestically produced refined copper to meet our needs and supply the demands of our domestic fabricators, the additional demand must be met either through the purchase of scrap copper or through buying foreign copper at the higher world price as quoted on the London Metal Exchange.

In April of this year, the world price was nearly $0.80 a pound compared to a "producer" price of about $0.56 per pound.

Currently this gap is much less due to recent increases in domestic prices and a great sudden drop in the world price. But indicators are that the gap, in existence since 1964, will soon open up again, with world prices considerably outrunning domestic producer prices.

So far, the situation may look simply like a competitive anomaly, where the domestic producing giants persist in selling, at an unnaturally low price, a supply of refined copper that is unable to meet the needs of the more competitive copper fabricators. But the great problem—and the disturbing situation—is in which fabricators get this limited supply of lower priced domestic production.

Since 1963, when this two-tiered system came into being, the domestic producers, dominated by the half dozen giants, have allocated their refined copper to their preferred customers, forcing all those fabricators not so fortunate to produce and attempt to compete by buying from the world market at far higher prices. Many of these preferred fabricators are, in fact, subsidiaries of, or controlled by, the producing giants. All of them enjoy an enormous competitive edge in the crucial fabricating sector of the industry. Any of them can continue to exist and show a substantial profit even though it may be far more inefficient than the struggling fabricator which gets no domestic supply. None of them has a strong motivation to increase efficiency or capacity, in spite of persisting copper shortages and the high prices for fabricated copper goods. And the entire industry is virtually foreclosed from any new entrants which would be unable to compete without a cut of the producer's supply.

Mr. President, all of this has been fully documented in the May 13, 1970, report of the Subcommittee on Copper to the Cabinet Committee on Economic Policy. This task force was chaired by Hendrik Houthakker, of the President's Council on Economic Advisers. Also serving on this Committee were Assistant Secretary of State Philip Trezise, former Assistant Secretary of Commerce Kenneth Davis, Assistant Secretary of the Interior Hollis Dole, Assistant Attorney General Richard McLaren, and Fred Russell and William Truppner of the Office of Emergency Preparedness.

Their report, which has yet to produce any concrete action, reads in part:

> Firms whose allocations of producer copper are disproportionately low are placed at a serious competitive disadvantage. Where the copper content represents a fairly large proportion of the value of a product, even a very efficient fabricator who has to obtain all or the great bulk of his metal on the open market may not be able to absorb this difference in his raw material costs without losses. Over several years this situation has led to the shutting down of some plants and reductions in the net worth of some companies that did not have access to the cheaper metal. It has also restricted the entry of new concerns because of their inability to obtain producer allocations.
>
> On the other side, firms obtaining large allocations enjoy a broader spread between raw materials cost and product price. They can, therefore, make larger profits even at lower levels of efficiency.

Mr. President, this report documents the perversion of competition within the copper industry: enormous concentration with vertical integration, discriminatory selling, reciprocal dealings between producers and fabricators, indisputable and serious damage to many independent fabricators, and the great possibility if not probability of collusion in restraint of trade.

I put great stock on free competition. It is the best way the world has yet found for promoting economic justice, freedom, and efficiency. Wherever possible, the role of the Government in the private sector ought to be to strengthen and preserve free competition.

It is patently clear to me that something must be done to restore free competition to the copper industry. Without trying to make a restraint-of-trade case at this time, I will simply cite another section of the Houthakker report:

> Nevertheless, the potential for anticompetitive behavior and for deviations from free market efficiency are obviously great. Under the two-price system it is simply too easy for a producer to bias his allocations of low-priced copper toward firms that do not compete with its fabricating subsidiary and away from those that do. It is also very unlikely that the pattern of allocations, whatever the design of the producers, would work out to be the same as that obtaining in an open and competitive market.

Dr. Houthakker hit upon the anticompetitive nature of the copper industry even more directly in a speech last March 11 at Duke University:

> The mere coexistence of these two very different prices for essentially the same commodity (refined copper in the form of electrolytic wirebars) is evidence that competition is severely curtailed.
>
> Obviously, this is not an equilibrium situation and could not have occurred in a competitive market . . . a two-price market means a market that is not free.

Mr. President, this is a unique threat to free competition in a key industry. Perpetuation of the current system means that a half dozen vertically integrated giants will continue to supply their own fabricating subsidiaries and a few select customers at a rate which is far below the world price. They hold the economic life of every fabricating company and every employee of those companies in their hands. This situation is contrary to our free enterprise system and antithetical to the principles of efficient production, free entry, and fair pricing.

Mr. President, the Honorable RAY BLANTON of Tennessee has taken up this cause on the other side. He introduced a resolution—H.R. 885—in the House on March 19 to create a select committee to study this problem. He also introduced a bill on May 18—H.R. 17657—along with Congressman Moss which would amend the Federal Trade Commission Act to make the dual pricing system an unfair method of competition. Hearings have been held on H.R. 17657, and a valuable record is finally beginning to emerge on this phenomenon.

The bill I am introducing today is nearly identical to H.R. 17657. It would preclude the selling of refined copper at a price significantly below the world price unless a system were devised to allocate this copper among domestic users in such a way as to insure fair competition among these users.

Mr. President, there may be other solutions—indeed, the Houthakker report lists five—and the Justice Department is allegedly investigating the situation at his time. However, the danger to the fabricators who are not within the anointed few is immediate and catastrophic. Something must be done now to save fabricating industries which are viable, efficient, and potentially profit-

able in every way but in their lack of access to the "inner circle." I urge congressional study and prompt action on this bill, and I ask that the text be printed in the RECORD in full.

The PRESIDING OFFICER (Mr. BENNETT). The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 4146) to amend the Federal Trade Commission Act to prohibit certain unfair sales practices in the copper industry, introduced by Mr. MONDALE, was received, read twice by its title, referred to the Committee on Commerce, and ordered to be printed in the RECORD, as follows:

S. 4146

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 5 (a) of the Federal Trade Commission Act (15 U.S.C. 45 (a)) is amended by adding at the end thereof the following new paragraph:

"(7) It shall be an unfair method of competition within the meaning of paragrapn (1) of this subsection for any person to sell refined copper in commerce at a price which the Commission determines is significantly below the world market price for refined copper of a similar grade, unless such person allocates such copper or refined copper of such grade in a manner which the Commission determines is fair and equitable to such users."

Sec. 2. The amendment made by the first section of this Act shall apply with respect to sales occurring more than ninety days after the date of enactment of this Act.

ADDITIONAL COSPONSORS OF BILLS

S. 2005

Mr. BYRD of West Virginia. Mr. President, on behalf of the Senator from Maine (Mr. MUSKIE), I ask unanimous consent that, at the next printing, the name of the Senator from New Jersey (Mr. WILLIAMS) be added as a cosponsor of S. 2005, the Resource Recovery Act.

The PRESIDING OFFICER (Mr. BENNETT). Without objection, it is so ordered.

S. 3486

Mr. BELLMON. Mr. President, I ask unanimous consent that, at the next printing, the name of the Senator from Alaska (Mr. STEVENS) be added as a cosponsor of S. 3486, to establish a Commission on Oil Imports, as an independent agency of the Government, to authorize the Commission to impose quotas on imports of petroleum and petroleum products, and for other purposes.

The PRESIDING OFFICER (Mr. BELLMON). Without objection, it is so ordered.

S. 3546 AND S. 3687

Mr. BYRD of West Virginia. Mr. President, on behalf of the Senator from Maine (Mr. MUSKIE), I ask unanimous consent that, at the next printing, the name of Senator HARRIS from Oklahoma be added as a cosponsor of S. 3546, the National Air Quality Standards Act of 1970, which would accelerate the designation of air quality control regions required by the Air Quality Act of 1967, and of S. 3687, the National Water Quality Standards Act of 1970, which would increase the Federal grant authorization for waste treatment facilities to $2.5 billion a year for 5 fiscal years and extend the standards program to all navigable waters.

The PRESIDING OFFICER (Mr. BENNETT). Without objection, it is so ordered.

S. 3650

Mr. GOLDWATER. Mr. President, on behalf of the Senator from Nebraska (Mr. HRUSKA), I ask unanimous consent that, at the next printing, the name of the Senator from Iowa (Mr. MILLER) be added as a cosponsor of S. 3650, to amend section 837, title 18, United States Code, to strengthen the laws relating to explosives and the penalties with respect thereto, and for other purposes.

The PRESIDING OFFICER (Mr. MILLER). Without objection, it is so ordered.

S. 3807

Mr. COOK. Mr. President, on behalf of the Senator from Illinois (Mr. SMITH), I ask unanimous consent that, at the next printing, the name of the Senator from Pennsylvania (Mr. SCOTT) be added as a cosponsor of S. 3807, to provide a program to improve the opportunity of students in elementary and secondary schools to study cultural heritages of the major ethnic groups in the Nation.

The PRESIDING OFFICER (Mr. BENNETT). Without objection, it is so ordered.

S. 3936

Mr. ERVIN. Mr. President, I ask unanimous consent that at the next printing the names of the Senator from Hawaii (Mr. INOUYE), the Senator from Nevada (Mr. BIBLE), the Senator from Hawaii (Mr. FONG), the Senator from Nebraska (Mr. CURTIS), the Senator from Georgia (Mr. TALMADGE), the Senator from Rhode Island (Mr. PELL), the Senator from Texas (Mr. YARBOROUGH), the Senator from Minnesota (Mr. MONDALE), the Senator from Tennessee (Mr. GORE), the Senator from North Dakota (Mr. BURDICK), the Senator from Maine (Mr. MUSKIE), the Senator from Utah (Mr. MOSS), the Senator from Florida (Mr. GURNEY), the Senator from Oregon (Mr. PACKWOOD), the Senator from Illinois (Mr. SMITH), and the Senator from New York (Mr. JAVITS) be added as cosponsors of S. 3936.

This bill, the Speedy Trial Act of 1970, is designed to give effect to the sixth amendment right to a speedy trial for persons charged with offenses against the United States, and to reduce the danger of recidivism by strengthening the supervision over persons released on bail, probation, or parole, and for other purposes.

The PRESIDING OFFICER (Mr. ALLEN). Without objection, it is so ordered.

S. 4032

Mr. BYRD of West Virginia. Mr. President, on behalf of the Senator from Oklahoma (Mr. HARRIS), I ask unanimous consent that, at the next printing, the names of the Senator from Indiana (Mr. BAYH), the Senator from Nevada (Mr. BIBLE), the Senator from Missouri (Mr. EAGLETON), the Senator from Alaska (Mr. GRAVEL), the Senator from South Carolina (Mr. HOLLINGS), the Senator from Hawaii (Mr. INOUYE), the Senator from Minnesota (Mr. MCCARTHY), the Senator from Montana (Mr. MANSFIELD), the Senator from Minnesota (Mr. MONDALE), the Senator from Rhode Island (Mr. PELL), the Senator from Alaska (Mr. STEVENS), the Senator from Maryland (Mr. TYDINGS), the Senator from New Jersey (Mr. WILLIAMS), and the Senator from Ohio (Mr. YOUNG), be added as cosponsors of S. 4032, to establish a National Advisory Commission on American Indian Education.

S. 4041

Mr. TOWER. Mr. President, I ask unanimous consent that, at the next printing, the names of the Senator from Indiana (Mr. HARTKE) and the Senator from Illinois (Mr. PERCY) be added as cosponsors of S. 4041, to repeal section 7275 of the Internal Revenue Code of 1954, relating to amounts to be shown on airline tickets and advertising.

The PRESIDING OFFICER (Mr. SPONG). Without objection, it is so ordered.

S. 4056

Mr. BELLMON. Mr. President, I ask unanimous consent that, at the next printing, the name of the distinguished junior Senator of Alaska (Mr. GRAVEL) be added as a cosponsor of S. 4056, to provide an effective and workable system of fiscal stabilization.

The PRESIDING OFFICER (Mr. BENNETT). Without objection, it is so ordered.

S. 4118

Mr. DOLE. Mr. President, I ask unanimous consent that, at the next printing, the name of the Senator from Oklahoma (Mr. BELLMON) be added as a cosponsor of S. 4118, the Agricultural Act of 1970.

The PRESIDING OFFICER (Mr. HARRIS). Without objection, it is so ordered.

ADDITIONAL COSPONSOR OF A JOINT RESOLUTION

SENATE JOINT RESOLUTION 218

Mr. DOLE. Mr. President, I ask unanimous consent that, at the next printing, the name of the Senator from California (Mr. MURPHY) be added as a cosponsor of Senate Joint Resolution 218, providing for the establishment of an annual "Day of Bread" and "Harvest Festival Week."

The PRESIDING OFFICER (Mr. HARRIS). Without objection, it is so ordered.

SENATE RESOLUTION 435—SUBMISSION OF A RESOLUTION RELATING TO THE PROTECTION OF CONSUMER SUPPLY OF NATURAL GAS

Mr. TOWER. Mr. President, on behalf of myself and Senators STEVENS, DOLE, PEARSON, COOK, LONG, YOUNG of North Dakota, BELLMON and HANSEN, I submit, for appropriate reference, a sense of the Senate resolution.

The PRESIDING OFFICER (Mr. SPONG). The resolution will be received and appropriately referred.

The resolution (S. Res. 435), which reads as follows, was referred to the Committee on Commerce:

S. RES. 435

Whereas, a shortage of natural gas exists in some areas of the United States;

Whereas, this shortage will spread to other areas of the United States during the coming months unless immediate corrective action is taken;

Whereas, severe hardship would accompany such shortages;

Whereas, it is in the best interest of the Nation and of the consumer to alleviate this shortage by securing adequate domestic supplies of natural gas to meet the present shortage and future demands for natural gas;

Whereas, natural gas is a desirable fuel because it pollutes least of all fuels;

Whereas, the Federal Power Commission regulates the price of natural gas paid to the producer of natural gas;

Whereas, the main cause of the shortage of natural gas in the United States is the low price paid to the producer;

Whereas, exploring for natural gas is a relatively high risk endeavor;

Whereas, there must exist adequate economic incentives for those who explore for natural gas;

Whereas, one necessary incentive is the assurance that the price to be received by the producer will be high enough to reward the high risk of invested capital;

Whereas, the free market mechanism is the best method for determining the price to be paid to the producer for his gas;

Whereas, the Federal Power Commission intends to reconsider the price of gas to be paid to the producer under contracts entered into by the producer after June 17, 1970; and

Whereas, the urgency of the situation requires immediate action: Now, therefore, be it

Resolved, That for the above reasons and in consideration of the above facts, the Senate hereby goes on record that it favors the free market mechanism as the most desirable method for determining the price of natural gas to be paid to the producer of natural gas; that the present price of natural gas as determined by the Federal Power Commission is too low to provide the necessary economic incentives to explore for new reserves of natural gas; and that it is in the best interest of the Nation and the consumer to allow the price of natural gas to be paid to the producer to seek its own level in the free market as this would tend to guarantee continued existence of adequate supplies of this desirable fuel.

Mr. TOWER. Mr. President, today the United States faces a dangerous natural gas shortage. The magnitude of this shortage was revealed in a recent report to the Federal Power Commission. This report stated the 12 major interstate gas transmission companies would be unable to meet an estimated demand of 3.1 billion cubic feet of gas per day for the winter of 1970–71. However, the report noted that some duplication of demand might exist in the estimates since some potential users may have inquired at more than one reporting company about the availability of gas to supply their needs. Even taking into account possible duplications, this is a large deficit.

Clearly many consumers will be denied the use of natural gas this winter. This is especially unfortunate since natural gas is the one fuel which does not pollute.

Furthermore, this shortage is likely to become more severe. This is so for three reasons.

First, to end the shortage, our producing capability must be increased. Even if the factors which caused this shortage could be immediately eliminated, there would still be a delay of from 4 to 6 years before new gas reserves could be delivered to the consumer. This delay is a little understood fact of life in the petroleum exploration industry. It is due to the normal, necessary, and time-consuming method of exploration which can involve the talents of the geologist, seismologist, and geophysicist who determine where to drill to achieve the highest possibility for success.

Next, the lease-broker attempts to secure a minimum quantity of acreage at a reasonable price. Usually, the broker must deal with many widely scattered landowners. After that, attorneys must examine and approve the title to the leases. Finally, the drilling can begin. This is usually the least time-consuming part of the operation. If the well encounters evidence of oil or gas, testing of the various prospective zones follows. If it is believed that commercial quantities can be recovered from those geologic formations, production equipment is installed.

Then, the purchase contract must be negotiated. If the gas is to be sold in another State, the FPC must approve all terms of the contract including, of course, the price to be received by the producer for his gas. The gathering line must be laid to the well. The gas is then gathered, processed, and transported to the distributor who, in turn, sells it to the consumer.

I feel that the nature and effects of this time lag should be thoroughly understood and appreciated. This normal delay tends to increase the shortage. Recognizing its existence makes even more imperative the urgent need for immediate action to alleviate this fuel shortage.

There is a second reason why this shortage is likely to become more severe. In the past, our energy requirements have increased at a more rapid rate than our population. From 1960 to 1968, the population increased by 11 percent, while our energy requirements increased by 41 percent. There is no readily apparent reason why we should expect this trend to change. Since natural gas presently supplies 35 percent of our energy requirements, it follows that as our population increases during the next 4 to 6 years, the demand for gas should increase at an even faster rate.

Another reason for the gap between supply and demand for natural gas to widen is the recent restricting by States of the use of some fuels which significantly contribute to pollution. As I noted earlier, natural gas pollutes the least of all presently available fuels. As users meet increasing demands for reduction in pollution, natural gas consumption soars. Many potential new users are finding great difficulty in obtaining natural gas and are forced to use other fuels which pollute the air to a much greater degree.

For these reasons, a worsening shortage appears inevitable.

Let us examine the more important factors which have caused this approaching crisis.

The most important factor, in my opinion, has been the 14 years of unrealistic and unworkable pricing practices imposed on the independent natural gas producers by the Federal Power Commission. The Supreme Court defined the "independent producer," in the 1954 landmark case of Phillips Petroleum Corp. against Wisconsin, et al., as a person who produced natural gas but who did not engage in interstate transmission of gas from the producing field to the consumer markets and who was not affiliated with any interstate natural gas pipeline company. Up to the time of this decision, the Federal Power Commission had held the position that the language of the Natural Gas Act of 1938, as amended, did not compel the Federal Power Commission to regulate the independent producer.

But, following the directive of the Supreme Court in that decision, the FPC instituted pricing practices which have been unfortunate. The FPC was ordered by the Court to regulate the independent producer as a utility. Normally, a utility is allowed to receive only a relatively low return on invested capital. This is justified on the grounds that the risk of not making a profit is virtually nonexistent. The utility simply proves its investment to the regulating agency, and it is allowed to adjust its prices upward in order to make the desired low profit.

The utility regulation approach as applied to the producer of natural gas virtually ignores the factors which differentiate the independent producer from a normal utility.

The most important difference between the two is the higher risk in exploring for petroleum. The risk is that the invested capital will be spent on a dry or commercially unproductive well. On the average, only one out of every nine exploratory wells encounters any trace of oil or gas, but only one out of every 50 exploratory wells produces enough oil or gas to repay its costs. Compare this risk to that of investing in a manufacturing plant, for example. The risk of failure is far less for a well-planned manufacturing venture than for an exploratory natural gas well. Even if the manufacturing enterprise fails, the investor still owns the land, building, and machinery which can be sold to diminish or eliminate the loss. On the other hand, when an investor spends his money on an exploratory well, the chances are much greater that he will lose his entire investment.

It is not difficult to understand, therefore, that when one considers the higher risk factor, there must exist some extraordinary incentive to induce an investor to spend his precious capital exploring for oil or gas. A fixed return of some 12 percent on the cost attributable to that single producing well

is not generally considered an adequate incentive. However, this is the rate of return which the FPC presently allows the independent producer. Of course, the FPC's formula for arriving at the profit margin is actually very complex, for it takes into consideration many varying possibilities. But 12 percent is the approximate rate of return permitted, and this is one of the basic reasons why we are presently facing a shortage of natural gas.

The FPC pricing system was designed to provide the consumer with a low-priced fuel. The system succeeded. The average retail price of natural gas has risen only 8 percent since 1960, while the consumer price index for all commodities has risen by 31 percent. The consumer bought this low-priced fuel. Consumption rose from 4.4 billion cubic feet of gas in 1947 to 19.4 billion cubic feet of gas in 1968. The share of natural gas in total U.S. power use has risen from 15.5 percent in 1947 to 34.9 percent in 1968.

While the sharply rising share of natural gas in total power has been due to a considerable extent to the qualitative advantages of natural gas, such as its ease of handling and its cleanliness, the primary reason for the increased consumption was due to the large cost benefits enjoyed by household and industrial users. For example, in 1968, in Brooklyn, N.Y., the cost of gas was exceeded by 35 percent for fuel oil, 47 percent for coal, and 168 percent for electricity. Similar disparities of price exist in other areas of the United States.

However, the FPC has held the price too low for too long. This neglect has caused serious economic stress upon independent producers. In the long run, the distributors and the consumers have also been adversely affected by this unrealistically low price for gas. As a result, they may not have adequate supplies of gas to distribute and to consume.

The low pricing policy has caused under investment in the exploration of natural gas. Referring to the problems facing producers of natural gas in its 1970 annual financial analysis of a group of petroleum companies, the Chase Manhattan Bank of New York City reported that:

> The expenditures for exploration and development have been much below indicated requirements. And, as a consequence, the nation is faced with a growing shortage of both oil and natural gas. The reason for the deficit of spending can be traced directly to the exceptionally low price for natural gas imposed by regulation.

The report continued that revenues from natural gas sales contributed by far the smallest amount to total company revenues. This helped to explain the lack of incentive to provide the capital and exploration expenditures necessary to find additional reserves.

Another factor which has contributed to the present shortage of natural gas is the uncertainty that the price of the gas will not be further lowered even though contracted for between the producer and the pipeline company and approved by the FPC. In the past, the FPC has made a folly of one of America's honored principles—the sanctity of the contract.

The best known example of this occurred in a Louisiana case. There, Pan American Petroleum Corporation contracted to sell gas from the Thibodeaux gas field in south Louisiana. Deliveries began in 1959 under a gas sales contract given "permanent" and "unconditional" certification by the FPC. This price was later challenged and a court proceeding followed. The result was that the FPC ordered the price paid Pan American lowered 13 percent under this permanent and unconditional contract. Since the new price was retroactive, Pan American had to arrange refunds totaling $839,000. This type of FPC action has had a serious lessening in the confidence of contract.

There are other similar examples of erosions of confidence in the sanctity of the contract. The sanctity of contract has been one of the cornerstones upon which this country's sound and dynamic economy was built and should remain inviolate. This fundamental principle was specifically written into our Constitution.

It should come as no surprise that implementation of these two policies of unreasonably low pricing and contract violation has resulted in a shortage of natural gas.

The FPC has been warned repeatedly. One such warning was given by former President Eisenhower. Shortly after the Supreme Court's Phillips decision in 1954, to which I referred earlier, Congress passed and sent to the President the Harris-Fulbright Act. This bill would have freed the independent producer from Federal regulation. By passing this act, Congress had repossessed the legislative prerogative delegated it by the Constitution by clarifying its intent that the independent producer be exempted from regulation.

President Eisenhower vetoed the bill for reasons other than those stated as its aims. He said when he vetoed it:

> I must make it quite clear that legislation confirming the basic objectives [of the Harris-Fulbright Bill] is needed. It is needed because the type of regulation required under present law will discourage individual initiative and incentive to explore for and develop new reserves of natural gas.
>
> In the long run this will limit supplies of gas which is contrary not only to the nation's interest but especially to the interest of the consumers.

President Eisenhower accurately foresaw the consequences of the debilitating effects of the FPC price regulations upon the independent producer and the consumer. Contrary to the interest of the Nation and consumer, a shortage now exists for the reasons given by President Eisenhower. Others have often and repeatedly warned the FPC and the Nation that shortages of natural gas would be the result of the repressive policies.

In all fairness, it should be noted again that the job of regulating the independent producer was not sought by the FPC. It was thrust upon the FPC by the Supreme Court's order following the Phillips decision.

Nothing will be gained by further references to the past, well-intentioned errors of the FPC. The task imposed upon it by the Supreme Court was all but impossible to achieve.

Rather, we need solutions to the Nation's present natural gas shortages. Needed now are policies aimed at insuring the continued existence of adequate supplies of natural gas to meet our growing consumer and industrial needs and to maintain our national security.

A rate hearing scheduled to begin July 29, 1970, in Midland, Tex., represents a focal point in the establishment of such new policies. Through this hearing, the FPC has initiated the gathering and evaluating of evidence and testimony concerning the proper price to be paid to the independent producers of natural gas in the Permian Basin, that geologic designation encompassing several counties of west Texas and eastern New Mexico.

The hearing also represents a focal point in time. It was 14 years ago in a similar hearing that the FPC first began to wrestle with the problems of regulating the independent producer. The FPC has come full circle and is now beginning anew.

In a larger sense, this hearing will involve a revamping of the procedure for determining the fair price of natural gas, not only for the Permian Basin, but also for the entire United States. The process used there to determine the fair price of gas will most probably be employed in subsequent rate hearings for other producing areas in the United States.

Thus, there is a focus of national attention upon the hearing. The results achieved there will probably influence this Nation's energy supplies for decades to come.

I commend the courage and wisdom shown by the FPC in instituting these hearings. I sincerely hope that these hearings mark the beginning of a process which will alleviate the effects of harmful policies.

The most harmful policy is the repressively low price of gas. In my opinion, the free market mechanism offers the most efficient and fair method for regulating the prices and supplies of natural gas. The ideal solution for correcting this Nation's gas shortage, while maintaining an equitable price to the consumer and the producer, would be best achieved by allowing the producer and the buyer to bargain without Federal interference. However, I feel that immediate steps must be taken to help alleviate the current shortage. The most direct step would be to raise the price of natural gas to a level high enough to provide the necessary incentive to the investor to seek and develop new reserves of natural gas. The Commission can effect such price changes consistent with past contracts without further legislative assistance, and this higher price should immediately stimulate the search for new reserves.

I hope the Midland hearing results in a decision by the FPC to recognize and properly reward those investors who stand ready to risk the capital necessary to explore for and develop new reserves of natural gas. These reserves are badly

needed to maintain our national security and to insure an adequate supply. This recognition can be achieved, I feel, by an increase in the price of gas paid in the Permian Basin of no less than 10 cents per thousand cubic feet above the present price.

Using again the example of the Brooklyn consumer, the price of natural gas there is presently about 42 cents per thousand cubic feet. If a 10-cent increase were passed on to the consumer, his total price would be 52 cents per thousand cubic feet.

This compares favorably to the price of gas imported from abroad in a liquid state and the anticipated price of the gas transported from the Alaskan North Slope. The price of gas from either of those two sources is approximately 60 cents per thousand cubic feet.

Mr. President, it has been rumored that the FPC was considering an increase of from 3 to 5 cents per thousand cubic feet for natural gas. But, a recent study showed that an approximated 3-cent increase is needed just to offset the cost of inflation and another 2 cents to offset the increased cost to the producer of the reduced depletion allowance. In other words, a 5-cent increase only brings the producer back to par.

I feel that a 5-cent increase is too low to stimulate the exploratory efforts necessary to secure adequate domestic supplies of natural gas to meet the present and expected future demands.

Mr. President, I feel that the Senate should register its feeling on this matter as a guide to the FPC in its deliberations on determining a fair price to be paid to the natural gas producer.

Accordingly, I herewith submit a sense of the Senate resolution relating to the protection of consumer supply of natural gas.

This resolution acknowledges the existing shortage of natural gas, attributes the shortage to the low price of gas presently allowed, and states that the best solution to the problem lies in allowing free market forces to determine the price of natural gas.

Mr. President, I feel that it is in the best interest of the consumer to have adequate supplies of this nonpollution fuel. Our supplies are running low. We must do all that we can to stimulate the private investor to explore for and develop our abundant gas reserves.

Adoption of this sense of the Senate resolution will, I believe, aid this cause.

Mr. DOLE. Mr. President, I join the junior Senator from Texas (Mr. TOWER) in cosponsoring his resolution urging the Federal Power Commission to adopt a realistic method for determining the price to be paid the natural gas producer for his product.

In 1954, the U.S. Supreme Court ruled that natural gas producers were subject to regulation by the Federal Power Commission and had the authority to fix the price of natural gas at the wellhead. The attempt by the Federal Power Commission to regulate the price of natural gas has been unsatisfactory. Price-fixing was implemented to protect the consuming public, but has instead discouraged natural gas exploration and development. While the establishment of a fixed price stimulated demand, it did not allow gas producers to compensate for increasing costs. As a result, producers were forced to cut back on exploration, and the United States now faces a dangerous and growing shortage of energy reserves. Failure to expand domestic natural gas production will compound present shortages which are certain to be aggravated by increasing demand for nonpollutant energy sources.

This problem was accurately described by William D. Smith in the Sunday, July 26, 1970, New York Times inserted into the RECORD by the junior Senator from Wyoming (Mr. HANSEN) on Monday, July 27, 1970, page S12176. Mr. Smith realistically points out the adverse effect of past policies which have discouraged the exploration for and development of new oil and gas reserves. His prediction of a gas shortage proved to be correct as the Monday, July 27, 1970, New York Times reported that the chairman of the New York State Public Service Commission, Joseph C. Swidler, announced that New York State is considering restricting the number of new customers gas companies may add. It is interesting to note that the same Mr. Swidler was chairman of the Federal Power Commission from 1961 to 1965 when many of the decisions that have created our present problems were made.

The problems of the independent oil and gas producer in Kansas are representative of the problems faced by the domestic oil and gas industry as a whole. The severe economic straights in which they find themselves will compound our energy shortages unless the Federal Power Commission and other Government agencies adopt more enlightened policies.

I ask unanimous consent that an article in the Independent Petroleum Monthly by James L. Porter, describing the plight of the independent producer in Kansas, be printed in the RECORD at this point.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

INDEPENDENTS NOW HOLD THE FATE OF KANSAS AS AN OIL- AND GAS-PRODUCING PROVINCE

(By James L. Porter)

Major oil companies in the past decade have practically ceased to search for new petroleum reserves in Kansas. Whatever oil and natural gas is found in the future will be up to the independents.

The Kansas oil industry today is mainly composed of small companies and individuals. The public thinks the oil business is composed of big companies because this is where they buy their gasoline. And even some of the state legislators do not know that the Kansas oil producing industry is composed mostly of small companies, which are owned by Kansas citizens. In the future, they will not be taxing and regulating large companies owned by out-of-state people.

The independents need to be treated differently from the major companies. Independents have only one product to sell: Their petroleum production, either oil or gas. They have no refineries, no chemical plants, no service stations from which to make a profit. A good share of their risk capital which is used to explore for oil comes from outside sources. This is not the case with a major company. Therefore, a changed economic climate and revised tax laws are vital to independents if they are to find Kansas oil in the future.

MENACE OF IMPORTS

And a big if in the future of the independent producer is what action the Federal Government will taken on the Mandatory Oil Import Program. A rollback of crude oil prices by 80 cents per barrel as proposed by the staff of the Task Force on Oil Import Controls would have a disastrous effect on operations of the small producers. Even a 30-cent cut, as proposed by a majority of the Task Force, would have serious consequences. When you realize that the oil and gas industry is state-wide, there would be few communities that would not suffer.

And another point: Numerous small producers have wells with low rates of production, because the fields are old. However, the ingenuity and low overhead of the independent permits him to operate these wells at a profit despite high labor and high equipment costs. Any severe cutback in crude prices would compel these men to plug and abandon their wells and drive them from the business.

STATE WILL BENEFIT

Many people are helped when independents produce oil in their own back yard. It will be a rare individual or independent company who will ever benefit from the oil produced in offshore areas, Alaska, and especially in foreign countries. This production will go to enrich Middle Eastern governments and large corporations. Production from our back yard enriches our citizens and furnishes capital that is re-invested in the state. It creates wealth here in Kansas.

INDEPENDENT FUTURE BRIGHT

Just because the major companies have left the state does not mean that the Kansas oil industry will be weak or unprofitable. The independents have grown during the last 20 years and there are still plenty of opportunities for investors and operators.

The oil industry has traditionally been the business that offered the little man the opportunity to grow big. The opportunity is still here.

Independents in Kansas have been very successful during the past 20 years.

INDEPENDENTS SUSTAIN KANSAS

Kansas oil production is rapidly passing into the hands of independent companies and individuals. Only three major companies are actively searching today for oil in Kansas. These are Cities Service Oil Co., Champlin Petroleum Co., and Anadarko Production Co., a subsidiary of Panhandle Eastern Pipeline Co. The other major companies are producing themselves out of the oil business in Kansas.

A number of large independents through use of fund monies are actively searching for oil. Nevertheless, most of Kansas' future oil is going to be produced by the "little man." At the present rate of decline of the principal companies, 90 percent of the Kansas oil will be produced by the smaller companies within 10 years.

About one-third of Kansas' oil reserves today are of no direct benefit for perpetuating the Kansas oil industry. These revenues are going to companies who drill less than 2 percent of Kansas' wildcat wells. As soon as this oil revenue comes into the hands of companies who are actively searching for new reserves, Kansas' oil production decline will be altered.

The increasing oil production Kansas enjoyed in the early 1950's was entirely due to the independents' success, and the decline since 1958 is mostly due to the major companies' decline. As the major companies sell out to those who are seeking new oil, the state decline curve will flatten out.

INDEPENDENTS HAVE GROWN

The last 20 years have been good to the independents. They have obviously enjoyed increased oil runs, but they have changed in other ways that have almost gone unnoticed since these changes came so gradually.

In the 1950's, an independent wildcat was usually supported by one or two other companies (usually major) with dry-hole money. Today it is almost rare for a wildcat to receive any dry-hole support.

In the 1950's the usual independent wildcat was on geology done by a major company. The average independent had few geologists, and many had none. Many wells were located solely on economics. Today, this is changed.

For example, a survey of the discoveries for the period December 1968 to November 1969 shows 104 discoveries. The survey reveals that over 80 percent of Kansas' wildcats today are drilled without any dry-hole support, and over 70 percent of the prospects are originating in the independent's own geological staff. Of the 104 discoveries, only one was made by a major company.

INDEPENDENTS ADD TO STAFFS

An indicator of the new independent strength is found in the membership of the Kansas Geological Survey. In 1955, the major companies employed 213 geologists, who composed 37 percent of the membership. Today the major companies employ 100 geologists, or a total of only 15 percent of the membership.

But today only 13 major company geologists are stationed in the State of Kansas, and several of these are on production staffs and do not explore for oil.

The number of geologists employed by independent companies has almost doubled since 1955. The number was 152 in 1955, and it was 287 in 1969. This illustrates how the independent companies have upgraded their technical staffs. The same sort of change has taken place among petroleum engineers, seismologists, and other technical personnel.

INDEPENDENTS WILDCAT

During the last 1940's less than 20 percent of the total wells drilled were wildcats. The major companies during this period were drilling between 25 to 30 percent of the Kansas wildcat wells.

During the 1950's the percentage of wildcats in the total wells increased, and the percentage of wildcats which were drilled by major companies declined. During this period they never drilled more than 10 percent of the wildcat wells.

During the 1960's, the percentage of wildcats out of Kansas' total wells continued to climb and today over one-third of Kansas' total wells are wildcats. The major companies' share of the wildcat wells today is less than 2 percent, and they are only supporting about this same percentage with dry-hole money.

Part of the decline in total wells can be attributed to the spacing law passed in January 1958. It took fewer wells to develop a field after passage of this law.

Improved discovery allowable rules came into effect in July 1965, and there followed a jump in the percentage of wildcat wells drilled. There has been a steady, long-range increase in Kansas wildcat activity when it is calculated as a percentage of the total drilling activity. This means the industry is going to be increasingly influenced by fluctuations in the economic climate, and by changes in the tax laws.

Much of the money the independents spend drilling wildcats comes from outside investors. Alteration in the tax law about the expensing of drilling costs will particularly influence the investors' interest in exploration. Also, exploration has traditionally been the segment of the industry to suffer the most decline in an economic recession. This is especially noticeable for the year 1957.

INDEPENDENTS ADVANCE

Major companies' production reached a peak in 1949, and then began to decline. What is difficult to understand is that this decline began at the very beginning of their most ambitious exploration programs. Also, while the majors were declining in production, the independents were having a dramatic increase. During the 9-year period 1949–1958, major company production declined 20 percent, but independent production increased 100 percent.

The major companies during this period had large staffs stationed in Kansas, and they were expending large sums in seismograph mapping and lease acquisition. However, as a group their production steadily declined, and they began withdrawing their staffs from Kansas in the late 1950's.

The independents during this same period, employed relatively few geologists, and frequently their wildcats were drilled because of economic factors, and were not located on good geological information.

WHY MAJORS DECLINED

Why did the majors fail to increase their production during the period when independents were doubling theirs?

And a second question follows: Why didn't the majors concentrate on the Central Kansas Uplift? This is where the most oil has been developed; this is the principal area of production in which the independents doubled their production.

There is a good reason why the major companies could not operate effectively in this region. Whenever a proposal was submitted by a major company geologist to his management for an exploration program, the first consideration was the geological reasons for selecting the areas, and the second was a survey of the lease situation. No program could be approved unless there was ample open acreage to insure that good blocks could be assembled on any structure the seismic mapping found.

On the Central Kansas Uplift, open acreage has not been plentiful during the last 25 years. Major companies could never mount any big seismic mapping programs in the most promising areas of the state. They usually bought broken blocks of acreage and tested them by test promotion, rather than drill company wildcats on small blocks of acreage.

First basic reason the majors have not been successful in Kansas since 1945 is that Kansas minerals are privately owned. Minerals are in small parcels and the lease prices are very reasonable. Consequently, when a region looked good, the many independents would buy small blocks and the major companies would eventually have to move out to the areas where large blocks of acreage were available.

To illustrate, visualize what would have happened if Kansas leases had been auctioned off in county-size blocks, or even 20,000-acre blocks. Kansas today would still be a major oil company country. The many small independents today would never have been able to get a start. The state's oil resources would have been developed at a much slower pace, and the many small fields produced today would have never been drilled.

MAJORS LOSE OUT

The second basic reason the majors failed in Kansas was that they relied on structural finding tools to find prospects to drill themselves. These tools became ineffective for various reasons.

Most companies concentrated on Western and Southwestern Kansas, and had large seismic mapping programs in those regions. Stanolind (now Pan American Petroleum) had led the way with discovery of Keyes Dome in the Oklahoma Panhandle, and with Kismet in Seward County.

Unfortunately, there were few other large structural accumulations discovered. Most of the sizeable oil and gas fields in Southwestern Kansas have been stratigraphic accumulations, and seismic mapping was of little help in locating them.

Only subsurface study and drilling could do this job, and at the time there were few wells to furnish the necessary subsurface information. Majors preferred to drill their company wildcats on large seismic structures.

In other areas, there was only limited success in locating structures. Texaco found Fall Creek field in Sumner County. Skelly found Cahoj Field in Rawlins County. Carter (now Humble Oil & Refining Co.) found the Davis Ranch Field in Wabaunsee County with surface mapping. All of these generated large lease plays, but not enough other large structural fields were discovered to sustain the interest of the major companies.

RANK EFFORT NEEDED

Most independents have preferred to stay in the best oil provinces and work as close in to production as possible. This forced major companies out into rank wildcat areas, but now that majors are practically all gone, there is much less exploration effort being expended in these areas.

The good oil provinces are still furnishing new discoveries, but now Kansas rarely has a big field in those areas, because the big structures were readily found earlier.

Lessening exploration in the rank wildcat areas is the one disadvantage of not having many major companies operating in Kansas. If we are to continue to develop all of our potential oil resources, the independents will have to increase their search in the rank wildcat areas.

PUBLIC MUST KNOW

The 25 years since World War II have brought fundamental changes to the Kansas oil industry. Everyone in the industry is aware that we have changed, but we need to study the changes and understand what they mean.

It is important, also, that those in the oil industry be aware of what has happened.

But it is even more important that oilmen make the public and the states and the Federal Government aware of how the oil industry is changing.

The change is of such a fundamental nature that oilmen must get this information out to the public and to those who tax and regulate the industry.

Mr. DOLE. I congratulate the Federal Power Commission on the announcement it is considering exempting all small gas producers from regulation and its action in reopening the Permian Basin area rate case for natural gas producers. This case will provide the Federal Power Commission the opportunity to establish a new area-rate proceeding. Passage of the resolution introduced by the Senator from Texas would clearly indicate to the Federal Power Commission the Senate's desire that the natural gas producer be paid a price that will provide "the necessary economic incentives to explore for new reserves of natural gas."

I urge expeditious action on this resolution.

Mr. HANSEN. Mr. President, I am happy to join the distinguished Senator from Texas in this resolution to allow the free market mechanism, the laws of supply and demand, to determine the wellhead price of natural gas.

As my good friend from the Lone Star

State has pointed out, Federal price-fixing policies of the past decade have resulted in a critical shortage of our cleanest, most convenient and, in terms of comparative energy, our cheapest fuel.

The northern utilities that have in the past opposed rate increases now recognize the need for realistic pricing if their demands for additional supplies are to be met.

Coming events cast their shadows before, as the Senators from Texas, Oklahoma, Kansas, Louisiana, and Wyoming have been warning for sometime now. The members of the Federal Power Commission are also now acutely aware of the need of price increases and have already opened the way for a new concept of setting rates for natural gas. They also have recognized the urgency of the worsening situation by aiming at new pricing policies by this fall.

Several companies either already have or are now planning to import liquified natural gas from Algeria and possibly Libya and other sources. This gas could only supplement and not begin to make up the coming shortage unless we undertake an accelerated exploration and development program. It also costs more than twice as much as domestic gas delivered to our east coast. Such a program will undoubtedly be encouraged by a return to producers that will reflect the competitive aspects of gas as a fuel, the unprecedented demand for gas as a clean fuel and the inflated costs of exploration, development, production and distribution of gas.

Also, a speeded-up program of offshore leasing of Federal lands will hopefully be forthcoming. Probably the most promising source of new and large gas reserves are in the Gulf of Mexico off of Louisiana and Texas coasts. New and stringent pollution laws are already in effect and the chances of pollution from gas wells is far less than from oil. However, we need both if we are to meet domestic demands for both gas and oil without becoming more and more dependent on Middle East and North African oil and gas which could be cut off at any time.

The Soviet powerplay in that area and the explosive Arab-Israeli situation makes it imperative that we renew our efforts to develop our own abundant energy resources and never become dependent on such unreliable sources.

Almost a year ago, Barron's National Business and Financial Weekly warned of the natural gas shortage brought on by Federal price fixing. In their feature story "Natural Gas Fiasco," they pointed to forthcoming events:

> The East Coast doubtless will come to rely for fuel on a source of supply that is unfriendly at best and, at the slighest provocation, downright hostile. As the U.S. proceeds to import natural gas—at higher prices, be it noted, not lower—the poor old balance of payments will suffer a fresh, and wholly gratuitous, setback. "Economists," so Dr. Milton Friedman has said, "may not know much. But we do know one thing very well: how to produce shortages and surpluses. Do you want to produce a shortage of any product? Simply have government fix and enforce a legal maximum price on the product which is less than the price that otherwise would prevail. . . ."

The periodical also quoted Dr. Clark A. Hawkins, associate professor of finance and economics at the University of Arizona, and authority on the subject. In a new book, Dr. Hawkins wrote:

> The market should be the mechanism for determining price because natural gas price fixing by governmental fiat is not only unnecessary but unworkable as presently attempted. Also, it is only the market that will give the lowest price consistent with maximum output in the long run. The standard of market price could be feasible under existing law if the Commission would espouse it and proceed to the courts. Failing that, of course, a Congress truly responsive to the needs of the country would enact legislation to bring the free market mechanism into play.

That is the purpose of the resolution I have cosponsored with the able Senator from Texas.

AUTHORIZATION OF APPROPRIATIONS FOR MILITARY PROCUREMENT—AMENDMENT

AMENDMENT NO. 797

Mr. BAYH. Mr. President, I submit an amendment intended to be proposed by me to H.R. 17123, the military procurement bill presently before the Senate.

Section 1 of my amendment requires annual authorizations for the active-duty personnel of each component of the Armed Forces. It prohibits the appropriation of funds for military manpower in the absence of such authorizations by the Congress. The amendment, if adopted, would become effective beginning in fiscal 1972, when the present suspension of the statutory ceilings on manpower levels expires.

In the Selective Service Act of 1948, Congress established the following statutory ceilings: Army, 837,000; Navy, 540,000; Marines, 400,000; Air Force, 502,000.

These congressionally authorized levels were extended for 1 year by congressional action on July 10, 1950. Later that year, in the face of the events in Korea, Congress suspended the authorized manpower levels until 1951, at which time the Selective Service Act was due to expire. It was argued by those supporting the suspension that Congress would have an adequate opportunity to debate the size of our Military Establishment the following year.

In 1951, with the Korean war in progress, Congress voted to continue the suspension, but this time until 1954 and an overall ceiling of 5 million was enacted in lieu of the previously authorized individual levels. The suspension was reenacted in 1954, 1957, 1959, 1963, and, most recently, in 1967—each time without so much as a word of debate on how large a standing military force the United States needed and why.

In the absence of statutory authorizations for the components of the Armed Forces, the process of raising an army has simply become an act of appropriating money. It is true that during the period of the suspensions, there was an overall ceiling of 5 million. Unfortunately, that 5-million-man ceiling was meaningless, as there was never any danger of approaching that level in the absence of a congressional declaration of war. It was for that reason that the distinguished Senator from Kentucky (Mr. COOK) and I authored an amendment to the military procurement authorization bill last year, setting the ceiling at a much more meaningful level of 3.285 million.

Mr. President, the appropriations process is not the proper place to determine how foreign policy and strategic considerations should affect our manpower levels. The failure to confront these difficult questions in recent years, I am afraid, has led to an unnecessary American military presence in many far-flung corners of the world. That, in essence, was the message so clearly and precisely delivered yesterday by the distinguished senior Senator from Missouri (Mr. SYMINGTON), whose subcommittee has looked into the problem of how to bring our foreign policy commitments and our military manpower into balance.

Recently, Congress has become increasingly concerned about the size of the military budget and this has led the Armed Services Committee to require annual authorizations for such items as aircraft, missiles, naval vessels, tracked combat vehicles and weapons and munitions. Since military manpower is the largest single item in the defense budget, Congress should have a better opportunity to scrutinize manpower levels and expenditures. The easiest and most logical way to do that, Mr. President, is to require annual authorizations for manpower.

Section 2 of the amendment requires the President, in requesting legislation to authorize the active-duty strength of the component forces, to spell out the relationship between the levels requested and our national security policies.

The PRESIDING OFFICER (Mr. MILLER). The amendment will be received and printed, and will lie on the table.

AUTHORIZATION OF APPROPRIATIONS FOR MILITARY PROCUREMENT—AMENDMENTS

AMENDMENT NO. 798

Mr. BROOKE (for himself and Mr. HART) submitted an amendment, intended to be proposed by them, jointly, to the bill (H.R. 17123) to authorize appropriations during the fiscal year 1971 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and other weapons, and research, development, test, and evaluation for the Armed Forces, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes, which was ordered to lie on the table and to be printed.

(The remarks of Mr. BROOKE when he submitted the amendment appear later in the RECORD under the appropriate heading.)

AMENDMENT NO. 799

Mr. BROOKE (for himself, Mr. MCINTYRE and Mr. HART) submitted an amendment, intended to be proposed by them, jointly, to House bill 17123, supra, which was ordered to lie on the table and to be printed.

(The remarks of Mr. BROOKE when he submitted the amendment appear later in the RECORD under the appropriate heading.)

ADDITIONAL STATEMENTS OF SENATORS

NATIONAL GOAL: CURE FOR CANCER

Mr. YARBOROUGH. Mr. President, the conquest of cancer is a goal which can be achieved if we are willing to dedicate the necessary resources to the battle.

On April 27, 1970, the Senate established the National Committee of Consultants on the Conquest of Cancer. The distinguished members of this study committee began their work in the Nation's Capital on June 29, 1970, and held their second meeting in New York City last Monday, July 27, 1970. This fall the committee will report on what needs to be done to find the causes and cures of cancer.

An editorial on this bold campaign to conquer cancer was published on July 23, 1970, in the Diboll, Tex., Free Press, on page 2 section 2. I ask unanimous consent that the editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NATIONAL GOAL: CURE FOR CANCER

When President John F. Kennedy issued his inaugural address at the beginning of the 1960's, he overwhelmed everybody by stating that the United States needed a national goal. And that goal should be to put an American on the moon before 1970, he went on to say.

Those who knew John Kennedy even remotely knew that he meant it. Those of us not too familiar with this new figure in American politics probably thought little about the boast, the promise that our national goal would be to send a man to the moon and bring him back—all in a period of less than ten years.

John Kennedy put into motion the men, money and muscle needed to accomplish the task. We proved that a nation could, and should, have such national goals.

Departing U.S. Senator Ralph Yarborough may have come up with our national goal of the 1970's: to conquer cancer.

The Texas Senator says he thinks a cure for cancer can be found by 1976, if America will only adopt this as a national goal. And what better goal to set for this decade than to conquer a disease that each year wipes out 300,000 American lives?

We have over the years found ourselves at odds with our Democratic Senator, though more with him than against him. We certainly are with him now, and it would be well for all segments of Americans to join this campaign to find a cure for cancer.

DISABLED COAL MINERS

Mr. SCOTT. Mr. President, as a Senator from a major coal-producing State, it greatly concerns me that disabled coal miners are all too common throughout the coal mining regions of the United States.

At the present time, such coal miners and their families are eligible for medical and hospital benefits from the United Mine Workers of America Welfare and Retirement Fund for 1 year after leaving the industry. In addition, if the disabled miner qualifies for a pension from the welfare fund, he is entitled to medical care for himself and his family for life. At the present time, the minimum age for a pension under the fund regulations is 55, with 20 years in the Nation's coal mines.

Unfortunately, I understand that even these regulations do not cover all of the miners who need hospital and medical care. Moreover, I am informed that the financial position of the fund dictates that a 1-year limitation must be placed upon hospital and medical care for beneficiaries who leave the industry.

Therefore, there is a gap between what is needed and what a private fund is able to provide. Last year, more than $65 million was paid for the fund for medical care out of a total revenue of $174 million. The fund's cost of providing medical care seems certain to increase even if no additional beneficiaries are added to its roles because of a liberalization of the medical care regulations.

There can be no doubt that the needs of the disabled miners are urgent and real. President W. A. Boyle of the United Mine Workers of America has come up with an answer to these needs without sacrificing the solvency of the fund. His proposal merits the serious attention of the Members of the Senate. I hope in the near future to introduce legislation to accomplish the objectives set forth by Mr. Boyle. In the interim, I ask unanimous consent that a letter from him to me outlining his proposal be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

UNITED MINE WORKERS OF AMERICA,
Washington, D.C., July 28, 1970.

Hon. HUGH SCOTT,
U.S. Senate,
Washington, D.C.

DEAR SENATOR SCOTT: Disabled coal miners under 65 years of age face a serious problem of medical and hospital care which must be assumed by the nation. These miners have suffered disability as the result of employment under hazardous conditions in an industry vital to the nation's health, comfort and economic welfare. They richly merit assistance from the nation in their hour of need.

The United Mine Workers of America has sought to meet the hospital and medical care needs of these disabled workers through the UMWA Welfare and Retirement Fund which is negotiated with the coal industry. The Fund expended more than $55 million of a total income of $163 million, for hospital and medical care for the mine workers during the fiscal year ending June 30, 1969. In the fiscal year ending June 30, 1970 the Fund spent over $65 million out of a total income of $174 million for hospital and medical care.

Because of the ever-escalating costs of medical and hospital care, the UMW Welfare and Retirement Fund has been forced to limit medical and hospital benefits to one year following disability for mine workers too young to qualify for a pension. Our union fully recognizes that this is inadequate to the needs of mine workers.

The UMW intends to win a much higher industry contribution to the Welfare and Retirement Fund in its 1971 negotiations. Even if the present forty cents per ton contribtuion were doubled, it would not be sufficient to provide indefinite hospital and medical benefits to disabled miners because of the need to increase pensions, survivors benefits and other benefits.

During recent weeks, mine workers who have been unemployed for more than one year because of disability have picketed and disrupted production of vitally needed coal in several mine fields. We recognize that the disabled miners' needs are urgent and very real. The UMW Welfare and Retirement Fund, however, cannot provide indefinite medical and hospital care for these disabled miners without denying benefits to other working and retired members and survivors.

The real answer to this problem, especially in the face of soaring medical and hospital costs, is a program of hospital and medical benefits for disabled miners similar to Medicare which would become applicable one year after disability. Such a program should provide uniform benefits for continuing medical and hospital care costs resulting from disability. The UMW Welfare and Retirement Fund now provides certain supplemental benefits to retired members over 65 who are enrolled in the Medicare program and would attempt to provide similar benefits under a federal program for disabled mine workers who have exhausted benefits now paid from the Fund.

In the view of the UMW, such a program would best be supported from general taxation. We urge the immediate introduction of legislation to meet the health care needs of disabled mine workers following one year of disability. We will be more than pleased to work with your office in shaping a satisfactory legislative measure.

Sincerely yours,

W. A. BOYLE,
President.

SEABED CONVENTION

Mr. MUSKIE. President Nixon stated in late May that the United States favored a strong form of international authority over all areas of the seabed and subsoil of the high seas beyond a depth of 200 meters. This statement of policy provided an excellent framework for the extension of sound international law and cooperation in the uses of the ocean.

The President now has a rare opportunity to pursue this initiative by introducing a comprehensive proposal to carry out these objectives before the U.N. Seabeds Committee meets in Geneva early next month. I urge the President to seize this opportunity and reject the advice of those who fail to see the necessity of extending sound environmental and legal concepts to the deep ocean. Unless sensible international arrangements are made shortly, spiralling demands on ocean resources and technological advances will make a shambles of this last untouched world resource.

The oceans are the common heritage of all men, and they should be the objects of world cooperation rather than world division.

First. An unqualified declaration that ocean seabeds and subsoil beyond the 200 meter boundary are the common heritage of all mankind;

Second. An unqualified prohibition against unilateral coastal state claims and unregulated exploitation beyond the 200 meter line;

Third. The unqualified reservation of international seabeds and subsoil for peaceful purposes only;

Fourth. The creation of a strong international authority to protect the marine environment and to regulate the

exploration and exploitation of such areas;

Fifth. A limitation on the rights of coastal States in areas beyond the 200 meter line to actions taken in concert with and largely for the benefit of the international authority.

The area between the 200 meter line and the base of the continental slope is of critical importance. It is here that the international authority must be strong. The zone should not extend beyond the recognized limits of the continental slope, and fees and payments received by the coastal State for development in this area should be turned over to the international authority for the benefit of all peoples.

Finally, both the international authority and the coastal State which may act on its behalf must establish strict environmental safeguards to preserve the life of the ocean.

From information that I have received, it appears that the proposal being developed within the executive branch is admirable in concept and in scope. I urge the President to take the fullest advantage of this opportunity to move forward in a field of utmost importance to the future of mankind.

THE CHANGING AMERICAN SCENE—ADDRESS BY FORMER SECRETARY OF STATE DEAN ACHESON

Mr. MILLER. Mr. President, one of the most perceptive analyses of the changes occurring in our society and their implications for the future was provided by former Secretary of State Dean Acheson last May 13 in his address at the Air University.

Fortified as they are by a close familiarity with history and the social and political changes produced by developments, Mr. Acheson's remarks command great attention and respect.

I regret that the address leaves one with a feeling of alarm and pessimism, coupled with the reaction of hope that this distinguished citizen will provide us with an equally perceptive analysis of how our society can reverse the trend Mr. Acheson so forcefully describes.

I ask unanimous consent that the address be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE CHANGING AMERICAN SCENE AND ITS IMPLICATIONS FOR OUR NATIONAL WELL-BEING

(Address by Dean Acheson)

Thinking of how to sum up for you my assigned theme, "The Changing American Scene and Its Implications for Our National Well-Being," I recalled that Lord Kenneth Clark had described a strikingly similar period as a time of "Protest and Communication." He was referring to the Reformation in sixteenth century Europe. Then, while a new world was in process of discovery and new horizons were unfolding, a novel method of communication fanned long dormant embers of protest into flames that destroyed the unity of Christendom and the very conception of universal authority. The protest of the fifteenth century was prelude to the destruction of the Thirty Years' War in the seventeenth, unequalled since barbarian invasion had put an end to the *Pax Romana*.

The novel method of communication was the printing press. "People used to think of the invention of printing," observed Lord Clark, "as the linchpin in the history of civilization. Well, fifth century Greece and twelfth century Chartres, and fifteenth century Florence got on very well without it—and who shall say that they were less civilized than we are? Still, on balance, I suppose that printing has done more good than harm."

Can one say as much of radio and television, which are dominating our age? Whatever the answer, the question is probably the wrong one. If we ask instead whether the impact of radio and television on our age is comparable to that of printing on the sixteenth century, the answer must be: Certainly—but far greater in affecting the pace and direction of change. Surely the fact that the Korean War was the last to be reported mainly by press and the Vietnamese the first to come to the viewer directly through television has had a great deal to do with the change in the public attitude between the two. Can one doubt that, had General Grant's Wilderness Campaign and the fighting from Somme thrugh Passchendale been seen on television, the problems of all leaders, but especially those of Presidents Lincoln and Wilson, would have been even more difficult than they were and vastly different?

In the sixteenth century the printed word needed nearly a hundred years to fan protest to effective and destructive action. The real and alleged causes of protest had long been present. Doctrinal and organizational conflicts were not new within the universal church. Political unease between the Emperor and the Pope and between both and the great feudal lords had laid fuel for the kindling despite the removal of restless spirits by the crusades. Protest against the harshness of the feudal system had already burst into violence with the Peasants' Revolt and its bloody suppression. Even so, criticism of religious and political authority was carried by a slow, small current to a few selected segments of society, and addressed to an educated elite. Today, in sharp contrast, an insistent torrent of information, misinformation, and opinion on all subjects overwhelms our society for lack of historical perspective and a prevailing sense of values necessary to cope with it. This lack is a consequence of the pace of change. In my lifetime the population of our country has more than trebled. By the end of the century it will increase further by an amount equal to the combined populations of Britain and France. An estimated 88% of our people will live in cities of over 100,000 inhabitants. The strides in science and technology surpass all achieved between the origin of the wheel and the nineteenth century. The increase of material production over only the past twenty years has been so great as to produce an environmental crisis of the basic elements of life itself—air, water, and the supporting earth.

Adjustment to the pace of change is quite as upsetting as to change itself. Over many millennia women have been struggling to overcome restraints variously attributed to men and biology. In the past century the rate of change in their status has been bewildering. Economic pressures, education, and medical science have all contributed to it. Its effect on the unit basically affecting contemporary culture, discipline, and ethical standards—the family—has been enormous.

All these changes have cumulatively accentuated another apparently new, but actually very old and always disturbing, phenomenon—the conflict of generations. To both Plato and Aristotle, revolt for its own sake by the young against the system and establishment of their elders—whatever it might be—provided the chief periodical cause of social change. It had no consistent purpose or effect; merely to change the *status quo*. Latterly it has been observed that this revolt has occurred only during static social periods when the younger generation found no escape from the geographic or other limitations of their elders' society. When, however, new fields or opportunities were opened by new discoveries, adventurous youth flocked off to new fields to make their own mistakes with joyous unrestraint. Even in static periods, it has been pointed out, those who protested were rarely themselves oppressed protestants. Thus, in Europe of 1848 middle-class and well-to-do students were championing working-class grievances; and in Russia, at the turn of the century, those of the peasants. Without laboring the point, it is probable that student unrest in this counry today is more the result of the nature and pace of change than a cause of change.

Another profound effect over the past century of the changes we have been noting is upon our political postulates. With growing emphasis after the Civil War the principal postulate, the Zeitgeist, was faith in Progress, conceived of as a force moving humanity steadily forward and upward. So strong was faith in this escalator that interference with its workings was regarded as a sort of hubris, an insolent meddling with divine law. Indeed, the Supreme Court interpreted the constitutional protection of life, liberty, and property as incorporating the doctrine of *laissez-faire*, or—in Justice Holmes's phrase—as enacting Mr. Herbert Spencer's *Social Statics*. Legislatures were prohibited from regulating economic enterprise in doing what came naturally.

Now, however, acceptance of the mechanistic ideal of Progress has given way to galloping nihilism and cynicism on one side and to escapist sentimentality on the other. In the resulting confusion a new postulate has easily taken over first place in political belief. The doctrine that all men are created equal has long been deeply imbedded in our political holy writ. After passing through the larval and chrysalis stage as an aspiration and ritualistic affirmation, it now emerges as the crusading faith of our time, demanding destruction of infidels. Egalitarianism and its corollary, maporitarianism, are potent forces for change today. Again, the Supreme Court within the past decade and a half has given constitutional sanction to both doctrines as controlling in our domestic affairs.

The State Department verbally embraces the same doctrines as the touchstone in relations with governments abroad. Their effects are only tangential and whimsical, for few governments in the world are based upon a broad, honest, and effective franchise. The domestic affairs of strong governments, like those of most of the communist states, we cannot affect and do not try to. Weaker regimes, such as those in Greece and Haiti, we scold for departures from the true faith. In regard to assorted regimes, black and white, the egalitarian principle is treated with light-hearted inconsistency. The black dictatorship of General Mobutu in the Congo is pampered with over a billion dollars in aid funds, while Duvalier's Haiti is starved. The white governments in southern Africa are subjected to various manifestations of displeasure (all ineffective), including embargoes and other irritations. Like a cannon loose in an eighteenth century ship of the line during heavy weather, the principle of egalitarianism can wreak considerable havoc to the crew without harm to the enemy.

Together the electronic media and egalitarianism have intensified the change in the nature of American political leadership that began in the Jackson era. Until then—and in Europe until much later—the word "Establishment" could be meaningfully applied to those directing the nation's affairs. After Jackson, and particularly after the Civil

War, the Establishment split, the controllers of economic affairs taking over the bulk of ability and power. Politicians, federal and local, fell into disrepute amounting almost to contempt. The same was true in Europe, so much so that George Bernard Shaw, himself a Fabian socialist, in *Back to Methuselah*, imagined a society of people living to nearly a millennium, attaining great wisdom, and assigning the duties of government to Chinese slaves. The main point, however, is the interacting effect of the demotion in status of the politician, the increase in complexity of his problems, and the development of electronic communication.

In a democracy gifts of advocacy and acting, enhanced by the new techniques of communication, are of immense importance in attaining political power and maintaining agreement, approval, and consent. They are, however, far less potent aids in the management of great affairs. Mr. Churchill's oratory inspired the British people, but it was his ability to stimulate and direct wise action that carried them through the Battle of Britain. Hitler's oratory aroused the German people, only to lead them to evil courses and their own destruction.

The needs of a politician before and after his election to office were strikingly brought home to me during a call from Mr. John F. Kennedy to discuss appointments to his Cabinet in December, 1960. "I knew," he said, "almost everyone in the country who could have helped me in becoming President, but I know all too few who can help me in acting as President."

It would be quite wrong, however, to leave the impression that the chief effect of the new electronic communication is as an aid to its adept users in gaining a political following. The obverse is equally true. It is also a powerful aid to the impact of any protesting group upon both political leaders and other social groups. Nor is this all. By accentuating the dramatic—and what is more dramatic than conflict?—it encourages exhibitionism, extremism, and violence. These are far more potent in gaining attention and asserting a position than reasoned argument and rational persuasion. The effect is to set aflame the atmosphere of political discourse and deprive it of reason, just as the great fire raids of the last war fed upon oxygen sucked from the air.

Finally, we are not without some experience to guide us in foreseeing the effect that competing and inflamed protests, aimed both at influencing leaders and attracting support, have upon the cohesion of a society. When I was young, British society nearly came apart over the controversy about Home Rule for Ireland and the Ulster question. Extremes of passion made parliamentary government almost impossible. Violence permeated the political scene to the point of being embraced by women in pursuit of their demand for suffrage. The loyalty of the army and of young intellectuals to "King and Country" was drawn into question. The outbreak of the First World War, perhaps, saved the British from trouble approaching that which produced the Civil War in 1641, the Revolution of 1688, and the Chartist riots of the nineteenth century.

Not long afterward the combination of military defeat and resulting internal divisions of the most basic sort so dissolved the coherence of the Russian and German political systems that the Bolsheviks and the Nazis, respectively, were enabled to impose their totalitarian systems and suppress all dissent by force and terror.

Such are the main elements, as I see them, in the changing American scene. What are the implications for our future national welfare? Do they help or hinder toward establishing justice, insuring domestic tranquility, and providing for the common defense? Do they help or hinder the conduct of relations with foreign nations to create a favorable environment in which free societies may survive and flourish? I believe that they are harmful for the reasons that can be briefly stated and explained.

First, the factors of change already noted are reducing the quality of judgment and the effectiveness of action with which our society and others deal with the tasks confronting them. They push leaders and lead toward the satisfaction of immediate desires and easiest choices. Then turn people away from self-restraint, discipline, and pursuit of values attainable only by persistent following of long-run policies.

Second, these same factors affect other nations very much the same way they affect us. Thus, an ill-considered decision of one state may adversely affect another, provoking equally ill-judged response, impairing the long-range interests of both and the prospects of future cooperation. Furthermore, as Lord Salisbury observed, the world was better off when people "could read no other language than their own." Now that they can hear and see what is going on everywhere, there is no end to "envy, hatred, and malice, and all uncharitableness" in interfering with other peoples' business. National and international communities are becoming more volatile, reacting hastily to find quick relief from often self-inflicted ills at the expense of impairing well-laid plans and more distant values.

For instance, during a brief period after the last war, a few gifted French leaders initiated in Westen Europe inspired steps toward a unity that might transcend the confines of small national states and hold promise of a new, strong, and benign unity in world affairs. The French people tired under the immediate strains of the task. Diverted by the lure of glamour and *folie de grandeur*, they followed General de Gaulle into a policy of prideful nationalism, which the country could not economically afford or militarily support. In its course to failure the military defense of Europe was weakened, the franc devalued, and economic and political conflicts were set up within Europe and with the United States that have impaired the opportunity to create a viable European community.

Again, as one considers our increasing involvement in Vietnam following the French withdrawal in 1954, one notes a series of improvised steps to deal piecemeal with a deteriorating situation. Most of them won general approval; none appeared as a large commitment until a very large one was upon us. One senses the defect, dangerous to gamblers and politicians, of increasing one's bets and investment in a venture showing steady loss, thus increasing the difficulty of cutting one's losses and scrapping the venture. One misses a calculation of the future, a reckoning of costs within allowable investment and values obtainable, unobscured by words like "falling dominoes," "honorable solutions," and "the will to win." The result has shaken confidence in our government at home and abroad and set up or increased conflicts, dangerous in the extreme, within our society. This is a description of continued failure of judgment.

Illustrations could be multiplied. It is enough to mention the reaction of the Soviet apparatus to alarm over successful protest by the Czechs against the rigidity of their communist bureaucracy and fear that it might be contagious. The short-term solution of invasion and suppression suggests long-term setbacks in relaxing fears and hostilities that must precede settlements furthering Russian security. One can add the failures of developing societies in Latin America to identify and attack their own problems rather than protest that a rich neighbor is not doing more to help them.

Perhaps the most basic difficulties of our own society and others in this time of protest and communication arise in identifying real subjects of concern and dealing with them with discrimination, circumspection, and persistence. In his book, *The Unheavenly City*, Professor Edward C. Banfield of Harvard discusses "Counterfeit Crises and Real Problems." Confusion comes from failure to differentiate the consequences of a cold from that of cancer. Our people are overwhelmed and frustrated by a multiplicity of concerns. A danger that confronts the radar of antiballistic systems is being saturated and rendered ineffective by multitudinous incoming targets—some false, some real weapons. Survival lies in identifying the real ones. In the political and social fields, protests, demonstrations, strikes, disorder, and the babel of media do not help separate the counterfeit and spurious from the real. Counterfeiting crises is considerably more serious than counterfeiting currency and is worthy of at least equal suppression.

When real problems are identified, the need arises to deal with them circumspectly. This requires a penetrating survey of all aspects of the problem and the effects of all solutions proposed. Solutions that create more or more serious problems than they attempt to solve are not wise or feasible, no matter how much support they have. For instance, if the legally enforced separation of black and white children for purposes of education had been clearly identified as a problem requiring solution, it would have been recognized as different and separate from other problems, such as enforcing by law some specific racial mixture in all public schools, or the use of schools whose primary function is education, as an instrument of social reform. Careful scrutiny of remedies would reject as not feasible those that seemed likely to bring an exodus of whites from cities, impairment of the cities' tax bases, underemployment and crime within them, decline in the quality of public education, other services, and the general urban environment.

In the foreign field the same necessity exists for discernment in selecting objectives and circumspection in choosing means and methods. Aid and trade policies and methods, for instance, seem to be products of popular whims and vagaries. Sometimes the aim asserted is to gain allies or strengthen them; at other times, to strengthen democratic regimes; at still others, to punish those of whom we disapprove by cutting trade relations. Often the object seems to be the humanitarian one of relieving need; and, again, the more earthy one of reducing surpluses by giving them away. Some urge the building of commercial bridges to communist satellites, presumably to wean them away from their ideology. In the face of this confusion, consistency in policy is almost impossible, and intelligent criticism of method very difficult. The result is most often an attitude of revulsion against liberal trade and aid policies and return to restrictive and isolationist ones.

However, "the common defense"—as the Constitution states one of our trinity of national purposes—suffers, perhaps, most severely in the interplay between the masses and the media. Here, where General Marshall used to urge that consistency and persistence in effort are as important as magnitude, policy is subject to extremes of almost hysterical pressures. Under the stimulus of actual enemy attack, there is almost no limit to what the media will support, the people will authorize, and the government will provide. When the memory of danger fades, taxation and national service are viewed as intolerable and unnecessary burdens. Distrust, springing from an unpopular war, accompanied by its full quota of military and political misjudgments, touches off an epidemic of attacks and protests, which

undermine confidence in the whole military establishment. When a distinguished soldier and undistinguished President voiced suspicion of the "military-industrial complex," he proved not only that "war is much too serious a thing to be left to military men," but that politics is, also.

War—certainly nuclear war—is too serious a thing to be engaged in by anyone. The object of national policy is to prevent it. In the present state of justified mistrust among nuclear powers, endless talk alone cannot produce a reliable nuclear disarmament treaty. Verbal negotiations will have to be accompanied over many years by negotiation through acts in which a wise, expensive, and persistent military policy upon our part might convince the Russians of our mutual interest in maintaining stable second strike capabilities on both sides, incapable of escalation into a first-strike capability without detection from outside observation.

Then, and only then, could some measure of confidence be placed in engagements. But have we the resolution and discipline to embark on and maintain such a policy over the years? Twenty years ago I argued with conviction that our society was inherently stronger than the Soviet because it was supported by the free will and consent of its citizens, whereas a communist regime rested upon compulsion backed by fear. If, however, free citizens turn against a course that their interest calls upon them to follow, within measurable time it will fail. The virus of disbelief in danger and recoil from meeting it seem to lead to distrust and impatience toward our allies and a wishful belief that Russian hostility of the Stalin-Khrushchev period has abated. Some go even further and urge a unilateral postponement in development or even an actual reduction of our military capacity to induce a Russian response in kind.

Enough has been said to indicate where present trends could take us. I cannot recall an instance of a democratic society that, once having lost the will to provide for domestic tranquility and national security, has regained it by a new birth of discipline and commitment. It has been said that the judgment of nature upon error is death. In the life of nations that judgment has been disaster. I do not predict. It is enough to regret that

I tell you nought for your comfort,
Yea, nought for your desire,
Save that the sky grows darker yet,
And the sea rises higher.

SENATOR MOSS AND THE CONSUMER

Mr. MAGNUSON. Mr. President, we in Congress rarely look back. Today's crisis or tomorrow's law preoccupies us. Stirring legislative battles, victories and defeats, pass quickly and surely from the front pages to the dimly remembered quiet of the CONGRESSIONAL RECORD.

But this week I happened to read a summary of the work of our Consumer Subcommittee during the current Congress. Frankly, I was amazed, not only at the level of energetic activity but at the level of significant achievement.

The Senator from Utah (Mr. Moss) assumed the reins as chairman of the Consumer Subcommittee only in April of last year. Much of the technical side of the subcommittee's work was new to him, but he seized the responsibilities and sorted out the essence of what it is that frustrates, angers, and bugs the Nation's consumers, then he set out to do something for the consumer.

Just look at the range of issues his subcommittee has pursued: cigarette advertising and toy safety; flammable fabrics and poison prevention packaging; advertising and drug addiction; advertising and nutrition, chemical mace and fish inspection; a forum of consumer protection activities within the Federal Trade Commission and the strengthening of the antifraud work of the Justice Department; assuring consumers that their day in court through class action suits for the benefit of all consumers cheated by the same scheme or practice, the development of sound consumer information on product life and performance through product testing and scrutiny of supermarket pricing and labeling practices which bring the consumer a dollar's worth for a dollar spent.

Several major new laws are already on the books as a result of his efforts; others are well on their way to enactment this year. And for still others a solid foundation has been laid for future action.

I thought Senators would like to have a capsule glance at the record of TED Moss' work product as chairman of the Subcommittee for Consumers.

Let us look at the record.

Warranties and guarantees: Let us face it. There is probably no greater source of frustration with the American consumer than phony and misleading guarantees. The tricky warranty game has become an American ritual of the late 20th century: Man buys a product—especially an appliance—that does not work or does not work the way it should or stops working in a couple of days. Then comes the anxious scanning of the small print in the warranty sheet and the inevitable discovery: The warranty expired as you crossed the threshold of the store; moving parts were not covered; you have to mail it to Muncie, Ind., postpaid. Shoddy workmanship coupled with shoddy promises. A recent poll in Utah found two-thirds of those polled demanding remedial legislation on warranties and guarantees.

Under Senator Moss' subcommittee and floor leadership they are getting it. The Senate has passed the landmark guaranty and warranty bill. When the House completes action, this law will force manufacturers to spell out their warranty obligations, keep them from using words of warranty as an illusory smokescreen to escape their common law obligation to provide a product which is fit for the purpose for which it is sold. It is a law which sets minimum standards for the content of full warranties; and it provides for the consumer's full recovery of his attorney's fees and incidental expenses if he has to go to court to enforce his rights.

Cigarette advertising: It is rare enough in Congress when a Senator or a Representative in Congress enters a face-to-face challenge with a powerful industry and it is rarer still when he wins. Senator Moss took on two heavies of American industry, the cigarette manufacturers and the broadcasters. The law which will make cigarette commercials a historic curiosity by the first of next year bears his imprint more than any other man. It represents the culmination of a decade-long fight for TED Moss—a fight he will not let rest until we have brought home to our young people the full truth about the hazards of smoking.

Toy safety: 6 months after the National Commission on Product Safety told Congress that comprehensive toy safety legislation was needed, the bill which Senator Moss had engineered through Congress was signed into law. No longer will our children be exposed to sharply pointed pins used to attach the eye of a doll; no longer will our children inhale the darts of a poorly designed Zulu gun. These dangerous products, and thousands of others like them, are no longer being sold thanks to the enactment of the Toy Safety Act.

Poison prevention packaging: The Consumer Subcommittee focus on protection for the very young has been demonstrated in yet another piece of legislation which the Senate has passed. Some day an innocent child, briefly unattended while her mother answers the door, will grab for some furniture polish under the kitchen sink and find that it has been safety packaged so that its deadly contents cannot find its way into her mouth. The mother who returns to find her baby struggling to get into the enticingly packaged container will have Senator Moss to thank for the safety closure that has saved her child from harm.

And the list could go on—Flammable Fabrics Act amendments that give the Federal Trade Commission stronger enforcement tools; future hearings on the product safety proposals of the National Commission on Product Safety; auto insurance legislation reform; nutrition of dry breakfast cereals.

Of course, no Senator single handedly passes legislation. It takes great teamwork to engineer important legislation through Congress. But Senator Moss has time and time again captained a strong consumer team that has scored heavily for the consumer—and for legitimate business. Consumers are fortunate in having a man like TED Moss carrying the ball for them.

Mr. MOSS. Mr. President, I am grateful to the senior Senator from Washington for his expression of confidence in my leadership of the Consumer Subcommittee. I would remind Senators, however, that I am but following the course set by Senator MAGNUSON himself, who doubled as chairman of the Consumer Subcommittee until he asked me to assume that responsibility.

Senator MAGNUSON has long been recognized as one of the top national leaders in promoting the consumer interest. He has provided an excellent example of leadership by his arduous efforts, his dedication, his effectiveness. I am pleased to be able to follow in his footsteps as chairman of the Consumer Subcommittee and join with him as a cosponsor of a number of measures including the warranty and guaranty bill that was recently passed by the Senate.

I have enjoyed this work and feel that we are making real progress in securing for consumers their just rights in the

marketplace. I want to assure the chairman of my continuing commitment to work with him in pushing the consumer movement forward.

SENATOR RANDOLPH RESPONDS TO EDITORIAL—DISCUSSES HIGHWAY PROGRAM AND TRUST FUND

Mr. RANDOLPH. Mr. President, on July 20, the Washington Post published an editorial concerning the Highway Trust Fund. I felt there were erroneous conclusions about the highway program and my own viewpoint on the future of the trust fund.

I subsequently wrote a letter to the Post discussing these matters in detail. That letter was published today.

I ask unanimous consent that the editorial of the Washington Post and my letter be printed in the RECORD.

There being no objection, the editorial and letter were ordered to be printed in the RECORD, as follows:

$20 BILLION A YEAR FOR HIGHWAYS?

On the Senate floor one day last month, Senator Randolph tossed off a piece of information that each member of Congress and each taxpayer ought to ponder for a while. "State highway officials, through their nationwide organization," he said, "estimate that the national highway needs for the next 15 years will cost $320 billion."

We've gotten so used to talking about billions—a federal debt that approaches $400 billion, a defense budget of around $80 billion—that the size of this figure is hard to grasp. But $320 billion is enough money for the government to buy all the railroads in the country, repair their roadbeds, fill all of their needs for new equipment, operate their passenger and communter trains without charge to the riders for the next 15 years, and still have a big kitty left over. Looked at another way, $320 billion is enough to buy every man, woman and child in the United States a new television set on each January 1, for the next 15 years.

That's why the hearings on highway matters on Capitol Hill last week are important. Slowly but surely, and rather quietly, Congress is moving toward a decision that will set the country's tranportation policy for the next decade. The law that sends tax revenues directly into the Highway Trust Fund expires on October 1, 1972, and the time for Congress to renew or change it is drawing near. And so is the battle between those who want to keep this great pot of federal money—now more than $4 billion a year—flowing into highways and those who want to see some of that money diverted to other projects, most particularly other transportation projects.

Some members of Congress, like Senator Randolph, have already made it clear that they cannot conceive of any substantial change in the trust fund. But Secretary of Transportation Volpe testified last week that he favors a broader use of trust-fund revenues. And Governor Mandel, speaking on behalf of the National Governors Conference, argued that a state ought to be able to choose between having its share of that trust fund spent on highways or on some other kind of transportation.

If the administration will give Secretary Volpe its full support and if the governors and mayors, not to mention plain old taxpayers, will rally round Governor Mandel, the fight over the trust fund could be a good one. But if any change is to be made in how that fund is used this kind of strong support will be required. The highway lobby is about as strong as lobbies come and a good many members of Congress seem to be in love with highways.

Before voting to renew the trust fund as it now stands, however, members of Congress ought to think about what it is doing to the country. One out of every eight dollars that state and local governments spend goes into highways. These governments spend more on highways than on colleges and universities; twice as much on highways as on hospitals; four times as much on highways as on crime prevention; ten times as much on highways as on parks and recreation. Much of this highway spending is stimulated by the federal government. It puts up almost a third of the money and a state can hardly afford to reject the 90–10 or 50–50 matching funds thus made available. All this happens while the cities become increasingly jammed with cars, while the air thickens with exhaust fumes, while seashores become more polluted with oil. Does it make sense in this situation—which is not the situation that existed when the trust fund was set up in 1956—for Congress to lead the way, to egg the states on, towards a time when more than $20 billion a year is spent on highways?

U.S. SENATE,
COMMITTEE ON PUBLIC WORKS,
Washington, D.C., July 20, 1970.

The WASHINGTON POST,
1515 L Street NW.,
Washington, D.C.

DEAR SIR: Your editorial of July 20 on the Highway Trust Fund raises questions that merit further discussion, as does your interpretation of my position concerning the future of the fund.

I agree that, considering the scheduled 1972 expiration of the Trust Fund and the delayed completion of the Interstate system, the hearings conducted by the Subcommittee on Roads are very important. For this reason I was disappointed not to see any coverage of these hearings in the Post up to this point, coverage that would contribute to a fuller public understanding of the issues involved.

Throughout the 15 days of hearings held this year there has been considerable discussion of the Highway Trust Fund. It is obvious from this testimony that there is some sentiment (but not necessarily a consensus) for changing the Trust Fund from its present comparatively limited purposes. The Trust Fund was created in 1956 mainly as a financing mechanism for the Interstate system of highways and the regular Federal-aid road building program. There is little question that it has performed this function well.

With the Interstate system now more than 70 percent complete, it is apparent that the Congress must give careful consideration to a new national highway program, one that will help set transportation patterns for many years. That is one reason I have deliberately deferred introducing comprehensive highway legislation until the conclusion of these hearings. In this way neither witnesses nor Senators were limited to discussions within the confines of specific legislative proposals.

I have not, contrary to the implications of your editorial, advocated an indefinite continuation of the Trust Fund as now constituted. I have stated that I believe the Federal Government has a moral, if not strictly legal, commitment to the public to complete the Interstate system substantially as authorized on a 90–10 matching basis. There has been strong evidence that several segments of the Interstate system, primarily high-cost sections located in urban areas, may never be constructed. Because of this, I have asked Transportation Secretary Volpe to explore with the appropriate state and local officials the feasibility of considering these controversial segments for removal from the Interstate system at a possible saving of $4 billion.

It is now estimated that the Interstate system can be finished in about seven years, and I am now considering proposing a legislative measure to establish a firm deadline for this completion.

For the post-Interstate period I have been repeatedly advocating establishment of a single formula for allocating Federal highway funds, perhaps on the order of 70–30, with the states having wide latitude in determining where this money should be spent. In this way we might hope to profit by the experience of the past 14 years, in which there has been concentration on the Interstate system, a necessary and worthwhile program, and comparative neglect of other parts of the highway network especially old bridges and many primary and secondary roads.

Although the transportation uses of the Highway Trust Fund cannot be broadened a great deal while the Interstate obligation remains, I expect to see moves to do so this year. Last December, I introduced a bill which would allow cities to use Trust Fund monies to support public transportation systems, mainly buses, thereby making use of highways more efficient and hopefully reducing the need for additional urban highways. I have also proposed a bridge replacement program financed by the Trust Fund.

New legislation to be introduced will propose moving other highway-related activities into Trust Fund financing, including forest highways, public lands highways, safety programs, safety research, beautification, replacement housing and equal employment opportunities.

Witnesses at our hearings have advocated enlarging the Trust Fund into a general transportation fund. I recognize that some transportation programs have been severely underfinanced, and I hope these imbalances can be corrected. What will happen several years in the future I cannot predict, but I feel it is necessary to retain the Trust Fund in essentially its present form until current Interstate and Defense Highway system commitments are met.

Truly,

JENNINGS RANDOLPH, *Chairman.*

TRIUMPH OF FREE ENTERPRISE

Mr. TOWER. Mr. President, the distinguished Senator from Colorado (Mr. ALLOTT) performed a service for the Senate and for readers of the CONGRESSIONAL RECORD on July 6 when he inserted a speech given in Tokyo on July 2 by the distinguished Chairman of the Board of Governors of the Federal Reserve, Dr. Arthur Burns. I have just finished reading the speech, and for those who may have missed it for one reason or another, I make the suggestion that this was too important a statement to miss. It can be found in the CONGRESSIONAL RECORD, July 6, 1970, page 22799.

The title of the address was "The Triumph of Free Enterprise." It was delivered in Tokyo, Japan, and addressed the problems of developing economies throughout the world. More than that, however, his thoughts range far into fundamental questions, and with a great deal of historic perspective he compared the promises and the performances of free world and Communist bloc economies during the past several decades. The substance of his remarks is that the world's economic success stories—particularly the Asian countries of Japan, the Republic of Korea, Nationalist China, Thailand, Hong Kong and Malaysia—are all countries which to a greater or lesser degree have adhered

to market economic principles. By contrast, Asian countries which experienced the slowest rates of growth in the period from 1958 to 1968 were also the countries which leaned most heavily on centralized economic controls. Examples in this category are Ceylon, Burma, India, and Indonesia.

Concluding his remarks on the international economic picture, Dr. Burns voiced the hope that those countries which have fared less well will be inclined to review their positions in the light of past policies and change those policies:

I see a basis for optimism about the future in the economic experience of both the countries that have forged ahead and those that have lagged behind. What has gone wrong, after all, is not something immutable. A country can change its future, for the better, by changing its policies. The countries that have lagged in the economic contest have the opportunity to learn from experience and to alter their course.

I commend Dr. Burns for his timely and astute remarks.

MAYOR GRANDBERRY PROVIDES A STRONG LEADERSHIP IN TIME OF DISASTER

Mr. YARBOROUGH. Mr. President, the Houston Chronicle of July 26, 1970, contains an article entitled "Lubbock's New Mayor Had Trial by Tornado," which describes the leadership and courage displayed by the mayor of Lubbock, Dr. James H. Grandberry, during the recent Lubbock, Tex., tornado.

As the article points out, Mayor Grandberry had been in office only 3 weeks when the tornado struck the city in early May. Despite his newness to the office, Mayor Grandberry went into action immediately and displayed leadership and organizational skills that would arouse envy in the most experienced governmental administrators.

I toured this disaster area within 72 hours of the tornado and met with Mayor Grandberry and the City Council of Lubbock to go over the situation in detail to determine what needed to be done. I was most happy to be able to help the people of Lubbock by expediting emergency assistance to that stricken city. The tornado struck Lubbock on May 11, 1970, and on May 18 after my return to Washington, I introduced S. 3848 to give special emergency relief to Lubbock. Within 1 week of the bill's introduction, hearings were held before the Subcommittee on Disaster Assistance of the Senate Committee on Public Works on my bill.

In my work with Mayor Grandberry, I was most impressed by the presence and poise he demonstrated during those trying days.

Mayor Grandberry is now working diligently on the problems of rebuilding this shattered community. I want to assure him and the people of Lubbock that the distinguished junior Senator from Texas (Mr. TOWER), Lubbock's great Congressman, Mr. MAHON, and myself are doing all we can to assist them with this task.

Mr. President, I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Houston Chronicle, July 26, 1970]

LUBBOCK'S NEW MAYOR HAD TRIAL BY TORNADO

LUBBOCK.—James H. Granberry had been mayor of Texas' eighth largest city only three weeks when on May 11 a tornado ripped out the heart of Lubbock.

In a terrifying five minutes one of the worst tornadoes in Texas history claimed the lives of 26 persons, injured an estimated 1500 and caused damage placed at $200 million.

For the 37-year-old dentist, life changed instantly.

Suddenly, 2600 Lubbock families were plunged into various degrees of distress. Ninety of the injured were hospitalized. With 949 homes destroyed or heavily damaged, 1800 persons required emergency shelter and 11,664 were provided by the American Red Cross with 34,994 hot meals in a week.

What can a mayor of three weeks, accustomed to the quiet decorum of a dental office, do when confronted with so frightening an emergency?

OPERATIONS PRAISED

"I have never seen rescue and relief operations brought into being more quickly or effectively," said Gen. George A. Lincoln, President Nixon's personal representative to the disaster area who flew in from Washington the next morning.

"Disaster operations are always difficult, but this has been the smoothest I have known," said George Hastings, who also arrived the following day to coordinate the entire federal relief and recovery effort. "I attribute it to an excellent city government and to full understanding and cooperation by the city, county and state governments."

Hastings, of Denton, is regional director of the Office of Emergency Preparedness. Lincoln is director of the OEP, working directly under the President. Both arrived in Lubbock after the city's emergency operating center had swung into action.

"You handled everything perfectly," said U.S. Rep. George H. Mahon, who comes from Lubbock.

AT HOME WITH FAMILY

Granberry, who defeated the incumbent mayor in an April 21 election, was at home with his family when the tornado dipped down from a crashing, lightning-filled thunderstorm which grew more violent as it approached the West Texas city.

Granberry said that at the approach of the storm, he and his family had gathered in the center of the house and he had helped his wife, Edwina, get the five children tucked away in the safest place. "Then I went outside to look at the sky. When I returned the radio was off and I figured my weak batteries had finally played out. It was several minutes later before I knew what had happened, and several hours before I began to realize the full extent of it."

The usual five minute drive to city hall took almost an hour.

"We even got lost a couple of times," Granberry said. "The usual landmarks that we automatically used to guide us had been blown away."

At city hall Granberry was soon joined by the other four councilmen and city officials. Everything was turmoil. The police station had been hit and was without electricity and communications.

COUNCIL CONVENED QUICKLY

It took only minutes to convene an emergency council meeting. The mayor asked for and received permission to allow the city manager, Bill Blackwell, to take charge and run things, although the city charter said the mayor had power under such emergencies to "act as he sees fit and order any agency or citizens to do what he requests."

"When you are riding horseback in a swollen stream and things get rough, you don't try to change horses," Granberry said. "Our city manager operates the city on a daily basis and knows the people who head each phase of our operation. I saw no reason to step in and take over when he already knew who was in charge of what and just how much he could do.

Action came fast that tragic night.

"Immediately we proclaimed a state of emergency," the mayor said. "We put a curfew on the hit area as best we knew it, and ordered all looters to be shot on sight. Then, the city council went into emergency session to pass needed resolutions to begin immediate search and rescue, and make plans on how to operate our city.

NATIONAL GUARD ASKED

"The council immediately contacted the state capital and asked the National Guard be activated. We learned the governor was out of state, but the lieutenant governor promised every help possible and flew out to aid us himself the next morning."

Gransberry went 44 hours without sleep while directing the emergency operation. All of the dead were found before daybreak and only a few injured were located after the sun came up.

"I see no major goof-ups in the entire operation, looking back over it," Granberry said. "Sure, no one is ever prepared for this type of thing. But with a capable, efficient and dedicated city staff, concerned and cooperative citizens and tremendous response from the county, state and federal government, everything seemed to go as smoothly as possible."

By daylight rehousing of persons had begun. The Red Cross and the Salvation Army headed the feeding and reclothing of stricken people, operating with the United Fund and many church organizations.

"Lubbock has already recovered in spirit," Granberry said. "This was proved six weeks after the storm when we went on national television with the 10th annual Coaches All-America game, and had the biggest crowd ever of football fans—not just people making a show.

"People have become individuals again, but with a different spirit. It's a renewed spirit that we are going to build back better. I think we will."

DON'T BLAME MR. NIXON

Mr. MILLER. Mr. President, one of the most incisive analyses of the causes and effects of campus unrest appears on the editorial page of today's Wall Street Journal.

It was written by a student, Douglas L. Hallett, a Yale University senior and editorial chairman of the Yale Daily News. He currently is a summer employee in the Journal's Washington bureau.

Mr. Hallett asserts:

No amount of frustration with society justifies or explains the destructive path some student protest has taken recently. President Nixon has withdrawn more than 100,000 troops from Vietnam and instituted draft reform that will lead to a voluntary army. He has proposed an income maintenance plan that would be the most revolutionary domestic program in a generation and he is already the first President since Franklin Roosevelt to spend more on domestic programs than on defense.

He says:

It can be argued that these steps are not enough.

But then he poses a question:

But can it really be argued that they are so unsatisfactory that burning buildings and disrupting classrooms become justifiable or even understandable?

Mr. Hallett declares:

Responsibility for the campus unrest does not lie with the President, as some suggest, but rather with the very same people who have been devoting so much energy to blaming the President: The faculty and administrators of the nation's colleges and universities.

In their efforts to escape responsibility, they are blaming Mr. Nixon. In the process, they are breeding in their students the kind of rigidity that comes only with a one-sided historical analysis—

But inevitably—

the universities must take primary responsibility for the confusion among many of our students. More than any other institution, they influence the thoughts and feelings of the brightest of our young. And more than any other institution, they are responsible for preserving our past and passing along the best of it to the next generation. They have failed miserably in that role. And only when they begin to succeed will students turn to more constructive paths for their emotional surges.

Mr. President, this article merits widespread attention. I ask unanimous consent that it be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Wall Street Journal, July 29, 1970]

CAMPUS UNREST: DON'T BLAME MR. NIXON

(By Douglas L. Hallett)

WASHINGTON.—President Nixon has now had an opportunity to study the initial testimony of his Commission on Campus Unrest headed by William Scranton. He has also received a report from his special adviser on campus problems, Alexander Heard, chancellor of Vanderbilt University. Hopefully he will read both selectively. Although the commission and Mr. Heard have elucidated some of the problems facing universities, their basic thrust is much too one-sided and much too limited by contemporary events to be of any real value.

While the testimony before the Scranton commission and Mr. Heard's report make some reference to the need for reform on university campuses themselves, the dominant tone is somewhat different: The President is at fault. He must listen to the students, respond to their views, end the war, and if that cannot be done tomorrow, at least try to "communicate" with the nation's colleges and universities.

"It may well be that the only line in your report that will have meaning for our colleges and universities is the line that reads: 'This war must end'," said Sen. Edward M. Kennedy (D., Mass.). From Robben Flemming, president of the University of Michigan: "An end to the use of American troops in Vietnam will not still campus unrest, but it will do more than anything else to help contain it." From Charles Palmer, president of the National Student Association: "As long as there is substantial American military involvement in Indochina, students will continue to oppose it."

And the foundation of criticism of the war is always buttressed with the nation's other alleged failings. "Unless we can begin now (restoring youth's faith by doing their bidding)," testified Yale psychologist Kenneth Keniston, "ours will not only be a divided and sick society, but a society that has lost the best of its youth—a society on its death-bed." Even calm Mr. Heard recommended "that the President increase his exposure to campus representatives, including students, faculty and administrative officers, so that he can better take into account their views, and the intensity of those views, in formulating domestic and foreign policy."

There is, of course, some validity in these views. Certainly the war and the threat of the draft have created consternation on campus. Certainly many able students are shocked by the disparity between their own luxury and the deprivation around them when they leave comfortable suburban high schools for the dirt and tedium of urban university neighborhoods.

IMPORTANT SOCIAL FACTORS

Even more important are other social factors the Scranton Commission and Mr. Heard have yet to discuss. Students discover in colleges for the first time that they will not inherit the earth, that the increasingly centralized nature of the American economy has foreclosed many of the opportunities for self-expression they thought they would have. Thousands study international relations in college, but the State Department can use only 150 each year. Only a few in any profession can rise to positions where individual initiative and creativity are truly possible.

But no amount of frustration with society justifies or explains the destructive path some students protest has taken recently. President Nixon has withdrawn more than 100,000 troops from Vietnam and instituted draft reform that will lead to a voluntary army. He has proposed an income maintenance plan that would be the most revolutionary domestic program in a generation and he is already the first President since Franklin Roosevelt to spend more on domestic programs than on defense.

It can be argued that these steps are not enough. But can it really be argued that they are so unsatisfactory that burning buildings and disrupting classrooms become justifiable or even understandable?

Can it really be argued that students, a group possessing the luxury of time to use traditional political channels and the most potential for eventually controlling them, deserve the President's special attention?

Can it really be argued that students are doing anything more than indulging their own uncontrolled emotions when their activities polarize the society and undermine the political viability of issues with which they are supposedly concerned?

Mr. Keniston and others who have been counseling the President over the past few weeks may be optimistic about the students and their concerns, but the real radicals in this society fear them. They see many students as indulging themselves at their expense. The Black Panthers denounced the white students who took to the streets during the May weekend demonstrations as "racist exhibitionists who know black people, and not they themselves, will have to face the repercussions of their madness."

And Steven Kelman, a Socialist and recent Harvard graduate whose book, "Push Comes to Shove," as the best yet on campus unrest, blasted his fellow students before the Scranton Commission for their "snobbish, arrogant and elitist attitude." He said unrest would continue "as long as students continue to regard the American people not as potential allies in solving problems but as an enemy to be confronted."

A FUNDAMENTAL REALIZATION

Neither the Panthers nor Mr. Kelman would appreciate being coupled with Vice President Agnew, but they share with him one fundamental realization: Most so-called student radicals cannot be trusted. Students don't know what they want. They identify for periods of time with anybody from Eugene McCarthy to Bobby Seale, but their commitments are transitory. The outrage that followed the Cambodian incursion has not been followed by sustained politcial activity among students. As president Kingman Brewster of Yale knew when he undertook his policy of generous tolerance last spring, students get bored easily when it comes to the hard work of political organization and stop when the initial enthusiasm has passed.

Worse yet, students are frighteningly ignorant of the problems the country faces and of the efforts that have been made to solve them. They react strongly to rhetoric because they have nothing else on which to rely. It can be argued that President Nixon's withdrawal from Vietnam is too slow, but those who make this point should be willing to acknoweldege that Mr. Nixon is doing exactly what Robert Kennedy proposed in 1968.

Similarly, it is possible to quarrel with the "new urbanology" of Daniel Patrick Moynihan and Edward Banfield, but it should also be clear that their approach is designed partially to eliminate the statism that proved so ineffective in the Johnson Administration's "Great Society" programs. Students, in their false morality, refuse to make these acknowledgments because their historical sense is too weak to breed in them the tolerance that should come with learning.

Responsibility for this situation, does not, as the Scranton commission testimony and Mr. Heard's report come close to implying, lie with Mr. Nixon. Rather, as only a few brave academic souls such as former Cornell President James Perkins have partially conceded, it lies with the very same people who have been devoting so much energy to blaming the President: The faculty and administrators of the nation's colleges and universities. During the Fifties, Mr. Perkins argues, universities became so distracted by the McCarthy furor that they failed to keep pace with changing historical currents. Instead of changing teacher content and academic structures, they just marked time.

On a public policy level, Mr. Perkins believes this led to the universities' advocating two premises that were "bankrupt" long before the academic community noticed. One was that the United States could intervene freely throughout the world. The other was that integration, accepted by both black and white, would be the answer to racial tensions. Mr. Perkins says these faulty ideas have "chopped up" universities. And although he does not continue his argument, presumably he means that this has taken place at least partly because the universities have refused to accept responsibility for their views. Now, in their efforts to escape responsibility, they are blaming Mr. Nixon. In the process, they are breeding in their students the kind of rigidity that comes only with a one-sided historical analysis.

UNCHANGED SINCE THE MIDDLE AGES

The Perkins analysis can also be extended to the internal structure of universities. Universities are the only institutions in American society that have not fundamentally changed since the Middle Ages. They still maintain highly structured tenure systems that protect incompetence and cheat the student out of the personal tutoring that he is told the best universities offer. But the academic community's own rigidity does not stop it from lashing out at the political system and accusing it of the very same authoritarianism and repression academic institutions so perfectly exemplify. Learning from people who engage in this kind of self-delusion and self-projection, students naturally come away confused about their history and their place in it.

In fairness, it must be noted that the problem lies deeper than the campus. The loss of

historical perspective and the diminished and unsure sense of the self that it brings have been encouraged by other institutions as well. Writes historian Daniel J. Boorstin, "In our churches the effort to see man sub specie aeternitatis has been displaced by the 'social gospel'—which is the polemic against the supposed special evils of our time. Our book publishers and literary reviewers no longer seek the timeless and durable, but spend most of their efforts in fruitless search for ala mode 'social commentary'—which they pray won't be out of date when the issue goes to press in two weeks or when the manuscript becomes a book in six months." Nor have the news media, in this day of up-to-the-minute television coverage, done much to develop in their audience a feel for the slow and deliberate character of social change.

But inevitably the universities must take primary responsibility for the confusion among many of our students. More than any other institution, they influence the thoughts and feelings of the brightest of our young. And more than any other institution, they are responsible for preserving our past and passing along the best of it to the next generation. They have failed miserably in that role. And only when they begin to succeed will students turn to more constructive paths for their emotional surges.

This does not mean President Nixon cannot take some steps to ease campus tensions. He can persuade his Vice President to soften his statements that appear to many students to be deliberate incitement to riot. He can make a far better intellectual presentation of his own views than he has so far. He can begin advocating the kinds of public and private decentralization that will create new opportunities for self-expression for students and others. But Mr. Nixon should resist, and resist vigorously, anybody who advises him to institute artificial consultation with students that cannot be followed by policy decisions the students desire. The problem goes far beyond anything symbolic gesturing could solve, and besides, students get too much of that already on their campuses.

THE COST OF MOVING THE EDA REGIONAL OFFICE FROM DULUTH TO CHICAGO

Mr. MONDALE. Mr. President, the Grand Rapids Herald-Review recently published an excellent editorial examining the Economic Development Administration's plans to move the regional office from Duluth to Chicago.

The Herald-Review editorial points out not only the cost of this move to the city of Duluth, but also the cost to those which the EDA office is designed to service. Among other ways, this cost can be measured in terms of the easier accessibility of the Duluth office to EDA designated counties than to the proposed office in Chicago. Twice as many eligible counties and 11 times as many Indian reservations are within 200 miles of Duluth when compared with those which are the same distance from Chicago.

Despite the testimony of Robert Podesta of EDA on the proposed move, clear evidence of the need for a transfer of offices and of the efficiency and economy which supposedly would accrue from it—indeed, clear evidence of any justification for such a move—has yet to be presented.

At a time when dollar investments in vital domestic programs must be stretched to their uppermost limits, and when high taxes and inflation prevent desperately needed legislation affecting health and education from being enacted, it is incredible that the administration should contemplate such a costly action.

Mr. President, I ask unanimous consent that the complete text of this informative editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Grand Rapids (Minn.) Herald-Review, June 29, 1970]

EDA OFFICE MOVE TO CHICAGO IS DIFFICULT TO UNDERSTAND

Minnesotans find it difficult to understand the reasoning back of the decision to move the regional Economic Development Administration (EDA) office in Duluth to Chicago.

Fifty-eight employees and a $1,100,000 annual payroll are involved in the transfer. But more importantly, it will move the EDA office a considerable distance from the area it serves most frequently.

Sen. Walter F. Mondale, in a sharp exchange with an EDA official at a recent senate sub-committee hearing, pointed out that "there are twice as many EDA designated counties and 11 times as many Indian reservations within 200 miles of Duluth as there are within the same radius of the Chicago office."

In further emphasizing the desirability of the present location, Sen. Mondale said that there are 106 public works projects within 200 miles of Duluth and 21 within 200 miles of Chicago, and 27 business loan projects within 200 miles of Duluth as compared with five in Chicago.

EDA will leave quarters which are leased through July 1, 1971, to move into temporary quarters in Chicago. Another move will be necessary when permanent quarters are located. Robert Podesta, assistant secretary for economic development of the Department of Commerce, admits that it is more costly to move twice than once, yet he can see no reason to remain in Duluth until permanent quarters are available in Chicago.

EDA offers the surprisingly feeble excuse for the move that "it is easier for most people who have to deal with us to get to Chicago. There are many areas that might have had some help that couldn't get to Duluth."

This may surprise residents of this area where many EDA projects are centered. It seems relatively easy to reach Duluth from virtually any part of the Upper Midwest. Grand Rapids residents, for example, can drive to Duluth in less time than it takes a traveler to get from his airplane at O'Hare airport and reach downtown Chicago.

Figures of EDA activities make it quite clear that more projects are located near Duluth than within easy traveling distance of Chicago. There may be good reasons for the transfer of the office to Chicago. If there are, someone should take the time to present them. In the absence of such information, it is rather difficult to view the transfer of the office from Duluth to Chicago in terms of efficiency and economy.

While it will now be less convenient to handle EDA projects, the really important concern is that projects from northern Minnesota continue to receive the consideration they merit. EDA has been helpful in financing a number of worthwhile projects in this area, and can be of assistance in areas plagued by economic problems.

SPURIOUS COMMUNIST RULES FOR REVOLUTION

Mr. McGEE. Mr. President, I do not know how many times, in the pages of the CONGRESSIONAL RECORD and elsewhere, I have run across the spurious "Communist Rules for Revolution," which are widely cited by those on the far right as evidence that our society is slipping toward Communism on a path set more than half a century ago.

We are indebted to the Senator from Montana (Mr. METCALF) for his exposure of this phony document a year ago. But exposure has not lessened the distribution of these so-called rules supposedly captured by allied forces at Dusseldorf, Germany, in May 1919. How they have survived as an article of faith among those of the far right was explained Sunday in an article written by Wesley McCune and published in the Washington Post. It is an article well worth reading, for it tells much about the operations of the rightwing publicity mill in this country. I ask unanimous consent that it be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RIGHTWING HOAX SURVIVES EXPOSURE

(By Wesley McCune)

(NOTE.—The author is president of Group Research Inc., a former correspondent for Time and Newsweek and a former staff member for the Agriculture Department and the Democratic National Committee.)

To anyone who believes a certain "document" currently making the rounds of rightwing groups and other places, there is little mystery about the cause of civil disorders, sexual permissiveness, pornography or even gun control legislation.

It is all the result of a Communist plot, and it is all laid out in the "Communist Rules for Revolution," said to have been captured in May, 1919, at Dusseldorf, Germany, by allied forces.

In the wave of current circulation being given the Rules, there is sometimes an introductory admonition to read them in the light of what is going on these days—51 years later—but the text is always the same:

"A. Corrupt the young, get them away from religion. Get them interested in sex. Make them superficial, destroy their ruggedness.

"B. Get control of all means of publicity and thereby:

1. Get people's minds off their government by focusing their attention on athletics, sexy books and plays, and other trivialities.

2. Divide the people into hostile groups by constantly harping on controversial matters of no importance.

3. Destroy the people's faith in their natural leaders by holding the latter up to contempt, ridicule, and obloquy.

4. Always preach true democracy but seize power as fast and as ruthlessly as possible.

5. By encouraging government extravagance, destroy its credit, produce fear of inflation with rising prices and general discontent.

6. Foment unnecessary strikes in vital industries, encourage civil disorders, and foster a lenient and soft attitude on the part of government toward such disorders.

7. By specious argument cause the breakdown of the old moral virtues: honesty, sobriety, continence, faith in the pledged word, ruggedness.

"C. Cause the registration of all firearms on some pretext, with the view of confiscation of them and leaving the population helpless."

Unfortunately for those minds to whom this explains our social evils, the whole thing is a fraud.

Proving the nonexistence of anything is difficult, but Sen. Lee Metcalf (D-Mont.) became alarmed last year at the wide circulation of the document and set out in his thorough way (he was once a judge) to nail the lie or find authenticity. And Metcalf was intrigued by the similarity of the "Rules" and another widely-circulated document called "Lincoln's Ten Rules" which he had exposed earlier as a hoax.

Last summer, the senator sent copies of the Rules, together with an inquiry as to their origin, to the Department of Defense, the Central Intelligence Agency, Library of Congress, Federal Bureau of Investigation and the Senate Internal Security subcommittee. None was able to identify the document or a source, but the inquiry did turn up a paragraph which the FBI had supplied a House subcommittee on appropriations on April 17, 1969, in answer to a question by Rep. Frank Bow (R-Ohio).

The paragraph concluded that "we can logically speculate that the document is spurious."

Metcalf reported his findings, together with instances of modern use of the Rules, to the Senate on Aug. 13, 1969, but since then several Members of Congress have inserted the phony in the Congressional Record as gospel truth—and lamented its aptness to present conditions.

IN GENERAL USE

The right wing keeps circulating it as an explanation for most modern evils. And more importantly, the phony is being given wide credence among editors, clubs and enterprises not connected with any ideology.

For instance, the Rules are printed on page one of "Table Talk," the little flyer distributed to customers of Marriott-Hot Shoppes, Inc., which boasts a circulation of 256,000.

This version is headlined "Document of Destruction" and is given the following introduction:

"In May of 1919 at Dusseldorf, Germany, the Allied Forces obtained a copy of some of the Communist Rules for Revolution. In 1946, a U.S. attorney general obtained a copy of the same rules from a known member of the Communist Party. Today, we're told, these same rules are in effect. As you read them, mentally apply them to the present national condition and what you come up with will be frightening when you see the headway the rule-writers have made toward these goals."

Readers might wonder about the "U.S. attorney general" who obtained a copy in 1946. There is no such person, but most versions attribute the Rules to one George A. Brautigan, identified as State Attorney, State of Florida.

Brautigan's jurisdiction, before he died, was Dade County, Fla., where he did indeed investigate communism. However, his successor has told inquirers that he can find no record of any such document.

Several others have tried to authenticate the document or engage in the game of finding out how the hoax got started. Among them are the Progressive magazine, the Des Moines Register, Rep. Don Edwards (D-Calif.) and Morris Kominsky, a West Coast author. Each has come to a blind alley in trying to retrace nearly 50 years of events and people.

A HARGIS INNOVATION

Apparently the first major use of the Rules by the organized right wing was on the front cover of the May, 1964, Christian Crusade, the magazine of Dr. Billy James Hargis. The next year, the last Rule was cited by Dan Smoot to fight gun controls.

Various splinter groups fanned it out at about the same time, and the John Birch Society cited the first Rule in its March, 1969, magazine as an explanation for efforts to get more sex education courses into schools.

Use of such a document may be expected from the more simplistic right-wingers, but it is perhaps more dangerous when employed by the scores of miscellaneous groups who have eagerly distributed the Rules. A few examples will show the nondescript and widespread nature of such circulation:

Miller Feedlot, Shepherd, Mont.; Concerned Taxpayers Association, St. Joseph, Mo.; the Milwaukee Lutheran; the Waterville, Minn., Advance; the Holdredge, Neb., Citizen; Grand Central Aircraft Co., Glendale, Calif., and Advertising Engineers, Inc., Tulsa, Okla. (which notes that reprints are available from Charley's Chuckle Cards in the same city.)

Efforts to learn where some of the editors got their copy of the Rules are frustrating and sometimes funny. Most received a copy from a subscriber or picked it up from another publication which they can sometimes name.

For example, the Seattle Shopping News picked it up from the Waterville Advance, a small paper in Minnesota which has been credited unusually often as a source. An editor there explains that the subscriber who turned it in had clipped it from a Knights of Columbus publication in Winona, Minn., but that an inquiry there went unanswered.

Meanwhile, the Seattle Shopping News version was being picked up by the Masonic Tribune, indicating the ecumenical virtues of the Rules.

INTERNATIONAL AIRPLANE HIJACKING

Mr. TOWER. Mr. President, on July 16 the Airline Passengers Association held a conference in Washington on the problem of international airplane hijacking. It was my pleasure to work with the APA in setting up this conference and to participate in it in a small way.

A significant number of representatives of the industry were there, along with distinguished government leaders whose official duties touch this problem. I understand from Mr. Jack Cox, President of APA and a long-time friend and political associate of mine, that the conference was definitely a success in terms of generating new ideas.

One of the participants in the morning session was the Honorable Secor Browne, Chairman of the Civil Aeronautics Board. His remarks were most interesting, and I want to share them with Senators. A transcript of the conference is being made, and as soon as I receive a copy I will ask that pertinent parts of it be included in the RECORD. In the meantime, I ask unanimous consent that Chairman Browne's remarks be printed in the RECORD.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

REMARKS OF SECOR D. BROWNE

Gentlemen, thank you for the opportunity to discuss with you today the problem of crimes against aircraft. I do not limit myself to air piracy or hijacking, because I consider equally serious the threat of ground sabotage and all other acts of violence committed during any phase of air transport operations.

Let me begin by saying that I truly believe this subject is of paramount importance to all responsible and involved parties, if not the subject of top priority. It is clear that any condition which threatens the safety of air travel simply cannot be tolerated. Crimes against aircraft, or any implied threat of violence, are a subject of international concern.

It is a problem, however, which has generated more discussion than decision; emotion than action. It is essential, when considering this subject, that the psychological roots of the problem be understood. Outside of the areas of international confrontation, such as the Middle East, where political considerations dominate motives, the problem is basically one of dealing with people.

I would also exclude that lunatic fringe element bent on self-destruction which chooses the aircraft as its vehicle. I doubt whether we can ever effectively screen out and eliminate those people. Thank goodness they are a small number.

Eliminating the professional guerilla and the insane, we are left with the common "run-of-the-mill" hijacker. The person who is not driven by any consuming internal fire, but essentially is looking for a means of expressing himself. He is, it would seem, a person capable of reason, of weighing pro's and con's, and, in a premeditated manner, one who is aware of and therefore considers alternatives.

He does not want to die and is not bent on violence though once committed to his course of action may not have any alternative but to back up an uttered threat and use whatever weapon he has at his command. He launches himself with the prior knowledge that probably nothing will go wrong, no one will get hurt, and he won't get caught. Even if he is apprehended, he is aware of the performance record of enforcement which, with notably few exceptions, has seldom adhered to Gilbert and Sullivan's admonition in *The Mikado:* "Make the punishment fit the crime."

Reduced to its ultimate simplicity, the solution is to be found in deterring the potential act rather than halting it once begun. The steps taken by individual carriers as far as searches, etc.; and the work being done by Dr. Rheigard in establishing the psychological profile of the potential offender are excellent and should be broadened. It has been clearly demonstrated that the large majority of airline passengers are not offended by the efforts of the carriers and the government to isolate the hijacker before boarding.

But clearly, something else is needed. It is impractical to expect that every passenger for every flight will be screened, physically or psychologically. It is impossible to achieve absolute security on every ramp and in every hangar around the world. It is also true that there are sufficient statutory provisions to adequately handle the problem, at least as I interpret them. I do not believe that any additional laws will be helpful on a broad scale.

What then, can and should be done? How can enforcement action be ensured and adequate use be made of existing statutes? I think it is admirable that the FAA and the Department of Justice have now agreed as to who has various responsibilities. That is an important step.

However, hijacking and the intricacies of aviation law and international relationships are highly technical subjects. I do not believe a local U.S. Attorney should be expected to be an expert in this field. A task force of specialists, traveling from case to case, would enhance the pursuit of justice—not hinder it, and such a group should be set up immediately, so that when a hijacker is apprehended, he is prosecuted to the fullest extent.

While I recognize everyone's right to capitalize on events and take advantage of opportunities, I find deplorable the exploitation of some of these events which has lent an aura of glamour to the individual and an

almost "holiday atmosphere" to the entire exercise. I think the communication medias are in a position to carry a clear message to those who are contemplating a crime against an aircraft—that they are dealing in an area which carries stiff penalties and has, in truth, none of the aspects of a modern day Captain Kidd charade. They should take every step, not to control the news, but to lend proper perspective to the problem.

Those involved in the international forum have taken steps to standardize procedures. The recent ICAO meeting in Montreal and its subsequent clarification and extension of the principles of the Tokyo Convention will have, I think, significant impact. It is significant that all nations, regardless of political orientation, are strongly united on this subject. But work in this area must not cease until there is clear and total agreement on definition of the crime itself. Enforcement procedures of a uniform nature and extradition rights in the absence of prosecution by local authorities remain to be agreed upon. There must be no haven for the hijacker, for as long as a single one exists, the temptations, and therefore the very real danger of mass disaster is ever present.

Since the immediate possibility of totally preventing a hijacker access to an airplane is somewhat remote and since there are still places to go, every effort should be made to control the hijack while it is in progress. This is an item squarely in the hands of the individual managements of the carriers themselves.

While violence on the flight deck is certainly to be avoided, perhaps some concentrated training of the crews in security and containment of the individual once he reaches the cockpit should be undertaken. The flight deck of a modern transport aircraft is a confusing jungle to the stranger, and a well briefed crew, acting in a coordinated fashion and making maximum use of modern deterrents should be in a position to avert disaster.

This coordination and training should also extend to a specially gathered ground crew (or crews) consisting of both government and carrier personnel, who are expert and experienced in the handling of a hijack in progress. Our communication network is such that these groups could be located in key spots and upon first notification of a hijack would immediately take over ground control of the aircraft.

Through the use of specially developed codes, and with firsthand personal knowledge of the individual crew involved, these groups could play a major role in averting an airborne disaster, should a hijacker slip past the ground screen.

The Civil Aeronautics Board has no statutory authority in this area. However, the grave impact of crimes against aircraft causes us deep and vital concern. While we are distressed and disturbed by aircraft crimes throughout the world, we can only voice suggestions to those who are directly included. We hope some have merits, and that those that do will be implemented.

The program I have outlined; the creation of a strike force to ensure adequate prosecution, the expansion of on-the-ground efforts by both carriers and government entities, the swift movement internationally to eliminate refuges, the additional special training of ground and flight crews in hijack procedures, and a concerted conscientious effort on the part of communications media, while not new in any sense, is perhaps more focused than in the past.

The Civil Aeronautics Board stands ready to help in any way. No one should rest easily until every *action* has been taken to eliminate crimes against aircraft.

Thank you.

BIG THICKET: FABULOUS WONDERLAND

Mr. YARBOROUGH. Mr. President, for many years I have fought to preserve the Big Thicket of southeast Texas for future generations to enjoy. On June 12, 1970, hearings were held on S. 4, my bill to establish a 100,000-acre Big Thicket National Park. The hearings were held in Beaumont, Tex., by the distinguished senior Senator from Nevada (Mr. BIBLE), chairman of the Subcommiteee on Parks and Recreation of the Committee on Interior and Insular Affairs. The witnesses who appeared at these hearings gave many reasons why a large part of the Big Thicket should be preserved.

Recently an article on the Big Thicket was brought to my attention. While the gentleman who wrote the article did not testify at the hearing, he is a strong and knowledgeable advocate for the Big Thicket. In his letter to me, he described himself as an old forester, and his articles demonstrate his great knowledge and love for our woodlands.

Mr. President, I ask unanimous consent that two columns by Mr. Barnard Hendricks, entitled "Getting To Know Texas," one which appeared in the December 4, 1969, issue of the Southwest Dallas County Suburban and the other which appeared in the December 30, 1965, issue of the Cedar Hill Chronicle, be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Southwest Dallas County Suburban, Dec. 4, 1969]

GETTING TO KNOW TEXAS

(By Bernard Hendricks)

Funk and Wagnall's dictionary defines a thicket as a thick growth, as of underbrush, through which a passage is not easily effected; a coppice; jungle. Perhaps the greatest example of a thicket to be found anywhere in the United States is located in East Texas, lying principally within the boundaries of Harding, Polk and Tyler counties with long arms extending into San Jacinto, Liberty and Montgomery counties. The present area of the "Big Thicket," estimated to be about two million acres, is a mere fraction of the great thicket the first pioneers faced as they traveled into Texas from Western Louisiana.

Once the great thicket, spread over an estimated fifteen million acres, mostly in the rolling country between the Neches and Trinity Rivers, was the home of Indian tribes that lived in picturesque villages of round-shaped pole huts, thatched with thick grass and mud and who tended small fields of squash, corn and melons. One tribe still lives on a reservation in the northern part of the thicket on the Alabama-Coushatta Indian Reservation. From the time the first pioneers tangled with its dense jungle like growth of vines, small trees and shrubs beneath towering primeval forest trees the great thicket has been known as the "Big Thicket." The dense growth was almost impenetrable with the equipment at hand in early times and only experienced hunters, trappers and scouts dared to venture beyond the edges of the great wilderness. During early times the great thicket was a wonderful haven for many forms of wild life and passenger pigeons, now extinct, once roosted there by the millions. Evidences of their great numbers may still be found in the very luxuriant growth of great trees that still thrive on the fertilizing materials which the birds left behind in great deposits of their droppings.

Now the chief attractions of the "Big Thicket" are the wonderful forest trees, many of great height and girth. The understory with its great array of rare and beautiful wild flowers and a host of interesting plants, including lovely wild orchids, delicate ferns, sparkling mosses and masses of lichens with rich and varied hues of orange red and blue green: beautiful streams densely shaded by great walls of living greenery; a host of wild animals and birds that make their home in the enchanting wilderness. The forest growth includes giant magnolias, lofty cypress trees, stately pines, giant hollies and a host of broad-leaved trees. Wildlife in the "Big Thicket" includes black bear, bobcat, lynx, a few panthers, deer, wild turkeys, beaver, otter and several different kinds of squirrels. A number of rare birds, such as the Ivory Billed Woodpecker, make their home in the "Big Thicket" and protection of the jungle-like habitat is essential to their continued existence.

According to the geologic history of the region, the "Big Thicket" area has at times been an arm of the Gulf of Mexico and the waters of the Gulf have inundated the area numerous times, only to recede and leave behind silty deposits which have in part, accounted for the richness of the soil and this in turn has led to the rich development of its varied and unique flora.

Sen. Ralph Yarborough now has a "Big Thicket National Park Bill" pending in the Senate and if it is approved, a considerable area of the "Big Thicket" will be preserved for future generations to enjoy. With a National Park only about 250 miles away, residents of Southwest Dallas County could easily take advantage of wonderful hiking trails that would penetrate the depths of this fabulous wonderland of plants and animals, the "Big Thicket."

[From the Cedar Hill Chronicle, Dec. 30, 1965]

GETTING TO KNOW TEXAS

(By Barnard A. Hendricks)

Foresters classify young trees into three groups, seedlings, saplings and poles. Beyond the pole state they are considered to be full fledged trees, although they may still be classified into various groups depending on age, height, crown form, etc. As for the tree itself, if it could have any feelings or any say about the matter it would probably consider itself a tree as soon as it was strong enough to bear the paperlike nest of the wasp and the down lined nest of birds, tall enough to serve as a perching place for the birds, or old enough to bear seeds that can replenish the forest.

Some trees bear seeds quite early in life. The presence of acorns on small live oaks, only 4 or 5 years old, is not extremely unusual. Chinese tallow trees, introduced trees now being extensively planted in the southern coastal areas of Texas for their brilliant autumn foliage, may bear when only 6 or 7 years old, copious clusters of small burs, each resembling a tiny cotton bur and containing 3 small pea sized seeds, china white in color. Some bald cypress trees may begin bearing their marble sized seed cones when only 8 years old and some sycamores of similar age, may likewise begin to produce their round ball like fruits dangling at the tips of long, slender thread like stems. These fruits with roughened surfaces and only slightly smaller than a golf ball contain hundreds of small seeds, each attached to a small dartlike spindle and bearing a tiny parachute of fluffy, light brown hair. Some flowering trees, like the desert or flowering willow for example, bear seeds at an earlier age, some when only 3 or 4 years old.

As the trees become self reproducing members of the forest and become host to the wasps, bees, and birds, they become ever more important in the cycle of life, contributing increased supplies of fresh oxygen to the atmosphere to combat the "smog" and "smaze" that threatens to reach the stage where it is dangerous to human life in the large cities. All trees make good use of the water they take from the soil by taking carbon dioxide from the air and nutrients and water from the soil and converting them through the miraculous process known as "photosynthesis," into sugars and starches which are changed into various forms of cellulose and ultimately into woody fibers and tissues that form the roots, trunks, branches and foliage of the trees. The water the trees lift from the soil is in part transpired out through tiny openings in the leaves to give that wonderful moist, cool feeling to the air that is so refreshing in the summertime.

The trees voice no spoken language, but the rustling of their leaves and the soft sighing of the winds amongst the cedars and junipers bring to us messages that no human tongues could utter. Each leaf laden twig and needle covered bough breathes a matchless spirit of vigor and mirrors the vibrance of sunlight in all its glory. The Southwest corner of Dallas County with its great escarpment where millions of trees manufacture fresh oxygen daily can truly lay claim to being a healthful place in which to live. Even in wintertime when the hardwood trees lose their leaves and become dormant, the cedars and junipers continually supply fresh oxygen.

The large size of old tree stumps found in numerous places within the escarpment forest offer mute testimony to the glory of the early day forest where many of the first settlers found logs to build homes, barns, and fences. Ancient, weathered cedar stumps, 18 to 20 inches in diameter and oak stumps that are much larger can still be found within the shaded depths of the hollows.

On some stumps annual growth rings are still visible and they still serve to remind us of the years when the trees that are now gone, lived in the forest. The inner rings tell of the tree's growth in infancy, the outer rings record its closing years. On a few big old stumps the record stretches back to the days when the largest and best trees were cut to provide logs and shakes for the first homes to be built along the escarpment. Many of the oldest and largest trees now standing in the forest had already reached tree size when those first homes were built and the laughter of children was heard along the rim for the very first time. What a wealth of memories these very very old trees must hold in their narrow bands of growth that measure the march of the seasons and the passing of the years.

HERSCHEL D. NEWSOM

Mr. DOLE. Mr. President, our Nation recently lost one of its outstanding agricultural leaders through the death of Herschel D. Newsom, for many years master of the National Grange. I had the opportunity of communicating often with Mr. Newsom.

His vast reservoir of experience in the field of agricultural legislation was of great help to me, and I benefited greatly on many occasions by seeking his advice and counsel.

Mr. Newsom's expertise in the general field of agriculture gained the attention of many international organizations which drew on his superior knowledge. He was appointed to many boards and commissions whose aims are of a humanitarian nature.

Mr. President, America and, in particular, American agriculture have been enriched by the life of this outstanding man. I ask unanimous consent that the editorial tribute appearing in the Indianapolis News of July 6, 1970, be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HERSCHEL D. NEWSOM

Indiana, which contains some of the nation's finest farmland, has produced many farm leaders whose knowledge and ability have won them national and international recognition.

Ranking high among such men was Herschel D. Newsom, 65, Bartholomew County farmer whose advice and services were sought by Washington administrations for many years.

Newsom followed a family tradition when he became active in the Indiana Grange and the National Grange, influential farm organizations. He was master of the Indiana Grange from 1937 to 1950 and master of the National Grange for 18 years.

His expertise in agricultural matters brought him two terms as president of the International Federation of Agricultural Producers. President Johnson then appointed him as a member of the United States Tariff Commission, a position he held at the time of his death from a heart attack Thursday. Secretary of Agriculture Clifford M. Hardin, also a Hoosier, paid tribute to him as one of the best informed and most active men in the national agricultural picture.

Newsom was a farm leader who opposed excessive government control of farm production and the daily lives of citizens. A man who did not hesitate to express his opinions, he believed it was this opposition to Federal encroachment which led to his election as master of the National Grange.

Indiana University, where he was graduated in 1926, acclaimed him as a distinguished alumnus. He was also a distinguished Hoosier and American and an outstanding spokesman for his fellow farmers.

JULY—HISTORIC MONTH

Mr. MOSS. Mr. President, most people are inclined to think of July as a lush month in which most people let down a little and concentrate upon enjoying the good life rather than driving toward some great achievement.

However, July is studded with dates of splendid accomplishments, as Harry Jones points out in the Deseret News of July 21.

Mr. Jones recalls that not only is July the month of our national natal day, but it contains such colossal achievements as the detonation of the first nuclear bomb and the arrival of the first men on the moon.

It is also the month in which the first Mormon pioneers arrived in the Utah valley, an event which is brilliantly celebrated each year in our State as a tribute to the courage, determination, and vision of those intrepid pioneers.

Having just returned from the 121st celebration of this event, on July 24, I consider it a privilege to pay tribute to the Mormon pioneers again briefly in the U.S. Senate. I ask unanimous consent that the Jones column be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IT'S HISTORY MONTH

(By Harry Jones)

You would think that the long torrid summer, when shade and cool are at a premium, would be the slower season. But July is the action month in the history books of America.

The first date is the Fourth of July. The most important day in our history. It is celebrated by most Utah people going up to Evanston, Wyo., to buy illegal fireworks.

John Adams said it best at the adoption of the Declaration of Independence:

"Through the thick gloom of the present (sounds more like he was speaking of today doesn't it?) I see the brightness of the future, as the sun in heaven. We shall make this a glorious, an immortal day. When we are in our graves, our children will honor it. They will celebrate it with thanksgiving, with festivity, with bonfires and illuminations."

NOT THE BUILDINGS, BOYS

But I don't think he meant the bonfires and the illuminations would be on the campus . . . the library or the ROTC building burning down.

There is another day in July that changed history.

It had rained on the desert on the morning of July 16, 1945. The rain glistened on the Cactus and the Joshua. Dr. J. Robert Oppenheimer gave a signal just as dawn came to New Mexico. It was 5:29.45.

Witnesses saw the first big mushroom cloud that sounded like no thunder had ever sounded before, roar across the land. The ground shook like a giant earthquake.

The first nuclear bomb had been detonated.

July 24 is celebrated in Utah with more gusto than the glorious Fourth. But it doesn't mean Utahans are not of a patriotic nature. It's just that the day the pioneers came into the valley was one of great joy. The trek had been at best hazardous . . . no superhighways, in fact no roads. (Imagine walking west day after day before sunglasses were invented.)

Where would we be without our pioneers?

WHAT HAPPENED TO MOON DAY

I guess you must call Neil Armstrong, Edwin "Buzz" Aldrin and Michael Collins pioneers, too.

It doesn't seem to be a year ago yesterday that Neil and Edwin walked on the Moon. Remember Neil saying something about it being a "giant step for mankind."

The next day there was talk about the 20th of July becoming a national holiday. Some said the feat was greater than old Chris and his craft crossing the ocean against everyone's advice. They talked of a switch . . . Moon Day instead of Columbus Day.

So what happens? Nothing. If the truth were known, 90 per cent of the people yesterday had forgotten the date. A good chance for another day off fell by the way.

Just when you and I could have used the day to rest up for the hectic week ahead celebrating Days of '47!

WIT'S END

The only way to be tolerant of a neighbor's noisy Days of '47 party is to be invited!

ONLY U.S. OFFICES OPEN JULY 24TH

The 24th of July is the wrong time to be a federal employe.

Federal offices are the only ones to open on that state holiday. State, city and county employes will have the day off.

Downtown stores and banks also will be closed, but merchants will reopen Saturday for the old-fashioned sidewalk sale.

Weekly garbage pickup will not be interrupted by the holiday, but semi-annual cleanup crews will work only through Thursday this week.

BOOK REVIEW OF "AGNEW: PROFILE IN CONFLICT"

Mr. THURMOND. Mr. President, the late Jim Lucas, distinguished author and newspaper writer, spent the last days of his life working on a book about Vice President SPIRO T. AGNEW.

This publication, released just prior to Jim's untimely passing, is entitled "Agnew: Profile in Conflict."

In the Washington Star of July 26, 1970, this book was reviewed by James B. Rowland.

Mr. President, while I have not had the opportunity to read this publication, judging from the review by Mr. Rowland this work contains information of historical importance. In particular, it sheds some light on the generally friendly press coverage accorded the Vice President during the 1968 presidential campaign.

I ask unanimous consent that the review be printed in the RECORD.

There being no objection, the review was ordered to be printed in the RECORD, as follows:

BRIEF AGNEW BIOGRAPHY

(By James B. Rowland)

(Agnew: Profile in Conflict. By Jim G. Lucas. Award House. 160 pages. $5.95.)

In the parade of political biographies that will assuredly precede the 1972 national political campaign, this brief and fast-moving work will serve as a cursory review of one of the most controversial figures in President Nixon's administration.

Those who hold firm biases for or against Vice President Spiro T. Agnew will find little here on which to reaffirm or modify their positions. The book is a chronological sketch of Agnew's rags to riches political development, with the emphasis on the dates of major occurrences rather than a studious insight into the motivations behind Agnew's actions and the reactions of the wide spectrum of those effected.

Lucas, a Pulitzer Prize winner for his coverage of the Korean War and author of the earlier "Dateline: Viet Nam," died Tuesday. He obviously had studied newspaper clippings on Agnew and talked to a few—but not enough—reporters and politicians who have dealt with him.

He had picked only a few high spots in Agnew's tenure as county executive of Baltimore County, as governor, as the surprise vice presidential selection at the 1968 GOP national convention, as a campaigner, and as the persistent thorn in the side of permissive liberals and thin-skinned radio, television and newspaper executives.

The result is a handy but shallow Agnew reference book that sets some guideposts for other authors who try to probe deeper into the makeup of a man who left the Democratic party on the belief that the GOP offered more chance for advancement. It is hoped that these authors will correct such inexcusable Lucas errors as the spelling of the names of former Rep. Carlton R. Sickles, State Sen. Roy N. Staten, D-Baltimore County, and place Montgomery County in its proper congressional district—the 8th, not the 10th.

Although the outcome is the same, the final tallies Lucas used for the 1966 Democratic primary and the subsequent general election which made Agnew governor are not those listed by the Maryland Hall of Records. The figures in a May 14, 1968, state referendum that defeated a proposed modernized state constitution are not the same as those carried in official Maryland election books. The errors may be due to too much reliance on clippings from newspapers which did not bother to update readers with final, official tallies.

In pages capsulizing the Agnew gaffes of the 1968 campaign, there is a full account of the "fat Jap" episode. The conclusion is that Agnew did not know how to control his candor and naivete in a campaign as closely watched as his.

It is the judgment of Lucas, and shared by many other reporters, that the "fat Jap" remark made in the privacy of a campaign plane with reporters never would have been publicized had it been said eight years earlier by John F. Kennedy during a similar informal exchange with newsmen. Some of these reporters well remember an anti-Negro remark made by Kennedy in jest, taken as a joke, and shielded by the news fraternity from the public.

Lucas' treatment did not come close to the accusations hurled at Agnew by some other newspapermen, nor did the author seek strongly to defend the Vice President's position on such issues as racial conflict and protests. There is an attempt at balance, but it is apparent the author respected Agnew for adhering to his principles and not wavering under the harangue of so-called liberal leaders—and intellectuals.

The brief account of Agnew as Baltimore County executive just prior to his election as governor mentions his successful fight for a public accommodations law, the first in the nation to be adopted by a county. There is no reference to Agnew's role in dealing with racial protests at Gwynn Park amusement park, where periodic clashes resulted in numerous arrests.

Agnew's two years as governor are centered mostly on his activities in the areas of racial protest, with emphasis on his April 11, 1967, scolding of Negro moderates for not openly opposing black militants.

There is no mention of Agnew's accomplishments in helping to broaden the state public accommodations law, and enacting the first open-housing law south of the Mason-Dixon line. The limited measure later was petitioned to referendum and defeated.

The fact that Agnew was the first Maryland governor to sign an executive order for fair employment practices goes unnoticed, as was his victory in getting the Democratic-controlled General Assembly to pass his $129 million water pollution control program.

Lucas' portrayal of the Agnew record in the State House omits the Republican's efforts to create a State Department of Transportation, set up an administrator of election laws and reorganize the executive branch of government—proposals that Mandel picked up and implemented.

On the other hand, there is no recall of Agnew's decision to cut back on welfare, already at a low level, and to drop some 22,000 persons from medicaid for economy reasons. One of Mandel's first acts as governor was to make these persons again eligible for state medical assistance.

Lucas included Agnew's speech nominating Nixon at the 1963 convention, and the Marylander's address accepting the No. 2 slot. It is interesting to reread the speeches, in view of what has happened in the two years that have transpired.

The author notes that Nixon, in selecting a runing mate, wanted a man who would be "nationally acceptable," while at the same time be a "unifying force" in the country.

"In one sense, Agnew is probably the most primitive—to use that term to denote lack of subterfuge—man ever to be Vice President. He has never learned the reasons for ducking a question; he has yet to be convinced that a soft answer is to be preferred over a direct one," Lucas surmised.

PROTECTION OF VACATIONING CITIZENS

Mr. MOSS. Mr. President, at this time, with hundreds of thousands of Americans trying to enjoy a well-earned vacation, we ought to examine very carefully the manner in which our Government is protecting its vacationing citizens, particularly in the field of air travel. It appears to me that the Federal Government cannot make up its mind on this important matter, a situation I would bring to the attention of the Senate.

Many will recall that on May 8 of this year, the Civil Aeronautics Board published proposed revised regulations governing air travel. As a person deeply concerned about the consumer and his ability to gain equity in the marketplace, I was genuinely surprised to see that agency proposed a series of regulations that would regulate not the air transportation industry but the traveling public. The CAB had a lot to say about the limitations of the number of American citizens that could belong to a traveling group, about how that group elects its officers and keeps membership records, and about the way it affiliates with other groups. The CAB attacked the travel agents and the operators of vacation, study, and travel tours, as if the consumer's right to travel and the right of others to aid him were inherently some kind of suspicious, if not outright illegal, activity.

Following the publication of those proposals, the CAB received harsh but just criticism from many distinguished Members of this Congress, as well as from organizations that would no longer be able to charter a plane as a group and fly to a convention or for study or simply for relief. Messages condemning the proposals have been sent to the CAB by the United Steelworkers of American—AFL–CIO—the Cooperative League of the U.S.A., the National Grange, and the Group Health Association of America, to name just a few. Mr. President, groups with such very different interests rarely get together on an issue unless the offending agency is grossly unjust or very unaware of the public need. It is just possible that both reasons prevail in this instance. However, I would point out that just last month, on June 22, the President issued the Government's revised statement of international air transportation policy. That statement is not only a document representing many forward-looking approaches to the improvement of America's position in the air, it is also a sharp rebuke to the CAB.

The statement reads:

> The economic and technological benefits we seek can best be achieved by encouraging competition and by a relative freedom from government restriction.

It goes on to specifically note—

> The U.S. should work for the broadest range of profitable services, designed to appeal to the broadest consumer market and based on the lowest cost of operating an efficient air transportation system. . . . We expect both scheduled services and charter services to have important roles throughout the coming decade.

It is apparent to me that the administration has a slight case of schizophrenia which can be cleared up with effective, low-cost therapy. I would strongly prescribe the pursuit of the ideas in the statement of policy and I would just as strongly urge that the Civil Aeronautics Board once again rejoin the Government, adjust its policies to the needs of the traveling public, and withdraw the proposed arbitrary, restrictive, punitive, and demeaning regulations. It is exactly this kind of fuzzy, contradictory thinking that has produced chaos in rail transportation and has worked against the welfare of passengers and shippers. Surely we can and we must avoid the same chaos from occurring in air transportation.

THE OIL INDUSTRY REGRETS IT WAS RIGHT

Mr. TOWER. Mr. President, an article entitled "The Oil Industry Regrets It Was Right," written by William D. Smith, appeared in the New York Times on Sunday, July 26, 1970. I ask unanimous consent that this article be printed at the end of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. TOWER. Mr. President, in my opinion, the title of this article succinctly and correctly states the sentiments of those in this vital industry.

During the past 20 years, the oil industry spokesmen have been predicting large-scale deficiencies of the Nation's energy supply of which oil and natural gas contribute 75 percent. Regretfully, these predictions are coming true.

Shortages of natural gas in some areas of the country and higher prices of imported crude and home heating oil on the east coast of the United States are but two of the many deficiencies predicted by the industry and presently coming true. The article capably explains in detain the reasons for these two maladies.

Mr. President, because of informative articles such as this, larger segments of our country are becoming aware of the dangerous energy crisis now facing the Nation. This energy crisis has been caused largely by ill-conceived policies emanating from the Federal Government. These policies have resulted in decreasing the economic incentives of those who explore for and develop our own abundant but untapped reserves of oil and natural gas.

In order to begin to correct this serious energy crisis, we need to implement policies designed to stimulate domestic exploratory activity.

We do not need investigations of this industry by various agencies of the Government. It has recently been suggested that the Justice Department investigate the cause of the high price of home heating oil on the east coast. This sort of investigation will not discover any new and meaningful solutions to the problem of the high cost of this commodity. We already know the solution depends upon an abundant domestic supply with transportation facilities to carry it economically to the consumers.

Let us resolve to alleviate the cause of our petroleum problems. Let us work to restore the economic incentives necessary to stimulate the needed domestic exploration and development of our abundant oil and natural gas reserves so that our present and future energy demands can be met.

EXHIBIT 1

U.S. OIL INDUSTRY REGRETS IT WAS RIGHT

(By William D. Smith)

If an industry could have a facial expression, the United States oil industry would be wearing a bittersweet smile.

The smile would be a result of having seen recent events prove some of its serious forecasts and urgent warnings correct.

The pleasure, however, is mitigated by the pain that the industry is nonetheless suffering from having seen its predictions come true.

Throughout the long and heated political controversy over oil imports, the industry has maintained that foreign sources of petroleum were relatively undependable and that their lower-than-domestic price levels could be quite ephemeral. For this thesis oilmen were raked over the political coals. The price of Middle East crude oil is now at least 75 cents a barrel more than domestic.

For more than a decade oil and gas producers have warned that Federally set "low" natural gas prices would dampen the incentive to look for gas and thus produce a future shortage. Again this was treated as a totally self-serving ploy.—"There is a shortage of natural gas today," Secretary of the Interior Walter Hickel reportedly explained.

John Emerson, energy economist of the Chase Manhattan Bank recently went even farther, "Never before in this century have we faced such serious and widespread shortages of energy. These shortages are upon us now."

The industry warned that rushing into low-sulphur, anti-pollution legislation and regulations might produce supply problems.—There appears a very good chance that there will be a shortage of low-sulphur residual fuel oil this winter, forcing cities and corporations to choose between lack of heat and power and the present practicality of recent anti-pollution laws.

Being correct, at least on the surface level, gives the industry no reason to gloat. In each instance it is costing the oil companies money. If they pass on the cost, as they probably will have to, it cuts into what little affection the public has left for the industry.

"No one will remember that Senator Kennedy or Senator Muskie and other so-called consumer representatives have advocated policies that have often ultimately resulted in higher costs. They will only blame us for rising the price of gasoline or heating oil," a vice president and counsel for a major company commented last week.

The executive's statement is probably too one-sided. The present situations are the result of many complex forces; some alterable, some not.

Nonetheless, some politicians and academicians, past and present, may have been guilty of thinking that a big desk and pet theories were a substitute for the hard facts of industrial life.

There is a very good chance that by fall the American consumer may be paying more for gasoline, natural gas and residual fuel. This means that the cost of running his car, his home and his factory will cost more.

These major impacts on the battle with inflation have not gone unnoticed in Washington although it appears that no major constructive actions have as yet occurred.

The leap in the pride of overseas crude oil is a result of soaring tanker costs. Few analysts expect these costs to go down in the very near future.

But if tankers are the central reason, the Arab-Israeli war is the underlying cause.

On May 3 in Syria, the Trans Arabian Pipeline was knocked out of commission by an errant or deliberately aggressive bulldozer. The Syrian Government has not allowed its repair, preventing 500,000 barrels a day of Saudi Arabian crude from reaching the Mediterranean.

At the other end of the Mediterranean the Libyan Government cut back oil production by 15 per cent, or 500,000 barrels a day.

The loss of almost 1 million barrels a day of oil west of Suez and close to world markets has strained tanker capacity. Replacement of this oil with oil from the Persian Gulf around South Africa takes six to eight times the tanker capacity.

CHARTER RATES RISE

Spot charter rates have risen to their highest level since the 1956 Suez crisis and are more than 50 per cent higher than during the 1967 Arab-Israeli war.

Persian Gulf oil is now coming into the United States at about $4.50 a barrel compared with Louisiana crude delivered to East Coast refineries at $3.75.

There is no chance of a shortage, however, because Texas and Louisiana will increase their production to meet the need. There is a very real chance of consumer price increases.

The Oil and Gas Journal, a trade publication, reports that Professors Phillip Areeda and James McKie, two of the chief advocates of sharply increased oil imports, have now backed off considerably from that position.

FPC REGULATION UPHELD

The natural gas supply and demand controversy is a far older argument. In 1954 the Supreme Court ruled that natural-gas producers were subject to Power Commission. In 1960 the regulatory agency began fixing wellhead prices for all gas sold interstate. The Supreme Court upheld this right again in 1965 despite vigorous crys of outrage from producers, who said it would kill incentive to drill.

Time has proven the oilmen right. Wildcat drilling dropped 40 per cent between 1956 and 1968. Geophysical activity fell 56 per cent.

Some of the drop off may have been artificial; just to show the Government. Nonetheless the results are uncontestable. In 1969 the United States proved reserves of natural gas fell 12.241 trillion cubic feet, the largest in the nation's history.

The previous record drop was in 1968, when they fell 5,548 trillion cubic feet. These are the only declines in the history of the industry.

POSITIONS CHANGED

The F.F.C. is now trying to rectify the situation by raising prices. Some of the people who supported the lower prices several years ago are now in the forefront of those pushing higher prices.

The Interior Department is trying to speed up lease sales of suspected gas fields, but is running into opposition from Conservationists. But even if this opposition is overcome, it will take from three to seven years for these areas to begin producing.

In the meantime Canadian sources of gas can be tapped although Canadian-American relations on energy matters are at an all-time low. Liquefied natural gas quite possibly will reach this country from Algeria, Nigeria or Venezuela. Contracts have already been signed to import Algerian L.N.G., but the Algerian Government's recent nationalization of American oil company properties puts this source of L.N.G. in a very questionable position.

SUPPLY OUTLOOK TIGHT

The supply outlook for this winter is tight. Industry sources say that there will be enough to heat homes, but that the industrial market, which accounts for about 50 per cent of total sales, may be in bad shape. Many distributors already have been forced to impose severe limitations on new industrial loads, and there is a real possibility that deliveries to existing customers may have to be curtailed, according to J. W. Heiney, president of the American Gas Association.

It would seem almost certain that consumer prices will have to go up, and possibly sharply.

The crude oil reserve situation is not much better, according to the American Petroleum Institute. Last year crude oil reserves dropped to 29.632 billion barrels, the lowest level in 15 years.

The A.P.I. explained the situation simply by saying that lack of incentives had led to a long and steady decline in exploratory drilling during a period of mushrooming production and consumption.

The oil industry in recent weeks seems to have won a lot of points, but through no fault of its own, it well may be losing the game.

INTEGRITY

Mr. THURMOND. Mr. President, in this country the press is quite powerful, and the proper use of the power of the press by the members of the fourth estate is a beautiful thing to behold.

Such responsibility is often demonstrated in the Augusta, Ga., Chronicle-Herald newspapers by the distinguished and able vice president and editor, Mr. Louis C. Harris.

In the Sunday, July 19, 1970, issue of the Augusta Chronicle-Herald Mr. Harris published a column entitled "What Happened to Integrity?"

Mr. President, this particular article impressed me as an excellent and responsible piece of journalism. I ask unanimous consent that it be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Augusta Chronicle, Augusta, Ga., July 19, 1970]

WHAT HAPPENED TO INTEGRITY?

(By Louis C. Harris)

For Americans brought up in the Victorian belief that certain fundamentals—honesty, integrity, the Presidency of the United States, love and the virtue of women, to name a few—are sacred, these are indeed times that try men's souls.

For them, the time (or could it be the people currently living in it) is, as Hamlet described his day, out of joint.

Language normally ascribed in the past only to the base, and heard only in the gutter falls almost with platitudinous simplicity from the movie screens these days as members of the male audience guffaw and the "ladies" titter.

Those persons who find a law or regulation offensive ignore it. Nor is it psychologically proper any longer, in our "civilized" society, to undertake to achieve—as was the "object all sublime" in Gilbert and Sullivan's "The Mikado"—"to make the punishment fit the crime." A man who is apprehended after stealing from another, or even after killing another in a paroxysm of hate, more often than not should be given little more than a reprimand and told to go and sin no more.

Criticism of the White House-based administration has always been the right of every American, but was generally countenanced and applauded in the days of yore, only when constructively offered and reasonably dignified. Now, it is not common at all for cheers to ring when epithets are hurled at the President personally and at the Presidency itself. One hears but few voices lifted in protest when a nationally known commentator impugns not only the ability, but the character of the White House occupant.

Love-making, viewed among human beings in days gone by as the ultimate in tenderness and intimacy, has become under the modern rules of morality a barnyard spectacle where a peep into the sanctity of the bedroom provides vicarious gratification to morally brainwashed and bankrupt men and women, boys and girls.

The Horatio Alger Concept, under which most of the Nation's older generation proudly reared itself, is undoubtedly regarded as a ludicrous anachronism now by a generation of Americans who view public welfare as their right, to be extended on a no-strings-attached basis and accepted without reservation.

An example lies in the action last month of some 500 mothers in Washington who stormed their way into welfare headquarters shouting "we want money." They broke out glass doors and windows, threw rocks at the police and resisted all attempts to deter them. Nor was it a spontaneous demonstration by women in despair. They arrived in Washington in chartered buses, moved calmly to an assembly point—and only then proceeded to hurl their rocks and their demands.

Anarchists such as Jerry Rubin are accorded public forums which one might normally expect to be reserved, if not for patriots, then at least for those espousing constructive programs.

Yet Time Magazine recently devoted a full page to this revolutionary misfit, providing credence to his incendiary claim that "all money represents theft," and that "to steal" from the rich is a sacred and religious act. To take what you need is an act of self-love, self-liberation. While looting, a man to his own self is true.

Yet, said Time, "the radicals (it did exclude the most violent fringe, which I guess is something of a concession) insist that America must be great," and "that is why we must cherish them."

Cherish a man who espouses stealing as an act of self-liberation and looting as an exercise of character-building? Have we indeed come to that? Pray God, we haven't!

All of this, fortunately, doesn't mean that every American is an ungrateful degenerate, eager to overthrow the government.

What it could mean is that we are simply guilty of getting our perspective out of focus. If a man shoots his wife, it's on Page 1. If he takes her out to dinner, it's on Page 16—if at all. And as a colleague said recently, one gunshot will drown out 1,000 prayers. When five shaggy-haired barbershop refugees call for blood to be donated to the Viet Cong, it is big news. But when 5,000 peaceful students each donate a pint of blood to our troops in Vietnam, no one notices.

What troubles me, however, as I reflect on the years which I hope are ahead of me, and especially those that await my sons, is the seeming growth of irresponsible radicalism and the more steady acceptance it appears to be receiving throughout the land.

It isn't any longer the fringe or the few. Radical concepts—or at least those that I, in my stuffy Victorian outlook, regard as radical—have become the norm. The living room echoes the gutter and the bedroom is removed to the barnyard. The flag, once the vibrant symbol of a proud Nation, is desecrated daily, and hardly anyone notices, much less objects.

Nor is radicalism confined to those extremists on the left. Race-baiters on the right infuse their own peculiar brand of venom into the fabric of our society. Trading falsely on patriotism and Christianity, these Nazi-like zealots are as guilty of weakening the threads of the fabric as are the socialistically-inspired activists on the left who are, in actuality, their mirrored counterparts.

Hopefully, the "silent center" is indeed the majority and, one of these days, will turn back the right and the left. So, you can't say that all is lost. But, then again, neither can we say that all is healthy.

Perhaps Foreign Minister Thanat Khoman of Thailand is closer to the truth than we like to suspect when he intimated last week that the United States is on the verge of a national mental breakdown.

The prospect of such a chaotic potential ought to stir us, each and every one, to a return to reason, even if not to Victorian morality.

SPEECH CONTEST BY OKLAHOMA FARMERS UNION

Mr. HARRIS. Mr. President, I recently had the opportunity, along with other members of the Oklahoma congressional delegation, to meet with several young people who had participated in a speech contest conducted by the Farmers Union throughout Oklahoma. The Oklahoma delegation was privileged to have the opportunity to meet with these outstanding young people and to hear some of their winning speeches. These young people put forth a great deal of effort to develop their speeches, and they certainly are representative of the high quality of young people Oklahoma is producing today.

I ask unanimous consent that the speeches of Julie Kusik, Vicky Allen, Denise Phelan, Linda Phelan, Roger Henneke, and Loretta George—all fine young outstanding Oklahomans—be printed in the RECORD.

There being no objection, the speeches were ordered to be printed in the RECORD, as follows:

HOW MY ORGANIZATION PROMOTES GOOD COMMUNITY LIVING

(By Loretta George)

The best way for me to tell you how my organization helps to promote good community living is to tell you about Betty, a girl from my own community.

Betty was a very shy girl who had no idea how to make friends, or to become involved in school activities. Hers was a very lonely, apathetic existence until she joined 4-H Club.

The day Betty joined 4-H Club was the beginning of a completely new existence for her. For the first time she had the feeling of belonging. The sparkle in her eyes betrayed her excitement. From that day on she had something to talk to people about. Betty no longer stood in the corner of the hall looking longingly at the groups of chattering students. She was part of them, she had something to talk about.

Each time 4-H Clubs meet the members salute and pledge allegiance to the flag. This was the nucleus of an interest in patriotism. When it came time for the timely topics, Betty wrote and gave, a most interesting one called Patriotism in Our Time. She was talking for her country, and she had a great influence on the people who heard her speak. Her speech changed the attitudes of some very skeptical students in her school, and laid the foundation for an interesting as-

sembly program with a patriotic theme participated in by those same students. Thus, Betty was an influence for better loyalty to her country.

The next year when the 4–H leader asked for enrollees for Jr. Leadership, Betty was the first to volunteer because she had learned the joys of cooperating with others. During the meetings of Jr. Leadership she learned to express herself. By helping younger members she learned the true meaning of cooperation. She was working with people rather than watching them work. Betty had learned leadership. Working with people certainly promotes good community living.

At the meeting when the 4–H leader outlined the projects Betty chose for her projects home baking, canning, and sewing. At the county fair that fall Betty exhibited some of her canning, some of her baking, and a dress which she had made. When the judging was completed and the ribbons awarded Betty had more blue ribbons than anyone else in her county. For her outstanding achievement at the county fair that fall the County Farmers Union awarded her a trophy as it does for the outstanding 4–H girl and the outstanding 4–H boy.

Because of the work which Betty did on her projects she came to have a better understanding of her mother's problems in running the home. There was that Farmers Union spirit of cooperation. There was a new lilt to her shoulders, and an added poise and confidence in her bearing. Betty had achieved; she had contributed to her community.

As Betty learned to express herself in 4-H, new avenues of learning opened for her. She became conscious of what was necessary to govern a nation, for in her junior year she was elected secretary of her club. When she was a senior she was elected president. Conducting meetings, appointing committees, planning activities, and assisting younger members helped her to reach the height of her potentials.

When the opportunity of joining a Farmers Union Youth Class came along she quickly joined, seizing every opportunity for maximum education.

Before joining 4–H Betty had attended church very irregularly. After she became a member of 4–H and learned the joys of helping others, she began to attend every Sunday. She was so enthusiastic about church that she began to teach a class of eight year olds. Her fervor was such that many of her associates followed her examples, and began to attend church regularly. The spiritual level of her community had been raised.

Because of her citizenship, degree of education, and spirit of cooperativeness, upon graduating from high school Betty was chosen to work for the F.B.I. in Washington, D.C. While there she met and married a fine young man. Today Betty is living in a small community where she is a 4–H Club leader, helping other young people find their place in America's way of life.

If Betty had not become a member of 4–H, she might have become a Diane Linkletter, experimenting with drugs, becoming despondent, and maybe even taking her own life. Instead, through her participation in 4–H Club and Farmers Union, she became a useful, cooperative, patriotic leader who promotes good community living. Don't you agree that Betty's experience is an excellent example of good community living?

REC

(By Julie Kusik)

I am an Oklahoma farm girl—one of the few still privileged to live out where there's room to grow. Generations before me, farm girls were not a novelty. In fact, at one time we far outnumbered our city sisters. But then, as cities modernized and started offering advantages unavailable in the country, more and more of us migrated to the land of opportunity, the city, and the question was "How you gonna keep 'em down on the farm?"

It would have been an impossible task, keeping us down on the farm, had not the rural electrification movement come along. In 1937, a group of Kingfisher County men organized Cimarron Electric Cooperate, and I truly believe that act was responsible for the fact that I have had the privilege of growing up in rural Oklahoma.

But, you say—wait a minute? What does that have to do with where I live? It has everything to do with it. Let's look at this picture:

Let's say Cimarron Electric had not been organized. Somehow I just can't imagine my Mom living on a farm without running water provided by our electric pump, without electric lights, our food freezer, washer and drier, and without refrigerated air conditioning. Why, I'd even hate to picture me without our electric dish washer! But I'm sure that wouldn't be Mom's biggest consideration.

Now let's see what a difference it would make to my Dad's life. Without the efficiency of electric milkers, our welder, electric farm tools, and our cattle watering system, Dad assures me the margin of profit a farmer now enjoys would soon disappear. In other words, electricity makes life on the farm possible for me today.

And you know, what applies to me and my family probably applies to others like us. It's obvious to me that most of the progressive farm families in my community would not be there today except for the convenience and work-saving efficiency of our REC Electricity. I shudder to think what would be the caliber of people on Oklahoma farms today without electricity. With few exceptions, only those too poor to leave the farm or too shiftless to care for a better life would probably remain. Does REC make my community a better place in which to live? You bet it does!

But, you say—wait another minute! If REC's hadn't brought electricity to the farm, private utility companies would have done the job! But would they? I took a survey of our immediate community recently and discovered that an average of only 3 persons (not families) per mile of high line, live in the area. The major private utility serves an average of 33 customers per mile. Could they have afforded to build lines for so few customers? No, they could not, and no one blames them for not coming into an area which would be unprofitable. They must make a profit to survive. REC's are in business to serve.

There are other ways in which a rural cooperate contributes to a community. In many cases it's a real shot in the arm for the local economy. Think of the appliances, the motors, the pumps, and the TV's we farmers buy. And think of the 35 families and their payrolls from Cimarron electric. This, plus the taxes the business pay are a real economic force for the good of our communities and the rural schools of which we are all so proud.

Farmer's Union, too, is a part of this movement that has kept the American farmer on the land—out where there's room to grow.

Farmer's Union has given the farmer a strong, united voice that has commanded respect in Washington. And Farmers Union continues to give those of us who are living in rural areas opportunities such as these to display our talents and our pride in farm life. We thank you for this opportunity.

How are you going to keep them down on the farm? Well, first of all bring REC Electricity to them—and the advantages that follow will help keep them on the land. But we'd better watch out! REC country living has become so attractive, have you noticed? Our city relatives are joining us. Suburbs and acreages are pushing out farther and farther. But—come on you industries, you city-weary families, REC's have the power waiting for you and the living is great "Out where there's room to grow."

Farmers Union

(By Vicky Allen)

Someone has said that "in union there is strength." All of us use this axiom every day as we cooperate or work together to do jobs that one could not do alone. Whether the job is simply too hard to do physically by oneself, like moving a heavy load, or whether the teamwork is needed to reproduce a beautiful symphony that one musician could never play alone, we acknowledge the power of union to get jobs done.

So it is that Farmers Union meets a need of the American farmer. Of course, farmers have long prided themselves with their independence. We've gloried in the freedom of rural life and have rigidly maintained our right to be our own bosses. But Farmers Union was born of the need for farmers to unite in speaking with a strong voice. And today that voice has strength and the respect of those who write our laws in Washington as well as in our state capitals. This is just one of the ways that Farmers Union has made for better living in my community, as well as yours.

Let us examine some of the specific things Farmers Union has helped accomplish in the past. Being a student in a small high school, I naturally remember first the strong stand Farmers Union took in our behalf during the past few years. Would it have weakened my community if we had lost our school? We of rural America answer with a resounding *yes*. Our school is the center, the hub, of our community. We appreciate your help in the fight for strong community schools.

The list of Farmers Union legislative interests is long. Soil Conservation and Rural Electrification are only a couple of examples of areas where help has been given. One of the most recent fights is in the field of corporate farming. In spite of the admonition that big corporation farming is just around the corner, we still believe a farmer's place is on his land and that his family deserves the right to grow up there—a privilege that is being recognized more and more by city people who are pushing the suburbs out faster than at any other time in our history. I truly believe that this fight against corporate farming is a real life—and death struggle for a productive, proud agriculture in our country.

These areas have partly been in the adult field of life. But Farmers Union Youth has long enjoyed the advantages given us by our parent organization. This speech contest today is an example of the encouragement in the right direction you are giving to emphasize the good in teenagers today rather than simply shaking your heads over some of our less worthy doings. A Farmers Union Youth has little time to worry about a generation gap with opportunities like these to work with those of you who are adult and yet so willing to hear us and to help.

Have you seen a picture of recent Farmers Union scholarship winners? They are a fine looking group of people—a far cry from the run-of-the-mill group of hippies and turned-on teenagers sometimes seen in news releases. Who can say what just one of these scholarships may mean for my community or for our country, for that matter? In financing these deserving young people, Farmers Union is saying "We believe in the youth of this country. We believe in them to the point of being willing to finance their worthwhile undertakings." We, the youth who are profiting from this support, promise your confidence will not be betrayed and we will remember the lesson of union. After all, our country, the United States is a living example of our adherence to that principle.

4–H

(By Denise Phelan)

What's the most valuable crop produced in your community? Perhaps if you live in northwest Okla. you'll answer that it is wheat that means the most in dollars and cents to the farmers in your area. Or perhaps you'll mention cattle if you live in the grasslands of Okla. Or, if you live in another section, cotton might come to your mind first. No matter what the economy is based on in your area, most thoughtful people will give another answer when asked about their most valuable crop. Yes, in almost all instances a community will gladly admit their biggest asset is their young people—that crop of kids whom they watch so hopefully—or perhaps fearfully. We of the younger generation truly are the pride, or the dispair of those of our parents generation.

It is for us, the youth, that you have built and maintained Churches and schools. It is for us that you have scrimped and saved so that we could have the things you didn't have. And now you've handed it to us. But the story hasn't had a happy ever after ending.

Indeed, young people today seem less happy, less satisfied than at any other period in history. Revolts and protests, drug addiction and bizarre habits seem to have become the trade mark of my generation. And our communities are worried—worried about the product they are sending into the world.

In a situation like this, what are stabilizing forces, the common sense institutions that can help my generation keep it's feet on the ground? I suggest that 4–H Clubs are one of those organizations that can and do provide the stability as well as the thrills and opportunities to keep youth on a reasonable course. In this way, it seems to me, 4–H Club does a great deal to make my community a better place in which to live.

But, you say, how can 4–H possibly influence the "turned on" crowd? Don't tell me a young drug experimenting protester will all at once get excited about clothing projects or showmanship contests. Probably not. But most of us who are in 4–H have been members since we were ten years old. We "got involved" at an early age, and "involved" pretty well describes it. The hours of actual work involved in raising an animal, the planned activities of 4–H meetings and parties, the thrill of competition, and the effort to win out-of-state trips has us so occupied that boredom and brooding about supposed injustices has no place in our lives. Even the generation gap loses its meaning as we work shoulder to shoulder with adult leaders and parents who really care enough to help as well as to listen to whatever we have to say. This, it seems to me, is much more important than facts or manual skills we learn in 4–H. Of course, the lessons on homemaking are valuable training, but, this attitude toward life will be an even more important part of our lives.

Farmers Union, too, has had a hand in helping the younger generation in worthwhile projects. This speech contest tonight, where we are encouraged to "speak our minds" is an example of your support of us. We from small schools remember, too, the strong stand Farmers Union has taken in recent years in defense of our schools and rural Oklahoma. Your opposition to corporate farming and therefore preservation of the rural way of life is much appreciated.

Yes, the seeds of rebellion and protest have been sown. Adults are worried about the harvest. But seeds of stability and commonsense have also been sown and nurtured by organizations like 4–H Clubs and Farmers Union. Most of us of the younger generation have developed ideals and attitudes toward life that can help us maintain an America of which we can be proud. We promise to do just that.

Soil Conservation

(By Linda Phelan)

On Christmas Eve 1968 Americans were stirred as they perhaps were never stirred before by the majesty of the creation story. As the American astronauts circled the moon in that historic flight, the voice of Anders came back to America: "In the beginning, God created the heavens and the earth—".

Somehow many of us were touched as never before with the magnificence of God's creation—the magnitude of our role as stewards of God's creation. We are to preserve and conserve what we have been given, that it may be passed on to our children and our children's children.

America, which was originally thought of as a land of plenty—a land of such vast resources that they could never be depleted—has had to learn conservation the hard way. It took the dirty 30's to shock us into the realization that conservation, not exploitation, must be practiced if the great "bread basket" of the world was to survive. You are all familiar with stories of the dust bowl days, if you did not experience it yourselves—stories of gritty clouds of dust, piling into drifts along fence rows, of top soil carried away by the ton—of land which never should have been stripped of its protective covering being washed into creeks. The resultant gullies and worn-out land which only a few short years earlier had been virgin soil made a scar across the map of the United States—a scar which we are still striving to heal.

So it was, as a result of that national disaster called the "dust bowl" that soil conservation legislation came into effect in 1935. I am proud that Logan County was one of the first to set up a soil conservation district and that now most land is under soil conservation contract in my community.

Well, then, you say, isn't that enough? After all, most farmers now practice conservation. Hasn't the job been done? My answer is no, it has not. Farmers today represent only a small proportion of our population. True, they are in the best position to see that soil and water conservation are practiced, but I maintain that the rest of us, the 95 percent who do not actually till the soil must be made conservation minded. Let me show you what I mean:

A careless camper lets his fire get out of control, or worse yet, he walks off and leaves smoldering embers—and in a few short hours natures work of hundreds of years is wasted. The burned-off forest land is laid waste because of the careless attitude of one American.

Or an unthinking motorist casually flips his cigarette out the car window where it will probably go out. In so doing, he burns off hundreds of acres of your pasture—or mine—and the conservation practices of many years of farming literally go up in smoke.

Conservation must become an attitude of the American people. We must teach it in our schools, practice it in our homes, and even preach it from our pulpits if need be. At the present time, one million acres of crop land per year are being lost to farming for highways, airports, and super-markets. The men and women who plan these things must be awakened to the need for saving our shrinking acres. Yes, soil conservation has done a great deal to make for better living in my community. But now all of us must carry the torch and do our parts so that conservation truly becomes the attitude of all Americans, including city people, as well as farmers.

Farmers Union is to be congratulated on the role they have taken in the conservation effort. Always a leader in what's good for the farmer, Farmers Union has given the American farmer a strong voice in Washington. We appreciate, too, opportunities such as this speech contest, when we can speak on conservation and makes others aware of the problems which are so important to us all.

Yes, God created the heavens and the earth, but to you and me he gave the charge to have dominion over it, to conserve it so that human life would be long on the face of the earth. Let us be true to that trust.

Electric Cooperative

(By Roger Henneke)

No other rural service enterprise makes as great a contribution to community growth and welfare as the Electric Cooperative. Bringing low cost electricity to our rural communities on an areawide basis has made it possible to improve education, cultural and health facilities, to modernize our rural homes, and to make farming more efficient and more profitable. Also, more employment opportunities are now available through the development of new rural industries.

The increase in rural family income is reflected by more local business, not only for electric appliance dealers, but for all merchants in towns who cater to the needs of the farm population. This means more prosperity for our communities and an increased desire on their part to provide themselves with better facilities and service.

Today electricity performs more than 400 different chores on the modern farm. It has become an important source of power to the farmer, decreasing his production costs, saving labor, adding comfort and convenience and eliminating drudgery from farming and farm living.

Visit a modern dairy farm almost anywhere in the Nation and you will find the owner milking a herd of 100 cows today, against a herd of 20 before electrification.

In the live stock business, electricity is being harnessed to control the environment of animals. Beyond any question, the air that the animals breathe, the humidity, the hours of sunshine, the temperature, and the kind of food they eat, all of these have a direct bearing on their health and weight gains. Stockmen and researchers are finding ways to use electricity to make sure that each of these factors are favorable for maximum production.

Today's farmer who finds himself unable to keep pace with the demands for his services is in a position of pulling himself out of trouble with one finger. That's the one that pushed the button that put electricity to work for him. Like millions of people before him, the farmer is rapidly discovering that electricity is the cheapest servant on his farm and the most reliable.

On our farm electricity has played an important part for my entire family. Our cattle are watered by an electric pump that has an electric tank heater for cold weather. We use electricity for our temporary fence. Our barn and yard is equipped with electric lights. An electric motor elevates our grain for a few cents a day. Our shop is equipped with electric tools and an electric welder. I use an electric sander, clippers and dryer to groom my show calves.

In many sections of Oklahoma, Rural Electric Cooperatives are providing the power needed for growth of new rural industries. Oklahoma lakes and recreational areas are on Rural Electric Cooperative lines. Although the city man may say he wants to "rough it", he probably doesn't mean going without refrigeration, lights, and water system.

Of the millions of farmers and stockmen who are receiving electric service, over one-half of them receive it from the rural electric cooperatives. These power suppliers feel that rural people are just beginning to use electricity and that as improved equipment and appliances are available, they will ultimately be using many times their present consumption.

Credit for the progress made in rural electrification during the past quarter century

must go to the Farmers Union Organization. It has been through their legislative activities as well as their promotional programs that the Rural Electric Cooperatives have been fostered and developed.

During the past 30 years, no other movement has done more to promote good community living than work and action of the Rural Electric Cooperative. Without the never tiring efforts of the Farmers Union to bring this inexpensive and efficient power to our farms and rural areas, we would still be feeding cattle by lantern light and much of farm drudgery would still remain.

FUTURE FARMERS OF AMERICA CONGRESSIONAL BREAKFAST

Mr. TOWER. Mr. President, it was my privilege and honor to be host to the Future Farmers of America congressional breakfast on July 23. This annual event brings together State officers of the FFA, who are attending their annual leadership conference at the National FFA Center near Mount Vernon, Va., and their congressional representatives in a traditional "bread breaking" that is becoming more meaningful each succeeding year.

This year, the FFA entered into a new era of activities and services when their national president, Harry Birdwell, announced the launching of a new national community development program which they have named "FFA—Building Our American Communities."

Mr. President, because of the historical significance of Mr. Birdwell's announcement, I ask unanimous consent that his statement entitled "Better Days Through Better Ways" be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

BETTER DAYS THROUGH BETTER WAYS

(By Harry Birdwell, national FFA president)

In the opening paragraph of the FFA Creed members of our organization are reminded that better days are the result of better ways. As we reflect upon the critical problems of 1970, it is quickly obvious that our challenge has become one of solving America's problems while maintaining America's strengths. That seems to indicate that not only the Future Farmers of America, but all of America, is seeking better days through better ways.

From every sector of America young people are saying, "Let us play an active role in America's future". For the most part young people have correctly analyzed the obstacles which our nation must overcome, and as we view the energy and ambition of constructive, well-meaning youths—what things can provide them with opportunities for meaningful participation? Unfortunately the opportunities for millions of this nation's youth to become involved with adults and to participate in worthwhile community efforts are limited. For this reason it is and will continue to be the aim of the Future Farmers of America to provide our members with the knowledge of community problems and to undertake noteworthy community service and community improvement projects.

In keeping with that objective I am proud to formally announce an innovative community action program, . . . *Building Our American Communities.*

The new national effort was conceived eighteen months ago by staff members of the Farmers' Home Administration, an agency of the United States Department of Agriculture. As the USDA and FFA view America's future, it becomes more evident that rural America must, of necessity, offer a solution to many problems of congested urban centers. This over crowding of our population can be reduced provided that sufficient jobs, adequate housing and municipal facilities can be secured in rural and semi-rural areas. As FFA has worked jointly with the Farmers' Home Administration, we have decided that a program involving both study and action will be the most effective means of involving our membership. Instructional units will be made available to 12,000 teachers of Vocational Agriculture, and beginning with the 1970–1971 high school year this information will be taught in Vocational Agriculture classrooms in 9,000 American communities. Vocational Agriculture students will devote a portion of their class time to discussion of the problems of their local communities. In addition to the instructional phase, FFA members will be involved in actual community improvement projects dealing with *seven* rural problem areas:

1. Making efficient use of community resources;
2. Conducting job surveys and rural job development;
3. Becoming involved in environmental clean-up and control of water, air and solid waste;
4. Leading community beautification drives;
5. Developing recreational programs and facilities;
6. Surveying and developing community housing; and
7. Encouraging community safety and aiding in the development of rural health facilities.

We realize this seems to be quite an undertaking, however, we anticipate that many other organizations will become actively involved in community projects as a result of the FFA effort to help coordinate rural development efforts. We challenge other youth and adult organizations, civic clubs and city governments to join hands with a half million FFA members as we set out to build rural America.

To this point the response to this effort has been excellent. Young and old alike are excited about the prospects for improved communities through this "youth pioneer" approach to community problem solving. President Nixon has sanctioned our program and has indicated that it satisfies the desire of his administration both to get youth involved in solution finding and to strengthen rural America.

If constructive youth involvement and further development of rural American communities seem to be important priorities for the decade ahead, then I solicit your enthusiastic support for *Building Our American Communities.*

To those of you assembled here today, and to every American who shall see the results of this effort, I say this . . . FFA members have not fallen subject to a spirit of pessimism and impending doom. On the contrary we believe that *better days* are ahead for America if we will search for *better ways* to solve our problems and employ our creativity. Though troubles beset America, though controversy divides America, 450,000 Future Farmers of America join with me in saying to you that as we further build our American communities we have much to build with and God knows everything to build for.

Mr. TOWER. Mr. President, developing this new national program, FFA—Building Our American Communities, has been a cooperative effort between the Farmers Home Administration and the FFA over the last 18 months. Suggested by FHA staff members, it illustrates how government and people can work together to construct positive programs for community development. The program emphasis is on positive action on the part of the community to originate development that will take care of its wants and needs.

The purpose of the program is to encourage and assist young people to become more knowledgeable and active community leaders.

This program is especially timely because of the national emphasis being placed on rural development: creation of job opportunities, community services, a better quality of living, and improved social and physical environment in small cities, towns, villages, and farm communities of rural America.

Both James V. Smith, Administrator of the Farmers Home Administration, and Neville Hunsicker, national advisor of the Future Farmers of America, have rendered a vital public service in creating a program that will channel the activism and energy of youth into building the America of the future.

Since the organization's inception over 40 years ago, the Future Farmers of America have contributed immeasurably to building the Nation's modern agricultural production plant. In 8 years the FFA will have been in existence a half a century. During that time, FFA members with dreams and visions, who believed in "better days through better ways," became the thinkers and leaders responsible in a large degree for the Nation's present abundance of food and fiber. Much of their success they attribute to their training in vocational agriculture and to leadership abilities developed through active participation in the FFA.

The basis of this new FFA program is a course of study developed by the Farmers Home Administration entitled "Build Our American Communities." Mr. President, I ask unanimous consent to have printed in the RECORD a statement prepared by Mr. James V. Smith, Administrator of the Farmers Home Administration, for the FAA congressional breakfast of July 23, which outlines the need and purpose of the program.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT FOR JAMES V. SMITH

Half a century from now the United States may be a nation of twice as many people as our present 200 million.

Older Americans may contemplate this prospect in their imagination, but young Americans must prepare to meet it in reality.

Redeveloping community life as the future demands could be our greatest domestic challenge in this century. But Americans of every generation have proved equal in the crisis to formidable, even "impossible" tasks. Again in the 1960s we attained the unattainable when we traveled to and walked on the moon. We are a people of unfathomed potential for accomplishment.

Today, the Future Farmers of America are acting in this tradition as they launch into the major task of their generation—the renewal and upbuilding of community life in America.

In the Farmers Home Administration, we carry a large responsibility in the rural sector of national growth. As a credit agency and a service agency, our role is to help

develop and conserve resources, improve the quality of living and expand opportunity in the open spaces and smaller towns—those green pastures where most of the building should be done for the future.

Our concern is not alone for the present adult generation, owning the family farms and managing the towns of America, but also the oncoming generation which must live with and build upon the consequences of our work. We believe it is right that we enter into the closest partnership with young Americans as they grow toward responsibility for the development of the nation.

My agency is dedicated to the principle of self help, and that is also the spirit in which FFA prepares to meet the future.

The Farmers Home Administration will channel over $2.2 billion into rural America this fiscal year through 23 different self-help credit programs that can benefit all rural people—those in towns and small cities as well as those on our farms. The thrust of the FHA credit program is in three principle areas of rural development:

The family farmer,

The rural community, for development of basic facilities such as water and sewer systems, and

Rural housing.

We know that this credit assistance is a good investment. One recent study made by a state university shows that the acquisition of a rural water system can create new wealth up to 10 times the amount of the original loan.

I would like to cite one typical example.

Five rural water systems in Warren County, Tennessee, financed with $1.4 million in Farmers Home Administration loans, have brought economic renewal to the area. These water systems have made possible new standards of health protection and safety, putting rural communities in Warren County on equal footing with other modern communities.

Warren County now has a water line on every major highway leading out of town and several of the secondary roads.

Four major industrial plants have been located along these lines.

Seventeen new small businesses have developed there.

Over 500 new rural homes costing more than $5.5 million have been built.

Nearly 600 houses have been remodeled.

The State of Tennessee has purchased a $500,000 tract of land for a new park and its facilities will be located on the water lines.

All this shows what can be accomplished with a combination of local enterprise and local determination, fortified by credit and technical assistance from the Farmers Home Administration. It is a pattern for development that must be carried forward in communities throughout America:

Accumulated physical obsolescence must be replaced.

Environmental deterioration must be overcome.

New housing must be built, jobs created, community facilities developed, transportation and services provided for 100 million more people by the year 2000, and for more than 200 million more people by the decade of the year 2030.

For the present generation, which must maintain an environment in which they can live, this is a building project unprecedented in the history of mankind, rivaling all that has been accomplished since the signing of the Declaration of Independence.

Many problems command the attention of the leaders of the future:

There is an urban crisis constantly fed from rural areas. Today 70 percent of the nation's population is concentrated on 2 percent of the land with the prospect that all the population will be jammed into 5 small geographical areas by the year 2000 unless steps are taken to prevent it. The great threat is that social economic ills may become more acute in metropolitan areas, and may infect our national structure unless we act together with intelligence to prevent what might be national catastrophe.

Thirty percent of the U.S. population lives in rural America, but more than half the nation's poverty is located there. To provide opportunity for these low-income rural citizens, as well as to improve the quality of living for everyone, is a challenge to all Americans and to young people especially.

Just as part of the problems of urban areas can be traced to outmigration from rural areas, so too can much of the solution to urban problems be found in the countryside. Financial resources have not been available to keep rural America in step with the rest of the nation in modern community development.

A new concept in community development is vital and necessary. Traditionally we have thought of community development as a local enterprise. Today we cannot divorce the local community from the state, nation or world. The earth has become a closed loop insofar as human activities are concerned. Population growth, air and water pollution, resource depletion and food shortage are all global problems, some of which originate in your own communities.

The President's Task Force On Rural Development, in its report of March 1970, "A New Life for the Country," stated that there was a need for interdepartmental cooperation throughout the Federal Government to improve the economic, social and environmental conditions in rural America.

Since March 1969, the national staffs of the Farmers Home Administration and the Future Farmers of America have been working together, building new guidelines for participation of young people in community development. The program resulting from this team effort is called Build Our American Communities (BOAC). A copy has been provided for each guest here today.

BOAC is a program to help young people become knowledgeable community leaders. In so doing they will come to understand the interrelationship of local, state, national and even world problems, and of the agencies concerned with these problems. As a final step, using the technical and financial resources they have learned about, they will plan, develop and carry out action projects compatible with their community's need.

That part of the BOAC program contributed by the Farmers Home Administration is available to any group which wishes to use it as the basis of a study-action program in community development.

FFA has adapted and added to the program. They are introducing their entire program this morning. They call it FFA—Building Our American Communities.

BOAC thus joins the curriculum of vocational agriculture throughout America as a study-action program involving systematic classroom discussion, and using the community as a laboratory and workshop. It is based on the doctrine that constructive community development starts with the local people and must be concerned with their wants and needs. The program will help them to:

Understand local, state, national and world development problems, and establish community goals, values and objectives.

Determine the kind of rural and urban America they want, and how to bring this concept to reality.

Make hard decisions about population, depletion of resources, economic stability and environment.

Develop the interest, concepts, attitudes and motivation necessary to solve these problems.

Acquire the basic tools for analyzing resources, determining employment needs, planning projects and obtaining necessary technical and financial assistance.

Initiate constructive projects from which they can apply the fundamentals of community development.

Inform and obtain the support of the whole community in their effort.

Beyond this the program will enable young people to get a "head start" in becoming part of the economic system at an earlier age. It will help bring them into the decision-making that takes place in community affairs. The nation can benefit from their acquired knowledge and experience, and the application of their youthful energy to build the new America.

As administrator of an agency dedicated to the self-help principle for rural America, I believe the FFA and FHA will make a good team. FFA is dedicated to helping others as well as themselves. FFA believes that they and others should work together for individual and community progress.

The FFA has never looked for a "handout." They do welcome a "handup" that will assist them in properly directing their own lives so that they can be of service to others as well as themselves.

This is not the "beat" generation. In my judgment FFA represents the "leading" generation, with visions for the future, and the imagination to find new means for positive action to bring those visions to reality.

National officers of the FFA visit my office frequently. I have had the opportunity to work closely with them this past 16 months in developing this program. It has been a particular pleasure to work this year with Harry Birdwell, the National President of FFA, because Harry is a neighbor of mine in Oklahoma.

It has been inspiring to observe the way Harry and the other officers have assumed responsibility for disseminating information about the purpose, merit, need and hope for this program. My association with them indicates that they merit our full confidence. As young people such as they are assume leadership responsibilities at an earlier age, the future of our communities will, indeed, be in good hands.

Community development is a continuous phenomenon. Its motive power must be drawn from the local people. Creators of the communities of the future must be knowledgeable, and concerned with the effect of their planning and building upon the total environment. That, too, is what the BOAC program is all about.

I want to assure the national advisors, officers and members of the Future Farmers of America that the FFA—Building our American Communities program has my unqualified support. The Farmers Home Administration at the national, state and county levels will continue to participate and cooperate with you in every appropriate way in building our American communities.

Mr. TOWER. Mr. President, I invite the attention of Senators to the key man in this program who serves on a day-to-day basis with little recognition other than the satisfaction he derives from the accomplishment of those whom he trains. I refer to the vocational agricultural instructor and local FFA adviser.

National leaders, including President Nixon, recognize the past achievements and outstanding leadership qualities of the Vocational Ag instructor. It is for this reason that they were selected to first implement the Build Our American

Communities program. The Vo-Ag instructor is the most important man in this program for numerous reasons:

He is oriented to youth development.

He knows how to develop successful youth community action programs.

He is at his best when cooperating with people.

He is the community development oriented man in the school system.

He knows more about his community than nearly any other person.

He is trained and has the ability and know-how to find the facts and develop the answers to problems with which he is unfamiliar.

It is in the Nation's interest that he accept the responsibility of implementing this program.

The Build Our American Communities program has been designed to fit into the Vo-Ag program of instruction. Here is the one place in the school system where a daily systematic approach can be used to build ideas, concepts and attitudes necessary to make our communities change as the time demands.

An example of the results of the Vo-Ag instructors' work are these outstanding young men who visit us, each in his blue and gold FFA jacket. It is always a pleasure to visit with them. I am sure that all Senators will agree with me that the instructors who prepare these young men for service to their communities and the Nation are a natural to implement the FFA—Building Our American Communities program. The Nation urgently needs them in this capacity.

As we look at the history of the FFA—what they have accomplished in the past and what they aspire to do in the future through their new program—it occurs to me that perhaps the members should consider a new name for the organization. I would like to suggest FBA Future Builders of America.

I would like to challenge them as Future Builders of America to be the catalysts who will involve millions of young people in the constructive effort they are launching to build the future America.

The Build Our American Communities program can be adapted to urban areas and central cities. Instructors trained in urban community development to work on a full-time basis, as the Vo-Ag instructor does in rural communities, could be a partial solution to some current national problems.

OUR FLAG

Mr. MONDALE. Mr. President, our flag has always symbolized America and all of the very special things this country has stood for.

I think that all of us feel a very personal outrage and sadness when this flag is defiled—whether by mutilation, destruction, or disrespect. We feel an outrage because it is a direct—although symbolic—insult to the Nation we love and helped to build. It is sad because something must be very very wrong in our society for this kind of act to be more than a rare occurrence.

But I feel an equally deep outrage and perhaps even a greater sadness when I see our flag defiled indirectly—through its use as a banner behind which march strident voices of repression and blind chauvinism.

Mr. President, an excellent editorial on this topic, written by Mr. Stanley Frankel, was published recently in the Scarsdale Inquirer. I think it makes this point forcefully and eloquently. I ask unanimous consent that it be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IN DEFENSE OF PATRIOTISM

(By Stanley Frankel)

Samuel Johnson wrote that patriotism is the last refuge of a scoundrel.

Johnson did not mean that all patriots were scoundrels. Rather, he suggests that some scoundrels wrap themselves up in the beautiful American flag and in the name of love of country commit all kinds of sins which, under any other disguise, would be grounds for impeachment or jail.

These are the scoundrels who appropriate the American flag and wave it while they throw rocks at Negroes; while they hurl epithets at Peace Marchers; while they bust the heads of youthful dissenters. And all in the name of patriotism—or law and order.

These might be the same scoundrels who fly the American flag from the tallest pole in their plants while their smokestacks spew poison into the clean American air; who pledge allegiance to the flag while their sewage wastes our streams; who hoist the flag up while oil leaking from the bow fouls our beaches and kills our wildlife.

Some of these scoundrels are fond of quoting Stephen Decatur's "My Country, right or wrong," but fail to follow up with "When right to keep her right, and when wrong to put her right."

These self-proclaimed patriots would blindly follow their temporary leadership into wrong wars which wrongly kill 40,000 American boys . . . hundreds of thousands of North and South Vietnamese men, women, and children, and which threaten, wrongly the peace of the world. For the time is now upon us when the wrong course could lead to nuclear annihilation. The true patriot's course is away from obscene wars, away from pollution, away from poverty and hunger, and, if our country, through its temporary leaders, is wrong, then the patriot's obligation is to put our country, and her leaders, right. Time has long passed for blind and unquestioning lockstep, for thse precipice is near and oblivion is ahead . . . dead ahead.

I much prefer Adlai Stevenson's definition of patriotism.

"What do we mean by patriotism? A patriotism that puts country ahead of self; a patriotism that is not the short, frenzied outburst of emotion but the tranquil and steady dedication of a lifetime. These are words that are easy to utter, but it is often easier to utter, but it is often easier to talk for principles than to live up to them.

When an American says he loves his country, he means not only that he loves the New England hills, the prairie glistening in the sun, the wide and rising plains, the great mountains, and the sea. He means that he loves an inner air, an inner light in which freedom lives and in which a man can draw the breath of self-respect."

I may sound corny, but, because our flag is the symbol of our great nation, I am proud of that flag, proud to march behind it, to salute it, and to wear it. I am not proud that it has been appropriated by those hard of hat, heart, and head who would use its shining presence to defile the Bill of Rights, to shortcut the Constitution, and to substitute brutality for beauty. These are the self-proclaimed patriots who equate dissent over the war with treason. These are the flag wavers and wearers who fail to understand that the safety of our soldiers in Viet Nam depends on our getting them out, not on forcing them in. These are the blind who cannot see that the most patriotic course to save our torn nation and our beloved sons is to march those boys off the ships behind the billowing red-white-and-blue, not to carry them off wrapped in it.

ISSUANCE OF REPORT BY BLUE RIBBON DEFENSE PANEL HEADED BY GILBERT W. FITZHUGH

Mr. THURMOND. Mr. President, the report of the blue ribbon defense panel, headed by Gilbert W. Fitzhugh, chairman of the board of the Metropolitan Life Insurance Co., was delivered to the President July 15 and is now being made available to the public.

This is an important report and deserves the attention of Congress and the nation. While I have not yet had an opportunity to study the findings of the panel, I have read over a 4-page summary of the findings and recommendations.

The summary clearly indicates that this document has considerable merit. It opens avenues of thought and discussion which should benefit our defense establishment. Some of its recommendations impress me as quite sound, while others I would want to examine closely.

I find it especially commendable that President Nixon has undertaken early in his administration a searching inquiry into the operation of the Government's largest executive department. While this report may give some ammunition to critics of the Defense Department it demonstrates the President's willingness to improve and strengthen our defense establishment under the hot glare of public opinion.

Mr. President, the panel members and staff of the Fitzhugh report are to be commended. They have rendered a worthwhile service to their country. I ask unanimous consent that the DOD summary of the Fitzhugh report be printed in the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

BLUE RIBBON DEFENSE PANEL ISSUES REPORT

Gilbert W. Fitzhugh, Chairman of the Board and Chief Executive Officer of Metropolitan Life Insurance Company, who has served as Chairman of the Blue Ribbon Defense Panel, appointed by President Nixon, today commented on the release of the Panel's report.

The report, which resulted from a yearlong study of the Department of Defense, was completed on July 1, and was delivered to the President on July 15, 1970. It contains 113 numbered recommendations for changes in the organization and procedures of the Department of Defense.

Mr. Fitzhugh stated: "The report does not enter the field of national policy, but makes recommendations we believe could cause important improvements in the effectiveness of the Department of Defense. Major areas covered in the report include orga-

nization, command and control, procurement, research and development, intelligence, personnel policies and practices, and conflicts of interest.

Mr. Fitzhugh, who spent full time on the study effort during the past year, said: "The objective of the study was not to devise ways and means to save money, per se; it was rather an attempt to discover the causes of shortcomings and to devise and recommend changes in organization and procedures which appear to have potential for increasing the efficiency of the Department of Defense."

Mr. Fitzhugh stated that if the Panel's recommendations are made effective, "we anticipate substantial ultimate reductions in dollars and personnel in both military and civilian areas," but said that "such savings as result from increased efficiency will be realized principally in the long term, rather than the short term."

Panel Chairman Fitzhugh added: "The recommendations of the Panel are not and could not be designed to support immediate budget reductions."

Upon the release of the report, Mr. Fitzhugh said: "Throughout our study and our report we have concentrated on problem areas, rather than in areas on which operations appear to be conducted efficiently and responsibly. Many things are done well in the Department of Defense, and we are conscious that our report, because it is problem oriented, reflects a lack of balance of the positive with the negative aspects. We hope it will be accepted by all as a timely and a constructive contribution, and will not be used by anyone to exacerbate present tensions and differences of opinion."

Mr. Fitzhugh expressed enthusiasm for the cooperation of the personnel of the Department, and said: "The Panel received excellent cooperation and inputs from both within and outside the Department. The Secretary of Defense made sure that the Panel experienced no limitations on its access to records and people of the Department. The attitudes of the Department personnel almost unanimously reflected interest and a desire to assist in improving the effectiveness of the Department."

"Our observation of the Department's operatiton indicates that efforts to improve its organization and management were not generally inhibited or postponed while the study was in progress," Fitzhugh noted. "Although this provided the Panel with a moving target, we welcomed the changes and the concern and sense of responsibility within the Department of Defense which prompted them."

In the covering letter of transmittal to the President, Mr. Fitzhugh observed that "from my extensive year-long exposure to our military and civilian leaders in the Department of Defense and in Washington, and to our fighting men in Europe, the Mediterranean, and Southeast Asia, I have been deeply impressed—and this applies both to the officers and enlisted men—with their competence and dedication to duty, as they see it."

"The Panel found many things that we believed should be corrected, but believes, and I agree, that many of the difficulties result from the structure of the Department of Defense itself, which almost inevitably leads people into 'adversary' relationships rather than toward cooperation in the interest of the Department—and the Nation—as a whole. I hope the Panel's recommendations will not be considered criticisms of individuals, but will help to restructure the Department and 'the bureaucracy' so that the talent and dedication of the fine people, both military and civilian, can be unleashed and redirected to accomplish more effectively the basic objectives of the Department of Defense and the Nation."

The recommendations contained in the report are based on fundamental findings by the Panel that:

"(1) Effective civilian control is impaired by a generally excessive centralization of decision-making authority at the level of the Secretary of Defense. Indeed, attempts to overcentralize decision making at the top seriously impair a Secretary's capability to exercise effective control. Under such circumstances, far too many decisions go unmade, critical issues are not addressed, problems are deferred and the principle of personal accountability is lost in the diffused maze of 'staff coordination.'"

"(2) Effective civilian control and management, however, do not require that the Secretary of Defense make all, or even a major proportion, of the innumerable decisions necessary for the operation of the Department.

"(3) The alternative is for the Secretary to delegate substantial decision-making authority and all executory functions to subordinate levels of authority.

"(4) Effective civilian control, appropriate delegation of authority, and decentralization of management cannot be effectively accomplished in the present organizational structure of the Department."

"Presently, there is no one below the Secretary/Deputy Secretary level with an appropriate purview to whom the Secretary can delegate," Mr. Fitzhugh added.

Mr. Fitzhugh noted that the recommendations of the report directed at organizational matters are intended to so restructure the Department as to make possible more effective decentralization and delegation of authority and responsibility with an accompanying increase in personal accountability of those to whom authority is delegated. "Sound management," Mr. Fitzhugh stated, "requires that individuals be responsible for the totality of a function which is narrow enough to be manageable, rather than having some portion of the responsibility and authority in a large number of functions."

In its report, the Panel proposed some major organizational changes including recommendations that:

(1) The various functions of the Department be placed in three major groups—Management of Resources, Evaluation, and Operations—each headed by a Deputy Secretary of Defense.

(2) The functions of the Director, Defense Research and Engineering be allocated among three Assistant Secretaries of Defense—Research and Advanced Technology, Engineering Development, and Test and Evaluation.

(3) The staffing of military operations for the Secretary of Defense be performed by a separate staff from the Joint Chiefs of Staff and that positions associated with that function on the Joint Staff and the Service Staffs be eliminated.

(4) All strategic offensive and strategic defensive forces be consolidated into a Strategic Command.

(5) All general purpose forces be consolidated into a Tactical Command and that three present Unified Commands be eliminated in the consolidation—Southern, Alaskan, and either Atlantic or Strike.

(6) A Logistics Command be established to exercise for all combatant forces supervision of support activities, including supply distribution, maintenance, traffic management and transportation.

(7) An independent Defense Test Agency be created to perform the functions of overview of all Defense test and evaluation.

(8) The Defense Atomic Support Agency be disestablished.

(9) A Net Assessments Group and a Long-Range Planning Group be created reporting directly to the Secretary of Defense.

(10) The administrative and facilities support of the Washington Headquarters elements of the Defense Department be consolidated.

(11) The position of Assistant Secretary of Defense (Administration) be abolished.

(12) Major reductions be made in Washington Headquarters Staffs and other Staffs, with the OSD and Military Department staffs limited to not more than 2,000 personnel each.

With respect to development and acquisition of weapons and other hardware, Mr. Fitzhugh stated that the Panel found the Department's policies have contributed to serious cost overruns, schedule slippages and performance deficiencies. "The difficulties do not appear amenable to a few simple cure-alls," Fitzhugh said, "but require many interrelated changes in organization and procedures." Recommendations for such changes are included in the report. Included is a recommendation that proposes:

"A new development policy for weapons systems and other hardware should be formulated and promulgated to cause a reduction of technical risks through demonstrated hardware before full-scale development, and to provide the needed flexibility in acquisition strategies. The new policy should provide for:

"(1) Exploratory and advanced development of selected sub-systems and components independent of the development of weapon systems.

"(2) The use of government laboratories and contractors to develop selected subsystems and components on a long-term level of effort basis.

"(3) More use of competitive prototypes and less reliance on paper studies.

"(4) Selected lengthening of production schedules, keeping the system in production over a greater period of time.

"(5) A general rule against concurrent development and production efforts, with the production decision deferred until successful demonstration of developmental prototypes.

"(6) Continued trade-off between new weapon systems and modifications to existing weapon systems currently in production.

"(7) Stricter limitations of elements of systems to essentials to eliminate "gold-plating."

"(8) Flexibility in selecting type of contract most appropriate for development and the assessment of the technical risks involved.

"(9) Flexibility in the application of a requirement for formal contract definition, in recognition of its inapplicability to many developments.

"(10) Assurance of such matters as maintainability, etc., by means other than detailed documentation by contractors as a part of design proposals.

"(11) Appropriate planning early in the development cycle for subsequent test and evaluation, and effective transition to the test and evaluation phase.

"(12) A prohibition of total package procurement."

Other areas and activities covered by the report include: Automatic Data Processing, Defense Laboratories and Test Centers, the Planning, Programming and Budgeting System (PPS), Equal Employment Opportunity, Contract Compliance for Equal Employment Opportunity, Public Affairs, Program Management, Cost Estimating, Industry Weaknesses, Industrial Mobilization Base, Selected Acquisition Reports, Accounting Procedures, Internal Auditing, Logistics Guidance, the Rotation, Promotion, Compensation, Accession and Retention of Military Personnel, Civilian Personnel, Telecommunications, External Relations, Industrial Relations, Military Installations, Domestic Action, Military-Industrial Complex, Physical Security in Pentagon, Conflicts of Interest and Office of Civil Defense.

CITIZENS OF MULESHOE, TEX., PROTEST POOR MAIL SERVICE; CITY OF 5,225 POPULATION HAS POST OFFICE TAKEN AWAY

Mr. YARBOROUGH. Mr. President, I recently received a letter from Mr. Don Harmon, president of the Muleshoe Chamber of Commerce of Muleshoe, Tex., in which he outlines the many difficulties the people of this west Texas city are having since the Post Office discontinued processing mail in Muleshoe and transferred this activity to Lubbock, Tex. As a result of this unwise and unnecessary action, it is taking letters from Muleshoe 5 or 6 days to arrive in other parts of Texas. In addition, this community has also lost its postmark which is just another step toward losing its complete identity as a city.

What has happened in Muleshoe should serve as a warning to other rural communities across the Nation of what the dreadful consequence of the administration's postal reform plan will be. The first victims of this unwise bill will be the post offices of rural America. On numerous occasions, I have spoken against this plan to wreck the Post Office Department and have called on the Postmaster General to focus his attention on the problems that the people of Texas are having with their mail service. By denying the city of Muleshoe its postmark, the Postmaster General has taken the first step in causing this city of 5,225 people to lose its identity. The people of Muleshoe deserve better treatment from their Government than this.

Our rural communities deserve the same postal service as our large cities and should not be arbitrarily eliminated from the postal system. I submit that if the Postmaster General would pay more attention to performing this function of insuring that the mail is delivered promptly and efficiently rather than spending his energy on the dismantlement of one of America's oldest public institutions, the people of Muleshoe would be able to mail a letter to Dallas, Tex., and know that it had a reasonable chance of arriving there within the same month in which it was mailed.

Mr. President, I ask unanimous consent that the letter from Mr. Don Harmon and the petition signed by the citizens of Muleshoe and their names and signatures concerning this matter be printed in the RECORD.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

MULESHOE CHAMBER OF COMMERCE,
July 24, 1970.

Hon. RALPH YARBOROUGH,
Senate Office Building,
Washington, D.C.

DEAR MR. YARBOROUGH: Because of the much dissatisfaction and distress, to put it mildly, of our people in Muleshoe at the change made recently in the postal service, we are writing in behalf of the citizens who are affected. The Chamber of Commerce is interested in everything that affected our area and nation, and we are extremely interested in the new postal changes.

We are continually getting complaints about the mail service since it has been taken to Lubbock to be processed. Prior to that time, we knew that we could depend upon prompt delivery of our letters and parcels, but in the last three weeks, it has taken from five to six days where before it took only two days from Dallas, and even three or four days from Portales, New Mexico. Maybe we were spoiled because of the prompt service we had been receiving in the past, and we might consider going along with the charge if it were a real "economy move". But upon checking, we find that it is false economy, since the employees to be discontinued here are replaced with added employees at the centralized mail processing places.

There are several things to be considered in the slower service. To mention a few, some bills are discounted 2% if paid by the 10th of the month. Since proper allowances could not be made in the postmark date, this would make for a continuous dispute between the customer and the company. Penalties would be assessed the Taxpayer who mailed his return on the last day because it had not been canceled the day it was mailed.

To bring this right down to our personal interest, as the Chamber of Commerce, we average about seven letters per week, seeking information about Muleshoe, how it got its name, etc. Because of the unique name, these individuals want to receive a letter with the Muleshoe postmark. Since we no longer get our letters and parcels postmarked in Muleshoe, we are losing our identity, which has caused many irate tax-paying citizens. We inquired of our Postmaster for the estimated time it would require each day to stamp the mail, and he said it would require no additional time, since that was handled during slack periods of the day, by no given employee, but by the employee who had spare time.

The citizens of Muleshoe have a lot of pride in Muleshoe. We have enjoyed about a 14% growth in population over the past ten years, and we hope to continue to grow and prosper, but can do so only with your help in matters such as our postal service. We feel that you will be sympathetic of our position and act accordingly.

Yours truly,
DON HARMON, *President,*
Muleshoe Chamber of Commerce.

PETITION

Be it known that we, the undersigned, are opposed to the discontinuance of the Muleshoe, Texas, postmark on the outgoing mail deposited and registered through the first class postoffice located in the city of Muleshoe, Bailey County, Texas, and choose this lawful means of petition to register our opposition and concern:

L. I. St. Clair, Jerry Hutton, Don Harmon, Jeff Peeler, Jim Shafer, James Glaze, J. E. McVicker, Bill Moore, Robert Hester, B. I. Loyd, Lindal Murray, Jimmie Crawford, Curly J. Brantley.

POPULATION CONCENTRATION

Mr. BELLMON. Mr. President, one of the major problems of the present age is overconcentration of population and the resultant congestion created by crowded housing conditions and overburdened transportation and communications systems, as well as the demands placed on governmental units to provide the necessary facilities and services required by large masses of people.

This problem is brought sharply into focus by a study completed and published recently by President Nixon's National Goals Research Staff. In its report, "Toward Balanced Growth: Quantity with Quality," this special study group expressed concern that the population of the United States would be massed into a few megalopolises. The report stated:

> Assuming that the trends continue unabated, most of the U.S. population growth over the next few decades will be concentrated in the 12 largest urban regions. These 12 metropolitan areas occupying one-tenth of the land area, will contain over 70 per cent of the population. Moreover, at least 50 per cent of the total population will be found in three great metropolitan belts: Boston-Washington, Chicago-Pittsburgh, San Francisco-San Diego.

As William H. Stringer, columnist for the Christian Science Monitor, described it, the problems of the future will be concentrated in "Boswash, Chippitts, and Sansan."

The National Goals Research Staff report added that the issue "is not whether we can feed and clothe a population of any size we can realistically envisage, or even supply it with the expanding amount of energy it may demand. It is rather that of whether a technologically advanced and industrially prosperous nation wants, or can continue to pay the price of congestion and contamination that comes with our overall affluence."

The report concluded that "the trends toward megalopolis in some areas and underpopulation in others are reversible" if the Federal Government and public and private institutions adopt a coordinated national strategy for balanced population distribution. Among the optional policies suggested to achieve population spread were: stimulating growth in sparsely populated rural areas, fostering the growth of existing small cities and towns in nonmetropolitan areas, and building whole new cities outside the metropolitan regions.

President Nixon recognized the magnitude and the seriousness of the problem when he stated in his state of the Union address last January:

> We must create a new rural environment that will not only stem the migration to urban centers but reverse it.

Mr. Nixon has followed through with a "Rural America" program, the approach of which is decentralizing the population in order to provide a better standard of living for millions of Americans, clean air and water, more recreational opportunity and less strain and strife caused by the social pressures of overcrowding.

Mr. President, the efforts of the Nixon administration to cope with this problem are commendable. It is not enough, however, to define problems and set goals. The reversal of the trend toward uncontrolled urbanization must begin now, and it can begin with our own Federal Establishment. The Government is in an ideal position to set an example for future growth and development through a planned system of decentralization of its functions and relocation of its facilities and services.

As I stated during Senate consideration of the urban mass transportation bill earlier this year:

> The federal government could well lead the way in seeking and finding a new pattern for urban centers of the future. There is probably no more glaring example of lack of reasonable urban planning than the job done by the federal government right here in the District of Columbia. Within a two-mile radius of the Capitol building, the vast majority of federal office buildings are clustered. As a result, many thousands of the world's highest paid and hopefully ablest officials and government workers spend from three-quarters of an hour to one and one-half hours (morning and night) traveling from their government jobs to their homes.
>
> Why is it not possible for many of these jobs to be created nearer the residential areas where the workers choose to live. More candidly, why is it not possible for many of the government jobs, which have been created in this congested, polluted, crime-ridden city to be created in areas of the country which are presently underpopulated, where there is an abundance of fresh water and clean air, where laws are obeyed, and where mass transportation presents no problem.

Mr. President, I know this matter is of great concern to many Members of the

Senate, including the distinguished majority leader, who has spoken on this subject on previous occasions. It is also attracting the attention of the Nation's Governors, as evidenced by events at the recent Midwestern Governors Conference, at which the Governor of Ohio, the Honorable James A. Rhodes, suggested the Federal Government undertake a massive relocation of its departments and agencies. I ask unanimous consent that a United Press International story regarding this proposal be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RELOCATE AGENCIES, GOVERNOR RHODES URGES

COLUMBUS, OHIO, July 22.—Gov. James A. Rhodes of Ohio proposed a massive decentralization plan today for the federal government that would relocate 26 federal agencies and departments, including the Defense and Treasury Departments, in other parts of the country.

"I see no reason why, in the 1970s, all but a few of the federal departments and agencies could not be located outside of Washington," Rhodes said.

Rhodes presented his plan at the final day of the Midwestern Governors' Conference here.

"I think perhaps the State Department and the Justice Department should remain in Washington," Rhodes said.

The governor said his proposal would create job opportunities in areas of high unemployment, save in governmental travel expenses and generate awareness and responsiveness of governmental operations among the people.

Mr. BELLMON. Mr. President, as a nation of 205 million people, facing the prospect of continued growth in a relatively few "population pockets," we must take the land that we have and put it to the best and wisest possible use to meet the needs of our society.

There is no more important responsibility that we, as Members of the Senate, can accept in determining the future course of this Nation and its people.

A HOPEFUL DECISION NEARS ON THE GENOCIDE CONVENTION

Mr. PROXMIRE. Mr. President, after languishing for 20 years in the Committee on Foreign Relations and after hearings this spring, the United Nations Convention on Genocide came to a full vote of the committee yesterday, bringing with it the possibilities for refreshing initiatives in the area of human rights for all of mankind. The time was at hand for the United States to show a resurgence of credibility, trust, compassion, and international responsibility. After all the rhetoric of promise, the very close decision of the full committee to reconsider the convention came as both a surprise and disappointment.

Yet, Mr. President, this action may be a hopeful sign, if the Foreign Relations Committee decides within the very near future to report the convention favorably to the full Senate.

I regret the action taken yesterday by the Committee on Foreign Relations, and only hope that the committee will truly reconsider their decision and report the United Nations Convention on Genocide favorably to this body as soon as possible. The time for decision on this important issue is already so long overdue.

A SOUTH DAKOTA SOLDIER QUESTIONS U.S. GOALS IN VIETNAM

Mr. McGOVERN. Mr. President, I have been deeply impressed by a letter to the editor of the Sioux Falls, S. Dak., Argus-Leader, written by a soldier serving in Vietnam, Sp4c. J. J. Margulies, son of Mr. and Mrs. Harold N. Margulies of Sioux Falls. This thoughtful young man has made a number of observations about our involvement in Vietnam which coincide with our long-held views.

I believe that Members of Congress will profit from reading the astute reflections of Sp4c. Margulies and I, therefore, ask unanimous consent that his letter be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A GI QUESTIONS U.S. GOALS IN VIETNAM

(By Sp4c. J. J. Margulies)

(NOTE.—The author is a Sioux Falls man. He is a specialist 4 serving with the U.S. Army in Vietnam.)

I have read with interest various letters from soldiers in Vietnam extolling the righteousness of the U..S intervention.

It seems only fair that the American public should know this feeling isn't universal among U.S. soldiers in Vietnam. There are many soldiers whose experiences here point to quite the opposite conclusion.

The American people have been told repeatedly that the U.S. is in Vietnam to give the Vietnamese people the "right to choose their form of government."

One needn't be in Vietnam for very long to begin wondering if striving for this goal, while admirable in theory, is out of place in Vietnam.

When asking this question one must not make the mistake of thinking that Thieu and Ky represent more than a special-interest group in Vietnam; one must think of Vietnam's "silent majority", the common farmer.

FARMER'S CONCERN

The Vietnamese farmer isn't concerned with politics. He is concerned with maintaining the traditional Vietnamese way of life. He has lived under both the Viet Cong and various Saigon governments. Both have taxed him, both have taken the young men to fight for causes, but both have allowed him to grow his rice and raise his children, which are two main concerns in the traditional life. As long as he is allowed to do this, he doesn't care who heads the government. This point surfaces with startling regularity in conversations with Vietnamese.

The Americans have changed all of this. I am stationed at what is known as Plantation. The people of this area once supported themselves from the rubber plantation. Today there are no trees. There is Long Binh Army Post, with its miles of concrete and asphalt. Families who have lived in villages for centuries have been moved to refugee centers, their villages turned into free-fire zones.

Villagers sleep next to bunkers, always fearing the sudden destruction of planes miles above. They see their country defoliated with chemicals that are banned in the U.S. because of the possible dangers in the form of birth deformities.

Americans have done good things in Vietnam also; schools, orphanages, etc. But in conversations with Vietnamese, they don't mention these; they remember the interruptions in their way of life.

WHAT IS THE GOAL?

We have been told that this is a war for the "hearts and minds" of the Vietnamese people.

Are we winning their hearts and minds by referring to the Vietnamese as "gooks," "dinks" "slopes," or "slants," as most soldiers do, or by treating them as some sub-human type of animal?

Have we won their hearts by disrupting the peasants' way of life or by distorting their economy beyond recognition?

In short, there are a number of soldiers in Vietnam who observe what is happening in this country and find it difficult to reconcile events with any of the publicly-stated U.S. goals.

We listen to the Vietnamese describe their lives before the coming of the Americans, when they admittedly didn't choose their rulers.

And we wonder how much thought was given to the welfare of the Vietnamese people when it was decided that the U.S. would fight to give them freedom of choice. It reminds many of us of the ironical statement of the American officer at Ben Tre who said "It became necessary to destroy the town to save it." We see this happening in Vietnam as a whole and ask "What has Vietnam gained?"

ENERGY CRISIS

Mr. BELLMON. Mr. President, I congratulate the distinguished Senator from Texas (Mr. TOWER) for the contribution he has made today by introducing the sense of the Senate resolution. The energy crisis which faces our country has not received the attention which it so desperately deserves. As the Senator from Texas has so ably pointed out, the institution of pollution control regulations have put a further strain on the supply of natural gas available for consumption in our country. An example of this appeared in this morning's Washington Post. The headline reads, "Hot, Smoggy New York Cuts Power by 5 percent." The article relates that New York City was on the verge of a power blackout yesterday. It goes on to say that voltage was reduced throughout the eastern part of New York State by 5 percent.

Also, the Associated Press reported only a few days ago that a shortage in the supply of natural gas to the Baltimore-Washington area has reached a critical situation. As a result of this shortage, the Baltimore Gas & Electric Co. had to tell 40 potential natural gas customers that they could not be supplied.

Mr. President, had an adequate supply of natural gas been available to spin the turbines of the electrical companies yesterday, this power shortage could have been averted. The unreasonable low pricing system for natural gas has created a shortage which has resulted in brownouts and blackouts all over our country. The natural gas industry supplies over 30 percent of all our energy needs. With increased concern about pollution of our environment, natural gas can supply the energy needed by this country to run the industry of this country without the harmful effects of other energy sources.

I am pleased that the Federal Power

Commission has seen fit to reopen the pricing system in the Permian Basin. The present pricing structure has had a harmful effect on that industry and I am hopeful that these hearings and discussions will lead to a more equitable pricing system and the further development of a much needed energy source.

I ask unanimous consent that the two articles on the subject be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

HOT, SMOGGY NEW YORK CUTS POWER BY 5 PERCENT

(By Karl E. Meyer)

NEW YORK, July 28.—This city was on the verge of power blackout today. Torrid weather nearly blew the fuse of the partly-crippled Consolidated Edison Co.

Subway service was trimmed drastically, voltage reduced by 5 per cent throughout eastern New York State, and everyone urged to use less electricity in a second successive day of suffocating weather.

New Yorkers also continued to endure an eye-stinging smog that blanketed the city, creating air conditions that officials grimly called "unsatisfactory." No change is in sight for Wednesday, when the polluted and superhumid weather may cause an even worse power crisis.

The peak power demand occurred between 11 a.m. and noon, when 7,248,000 kilowatts poured into the city's subway system, high-voltage machines and overworked air-conditioners.

This peak was only about 400,000 kilowatts short of Con Ed's total capacity, which has been temporarily increased by purchasing of outside power from utilities all over the Northeast and from Canada and the Tennessee Valley. The record hourly figure of 7,266,000 kilowatts was set last summer.

By 5 a.m., as of Monday, the utility reported an all clear. But today's dimout was in every way more serious, so much so that the police department ordered all patrol cars to maintain at least a half-tank of gas, because gasoline pumps are electrically operated. Monday's voltage reduction was only 3 per cent.

The 5 per cent voltage reduction extended to seven other New York State utilities that have joined in contributing to Con Ed's emergency power pool.

The pool was formed after two major generators were knocked out of service for the rest of the summer, reducing Con Ed's total capacity to 6.35 million kilowatts.

Sen. Edmund Muskie (D-Maine) announced in Washington that he would hold hearings beginning Monday into a power famine that may "well happen in other large metropolitan areas."

As early as 9:40 a.m., Con Ed ordered a voltage cut of 3 per cent, a reduction level which the utility asserts is not noticeable to users. At 1 p.m., the reduction was increased to 5 per cent—second stage in the power company's cutback plan.

Simultaneously, Con Ed pleaded with its customers to turn off unneeded air conditioners, to run major appliances after 6 p.m., and to dial air conditioners to medium settings. Gov. Nelson Rockefeller joined in the call for saving power.

The utility appealed for a subway slowdown and asked other major users—the New York Port Authority, Rockefeller Center, the Empire State Building among them—to tap less power wherever possible.

The Transit Authority, which operates the subways, responded by cutting by one-third the number of cars running and ordering motormen on the remainder to travel no faster than 15 miles per hour.

Service did not return to normal until 5:30 p.m., midway through the rush hour.

State agencies were ordered by Rockefeller to cut peak-hour loads by as much as 8 per cent in state-owned or state-leased properties. The order covered an area spanning from Albany to New York City.

In midtown Manhattan, lights went out in office buildings wherever feasible to ease the peak-hour load, causing employes to grope down dark halls to toilets. Some buildings shut down spare elevators.

A company spokesman reported today that "no major snags" had developed in the outside power pool. But he added that the third day of a heat wave usually brings the severest strain on power. "We'll have to face it as best we can," he said. * * *

DISTRICT OF COLUMBIA, BALTIMORE GAS SHORTAGE CALLED CRITICAL

BALTIMORE.—A shortage in the supply of natural gas to the Baltimore-Washington area has reached a "critical" situation, according to the Maryland Public Service Commission.

PSC Chairman William Doub said in a letter to the Department of Interior, that last April Atlantic Seaboard Corporation, the main supplier of natural gas to this area, drastically cut back its supply of gas to the Baltimore Gas and Electric Co.

Doub asked the department to lease "as quickly as possible" 137 potential gas bearing tracts in the Gulf of Mexico.

The immediate leasing of these tracts, he wrote, would aid in "the pollution control efforts of government and industry."

In April, the gas supplier informed the power firm that it should not contract to supply gas to any new customer or for new equipment to an old customer that would use more than 300,000 cubic feet of natural gas per day.

As a result, the power firm had to tell 40 potential natural gas customers that they could not be supplied.

A spokesman for the power firm said that firms already using gas and new homes and small commercial establishments will be supplied.

HEALTH SERVICES AND MOUNTING MEDICAL COSTS

Mr. HARRIS. Mr. President, on July 8, 1970, I held an important public hearing in Tulsa, Okla., on the subject of the delivery of health services and mounting medical costs. The testimony I received at that time was thoughtful and worthwhile, and I believe that Senators and relevant committees can benefit from consideration of it. Accordingly, Mr. President, I ask unanimous consent that the third additional portion of that testimony be printed in the RECORD.

There being no objection, the portion of testimony was ordered to be printed in the RECORD, as follows:

DELIVERY OF HEALTH SERVICES AND MOUNTING MEDICAL COSTS

TESTIMONY OF WALTER D. ATKINS, D.D.S., M.P.H., CITY-COUNTY HEALTH DEPARTMENT, TULSA, OKLA.

Senator, we do appreciate being here and I am going to cut my remarks fairly short. I prepared a paper which you have in your hands. I prepared this statement in two veins: one, what are the problems with health conditions and delivery systems in the United States and, two, I related it actually to the federal government. I also have offered some general solutions. And it's this I want to dwell upon. I'm real glad to hear Dr. Colyar say, and others, that we've got to start with prevention in all of our planning. This has not been done. We need to clarify the definitions I think, as referred to one word which we've kicked around this morning considerably—that is "comprehensive." We talk about comprehensive health services; we talk about comprehensive hospital care. This word really needs to be defined. We need to know what we're talking about. We feel that there is no one health delivery system solution. We feel strongly that there are three population groups that need to be served.

One is the poor, and these are people who have absolutely no health resources; they have no health knowledge. We are engaged (and this is the reason I mention these comprehensive health service programs) in a project here in Tulsa to demonstrate what can be done for the poor people. This has been done really at a very moderate cost. The medical visit cost per patient is averaged at $12. Dental visit, $14. Home nursing and all the other social services have run about $9 per visit. Now this is a facility in which we treat complete families. We're talking about environmental problems; we're talking about health problems and not health care. We're talking about total health and what it means to the population. We feel then that there is this other large group of medically indigent people which has been discussed here considerably this morning who cannot afford medical care. And it is to these people that we feel a health insurance program—let's define this too, we're not talking about hospitalization insurance. We're talking about health insurance which includes prevention; it includes diagnosis, treatment and rehabilitation. In a comprehensive—again, comprehensive, in that sense—a health insurance program would do very well for this group of people. Then we feel that there is a third, large segment of the population who are affluent, who are able to purchase all of their health services, and admittedly the best health services in the world, so why tamper with this? Let's talk about these three groups of people and I think we can solve our problems.

One of the biggest fallacies that has occurred in any discussions of planning or programs for the health of the people in the United States is that the talking point nearly always starts with a sick person. The fact is that to cure any ill is infinitely more expensive than to prevent it. There have been some very good examples of what prevention can do and I cite only one example—the disease smallpox. This is a disease that is practically unheard of in this country now because we had the vaccine that would immunize the population. The disease hasn't gone away; it has just been controlled at a comparatively minor expense. The implication here is that this should apply to total health. We feel that planning in the practice of medicine, the practice of dentistry or insurance programs must begin with a well patient or a well family.

In discussing health delivery systems one must realize that the method by which the people receive health services in the United States just grew. It grew without any planning, without any thought for the need of planning. It was predicated on the free enterprise system and actually is a business and while there is a great deal of humanitarianism surrounding it as well as an air of mystery surrounding the man who has this special knowledge, in the final analysis all the people in the world of medicine are human beings with the same strengths and frailities as all other human beings. They had to be extremely ambitious to be willing to spend the time, effort, and the money that is required to become a physician, a dentist, a

nurse or what have you. Ambition is closely akin to greed which of course is in all of us to a greater or lesser extent. Therefore, when we talk about health delivery systems, we must approach it from the human standpoint, tie the discussion in with economy and inflation and with the wisdom of mandating health services or leave it up to the free enterprise system.

There is no documentation as to what, if any, medical delivery system would be better than any other in the United States. To our knowledge no studies have been done. This is true probably because there is no definite delivery system. Medicare and Medicaid cannot be classified as delivery systems; rather they are methods by which people can receive medical services if they are eligible and if the services are available. There have been some experimental systems; not all the answers are in on these yet. One that we're engaged in here in Tulsa county is the neighborhood health center approach for poor people. This is much more than an outpatient clinic operation; it starts with a preventive program working with families as groups, offering one door services for the maintenance of the total family including environmental health services. The present indications after a year's operation is that this is a very feasible method of delivering services to poor people. This will be discussed more in detail later in this paper. Another system that has been experimented with is a Kaiser-Permanente plan on the West Coast. Labor has taken the lead in planning for benefits for employees under labor contracts; they have had to think about the dollar value and the services to the people. This plan includes prevention, treatment and rehabilitation through their own closed panel medical insurance system with paid physicians and is being accomplished at a very reasonable figure.

One of the biggest deterrents to meaningful discussions of health systems is that there are no clear cut definitions of terms that are bandied about as they relate to the health of the nation. For instance, the World Health Organization definition for the word "health" is that it involves man's physical, mental, and social well being and not the mere absence of disease or infirmity. The Oklahoma Medical Association has differed with this definition—to them health is black or white, you either have it or you don't. Another term that's extremely confusing is the word, "comprehensive." This is used as an adjective with many different meanings such as Comprehensive Health Services, Comprehensive Medical or Dental Care, Comprehensive Hospital Services, Comprehensive Hospital Insurance, and Comprehensive Health Insurance. Often times discussions will go on for a considerable period of time without people really knowing what the other is talking about even though they are using the same words. There are other definitions that need to be clarified also.

Other deterrents to a workable solution of successful health delivery systems need to be discussed before any definite opinions can be established. These are problems that either have been or will be blocks to the efficient delivery of health services. (Even here is a definition that needs to be clarified. When one talks about health services, he is talking about the whole gamut of prevention, treatment, and rehabilitation as compared to health care which starts with treatment and rehabilitation.)

1. One of the problems is explained in a discussion of the origin and background of the delivery of health care in the United States. Under the free enterprise system the practice of medicine or dentistry is a business. It is a matter of a person being trained and selling his training to the highest bidder. He expects to be paid for his services and rightfully so. He very jealously guards his independence as to what patients he will see and will fight anyone who attempts to encroach upon this. His training taught him that his obligation was to his office, to the patients that came to his front door, and that this is the extent of his obligation. Professional schools have been changing in recent years to include courses in community medicine or community dentistry which are designed to give the practitioner a broader outlook that there are social forces within the community that need his attention as well. However, it will be a long time before this permeates the whole profession. Because most physicians and dentists are pretty badly overworked, they feel that they are more than doing their part regardless of the type clientele they have by just taking care of their office. They also feel that the medical needs of the people are being met simply due to the fact that they can't see beyond their office. This is not an indictment necessarily it is just a tired man trying to do more than he is capable of.

2. This brings up the second problem which is health manpower. If everyone in the United States had all the money they needed to purchase health services and the knowledge and the motivation necessary to seek health services, are the services available? The answer here is no and certainly not in a quality manner. The health industry is the third largest industry in the United States and when this is coupled with the fantastic technological explosion in the health field then the manpower situation really looks hopeless. There are some favorable signs. One is that the medical and dental professions are finally maturing and beginning to feel secure enough so that they are really looking at auxiliary or ancillary type people to do an awful lot of jobs that heretofore have been the privilege and prerogative of the doctor himself. Of course, the greed motive enters back into the picture at this point also because he realizes finally that there are some people that he can train to do things that he has done at much less cost than if he were doing them so that his profits are enhanced. There also is a growing tendency toward group practices which may alleviate part of the manpower shortage and allow many more people to be seen also at much less cost.

3. The third problem is we hear an awful lot about hospital insurance; this is often referred to as health insurance which of course is a misnomer. Hospital insurance starts with a sick patient and most policies only benefit a patient when they are hospitalized. Some of the insurance companies, Aetna for instance and Blue Cross, are giving lip service to changing the format of their policies to include prevention and office visits for diagnostic purposes and treatment; however, this is not universal yet by any means. Blue Cross has instituted a supplemental emergency policy that they sell at a considerable additional premium. The health insurance people need to redefine their objectives and in our opinion, start emphasizing preventive programs. Their fear is that they are going into unchartered areas without actuarial experience as to the use, rate, and cost of preventive services. They seem reluctant to buy the premise that you can prevent illness and disease cheaper than you can treat it.

4. All across the country in cities with more than one hospital, you find the hospitals competing with each other and they claim that they offer comprehensive hospital services. This definition of "comprehensive" means that they're offering all services to their patients such as intensive coronary care, radiography, heart surgery, O.B. and pediatric services and these services are found in each and every hospital; this certainly is true here in Tulsa. This equipment is extremely expensive to purchase and to maintain. It takes highly qualified people to operate it and is utilized a small percentage of the time. And while hospitals have had to raise salaries tremendously there is no question that this duplication of equipment and services has added materially to hospital costs.

5. The fifth problem has become evident particularly since World War II and that is that the general public is becoming much more sophisticated in terms of health services and what they want and what they are entitled to and have been in one sense willing to pay for it but griping about it tremendously. This I think doesn't need elaboration other than the fact that it is adding to medical care costs and when this happens it adds to the problems of medically indigent people.

6. Perhaps this isn't the place to mention this, but I feel like it needs to be aired. Congress itself with the collaboration of President Johnson has created some very real problems in the health field. While I think you will agree that we have the greatest form of government in the world, at the same time the congressional system is a little bit cumbersome. Through lobbying mechanisms, through the zeal of individual members of Congress, and because of a lot of other reasons, much legislation gets introduced that has overlapping overtones, gets passed, and signed into law without any clear cut responsibility as to who is to operate the programs. This has been especially true in the social legislation that has occurred in recent years. It got its major push early in Johnson's administration. Although social problems have been with us ever since the inception of our government, very suddenly it seems Congress and President Johnson was panicked into passing a great deal of legislation to help the poor, to increase health services for certain age groups, etc. The minute this legislation became law then the pressure was really put on people at the local level to get programs moving and off the ground.

All of the guidelines and practically all of the programs were issued with a Washington viewpoint and without any actual knowledge of what was going on at the local level or what was needed at the local level. The guidelines were often changed on a month to month basis as to operation so that the people who were trying to operate the programs were essentially in chaos. I can refer to one particular case because we were involved in this and that's our North Tulsa Neighborhood Health Center where everytime we had a change of administration (less than annually) we would have a change in in the interpretation of the guidelines and this continues. We also are finding in the OEO office that the program people aren't in tune with the procurement people and we are still being dictated to by the Washington office without regard to what the local situation actually calls for. However, the two main pieces of legislation that I refer to is Medicaid and Medicare. Medicare for instance was planned much more carefully than Medicaid apparently and with superhuman efforts by states to certify agencies pretty well got off the ground; however, very suddenly they have reinterpreted eligible services which has certainly put a cramp in the operation of programs. The program that we're associated with is a bedside nursing program. In the last three months we have been forced to reduce our patient load very materially because of increased restrictions on the program. However, the program that has caused the most consternation is title 19 or the Medicaid program. In the first place this was put in the hands of lay people, generally the Welfare Depart-

ments, who determined what services were to be offered, the manner in which they were to be offered, and who the eligible people would be. They enlisted the aid, support, and understanding of the medical people for services not planning and received it. But in order to get this they promised everybody the moon. There was no realism put into the planning of the delivery of these services. In most states they said that they would pay usual and customary fees.

Again I don't intend to indict the dental or medical professions but I think what happened as far as fees are concerned is history. The facts are that the planners forgot that all medical people are human first and professionals second and now that the usual and customary fee system has been installed, it is going to make it extremely difficult to change this system. Another thing that was very bad was that there was no quality review system built into these programs so that dentists for instance in one program that I know of were given a completely free hand in their diagnosis and treatment plan; whereas, if they had had peer review, it probably would have saved the program. But the upshot was that they canceled the whole program except just for pain and infection.

7. The final problem that we mention is the Department of Health, Education, and Welfare. Ten years ago this was a very well organized, closely knit, smoothly operating force for the good of health management particularly in public health for all of the United States. With all the social legislation that has been passed since President John Kennedy was first inaugurated the majority of it was given to HEW for implementation. What this has done in our opinion in effect is to make HEW so large and so unwieldy that it is completely unmanageable. I feel this is one of the reasons that the secretaries of HEW have come and gone so fast; all of them are taking a shot at reorganizing it when it probably didn't need this at all.

At any rate, it is so disorganized at the moment that it is very questionable whether it can ever be put back together again as a single entity. Certainly all of the subjects, Health, Education, and Welfare, are so important that they should have separate recognition and probably should not be in one department. We in the public health field have for many years looked toward the health component of HEW for consultation, guidance, and support. Very suddenly we find ourselves in the position of playing the opposite role. The point is that this is occurring at a time when the President and Congress need strong positive leadership and guidance in this most important field.

When one takes a look at the problems listed above, the question arises—Is there any one solution to the total subject of health in the United States? Then when one looks further at how closely health care is related to economics and inflation, one really begins to wonder—Is there an answer? Our first thought is: This is too complicated, too large to ever reduce the polarity of all the special interests such as the empire building tendency of the American Medical Association, American Dental Association and more importantly the power struggle that is very evident in the underprivileged areas particularly among Blacks as to who will emerge the leader and the spokesman for their people. However, there has to be a way, there has to be some method by which we can reach a consensus to bring together all the forces that would promote better health for our people.

There are those who will argue that it will have to be done by mandate and others that free enterprise will solve the problems. In our opinion neither of these views is correct because we have seen social legislation fail such as the Volsted Act and we know that our medical care system under free enterprise is just not doing the job. Our view is that the answer lies somewhere between these two extremes.

For instance, there has been some very significant work done; also, some tentative steps taken toward the solution of these problems. The first is the study by the National Commission on Community Health Services entitled, "Health is a Community Affair." This study very significantly points out the personal and environmental health services that will be needed in the years ahead and makes authoritative recommendations for action. I feel very strongly that anyone who is interested in health legislation should be thoroughly familiar with this publication. Secondly under P.L. 89–749 we have the comprehensive health planning people both at the state and regional levels. Unfortunately the funding for this is very insignificant; secondly, they didn't put enough "teeth" in the planning agencies to make them really effective. Even taking the middle road between mandated and voluntary action, the planning people should have enough authority to correct gross errors in delivery of health services.

It is our feeling that *no one* health delivery system is going to fit our total population. It has been shown very clearly in our neighborhood health center for the poor the amount of good that can be done for poor people at a fairly reasonable cost but more importantly the facts that have come out of these projects is that this population has absolutely no inner resources in which to manage health affairs; they have no understanding of what health is; they have no knowledge of how to receive or to ask for health services; they have no transportation to get there if they did know so that everything needs to be done for them—management of their home, management of nutrition, management of their environmental surroundings, so that this would necessarily take an entirely different approach to health services than it would for the better educated and more affluent people.

Actually the cost of delivery of services to these people (this has incidentally been a completely one door operation) for medical visits have averaged $12.94; dental visits $14.18; physical therapy visits $8.40; all the other social services—mental health, home nursing etc. has averaged about $9.00 per visit. This amounts to about $11.00 per patient visit for total health care for families. Now contrast this with the affluent society who has enough money to purchase at least hospitalization insurance protection and to purchase health services if the health services are available. This is a population group who should be well enough educated if they are properly motivated to manage their own health affairs and generally I'm sure this is true. The only thing in this group that I would be hesitant to predict is what is an income level that would make them affluent enough to manage their health affairs; of course, it depends on the number of children, size of the family and so forth, but I would suspect that it would start around $7,500.00 per year for a family of three people. This should afford them enough money to purchase hospitalization insurance and to pay their medical bills that are accrued outside of this insurance program.

This leaves a large group that is classified as medically indigent in which any kind of medical problems are calamitous to the family. It is our feeling that the private purveyors of medical care could take care of this group of people if they were furnished with an insurance program that would adequately cover them. I would like to emphasize again and again that we are talking about comprehensive health insurance which covers prevention, office visits, hospitalization, rehabilitation, and whatever it takes to keep a family healthy. This portion of the program could be very well done on a sliding scale so that the government would not have to pick up the total insurance cost because these people do have some capability.

Now in order to review what has been said in the foregoing I think that there should be three methods of delivering health services to the three different kinds of population groups that we have in this country because I don't think one system would cover all three adequately. These three are:

1. For the poor that total services be given this group through a closed group practice such as Kaiser-Permanente plan or such as the Neighborhood Health Center concept. This would be done with salaried health workers, with all of the disciplines organized toward rendering family health services to poor people within certain eligibility guidelines.

2. That a health insurance program for medically indigent people be written that would have sufficient comprehensiveness to cover all of the services in order to prevent diseases, to treat diseases, and to rehabilitate people and that these services be rendered by the private sector of medicine or through group practices. Also, that the programs be done on a sliding scale basis.

3. For the affluent society that there be no change in the health delivery system that is presently available in the United States and which admittedly offers the best technological health care in the world. At the present time in this group the real health needs are being met so that in any community the health indices show that the affluent have many, many less health problems than the poor people. And finally that there be a health planning agency within each community that has enough authority in their activity to see to it that health services meet the needs of a given population and that we don't have hospital beds in hospital wards standing idle; that we do have adequate ambulance services. In short that the health needs of the people of the community can be met in a quality manner and through a true community service effort.

Senator HARRIS. Mr. Gene Jordan is a consumer of health and medical services. A statement by him of his own personal experiences might be helpful to us. I thank Bethal Ward for bringing Mr. Jordan's presence to my attention. Mr. Jordan, I understand you've lately had some considerable expense because of open heart surgery. Tell us about that and your own personal situation with regard to those expenses. I think it will be useful to us.

STATEMENT OF MR. GENE JORDAN

In May of 1969, I had open heart surgery. Prior to this time I had never been able to get hospitalization because I had rheumatic fever when I was seven years old. The doctor had told me a year before I had this surgery that I should have had it done then but I felt like I couldn't afford it because, with a family and automobiles and everything and no insurance, there was no way which I could afford it. So finally back in April of 1969 I had a heart seizure and the doctor told me I would have to have this surgery or live maybe a year or a year and a half. I still didn't have any insurance. So I went ahead and had it and it cost approximately $7000 for the hospital and the doctor who did the surgery.

I've had some help with Title 19. It did help me with some of my bills but I still have probably $3000 for $3500 that I still

have to pay. I have to pay this over a period of payments whenever I get the money to pay it. My family, mother, father, sisters and brothers, really kept me going—rent, eating, etc. My wife worked but she was off five weeks when I had this surgery, because after I came home she had to care for me.

If it hadn't been for my mother and father, sisters and brothers, and people like this I would have been—well it would have been a disaster because everything I had was mortgaged—car, house, furniture and all those things, and I would have lost everything I had. I have been real fortunate in getting some of these bills paid but a lot of people are not as fortunate as I am.

I know, I've visited with people who have had open heart surgery since I had it and they haven't been quite as lucky as I have been. This shows you that poor people just can't get this insurance. If I could have got the insurance I could have paid for it probably but there was no way I could because I wasn't qualified, because I had this trouble. After I got out of the hospital, for awhile my drug bill was about $50 or $60 a week for three or four months because they put me on one drug and this wouldn't work and they'd take me off this and put me on another. I don't know what I would have done, and I still have problems with paying. But the doctors are real lenient but the hospital is not quite so lenient. But the doctors, they go along, and pay me this and when you have more, pay me more. This has been my experience with medical expense and it's been this way most of my life. My mother and father were hindered by it because I had to be in the hospital so much. I probably spent 75% of my life in hospitals between the time I was seven and the time I was 16 or 17 years old. So it cost them a lot of money and had there been some way—if they could have had any insurance like this why it would have been a lot easier on them and a lot easier on myself too.

Senator HARRIS. Gene, are you back at work yet?

Mr. JORDAN. I was a barber and holding my arms up like this puts too much pressure on this valve, so vocational rehabilitation is going to train me to do something I can sit down to and work with my hands out front and get off my feet.

Senator HARRIS. How long have you been off work?

Mr. JORDAN. Since May of 1969.

Senator HARRIS. About what were you making before that?

Mr. JORDAN. In the neighborhood of $650 to $750 a month.

Senator HARRIS. And what did you say you still owe?

Mr. JORDAN. Approximately $3500, plus medicine I'm still buying, which I'll have to be taking the rest of my life.

Senator HARRIS. Gene, you present the problem very dramatically. You are certainly to be complimented for coming here and giving us that testimony. It will be very helpful.

Mr. JORDAN. Thank you very much.

Senator HARRIS. Thank you, and good luck.

Mr. Ross Hutchins is a good friend of mine. Ross has had some particular experience which I think will be very useful to us here.

TESTIMONY OF MR. ROSS HUTCHINS, ATTORNEY, TULSA, OKLA.

Senator, my name is Ross Hutchins. I am an attorney here in Tulsa, I serve as trustee in bankruptcy for between one and two hundred cases per year. By far, the overwhelming cause for bankruptcy is an illness and the resulting medical expense. It is the cause of somewhere between 60% and 90% of those cases tried. We are talking about here in Tulsa approximately 1,300 cases per year.

The typical bankrupt is between 20 and 30 years old. He has a wife. He has children. If he has been the one who incurred the illness the time at which he goes into bankruptcy is shortly after the illness occurs because both income stops and expense goes up. If it has been some other member of the family the time of bankruptcy is extended. It may be as short as six months; maybe five years. In that time he has devoted part of his income into payment of the medical bills and he has become indebted to any number of people in the community. Typically when he became bankrupt he had a good job, his income may have been $600 or $700 per month even. Maybe he did not have as good a job. In either event since he was relatively newly married, he owed on his furniture, his car and his home. It took virtually everything he had to meet the payments and there was no reasonable way by which economic planning would have permitted him to be in some other position.

There were few, if any, government programs available to him because he was neither old enough to qualify nor poor enough to qualify. Nor was he physically impaired, at least when the accident or the illness occurred. By the way, it's virtually always an illness, very, very seldom an accident. He finally reaches a point where he just cannot go on and does file bankruptcy. This would not be a 100% load back on the government to take up these people to the extent they represent an expenditure in the economy because there is an expense to the government in putting him through bankruptcy. There is also an expense to a large segment of the population in the bills and expenses they're already losing by reason of his particular problem.

Senator HARRIS. That's very startling testimony. It is something that is new to me.

Mr. HUTCHINS. Well, virtually all your bankrupts are young, married couples. If they're under twenty they just haven't had sufficient time to get in enough trouble. (laughter). Also they haven't been able to borrow . . . they may have already come into the problems but the creditors haven't had time to apply sufficient pressure that they had to resort to bankruptcy courts to get out from under. As they grow older and the problems build up on them, they finally give up under the load and by the way they give up justifiably. As this man suggested, too, about his parents, typically some of the debts listed are debts to parents and relatives who have given them money to help them out in this crisis. And by and large from the creditors' standpoint they have tried to do the right thing. They just haven't been able to do it.

Senator HARRIS. There is a point that you make that we really miss a lot in this country: that the people in the middle rightly feel that if they were a little poorer or richer they would get a lot more attention. The man in the middle, for example, pays more than his fair share of taxes, which is something we've been trying to do something about, but not enough. He generally doesn't have the special attention to the educational needs of his children; doesn't have the special attention to his health needs; and so forth. I think the point you make in that regard is very well taken.

Mr. HUTCHINS. This man has few programs available to him offered through the government. When he gets newly married, he's got the greatest cash requirement he'll ever have. He's got to buy his home, car, furniture, and pay for his children and their education and clothing. For instance, elderly people who frequently go to nursing homes, even under the minimal amount afforded to them, sometimes are able to save a little money, five or ten dollars a month. This man can't possibly have been in that position. Every month he's short. He's short even under the most favorable conditions. Yet he had a hard time borrowing money and is unable to establish any credit and he has no assets. He started out with a wife and maybe a car. He owed more on the car than it was worth. Typically also is another thing that frequently happens to them as they start going bankrupt, they have no credit; they didn't buy a good enough car and they keep driving it and they may own three or four cars none of which are newer than six to eight years and virtually none of them run. He probably had to come to the court house with his attorney because his car didn't run.

Senator HARRIS. Thank you very much.

Now we'd like to hear from Mr. W. R. Bethel, who is President of the Oklahoma Blue Cross-Blue Shield. He's been waiting here very patiently all day. We're glad you could be here and we're glad to hear from you.

TESTIMONY OF MR. W. R. BETHEL, PRESIDENT, OKLAHOMA BLUE CROSS-BLUE SHIELD

Thank you, Senator Harris. My name is W. R. Bethel. I am President of Group Hospital Service and Oklahoma Physicians Service, better known as Oklahoma Blue Cross and Blue Shield. We believe that it is both timely and fitting that you should provide an opportunity for the citizens of Oklahoma to express their views relative to one of the most pressing problems facing our state, and the nation, today . . . "health care financing and health care delivery." We believe it might be helpful to your deliberations to have some of the background of Blue Cross and Blue Shield nationally and, more specifically, Blue Cross and Blue Shield in Oklahoma.

Further, as you know, our corporations are made up of laymen, administrators, doctors, hospital representatives, and people of the communities we serve. We have representatives of each of those sections here today.

Senator HARRIS. I think we should introduce them so we'd be certain to have their names in the record.

Mr. BETHEL. Mr. Ernest L. Stucker is Chairman of the Board of the Blue Cross Corporation. Mr. W. B. (Bill) Hicks of the M K & O Trailways. Blunt Martin. Dr. Ed Calhoon is here as a member of the Blue Shield Board. Dr. Scott Hendren is a member of the Blue Shield Board. Mr. H. C. Gocher is a layman and is the owner of the Cimmaron Telephone Company from Mannford and is a lay member of the Blue Shield Board. Our hospital representatives are: Mr. Jim Harvey who is a member of the Blue Cross Board; Dick Luttrell who is a member of the Blue Cross Board; and Joe Gunn who is a member of our Board and President of the Oklahoma Hospital Association.

As you are perhaps aware, the concept of voluntary prepayment was originated in Texas in 1929. It came about because people had a need for financial help in times of health crises. The Oklahoma Blue Cross Plan was formed in 1940, followed by Oklahoma Blue Shield five years later. It those years, approximately 70% of the hospitals in the state were small, proprietary institutions, in the main, with somewhat limited facilities and services. Because of the increasing demand for services the profile of hospitals has changed, over the years, from proprietary to community sponsorship, offering a wide variety of services. Another contributing factor to this change was the existence of a private financing mechanism through Blue Cross and Blue Shield. Without question, the implementation of a mechanism that allows a substantial segment of the state's population to prepay a goodly portion of its health care needs, continues to contribute substantially to the significant changes and improvements in all health care services.

Historically, Blue Cross and Blue Shield

have also concerned themselves with quality care at the least possible cost.

With regard to the latter, we believe the Oklahoma Blue Cross and Blue Shield Plans were among the first pioneers of many innovations relating to cost stabilization. Utilization and peer review which are much discussed today, are only two ways the Plans have helped people to obtain quality health care at the lowest possible price over these many years.

These fiscal safeguards, in spite of seeming evidence to the contrary, have helped to contain costs. Additionally, these two systems of voluntary prepayment (Blue Cross and Blue Shield) have served as catalysts for what is now known as comprehensive areawide planning. For example, in the middle 1950's, the Oklahoma Blue Cross and Blue Shield Plans established Member Councils in all of the counties in Oklahoma.

These councils were comprised of responsible community leaders, such as, members of the Chamber of Commerce, physicians, hospital administrators and other opinion and influence leaders. The purpose of the Member Councils was to provide forums through which the community leaders and providers of care could exchange their concerns and ideas for improvement. Most of their discussions were focused on meeting community health needs through private financing mechanisms such as Blue Cross and Blue Shield, as opposed to tax financed governmental support.

One important by-product of these meetings was a series of educational programs entitled "Careful Use," aimed at encouraging the wise and effective use of their budgeted health care dollars. These educational programs were sponsored by Blue Cross and Blue Shield and had the support of both consumer and provider groups. Through this type of contact and involvement in community health affairs, Blue Cross and Blue Shield have long been influential so far as both the availability of heath services and their economical delivery are concerned.

In this time when the pubic's interest is of utmost importance, it is interesting to note that, for many years, Oklahoma Blue Cross and Blue Shield have had equal representation on their Boards of Trustees from consumers, hospitals anl physicians.

The people's trust is truly an invigorating challenge. These voluntary, non-profit entities, Oklahoma Blue Cross and Blue Shield, have, from the very beginning, under their enabling legislation, required participation by the consumer public on their Boards. Now, standing on the threshold of the Substantial Seventies, consumer influence will become more important than ever before. It will be a vital factor in areawide planning for the distribution of health services and in the recruitment and prudent use of available health manpower. Consumer participation will be heavily relied upon to clarify, and make more effective use of government subsidy programs—and to help define the direction of an improved health care delivery system.

While this balance of representation is evidence of our recognition that the interest of the consumer is paramount, I would hasten to add that, in our judgment, the interest of the provider and the consumer is more often in harmony than in conflict.

Earlier, I mentioned the vogue term, "Peer Review." Here again, the Oklahoma Plans assumed a leadership role many years ago. In the late 40's and early 50's, meetings were held with physician committees, all over the state, to decide ways and means of assuring quality care and optimum use of health care dollars. Of course, those early endeavors have now evolved into a much more sophisticated monitoring system, which is still under constant review and improvement.

Nationally, the Blue Plans touch every major community in the United States, rendering services to approximately 70 million Americans, at risk, and reach approximately 25 million more aged and poor through government contract. These Plans, including Oklahoma Blue Cross and Blue Shield, are all voluntary, non-profit corporations.

From our humble beginning in 1940, Oklahoma Blue Cross and Blue Shield now serve about one million Oklahomans, including 625,000 persons under private contract, and as intermediary for the remainder under government programs.

We can report that Blue Cross and Blue Shield returned 97% of its members' dues, in the form of benefits, in 1969. It is also noteworthy that Blue Cross administered the Part A portion of the Medicare Program at a cost to the government of only 1.9%.

We are gratified that 100% of the hospitals in Oklahoma demonstrated their confidence by designating Blue Cross as their intermediary for Medicare and that the Oklahoma physicians chose Blue Shield to handle the CHAMPUS Program. We believe that all of this is indisputable evidence that the voluntary prepayment mechanism has a unique contribution to make in the implementation and administration of government-sponsored health care programs just as it has in the private sector.

Further, we are convinced that such economical and efficient administration of federal programs is achievable only through utilizing the expertise of the private sector and we would urge that broader administrative latitude be granted to this proven system.

While our accomplishments are substantial, many problem remains to be solved. In this connection, we are currently engaged in developing broader benefit programs, studying alternative delivery systems and new methods of containing costs.

In cooperation with the dental profession, we are currently administering an experimental dental care program for approximately 12,000 Oklahomans. Shortly, we will make a similar program available to a large portion of our total membership. Also, we will soon introduce an out of hospital drug program and, with the cooperation of the Oklahoma State Medical Association, will implement a program for the payment of physicians' usual, customary and reasonable charges with a broad scope of benefits.

At the same time, we are conducting experiments in alternate levels of care and home health services in the City of Muskogee with expectation they will be implemented throughout the state if proven successful.

Further, we are investigating a broad spectrum of additional programs seeking those best suited to reduce the incidence and length of in-patient care which is the most costly care of all. Some examples of these are pre-admission testing, multi-phasic screening and group practice arrangements, with emphasis upon prevention and early detection.

Senator, you are undoubtedly aware that a major factor in the increasing cost of health care is a substantial shortage of health manpower. Many communities in Oklahoma do not have physicians, nurses or paramedical personnel available at all. We would urgently recommend that federal funds be directed, through the states, to refine and expand programs for better facilities and education of health manpower in all categories. Even more important, in terms of more attainable goals in the near future, is the need for planning which will stress better distribution and increasing the production of our present manpower resources.

As an example of what can be accomplished, we suggest further consideration be given to the "Health Careers" programs which Blue Cross actively supported from the beginning through the Regional Medical Program now functioning at the University of Oklahoma Medical Center. This program seeks to encourage young physicians and others to go into areas of the state where health services are inadequate or are non-existent. It is our belief that the Regional Medical Programs hold much promise for more effective use of existing and future health manpower.

Voluntary Areawide Planning is another approach which, when effectively implemented, will help utilize health manpower to a greater advantage. The importance of comprehensive planning for health facilities, services and manpower, and the coordinated use of financial resources is widely recognized. This recognition stems from an awakening realization that health facilities are interdependent; and that consumer interests and economic reality require a wide variety of facilities and services. Further, with new ways to retrieve and use comprehensive data on all aspects of health care, new opportunities for effectiveness are presenting themselves.

The management of Oklahoma Blue Cross and Blue Shield, believing in the need for comprehensive health planning, is committed to supporting recognized agencies with financial contributions and with skilled manpower and sophisticated equipment.

Many of these efforts we've touched on are also under study and trial by other Blue Cross and Blue Shield Plans across the nation. Since these programs have been widely aired in other public hearings, you are undoubtedly aware of them and no useful purpose would be served by going into greater detail today.

Of immediate concern to all of the people of Oklahoma and the providers of health care is the unwarranted increase in the cost of care to the private sector, caused by certain restrictions in the Medicare and Medicaid regulations. These restrictions prohibit the federal and state governments from paying their fair share of the full cost of providing health services.

Briefly, here's what we mean . . .

Since hospitals provide a substantial amount of care for which they are not reimbursed, they must then add these costs to the charges of other patients. This is commonly known as "reduction in revenue" and includes all contractual allowances, charity and bad debts. In 1968, Oklahoma hospitals had reductions in revenue which cost Blue Cross Subscribers in excess of $2 million. Amounts ranging up to $15.30 per day had to be added to the Blue Cross patient's bill to make up this loss, mainly attributable to Medicare and Medicaid. Studies for 1969 are not yet completed, but indications are that these losses of revenue cost Blue Cross Subscribers in excess of $3 million. When our studies are complete, we predict that the effect upon the Blus Cross patient's bill was an increase of up to approximately $20 per patient day.

The net operating loss of the Blue Cross Plan in 1968 was $1,098,000. In 1969 our losses were $2,199,000. Senator Harris, we think you will agree with us that it is unfair to the 625,000 Oklahomans who are Blue Cross Subscribers to have to subsidize Medicare and Medicaid to this extent.

Since the advent of the Medicare Law, there have been 35 hospitals which have closed their doors. We are of the opinion that these hospitals were closed in large measure due to Medicare regulations and the disparity of reimbursement. This past week, three more

Oklahoma hospitals were added to this list of "closed hospitals."

Based upon our knowledge gained as a Medicare Intermediary and from our on-going Blue Cross audits, current information indicates that 30 to 40 additional Oklahoma hospitals are in a very precarious financial condition and may also be on the verge of closing.

As mentioned earlier, we already have a problem of inadequate health care facilities in our rural communities. While we would grant that some of the hospitals which are caught in this predicament leave much to be desired, the communities affected by their closing now need assistance in finding direction in the development of new types of facilities and services to replace the old.

Perhaps it will be of interest to you, Senator, to know that we returned from Baltimore last evening, where we . . . along with representatives of the Oklahoma Hospital Association, the Oklahoma Department of Public Welfare, the American Hospital Association and the Blue Cross Association . . . presented to HEW officials a new proposal for hospital reimbursement which we call "A Cost Containment Program for Oklahoma Hospitals." This proposal is a realistic approach to solving the disparity in reimbursement now being so critically felt by Oklahoma hospitals and all of the people who are attempting to pay their own way. The main thrust of the proposal is to establish a means for the containment of rapidly rising costs of care in hospitals and at the same time provides adequate financing for these facilities.

This Program will require that hospitals establish rates related to their individual financial needs and that budgets will be established on a prospective basis each year. Determination of the rates will be based (1) upon the American Hospital Association Statement of Financial Requirements; (2) the recommendations made by the appropriate areawide planning group as related to capital needs; and (3) a budget forecast acceptable to all contracting agencies.

Further, this proposal contemplates incentives for providers to operate their facilities within the framework of the prenegotiated budgets but also envisions placing the hospitals at risk for failure to stay within the limits of their projections. Additionally, this prospective reimbursement proposition requires the advance approval of an external agency to be known as the "Program Policy Board." This external agency will be made up of representatives of the Title 18 and Title 19 Programs, the Oklahoma Hospital Association, Blue Cross and knowledgeable representatives of the public. Should you desire, we can furnish you a copy of the Cost Containment Program.

Senator HARRIS. I've got a copy of the program already and we've been in close contact with Cleve Rodgers and Lloyd Rader about that, and I appreciate your statement concerning it.

Mr. BETHEL. In summation, we wish to make two points with you, today, Senator. First, we feel the resources and expertise of the private sector afford this country its most viable approach to the continuing improvement of the health care delivery system and the financing of it. We urge your assistance in seeking more latitude for its use. Secondly, we urge you, in behalf of all Oklahomans, to exert your influence to see that governmental health programs pay their fair share of all legitimate costs in the future.

Thank you for this opportunity to express our views.

Senator HARRIS: Thank you very much. You made two or three very good points very knowledgeably. The National Health Insurance Committee yesterday reported. One of the things they said, and one of the things which came out so clearly at the National Health Forum this year, was that if we're going to move into an additional system of some kind without recognizing the additional strain on facilities and on personnel, we're not going to solve the problem. You make that point well. The other points you make are extremely important, and we'll be hearing some more about the severe and growing financial problems that hospitals are facing. I really appreciate what you've had to say and your background and experience add a lot of weight to it.

I'd like now to call on the Oklahoma Hospital Association of which Joe Gunn is President. Cleve Rodgers, the Executive Director, is in Baltimore involved in the meeting that Mr. Bethel talked about. His assistant, Ben White is here, as are Jim Harvey and Dick Luttrell and others mentioned awhile ago. I am glad you're here and we'll be pleased to hear from you, Joe.

Mr. GUNN. Thank you very much Senator Harris. We have Mr. Rodgers' statement which we will leave here. I apologize that he could not be here today but he is there on very important business.

TESTIMONY OF CLEVELAND RODGERS, EXECUTIVE DIRECTOR OF THE OKLAHOMA HOSPITAL ASSOCIATION

I am Cleveland Rodgers, executive director of the Oklahoma Hospital Association, whose offices are at Suite 115, 1145 South Utica, Tulsa, Oklahoma. The Oklahoma Hospital Association is a non-profit, voluntary association with a membership of 167 hospitals in the State of Oklahoma.

Speaking from my 23 years' experience as executive director of this organization, I can say that Oklahoma hospitals have never been in such a precarious financial position as they are today. The federal Medicare program, with its retrospective determined cost provisions, have contributed to the financial dilemma facing Oklahoma hospitals that is resulting in an alarming acceleration of hospital charges to private paying patients that we serve.

Oklahoma's non-profit, community hospitals are organized to provide hospital services—they are not organized to earn money. However, they must earn money in order to provide services. The hospital's present method of securing its financial requirements to continue serving its patients is resulting in gross inequities to the private paying patients, Blue Cross and commercial insurance companies because of the present Medicare reimbursement methods. . . . To illustrate, let me give you a composite picture of the patients presently being served by Oklahoma hospitals:

1. Thirty-seven percent of the hospitals' patient days are for Medicare patients.

2. Approximately thirteen percent of the hospitals' patient days are for Medicaid patient, although the Medicaid program is only able to pay for approximately ten percent of these days, as they have had to reduce the scope of their program to a maximum of ten days per admission for an adult Medicaid recipient because of the limit of state matching funds.

3. Ten percent of the patients in Oklahoma hospitals could not pay for their care and are not eligible for Medicaid and have to be considered as bad debts or charity by the hospitals.

4. The balance of forty percent are those who have Blue Cross, commercial insurance or private pay patients, who must assume more than their proportionate share of the hospitals' total financial requirements because of the inequities presently provided with the Medicare reimbursement formula.

To illustrate this point, the cost of care of the ten percent of our patients who are not eligible for Medicaid and are not able to pay for their own care must be borne entirely by the forty percent of our private paying patients as the Medicare and Medicaid law says they would assume no responsibility for the hospitals' cost for charity services.

In addition, hospitals have many community services that are financially "losers" such as emergency room services, obstetrical services, charity out-patient clinics and other similar community services which Medicare will not assume any part of these costs for community services in their definition of allowable, reasonable cost. This, in effect, is saying that the forty percent of the private paying patients must assume the total cost of these community services rather than apportioning these costs equally among all users of hospital services.

During the last few years, many hospitals have had to borrow capital on short term loans to expand and modernize their facilities. Yet Medicare and Medicaid will not allow the retirement of debts as a part of allowable cost and will only allow a percentage of the depreciation allowable over a 40-year period. Therefore, a large part of the financial burden for capital improvements must also be passed on to the forty percent private paying patients.

As a result of this retrospective determination of what is, or what is not, an allowable cost, hospitals are finding that they actually recover less than eighty percent of regular and normal charges rendered to Medicare and Medicaid patients.

If Oklahoma hospitals are to *contain* their costs to their private paying patients (who are the taxpayers paying the Social Security taxes and the general revenue taxes to finance Medicare-Medicaid program) we believe the following changes must be written into the law to provide for equity among all purchasers of hospital care, including the federal government:

1. The hospitals' financial requirements must be met by equity payments appropriated on the basis of each group of patients' use of hospital services. For example: If Medicare patients use thirty-five percent of the hospital's services, their payments for this service must be approximately thirty-five percent of the hosiptal's financial requirements, including their proportionate share of the hospital community service programs and their capital financial requirements.

2. Since Oklahoma's non-profit hospitals furnish care to all patients admitted to the hospital by the patient's physician, regardless of their ability to pay, either the Medicaid program must be expanded to pay for the cost of this care to the medically needy or apportion the cost equally among all the users of the hospital, including Medicare.

3. Because of the obvious failure of the retroactive determination of allowable hospital costs that has contributed largely to the hospital's financial dilemma, we urge that the hospital's financial requirements must be reviewed *prospectively* by the major purchasers of hospital care and that the hospitals be paid their cost during the period they render the care, thus enabling the hospitals to be financially able to provide the needed services for the patients that they serve.

The Oklahoma Hospital Association, in affiliation with Oklahoma Blue Cross and the Department of Public Welfare, has developed such a plan. If implemented, this plan, which was presented to representatives of the Department of Health, Education and Welfare yesterday, would enable the hospitals to recover their approved financial requirements. We also believe that our proposal will stimulate hospitals, through positive financial incentives, to use their facilities and personnel more efficiently, thereby reducing their costs,

while maintaining or enhancing the quality of the health care provided. This plan would also cover the cost of construction or expansion if appropriate health planning agencies certified the need for such expansion.

Hospital tax exemption

We are also concerned with the Senate Finance Committee's staff report, which recommended that the ruling of October 8, 1969 by the Internal Revenue Service that provided for tax exemption for hospitals who provide care on a non-profit basis, be rescinded. The Oklahoma Hospital Association recommends most strongly against any legislative action by the Senate Finance Committee designed to negate the current tax ruling or modify the basis for tax exemption for hospitals for the following reasons:

1. Hospitals should be granted tax exemption on the basis that they provide a community service; that they are available to service the community in all areas of health and provide necessary emergency treatment

2. Denial of tax exemption by the Federal Government would destroy the incentive for people to make donations to a worthwhile public interest cause.

3. Denial of tax exemption would increase the cost to all patients, including Medicare and Medicaid patients, by the relative amounts needed to pay real estate, ad valorem, sales and other type taxes at state and local levels.

4. Denial of tax exemption would increase the cost to patients by the amount heretofore contributed by donors who would refuse to make donations because of impairment to their tax status.

5. Because of the financial structure of hospitals, i.e., having to have a source of income to provide services, hospitals, other than tax status supported institutions, would be unable to accept charity cases. In this connection, consider the anomaly of the Federal Government through its tax arm insisting on hospitals providing charity services but refusing through its contractual relationship with hospitals under Medicare and Medicaid programs to contribute anything to the hospital's cost of charity services.

National health insurance

In conclusion, we notice that there are many pieces of legislation before the present Congress on a proposed National Health Insurance Program. Should a National Health Insurance Program be devised, there are several elements which we, of the Oklahoma Hospital Association, view as essential or desirable:

1. The federal government should enact a minimum range of comprehensive benefits for all health prepayment plans, including hospital inpatient services, outpatient services, extended care, home care and physician services, and should include a noncancelability clause so that each individual or family can be assured of a continuing health insurance program. This would force the many health and accident insurance companies to upgrade their coverage to an acceptable minimum.

2. Rather than the federal government administering and underwriting a National Health Insurance Program, it would seem more economical, and more in the public interest, for the Congress to require a compulsory coverage by a comprehensive health insurance plan for all employed or self-employed individuals and their families, financed jointly by the employee and the employer contributions.

3. We believe that the federal government should finance a comprehensive health insurance program of all unemployed or identifiable indigent persons.

4. A special study should be made on a mechanism for financing long-term, institutional care for the chronically ill patients—particularly, the aged.

On behalf of Oklahoma hospitals, we are most grateful for this opportunity to express our views and to commend you for your special interest in the financial problems facing Oklahoma hospitals.

Thank you.

TESTIMONY OF B. JOE GUNN, ADMINISTRATOR OF THE OKMULGEE MEMORIAL HOSPITAL, OKMULGEE, OKLA. AND PRESIDENT OF THE OKLAHOMA HOSPITAL ASSOCIATION

My name is B. Joe Gunn. I am Administrator of the Okmulgee Memorial Hospital, a 101-bed general hospital located in Okmulgee, Oklahoma. I am also currently President of the Oklahoma Hospital Association. It is my privilege to appear before this Committee and to make a statement concerning the health crisis that affect the Okmulgee Memorial Hospital.

The story of the Okmulgee Memorial Hospital could be duplicated by many hospitals in the state of Oklahoma as well as in our nation. The Okmulgee Memorial Hospital was founded as a city hospital in 1917—and operated under the city-management until 1963. During the early sixties a group of interested citizens wanted a better health care delivery program than was being provided by the city form of management. These interested persons formed a corporation and the citizens of the community agreed to lease the facilities to a non-profit foundation for the purposes of operating the hospital. At the same time, action was taken to initiate a building program in order that the citizens of the city of Okmulgee and Okmulgee County could have access to new and modern health care facilities. As a result of many hours of volunteer work in the area of fund-raising, planning and organizing, a new hospital was dedicated to the citizens of the Okmulgee area in October, 1967. The $2-million, 101-bed hospital was financed by raising $650,000 from local citizens through voluntary contributions. The Hospital sold revenue bonds in the amount of $550,000 and Hill-Burton provided $800,000 for the completion of the project. It is obvious that without the assistance of the Hill-Burton agency, it would have been impossible for the community to have built a health care facility that would meet the needs of the community. Therefore, through many hours of volunteer work by citizens of the community, and through the assistance by the Hill-Burton program, a new hospital was completed.

The Okmulgee Memorial Hospital is perhaps atypical in its mix of type of patients as compared to other hospitals in Oklahoma and other states of our union. In our hospital, the Medicare patient accounts for 53 of the patient days; the welfare patients under title XIX Program accounts for 20% of the patient days; Blue Cross patients are 12% and the commercial and private-pay patients account for 15% of the patient days. In Oklahoma, the average hospital is experiencing 37% medicare patient days—11% medicaid patient days—17% Blue Cross patient days, and 35% private pay and other commercial insurance patient days. Therefore, the Okmulgee Memorial Hospital is experiencing a higher percentage of medicare and welfare patient days as compared to other hospitals in the state. Oklahoma has a somewhat higher average of medicare and welfare patient days than do other states in the union. The problem of the Okmulgee hospital is very similar to other small hospitals in the state of Oklahoma—high utilization of the senior citizens and welfare segment of the population for which the hospitals are experiencing an inadequate reimbursement of expenditures.

The Okmulgee Memorial Hospital is currently experiencing an 18.5% reduction in revenues which is brought about because of the high percentage of medicare-welfare patient day utilization as related to the reimbursement formula. However, in Oklahoma for the first quarter of 1970, the average days length of stay for medicare patients was indicated at 13.4 days. The Omulgee Memorial Hospital experienced 11.6 days of stay for medicare patients during this same period. However, the important point of realization is that many hospitals, like the Okmulgee Memorial Hospital, are experiencing difficulties in generating sufficient revenue to adequately meet the expenses of an on-going health care organization. Also, due to the fact of the high percentage of reduction in revenue which is dictated by the present reimbursement formula—it is impossible for an organization to adequately meet its financial needs. The dilemma in which we find ourselves today is that of trying to generate enough income (cash flow) to meet the current financing requirements of the hospital as well as provide funds for capital improvement in long-range development in a very rapid changing field.

Our hospital has also experienced the rapid upswing of the cost of personnel services. Since 1966, our hospital has increased its minimum wage from $.75 to the present $1.60 per hour. Very few industries have had such a dramatic percentage of increase in salaries over a short period of time. We also find that a majority of our employees are in the minimum wage category. We have also experienced extreme upward spirals in the professional categories of personnel. This includes registered nurses, pharmacists, dietitians, physical therapists, laboratory technologists and other skilled persons. Due to the increased demand on the supply of these personnel, it has caused a tremendous increase in the salary level of persons in these categories. In order to give the highest quality of care, it is imperative that the best quality of personnel be secured and developed. Therefore, the arena of competition for qualified personnel has also caused the price of these persons to increase. The smaller communities also have problems that are compounded due to the fact it seems to be increasingly difficult to attract families to smaller communities. The great trend is that people are moving to the urban centers and to the suburbs of the urban centers, and it is more difficult to attract qualified professional people to the smaller community. This also has its bearing upon cost.

Senator HARRIS. To some extent the problem feeds on itself; the fact that there is high quality medical care in the larger city may be part of the draw, for people who move there.

Mr. GUNN. We have in our particular situation, relating back to cost, and what we are confronted with—in 1966 the minimum wage in our hospital was $.75 an hour. We all agree that that was not a living wage. The federal minimum wage came in and started upgrading it at this time. As of now our minimum wage is $1.60 per hour. The point I'm making now is that we're to the federal minimum wage but in this short period of time that's a tremendous increase in cost. 70% of our cost is related to personnel services. This is a tremendous increase in costs and it takes us several weeks and even months to generate what service we perform to get the income from that service. This is compounded on the fact that we don't have a chance to get some of that income because of our deductions in revenue. This has put an extreme squeeze on the hospital and this certainly is not atypical I think; there are other hospitals in similar situations.

Senator HARRIS. Would the people who are now getting $1.60 an hour be working 40 hours?

Mr. GUNN. Yes, sir.

Senator HARRIS. That would be $64.40 a week, I believe. Per month that would be $257.60. The point I'm making is, just as the paying patient ought not to be the one who pays extra for the person who can't pay all of his hospital care, I wouldn't think that any of us would think it would be proper, either, that some people should have to work for less than a living wage in order to hold down other people's medical costs. You make the point very well, however, that it is a factor which must be taken into account, aside from the argument of whether or not it was justified.

Mr. GUNN. We have another problem involved with our professional people that I mentioned—the supply and demand factor to which you alluded a minute ago. The supply is very short and the demand is great because of the response. This has caused a tremendous upward spiral of these types of personnel. I'm not saying that they don't deserve it. But at least it's a real factor that wages for the professional nurse have increased dramatically within the last three years.

Senator HARRIS. What do they average out in a town like Okmulgee?

Mr. GUNN. Before three years ago we were averaging $425 a month. We're now at $610 a month.

Senator HARRIS. What kind of schooling is required for that kind of salary?

Mr. GUNN. This is for a registered nurse who has normally three years in our situation. We do have some four-year degree persons but mostly the three-year diploma school type nurse. These are all registered nurses. So this has the bumping effect, you raise one category and you have to raise the other. These are part of the factors. We certainly should not expect to see a downward move in anybody's wage unless we have a national crisis and all we can expect, I assume, is to continue in this way.

There is another area which I would like to touch on, which we have not touched upon yet. And we almost could call these people the forgotten people and these are the hospital trustees. Hospital trustees are confronted with seemingly greater responsibilities in providing quality patient care. Trustees are becoming legally involved to a greater degree in granting or denying staff privileges to medical practitioners. The Courts today are tending to hold that hospital boards must not discriminate and must not act arbitrarily and capriciously as related to privileges of staff physicians—some are suggesting that a license to practice should afford a physician the privilege of any hospital that he may choose. On the other hand, courts have held that hospital trustees are responsible for the care of the patient within the hospital. The difficult position that the trustee finds himself in is that on the one hand he is responsible for the patient care within the hospital, and at the same time he is also being told that he must be more lenient about admitting physicians to practice on hospital staffs. Community control of the voluntary hospital then is in jeopardy because citizens of the community are becoming more reluctant to become involved in hospital matters due to the fact of potential legal problems that they might be confronted with brought about by these very delicate but ever-present issues related to the medical staff.

In summary, the problems which the Okmulgee Memorial Hospital faces are those of difficulties in generating sufficient cash to meet current as well as long-range obligations—increasing costs brought about by greater wages paid to employees to meet the federal wage requirements as well as increased wages for professional people because of the supply and demand factor. The medical-legal involvement of physicians, hospitals and trustees in the area of appropriate privileges granted to the physician within the hospital has also presented unique problems. The future of an adequate program of delivery of health care to the citizens of Okmulgee County are largely dependent upon resolving these issues so that adequate planning and implementation can be developed for the necessary programs of the future.

Of course, all of our problems cannot be corrected at once. However, our survival depends upon adequate financing of our monetary needs. The reimbursement formula is the key. The Oklahoma Hospital Association, and others interested in the survival of Oklahoma hospitals have developed a reimbursement program that would help the hospitals in Oklahoma in meeting their financial crises. Oklahoma is one of the first states to develop a program such as this and it is our desire that the Social Security Administration will approve our program as a demonstration project. Bold steps must be taken now in order that our voluntary hospital system can continue to provide quality patient care to our citizens.

Thank you.

Senator HARRIS. What is the part in the increased hospital costs played by improved technology and new equipment and machinery we didn't formerly have? Does that amount to much of the increased cost?

Mr. GUNN. It is a certain factor. The larger hospitals and the teaching centers are having a bigger problem in this area because the demand is greater for the new equipment and new techniques. Even in our size hospital, 100 beds, which is a small hospital, we have the same problem in a relative sense. For example, buying a new piece of equipment in the laboratory may be $4000 to $4500. This in itself is capital outlay which puts again the strain on the cash flow. So there are certain things that cause the cost increase. On the other hand, by virtue of using new equipment and new techniques, we can reduce some of the cost to the patient. And this has been very dramatic in the area of the auto-analyzer. That's the trade name for a machine that can produce a series of tests for the patient, let's say twelve tests, that would cost the patient about $20, as compared to the old system which would have cost him $65 or $70 for the same twelve tests. So these are definite economies for the patient that the public normally does not hear about, but it creates a strain on the cash flow of the hospital in acquiring these things.

Senator HARRIS. I suppose, too, that education of the public and the increase thereby of their expectations is some reason for the increase in costs. Formerly, there might have been fewer specialists involved in an operation or in diagnosis, where, now, we demand the best we can get. I suppose that would be involved, too.

I thank you very much.

Mr. Lloyd Rader, Director of the Oklahoma Department of Public Welfare, is in that important meeting in Baltimore which we talked about earlier. He is represented here today, I am pleased to say, by Jim Overfelt and Dr. Bertha Levy whose presence will be noted in our record. They wanted to be here to take part in these hearings and report back to the Department and use this information in their own positions. I appreciate your presence. Do you have anything to add at this time?

Mr. OVERFELT. No, thank you.

Senator HARRIS. Dr. Ed Calhoon whose name has been mentioned earlier is also President-elect, I believe it is, of the Oklahoma State Medical Association. Dr. Calhoon, we're grateful you're here. You've come a long way to be here from Beaver. You've been patient during the long day.

Dr. CALHOON. I've asked Dr. Hendren of Oklahoma City and Dr. Keith of Shattuck to make our presentation.

TESTIMONY OF SCOTT HENDREN, M.D. ON BEHALF OF THE OKLAHOMA STATE MEDICAL ASSOCIATION

Senator Harris and ladies and gentlemen. We are most grateful to have the opportunity of being here to make some presentation of this very complex problem of health care and to make ourselves available for any questions we might answer or any additions we might make to the statement.

I am Dr. Scott Hendren. I would like to identify myself first as a physician who, like nearly 2,000 of my colleagues, has devoted some 70 or 80 hours a week for the past two decades to the care of the sick. I might add, Senator, also to the anxious and the worried-well in the state which are a real factor in the burdening of medical care facilities. As a Past-President of the Oklahoma State Medical Association, it has been my priviledge and responsibility to observe, to counsel with and be concerned with the health care that is rendered throughout the state, not just in my area of practice. I am a member of various councils and committees and boards of trustees in our state and elsewhere who have some involvement with this care in many other areas across the nation. I would like to emphasize, as has already been brought out, that the health needs of our citizens and the systems to provide this are, and must remain, as heterogeneous and varied as the people who are serviced. What may be desperately needed in central Detroit may be totally out of place in Beaver, Oklahoma. That which is the ideal system for Beaver, Oklahoma would find no place in the ghetto of New York. I think although it's somewhat of a cliche, it must be constantly borne in mind when we consider seriously the financing and delivery of health care. It is so easy to say well we've not devised a system that is going to solve all these problems and forget that we are not a unity as far as our individual personalities, our individual needs, and our individual situations are concerned.

Just as there are great deficiencies in economic opportunity, employment, and education in our country, we certainly agree that all of the people do not receive the best medical care, and some of them do not receive care at all. Physicians are receptive to changes and are receptive and are anxious to identify and improve existing deficiencies and provide for future needs. I would like to point out that the crisis approach does prod people to think and to act and this we will concede. I would also caution that the crisis approach may lead to precipitous action and the result of such action may not bear the test of time.

Having been in practice in Oklahoma for two decades, I identify that I made the decision to study medicine somewhere in the thirties. At that time the demand for medical care was certainly not very great and the expectations were certainly not very much. People sought medical care only if they were desperately ill, and they went to a hospital only as a last resort. The so-called paramedical assistance that each doctor received in this state at that time was ¾ of one person. The paramedical assistance of each physician in this state required to care for the people at this time is somewhere between eight and ten people and should be 13 or 14 if the present trend continues, in the very near future.

Recognize that the tremendous advance in knowledge and technology since 1941 has placed on each individual physician a tremendous burden of keeping informed and keeping up with those things he must know and do to provide good medical care. In spite of all of the problems, I feel that the progress of medicine in this nation is one of the most dramatic stories of the century.

About five million Americans are alive today who would be dead if the mortality rate of the thirties were still in effect. Today obviously the intelligent and capable young man who faced us a bit ago would not have been here had his problem existed in the 1930's. I realize that $7,500 is a tremendous burden, but funerals are expensive also. Life expectancy for Americans has exceeded the Biblical three score and ten years. Today's babies will live ten years longer than their 30 year old parents. I would like to pause here to add another word of caution. I think it is important when we throw statistics around that we examine them carefully and we take them with a grain of salt, from two standpoints particularly when we talk of infant mortality. First of all, in Sweden, for example, and in many countries of Europe, infant mortality statistics are calculated on the basis of the first to sixth months. Our own reporting system calculates infant mortality anytime during the period of first to eighteenth months. Obviously this is not a comparable statistical report. Now this does not mean that we feel that infant mortality in this country does not need a lot of attention and improvement. But I think that we must examine statistics carefully.

Senator HARRIS. Do you feel that it is not any worse than in those other countries?

Dr. HENDREN. I said that we don't know because we don't have a comparable yardstick, Senator. The point I do make is that our own infant mortality is of concern to us, but to compare it with an orange is not very helpful in solving the problem.

Senator HARRIS. I've seen figures ranking us twelfth or thirteenth or fourteenth on what the United Nations and other organizations purport are comparable statistics.

Dr. HENDREN. We have not been able to identify that this is so. We're still comparing, we believe, apples and oranges. The point has already been made and I would like to emphasize it—when we talk of infant mortality and maternal life expectancy, we are also talking of factors which have nothing to do with medical care as such, but other, many and varied economic and like factors. For example, the life expectancy of infants of Swedish origin in the United States is twice what it is in Sweden, which has to do with way of life.

Nearly two-thirds of the major new drugs made available since 1941 are the products of American medical research. Over 70% of prescriptions today are for drugs not even known ten years ago.

There are more and better hospital beds in this country than in any nation in the world, and the average time it takes to get well has been shortened steadily over the years.

The United States now has over 300,000 medical doctors, the highest in history, and they are being produced faster than the national population growth rate.

Our nation is the medical training center of the world. More than 12,000 foreign physicians and students are receiving medical training in America, and the number increases annually.

A record number of Americans, 163 million, are protected by voluntary health insurance and prepayment plans.

Many dread diseases have been virtually eliminated through medical progress in this country.

The health services industry has grown to the nation's third largest employer . . . just behind agriculture and construction.

With this record of achievement—perhaps the most startling progress of any American profession or industry—it is paradoxical that many government leaders have singled out the health care industry and the medical profession for vilification!

Senator HARRIS. Do you feel really that doctors are being singled out? From where I stand, I think politicians are singled out for vilification. (laughter) I believe that every aspect of our national life, right now, is having to respond and having to change and having to take criticism—some justified and some not. It doesn't hurt us, number one, to recognize how good we are, and I think that you make that point very well and it's been made earlier as well. But I don't think that we ought to say that the medical profession is the only one being singled out; education is, lawyers, politicians, and the like—everybody. I don't think that that hurts us as long as it is constructive.

Dr. HENDREN. I agree with you thoroughly. The point that I wish to make is not defensively that the profession is being criticized. I welcome the criticism. The point I wish to make, and I think it is an important one, is that this is being advanced as an important reason for a total scrapping of a system which I am defending, or a multiplicity of systems.

Senator HARRIS. I haven't heard that advocated today.

Dr. HENDREN. I feel that that has been advocated by some five representatives of organized labor.

Senator HARRIS. That the whole system be scrapped?

Dr. HENDREN. Absolutely.

Senator HARRIS. I misunderstood, I suppose, what you meant by total scrapping. Go ahead.

Dr. HENDREN. American medicine is amenable to change and we are anxious to meet the needs. I would also like to point out in the legislative field, Senator, that the recent rush of health legislation, most of which is good, has been another factor in the tremendous burdening of our system. In the 89th Congress alone there were 1526 legislative bills introduced which affected health or the practice of the delivery of health care. I would submit that it would be difficult for any industry in the country or any profession to absorb and withstand this rapid a change in the customary way of doing things without being burdened tremendously and confused more than slightly.

There are admittedly some problems associated with the supply and distribution of health services to the people, and government can share with the private sector the responsibility of solving these problems. Dictatorial domination of an industry by government, however, is neither warranted nor welcome.

In the following pages of this paper, comments are made on several key issues of concern to the medical profession.

Medical manpower

America needs more physicians.

Higher levels of general education, increased spending power, and public awareness of the quality of health services available have made the American people more mindful of their health. As a consequence, greater expectations and demands for medical services have generated an excessive burden on today's health manpower resources.

This is true even though the number of physicians has increased faster than the general population. Between 1950 and 1966, the population of the U.S. increased 29 percent while the number of physicians increased 34 percent. Moreover, the physician-population ratio . . . the number of physicians divided into the total population . . . has improved. In 1960, the ratio was one physician for every 737 persons; by 1967, it was one for every 658.

To meet national expectations for health services, the enrollment of our medical schools must be substantially increased. The American Medical Association and the Association of American Medical Colleges have issued a joint statement to this effect.

National policy which would best meet this need, and would be consistent with the American ideal of equal educational opportunity for all, would provide such educational resources that every young person interested in and qualified for entry to the study of medicine would have this opportunity. All medical schools should now accept as a goal the expansion of their collective enrollments to a level that permits all qualified applicants to be admitted. During the 1966–67 school year, 18,250 young persons applied for medical training, but only 9,123 could be accepted.

Some medical schools have been increasing their enrollments, others have not. Of the 85 U.S. medical schools in 1967, 32 have shown no increase during the past ten-year period.

The reasons vary from school to school, but nearly always include such problems as lack of faculty, shortage of operational funds, and limited physical facilities. Too much emphasis on research and the provision of health services, as opposed to the primary mission of educating physicians, may indicate that some medical schools should reassess their priorities and purposes.

Our own University of Oklahoma School of Medicine is pioneering concepts which could well serve as models for national emulation.

Through a healthy blend of private, state and federal resources, a ten-year, $185 million program is underway to create the integrated "Oklahoma Health Center", whose mission will be to train health personnel of all types to meet the needs of Oklahoma citizens.

The Oklahoma Health Sciences Foundation, a group of prominent Oklahomans brought together at the invitation of former Governor Henry Bellmon, is playing an important role in coordinating governmental and private efforts to create one of the nation's leading health education centers.

The Oklahoma Legislature is not only supporting their effort by submitting an implementing major bond issue to a vote of the people, but it has also authorized a feasibility study for a second medical school to be located in Tulsa.

To solve the national problem for increased medical manpower, the following immediate and long-range steps should be taken:

Immediate

1. To increase the enrollment of existing medical schools. Considering the time required to create new schools and to provide a student with a medical education, there is no alternative in meeting the present emergency.

2. To foster curricular innovations and other changes in the educational programs which could shorten the time required for a medical education and minimize the costs. In view of the increasing quality of pre-professional education and the growing competence of entering medical students, it should be possible to reduce the length of medical education without sacrificing quality. Also, as the amount of clinical experience provided medical students increases, the duration of internship and residency training programs should be re-assessed.

3. To meet the need for innovation in educational programs, and to encourage diversity in the character and objectives of medical schools. The development of schools of quality where a primary mission is the

preparation of able physicians for clinical practice as economically and rapidly as possible is to be encouraged. Such schools may have less emphasis upon fundamental biologic research than is appropriate for a number of other schools.

Long-Range

A longer-range approach to the need for physicians is the development of new medical schools. Such a step is essential for meeting the national needs of 1980 and beyond.

This will require adequate financial support from governmental and various private sources for:

1. Construction of facilities to expand enrollment of existing schools and to create new schools.

2. Support of the operational costs of medical schools.

3. Stimulation and incentive for educational innovation and improvement.

To implement these measures will further require that each medical school and its university re-examine its objectives, its educational program, and its resources to determine how it can contribute most effectively to the national need for more physicians, and what financial help it will need to make this contribution. Also required is understanding by the public, the private foundations, industry, local and state governments, and the national Congress . . . groups which must provide the financial support which is necessary.

Initiative for development of new schools and expansion of the established institutions should be locally determined. Only the governing bodies of schools with ongoing programs in medical education can decide to expand such programs. Institutions wishing to organize new medical schools must assume the responsibility for marshalling the necessary support. Medical associations are prepared to assist with such efforts.

I think another area in the distribution of health manpower, particularly in Oklahoma, is the need for the rural area. I would like to make another comment or two in this area.

First of all, I think it is most important to understand that the failure of location of physicians and other health professionals in sparsely populated or rural areas is not, at least not to a large extent, economic. There are many more factors that have a great deal greater bearing on this maldistribution than income. It is our knowledge that the income levels of physicians across the state vary little between either area and there's no great penalty economically of being located in a rural area.

The penalties, of course, are number one, the same reasons that the rest of the population is not located in sparsely populated areas. Physicians are people. The local educational situation, the local . . . many other things. But the most important single reason is the professional and educational loneliness of the physician in an isolated area. This is the one great factor that we have determined in every instance where we do not have physicians locating in sparsely populated areas. As we mentioned awhile ago, the demand for educational progress and continuing education of physicians is absolutely essential. Without continuing education a physician five years from now will not be able to provide the level of care that the people need. One will be a professional dodo five years from now without any continued education in the interim. If one accepts the responsibility of a remote area then he must have some opportunity for ongoing, continued education.

The Oklahoma State Medical Association for many years has maintained a scholarship program. We are restructuring this program and have already restructured it, in fact, to provide incentive for the subsidization of the medical student's entire medical education on the provision that he voluntarily locate in an area of great need. We do not believe in indentured service for physicians or attorneys or teachers or anyone else. This is a voluntary program accepted by the student and if he changes his mind he has the ability to pay back all of this subsidization and go the way he wishes. But he's excused if he fills this great need.

Along with this we have begun work on VIP or what we call the Voluntary Interested Physicians program through the State Medical Association whereby physicians throughout the state, on a rotating basis, volunteer, much as our great volunteer physicians for Vietnam do, to locate temporarily in an area served by only a single physician to let him get loose for graduate studies, rejuvenation, and so forth.

Finally the State Medical Association has established a Rural Health Council composed of a broad segment of the society as well as physicians producing some very excellent ideas for the relief of this problem.

ARMY MAINTAINS DETERRENT POWER OVER CIVILIAN RIGHTS

Mr. ERVIN. Mr. President, there has been increased public concern over the wisdom and legality of some of the data banks which are being constructed by Federal departments and agencies.

On the basis of a study which the Constitutional Rights Subcommittee has undertaken, I am convinced that this public concern is caused by the failure of some agencies to limit their information activities to those reasonably necessary for administration of the laws they are charged by Congress with administering. It is also caused by the failure of responsible officials to inform the public and Congress honestly and squarely just why the information is needed and what will be done with it, and it is caused by their frequent failure to assure due process to individuals who might be involved with the program or placed in a data bank. Consequently, many worthwhile data programs which are necessary for good government come under criticism for lack of public information and for lack of government candor.

One of the Federal departments which has recently been guilty of incursions into the constitutionally protected sanctuaries of individual rights is the Department of Defense. A branch of this mammoth Department, the Army, has admittedly engaged in the collection and data banking of personal information about civilians who are active in politics or who belong to organizations which are or might be active.

In response to public reaction to this program, the Army pleaded that it needed to do these things in the interest of being prepared to deal with civil disturbances. It finally agreed to cut back on its program. However, from the latest policy statement, it is clear that the Army has maintained its deterrent power over the individual rights of American citizens.

When I first learned about these activities, I asked the Secretary of the Army for a full report because I thought the Army has no business meddling in civilian politics, or conducting surveillance of law-abiding American citizens or maintaining data banks on civilians who had no business with the Department of Defense.

In addition to the constitutional questions they raised, the Army's data banks were important for another reason. This was that they appeared to be part of a vast network of intelligence-oriented systems which are being developed willy-nilly throughout our land, by government and by private industries. I believe that in these systems, where they contain the record of the individual's thoughts, beliefs, habits, attitudes, and personal activities, there may well rest a potential for political control and for intimidation which is alien to a society of free men.

In March 1970, I was informed that the Army had unplugged one of its computerized data banks on civilians which it maintained at Fort Holabird and that it would discontinue a blacklist of dissenters which it has distributed widely. However, many more questions which I and other Members of Congress had asked the Secretary of the Army remain unanswered. The mail which has been received by the Subcommittee on Constitutional Rights and by other Members of Congress convinced me that aside from its use of computers, there were obviously some major constitutional issues remaining about other aspects of the Army's programs.

I ask unanimous consent that my letters of January 22, 1970, and February 27, 1970 to the Secretary of the Army, the Army General Counsel's letter of February 25, 1970 to me, and letters of March 20 and June 23, 1970 to me from Under Secretary of the Army Thaddeus R. Beal, a memorandum of March 6, 1970 to the Chief of Staff from the Secretary of the Army, and the latest policy statement of June 9, 1970, issued by Colonel Robert E. Lynch, Acting Adjutant General, printed at this point in the RECORD.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

JANUARY 22, 1970.

HON. STANLEY R. RESOR,
Secretary of the Army,
Washington, D.C.

DEAR MR. SECRETARY: In connection with our study of computers, privacy and constitutional rights, the Constitutional Rights Subcommittee is conducting a survey of the development and maintenance of data banks by Federal departments and agencies.

One of our purposes is to determine whether or not such data systems are being developed in accordance with constitutional standards of privacy and due process of law for the individual citizens involved. Another purpose is to help Congress ascertain the need for comprehensive legislation to govern all computerized data banks on individuals.

Our attention has been particularly directed to reports of the development and expansion of data banks at Fort Holabird, containing information on the personalities, on the political, economic, and social beliefs and on the lawful community activities of American citizens.

To assist the Subcommittee in its study,

we should appreciate your explaining for us: (1) the present situation concerning collection and storage of Army intelligence and other investigative data on private individuals, particularly at the Investigative Records Repository, but also at other data centers operated by the Army; and (2) future plans for expanding and further computerizing the present system.

Specifically, we should receive responses to the following questions:

1. Under what statutory and administrative authority was the Investigative Records Repository established, and for what purpose? What is the relationship of this activity to the responsibilities of the Armed Forces? Please supply copies of pertinent statutes, regulations and memoranda.

2. Is all military intelligence data on individuals filed in this center? Is it computerized?

3. How many subject individuals are presently recorded in the system at the Records Center?

4. What categories of information about individuals are contained in this data bank? Are there any published or unpublished regulations or instructions governing the type of information appropriate for the files, how it is to be gathered, and how its accuracy is to be determined? If so, please supply copies.

5. Are there plans to expand the scope of these files in number and subject matter? If so, how would this specifically alter the existing data system?

6. Is the subject individual, or his representative, allowed to review the data on record about him, to supplement his file and to explain or rebut material he considers inaccurate?

7. What provisions are made for deleting material found to be inaccurate or inappropriate, either spontaneously by the Army or on motion of the individual concerned?

8. What limitations are placed on access to the file or to information contained in it? What security procedures or devices are employed to prevent unauthorized access to the data file or improper use of the information? Who spcifically has access to this data? For what reasons and on what authority is access granted?

9. What other agencies have access to these files? For what purposes? Under what restrictions?

10. Is a record maintained of the details of inspection or use of the file or data on an individual?

11. How is the information collected and by whom? Is it collected by investigators or from third parties? Is it solicited from the individual himself, or is it collected from other records?

12. Do you have published or unpublished regulations or guidelines concerning use and availability of these files? If so, please supply copies.

13. Do you have published or unpublished regulations or guidelines concerning the gathering, screening and accuracy of data in these files? If so, please supply copies.

14. To what extent are these files computerized? What are your plans for computerizing further?

15. The Subcommittee is interested in learning the truth about current reports that the Army plans to connect its intelligence teletype reporting system to a computerized data bank at the Investigative Record Repository. If so, what are your plans for safeguarding the accuracy of the data collected and its relevance to the area of your responsibility?

16. What other data banks are maintained or supported by the Department of the Army on private citizens? To the extent possible, please supply for each of these the information requested for the Fort Holabird data banks.

Enclosed is a *Congressional Record* excerpt describing the scope of the Subcommittee's interest in the government's use of data banks on individuals.

Your assistance in our study is deeply appreciated.

With all kind wishes, I am

Sincerely yours,

SAM J. ERVIN, Jr.,
Chairman.

DEPARTMENT OF THE ARMY,
OFFICE OF THE GENERAL COUNSEL,
February 25, 1970.

Hon. SAM J. ERVIN, Jr.,
Chairman, Subcommittee on Constitutional Rights, Committee on the Judiciary, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: This is in response to your letter concerning development and expansion of data banks at Fort Holabird, which we believe may be related to an article in the *Washington Monthly* entitled "CONUS Intelligence: The Army Watching Civilian Politics" by former Army Captain Christopher Pyle.

The allegations made by Mr. Pyle were viewed with great concern by both the civilian and the military leadership of the Army. Both have always, over the generations, been keenly sensitive to the long-standing American tradition separating the military from involvement in domestic politics, and both are constantly alert to ensure that Army actions as well as policies are in keeping with the traditional limitations upon our armed forces. Ever since the unfortunate necessity arose, several years ago, for military forces to be prepared for civil disturbance operations when directed by the President, there has been a special sensitivity to the immediacy of this problem.

Our continuing goal has been to maintain suitable limts to Army intelligence involvement in the civilian sector, and toward this end our policies and practices have been undergoing periodic examination. The main charge of the article, and indeed its title, hold that the Army deliberately seeks the opposite, by widespread aggressive covert collection of intelligence about people who "might make trouble for the Army." This charge is false. The Army's domestic intelligence activity has been to a small degree in the civil sector, but only to focus upon civil disorder, and the Army has long been pressing to have civilian governmental agencies meet even these intelligence needs.

The military security functions of the Army in the United States are conducted by the U.S. Army Intelligence Command, Fort Holabird, Maryland. This Command reports directly to the Chief of Staff of the Army and is closely supervised for him by the Assistant Chief of Staff for Intelligence. The Command employs seven subordinate organizations, military intelligence groups, located throughout the United States in support of its military security functions. These groups, employing approximately 1000 agents, support the principal missions assigned to the Intelligence Command by the Department of the Army.

The principal activity of the U.S. Army Intelligence Command is to conduct security investigations to determine whether uniformed members of the Army, civilian employees and contractors' employees should be granted access to classified information. This activity and allied activity relating to security matters account for 94% of the time of Intelligence Command field personnel, and will consume a higher percentage in the future because of reduction in civil disturbance activities.

To avoid duplication of effort and to give investigators the benefit of prior work, a central filing system of Army investigations is necessary. The U.S. Army Investigative Records Repository, run by the Intelligence Command, has approximately 7 million files relating principally to security, loyalty or criminal investigations of former and present members of the Army, civilian employees and contractor personnel. When security or criminal investigations are completed the entire report is forwarded to the Records Repository at Fort Holabird for filing. The use of these files is limited by Regulation to specifically authorized Executive Branch agencies. No computer has been installed in the Investigative Records Repository; none has been or is planned to be installed since the cost in manpower and time to convert the Repository files to a computer bank would be prohibitive. The Repository does have an automatic retriever system for some of the files; these files, placed in boxes, can be mechanically retrieved on a trolley system in order to save time in searching for files.

In order that investigative efforts in the security field would not be duplicated, Secretary of Defense McNamara directed on 27 May 1965 that a central index of all security investigations conducted by Department of Defense agencies be established. Accordingly, the Defense Central Index of Investigations was established at Fort Holabird. Data included in this Index is limited only to the identification of an individual, the type of investigation conducted, date of completion, and the location of the investigation (for example, Army investigations are filed in the Investigative Records Repository. The data is placed on manually key punched cards which are then alphabetically filed. A sample card is attached. At present, these cards must be manually searched. A plan to install a computer at the Central Index has been approved. Information on the key punched cards will be placed in the computer; the purpose of this computer will be to rapidly identify and indicate the location of files needed in security investigations. The computer will contain only the information shown on the sample card, which does not reflect the existence of any personal information of any kind, derogatory or otherwise. The present system and the planned computer are not and will not be tied in with any form of computer data banks. There is no plan to use the Central Index in any other fashion.

The U.S. Army Intelligence Command also has missions relating to the collection of information that may be needed by civilian planners and Army commanders in the event Federal troops are directed to act by the President. As you know, the Army has certain obligations under the Constitution and the laws to act at the direction of the President to deal with the civil disturbances beyond the capability of local and state authorities to control. Army intelligence activities in the field of civil disturbances are directed primarily at ascertaining information needed to prepare appropriate levels of alert for military forces and needed by military commanders if they are directed to act. This limited field of interest removes from legitimate concern of the Army minor forms of disturbances and lawful activities not likely to lead to major disturbance involving use of Federal resources.

Intelligence personnel obtain this limited civil disturbance-related information primarily from the FBI and state and local police agencies. *When this information is collected in the field,* it is reported usually by teletype to the U.S. Army Intelligence Command. The Director of Investigations, U.S. Army Intelligence Command, is responsible for collecting the information, storing it, and forwarding it, as necessary, *to appropriate officials in the Department of Defense. The teletype is not linked to any computer, nor has there ever been a plan to do this.*

The collection of civil disturbance-related information by the Army increased after the disturbance in Detroit in 1967. However, the Intelligence Command was not and has never been reinforced with additional personnel to accomplish the civil disturbance missions assigned to them at this time. Since

this was a new area for the Army, an appropriate level of action necessary to accomplish the Army's mission had to be evolved. This area has been a subject of constant attention and refinement in order to narrow the Army's actions to only those which are absolutely necessary. There have been some activities which have been undertaken in the civil disturbance field which, after review, have been determined to be beyond the Army's mission requirements. For example, the Intelligence Command published from 14 May 1968 to 24 February 1969, an identification list which included the names and descriptions of individuals who might be involved in civil disturbance situations. All copies of the identification list have been ordered withdrawn and destroyed. The Army's present policy is that reporting of civil disturbance information is limited to incidents which may be beyond the capability of local and state authorities to control and may require the deployment of Federal troops.

In the past, the Director of Investigations at the Intelligence Command has operated a computer data bank or storage and retrieval of civil disturbance information. This data bank, which included information about potential incidents and individuals involved in potential civil disturbance incidents, was thought useful in that it permitted the rapid retrieval of related information for predicting trends and possible reactions. The civil disturbance data bank was discontinued since, after study, it was determined that the data bank was not required to support potential Army civil disturbance missions.

Thus the Army does not currently maintain, and has ordered the destruction of, the identification list referred to above. No computer data bank of civil disturbance information is being maintained, and directives provide that no such system can be initiated without the approval of the Chief of Staff and the Secretary of the Army.

I hope that the information set out above will satisfy your concerns.

Sincerely,

ROBERT E. JORDAN III,
General Counsel.

DEPARTMENT OF THE ARMY,
Washington, D.C., Mar. 6, 1970.

Memorandum for the Chief of Staff U.S. Army.

Subject: Restrictions on Intelligence Operations Involving Civilian Activities.

I appreciate the prompt and vigorous actions taken by General Palmer, General McCaffrey and General McChristian to eliminate the computer data banks, containing information on civilians, which were identified during the recent review of Army civil disturbance intelligence activities. The actions taken are a step toward limiting Army civil disturbance intelligence activities strictly to activities which have a clear potential for developing into a major disturbance beyond the capability of local and state law enforcement officials and the state National Guard.

I understand that General McCaffrey and General McChristian are reviewing still other measures, such as reductions in direct overt observations of incidents in progress, liaison with local authorities, and related "spot reporting" activities. The Under Secretary and the General Counsel will continue to work with your representatives to assure that appropriate further actions are taken in these other areas.

With respect to computerized data bank operations, it seems clear that the dangers of such systems require strong, centralized control over their creation and use. Accordingly, confirming the verbal policy which I stated to the General Counsel in connection with responding to recent Congressional inquiries on the subject, no such intelligence data bank operations relating to civil disturbance or other activities involving civilians not affiliated with the Department of Defense should be instituted without the approval of the Secretary of the Army and the Chief of Staff. In view of the sensitivity of such operations, approvals will not be granted without consultations with the concerned committees of Congress.

In order to insure that no Army element in the United States is maintaining this type of system, I would appreciate your asking all commanders in CONUS, Alaska and Hawaii, down to the installation level to report whether their command has any form of computerized data bank relating to civilians or civilian activities, other than data banks dealing with routine administrative actions such as finance or personnel records involving Army personnel or employees. If a command has such a data bank, the data bank should be immediately destroyed, unless a report justifying its existence is submitted for approval as indicated above.

STANLEY R. RESOR,
Secretary of the Army.

SUBCOMMITTEE ON
CONSTITUTIONAL RIGHTS,
February 27, 1970.

HON. STANLEY R. RESOR,
Secretary of the Army,
The Pentagon,
Washington, D.C.

DEAR MR. SECRETARY: Thank you for your interim reply to the Subcommittee's inquiry of January 22, 1970, in connection with our study of privacy and data systems.

I wish to commend you and the General Counsel of the Army for the prompt and effective action you have taken to reduce the Army Department's involvement in domestic intelligence work. I was gratified to learn that you have discontinued the computer data bank which was maintained on "potential incidents and individuals involved in potential civil disturbance incidents." Furthermore, the fact that you have ordered the withdrawal and destruction of a list of people who might be involved in civil disturbances is also laudable, and will be reassuring to those in Congress concerned with constitutional rights.

My inquiry of January 22, as you know, was not limited to information collected for possible civil disturbances, nor was it confined to files kept at Fort Holabird.

Since Mr. Jordan's letter deals only with one Fort Holabird computer data bank, and does not refer to other similar civil disturbance data banks and data systems not necessarily computerized, which are reportedly maintained by the Army in the Pentagon and in the various Intelligence Groups, I hope that your final reply will complete your responses to our inquiry, especially to Question 16.

His letter does not, furthermore, deal with the questions raised concerning the information which he indicates is currently being maintained under the new policies. In addition, it does not answer our inquiries concerning other information kept on file about civilians.

With your final reply, I hope that you will comply with the Subcommittee's request for the pertinent regulations, statutes, directives, and other authority to which Mr. Jordan generally refers.

Since Mr. Jordan states that the Army has urged that other civilian agencies take over the task of domestic intelligence, we should be interested in knowing what specific recommendations have been made in this matter.

While the Department is to be commended for the prompt action to remedy, at least partially, this unjustified interference by the Army into domestic political activities, this does not explain how the Army was permitted to engage in such activities in the first place. The preservation of our civil liberties cannot depend on the lucky discovery of illegal programs. Clearly, in our government of laws, no such activity should be undertaken secretly, as was this, nor without clear statutory and constitutional authorization from Congress.

With all kind wishes, I am

Sincerely yours,

SAM J. ERVIN, Jr.,
Chairman.

DEPARTMENT OF THE ARMY, OFFICE
OF THE UNDER SECRETARY,
Washington, D.C., March 20, 1970.

HON. SAM J. ERVIN,
Subcommittee on Constitutional Rights, Committee on the Judiciary, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: This is in further response to your letters about certain practices of Army intelligence and your Subcommittee's concern with privacy and data systems. The purpose of this letter is to answer the questions that you posed in your letters of 22 January and 27 February. While some of the information in this letter may repeat some of Mr. Jordan's comments to you, I have done this, where necessary, to help clarify the matter from the overall standpoint.

The present program governing access to classified information was established on 27 April 1953 in Executive Order 10450 (Encl 1). This Executive Order, and the programs developed by Federal agencies, recognizes the need for the Government to protect access to classified information. The Executive Order provides that the head of each Federal agency is responsible for establishing procedures governing security and sets out general standards to be applied. As a result, the Department of Defense has issued Department of Defense Directives 5210.8 (Encl 2) and 5210.7 (Encl 3); the Department of the Army, as well as the other Military Departments, has issued further implementing instructions.

The principal activity of the U.S. Army Intelligence Command is to conduct investigations to determine whether uniformed members of the Army, civilian employees and contractors' employees should be granted access to classified information. In order to avoid duplication of effort and give investigators the benefit of prior work, the U.S. Army Investigative Records Repository (USAIRR) was established on 17 August 1951 to serve as a central filing system for all Army investigations (Encl 4), and detailed instructions to field elements for centralizing files then located throughout the Army were issued on 18 January 1952 (Encl 5). You will note that these orders provide that the USAIRR "is not an investigative agency and has no responsibility for the evaluation of information. . ." This policy continues in effect today.

Since 1952 all Army security and criminal files have been centralized in the USAIRR. The USAIRR presently contains approximately 7 million files relating principally to security and criminal investigations of former and present members of the Army, civilian employees and contractors' employees. At present, the operating procedures and controls over the USAIRR are specified in Army Regulation 381–45 (Encl 6). There are no plans to expand either the scope or the subject matter of files in the USAIRR. As previously noted, no computer has been installed or is planned to be installed in the USAIRR.

The files maintained by the USAIRR relate to individuals within the Army's investigative jurisdiction; the other services maintain similar files. As noted in Mr. Jordan's letter to you, the Army operates, for the Department of Defense, the Defense Central Index of Investigations. This Index, designed to locate any security or criminal investigative file for any Defense agency, will be computerized shortly. As previously noted, the material in this Index is limited to identifying data such as name, date of birth, social security number, on individuals who

have been the subjects of investigations and the location of the investigations.

It is estimated that approximately 1.1 million of the 1.9 million civilian and military employees of the Army require a security clearance in order to perform their jobs. When an individual is selected for or assigned to a position requiring a security clearance, a request for an appropriate investigation is submitted, through channels, to the U.S. Army Intelligence Command. The Intelligence Command, depending upon the type of clearance sought, will review the information submitted by the individual and direct military intelligence agents to conduct an appropriate investigation. This investigation, again depending upon the type of clearance requested, may consist of a check in the Defense Central Index of Investigations to see if other investigations have been conducted by DoD agencies, review of an existing file in the USAIRR, a check of local criminal records in areas where an individual has lived, interviews with references, checks with former employees, etc. Each activity performed by an agent is reported to the Intelligence Command; the Intelligence Command is then responsible for resolving contradictory or conflicting reports through further investigation and checking out all undeveloped information. When the investigation is completed, the entire file is forwarded to the command which requested the investigation; that command (the clearance authority), and not the Intelligence Command, is responsible for evaluating the investigation and determining whether a clearance will be granted.

When the clerance authority has completed action, the entire file is sent to the USAIRR. Accordingly, a standard personnel security file in the USAIRR will contain the papers submitted by the individual, reports submitted by the agents concerning their investigation, and copies of the action taken by the clearance authority in determining whether a clearance should be granted. I have attached copies of the types of documents which may be included in the file (Encl. 7). In additon, the USAIRR contains completed criminal investigation files, completed investigative files dealing with espionage or security investigations involving the Army and files in the other categories specified in Army Regulation 381–45.

Under normal circumstances, an individual is not permitted to review material contained in his file at the USAIRR. Of course, the individual is provided with copies of any statements which he submitted. However, according to paragraph 4–5, Army Regulation 604–5, a security clearance may not be denied or revoked unless the clearance authority explains the basis for the denial or revocation and affords the individual the opportunity to rebut the specific derogatory information against him; exceptions to this procedure can be granted only on a case-by-case basis by me. In addition, an individual may request an interview in order to clarify material in his file; this interview and the individual's rebuttal in a clearance proceeding are placed in the file. Thus an individual seeking a clearance should be aware of any derogatory information of significance in his file and no adverse action can be taken against him until he is so aware.

Information in a file at the USAIRR is, once action is completed, considered an historical record of the security clearance action. Accordingly, there is no procedure for removing or correcting documents in the file once action is completed. While an investigation is pending, the Intelligence Command makes every effort to limit information to appropriate matters relevant to the issues under consideration and, where conflicting evidence is developed, is expected to order further investigations.

Access to USAIRR files is strictly limited to those with a "need-to-know." Files are treated as if they contained Secret information so that special transmittal procedures are necessary to insure limited distribution. Access to files is limited to Department of Defense and other Government agencies with a legitimate interest in the personal security field. I have attached a copy of Army Regulation 381–46 establishing Army policy on the use of USAIRR files by non-Army agencies (Encl 8). I have also attached a book listing those authorized to request USAIRR files (Encl 9).

With reference to your questions about civil disturbance intelligence activities, I should point out that this activity is separate and apart from the USAIRR. As you noted in your letter of 27 February, Mr. Jordan's letter dealt primarily with the civil disturbance activities of the U.S. Army Intelligence Command. As noted in that letter, the civil disturbance computer data bank at Fort Holabird has been discontinued and destroyed since the information in the computer was not useful in view of the Army's limited civil disturbance mission. "Spot reports" which provided the basis for entries into this computer have been routinely destroyed for some time. I have attached a copy of a memorandum signed by Secretary Resor on 6 March 1970, concerning the subject of computerized data banks within the Army (Encl 10). You will note that this memorandum prohibits the operation or establishment of any computer data banks concerning civilians or civilian activity unless the specific data bank is approved by the Chief of Staff and the Secretary of the Army. Your Subcommittee and other interested Committees of the Congress will be informed in these specific instances.

Under our current policies, reports concerning civil disturbances will be limited to matters of immediate concern to the Army—that is, reports concerning outbreaks of violence or incidents with a high potential for violence beyond the capability of state and local police and the National Guard to control. These reports will be collected by liaison with other Government agencies and reported by teletype to the Intelligence Command. They will not be placed in a computer (in fact, there never has been a direct link between the teletype reporting system and the computer). These reports are destroyed 60 days after publication or 60 days after the end of the disturbance. This limited reporting system will ensure that the Army is prepared to respond to whatever directions the President may issue in civil disturbance situations and without "watching" the lawful activities of civilians.

I should note that the Assistant Chief of Staff for Intelligence of the Department of the Army is responsible for providing analyses of matters of concern to the Army; to perform this function, the Counter Intelligence Analysis Division has been established in his office. This Division has a worldwide analysis function and is responsible for reviewing counter-intelligence material for all Army areas of interest. The Division does not collate information on a broad basis and only has information needed to answer specific questions of concern to the Department of the Army. This Division will, of necessity, have office files concerning civilian activity. For example, the Division is responsible for determining cities where civil disturbance potential is high so that Army officials can prepare civil disturbance plans. Such plans become the basis for the application of minimal force to restore stability when ordered by the President. In the course of this analysis, information is received from the FBI and collated in order to permit evaluation. These files, along with the world-wide counter-intelligence files are stored on microfilm because of the volume of the latter; but they are not computerized and there are no plans to computerize them. In our view, the activities of the Counter Intelligence Analysis Division do not involve an invasion of privacy or constitute an improper activity for the Army to perform. The limited questions responded to by this Division in the civil disturbance field are ones of legitimate concern to the Army. The Division is closely supervised by the Assistant Chief of Staff for Intelligence and is not permitted to consider matters beyond its limited area of concern.

The Counterintelligence Analysis Division did compile an identification list from federal and local authorities on individuals and organizations associated with civil disturbances. This list was last updated in late 1969 and is available to a limited number of Department of Army organizations with civil disturbance responsibilities. The lists are now out of date, and are not considered necessary to satisfy the limited intelligence requirements referred to above. Accordingly, existing lists are being withdrawn from the field and destroyed, and new lists are not being prepared.

Your letter of 27 February expressed concern over how the Army could have engaged in the practices described in Mr. Jordan's letter. I believe it is important to place this matter in proper perspective. The Army provided troops to assist local authorities in controlling civil disturbances in Detroit and during the disturbances following the death of Dr. Martin Luther King; prior to this time, Army troops had not been used for this purpose since 1942. Obviously, after the death of Dr. King, it was impossible to predict exactly what level of action the Army should adopt in order to be prepared to deal with disturbances if the President should direct the Army to act again. Thus the Army began to collect information in order to be prepared to meet its civil disturbance requirements. This collection, despite allegations to the contrary, never reached proportions even approximating the charge that the Army was "watching" civilian politics on a broad scale. Our continuing policy has been to reduce the scope of the Army's activities to only those needed to accomplish our mission; reductions in the level of activity have been made as our experience indicated that a given course of action was not required. In fact, our latest actions to reduce the level of intelligence activity have been under study for some time. The Vice Chief of Staf and I are both personally involved in this continuing review.

I hope that the information set out above will satisfy your concern. I will be happy to answer any further questions you may have or meet with you to discuss this matter.

Sincerely,

THADDEUS R. BEAL,
Under Secretary of the Army.

DEPARTMENT OF THE ARMY, OFFICE OF THE UNDER SECRETARY,
Washington, D.C., June 23, 1970.

Hon. SAM J. ERVIN,
Chairman, Subcommittee on Constitutional Rights, Committee on the Judiciary, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: Several months ago, I corresponded with you about certain alleged practices of the Army in the collection, reporting and storage of civil disturbance information. Because of your continuing interest in this matter, I have attached a copy of a letter recently issued to all Army commanders setting out the Army's new policies concerning civil disturbance information.

I would be happy to answer any questions you may have about this new policy.

Sincerely,

THADDEUS R. BEAL,
Under Secretary of the Army.

DEPARTMENT OF THE ARMY, OFFICE OF THE ADJUTANT GENERAL,
Washington, D.C., June 9, 1970.

Subject: Collection, Reporting, Processing, and Storage of Civil Disturbance Information.

SEE DISTRIBUTION

1. Purpose. This letter establishes Department of the Army policy regarding the collection, reporting, processing, and storage of civil disturbance information. It is applicable within the Continental United States, the States of Alaska and Hawaii, and Puerto Rico. It applies to all Army commands within those geographic areas.

2. Definitions.

a. Civil disturbance—A situation in which a civil jurisdiction is required to apply a greater than usual degree of police enforcement in order to insure the maintenance of law and order.

b. Civil jurisdiction—A town, city, county, or State; a legal corporate government within the Continental United States, Alaska, Hawaii, or Puerto Rico other than the Federal Government or its departments and agencies.

c. Collection—For purposes of this policy, the acquisition of information in any manner, to include direct observation, liaison with official agencies, or solicitation from official or unofficial sources.

d. Law and order—A condition in which a reasonable degree of the normal operations of a civil jurisdiction is possible.

e. Police enforcement—That force available to a civil jurisdiction in order to insure law and order, such as a city police department, a county sheriff's office, State police, or National Guard in State service.

f. Processing—The collation, evaluation, and analysis of raw information in order to produce finished intelligence.

g. Reporting—For purposes of this policy, communicating information to another person or organization, whether orally, mechanically, or electrically.

h. Storage—For purposes of this policy, the retention of information in any way, to include card files, dossiers, folders, computers, or punch cards.

3. General.

a. Public order is the responsibility of local and State governments and Federal civilian agencies. The Attorney General is the chief Executive Branch officer responsible for coordination of all Federal Government activities related to civil disturbances. Military forces are responsible for action only when the President has determined, in accordance with Chapter 15, Title 10, U.S. Code, that the situation is beyond the capability of civilian agencies to control.

b. The investigative jurisdiction of the Army with regard to espionage, sabotage, and subversion is in accordance with Executive Order 10450, dated 27 April 1953. It is delineated in AR 381–115, 2 July 1969, and is limited to:

(1) The investigation and disposal of all cases in these categories involving active and retired military personnel of the Army.

(2) The investigation and disposal of all cases in these categories of civilian employees of the Army outside the United States and its possessions.

(3) The disposal of cases on civilian employees of the Army inside the United States and its possessions.

c. The Department of the Army relies upon the Department of Justice at the national level to furnish civil disturbance threat information required to support planning throughout the Army for military civil disturbance needs.

d. The Department of the Army relies upon the Department of Justice at the national level to furnish early warning of civil disturbance situations which may exceed the capabilities for control by local and State authorities.

e. Under no circumstances will the Army acquire, report, process, or store civil disturbance information on civilian individuals or organizations whose activities cannot, in a reasonably direct manner, be related to a distinct threat of civil disturbance exceeding the law enforcement capabilities of local and State authorities, except as authorized in paragraphs 8 and 9d.

4. Collection.

a. Army intelligence resources will not be used for the collection of civil disturbance information until the Director for Civil Disturbance Planning and Operations, or the Commander in Chief, Atlantic (CINCLANT) in the case of Puerto Rico only, has made a determination that there is a distinct threat of civil disturbance beyond the capability of local and State authorities to control.

b. Army Military Intelligence elements possessing counterintelligence resources will maintain the capability to collect civil disturbance threat information during a period in which there is a distinct threat of, or actual, civil disturbance requiring the use of Federal military forces.

c. Within the District of Columbia, the criterion is a distinct threat of civil disturbance beyond the capability of the Metropolitan Police to control.

d. Civil disturbance information collection capability of Army elements in the Continental United States, Alaska, or Hawaii will not be employed except on Department of the Army order or, in the case of Puerto Rico, on order of CINCLANT.

e. On activation by the Department of the Army, or CINCLANT for Puerto Rico, Military Intelligence elements possessing counterintelligence capability will:

(1) Establish and maintain liaison with appropriate local, State, and Federal authorities.

(2) Through liaison, collect civil disturbance information concerning incidents, general situation, and estimate of civil authorities as to their continued capability to control the situation.

(3) Report collection results to Department of the Army, ATTN: ACSI–IA, and DCDPO. In Puerto Rico only, report results to CINCLANT with information copies to DA, ATTN: ACSI–IA, and DCDPO.

(4) Keep appropriate commanders informed.

(5) Provide intelligence support to the Personal Liaison Officer, Chief of Staff, Army, and the Task Force Commander on arrival in the affected area.

(6) Recommend methods of overt collection, other than liaison, if required, to Department of the Army for approval.

f. Army Military Intelligence elements will employ methods of collection other than liaison only on order of Department of the Army.

g. Covert agent operations will not be used to obtain civil disturbance information on individuals or organizations without the concurrence of the Federal Bureau of Investigation and the specific approval of each operation by the Under Secretary of the Army.

h. Unsolicited Sources.

(1) So-called walk-in sources who volunteer civil disturbance information to Army elements will be referred to appropriate local police or local offices of the Federal Bureau of Investigation. If the source refuses such referral the information will be obtained and immediately furnished to the proper office.

(2) Information received from anonymous telephone callers or written messages will be referred as indicated in paragraph 4h(1) above.

5. Reporting.

a. Army elements will maintain the capability of reporting civil disturbance information.

b. Civil disturbance information reporting will be activated only on Department of the Army order. In Puerto Rico, reporting will be activated only on order of CINCLANT.

6. Processing.

a. OACSI, DA, has the sole responsibility for processing civil disturbance information in accordance with the definition outlined in paragraph 2 above at all times when Federal troops are not actually placed on standby or committed.

b. When the Director of Civil Disturbance Planning and Operations directs that Federal troops be placed on standby or committed to assist in restoring order, those Army elements involved will also be responsible for processing civil disturbance information in support of their local planning.

7. Dissemination. Analyzed reports will be furnished to appropriate major Army commands in CONUS, Alaska, Hawaii, and Puerto Rico, when it appears that a civil disturbance poses a distinct threat beyond the capabilities of local and State authorities to control.

8. Planning. Civil disturbance plans and supporting materials will not include listings of organizations and personalities not affiliated with the Department of Defense. Exceptions to this policy are:

a. Listings of local, State, and Federal officials whose duties include responsibilities related to control of civil disturbances may be compiled and maintained.

b. Appropriate data on vital public and commercial installations/facilities or private businesses and facilities which are attractive targets for persons or groups engaged in civil disorder may be compiled and maintained.

9. Storage.

a. Army elements will be prepared to store civil disturbance information during a period in which there is a distinct threat of, or an actual, civil disturbance requiring the use of Federal military forces.

b. Adverse civil disturbance information relating to persons or organizations within the Continental United States, Alaska, Hawaii, or Puerto Rico, will not be stored except on order of Department of the Army.

c. Spot reports generated by activation of civil disturbance information collection will be destroyed within 60 days of the termination of the situation to which they refer.

d. After-action reports, where required for clarity, may contain names of individuals or organizations that were directly involved in the civil disturbance being reported. Inclusion of names of organizations and individuals will be kept to the absolute minimum for the purpose of the report.

e. Upon termination of a civil disturbance situation, the nature and extent of all accumulated files other than spot reports and after-action reports will be reported to Department of the Army, ATTN: ACSI–CIC, with recommendation for destruction or release to the Department of Justice.

f. Army elements will be prepared, on Department of the Army order, to destroy accumulated files or forward them to Department of the Army, ATTN: ACSI–CIC, for release to Department of Justice.

g. Computerized data banks for storage of civil disturbance information will not be instituted or retained without the approval of the Chief of Staff and the Secretary of the Army.

10. The collection, reporting, processing, and storage of information related to Army personnel security programs, counterintelligence operations, and special collection requirements related to direct threats to Army personnel, installations, or materiel are not affected by this letter.

By order of the Secretary of the Army:

ROBERT E. LYNCH,
Colonel, AGC,
The Acting Adjutant General.

Mr. ERVIN. Mr. President, unfortunately, my suspicions were increased by an article by Christopher Pyle which appeared in the July issue of the Wash-

ington Monthly. Mr. Pyle, a lawyer and doctoral candidate at Columbia University, is a former Army intelligence officer whose scholarly analysis and documented account of the Army's program was published in the January issue of the same publication. In his second article, Mr. Pyle concludes that the blanket of surveillance of civilians has resumed in some quarters and has continued in others. I ask unanimous consent that the article entitled "Conus Revisited: The Army Covers Up," written by Christopher H. Pyle, be printed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. ERVIN. Mr. President, the courts have not yet provided a remedy for citizens complaints about such programs. A suit was filed in the Federal district court in the District of Columbia attacking the constitutionality of this type of surveillance by the Army, but it was dismissed, and that case, Tatum against Laird is now on appeal to the U.S. Court of Appeals for the District of Columbia.

Mr. President, the latest policy statement regarding these activities, issued by Colonel Lynch, reflects a commendable and, I am sure, a sincere effort by the Army to get a grasp on the many horns of its dilemma and to disengage from what has appeared at times to be warfare on American citizens. The letter states that from now on, under no circumstances will the Army "acquire, report, process, or store civil disturbance information on civilian individuals or organizations whose activities cannot, in a reasonably direct manner, be related to a distinct threat of civil disturbance exceeding the law-enforcement capabilities of local and State authorities." Instead, the Army says it will rely on the Department of Justice to gather information on certain people and events and relay it to the Army. On the other hand, the Army says it will no longer retain certain information on personalities in its data banks, but will, in some cases, relay it to the Department of Justice. In fact, I was informed the other day, that, pursuant to the Secretary's March 6 order to the Joint Chiefs of Staff, a survey has been made of every Army command in the United States to determine how many computer data banks were maintained for civil disturbance purposes. Only one was found, that maintained at Fort Hood, Tex., and this has been ordered destroyed, together with punchcards, tapes, and any existing print outs of the data. One copy of the entire printout was retained and turned over to the Internal Security Division of the Department of Justice. I was informed that this is because the division is dealing with the Tatum case and a copy of the records from the Fort Holabird computer data bank and others maintained for civil disturbance purposes had been requested by the plaintiffs.

This new policy, enunciated by the acting Adjutant General of the Army, is an obvious surrender by the Justice Department in that it has agreed to engage in a program which, according to previous reports and correspondence, it has refused to undertake until now.

Colonel Lynch's letter, while carefully organized and even accompanied by a small dictionary of definitions of the terms used in it, contains a number of inconsistencies and lacks precise standards. In some cases, the last half of his sentences seem to cancel out the first half of his sentences.

I have therefore set out my analysis of his statement in a letter to the Secretary of the Army, which I ask unanimous consent be printed at this point in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

JULY 27, 1970.

Hon. STANLEY R. RESOR,
Secretary of the Army,
Washington, D.C.

DEAR MR. SECRETARY: This is to thank you for sending me the policy letter from the acting adjutant general to all Army commanders concerning collection of civil disturbance information. You are to be commended for this thoughtful attempt to define the Army's role in the federal government's collection of information on individuals engaged in political activity or the surveillance of organizations which are politically active and whose members allegedly might be involved in civil disturbances.

I understand that you have decided that under no circumstances will the Army "acquire, report, process, or store civil disturbance information on civilian individuals or organizations whose activities cannot, in a *reasonably direct* manner, be related to a *distinct threat* of civil disturbance exceeding the law enforcement capabilities of local and state authorities, except as authorized in paragraphs 8 and 9(d). These exceptions in paragraph 8 refer to "listings of local, state and federal officials whose duties include responsibilities related to control of civil disturbances" and "appropriate data on vital public and commercial installations, facilities or private businesses and facilities which are attractive targets for persons or groups engaged in civil disorders."

In paragraph 9(d), this exception relates to "after-action reports, where required for clarity, which may contain names of individuals or organizations that were directly involved in the civil disturbance being reported." Furthermore, in paragraph 10, it is stated that "the collection, reporting, processing, and storage of information related to Army personnel security programs, counterintelligence operations, and special collection requirements related to direct threats to Army personnel, installations, or material are not affected by this letter."

The Army's definition of civil disturbance is a "situation in which a civil jurisdiction is required to apply a greater than usual degree of law enforcement to maintain law and order." This, it might be presumed, could include the assignment of one more police officer than usual when there is a football game in a town. To clarify this, we should appreciate receiving a specific description of the criteria which would determine exactly when the Army would engage in surveillance and data collection.

You state that the Army (1) will rely upon the Department of Justice to furnish civil disturbance threat information required to support Army planning for military civil disturbance needs; (2) that covert agent operations will not be used to obtain civil disturbance information on individuals or organizations without the concurrence of the Federal Bureau of Investigation; (3) that Army elements will be prepared on Army order, to destroy accumulated files or forward them for release to the Department of Justice.

From an initial reading of these and other items in your policy letter, it appears that the Army has finally persuaded the Department of Justice to assume certain surveillance and certain data-collection which the Army has been performing on civilians and to share responsibility with the Army for the total program.

However, I confess that the exceptions, qualifications and lack of criteria in your policy letter could lead the average citizen—which I consider myself—to wonder just how much of a change it represents in government policy.

Since I was never able to obtain a precise statement from you as to what exactly the Army had been doing and why, it is difficult to determine from this regulation just what you will not be doing in the future. In view of this initial difficulty in evaluating the Army's role, it is even more difficult to determine how many of the old activities have been eliminated, how many are merely shared with other agencies, and how many are completely assumed by other agencies.

The Subcommittee plans to conduct hearings in the fall to consider the extent to which constitutional rights are affected by government data banks, including those developed for surveillance and intelligence sources. In view of the constitutional issues raised by the Army's original activities, and in view of the questions still remaining, it would be most helpful to Congress if you were to appear before the Subcommittee and describe the differences between your old program and the new, both with respect to the Army's function and the total program of the Federal Government with respect to data collecting on civilian activities.

This is to extend to you as Secretary of the Army, an invitation to appear on a mutually agreeable date and discuss these matters. In particular, we would hope that you would tell us how the new policy will better protect the privacy and due process rights of (1) any citizen engaged in legal activities who might have been subject to surveillance or to incorporation in a federal data bank under the old policy, or (2) who might be so monitored in the future.

Pending the hearings, it would be helpful if you would supply the responses to the following questions.

1. When will your policy letter be published as an official regulation so that it will be available to the public and may be relied upon by citizens and organizations?

2. To what extent may the average citizen or student who engages in legitimate demonstrations, or who is politically active in expressing his views on issues of the day, or who belongs to organizations which demonstrate a concern with governmental policies—to what extent may such a citizen or student benefit from the change of policy reflected in this new order? Under what circumstances could he expect to be subject to the Army or any other agency taking note of his activities?

3. What disposition has been made of the data in files, microfilms, and computer systems previously acquired on civilians in the course of this program, and maintained in base and unit offices and in local, regional or national offices?

(a) Has any of this information been transferred to or made available to any other federal, state or local agencies?

(b) If so, which ones?

(c) For what purposes?

(d) Beyond dissemination of Colonel Lynch's letter, what steps does the Department of the Army intend to take to ascertain that the regional data banks on civilian political activity maintained by military intelligence groups and elements of the Continental Army Command have in fact been destroyed?

4. You indicate that covert agent operations will not be used to obtain civil disturbance information on individuals or organizations without the concurrence of the Federal Bureau of Investigation.

(a) Why has the Army decided not to rely on the FBI entirely for such covert operations?

(b) Will covert operations be used for any other program affecting civilians? If so, which ones?

(c) Will the recommendation for such civil disturbance-related covert operations initiate with the Federal Bureau of Investigation?

(d) Would you provide examples of the type of incident or activity which might in your view call for such a covert operation?

(e) Who under this new arrangement would be responsible for terminating the operation?

(f) Would the order for such surveillance include a time limit or require a renewal of authority for continuance?

(g) Will Army intelligence agents or any other Army or Defense Department personnel be utilized under any arrangement to assist the Justice Department in implementing its share of this program?

5. What kinds of overt and covert collection operations can be undertaken by Army intelligence units to investigate "direct threats to Army personnel, installations, or materiel?" In instances not involving the crimes of treason, espionage, sabotage, or sedition? Who may authorize the collection of information in these cases?

6. It would appear to me that rule 10 exempts from any restrictions any program under the sun for monitoring of civilians which is not termed a "civil disturbance" program. Aside from the civil disturbance program, what other programs might in any way involve systematic collection of information by the Army about civilians other than those investigated for employment by or service with the Defense Department of Defense industries?

For example, would the monitoring of those personnel and civilians patronizing coffee houses and other businesses in communities near defense facilities fall under a program related to civil disturbance threats, or under some other program?

For instance, under your security program, does the Department of the Army have a program similar to that authorized by the Air Force Order of May 25, 1970, "Reporting Subversive Activities" by which personnel are ordered, supposedly in connection with civil disturbance threat preparations, to report "personnel making sympathetic statements in support of the antiwar demonstrators;" "congregation of unauthorized persons;" "persons attempting to spread antiwar sentiments in public places on the base;" "persons making statements with racial overtones." If so, would you supply the Subcommittee with a copy of your directives, memoranda or regulations?

As an additional example, it has been reported to the Subcommittee that the 902 Military Intelligence Detachment at Fort Meyer investigates and maintains dossiers on members of Congress, ambassadors, their staffs, business and labor leaders and congressional lobbyists. Would you advise the Subcommittee whether such a data bank is maintained, by whom and for what purpose?

7. (a) Which military intelligence unit will analyze "early warning" information from the Justice Department and thereby assist the Director of Civil Disturbance Planning and Operations in determining whether a "distinct threat of civil disturbance" exists?

(b) What permanent files, if any, will that unit maintain on past civil disturbances and/or the political activities of civilians?

8. Under rule 4e(1), what methods of "overt collection, other than liaison" are contemplated?

9. Under the new policy, will the domestic intelligence portion of the microfilm archive maintained by the Counterintelligence Analysis Detachment be retained? Will any portion of this data bank be destroyed? If so, which?

10. Paragraph 8 of Colonel Lynch's letter states: "civil disturbance plans and supporting materials will not include listings of organizations and personalities not affiliated with the Department of Defense." Will civil disturbance plans and supporting materials be permitted to include information on organizations and personalities not affiliated with the Department of Defense so long as that information is not presented in lists?

It would be appreciated if you would also supply as soon as possible the regulations implementing the program as spelled out in the policy letter and a copy of any inter-departmental memorandum or joint-agreement governing the working relationship between the Department of the Army and the Justice Department, and between the Department of the Army and any other agency or department with respect to the collection, processing, and storing of data on civilians.

To judge from the mail which is coming to this Subcommittee, to my own office, and to most members of Congress on the subject of data banks, and particularly on those maintained by the Army under current programs, there is intense public concern about this subject. Furthermore, the many expressions of interest and alarm which I and the Subcommittee have received from other members of Congress, convince me that there is urgent need for public hearings to clarify the impact of the Army data banks and those of numerous other agencies on the constitutional rights of law abiding American citizens.

With all kind wishes, I am,

Sincerely yours,

SAM J. ERVIN, Jr.,
Constitutional Rights.

Mr. ERVIN. Mr. President, I have also invited him to appear as one of our witnesses before the Constitutional Rights Subcommittee at our forthcoming hearings on Federal data banks and constitutional rights. At that time, I believe he will have the opportunity to inform Congress how the new policy will better protect the privacy and due process rights of any citizen engaged in legal activities; first, who might have been subject to surveillance or to incorporation in a Federal data bank under the old policy; or, second, who might be so monitored in the future.

Mr. President, as part of the subcommittee's study of privacy and data banks, we have been conducting a Government-wide survey to learn what data banks are being built to house personal information about individuals for statistical, administrative, or intelligence purposes.

Among departments asked to respond to the subcommittee questionnaire, for all component agencies, are the Department of Justice and the Department of Defense. In view of the new Army-Justice policy and the fact that other branches of the Armed Forces may also be derelict, I believe the replies to those questionnaires will be even more meaningful than ever. I ask unanimous consent that the questionnaires sent to the Attorney General and to the Secretary of Defense about their data systems and their use of computers, be printed at this point in the RECORD.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

JUNE 9, 1970.

Hon JOHN N. MITCHELL,
Attorney General,
Washington, D.C.

DEAR MR. ATTORNEY GENERAL: In connection with our study of computers, privacy and constitutional rights, the Constitutional Rights Subcommittee is conducting a government-wide survey of federally-administered or federally-sponsored data banks containing personal information about individuals for statistical, administrative or intelligence purposes.

Clearly, the Federal Government's ability to respond to the needs of state and local governments and its capacity to meet its responsibilities to all of the people quickly and efficiently, may well depend on the ease and ingenuity with which it applies the best of the new technology to federal programs. Therefore, this Subcommittee inquiry should not be deemed criticism of Departmental policies in the field of data collection or processing. Rather, the questionnaire is designed to assist Congress in its evaluation and understanding of the current trends and practices in those areas where individual rights and privacy may be affected in some way. Letters to the Subcommittee and other congressional offices show a growing public concern and what is frequently an unnecessary alarm over the extent of government data collection about citizens and the reasons for it. While I believe some of this concern is warranted, much of it could be allayed by clearer definition of official duties and of the rights of citizens and by better communication with the public, the press and Congress about agency programs.

It is the Subcommittee's hope that the replies from this survey will better enable Congress to respond to public inquiries and to help it determine the need for comprehensive new laws and for a new federal agency to govern computerized and mechanized data banks where they affect individual rights to privacy and due process. Since reports from our investigation will be published, it is essential that to the extent possible, the questions be answered seriatum and in layman's terms so that the public may understand your operations.

A particular area of current controversy is the extent to which federal agencies may appropriately maintain intelligence-type data banks for surveillance of protestors, demonstrators and others involved in political activities either for or against various governmental policies. I should especially appreciate a statement on the degree to which the Department of Justice or any component agency, including the Federal Bureau of Investigation, maintains such a data collecting program, and whether or not it is computerized or mechanized for easy access and retrieval. I believe such a statement might be facilitated if the questions submitted below were to be answered separately in connection with such program, and supplied with your other responses as a separate item in your report. I am enclosing a copy of a typical news article concerning such a Justice Department program, so that the Department may comment or respond to the points raised there if it so wishes.

It would be helpful if the same procedure could be followed for a separate report on the National Crime Information Center.

In addition to reports on these two data banks, the Subcommittee would appreciate your responses to the following inquiries:

(1) Describe briefly the major categories of data presently maintained and stored under auspices of the Department of Justice and its agencies and the approximate number of subject individuals covered in each category:

(2) Under what statutory and administrative authority was each data bank established and for what purpose? Please supply copies of pertinent federal statutes, regula-

tions and memoranda on which this authority is based and by which it is implemented;

(3) Are departmental controls, guidelines, or advice required by or offered to (a) federal, (b) state officials and private individuals who either administer or who utilize this data-gathering program? Please supply copies of pertinent rules or advisory documents as issued by federal and state agencies;

(4) For each category and each conglomerate of data, indicate its present state of computerization or other mechanization for access and retrieval as well as for evaluation and analysis;

(5) Describe plans for further computerization or mechanization in each program;

(6) In what instances would each system be utilized? By what officials and by what agencies?

(7) For each new data storage and processing program, please describe: (a) the advantages; and (b) the extent to which it permits correlating, common storage and multi-faceted analysis of data on a scale not hitherto available.

(8) What specific subject areas concerning an individual's background, personal life, personality and habits are noted in each data program?

(9) Have the Department and the Federal Bureau of Investigation developed comprehensive guidelines governing maintenance of each data system, access to it, review and disclosure of material in it, and distribution to other agencies? If so, please supply copies.

(10) A. Is the subject individual or his representative notified of the fact that he is in the data bank?

B. Is he allowed to review the data on record about him; to supplement his file; or to explain or rebut inaccurate material? Please describe the precise limitations on such rights for each restriction.

(11) What aspects of the recorded data are available to other persons? Who, specifically? For what purpose? By what authority?

(12) Is a record maintained of each inspection or use of the individual's records?

(13) For each data bank, please indicate how the information is collected, whether it is solicited from the individual, from third persons, or from existing records.

(14) What officials in the Department or agency are responsible for determining the accuracy of information in the data bank? What provisions are made, procedurally, for deleting information found to be inaccurate or inappropriate, either on the initiative of the Department or on motion of the individual?

(15) What other agencies have access to information or use of information in each data bank?

(16) What state and federal agencies may utilize the data in your computerized files by coding, interfacing and other devices relating to their own computers?

(17) What security devices and procedures are utilized to prevent:

a. Unauthorized access to the data file; and

b. Improper use of the information?

(18) What formal or informal arrangement does the Department have with Congressional Committees for the authorizing and reviewing of new data banks and the clearance of new electronic or mechanized record-management techniques?

(19) A. Have any data programs or the development of other comprehensive records systems been discussed before other Congressional Committees by Departmental representatives?

B. Have any been specifically approved by Congress or Congressional Committees?

C. If so, would you please supply any available testimony, or citations to such hearings?

In the first phase of our study, in connection with our hearings on S. 1791, the Department kindly supplied a report on the statistical inquiries it sent to individuals or groups of people for various purposes over the last five years. For purposes of our current study, it would be especially helpful to have included in your report the processing, storage and use of responses to such inquiries.

Would you kindly supply copies of any statutes and regulations cited in your report to the Subcommittee, together with sample print-outs from each data bank.

I realize that the collection of such a large amount of information will constitute an administrative burden, but I hope it will not tax your employees unduly. The Subcommittee believes that a worthy cause will be furthered by the diligent and good faith efforts of the officials of the Justice Department to supply these responses to the best of their ability. In the final analysis, I believe Congress, the Executive Branch and the people will profit by this investigation.

Your own personal assistance in our study is deeply appreciated.

With all kind wishes, I am,

Sincerely yours,

SAM J. ERVIN, Jr.,
Chairman, Subcommittee on Constitutional Rights.

JULY 20, 1970.

HON. MELVIN J. LAIRD,
Secretary of Defense,
Washington, D.C.

DEAR MR. SECRETARY: In connection with our study of computers, privacy and constitutional rights, the Constitutional Rights Subcommittee is conducting a government-wide survey of the extent to which constitutional rights may be affected by federally-administered or federally-sponsored data banks containing personal information about individuals for statistical, administrative or intelligence purposes.

Clearly, the Federal Government's ability to respond to the needs of state and local governments and its capacity to meet its responsibilities to all of the people quickly and efficiently, may well depend on the ease and ingenuity with which it applies the best of the new technology to federal programs. Therefore, this Subcommittee inquiry should not be deemed criticism of Departmental policies in the field of data collection or processing. Rather, the questionnaire is designed to assist Congress in its evaluations and understanding of the current trend and practices in those areas where individual rights and privacy may be affected in some way. Letters to the Subcommittee and other congressional offices show a growing public concern and what is frequently an unnecessary alarm over the extent of government data collection about citizens and the reasons for it. While I believe some of this concern is warranted, much of it could be allayed by clearer definition of official duties and of the rights of citizens and by better communication with the public, the press and Congress about agency programs.

It is the Subcommittee's hope that the replies from this survey will better enable Congress to respond to public inquiries and to help it determine the need for comprehensive new laws and for a new federal agency to govern computerized and mechanized data banks where they affect individual rights to privacy and due process. Since reports from our investigation will be published, it is essential that to the extent possible, the questions be answered seriatum and in layman's terms so that the public may understand your operations.

A particular area of current controversy is the extent to which federal agencies may appropriately operate systems for collection or storage of intelligence-type data on protestors, demonstrators and others involved in political activities either for or against various governmental policies, or whether or not they maintain data banks containing information on political attitudes and beliefs of citizens. I should especially appreciate a statement on the degree to which the Department of Defense or any component service, agency or office, maintains such data programs and whether or not it is computerized or mechanized for easy access and retrieval. I believe such a statement might be facilitated if the questions submitted below were to be answered separately in connection with such programs, and supplied with your other responses as a separate item in your report.

It would be especially helpful if your report on these data banks takes into account such data as is ordered collected by an Air Force order issued on May 25, 1970, at Sheppard Air Force Base entitled: "Reporting Subversive Activities." Apparently in pursuance of civil disturbance prevention, this order, as you know, directs reporting of persons making statements with racial overtones, congregation of unauthorized persons, persons attempting to spread antiwar sentiments in public places on the Base, personnel making sympathetic statements in support of the antiwar demonstrators, and personnel making statements which indicate disloyalty to the United States, and persons having indebtedness being approached with offers of financial aid.

The Subcommittee would like to know whether identical or similar memorandums have been issued by any of the other services or any of its elements, or by any component agency or office under the Department of Defense. If so, please supply copies. In addition, we should appreciate copies of the directives, administrative regulation, and statutes authorizing such orders.

For each office, service or element where such orders are effective, please indicate the respective data in which such information would be stored, and the respective data program under which it would be analyzed and processed.

In addition to reports on these data systems, the Subcommittee would appreciate your responses to the following inquiries with respect to the administrative, intelligence, and statistical data banks on personnel and civilians:

(1) Describe briefly the major categories of data presently maintained and stored under auspices of the Department of Defense and each of the Services and their elements and the approximate number of subject individuals covered in each category;

(2) Under what statutory and administrative authority was each data bank established and for what purpose? Please supply copies of pertinent federal statutes, regulations and memoranda on which this authority is based and by which it is implemented;

(3) Do other federal agencies or any state, local or private agencies utilize such programs or data banks? If so, are departmental controls, guidelines, or advice required by or offered to (a) federal, (b) state officials and private individuals who either administer or who utilize this data-gathering or data-storage program? Please supply copies of pertinent rules or advisory documents as issued by federal and state agencies;

(4) For each category and each conglomerate of data, indicate its present state of computerization or other mechanization for access and retrieval as well as for evaluation and analysis;

(5) Describe plans for further computerization or mechanization in each program;

(6) In what instances would each system be utilized? By what officials and by what agencies?

(7) For each new data storage and processing program, please describe (a) the advantages; and (b) the extent to which it permits correlating, common storage and multi-faceted analysis of data on a scale not hitherto available;

(8) What specific subject areas concerning

an individual's background, personal life, personality and habits are noted in each data bank?

(9) Have the Office of the Secretary, the Services, or their component agencies, developed comprehensive guidelines governing maintenance of each data system, access to it, review and disclosure of material in it, and distribution to other agencies? If so, please supply copies.

(10) A. Is the subject individual or his representative notified of the fact that he is in the data bank?

B. Is he allowed to review the data on record about him to supplement his file; or to explain or rebut inaccurate material? If there are restrictions on such permission, please describe the precise limitations.

(11) What aspects of the required personal data about an individual are available to other persons? Who, specifically? For what purpose? By what authority?

(12) Is a record maintained of each inspection or use of the individual's records: (a) by persons within the department, service, or agency in which the individual services, has dealings with; (b) by persons in other agencies; (c) by private persons?

(13) For each data bank, please indicate how the information is collected, whether it is solicited from the individual, from third persons, or from existing records.

(14) What officials in the Department and services and agencies are responsible for determining the accuracy of information in the data bank? What provisions are made, procedurally, for deleting information found to be inaccurate or inappropriate, either on the initiative of the Department or on action of the individual?

(15) What other agencies have access to information or use of information on each data bank? Official? Private?

(16) What states and federal agencies may utilize transfers or access to the data in your computerized or mechanical files by coding, interfacing compatability or other arrangement with their own systems?

(17) What security devices and procedures are utilized to prevent:

a. Unauthorized *access* to the data file; and

b. Improper *use* of the information?

(18) What formal or informal arrangement does the Department, Service or agency have with Congressional Committees for the authorizing and reviewing of new data banks and the clearance of new electric or mechanized record-management techniques?

(19) A. Have any existing data programs which you administer as Secretary of Defense, or the development of other comprehensive records systems been discussed before other Congressional Committees by Department or service representatives?

B. Have any been specifically approved by Congress of Congressional Committees?

C. If so, would you please supply any available testimony, or citations to such hearings?

Would you kindly supply copies of any statutes and regulations cited in your report to the Subcommittee, together with sample print-out from each data bank.

I realize that the collection of such a large amount of information will constitute an administrative burden, but I hope it will not tax your employees unduly. The Subcommittee believes that a worthy cause will be furthered by the diligent and good faith efforts of the officials of the Defense Department to supply these responses to the best of their ability. In the final analysis, I believe Congress, the Executive Branch and the people will profit by this investigation.

Your own personal assistance in our study is deeply appreciated.

With all kind wishes, I am,

Sincerely yours,

SAM J. ERVIN, Jr.,
Chairman, Subcommittee on Constitutional Rights.

Mr. ERVIN. Mr. President, the editors of many newspapers wisely perceived the dangers which the Army's program presents to the principles of the Constitution. The New York Times, in an editorial published on June 6, 1970, commented:

. . . the fundamental question concerns the right of the Army to set up a domestic secret service. We are under the impression that the FBI was already engaged in this activity as provided by law. The implications are ominous in a country where the military is supposed to be subservient to civilian authority.

The editor of the Raleigh, N.C., News and Observer in a recent editorial stated that Congress and the President ought to share the "acute concern about this matter." He continues:

Now that news of Army surveillance activities is out, failure to curb those activities, or at least to put some proper safeguards on them, will leave lawmakers and the chief executive resembling, at best, silent accomplices in repression . . . The mere fact that the military has plainclothesmen sneaking around and spying on legal political activities of civilians is enough to discourage those activities. And that is a very real infringement upon individual liberties.

The editor of the Boston Globe on March 15 called attention to remedies which have been proposed for improper data banks. This editor states:

The disclosure gives added point to the suggestion of Alan F. Westin, professor of public law and government at Columbia University, for legislation creating a writ of habeas data, similar to a writ of habeas corpus, commanding government and private organizations to produce, on demand, the data they have collected on petitioning individuals.

The editor of the Toledo Times comments that while the Defense Department has an obligation to use its intelligence apparatus for the protection of internal security, for the safeguarding of communications, transports and defense plants:

The indications are that the military intelligence network has gone far beyond such legitimate precautions and is nosing around in the area of political opinions. Monitoring of ideologies smacks more of thought control than of national security. If allowed to continue unchecked, it could open the door to military control of the civilian government.

The Washington Post, in an editorial on May 21, called attention to a fact which many citizens had already noticed. This is that the Senate on May 19 had passed a bill to protect the privacy and first amendment rights of employees of the Federal Government and applicants for employment but had done nothing whatsoever about other Americans. Commenting on the Army's collection of data about all manner of citizens, recording their participation in protests, their attendance at political meetings, their enrollment on petitions, the editorial writer observed:

These data, computerized by the brilliant resourcefulness of modern technology lie waiting like buried bullets to shoot down a blossoming career. There is not much use in protecting government employees from snooping if the citizens who might otherwise become employees are under Big Brother's surveillance. In such a system, no one knows what job offers may be denied him because at some time he has been unconventional or indiscreet.

The author of an editorial published in the Charlotte Observer of March 5 restates a principle which should be engraved on the heart of every official in the Defense Department and indeed on the heart of every official in the executive branch. He writes that Army intelligence:

Is supposed to concern itself solely with defense-oriented counter-espionage, counter-sabotage measures, and security clearance of defense personnel. It has no business in purely civilian affairs, and its efforts in that sphere are not likely to increase civilian sympathy or Congressional goodwill.

Americans have traditionally held a strong aversion to "spying", a tradition that draws strength from our pride in the Bill of Rights, our heritage of individual liberties, and our distaste for foreign states which rely on secret police to maintain their power.

Mr. President, I am firmly convinced that every Member of Congress agrees with this observation.

Mr. President, I ask unanimous consent that a cross section of thoughtful editorial opinions on both sides of this issue be printed in the RECORD at the conclusion of my remarks, together with various news articles describing developments in this matter. These are:

EXHIBIT 1

CONUS REVISITED: THE ARMY COVERS UP

(By Christopher H. Pyle)

The Army still watches civilian politics. Despite over 50 Congressional inquiries, the threat of House and Senate hearings, and a lawsuit by the American Civil Liberties Union, more than 1,000 plainclothes soldier-agents continue to monitor the political activities of law-abiding citizens.

Some reforms have occurred since this blanket surveillance was first revealed in the January issue of this magazine. The Army has admitted that its CONUS (Continental U.S.) intelligence program exceeded its needs in preparing for riots and has agreed to cut it back. It has also promised to destroy two widely circulated "blacklists" on dissenters and to scrap its computerized data banks containing records on the membership, ideology, programs, and practices of virtually every activist political group in the country, from the violence-prone Weathermen to the non-violent Urban League. Important as these reforms are, however, they are deceptive.

THE FIRST PLAUSIBLE DENIALS

When *The Washington Monthly* reached the newsstands on January 9, the Army high command dove for cover. The Pentagon's office of Public Information refused to comment. Reporters were told to submit their questions in writing. From its headquarters at Fort Holabird in Baltimore, the Army Intelligence Command flashed orders to each of its intelligence groups limiting the collection of domestic intelligence to only the most "essential elements of information." Agents were forbidden to discuss any aspect of the program with newsmen and were warned that any who did would be prosecuted for breach of national security. From his office on the second floor of the Pentagon, Robert E. Jordan III, Army General Counsel and Special Assistant to the Secretary for Civil Functions, suspended all replies to Congressional inquiries. In violation of its own regulations, the Army even refused to acknowledge receipt of them.

By the end of the month, however, the rising tide of criticism could not be ignored. Recognizing this, the Army issued, on January 26, the first in a series of partial admissions. In the jargon of the spy trade, such admissions are known as "plausible denials," because they are invested with just enough truth to mask an essential falsehood. Thus the Army confirmed the existence of the nationwide intelligence apparatus (true), but said that it collected political intelligence only "in connection with Army civil disturbance responsibilities" (false). "Civil disturbance incident reports are transmitted over [an] . . . automatic voice network teletype system to the U.S. Army Intelligence Command headquarters" (true) and "information on incidents by types and geographical location is placed in the data bank from key-punched cards" (also true). But: "This is incident information only and does not include individual biographies or personality data" (false).

The statement also acknowledged that the Army "does publish an identification list, sometimes with photos, of persons who have been active in past civil disturbance activity" (true), but failed to mention that the list (actually a booklet) also contained detailed descriptions of persons and organizations never involved in civil disturbances.

Finally, the Army admitted in a backhanded way that its agents had infiltrated civilian political groups: "For some time there has been a special prohibition against military persons undertaking such activities as undercover operations in the civilian community." Of course, it did not say when the order was issued, or whether it was being obeyed. (It is not.)

The "plausible denials" satisfied no one. Inquiries directed to the Secretary of the Army, Stanley R. Resor, poured forth from both Houses of Congress. Legislators of such diverse persuasions as Senators Williams of Delaware, Hart of Michigan, Dole of Kansas, Brooke of Massachusetts, Percy of Illinois, Fulbright of Arkansas, and Cook of Kentucky demanded to know if the charges were true and, if so, by what authority and for what purpose the Army was spying on law-abiding citizens.

Congressman Cornelius E. Gallagher (D-N.J.), Chairman of the House Invasion of Privacy Subcommittee, and Senator Sam J. Ervin, Jr. (D-N.C.), Chairman of the Senate Subcommittee on Constitutional Rights, led the attack. Gallagher wrote to Secretary Resor on January 26: "I am deeply concerned about the implications of collecting dossiers on Americans who are pursuing constitutionally protected activities, especially when they are to be imbedded in immediately available form in a computerized data system."

Senator Ervin, a member of the Armed Services Committee and a former judge, was more outspoken. "The Army," he said in a Senate speech on February 2, "has no business operating data banks for the surveillance of private citizens; nor do they have any business in domestic politics."

When the Army continued to avoid inquiries during the month of February, however, Members of Congress expressed annoyance at being ignored. Congressman Gallagher, usually a staunch friend of the military, was especially fed up. After waiting over two weeks for the Army to acknowledge his letter, he threatened to hold hearings.

Still the Army stalled for time. It had good reason. Like Congress and the public, its civilian hierarchy first learned of the Intelligence Command's unbridled curiosity from the press. Unable to learn more from the Assistant Chief of Staff for Intelligence, who greatly downplayed the CONUS system's capabilities, the civilians resolved to conduct their own inquiry. This reached a point of revelation sometime in mid-February when Army General Counsel Jordan went to Fort Holabird and watched as the computer bank on dissidents disgorged a lengthy print-out on Mrs. Martin Luther King, Jr.

On February 25, Jordan dispatched the Army's first reply to more than 30 Congressional critics. Each received the same letter, regardless of the questions he had asked. It opened with a lengthy defense of the Intelligence Command's library of security clearance dossiers—never at issue—and closed with a brief confession: "There have been some activities, which have been undertaken in the civil disturbance field which, on review, have been determined to be beyond the Army's mission requirements."

"For example, the Intelligence Command published . . . an identification list which included the names and descriptions of individuals who might become involved in civil disturbance situations." And: "The Intelligence Command has operated a computer data bank . . . which included information about potential incidents and individuals involved in potential civil disturbance incidents."

Jordan assured Members of Congress that both the identification list and the data bank had been ordered destroyed. "Thus," he concluded, "the Army does not currently maintain the identification list referred to above. No computer data bank of civil disturbance information is being maintained. . . ."

Again, the denials were both plausible and deceptive. Jordan's seemingly candid letter failed to mention that in addition to the Fort Holabird computer (an IBM 1401) and the Intelligence Command's identification list (published in over 330 copies), the Army also maintained:

1) over 375 copies of a two-volume loose-leaf encyclopedia on dissent entitled "Counterintelligence Research Project: Cities and Organizations of Interest and Individuals of Interest" but popularly known as "the Compendium." Compiled by the domestic intelligence section of the Counterintelligence Analysis Division (CIAD), a Pentagon-based unit responsible for briefing high Army officials like Jordan on protest politics, the Compendium contained descriptions of hundreds of organizations and individuals, including the John Birch Society, the Urban League, the Fifth Avenue Peace Parade Committee, Negro playwright LeRoi Jones, and the late Rev. Martin Luther King, Jr.

2) a computer-indexed, microfilm archive of intelligence reports, newspaper clippings, and other records of political protests and civil disturbances at CIAD headquarters in Alexandria, Virginia. The index to this data bank is a computer print-out, 50 lines to a page, a foot-and-a-half thick. It catalogues microfilmed documents relating to such groups as Young Americans for Freedom, the Southern Christian Leadership Conference, and the Center for the Study of Democratic Institutions. Individuals listed include Rear Admiral Arnold E. True and Brigadier General Hugh B. Hester (war critics), Georgia State Representative Julian Bond, and folk singers Joan Baez, Phil Ochs, and Arlo Guthrie.

3) a computerized data bank on civil disturbances, political protests, and "resistance in the Army (RITA)" at the Continental Army Command headquarters, Fort Monroe, Virginia. The civil disturbance-political protest side of this data bank was developed because the Continental Army Command hoped to recapture supervision of its riot control troops from the Pentagon's special 180-man Directorate for Civil Disturbance Planning and Operations.

4) non-computerized regional data banks at each stateside Army command and at many military installations. In addition to the usual agent reports, incident reports, and newspaper clippings, these records include booklet-size "CONUS intelligence summaries" published each month by the 1st, 3rd, 4th, 5th, and 6th Armies, and the Military District of Washington.

5) non-computerized files at most of the Intelligence Command's 300 stateside intelligence group offices. These records on local political groups and individuals are similar to, but more detailed than, the records at Fort Holabird which the Army promised to destroy. The political files of the 108th Military Intelligence Group's Manhat-

tan offices, for example, take up five four-drawer file cabinets and require a full-time custodian.

Congressional reactions to Jordan's admissions, omissions, and denials were mixed. Congressman Gallagher—although fully aware of the omissions—seemed pleased. Without withdrawing his threat of hearings, he announced to the press that the Army would no longer keep tabs on peaceful demonstrations or publish a list of individuals who might be involved in a riot. His announcement, repeated in interviews over the weekend, became the basis of widespread and erroneous newspaper reports. *The New York Times* of February 27 was typical: "Army Ends Watch on Civil Protests.' Gallagher got the credit for the apparent victory.

Other members of Congress were slower to react and before they did Morton Kondracke of *The Chicago Sun-Times* reported on February 28: "The Army acknowledged yesterday that it maintains files on the political activities of civilians other than the computerized political data bank it told Congressmen it was closing down." Kondracke, a thorough reporter, listed them all.

The following Monday, Senator Ervin expressed his dissatisfaction with Jordan's letter. In a letter to the Secretary of the Army he reiterated his demand for a complete report to Congress, and in a Senate floor speech denounced the surveillance as a "usurpation of authority." "The business of the Army in [civil disturbance] . . . situations is to know about the conditions of highways, bridges, and facilities. It is not to predict trends and reactions by keeping track of the thoughts and actions of Americans exercising first amendment freedoms."

"If there ever were a case of military overkill," he added, "this is it . . . . I suggest the Army regroup and define its strategic objectives, lower its sights, and reidentify its enemy. Under our Constitution that enemy is not the American citizen."

THE ARMY REGROUPS

Within the Army, much regrouping was already going on. A letter received by Congressman Gallagher from sources close to the 116th Military Intelligence Group at Fort McNair in Washington, D.C., described what was happening at the lower echelons:

On the morning after news reports about the dismantling of the CONUS system first appeared in the Washington papers . . . members of the 116th were . . . informed that their unit and its operations would be unaffected . . . They were told that the only major effect of the Congressional and press criticism would be destruction of the national data bank and related files that were kept at Fort Holabird. Files kept by the regional M.I. Groups (which were the basis for the Fort Holabird file and contained more information) would remain intact, and members of the M.I. Groups would continue their operations of surveillance, infiltration, and reporting as previously.

In addition, all files and operations of the 116th were to be classified to prevent the release of any information about them; disclosure of such information would subject people who released that information to court-martial or prosecution in civilian court for violation of national security.

At the present time, the files of the 116th M.I. Group consist of a 5x7 card file on several thousand persons in the Washington area. On these cards are a picture of each person, his name and address, occupation, background, a record of political groups with which he has been affiliated, notes on political meetings, rallies, and demonstrations which he has attended, and summaries of his views on political issues.

To gather such information, the 116th routinely assigns some 20 of its men as full-time undercover agents to infiltrate political groups and observe politically active persons. . . . Some of these officers have grown beards and long hair to pass as students on local college campuses. In addition, other members pose as members of the working press to obtain pictures of those involved in political activities; concealed tape recorders are also commonly used to record speeches and conversations at political events. Until very recently the 116th's standard equipment also included a full TV video-tape camera and sound truck labeled "Mid-West News," which was used to record major demonstrations.

Higher up the chain of command, officials at Fort Holabird also balked at carrying out the new policy. Questioned by Joseph Hanlon of *Computerworld* on March 10, an Intelligence Command spokesman refused to say whether the computer tapes there had actually been erased or merely placed in storage. He admitted, however, that the "input" to the data bank (presumably the key-punch cards) had not been destroyed.

Higher still, the civilians supposedly in charge of the Army struggled to find out what their military subordinates were doing. Robert Jordan, surprised by the *Washington Monthly* article and by his pilgrimage to the Fort Holabird computer, was taken aback once more on February 27 during a conference with Congressman Gallagher. Asked why his letter made no mention of the microfilm archives at CIAD, he replied: "I'll have to check into that."

To help Jordan out, Secretary Resor wrote to the Army Chief of Staff, General William C. Westmoreland, on March 5: "I would appreciate your asking all commanders in CONUS, Alaska, and Hawaii down to the installation level to report whether their command has any form of computerized data bank relating to civilians or civilian activities, other than data banks dealing with routine administrative matters. . . ."

THE UNDER SECRETARY TRIES HIS HAND

The results of this canvass have not been made known, but on March 20 Under Secretary of the Army Thaddeus R. Beal wrote long letters to both Ervin and Gallagher. He claimed: "The only other 'intelligence files' concerning civilians maintained by the Army consist of the files maintained by the Counterintelligence Analysis Division."

No reference was made in either letter to: 1) the Continental Army Command's computer files at Fort Monroe, about which Gallagher had made specific inquiries; 2) the regional data banks kept by most of the 300 offices of the Army Intelligence Command; or 3) similar records maintained by the G–2s (intelligence officers) of each stateside Army command and of many Army posts.

The microfilm archives at CIAD, Beal went on to say, contain only "limited files concerning political activity" in keeping with that unit's responsibility "for identifying factors which affect civil disturbance potential. . . ." He did not mention that these files take up over 200 rolls of microfilm, at 500 frames a roll. Nor did he acknowledge that the unit's domestic intelligence section, which is larger than any of its foreign intelligence sections, had charged its "left wing," "right wing," and "racial" desks with maintaining detailed card files on dissident individuals and groups. These files are in addition to mounds of current FBI and Army reports and newspaper clippings which are coded on key-punch cards (for the computerized index) and recorded on microfilm.

The Under Secretary's claim that the archive was used only in connection with civil disturbance planning was similarly misleading. According to former CIAD employees, one of the principal uses of this file—if not the main reason for its existence—has been to satisfy the curiosity of the Pentagon's brass. A not unusual assignment carried out by one domestic intelligence expert was to write an unclassified report on SDS for a general to send to his daughter at an exclusive Eastern women's college.

In addition to these "plausible denials," Beal also admitted that CIAD had compiled "an identification list . . . on individuals and organizations associated with civil disturbances." "This list," he contended, "was last updated in late 1969 [true] and is available to a limited number of Department of the Army organizations with civil disturbance responsibilities [false]." According to persons who helped compile it, the Compendium went out to over 150 Army Intelligence and troop units, plus the FBI, the Justice Department, Naval and Air Force Intelligence, the CIA, and U.S. embassies in West Germany and Canada.

More important, Beal conceded that "the lists are now out of date, are not considered necessary. . . ., [and] are being . . . destroyed. . . ." In addition he promised that the Army would: 1) henceforth limit its curiosity to "incidents where there is a high potential for violence or disorder growing beyond the capability of state and local police and the National Guard to control;" and 2) destroy all existing *computerized* data banks on civilian politics.

No new computerized data banks, he said, would be established without the approval of both the Secretary of the Army and the Chief of Staff after "consultations with concerned committees of Congress."

The concessions were substantial. To Congressman Gallagher, they were sufficient. "In view of the Army's commendable action in reversing its former policy," he announced "I see no further need for a Congressional hearing at this time."

To Senator Ervin, on the other hand, Beal's assurances were plainly inadequate. Only the press of other matters, such as preventative detention, bail reform, and the Government Employees' Privacy Bill kept him from calling his subcommittee into session for a full-scale review of all government political data systems, starting with the Army's.

THE ACLU GOES TO COURT

While Congressmen and Senators struggled with the Army's evasions and deceptions, the civilian intelligence program was being attacked in the courts. On February 17 the American Civil Liberties Union filed suit in Federal District Court in Washington, D.C., against the Secretary of Defense, the Secretary of the Army, the Army Chief of Staff, and the Commanding General of the Intelligence Command. The suit charged that the surveillance, data banks, and blacklists violated the Bill of Rights by reason of the chilling effect which knowledge of their existence can have upon the willingness of citizens to exercise their freedoms of speech, press, and association and their right to petition the government for redress of grievances.

The plaintiffs were 13 individuals and organizations whose non-violent, lawful politics had been the subject of widely distributed Army reports. The first was Arlo Tatum, executive director of the Quaker-sponsored Central Committee for Conscientious Objectors in Philadelphia. An IBM card prepared for his computer file at Fort Holabird showed only that he had once delivered a speech at the University of Oklahoma on the legal rights of conscientious objectors. Other plaintiffs included Women's Strike for Peace, Veterans for Peace, Conrad Lynn, and the Reverend Albert Cleage, Jr.

Even before filing suit, the ACLU was aware that a cover-up might be attempted at the lower, as well as higher, echelons of the Army. This suspicion was confirmed by the letter describing the activities of the 116th M.I. Group and by former intelligence agents who warned that many units would hide copies of blacklists and personality

files, regardless of what their civilian superiors told them to do.

In an effort to prevent this, the ACLU asked the District Court on March 12 for a preliminary injunction ordering the Army to cease its destruction of the records and to deliver them (along with inventories, receipts, and certificates of destruction) to the court for safekeeping, pending the outcome of the suit. Then, if the plaintiffs were successful, the court would be in a position to assure complete destruction of the records.

A hearing on this request, and an opposing motion by the Army which asked that the entire suit be thrown out for failure to show that the program violated anyone's constitutional rights, was convened in Washington on April 22 before U.S. District Court Judge George L. Hart, Jr.

Judge Hart, a graduate of Virginia Military Institute and a battlefield colonel during World War II, was openly hostile to the ACLU's contentions. He began the proceedings with an announcement that he would not hear testimony.

In effect, this announcement meant that Hart had prejudged the ACLU's claims. Few, if any, judges would consider issuing an injunction against the government on the basis of affidavits (written statements by persons not present to testify). To do so, of course, would deny the government the opportunity to cross-examine the witnesses against it and would be regarded quite properly as an abuse of judicial discretion.

Hart's reasons became clearer as the hearing progressed. For example, when Frank Askin, the ACLU's chief counsel at the hearing, argued that it would be all right for members of Army intelligence to follow accounts of protest politics in the newspapers, but that they should not be permitted to maintain computerized files on the political activities of specific individuals, the judge scoffed: "It's all right if they remember it, but they can't take note of it . . . Isn't that ridiculous?"

Nor could he understand why citizens should fear the military's surveillance any more than they should fear reporting of political activities by the news services. "Newspapers don't have guns and don't have jails," Askin responded. ". . . nobody is afraid that one of these days the newsmen are all going to sweep into town and come to arrest the troublemakers."

But the judge was unimpressed: "There is no threat that the Army is going to come in and arrest you . . ." "If it does," he added: "We still sit here with the writ of habeas corpus."

"But, your Honor, then why are they keeping these lists of people, that's the issue at stake . . . . They have no need for this . . . ."

"It may help them know what persons are likely to cause trouble [in civil disturbances] and thereby keep an eye on them," Hart replied, apparently forgetting that the Army had agreed to withdraw the lists precisely because they were not needed for that, or any other, purpose.

The ACLU's other contentions—that the surveillance had exceeded the Army's civil disturbance responsibilities, that riot control troops do not need blacklists to enforce curfews or clear streets, that the CONUS intelligence operations encroached upon the authority of civilian law enforcement agencies—were also rejected. Even Askin's offer to present a former intelligence agent who had infiltrated a coalition of church groups was brushed aside with the question: "Did they have a sign saying 'No Military Personnel Are Admitted'?"

"What . . . the plaintiffs are complaining of here," Hart decided, "is that the Army is keeping the type of information that is available to the news media in this country and which is in the morgues of the newspapers . . . and magazines. . . . They show no unconstitutional action on the part of the Army; they show no threat to their rights." Accordingly, he refused to confiscate the records. Instead, he dismissed the suit.[1]

The likelihood that the CONUS intelligence program will be cut back soon is low. The ACLU has asked the Court of Appeals for a prompt hearing and reversal, but that court has yet to act. With summer here, chances of a hearing before fall are dim.

Chances are better that Judge Hart's decision will be overturned on appeal, but even that depends on which members of the relatively liberal Court of Appeals are assigned to review it. The panel could turn out to be as unsympathetic as Judge Hart, in which case the plaintiffs would have to take their appeal to the Supreme Court and suffer still more delays.

Thus, it will be many months at best before the witnesses testify, and perhaps years before a final judgment is rendered. Meanwhile, as the delays multiply and Army security restrictions tighten, the ACLU will find it increasingly difficult to keep its evidence up-to-date.

Odds for Congressional hearings are also poor. Representative Gallagher appears to have left the field, while Senator Ervin and his subcommittee staff are swamped by work on other matters. And although many members of Congress have expressed their personal concern about the surveillance, no other Congressional committees have taken up the fight.

Inside the executive branch, prospects are even worse. The Army's civilian leaders have said nothing since Beal's letters of March 20, while Pentagon press officers continue to evade inquiries with the excuse that to answer them would prejudice the ACLU lawsuit.[2] Moreover, the Justice Department has reasons of its own to put up a stiff legal battle to keep the Army Contributing to the expanded surveillance of dissenters ordered by President Nixon.

Were the court to end all military domestic intelligence operations, the FBI would have to run the civil disturbance early warning system—a politically risky and tedious task which it does not want—and the FBI and the Secret Service would have to find new alternatives to what has been a free source of supplementary manpower.[3] In addition, the Justice Department would be deprived of the Army's political wire service, upon which it depends to feed its political computer and to produce, each week, a four-volume guide to coming events on the political circuit.

No matter how discouraging the prospects for reform may seem, however, efforts to curb the CONUS intelligence program must go on. The initiative remains with Congress—particularly with those committees of Congress which have jurisdiction to hold hearings.[4]

Without the threat of hearings, the Army's civilian leaders are not likely to end their evasions and deceptions, admit the full scope of the program, or reconsider its needs or consequences. They are the crisis managers of their bureaucracy. Threats, not suggestions, determine their agenda.

But while hearings may command their attention, only skillful questioning can move them towards reform. Once the full scope of the program is established, the Army's official must be pressed to concede what in effect they acknowledged by their promises—that blacklists and dossiers do not contribute to the prediction or control of riots. Having conceded that, they will be hard put to justify the continued pursuit of personality and organizational data in light of its cost, its effect on the willingness of people to participate in politics, and the mischief that could result were the records to fall into the hands of blackmailers, demagogues, or security clearance adjudicators.

To question the Army's needs, however, is not enough. The hearings should also define the Army's authority to monitor civilian politics in light of such principles as civilian control of the military, state and civilian primacy in law enforcement, compartmentalization and decentralization of intelligence duties, and obedience to the constitutional scheme of separate branches of government sharing policy-making powers.

Finally, whether or not the hearings produce legislation, they should attempt to establish a consensus on what the lines between permissible and impermissible conduct for Army intelligence should be.

This will be the hardest task of all. There is no question that the Army must know about incidents and activities which bear upon the need for federal riot troops and the manner in which they may best be deployed. Similiarly, there is no question that it does not need to know anything about the beliefs and actions of individuals and groups

---

[1] At a press conference following the hearing, the ACLU's attorneys introduced several witnesses whose testimony Judge Hart refused to hear. One was Oliver Peirce, 25, a former agent assigned to the 5th Military Intelligence Detachment at Fort Carson, Colorado, during the summer and fall of 1969.

One of Peirce's assignments was to infiltrate a group called the Young Adults Project (YAP), which was established by a coalition of local church groups, the Young Democrats, and a ski club to operate a recreation center for emotionally disturbed young people. Although the project was entirely non-political, Peirce said, he and a soldier-informant were directed to make detailed reports on its meetings because one of the group's founders had attended anti-war demonstrations outside the fort and had once been a member of SDS.

In addition to watching YAP, the 5th MID also sent an informant to the 1968 SDS National Convention in Boulder, Colorado, assigned five undercover agents to monitor an anti-war vigil in the chapel of Colorado State College, maintained two full-time infiltrators within the local peace movement, and sent others to observe meetings of the Colorado Springs poverty board.

Operations such as these, Peirce said, were carried out even though they often duplicated political surveillances conducted by the FBI, state and local police, and the Colorado Springs office of the 113th Military Intelligence Group (part of the Army Intelligence Command).

[2] The rules against official comment on pending lawsuits, of course, were designed to protect criminal defendants from prejudicial pre-trial publicity. They do not exist to immunize the government from press inquiries when its officials are accused in civil court of exceeding their authority.

[3] During the 1968 Democratic National Convention in Chicago, for example, Army agents posed as TV camera crews, a naval intelligence agent tape-recorded speeches in Grant Park, and two plainclothesmen from the staff of the Army Assistant Chief of Staff for Intelligence occupied assigned seats within the convention hall. All of this assistance—and more—was given despite the Counterintelligence Analysis Division's correct prediction that federal troops would not be needed.

[4] Besides Senator Ervin's Constitutional Rights Subcommittee (of the Judiciary Committee), these include Senator Edward M. Kennedy's Subcommittee on Administrative Practices and Procedures (also of the Judiciary Committee), Senator John Stennis' Armed Services Committee, Senator Abraham Ribicoff's Committee on Executive Reorganization (of the Committee on Government Operations), and Congressman Robert W. Kastenmeier's Subcommittee No. 3 (of the House Judiciary Committee.

that pose no threat to military security or public order. Nor is there any reason to believe that Army agents must conduct undercover operations in order to calculate the size, location, and kind of riot troops may be called upon to quell.

The difficulty will come in determining 1) the extent to which military intelligence units in the field should be permitted to watch controversial political figures on the theory that "agitators" cause riots, and 2) the extent to which the Army, through CIAD or similar units, should be expected to analyze the political and social aspects of civil disturbances. There are strong reasons for leaving both of these functions up to civilian authorities. On the other hand, the domestic intelligence section of CIAD has a fairly good record for common sense and has more than once persuaded hard-nosed generals that demonstrators and rioters are not "the enemy," "insurgents," or part of "the Communist conspiracy."

Wherever the lines around the Army spy program are finally drawn, however, action on them should begin promptly. Incredible though it may seem, the Army has already assembled the apparatus of a police state. That apparatus must be disassembled before it falls into the hands of those who would deliberately or inadvertently misuse it.

EXHIBIT 2

[From the New York Times, Apr. 1, 1970]

THE ARMY'S INDISCRETION

Recent disclosures in "The Washington Monthly" that the Army is operating an extensive political intelligence network raise the specter of secret military power undermining civilian rule. The American Civil Liberties Union has challenged in court what appears to be an unauthorized system of surveillance under control of the Defense Department. The A.C.L.U. charges that by maintaining dossiers on political dissenters, a special intelligence branch with some 300 offices throughout the country potentially violates the rights of free speech, association and privacy.

After some pointed inquiries by several members of Congress, the Pentagon says it has eliminated a computerized data bank containing millions of names, associations and incidents; but it appears that the Army retains complete microfilm files of virtually the same information. "Regardless of the imaginary military objective," Senator Sam Ervin, Democrat of North Carolina, observes that "the chief casualty of this overkill is the Constitution of the United States."

The danger represented by a domestic military secret service is, in fact, more serious than is indicated by the legal language of the A.C.L.U.'s charge. In contrast to such civilian agencies as the Federal Bureau of Investigation, an Army intelligence system operating under the cover of military secrecy could skirt all supervision and restraint by Congress, the executive branch and the courts. Neither the scope of its activities nor the competence and discretion of its personnel would be subject to civilian regulation. Unauthorized by law, the operation is accountable only to its own command, as indeed appears to have been the case ever since the network was created in 1965.

The defense establishment clearly has a mandate and a duty to use its intelligence apparatus for the protection of internal security. It is responsible for the safeguarding of communications, transportation, supply lines and defense plants. Since the armed forces also play an important role in the prevention of civil disorder, they have a legitimate concern with the identification of persons who might engage in sabotage or similar criminal acts. They have at their disposal pertinent information gathered by the civilian law-enforcement and investigatory agencies.

But the indications are that the military intelligence network strayed far beyond such legitimate precautions and roamed instead uninhibited into the area of political opinions. Monitoring of ideologies smacks more of thought control than of national security. If allowed to go unchecked, it could open the door to politico-military control over civilian government. The political dossier on civilians is not a legitimate weapon in the Army's arsenal.

[From the New York Times, June 6, 1970]

THE ARMY'S POLITICAL FILE

The Federal Court of Appeals in the District of Columbia is now considering a request for an expedited appeal, if not summary reversal, of a case that concerns the civil rights of many people engaged in lawful dissent. It involves the Army's practice of collecting information and keeping secret files on the political activities of civilians and organizations.

The Army won the first round in Federal District Court in Washington. A judicial ruling gave a go-ahead for military intelligence to expand its existing dossiers on dissenters and protesters who expressed their opinions in speech, writing, or by association and assembly.

In dismissing a suit brought by the American Civil Liberties Union on behalf of various peace groups, black ministers and attorneys and even the Memphis sanitationmen's union, Judge George L. Hart Jr. refused to hear the testimony of two former military intelligence agents. They had planned to present evidence that a computerized data bank was maintained by the Army at Fort Holabird, Md., on thousands of civilian "dissenters." Their disclosures, supplementing an article in "The Washington Monthly," were later made out of court.

Judge Hart drew an analogy from the bench between the right of the Army to gather and store intelligence and a newspaper "morgue" that keeps names and data on organizations on file. This comparison, as the A.C.L.U. pointed out, failed to recognize that a newspaper is not a military organization, has no power of arrest and—so far as we know—maintains no arsenal of weapons.

But even without this flawed reasoning, the fundamental question concerns the right of the Army to set up a domestic secret service. We were under the impression that the F.B.I. was already engaged in this activity as provided by law. The implications are ominous in a country where the military is supposed to be subservient to civilian authority.

[From the Raleigh (N.C.) News and Observer]

ERVIN AND THE SNOOPERS

If North Carolina Sen. Sam Ervin is able to do nothing to depress the U.S. Army's appetite for all sorts of data about all sorts of civilian activities, he is performing a valuable service by calling attention to this frightening business and trying to learn more about it. The Senate subcommittee on constitutional rights, of which Ervin is chairman, is a most suitable agency for inquiring into the Army's fact-gathering operation, for constitutional rights are directly and disturbingly at stake.

Ervin's interest stems from an article by Christopher Pyle, an ex-Army intelligence officer, and from constituents' letters prompted by publication of the article in The News and Observer. Very quickly, the senator phrased the questions that beg for answers. Just how much information is the Army collecting about lawful political activities of private citizens? Are constitutional rights protected in the collection process? What relation has the data to defense? And just what does the Army plan to do with all the fruits of its snooping? While popping these questions (in the form of a questionnaire sent to the Army and other snooping agencies), Ervin voiced the very sound opinion that "the Army has no business operating data banks for surveillance of private citizens, nor do they have any business in domestic politics."

Congress and the President ought to share Ervin's acute concern about this matter. Now that news of Army surveillance activities is out, failure to curb those activities, or at least to put some proper safeguards on them, will leave lawmakers and the chief executive resembling at best, silent accomplices in repression. As Pyle pointed out in his article, Army snooping can be exceedingly dangerous even if its results are not used. The mere fact that the military has plainclothesmen sneaking around and spying on legal political activities of civilians is enough to discourage those activities. And that is a very real infringement upon individual liberties.

Ervin has assumed the important responsibility of asking the questions about the Army's yen for data irrelevant to its traditional role. All his colleagues should join him in insisting that the questions be answered in full.

[From The Charlotte (N.C.) Observer, Mar. 5, 1970]

ARMY INTELLIGENCE "SPYING" ON CIVILIANS MUST BE HALTED

Americans have traditionally held a strong aversion to "spying", a tradition that draws strength from our pride in the Bill of Rights, our heritage of individual liberties, and our distaste for foreign states which rely on secret police to maintain their power.

In modern times, of course, "spying" has become a vast global industry, and it was inevitable that America, too, should strive to develop intelligence agencies to counter those of any presumed or potential enemies. Even so, we as a people dislike "spying" and look upon it as a necessary evil of modern times.

It was therefore somewhat shocking to discover, over recent weeks, that the Army's Intelligence branch has become massively involved in monitoring internal social and political activities.

This revelation has come about largely through the Senate's Constitutional Rights subcommittee headed by Sen. Sam Ervin.

About 1,000 agents have infiltrated and monitored political gatherings of every description, including some at the high school level. Computerized dossiers have been collected covering the activities of several thousand individuals and organizations, ranging from such avowed revolutionaries as the SDS Weathermen on to such relatively innocuous groups as the NAACP and the American Civil Liberties Union. Last month the ACLU filed suit against Army Intelligence, charging it with illegally interfering with the rights of civilians.

Astoundingly, none of this was done with the approval, or even the knowledge of Congress. The Army insists its spying activities are necessary to help it deal effectively with domestic unrest, and further insists that the files of the FBI and the Justice Department are not adequate for its needs—an assertion which insults the competence of those professional agencies and also raises interesting questions as to what Army Intelligence's specific "needs" might be in such matters.

It may be that the military simply no longer trusts civilians to do such jobs properly, regardless of constitutional niceties. It is likewise doubtful that the Army gained much new information by duplicating the activities of the civilian intelligence agencies.

One Army report warned of possible domestic violence on "St. Lazar's Day", when men of Serbian descent might be tempted to revive the old days of Balkan bomb-throwing. Any intelligence report that seriously warns of a Serbian uprising in 1970 America does not reassure the public as to the Army's expertise in domestic spying.

The CIA has, from its inception, been expressly forbidden to engage in purely domestic spying. Agencies operating under the Justice Department are trained to a high degree of professionalism and tightly-monitored by civilian judicial authorities. Army Intelligence is supposed to concern itself solely with defense-oriented counter-espionage, counter-sabotage measures, and security clearance of defense personnel.

It has no business in purely civilian affairs, and its efforts in that sphere are not likely to increase civilian sympathy or congressional goodwill.

[From the Charlotte (N.C.) News, Mar. 13, 1970]

GOVERNMENT SNOOPS TOO MUCH

What Sen. Sam J. Ervin Jr. (D.-N.C.) has called the government's "boundless curiosity" about its citizens does indeed appear to be without limit. And the government apparently has no shyness about seeking to satisfy it.

The latest result is that the Justice Department has put its political files into a massive computer, so that complete reports on cities, events, organizations and individuals can be printed out instantly. Officials aren't saying specifically what is in the files, but make clear that perfectly legal activities can earn a person some space in the computer. Information comes from the FBI, the Secret Service, the Treasury Department, U.S. attorneys around the country and other sources, and even includes such things as who said what in a speech to whom.

While the Justice Department defends the computerized system, saying that the information was already available in the files, we would suggest that the computer amounts to a serious escalation in the spying on citizens. First because the machines make feasible the collecting, storing and indexing of amounts of data that simply could not be managed otherwise, and are therefore a temptation to broaden the spying on citizens. Second, because the computer makes possible the coordinating of data throughout all branches of government, hastening that awful day when everything known about a citizen—from his interview with the army psychiatrist to the petitions he has signed to the size of his gambling losses—can be obtained by typing his Social Security number into one computer.

The Justice Department apparently has not gone to such lengths, yet, and it ought to be stopped before it goes another step. There is a legitimate reason for federal law enforcement officials to have ready access to the records of convicted and accused felons. But there is no reason for them or anyone else to have push-button access to the record of a man's political opinions and activities.

BUSINESS, TOO

Nor do the dangers to personal privacy and freedom stop at the edge of government these days. The computer's ability to handle vast quantities of information quickly and cheaply has paved the way for private information operations every bit as threatening as those run by the government.

How threatening is the question a new $150,000 study will seek to answer. But the potential for mischief is frightening. Whether a citizen wants a loan, a job or an insurance policy, he fills out forms giving considerable amounts of personal information. Behind this on occasion comes the company investigator who may ask neighbors and associates about everything from the cleanliness of the person's house to his drinking habits. All this, plus performance with charge accounts, etc., can end up in private computers.

The study by the National Academy of Sciences will try to learn how much information does end up on computers, how it is used and swapped, how much control the citizen has over such information about him. It's a worthy project, and one that ought to be of considerable interest to the Congress. For the tools for handling and mishandling information have become so available and so powerful, that the potential for damage to the citizen is enormous.

[From the Boston (Mass.) Sunday Globe, Mar. 15, 1970]

ARMY SPYING ON CIVILIANS

Two weeks ago Army spokesmen informed two members of Congress (Chairman Cornelius E. Gallagher of the House Subcommittee on the Invasion of Privacy and Chairman Sam J. Ervin of the Senate's Judiciary Subcommittee on Constitutional Rights) that Army Intelligence had destroyed its files on political activists.

But there was a catch in it, as more than one alert reader of The Globe has pointed out. The destruction was only token, a cover-up. The Army did indeed destroy its data banks and related files at Ft. Holabird, Md.—or so it was said, at least. But it did not destroy other similar files pertaining to several million Americans and maintained by its Counter Intelligence Analysis Division in the Pentagon and by at least seven other military intelligence offices. It has indicated that it may do so on demand of Congress but the central question remains as Sen. Ervin, a Southern segregationist but one of Congress' most respected authorities in other constitutional matters, has put it:

"By what authority was the Army permitted to engage in such illegal activities with nearly 1,000 plain-clothesmen working out of 300 offices?"

The senator has committed himself to getting an answer, and it is high time, for, as he says:

"Although I may have little if anything in common with the views of persons who are probably in the Army files, the very existence of such unconstitutional surveillance by the Army is destructive of our form of government."

Groups spied on include the American Civil Liberties Union, the Southern Christian Leadership Conference, the John Birch Society, the National Association for the Advancement of Colored People, the Women's Strike for Peace, the Center for the Study of Democratic Institutions, and Clergy and Laymen United Against the War in Vietnam. The Army's excuse is that "it has to be ready for contingencies in the event Federal troops are ordered into action by the President." To this Sen. Ervin replies:

"If the President determines that new forms of intelligence gathering are necessary, let him so inform Congress and let Congress assign the responsibilities to an appropriate civilian agency. I suggest the Army regroup and reidentify its enemy. Under our Constitution, that enemy is not the American citizen."

It could not have been better said. The "predicting of trends and possible reactions" of the American people is none of the military's business. Nor is it proper for the Army to stockpile, as Sen. Ervin says it has "an amazing arsenal of weapons" for use against political activists.

"The chief casualty of such military overkill," says the senator, "is the Constitution of the United States which every military officer and every appointed official has taken an oath to defend."

In this case, the Army's illegal activity was disclosed by a former captain of intelligence, Christopher H. Pyle, now a graduate student at Columbia University. But, as Sen. Ervin puts it, "the preservation of our civil liberties cannot depend on the lucky discovery of illegal programs."

The disclosure gives added point to the suggestion of Alan F. Westin, professor of public law and government at Columbia University, for legislation creating a writ of habeas data, similar to a writ of habeas corpus, commanding government and private organizations to produce, on demand, the data they have collected on petitioning individuals.

This may not be a complete answer. But Americans, somehow, must not let themselves be put through another "I hold in my hand" era.

[From Time, Mar. 9, 1970]

ARMED FORCES SPYING ON CIVILIANS

Anything smacking of secret police tactics has always been highly suspect in the U.S. The Central Intelligence Agency is specifically barred from domestic spying. The FBI operates under tight civilian and judicial controls. Pentagon intelligence and security operations within the country are supposed to be limited to matters of direct military concern, such as counterespionage, protection against sabotage and investigation of personnel. Thus the shock when it became known recently that Army Intelligence had got into the business of monitoring the political and social protest activities of civilians.

From its own field work and that of other Government agencies, the Army has compiled dossiers in its computer at Fort Holabird, Md., on between 2,000 and 5,000 individuals and numerous political organizations. The records are not even limited to such avowedly revolutionary groups as the Black Panthers or the Weathermen. Also among them are respected organizations like the N.A.A.C.P. and the American Civil Liberties Union. The Army has also circulated to base commanders a six-volume "blacklist" of dissidents and their organizations.

Love Festival. About 1,000 agents have been used to monitor disturbances, rallies, even high school demonstrations. One agent was on the floor of the 1968 Democratic Convention in Chicago, mission uncertain. Two Keystone Korporals were flushed out of the bushes in a Chicago park as they watched a Yippie love festival. From such activities the Army compiled reports that were circulated to base commanders and law-enforcement officials. Some of the information relayed seemed ludicrous. One item warned of impending violence on the "Day of St. Lazar," when "Serbian men are supposed to show their manhood," presumably by bombing Yugoslav diplomatic missions.

The domestic intelligence program started modestly enough in 1967, when the Army began serious preparations to support local authorities in quelling ghetto riots. With the advent of large-scale antiwar protests, the Army argued that the files of the FBI, Justice Department and other agencies were not adequate for its intelligence needs. Therefore the Army extended its purview into areas normally reserved to regular law enforcement bodies. This was done without congressional approval. In some cases, the Army launched its clandestine activities without the knowledge of Army civilian officials.

Free Speech. The extent of the operations was revealed in January's *Washington Monthly*, a political review, by a former intelligence officer, Christopher Pyle. Since then, some members of Congress have threatened an investigation. The A.C.L.U. filed suit, charging that the Army's activities sought to inhibit civilians from exercising their rights of free speech and petition.

Last week the Army retreated, promising to conduct no more covert investigations of

civilians without the Secretary of the Army's approval, and to recall the blacklist. It also promised to destroy information about domestic political activists stored on the Fort Holabird computer. But the Army still maintains extensive files on civilian political activists, and has no intention of ceasing its snooping altogether. With that in mind, the A.C.L.U. intends to press its court suit for a permanent injunction against all such Army surveillance activities.

[From the Sarasota (Fla.) Herald-Tribune, Mar. 10, 1970]

ARMY ERASES A POLITICAL FILE

The U.S. Army has dismantled, at least in part, its machinery for collecting information on the domestic political activities of American civilians, according to two key lawmakers.

Sen. Sam J. Ervin Jr. (D-N.C.), chairman of the Judiciary Subcommittee on Constitutional Rights, and Rep. Cornelius E. Gallagher (D-N.J.), chairman of the Government Operations Subcommittee on Invasion of Privacy, announced last week the Army had destroyed its data banks and related files at Ft. Holabird, Md., pertaining to the political activities of 7 million civilians.

But the Army did not confirm destroying other similar files maintained on microfilm by the Counter-Intelligence Analysis Division (CIAD) and by at least seven military intelligence headquarters throughout the nation. The files consist mostly of reports prepared by the Federal Bureau of Investigation.

An Army spokesman has explained that CIAD helped determine where civil disorders were likely to occur.

Congressional concern over the data banks was sparked by an article in the January issue of Washington Monthly written by a former Army Intelligence officer, Christopher H. Pyle. The article described an intelligence network of "nearly 1,000 plainclothes investigators, working out of some 300 offices from coast to coast," who write reports on "political protests of all kinds."

"To assure prompt communication of these reports," the article stated, "the Army distributes them over a nationwide wire service. Completed in the fall of 1967, this teletype network gives every major troop command in the United States daily and weekly reports on virtually all political protests occurring anywhere in the nation."

Pyle went on to describe a huge intelligence operation that stored and disseminated information on both groups and individuals who "might cause trouble for the Army."

Some of the groups listed in the article were the American Civil Liberties Union, the Southern Christian Leadership Conference, the John Birch Society, the National Association for the Advancement of Colored People, the Women's Strike for Peace, the Center for the Study of Democratic Institutions and Clergy and Laymen United Against the War in Vietnam.

Following publication of the Washington Monthly article, at least 50 members of Congress questioned the Defense Department about its banks of data on civilians, an Army spokesman told Congressional Quarterly.

The official order to destroy the "Data Bank of Political Activities" at Fort Holabird was issued Feb. 19, and members of Congress were informed of the action Feb. 23.

Sen. Ervin commended the Army for dismantling the computerized data bank, but said the "attempt to explain all their files on civilians raises more questions than it answers. . . . The Army has not yet answered our questions, nor have they yet discussed all of their data banks and collection and filing of information about civilians."

Calling the operation a case of "military overkill," Ervin said an explanation of "how the Army was permitted to engage in such activities in the first place" was needed. "The preservation of our civil liberties cannot depend on the lucky discovery of illegal programs," he added.

Rep. Gallagher said the Army ordered the destruction of the Ft. Holabird data bank after he had announced he would hold public hearings on the "validity and legality of such a program."

He added that the Army told him it would ask Congress for permission before undertaking such a venture again. "I can assure you that no Congress will grant such permission," Gallagher said. "The construction of such a data bank is tantamount to a domestic espionage apparatus."

[From the Houston (Tex.) Chronicle, Mar. 12, 1970]

ARMY VIOLATES CIVIL LIBERTIES

Those Americans concerned with the erosion of their civil liberties have further justification for their fears. Despite assurances to the contrary, the U.S. Army is continuing to collect voluminous information on the political activities of civilians.

U.S. Sen. Sam Ervin, North Carolina Democrat, says the intelligence activity is a "usurpation of authority." He calls it an "illegal activity" and contends it's not the business of the Army to collect information on civilians. He suggests the Army redefine its strategic objectives.

We believe this activity is a violation of the individual's civil rights guaranteed under the First Amendment to our Constitution. Not only that, such activity can only lead to fear and distrust of a military establishment and erode its necessary base of civilian support.

The Army has abandoned operation of a political computer data bank at Fort Holabird in Baltimore, Md., but there remains the microfilm file of the counter-intelligence analysis division (CIAD) of the office of the Army's assistant chief of staff for intelligence. It's still very much in operation. It contains information on thousands of individuals, including many nonviolent activists, and even two retired military officers who have criticized the Vietnam War.

The Army admits it uses the information—including FBI reports and other documents—to evaluate the violence-potential of upcoming events. There is, however, no clear-cut safeguard against the information being used for other purposes.

We are alarmed at this aspect of "big brotherism." But we're not suggesting abandoning the legitimate safeguarding of our internal security. We need governmental agencies with this responsibility but they should be staffed and headed by civilians.

[From the Milwaukee (Wis.) Journal, April 7, 1970]

THE ARMY'S DATA BANKS

Public alarm over the growing prevalence of "data banks" tucked away in government offices, fingering millions of people as possibly "dangerous" in their future political activities, has got some remedial steps afoot.

The chairman of the Senate Judiciary Subcommittee on Constitutional Rights, Sen. Ervin (D-N.C.), responded to "numerous complaints" in January and zeroed in on the Army Intelligence Command, demanding "full explanation" of the nature of its data banks, their purposes and the legal authority for them, if any.

The Army got the message to the extent of reporting back, in its interim reply, that it has withdrawn and destroyed all copies of an identification list of persons whom it deemed likely to be involved in "civil disturbance situations" that it might have to police. It has discontinued one data bank, similarly related, that it now admits, upon being prodded, was "not required" in aid of any possible missions. But it confessed to having seven million other individual files on American citizens in its Investigative Records Repository.

Ervin is keeping the heat on, demanding fuller explanation and further response. As he told the senate: "Clearly, the Army has no business operating data banks for surveillance of private citizens." They can be a tool of suppression and tyranny, useful for dragnet type operations—wholesale roundups and harassment of hundreds and thousands of citizens whom the Army might not approve of. Their existence is a threat to American liberty and justice.

[From Computerworld, April 8, 1970]

THE WORD GAME

The Army's recent action in "destroying" its computerized data banks on lawful civilian political activity was more a matter of semantics than of destruction.

Although the tapes have been erased, the data banks still exist in written form, and even possibly in punched card form. And presumably the programs for file maintenance and retrieval still exist.

Which all means the computerized data banks could be recreated in days, if not in hours.

Further clouding the issue is the fact that the Army apparently distinguishes between "computerized" and "computer-aided." So the "destruction" order did not apply to computer-maintained indexes to manually maintained data banks.

All this "destruction" of computerized data banks has only been a maneuver to take the pressure off the Army and to lead critics away from the real question:

Why is the Army maintaining files on civilian activity?

Civilian activity is a question of internal security, and as such, should be handled by the FBI or possibly the Secret Service—if it's necessary at all.

Sen. Sam J. Ervin (D-N.C.), normally considered quite conservative, summed up the situation this way: "I suggest the Army . . . re-identify the enemy. Under our Constitution, that enemy is not the American citizen."

[From the Washington Star, Apr. 19, 1970]

SIGNS OF A RIGHT-WING TAKEOVER INCREASE

Self-styled revolutionary Abbie Hoffman told a Texas audience the other day that because the United States is "losing the Vietnam war, it is turning to fascism at home."

There very definitely has been a swing toward repression and the trappings of fascism in this society, but I don't think this reason is Vietnam. The reason is Abbie Hoffman and his kind.

The promoters of violence, the bomb planters, the mad reformers push on zealously to prove a point that I made in an earlier column: That this country is not remotely in danger of a left-wing takeover; the danger is that fear of violent upheaval will provoke the great mass of Americans to tolerate aspects of fascism if that promises law and order.

Many "dreamers" in the Abbie Hoffman crowd say they know exactly what they are doing. They welcome a right-wing dictatorship, they say, because only when "the establishment" shows its "true fascistic colors" will the people rise up and smash this system.

Could we really let a rag-tag band of unkempt reformers, shouting the rhetoric of revolution, force upon the nation so much panic that the people would tolerate a dictatorship? One need not be an alarmist to conclude that the answer is yes.

The American Civil Liberties Union and several Congressmen, like Rep. Cornelius E. Gallagher, D-N.J., months ago challenged the Army practice of putting into a computerized data bank information on civilians involved in disturbances and demonstrations and who might become civil disrupters at some time in the future.

Army Secretary Stanley Resor sent a memorandum to the Army Chief of Staff March 6 stating: "No such intelligence data bank operations relating to civil disturbances or other activities involving civilians not affiliated with the Department of Defense should be instituted without the prior approval of the Secretary of the Army and the Chief of Staff. In view of the sensitivity of such operations, approvals will not be granted without consultations with concerned committees of the Congress."

The ACLU will charge in the U.S. District Court here Wednesday that while the Army proposes to close down its computerized data bank at Ft. Holabird, Md., it is collecting and storing such data elsewhere.

One need not be a raving liberal, or even a civil libertarian, to see the dangers of having the military snooping on civilian dissenters, compiling its own computerized lists of Americans the Pentagon regards as "potential security risks."

But the danger is there because the violent dissenters are a reality. Because the bombers and rioters are already here, much of the public is far more afraid of them than of a "military takeover" that is just an intellectual threat in the future.

The public's willingness to surrender basic individual liberties and rights of privacy will become all the greater if Nixon's aides can sell the idea that the country is endangered by extreme radicals who cannot be won over by racial, social, economic, or political reforms.

The New York Times quoted an unnamed Nixon assistant as saying: "It wouldn't make a bit of difference if the war and racism ended overnight. We're dealing with the criminal mind, with people who have snapped for some reason."

So, to protect society from "revolutionary terrorism," some Nixon aides are advocating a vastly expanded domestic intelligence apparatus—that is, more wiretaps and buggings, more undercover agents, more informers.

Think how far we have gone toward a police state in one year and where we might be in another year: the Pentagon with its master computer list of "risks" to internal security, the FBI listening in on more and more private conversations, a corps of "secret police" and their informers in every community, policemen permitted to burst into just about any private home without knocking, Post Office bureaucrats authorized to open and read your first class letters from overseas, Clark Mollenhoff or some other presidential political operative permitted to examine your income tax return, "preventive detention" laws that authorize jailing people someone believes might commit a crime, a proposal (just rejected by the White House) to subject all the 6- to 8-year-olds in the country to psychological tests to determine if they are inclined toward future criminal behavior.

All this and more because the men now around the throne in Washington can't think of any other way to deal with Abbie Hoffman, or the Black Panthers, or the Weatherman faction of the Students for a Democratic Society.

[From the Plainfield (N.J.) Courier-News Apr. 21, 1970]

KEEPING TABS ON PEOPLE

The Army thinks it has good reason to keep tabs on the activities of civilian dissenters. The argument is that it needs to gauge the potential for civil disturbances where the Army might be called out to restore order. To this end, the Army is alleged (Washington Monthly, February, 1970) to have used full-time undercover agents to infiltrate political groups and to have set up a computerized data bank on the political activities of civilian activists.

Civil libertarians in and out of Congress raised enough of a fuss about the Army snooping to get the Pentagen to agree to shut down its Fort Holabird, Md., data bank on civilians. But the American Civil Liberties Union (ACLU) plans to go into U.S. District Court in Washington tomorrow, for a hearing on a new complaint. It charges that such information is still being collected and stored elsewhere by the Army in violation of the Constitution.

One paradox is that while the ACLU is attacking Army surveillance, the Federal Bureau of Investigation is under White House orders to step up its monitoring of militant left-wing groups and individuals. As explained by anonymous White House aides (New York Times, April 22, 1970), the objective is to find out who potential bomb planters and snipers may be before they endanger others.

One aide says the increased surveillance actually strengthens safeguards of individual civil liberties. Unless the terrorists are stopped before they can act, the public will "demand that their police start cracking heads." One way or another, the file space for dossiers will continue to grow.

[From The Toledo (Ohio) Times, Apr. 23, 1970]

BIG BROTHERS

The American Civil Liberties Union has challenged in court without success what appears to be an unauthorized system of surveillance by the Defense Department. The ACLU charged that by maintaining dossiers on political dissenters, a special intelligence branch with some 300 offices throughout the country potentially violates the rights of free speech, association, and privacy.

In contrast to such civilian agencies as the Federal Bureau of Investigation, an army intelligence system operating under the cover of military secrecy could escape all supervision by Congress, the President, and the courts. Neither its activities nor the competence and discretion of its spies would be subject to civilian regulation. Unauthorized by law, the operation is accountable only to its own command and has been ever since the network was created in 1965.

Obviously the Defense Department has an obligation to use its intelligence apparatus for the protection of internal security. It is responsible for the safeguarding of communications, transportation, and defense plants. Since the armed forces also play an important role in the prevention of civil disorder, they have a legitimate interest in the identification of potential saboteurs and the like.

But the indications are that the military intelligence network has gone far beyond such legitimate precautions and is nosing around in the area of political opinions. Monitoring of ideologies smacks more of thought control than of national security. If allowed to continue unchecked, it could open the door to military control over the civilian government.

[From the Washington Daily News, Apr. 23, 1970]

ACLU LOSES ARMY SUIT

The American Civil Liberties Union has lost its battle to obtain a court order preventing Army intelligence agents investigating "law-abiding citizens."

District Court Judge George L. Hart Jr. denied the group a preliminary injunction and sustained the government's motion to dismiss the case. Judge Hart said "the evidence shows no threat by the Army and no unconstitutional action."

Julius Hobson, head of the Washington Institute for Quality Education, said he was intervening in the ACLU case because "the damn Army has my picture and my serial number. I want the court to let me see the card and tear it up."

ACLU lawyer Frank Askin told Judge Hart that the complaints by his clients "* * * a disgraceful system in the United States of America in which military authorities have employes lurking around the country spying on citizens. They (the Army) are our servants not our surveillance."

Mr. Askin testified that the Army has a teletype network "much like a news service," feeding information on "potential trouble makers" to Fort Holabird, Md. and "a microfilm library and computerized index of these persons at the Pentagon."

Mr. Askin said, "This causes a chill and a pall on freedom of speech by keeping dossiers on citizens." He said the ACLU had a list of witnesses, some of whom are former Army intelligence agents, willing to testify about the work they did.

INFILTRATION

"One agent was instructed to infiltrate a group called the 'Young Adults Projects,' an organization of church groups. He was instructed to become a member of this group and make reports of what was going on to Army intelligence in Fort Carson, Colo.

"The Army seems to think they have to attend peaceful meetings to curb disorders," Mr. Askin said.

[From the Michigan City (Ind.) News Dispatch, Apr. 23, 1970]

THE DOSSIER SOCIETY

"Experience should teach us to be most on our guard to protect liberty when the Government's purposes are beneficient. Men born to freedom are naturally alert to repel invasion of their liberty by evil-minded rulers. The greatest dangers to liberty lurk in insidious encroachments by men of zeal, well-meaning but without understanding."—Justice Louis Brandeis in dissent, Olmstead vs. U.S. (1928).

The Army of the United States thinks it has good reason to keep tabs on the activities of civilian dissenters. The argument is that it needs to gauge the potential for civil disturbances where the Army might be called out to restore order. To this end, the Army is alleged to have used fulltime undercover agents to infiltrate political groups and to have set up a computerized data bank on the political activities of civilian activists.

Civil libertarians in and out of Congress raised enough of a fuss about the Army snooping to get the Pentagon to agree to shut down its Ft. Holabird, Md., data bank on civilians. But the American Civil Liberties Union (ACLU) yesterday went into U.S. District Court in Washington for a hearing on a new complaint. It charged that such information is still being collected and stored elsewhere by the Army in violation of the Constitution.

One paradox is that while the ACLU is attacking Army surveillance, the Federal Bureau of Investigation is under White House orders to step up its monitoring of militant left-wing groups and individuals. As explained by anonymous White House aides, the objective is to find out who potential bomb planters and snipers may be before they endanger others. One aide says the increased surveillance actually strengthens safeguards of individual civil liberties. Unless the terrorists are stopped before they can act, the public will "demand that their police start cracking heads."

One way or another, the file space for dossiers will continue to grow.

[From the Glens Falls (N.Y.) Post Star, Apr. 24, 1970]

ON FILE

Have a curious situation. Last February a Washington publication charged that the Army was using undercover agents to infiltrate political groups and that it had set up a computerized data bank to record the doings of political activists. A howl was raised in and out of Congress. The Pentagon agreed to shut down its Fort Holabird data bank on civilians.

The American Civil Liberties Union subsequently charged that the Army's promise amounted only to collecting the identical information and storing it elsewhere. It filed a complaint charging a violation of the Constitution. Last Wednesday a federal judge threw the case out of court.

Before he did so, however, the Army argued that it had to keep track of people in case it might be called upon to put down riots. According to witnesses, some 3,000 names in the Army's files including Joan Baez, a pacifist singer, Dr. Benjamin Spock, such organizations as the National Association for the Advancement of Colored People and the American Friends Service Committee, plus a lot of communist names. Witnesses told of infiltrating various oragnizations.

There is a general impression that this sort of information-gathering is the job of the Federal Bureau of Investigation. The FBI is, in fact, under orders to locate potential bombers and snipers. That is its job. But the Army? If it can get in on the act, why not the Navy, the Air Force, any federal agency that can find some remote excuse for snooping on civilians?

At this rate there could come a day when Miss Baez might labor under the impression she was singing to a sell-out audience only to discover that they were all Pentagon Sleuths. Somehow it hardly seems compatible with civil liberties. Just incidentally, what about the worth of the Pentagon's promise?

[From the Wichita Eagle (Kans.), Apr. 24, 1970]

PERSONAL LIBERTY SUFFERS AS POPULATION BURGEONS

A federal district judge has dismissed a suit to keep the army from collecting, storing and circulating information on the political activities of some 3,000 civilians.

The contention of the American Civil Liberties Union which brought the suit is that the army is engaged in surveillance that serves no legitimate military purpose.

The army counters with the assertion that it is required to conduct domestic intelligence activities to prepare for emergencies such as the riots that erupted in Newark and Detroit in 1967. Federal troops were called both times.

It is probably necessary for the good of all to keep the military informed of potential domestic crises. The nation's peace-keeping machinery would be powerless without knowledge.

The apparent infringement of the privacy we are all entitled to is the unfortunate result of activity on the part of a militant minority which could threaten the security of the entire nation.

The saddening result of a growing social complexity and a burgeoning population is that it is increasingly difficult to exercise complete personal liberty without infringing on the rights of others.

The task that lies ahead is to strike a balance. We must protect the whole society from the excesses of a few without unduly restricting personal liberty.

Military surveillance of civilians is distasteful, but for the protection of the many, perhaps necessary.

The trick is to see that it is not carried to excess, to guard against political suppression and invasion of privacy, it must be made certain that the military always remains under civilian control.

[From the Waterloo (Ohio) Courier, Apr. 24, 1970]

DON'T LET ARMY ASSUME FBI FUNCTIONS

A Federal district judge in Washington, D.C., has dismissed a suit filed by the *American Civil Liberties Union* which sought to prohibit the Army from investigating and keeping files on individuals possibly involved in subversive activities.

Testimony both in and outside the court indicated that the Pentagon's Counterintelligence Analysis Division may be keeping files on individuals ranging from members of the Ku Klux Klan to Attorney William Kunstler.

The ACLU says it will appeal the verdict.

We see nothing ethically wrong with the Army activity; but there seems to be a good argument that it is intruding on the specialized function of the Federal Bureau of Investigation.

The Army has the assignment of defending the country against foreign enemies. In case of widespread civil disorder, it is also called in to restore law and order.

Thus it has a right to obtain within certain limitations the information which would be necessary in carrying out those functions. The collecting of information implies no right to intervene in civilian affairs in any way except when called upon to do so by the commander-in-chief.

But there is obviously an overlap area involving the FBI and in most domestic situations the FBI would be the more appropriate agency to probe the activities of extremist right-wing and left-wing groups. While U.S. Supreme Court decisions allowing the advocacy of violence make court convictions difficult, investigation of possibly subversive groups by an agency of the Justice Department is much more desirable and defensible than by an agency of the Department of Defense.

We hope that the lower court verdict will not be reversed on appeal because it would be undesirable to have the Army's hands tied by intricate court decisions. But as a matter of practice, the President should investigate this area to determine if the Army has exceeded reasonable military necessity.

[From the St. Louis Post-Dispatch, Apr. 24, 1970]

LIKE A NEWSPAPER?

A federal district judge in Washington has concluded that the Army has a legal right to go on infiltrating and spying on civilian groups engaged in legally permissible activities. Maybe so; the American Civil Liberties Union intends to press an appeal.

The wisdom of the Army's efforts, as a matter of public policy, is entirely another matter. Judge George L. Hart Jr. made no case for that by holding that the Army's collection of intelligence reports is essentially no different from that of newspapers which store information on individuals in their files.

Newspapers do not store information on individuals or groups solely because of their political ideas and associations—and that is what the Army is doing. But no matter. The great distinction is that newspapers are not arms of government. The Army is. And when an arm of government goes about spying on citizens, and keeping vast records on them just because of their ideas and associations, then government is interfering with free political rights.

The ACLU argued that the Army's activities inhibited the free speech guarantees of the Constitution. We would not be surprised if a higher court agreed. In any case, since Congress has not specifically authorized the military to spy on civilians, Congress ought to deny the Army the power to do so. It is not consistent with the ideals of a free country.

[From the Valdosta (Ga.) Times, Apr. 25, 1970]

TO PROTECT CIVIL LIBERTIES

The U.S. Army has felt it has had good reasons to be snooping around with its own force of undercover agents. They have been snooping right here at home, compiling information on civilians who have been involved in demonstrations and other types of political activities.

Army higherups say the activities have been necessary, because they need such information if called into an area to quell a disorder. But when the Army's homeside intelligence activities were made public, there was enough cain raised by civil libertarians and some Congressmen that the Army closed down its data bank on civilians at Ft. Holabird, Md.

The American Civil Liberties Union (ACLU), however, is going into court with a new complaint. It contends the Army is still collecting such information in violation of the federal Constitution.

One paradox is that while the ACLU is attacking Army surveillance, the FBI is under White House orders to step up its monitoring of militant leftwing groups and individuals. The objective is to find out who potential bomb planters and snipers may be before they endanger others.

It is apparent, despite what the ACLU and others say, that there will be more and more undercover activities right here at home. In effect, it will protect the civil liberties of a lot of people who would be killed or injured by some crazy bomb planter.

[From the New Britain (Conn.) Herald, Apr. 25, 1970]

THE DOSSIER SOCIETY

The question of official encroachment against personal privacy, a recurring problem of our times, has been raised again, this time by the United States Army, which thinks it has good reason to keep tabs on the activities of civilian dissenters. The argument is that the Army needs to gauge the potential for civil disturbances in which the Army might be called out to restore order. To this end, the Army reportedly has used fulltime undercover agents to infiltrate political groups and to have established a computerized data bank on the political involvement of civilian activitists.

As it developed, enough of a fuss was raised by civil libertarians, both in and out of Congress, to get the Pentagon to agree to shut down its data bank on civilians. But the matter hasn't ended there. The American Civil Liberties Union charges that the Army, in violation of the Constitution, is still collecting such information and storing it elsewhere. The ACLU has gone into U.S. District Court in Washington for a hearing on the complaint.

Meanwhile, a paradox: As the ACLU continues its attack on Army surveillance of civilians, the Federal Bureau of Investigation is under White House orders to step up its monitoring of militant left-wing groups and individuals. White House aides explain that the objective is to find out who potential bomb planters and snipers may be before they endanger others. One aide claims this increased surveillance actually strengthens safeguards of individual civil liberties, since, unless potential terrorists are stopped before they can act, the public will eventually demand a suffocating clampdown by police.

One way or another, it looks as though the file space for dossiers will continue to grow,

which is a shame, because it measures our growing distrust of one another. A Constitutional test on the question of individual privacy may eventually resolve the matter, but it is sad that the issue has to be raised in the first place. In a time which experiences the increasing polarization of viewpoints, reconciliation seems a small hope indeed.

[From the Augusta (Maine) Kennebec Journal, Apr. 25, 1970]

THE DOSSIER SOCIETY

"Experience should teach us to be most on our guard to protect liberty when the Government's purposes are beneficent. Men born to freedom are naturally alert to repel invasion of their liberty by evil-minded rulers. [From the Sioux City (Iowa) Journal, Apr. 26, 1970]

BIG BROTHER ROLE FOR ARMY?

This turbulent era has produced a number of disturbing expressions of movement toward thinking and speaking made sterile and stereotyped through the subtle injection of fear and intimidation. The cursory dismissal by a federal judge of a challenge to the Army's declared right to spy on civilians should leave any thinking American more than aghast.

Surveillance of civilian actions and comment is an accepted and approved extraordinary duty placed on the military when administering territory and peoples subdued by the force of arms. Does America fall into the category of occupied territory?

U.S. District Judge George L. Hart Jr., refused to hear a suit filed by the American Civil Liberties Union which contends that Army spying activities (one report claims 1,000 undercover agents) violates citizens' First Amendment rights of free speech and freedom from guilt by association. The denial was based on the opinion that the A.C.L.U. failed to show that the civilian spying is unconstitutional.

Which must mean that the gathering of data on private citizens is constitutional. It was constitutional in Germany when the Gestapo engaged in such activities during the Hitler era.

The Army claims it has good reason to keep tabs on the activities of civilian dissenters, the highly questionable argument being that it needs to gauge potential for civil disturbances to which it might be called to restore order.

There is clear evidence in this restless, violence-threatened period for anticipatory soundings and surveys of possible explosive situations. They are needed. And this summer may find the longest and hottest ordeal in recent years. As abhorrent to many as is the White House order for an increase in Federal Bureau of Investigation monitoring of suspected dissenters and extremists, property and human life may be at stake. Such action, with wise restraint, is an integral part of the defense of freedom.

The Army of the United States is another matter. It functions and performs at the discretion of civilian superiors. Civilian decree will judge when, if and where military protection is needed in the event of violent disturbance. Use in domestic emergency has, and should continue to be, an option of last resort.

A self-declared right to spy is neither in the spirit of this country's compact with freedom nor in the realm of common sense. Justice Louis Brandeis, in 1928, offered an opinion much in need of careful appraisal now:

"Experience should each us to be most on our guard to protect liberty when the government's purposes are beneficent. Men born to freedom are naturally alert to repel invasion of their liberty by evil-minded rulers. The greatest dangers to liberty lurk in insidious encroachments by men of zeal, well-meaning but without understanding."

[From the Scranton (Pa.) Tribune, Apr. 28, 1970]

GOVERNMENT SNOOPING

In recent years more and more attention is being given to complaints against government snooping in areas where it may very well be termed invasion of privacy. The action of government agencies in gathering information about our citizens is now being looked upon with grave suspicion by all persons conscious of their rights and liberties.

The latest of the complaints lodged against investigative actions by the government involves the U.S. Army which is charged with using fulltime undercover agents to infiltrate political groups and to have set up a computerized data bank on the political activities of civilian activists.

Civil libertarians in and out of Congress raised enough of a fuss about the alleged Army snooping to get the Pentagon to agree to shut down its Fort Holabird, Md., data bank on civilians. But the American Civil Liberties Union (ACLU) is instituting court action on a new complaint. It charges that information is still being collected and stored elsewhere by the Army in violation of the Constitution.

The Army thinks it has good reason to keep tabs on the activities of civilian dissenters. The argument is that it needs to gauge the potential for civil disturbances where the Army might be called out to restore order.

One paradox is that while the ACLU is attacking Army surveillance, the Federal Bureau of Investigation is under White House orders to step up its monitoring of militant left-wing groups and individuals.

As explained by a White House aide, the objective is to find out who potential bomb planters and snipers may be before they endanger others. The informant says the increased surveillance actually strengthens safeguards of individual civil liberties. Unless the terrorists are stopped before they can act, the public will "demand that their police start cracking heads."

All of which serves to recall an observation by Justice Louis Brandeis: "Experience should teach us to be most on our guard to protect liberty when the Government's purposes are beneficent . . . The greatest dangers to liberty lurk in insidious encroachments by men of zeal, well-meaning but without understanding."

[From the Houston (Tex.) Post, May 1, 1970]

ARMY UNDER ATTACK

During World War II, many Americans were shocked by the use of "fifth columns" by this country's enemies, although they should not have been since the use of subversion to undermine resistance is as old as warfare itself. Still, since it involves a "sell-out" of one's country, it evokes feelings of moral indignation in some people.

The term "fifth column" came into use during the Spanish Civil War, one of the preliminaries of World War II, when it was applied to Madrid residents supporting Generalissimo Francisco Franco, the leader of the anti-democratic forces.

However, it is the Communists, who aided the resistance to France, that have developed use of this weapon to a fine point in recent years. They have made subversion an integral part of their military operations. They have developed highly complex and sophisticated techniques for penetrating and subjecting other countries by blending the use of subversion, terrorism and politics with that of outright military force.

The current conflict in Southeast Asia provides an excellent example of the use of these techniques. Because of this and the use of guerrilla warfare tactics, it is very difficult to distinguish combatants from non-combatants or friend from foe.

Subversion has become an important weapon in the worldwide operations of the international Communist movement.

For this reason, it is difficult to justify the outcry raised by some civil libertarians in this country about the collection by the Army of information about active and potential subversives. The military's right to "collect, store and circulate" information about the activities of civilian "dissenters" has come under broad attack, and the climate has been favorable because of the fear many people have of the loss of personal privacy as a result of the growth of governmental bureaucracy.

Congressional pressure forced the Army to close down its computerized data bank on civilian dissenters at Fort Holabird, Md. The bank was supposed to contain a "blacklist" of political activists, who might properly be regarded by the Army as potential troublemakers. The Army is continuing to maintain its files.

When the American Civil Liberties Union filed a suit in federal district court in behalf of 12 of these political activists, the judge threw the suit out and called some of the arguments ridiculous. Pointing out what the Army was doing was not different from what newspapers do when they collect clippings and notes in their "morgues," he upheld the Army's right to collect intelligence related to the carrying out of its mission, protection of the nation's physical safety. The decision will be appealed, of course, and the case could reach the Supreme Court.

The Army argued that its intelligence-gathering activities in this area are essential to the planning and operations in that it is necessary to gauge the possibility of civil disorders it might have to quell or help quell. The number of these disorders has increased greatly the past few years, and the Army has been called upon to come to the assistance of civil authorities on numerous occasions, particularly the National Guard.

[From the Springfield (Ohio) News-Sun, May 3, 1970]

SNOOP WE MUST?

Big Brother, army-style, may be watching you and what's more, a federal district judge has ruled that it is perfectly all right for the Army to spy on civilians. The American Civil Liberties Union, which pressed the case against the snoops, will try again, and it is difficult to believe that higher courts won't tell the Army to start minding its own business.

The issue has been kicked up by the report from a former intelligence officer that the Army has 1,000 undercover agents probing, and compiling files on, several civil rights, antiwar and racist groups. The Army has conceded that the report is substantially correct and claims that it must spy on such groups because it someday might be called to put down civil disturbances involving them.

District Judge George Hart Jr. ruled that the Army's activities are constitutional, basing his decision in part on a far-fetched comparison between newspaper reporting and official surveillance and infiltration. That's as untenable as the Army's own excuse, which, if carried to its logical conclusion, soon would have soldiers spying on Republican and Democratic politicians because their conventions might become disorderly.

The issue obviously deserves the sustained opposition that the civil liberties union has vowed. Chances are an appeals court will order the Army back to soldiering. In the meantime, however, whether or not the snooping is constitutional, it is clearly wrong.

[From the Boston (Mass.) Globe, May 20, 1970]

ARMY STILL SPYING ON CIVILIANS

House committee disclosure that Army, Navy and Air Force intelligence services are spending $2.9 billion per year should be read in conjunction with former Army Capt. Christopher H. Pyle's letter to the editor elsewhere on this page.

As Mr. Pyle points out, the military, to do its job, "must have maps and descriptions of potential riot areas, early warning, of incidents likely to provoke mass violence, and information about direct threats to military installations, activities and personnel. But it does not need dossiers, card files, computerized data banks and identification lists describing the political beliefs and actions of persons and groups that pose no threat to public order or military security."

It is intolerable that the Army is still going about the business of spying on civilians in their purely civilian activities despite assurances to congressional committees that it would abandon such purely political and intimidating practices.

The $2.9 billion does not include the cost of day-to-day operations in Vietnam or elsewhere beyond the United States, and it does not include the cost of intelligence activities of either the State Department or the Central Intelligence Agency. The $6 billion annual expenditure of the CIA is concealed (or until now has seen) in a one-line item in the Federal budget. The $2.9 billion does include such items as the cost of infiltrating a coalition of church groups running a project for emotionally disturbed young people. It takes a strange kind of mind to find a threat to the security of the nation in such socially commendable enterprises.

Except within the areas defined in Capt. Pyle's letter, what Americans do in their own country would be none of the military's business even if the military's inquiry into such matters cost not one penny. But Assistant Defense Secretary Robert F. Froehike has testified that he "cannot hazard a guess" as to the total spent on intelligence over and above the sums mentioned. He has said that, if he made such a guess, "it would be frightening."

Can any better argument be offered for Congress to get back its traditional control of the purse strings and other powers over American life which it has surrendered to the executive branch of the government?

[From the Washington (D.C.) Post, May 21, 1970]

SURVEILLANCE

The Senate Judiciary Committee has given unanimous approval to Sen. Sam Ervin's bill designed to protect the constitutional rights and privacy of executive branch employees. The bill, which, incidentally, has 54 other sponsors, would prohibit the questioning of government personnel or applicants for government jobs about their religion, personal relationships, sexual attitudes, race, religion, political preferences or affiliations unrelated to their employment. Well, you might think this was just a generalized expression of senatorial preference for virtue over vice. But not at all. When a closely similar measure came to the Senate floor in September, 1967, it passed that chamber overwhelmingly. It died aborning, however, in a House Post Office and Civil Service subcommittee—because certain federal agencies, the Civil Service Commission among them, looked askance at so much freedom.

In its contemporary version, Senator Ervin's bill provides exemptions for the CIA, NSA and FBI, gumshoe operations that continually insist they are a law unto themselves. Perhaps the bill's sponsors figure that those who go to work for these agencies are old enough to know what they're getting into and deserve no better than what they get; and it may be that exempting them is the price that has to be paid for covering State, Treasury and all the rest of the executive branch.

But what about all the rest of us outside the government? Senator Ervin's ardent objections notwithstanding, the U.S. Army is still taking it upon itself to collect data about all manner of citizens, recording among other things their participation in protests, their attendance at political meetings, their enrollment of petitions. These data, computerized by the brilliant resourcefulness of modern technology, lie waiting like buried bullets to shoot down a blossoming career. There is not much use in protecting government employees from snooping if the citizens who might otherwise become employees are under Big Brother's surveillance. In such a system, no one knows what job offers may be denied him because at some time he has been unconventional or indiscreet.

The American Civil Liberties Union has challenged this army surveillance in the courts. Its effort failed in a federal district court here; but the issue is now up for circuit court review. Government snooping into the private lives of citizens charged with no violation of law is worse than a nuisance, worse than an intimidation. It is a fascist technique which fosters fascism.

[From the Progressive, June 1970]

THE BOON OF SNOOPERY

(By Morton Kondracke, Washington correspondent for the Chicago Sun-Times)

If the nation is threatened with bombings, bank burnings, violent demonstrations, and assassinations doesn't the Government have a responsibility to find out who is up to such terrorism, and head it off? Indisputably, it does, but Federal agencies are now using this responsibility as a pretext for infiltration, spying, and file-keeping on a scale that would dumfound even the redoubtable old snooper of the 1920s, the late Attorney General A. Mitchell Palmer.

Consider:

The Justice Department's Interdivisional Information Unit daily receives hundreds of raw reports from the FBI, the Secret Service, and other agencies, and feeds them into a computer. Each week, the computer disgorges its contents onto print-out paper which fills four two-inch-thick regional books that list every demonstration in the country, violent and nonviolent, along with its organizers and their political backgrounds.

The Secret Service has compiled a computerized data bank containing 100,000 names and 50,000 investigative dossiers—not only on potential assassins, but on persons who might "embarrass" or make "abusive statements" about high Government officials.

As recently revealed by John Lang of the Associated Press, the Civil Service Commission employs seventeen clerks to read dissenting publications and clip the name of persons "favorably mentioned" for addition to the Commission's "subversive activities file," which now contains 2.5 million names. The CSC files are available to other Federal investigating agencies.

As uncovered by Robert Walters of the *Washington Star*, the Civil Service Commission is also considering guidelines which would forbid Federal employment to persons who "engage in violent campus demonstrations"—not necessarily those convicted of any crime or even formally charged.

In the most unconscionable example of all, the Army has undertaken to infiltrate civilian political groups, report on them, and keep massive files on individuals who have nothing whatever to do with the military. In response to criticism, the Army has justified this activity by referring to its need to move into situations of civil disorder when ordered to do so by the President. The Army was called into five cities in 1967 and 1968—none since—yet until recently it maintained two computerized data banks on civilians and still maintains one, at Fort Monroe, Virginia. It compiled two "blacklists" of troublesome individuals and groups, and it has a microfilm file containing the names of thousands of citizens, including Mrs. Martin Luther King, Joan Baez, Julian Bond, and anti-war Admiral Arnold E. True. Still other files are kept by local military intelligence groups headquartered in cities around the country.

Although the Army claims that its 1,000 counterintelligence agents are under specific orders not to engage in undercover activities in the civilian community, they regularly pose as students and newsmen at demonstrations and pose as interested participants by joining groups. One agent took up residence at Resurrection City in 1968. Another had a reserved seat at the Democratic National Convention. The 116th Military Intelligence group in Washington for a while drove to demonstrations in a video tape truck marked "Midwest News."

This does not begin to exhaust the list of agencies now involved in the boom business of snoopery. Others include the Post Office and the Navy on the Federal level, and "subversive units" of several local police departments, which share their information with Federal spies.

The problem is compounded by the attitude of official Washington. On the one hand, the Nixon Administration's policies and rhetoric contribute to the radicalization of students, blacks, and just plain citizens. On the other, the Administration is cracking back at the radicalization by "unshackling" the uniformed police and expanding the political police. Attorney General John Mitchell has already authorized the use of "national security" wiretaps, requiring no court permission, on radical groups.

As disclosed by James Naughton of *The New York Times*, conservatives in the White House are determined to step up surveillance still further in the conviction that radical dissenters are not politically motivated at all. "We're dealing with the criminal mind," one Presidential aide told Naughton.

Without a doubt, there are criminals among U.S. radicals who give not one whit for democratic procedure and who would be only too happy to see an orgy of fear and destruction result in the actual triumph of a police state. To control the terrorists, however, we cannot rely on the Federal internal security establishment as it presently operates. All of its instincts, ideological and bureaucratic, impel it to construct the kind of police state the radicals seek. In a sense, SDS bomb-throwers and J. Edgar Hoover's wiretappers are partners in accelerating us toward 1984.

Breaking up this partnership will require Congressional intervention in response to public demand. In the era of terror and panic that we seem to be entering, however, few Congressional voices have been heard. In fact, only one legislator has had the temerity and the power to speak out consistently. He is Senator Sam Ervin Jr., North Carolina Democrat, whose strict constructionist view of the Constitution permits no bridling of the First Amendment and no invasion of privacy save through the legislative process. Ervin, who is a civil liberties hero and a civil rights rascal, is preparing hearings on a broad range of Government spying and suppression of dissent. He cannot hold them too soon. It is imperative that they lead to tough legislation prescribing what the snooping establishment can and cannot do. Most spying now goes on under regulations promulgated by the spies themselves.

Ervin cannot bear the burden alone. Liberals, many of whom have been curiously inactive, must mount a major campaign to resist and reverse the current trend toward a police state, while still providing adequate controls to enable the Government to deal with genuine threats of violence. So must true conservatives, if their proclaimed commitment to preserve liberty is sincere.

[From the Washington (D.C.) Daily News, Feb. 5, 1970]

ARMY SNOOPS ON CIVILIANS' POLITICAL ACTS

(By John Cramer)

Sen. Sam Ervin, D-N.C., the Constitutional Rights subcommittee chairman, may soon call special hearings on the recent disclosure that the Army has its own small regiment of plain-clothesmen checking on citizens who lawfully engage in protest movements.

And on the further disclosure, denied but not quite believed, that the Army is planning a data bank to provide "instant" information on the citizens investigated.

Both disclosures came in an article by Christopher H. Pyle, a former Army intelligence captain, in the January issue of the year-old, highly impressive Washington Monthly.

The Pyle article says in effect:

If you were a Federal employe who helped lead Monday's brown-bag boycott against Pentagon cafeterias, your activities probably were observed surreptitiously . . . duly recorded . . . and reports fanned out to Army installations even in Alaska, Asia and Europe by some of the almost 1,000 under-cover Army investigators "keeping track of political protests of all kind—from Klan rallies in North Carolina to anti-war speeches at Harvard."

That if you were active on Moratorium Day, no matter how legally, you are almost a 100 per cinch to make the Army's daily and weekly reports to its far-flung stations.

ARMY CLAIMS NEED

The Army justifies this on the ground that it needs the information to play its necessary role in assisting civilian authorities in time of civil disturbances.

Mr. Pyle insists, and Sen. Ervin agrees, that the Army program goes far beyond its legitimate needs.

The nationwide surveillance network Mr. Pyle writes about is based at Ft. Holabird, Baltimore. Its principal function, he says, is "to protect the Army from espionage, sabotage, and subversion. Its main job is to investigate personnel being considered for security clearances, and to inspect military installations for adequate physical, wire-communications, and document security."

But in practice, his article says:

Holabird uses "soldier agents . . . personable young men" to keep watch on "virtually every political activist group in the country" . . . including "the Southern Christian Leadership Conference, Clergy and Laymen United Against the War in Vietnam, the Civil Liberties Union, and the National Association for the Advancement of Colored People."

These "soldier agents" are given only minimum training.

The information they collect is distributed by a group "commanded by a major and run by a civilian. They supervise the work of about a dozen persons who work in shifts around the clock. Most are WAC typists . . ."

This force "rarely has the time to verify, edit or interpret" the reports they send out to Army installations world-wide.

But despite this, the reports are used by other agencies, including Civil Service Commission, in evaluating the fitness for duty of Federal job applicants, and Federal employes already on the job.

PUBLISHES BLACKLIST

Mr. Pyle also wrote:

"The Army also periodically publishes an eight-by-ten-inch, glossy-cover paperback booklet known within the intelligence circles as the 'blacklist'.

"The 'blacklist' is an encyclopedia of profiles of peoples and organizations who, in the opinion of the Intelligence Command officials who compile it, might 'cause trouble for the Army' . . .

"Sometime in the near future the Army will link its teletype reporting system to a computerized data bank.

"This computer . . . will be able to produce instant printouts of information in 96 separate categories. The incident reports will relate to the Army's role in domestic disturbances, and will describe such occurrences as bombings, mass violence and armed thefts.

"The personality reports—to be extracted from the incident reports—will be used to supplement the Army's seven million individual security clearance dossiers and to generate new files on the political activities of civilians wholly unassociated with the military."

If it doesn't scare you, it should. It scares me!

[From the Chicago (Ill.) News, Jan. 15, 1970]

ARMY SPYING ON CIVILIANS, EX-INTELLIGENCE MAN SAYS

(By Robert Gruenberg)

WASHINGTON.—The Army has 1,000 plain-clothes agents spying on civilian activities ranging from antiwar protests to Ku Klux Klan rallies, a former Army intelligence officer has charged.

Aside from violence-prone groups that the Army first decided in 1965 to watch, those under surveillance now include the National Assn. for the Advancement of Colored People, the Southern Christian Leadership Conference, the American Civil Liberties Union, and Clergy and Laymen United Against the War in Vietnam, according to former Capt. Christopher H. Pyle.

Pyle, a doctoral candidate at Columbia University, recently completed two years' service in Army intelligence.

Writing in the current Washington Monthly, Pyle says Army agents frequently have posed as press photographers covering antiwar demonstrations, students and even as "residents" in Resurrection City, the mass assembly of poor blacks in Washington in the summer of 1968.

Originally, Pyle said, the Army's purpose was to "provide early warnings of civil disorders" it might be called upon to quell.

The program has expanded, he said, so that "today the Army maintains files on the membership, ideology, programs and practices of virtually every activist political group in the country."

The information is funneled by a teletype network to major troop commands in this country daily, while its files are available to the U.S. Civil Service Commission, the Atomic Energy Commission and military intelligence units.

The system will soon be hooked into a computerized data bank at Fort Holabird, in Baltimore, and will provide, among other things, Pyle said, "personality reports" on civilians "wholly unassociated with the military."

Pyle added that the army's files, unlike those of the FBI's national crime information center, "will not be restricted to the storage of case histories of persons arrested for (or convicted of) crimes."

[From Computerworld, Feb. 11, 1970]

ARMY FILES DATA ON LAWFUL CIVILIAN POLITICAL ACTIVITY

(By Joseph Hanlon)

BALTIMORE, MD.—The Army now has a computerized data bank on lawful civilian political activity.

The computerized file of Civil Disturbance Incident Reports is one of several data banks maintained by the U.S. Army Intelligence Command Headquarters at Fort Holabird, here.

The incident reports actually include not only "civil disturbances," but lawful and non-violent meetings and lectures as well, and apparently include groups such as the American Civil Liberties Union.

Data from the file is available to other government agencies doing security checks, according to the Army. Primary input to the file appears to be newspaper clippings, with little or no attempt made to verify them.

CONGRESSMEN PROTEST

Letters of protest have been sent to Army Secretary Stanley R. Resor by the two congressmen most concerned about privacy: Sen. Sam J. Ervin, chairman of the Senate Constitutional Rights Subcommittee, and Rep. Cornelius E. Gallagher, chairman of the House Right to Privacy Inquiry.

The existence of the data bank was first revealed in the January *Washington Monthly* in an article by Christopher H. Pyle, who recently completed two years as a captain with Army Intelligence.

COMPUTER CORRELATES TRENDS

The incident reports are gathered from 300 field offices throughout the country, and are sent here by Teletype. The reports are then punched into cards and processed by computer.

An Army spokesman said that the computer "can correlate trends and like incidents" and could compile a list of all of the incidents in which a particular person has been involved. Other details of the computer operation are not available.

Incident reports are gathered by the local field offices from the police and by clipping local newspapers. The headquarters subscribes to the major news services such as the Associated Press, and articles relating to incidents are filed.

The FBI is also a major source of information, according to the spokesman. Finally, some information is obtained by undercover agents.

The justification for the data bank, according to the Army spokesman, is that the Army needs information of potential civil

disorders that it might be called upon to quell. In addition to collecting incident reports, the Intelligence Command Headquarters also collects information on "possible subversive activity" by civilians, and the "names and addresses of influential people in certain groups."

The Army maintains the name and address list in order to call on leaders for help in quelling riots, according to the spokesman. But Pyle suggests that the list is actually maintained in order to give the Army a list of people to be arrested.

ACLU INCLUDED?

The Army admits that incident reports include lawful meetings, and Pyle claims that the Army is building files on groups that are unlikely to be involved in civil disturbances. "The Army maintains files on the membership, ideology, programs, and practices of virtually every activist political group in the country," he said.

"These include not only such violence-prone organizations as the Minutemen and the Revolutionary Action Movement, but such nonviolent groups as the Southern Christian Leadership Conference, Clergy and Laymen United Against the War in Vietnam, the American Civil Liberties Union, Women Strike for Peace, and the National Association for the Advancement of Colored People (NAACP)."

Pyle told CW that while touring an Army Intelligence office, he saw a stack of incident report cards. The top card, he said, contained a single notation: that Arlo Tatum, executive secretary of the Central Committee of Conscientious Objectors, had delivered a speech at the University of Oklahoma on the legal rights of conscientious objectors.

OTHER DATA BANKS

The Army Intelligence Command Headquarters maintains several data banks here. A noncomputerized one is the Investigative Records Repository (IRR) used to maintain information for security checks of Army personnel and civilian Army employees. Information in the IRR files is available to the FBI, the Central Intelligence Agency, and to other government agencies for security checks.

The Intelligence Command probably exchanges data between its various data banks as needed, so that agencies requesting information from the IRR for a security check can probably get information from the incident reports as well.

Pyle charged that the incident reports "will be used to supplement the Army's seven million individual security-clearance dossiers and to generate new files on the political activities of civilians wholly unassociated with the military." The Army spokesman refused to discuss access rules for the incident reports. Pyle sees two dangers posed by the data bank of incident reports. First, since the incident reports are filed without much, if any, check, it is likely that "unverified and potentially erroneous and irrelevant reports" will get into the security-clearance dossiers of the IRR.

Second, Pyle notes that "unlike similar computers now in use at the FBI's National Crime Information Center in Washington," this computerized data bank is not restricted to the storage of case histories of people who have been arrested. Rather, it "specializes in files devoted exclusively to descriptions of the *lawful* political activity of civilians."

STATES ALSO HAVE DATA BANKS

The Army is not the only organization maintaining data banks of legal political activity. Many state police departments also do, and in some cases the information is available to the public. Most such files are not computerized, but since the Army Intelligence draws on state police files, this information probably ends up in the Army's computerized data bank.

The Massachusetts State Police Division of Subversive Activities maintains such a data bank. In its annual report for fiscal 1968, the division said that it had set up files "on peace groups, civil rightists, and other such groups." During that year, it "performed 4,034 security name checks."

Such checks are not just for state agencies. Although they are not authorized to do so, they will give out information to private concerns who call and ask. CW and other Boston newspapers have been able to check on individual files merely by telephoning the division and saying that they were considering hiring the individual.

NEW JERSEY FILE ILLEGAL

In New Jersey, the state attorney general had set up a reporting system in which the state police received reports on protests, rallies, and other demonstrations, whether legal or illegal.

Reports were to include basic personal data on the individuals involved, such as their names, ages, occupations and employers, names and addresses of associates, financial status, and past activities.

Last year, State Superior Court Judge J.S.C. Matthews ordered the attorney general to stop collecting such reports and "destroy all forms and files connected" with the reporting system.

Matthews declared that "the secret files that would be maintained as a result of this intelligence gathering system are inherently dangerous and by their very existence tend to restrict those who would advocate, within the protected areas, social and political change."

DOES NEW YORK HAVE A FILE?

New York State's computerized criminal data bank may also contain such a file. Plans call for it to contain a "crime intelligence file" which would include suspected Mafia members. This file is being used to check on possible Mafia associations with stock brokerage house employees [CW, Sept. 17].

[From the Chicago Sun-Times, Feb. 13, 1970.]

PLAN HEARINGS ON ARMY'S POLITICAL DATA BANK

(By Morton Kondracke)

WASHINGTON.—A House subcommittee will hold hearings in two or three weeks on the Army's computerized system for gathering political information of civilians, a committee aide said Wednesday.

Timing of the hearings depends on when the Army responds to inquiries sent to the Pentagon two weeks ago by Rep. Cornelius Gallagher (D–N.J.).

Gallagher, chairman of the House Government Operations Committee's right-of-privacy inquiry, is one of three legislators to have requested information on the Army system after its existence was disclosed by a former intelligence officer.

None of the three has received a response from the Army. Besides Gallagher, the letters were sent by Senators Abraham Ribicoff (D-Conn.) and Sam Ervin (D-N.C.).

Concern about activities of the CONUS (for Continental U.S.) intelligence branch of Army intelligence was first aroused by former Capt. Christopher Pyle in a magazine article in the Washington Monthly.

Pyle, now a graduate student at Columbia University, charged that the Army "has gone far beyond the limits of its needs and authority in collecting domestic political intelligence."

Though the Army has not yet responded to the legislators, it did acknowledge to newsmen that information is maintained on civilians "who have been active in past civil disturbance activity" and that it keeps computerized files on "civil disturbance incidents."

HOW IT'S GATHERED

Ribicoff asked the Army specifically whether the information is gathered by the Army itself or whether data is supplied by other agencies.

The Army told reporters that its information comes from local, state and federal law enforcement agencies, though Pyle said it also was gathered by army intelligence agents posing as press photographers, college students and "residents" at Resurrection City.

The Army said its agents never engaged in undercover activity to gather domestic political intelligence.

COMPUTERIZATION CRITICIZED

Inquiries by Gallagher and Ervin were directed especially at the computerization of the Army information.

Long a battler against construction of a national data bank, Gallagher said the Army system described by Pyle seemed to be "a nationwide data bank of information about the constitutionally protected protest and dissent activities of many American organizations."

Gallagher told Army Sec. Stanley Resor in a letter that "I am deeply concerned about the implications of collecting dossiers on Americans who are pursuing constitutionally protected activities, especially when they are to be inextricably embedded in immediately available form in a computerized data system."

REBUTTAL?

Gallagher asked Resor whether individuals would be permitted to review and correct information gathered on them. He also asked about the Army's authority for operating the system, its use and source of funds.

Replying to reporters' questions, the Army insisted that its computerized files were not arranged by individual but by "incident" and were used only "for analysis of trends and identification of potential trouble spots."

But a Gallagher aide, Charles Witter, said testimony in previous computer-control hearings had shown that as long as information on individuals is stored in a computer, under whatever subject heading, it can be retrieved.

SECRET SERVICE LINK

Witter said the Gallagher inquiry will also look into whether there is a link between the Army system and the data bank maintained by the Secret Service.

That system, complained of by Ervin, permits collection of information on cranks, gate crashers and persons who threaten high government officials, but also on "anti-American or anti-U.S. government demonstrations in the U.S. or overseas" and individuals and groups intending to "embarrass" government officials.

[From the Minneapolis Tribune, Feb. 15, 1970]

U.S. ARMY RIVALS FBI IN SURVEILLANCE OF DOMESTIC ACTIVISTS

(By Frank Wright)

WASHINGTON, D.C.—Not long ago Conrad Lynn, an author of draft evasion materials replaced Yale University Chaplain William Sloan Coffin as the principal speaker at a Philadelphia, Pa., rally.

Lynn's appearance at the antiwar meeting was sponsored by the Philadelphia chapter of the Women's Strike for Peace. About 200 people came to the First Unitarian Church to hear him.

The same week the Rev. Albert Cleage Jr., founder of the Black Christian Nationalist Movement in Detroit, Mich., spoke to about 100 people at the Emmanuel Methodist Church there on the subject of black unity and the problems of the ghetto.

Also that week, about 300 members of Veterans for Peace and Women for Peace held a demonstration at the Museum of Science and Industry in Chicago, Ill.

They were protesting an armed forces exhibit.

In each case the gathering was peaceful, lawful and totally civilian in nature.

But, also in each case, agents of the U.S. Army observed the event and made a report. The reports were quickly transmitted by the Army's intelligence command to every major troop headquarters in the continental United States, Hawaii, Alaska, Panama and Europe.

These are not isolated incidents of occasional military surveillance of civilian political activity.

To the contrary, they are evidence of the latest example of the continuing growth of federal "Big Brotherism"—meaning the encroachment of the national government on individual privacy—in this country.

For four years, it develops, the Army has been closely watching civilian politics. Nearly 1,000 plain-clothes agents working out of 300 offices across the nation keep track of all kinds of protests.

The source of this disclosure is Christopher H. Pyle, a former Army intelligence officer. Pyle, 30, received an Army commission in 1961 upon graduation from Bowdoin College, Brunswick, Maine, where he was in the Reserve Officer Training Corps. He obtained permission to delay his active duty and earned a law degree and a master's degree in political science from Columbia University.

He entered the Army in 1966 as a first lieutenant and was assigned to the intelligence branch at Fort Holabird in Baltimore, Md. He was discharged as a captain in 1968 and now is a candidate for a doctor of philosophy degree at Columbia.

He described the Army's civilian-watching network in an article in the latest edition of the Washington Monthly, a journal focusing on politics and government in the national capital.

"When this program began in the summer of 1965 its purpose was to provide early warning of civil disorders which the Army might be called upon to quell. In the summer of 1967, however, its scope widened to include the political beliefs and actions of individuals and organizations active in the civil rights, white supremacy, black power and antiwar movements," Pyle said.

"Today the Army maintains files on the membership, ideology, programs and practices of virtually every activist political group in the country. These include not only such violence-prone organizations as the Minutemen and the Revolutionary Action Movement, but such nonviolent groups as the Southern Christian Leadership Conference, Clergy and Laymen United Against the War in Vietnam, the American Civil Liberties Union, Women's Strike for Peace and the National Association for the Advancement of Colored People," Pyle said.

"What is perhaps most remarkable about this domestic intelligence network is its potential for growth," Pyle said. "Uninhibited by congressional or presidential oversight, it has already expanded to the point where it in some ways rivals the FBI's older internal-security program.

"If the Army's fascination with the collection of domestic intelligence continues to grow as it has in the recent past, the intelligence command could use military funds to develop one of the largest domestic intelligence operations outside of the Communist world," he said.

The Army obtains its information from state and local police, the FBI, newspapers and, on occasion, its own undercover operations. Army agents have posed as press photographers covering antiwar protests, as students on college campuses and as residents of Resurrection City, where the poor people lived during their march on Washington in 1968, according to Pyle.

He said the Army also recruits civilian informants—sometimes for pay but usually via appeals to patriotism. For example, he said, Columbia recently gave students authority to forbid routine inspection of their academic records by government investigators; but the 108th Military Intelligence Group in New York City quietly persuaded an employee of the registrar's office to provide information from the closed files on the sly.

Army agents file hundreds of reports each month on events and personalities, Pyle said. They are distributed daily and weekly over a nationwide wire service completed in the fall of 1967.

In addition, according to Pyle, the Army periodically publishes a paperback booklet known in the intelligence trade as the "blacklist." It contains profiles on people and organizations who, in the opinion of the officials who compile it, "might cause trouble for the Army," Pyle said.

The voluminous files, Pyle said, are soon to be computerized and stored in a central location at Fort Holabird's Investigative Records Repository.

This means their audience is likely to be substantially broadened, since numerous federal agencies—including the FBI, Secret Service, passport office, CIA, National Security Agency, Civil Service Commission, the Navy and the Air Force—have access to the repository and its data banks.

Pyle conceded that the Army, in order to help civilian authorities, needs a certain amount of information to provide early warning of incidents "likely to provoke mass violence."

But, he asked, "must it also distribute and store detailed reports on the political beliefs and actions of individuals and groups?"

He concluded that the Army has gone much too far.

Pyle's case has been taken up by Sen. Sam Ervin, D-N.C., who is known primarily as a segregationist on civil rights and a hard liner on law enforcement, but who also has a reputation as a champion of individual privacy.

Acting as chairman of the Subcommittee on Constitutional Rights, Ervin has undertaken a government-wide investigation of federal data banks and the extent to which they infringe on a person's desire to be left alone.

The first step is a survey of all departments and agencies to determine, as Ervin put it in a Senate speech, "what data banks are being developed and how they operate." The survey is still in progress.

In the same speech he called Pyle's disclosures "disturbing" and added, "Clearly, the Army has no business operating data banks for surveillance of private citizens, nor (does the Army) have any business in domestic politics."

Ervin also expressed concern over "data drives" undertaken by other agencies and said many of them were "unconscionable."

As examples, he mentioned activities of the Secret Service, the Health, Education and Welfare Department (HEW) and the Bureau of the Census.

The Secret Service, he noted, has asked all federal employees to provide it not only with information about plots to do violence to high government officials but also with information about people who want to make personal contact with those officials to redress grievances, persons who may be planning to "embarrass" those officials in some way and persons who participate in "anti-American or anti-U.S.-government demonstrations."

HEW, Ervin said, is sending to Medicare and Social Security recipients a 72-question survey making detailed inquiries into their financial condition and other aspects of their lives.

Those who fail to respond, he said, are pressured by follow-up letters and telephone calls from federal officials without ever being told that compliance is voluntary and not legally mandatory.

An earlier investigation by his subcommittee, Ervin said, showed that during the last three years the Census Bureau had conducted 87 surveys for 24 other agencies covering more than 6 million people.

"Everything from bomb shelters to smoking habits to birth control methods was included in these 'people studies'," Ervin said. "And usually with spaces for Social Security number, address and phone number on the form. All responses were fed into computers."

He said those in charge of some of the studies had told his subcomittee that it was "bad psychology" to tell the recipient that the studies were voluntary. It was better, they told the subcommittee, to give him the impression his replies were "required on pain of penalty."

Ervin called for new legislation to supervise and restrict the collection of data and, summing up, said:

"In the total recall of vast computer systems rests a potential for control and intimidation which is alien to our form of government and foreign to a society of free men.

"Regardless of the purpose, regardless of the confidentiality, regardless of the harm to any one individual, the very existence of government files on how people exercise First Amendment Rights—how they think, speak, assemble and act in lawful pursuits—is a form of official psychological coercion to keep silent and to refrain from acting.

"Because it is more insidious, it is a coercion far more effective and intimidating than any tyranny experienced by the founding fathers."

CIVILIAN DATA BANKS CONTINUE, DESPITE ARMY DISAVOWAL

(By Morton Kondracke)

WASHINGTON.—The Army continues to maintain computerized files on the political activities of thousands of civilians despite assurances it gave congressmen Thursday that it has discontinued the practice, The Sun-Times learned.

Microfilmed reports and a computerized index are maintained at the Pentagon on such individuals as Mrs. Martin Luther King Jr., folk singers Arlo Guthrie and Phil Ochs, black Georgia state Rep. Julian Bond and two retired military officers who have opposed the Vietnam War, Rear Adm. Arnold E. True and Brig. Gen. Hugh B. Hester.

The Army's general counsel, Robert E. Jordan III, sent letters to congressmen Thursday advising that a data bank at the Army Intelligence Command at Fort Holabird, Md., had been discontinued.

But sources who could not be identified said that the Holabird computer was only one of several files the Army keeps on civilian political activity.

It was learned that Rep. Cornelius Gallagher (D-N.J.) and Sen. Sam Ervin (D-N.C.) plan to continue their inquiries on Army data banks despite Jordan's letter. Ervin had asked the Army for a list of all its data banks.

CONFLICT APPARENT

In his letter, Jordan mentioned only one. He said: "The civil disturbance data bank (at Holabird) was discontinued since, after study, it was determined that the data bank was not required to support potential Army civil disturbance missions."

Jordan's letter also said that an "identification list" of persons "who might be involved in civil disturbance situations" had also been discontinued, but Gallagher was known to be studying whether the Army continues to maintain other "blacklists."

Information supplied to The Sun-Times also appears to conflict with Jordan's contention that the Army's "limited field of interest removes from legitimate concern of the Army minor forms of disturbances and

lawful activities not likely to lead to major disturbances involving use of federal resources."

Jordan declined to respond when an interview on the conflicting information was requested. Army information officers said they could not answer reporters' questions because of a suit filed by the American Civil Liberties Union to enjoin domestic intelligence gathering, even though the suit was not a criminal proceeding.

FAIL TO MENTION

Sources said that Jordan's letter failed to mention these domestic intelligence files:

(1) A microfilm data bank located at the Pentagon in the Directorate of Civil Disturbance Planning and Operations—the "domestic war room"—and maintained by the Counter-Intelligence Analysis Division of the Office of the Army's Assistant Chief of Staff for Intelligence.

Mrs. King, Bond, the folk singers and the military officers are only a few of thousands of persons on whom information is kept in the microfilm, the sources said.

(2) Although the computerized file at Fort Holabird has been discontinued, the information it contained is still on file at seven Military Intelligence Group headquarters around the country and could be reassembled.

Each group maintains files on domestic political activity in its region. Among them is the 113th MIG, Fort Sheridan, Ill.

(3) Smaller files are maintained at the G-2 office of each of the six Army Commands in the Continental United States and the military district of Washington.

(4) Still another political data bank is kept at the headquarters of the Continental Army Command, Fort Monroe, Va.

Jordan's letter went to congressmen in response to their inquiries about an article published in a Washington magazine by a former Army officer. Jordan confined his answers to rebuttal of the officer's assertions.

[From the Washington Star, Feb. 28, 1970]

ARMY STILL MAINTAINING FILES ON CIVILIANS' POLITICAL ACTIVITY

The Army acknowledges that it maintains files on the political activities of civilians other than the computerized political data bank it told congressmen it was closing down.

It also conceded yesterday that information that formerly was kept in the computer is still on file and has not been ordered destroyed.

An Army spokesman confirmed that a microfilm file is kept on civilian political activity by the Counter-Intelligence Analysis Division of the office of the Army's assistant chief of staff for intelligence.

The spokesman, an official in the office of Army General Counsel Robert E. Jordan III, said that very few files were kept on individual civilians. He could neither confirm nor deny existence of files on several specific individuals.

Sources who asked not to be identified reaffirmed, however, that individual and organizational files number in the thousands and that they include data on such individuals as Mrs. Martin Luther King Jr., folk singers Arlo Guthrie and Phil Ochs and Georgia State Rep. Julian Bond.

SOME GROUPS MENTIONED

In addition, the sources said, files are kept on such organizations as the American Friends Service Committee, the American Civil Liberties Union, the Center for the Study of Democratic Institutions, the John Birch Society, Clergy and Laymen Concerned about Vietnam and the New Mobilization Committee to End the War in Vietnam.

Files are also kept on publications, including the magazine the Nation, the newsletter of Young Americans for Freedom, the New Left's National Guardian and the underground Berkeley Barb.

The eight persons indicted in connection with disorders at the Democratic National Convention in 1968 are also listed, sources said.

While admitting existence of the microfilm file, the Army spokesman sought to play down its size and importance. He said it was an uncomputerized "office file" kept "for analysis purposes" by an agency charged with "answering specific questions" posed by top Army officials.

He said questions that might be posed to CIAD include "what likelihood is there that violence will occur this summer?" And "where is it likely to occur?" In case a mass march is planned somewhere. Another question would be "what likelihood is there that violence will occur which local authorities cannot handle?"

CIAD would use its files, which "consist primarily of FBI reports," to get an answer for the Army, based on the expected size of a march and the people and organizations planning it, he said.

CIAD also has a role in determining which U.S. cities might experience large riots. The Army now plans to be able to handle eight major disorders at once, a reduction from the 25 once planned for.

The spokesman said that there was an "innocent bureaucratic reason" for the CIAD files.

FBI POLICY CITED

He said, "The FBI has a policy that, if it once gives you a report, it won't give it to you again. So the analysis people have to keep the reports they've worked on before."

The spokesman said the files reflect work that CIAD has done. "This is far different from a data bank which contains whole reams of information," such as the one the Army maintained at Ft. Holabird in Baltimore and which was discontinued after pressure from Congress.

The spokesman said that a review of the Holabird data bank was under way before congressmen became aroused by a magazine article about it written by a former intelligence officer.

He said 50 congressmen sent inquiries to the Army about it—15 by personal letter to the Secretary of the Army.

The Holabird data bank was ordered discontinued on Feb. 19, he said, and an announcement was made Thursday to the congressmen. The announcement made no mention of the CIAD microfilm files or of the fact that formerly computerized information is still in files at Ft. Holabird, and at seven military intelligence group headquarters around the nation.

NO DESTRUCTION ORDER

No order has been issued yet for the destruction of those files, or of still other files maintained by the Continental Army Command at Ft. Monroe, Va., the spokesman acknowledged.

The Justice Department is the agency charged by President Nixon with primary responsibility for civil disorders.

The spokesman said, "We've been pushing for a long time to get Justice and the FBI to take over this responsibility completely.

"Justice does not (now) have the capability, in our minds, to do the job.

"We have to have an answer if we're asked, 'Will there be violence,' "

"Until we are satisfied that Justice can answer the question satisfactorily, we have to do it ourselves."

[From the Charlotte (N.C.) Observer, March 1970]

DATA BANKS FOR ARMY RILE ERVIN

(By Davis Merritt)

WASHINGTON.—Angered by the Army's use of data banks to keep track of political protesters, Sen. Sam Ervin (D., N.C.) announced Tuesday a governmentwide study of the surveillance of private citizens.

(Such civilian intelligence operations by the Army were recently disclosed in the article in the Washington Monthly magazine, which was reprinted in The Herald.)

Ervin said the Army and other government agencies are creating "monsters of surveillance whose very existence is often a form of coercion" to silence political protest.

Through his Senate Constitutional Rights Subcommittee, the senator will try to identify and control the many and massive intelligence-gathering programs within the government.

Citizens' First Amendment rights to free speech, assembly and petition will be "devastated beyond repair unless there is all-out control over the ever-curious executive branch of government," Ervin said.

The data banks are "garbage bins for the products of unwarranted invasions of privacy" and, "when hooked together, form a grave threat to Americans."

Ervin is particularly miffed about a recently disclosed Army system that keeps track of citizen anti-war protests.

Called CONUS, the secret Army data bank includes clippings from newspapers about campus and city-street protest activity and memos from intelligence agents based on casual conversations.

Ervin, early this month, wrote to Army Secretary Stanley Resor asking what business the Army had collecting data on civilians and what that had to do with defending the country.

He hasn't received a reply, and that makes him angry, too.

The military, he said, should have no role in civilian politics.

Likewise, he said, referring to previous data-bank discoveries by his subcommittee, the Secret Service has no business taking names of anti-war marchers, HEW has no business blacklisting scientists for their political beliefs, and government agencies have no business asking government employes how they spend their spare hours.

Ervin wants the study of all government data banks to help write laws giving citizens the right to see and answer charges made against them during intelligence-gathering operations. He also wants to control the improper exchange of information between agencies.

"The public does not have enough knowledge of these operations," he said. "There is no law requiring that the agencies divulge what they are doing."

[From the San Antonio (Tex.) Express and News, Mar. 1, 1970]

FORT SAM FILE WATCHES CIVILIANS

WASHINGTON.—The Army is maintaining computerized files at Fort Sam Houston on the political activities of civilians from San Antonio and elsewhere in the four-state 4th Army area.

The existence of the political "data bank" at Fort Sam was revealed this past week after the Army told congressmen it was closing its political data bank at Fort Holabird in Baltimore.

Later the Pentagon acknowledged that it was also maintaining the political data banks at seven other locations, including Fort Sam Houston.

The situation came to light after Rep. Cornelius Gallagher, D-N.J., and Sen. Sam Ervin, D-N.C., began quizzing Pentagon officials about reports of military intelligence activity in the realm of civilian politics.

Under fire, the Army's general counsel, Robert E. Jordan III, sent letters to congressmen Thursday advising that the data bank at Fort Holabird had been closed.

Sen. Ervin commended the Army Saturday for discontinuing the Holabird operation, but said further action is necessary

to protect the First Amendment freedoms of American citizens.

"The essential factor here was not necessarily the computerization of the files but the fact of the Army surveillance of citizens," Ervin said.

"Although I have little, if anything, in common with the attitudes and views of some of the persons who are probably in the Army files, the very existence of such unconstitutional surveillance by the Army is, I believe, destructive of our form of government," he said.

The senator called on the Army to "regroup and redefine their strategic objectives, lower their sights and re-identify their enemy. Under our Constitution, that enemy is not the American citizen."

The Army conceded that information formerly kept in the Holabird computer is still on file and has not been ordered destroyed.

It is the Pentagon's position that such files are necessary for military assessment of the possibility of domestic violence.

According to an Army spokesman, political intelligence gathering and analyses are unwelcome functions carried out by the Army only because the Justice Department is not capable of handling them yet.

Justice is the agency charged by President Nixon with primary responsibility for civil disorders.

The spokesman said, "We've been pushing for a long time to get Justice and the FBI to take over this responsibility completely.

"Justice does not have the capability, in our minds, to do the job.

"We have to have an answer if we're asked, 'will there be violence?'

"Until we are satisfied that Justice can answer the question satisfactorily, we have to do it ourselves.

"Our hope is, we can get out of this entirely. We hope Justice will take over this responsibility themselves. When they are able to do so to our satisfaction, that analysis office—the Counter Intelligence Analysis Division—will close down entirely."

Microfilmed reports and a computerized index are maintained at CIAD on such individuals as Mrs. Martin Luther King Jr., folk singers Arlo Guthrie and Phil Ochs, black Georgia State Rep. Julian Bond and two retired military officers who have opposed the Vietnam war, Rear Adm. Arnold E. True and Brig. Gen. Hugh B. Hester.

In addition, sources who could not be identified said, files are kept on such organizations as the American Friends Service Committee, the American Civil Liberties Union, the Center for the Study of Democratic Institutions, the John Birch Society, Clergy and Laymen Concerned About Vietnam and the New Mobilization Committee to End the War in Vietnam.

Files are also kept on publications, including the magazine The Nation, the newsletter of Young Americans for Freedom, the new left's National Guardian and the underground Berkeley Barb.

The eight persons indicted in connection with disorders at the Democratic National Convention in 1968 are also listed, sources said.

While admitting existence of the microfilm file, the army spokesman sought to play down its size and importance. He said it was an uncomputerized "office file" kept "for analysis purposes" by an agency charged with "answering specific questions" posed by top army officials.

Questions that might be posed to CIAD include, he said, "What likelihood is there that violence will occur this summer?" and "Where is it likely to occur?" In case a mass march is planned somewhere, another question would be, "What likelihood is there that violence will occur which local authorities cannot handle?"

Although the computerized file at Fort Holabird has been discontinued, the information in it still is on file at seven military intelligence group headquarters around the country and could be reassembled.

Each group maintains files on domestic political activity in its region.

The groups are the 108th MIG, Fort Devens, Mass.; the 109th MIG, Fort Meade, Md.; the 111th, Fort McPherson, Ga.; the 112th, Fort Sam Houston; the 113th, Fort Sheridan, Ill.; the 115th, the Presidio, San Francisco; the 710th Military Intelligence Detachment, Hawaii, and the 116th MIG, Washington, D.C.

"The business of the Army in such situations (as domestic violence) is to know about the conditions of highways, bridges and facilities," Sen. Ervin said. "It is not to predict trends and reactions by keeping track of the thoughts and actions of Americans exercising First Amendment freedoms.

"If ever there was a case of military overkill, this is it . . ."

Secretary Jordan said, "The Army's domestic intelligence activity has been to a small degree in the civil sector, but only to focus upon civilian disorder, and the Army has long been pressing to have civilian governmental agencies meet even these intelligence needs."

[From the San Antonio (Tex.) Express and News, Mar. 4, 1970]

ARMY'S CIVILIAN SPYING SAID ENDED

Army intelligence officers in San Antonio and elsewhere throughout the nation apparently were back conducting only military business Tuesday with the task of destroying computerized files on the political activities of civilians reportedly completed.

The army last week ordered the information it collected in a computer the past three years on persons and organizations considered political activists, potential activists and potential participants in riots, destroyed.

A Pentagon spokesman said Tuesday the army had completed destroying the files. "Now that the civil disturbance operation has been discontinued, it will give them (Army Intelligence) more time for conducting security clearances on military personnel," the spokesman reported.

The order to destroy the information, fed into a computer, known as the "Databank of Domestic Political Activities," at Fort Holabird, Md., and supplied from seven Army intelligence units, including one located at Fort Sam Houston and downtown San Antonio, came after U.S. Rep. Cornelius Gallagher, D-N.J., informed the Army he would hold public hearings on the "validity and legality of such a program."

The 112th Military Intelligence Group is located here and was the operation which relayed information to the Data Bank for the 4th Army area although it is not part of the 4th Army.

The fact the San Antonio-based 112th was among those units feeding information on the political activities of civilians from San Antonio was confirmed by Army General Counsel Robert E. Jordan III, at the pentagon.

Officers in the 112th at Fort Sam Houston and at their downtown offices at the 301 Building, at 301 Broadway (formerly the Manion Building), were unwilling to discuss their operation. They also refused to discuss why the 112th maintained downtown offices as well as a building at Fort Sam Houston, and newsmen were not allowed inside their second-floor downtown office.

Meanwhile, San Antonio Chief of Police George Bichsel said there was no doubt in his mind some police information had been fed into the Data Bank files.

"We share information with the FBI and if they wished they too could have given the 112th this information," Bichsel added. He added that the Police Department did not "go around making reports" for the military, but just released information they asked for.

Asked if photographs taken of protestors of multi-family housing in the Edgewood Independent School District outside the Lulac anniversary banquet last Saturday at the Gunter Hotel by policemen were taken for Military Intelligence, Bichsel said he was positive they were not.

He said his department occasionally photographs individuals and groups involved in protests or demonstrations so the department would have a photo file available for its officers, if ever needed. "This does not imply they (demonstrators) are doing anything unlawful," Bichsel said.

[From the Chicago (Ill.) Sun-Times, Mar. 8, 1970]

ARMY CONDITIONS MET ON CIVILIAN INTELLIGENCE FILES?

(By Morton Kondracke)

WASHINGTON.—By its own stated conditions, the Army should be able shortly to give up its remaining intelligence files on civilian political activity.

The Army claimed it would give up all its political intelligence functions when civilian agencies are ready to assume them. Last week, the Justice Department said: "We are ready." James T. Devine, chief of the Justice Department's Civil Disturbance Group, said, "We are quite capable. We are qualified to do everything as far as advising the President is concerned."

JUSTICE RESPONSIBILITY

Under executive orders on civil disturbance preparation, the Justice Department is charged with advising the President when disorders have reached a point where federal action is necessary. The Army's responsibility, on orders from the President, is to move in as fast as possible to aid local authorities in putting down the disorder.

In furtherance of its responsibility, the Army constructed a $2,700,000 command post under the Pentagon's mall parking lot, created a Directorate for Civil Disturbance Planning and Operations to maintain a constant riot watch, trained several military task forces in riot control and formulated logistic plans necessary to perform disorder duty in eight cities simultaneously, if necessary.

To prepare for fast action, the Army also compiled thick "city books" on 150 U.S. cities, containing maps, lists of officials, locations of bivouac areas and communications facilities: It went beyond this, however, into areas from which it is now retreating under congressional pressure.

BLACKLIST COMPILED

The Army Intelligence Command at Fort Holabird in Baltimore established a computerized data bank on civil disturbance incidents and on individuals and organizations that might become involved in them.

To fill the bank, local military intelligence units, collected reports from local police, newspapers and personal observation and sent them by teletype to Baltimore. The Army also compiled "identification lists"—also known as "blacklists"—on persons who "might become involved in civil disturbance activity."

To get an idea which eight cities were most likely to be hit by disorder, the Army vested "analysis" responsibility in the Counter-Intelligence Analysis Division of the office of the assistant chief of staff for intelligence. CIAD compiled a microfilm file of FBI reports on individuals and organizations.

As it has happened, the Army has been called to actual riot duty only four times since 1942—once in Detroit in 1967 and in three cities after Dr. Martin Luther King Jr. was assassinated in 1968.

When a former Army intelligence officer, Christopher Pyle, described the computer and the blacklists in a recent magazine article, congressmen complained, and the Army announced it had stopped both projects.

QUESTIONS ANSWERED

What remains of the Army's civilian intelligence activity, so far as is known, is principally the microfilm file at CIAD. The Army has assured Rep. Cornelius Gallagher (D-N.J.) that it will destroy data that formerly fed the computer. It also is examining the need for another political file at Fort Monroe, Va.

An official in the Army general counsel's office said CIAD would give up its analysis functions and microfilm files when "we are satisfied that Justice can satisfactorily answer the question, 'Will there be violence?'"

Devine, at Justice, said his office can satisfactorily answer the question—and does so daily for the attorney general, the official responsible for advising the President on disorders.

A COMPARISON

Devine's equipment for doing so is a regular budget of $274,000, about 100 daily reports from the FBI and other agencies, 12 intelligence analysts, a computer that weekly prints out an 8-inch-thick set of books on the riot potential of every city in the nation, and a command post on the sixth floor of the Justice Department.

For sumptuousness, the Justice command post cannot compare to the Army's. Justice has what looks like a low-budget radio studio. The Army has a hushed "war room"—more impressive than the ones in movies—with computer consoles, instant communications linkups with any Army unit in the world's giant panels that can instantly show the map of any city in the nation.

For intelligence purposes, however, the Justice Department's Interdivisional Information Unit most logically surpasses the Army's CIAD. Both rely primarily on information gathered by the FBI, which is part of the Justice Department. Justice has a computer, while the Army does not. Justice has the authority to perform the intelligence function; the Army does not.

As a pentagon aide said, "We've been pushing for a long time to get Justice and the FBI to take over this responsibility entirely." If the Army is satisfied with Devine's assessment of Justice's readiness, the need for pushing seems at an end.

[From Computer World, Mar. 11, 1970]

ARMY DROPS DATA BANK BUT KEEPS BANK DATA

(By Joseph Hanlon)

FORT HOLABIRD, MD.—With much fanfare, the U.S. Army has abandoned its computerized data bank on lawful civilian political activity.

But the Army failed to report that a microfilm data bank with a computer-produced index, apparently containing much the same information, is in use in the Pentagon.

Furthermore, only the central data bank has been abandoned The input has not been destroyed, and could be easily reassembled. Even if the data bank is never reassembled, a soon-to-be-computerized index would enable the Army to reconstruct parts of the data bank as needed.

The abandoned data bank is the computerized file of Civil Disturbance Incident Reports maintained by the Army Intelligence Command Headquarters here. The incident reports included not only "civil disturbances," but lawful and nonviolent meetings and lectures as well. The American Civil Liberties Union and a labor union were included (CW Feb. 11, 25).

AMERICAN CITIZEN NOT THE ENEMY

Sen. Sam. J. Ervin (D-N.C.) Chairman of the Constitutional Rights Subcommittee, charged the Army with "unjustified interference into domestic political activities." "I suggest that the Army regroup, redefine their strategic objectives, and reidentify the enemy. Under our Constitution, that enemy is not the American citizen," he declared.

In a letter to Ervin and several other congressmen released last week, Army General Counsel Robert E. Jordan admitted that such a data bank existed, and that it had been used to compile "an identification list which included the names and descriptions of individuals who might be involved in civil disturbance situations."

Jordan said that the Army has ordered the destruction of all copies of the identification list, and that the use of "the civil disturbance data bank was discontinued since, after study, it was determined that the data bank was not required to support potential Army civil disturbance missions."

An Army spokesman said that use of the data bank was stopped Feb. 18. He also said that IBM 1401 used for the data bank had also been used for payroll and other command functions, and would continue to be used in those areas.

INPUT NOT DESTROYED

The spokesman was unable to say whether the data bank tapes had been erased, or if they had merely been placed in storage. Furthermore, he admitted that copies of the input to the data bank have not been destroyed, and that the status of these copies "is being reviewed."

Under the old procedure, 1,000 military field agents, as part of their job, collected newspaper clippings, police reports, and other information on "civil disturbances." These reports were sent to the seven Military Intelligence (MI) group headquarters, who forwarded them here to Fort Holabird for inclusion in the data bank.

Under the new procedure, the field agents still collect the same information and forward it to the seven headquarters, as before. Now, however, the headquarters keep the information and do not forward it to the central data bank.

Furthermore, the MI headquarters still have copies of everything which they sent to Fort Holabird. The Army spokesman admitted that the only real change in procedure under the new ruling is the elimination of the central data bank. A non-computerized version of the data bank exists, although dispersed to seven locations, and collection of information continues.

"COMPUTER-AIDED"

Jordan concluded his letter with the statement: "No computerized data bank of civil disturbance information is [now] being maintained." But that statement is correct only if one distinguishes between computerized and computer-aided. At least one computer-aided data bank of civilian disturbance information is still being used.

That data bank is maintained by the domestic intelligence section of the Counterintelligence Analysis Division (Ciad) of the Office of the Assistant Chief of Staff for Intelligence. An Army spokesman admitted that such a data bank existed, but refused any other comment.

Other sources report that the Ciad data bank is in the domestic war room of the Pentagon.

COMPUTERIZED MASTER INDEX

In his letter to the congressmen, Jordan reported the existence of a master index of the names of everyone ever investigated by a defense agency. Called the Defense Index of Investigations, it was established at Fort Holabird in 1965 and is presently being computerized.

"Data included in this index is limited only to the identification of an individual, the type of investigation conducted, date of completion, and the location of the investigation (for example, Army investigations are filed in the Investigative Records Repository). The data is placed on keypunched cards which must be alphabetically filed," Jordan said. Unofficial sources report that there are now over 18 million cards.

When the computer is installed, according to Jordan, information on these cards will be entered into the computer. "The purpose of this computer will be to rapidly identify and indicate the location of files needed in security investigations."

Army and Defense Department spokesmen declined to amplify on Jordan's statement. But other sources said that the index probably contained references to persons mentioned in the Civil Disturbance Incident Reports as well as those included in the Ciad data bank. If this is true, then the Army could easily recompile the data on anyone who had a listing in the civil disturbance incident report data bank. This could be done by checking the index for the name; if the index indicated a listing in the now abandoned data bank, the intelligence officer would only need to contact the seven MI offices to recompile the file.

OTHER ARMY FILES

The Army does not just investigate political activists. In fact, most of its investigations are in other areas. In his letter, Jordan noted: "The U.S. Army Investigative Records Repository, run by the Intelligence Command, has approximately 7 million files relating principally to security, loyalty, or criminal investigations of former and present members of the Army, civilian employees and contractor personnel."

Unofficial sources report that "contractor personnel" goes as far afield as employees of the Red Cross. Furthermore, they say that the Investigative Records Repository also contains information on aliens, including prospective spouses of Army personnel and aliens investigated because of complaints.

In all, ten Defense Department Agencies maintain data banks of investigative records. These agencies include the Navy, Air Force, Defense Atomic Support Agency, and the Defense Supply Agency.

A data bank is even maintained on newspaper reporters accredited to the Pentagon, and includes comments on "inaccurate reporting."

Access to files, according to Jordan, "is limited by regulation to specifically authorized Executive Branch agencies."

ERVIN CRITICAL

Sen. Ervin has been particularly critical of the Army's collection of data on civilians, calling it "a case of military overkill." He continued: "Regardless of the imaginary military objective, the chief casualty of this overkill is the Constitution of the United States.

CALLS FOR NEW AGENCY

Sen. Ervin concluded that Jordan's letter "provides a remarkable demonstration of the need not only for new laws but for a new agency to regulate data banks and protect individual privacy."

[From the Washington (D.C. Star, Mar. 28, 1970]

DESPITE DENIALS, ARMY SENDS SPIES TO RALLIES

(By Morton Kondracke)

Despite Army denials that it engages in such activity, a military intelligence unit in Washington regularly infiltrates and reports on civilian political groups.

And in spite of assurances the Army gave to a congressman, the unit has not destroyed its extensive political file on civilians. It has merely classified it to keep it secret.

Agents of the unit, the 116th Military Intelligence Group, have posed as newsmen and photographers at rallies to get pictures for their files and at one time the unit even

maintained a video tape truck marked "Midwest News."

NO LONGER HAS TRUCK

The truck and its taping equipment, purchased at the end of a fiscal year with unexpended funds, have been disposed of recently out of concern the civilian spying would be discovered and exposed.

Information on the unit's activities was given to the Sun-Times by sources who asked not to be identified. Col. Frederick Barrett, commander of the 116th, refused to grant a request for an interview saying Army regulations prohibited it.

Data on the 116th activities has been supplied to Rep. Cornelius Gallagher, D-N.J., who, with Sen. Sam Ervin, D-N.C., has been probing Army civilian intelligence gathering.

Both Gallagher and Ervin earlier this year announced plans to hold meetings on intelligence gathering and evaluation programs maintained by the armed services and aimed at civilians in this country. Gallagher, however, called off the proposed House hearings earlier this month.

UNIT NOT MENTIONED

In his announcement at that cancellation, Gallagher made no mention of the activities of the 116th. The Army has not replied to a series of questions about the 116th submitted 10 days ago.

The activities of the 116th appear to contradict official assurances given by the Army on Jan. 26 that it never engages in undercover operations in the civilian community.

In answer to a question about general intelligence activities, the Army said that "for some time, there has been a specific prohibition against military personnel undertaking such activities as undercover operations in the civilian community.

"Exceptions to this policy may be made by appropriate civilian officials, but none have been made."

Despite this statement, the 116th maintains a staff of 20 agents whose job it is to infiltrate political groups and to observe politically active persons in the Washington area.

POSE AS STUDENTS

Some of the agents have grown beards and long hair to pass as students on college campuses in the Washington area. Others pose as members of the working press to obtain pictures of those involved in political activities.

The pictures are kept on file and are reproduced for agents attending demonstrations to enable them to identify those participating.

The unit has furnished tape recorders to agents attending rallies so they can clandestinely record speeches and conversations.

The videotape-sound truck was driven to demonstrations by agents posing as television newsmen for the nonexistent "Midwest News."

At one large demonstration, the Nov. 15 anti-war march on Washington, intelligence agents were assigned to bridges along the Baltimore-Washington parkway to count the number of buses heading for Washington bearing demonstrators.

The political intelligence activities of the 116th are frequently undertaken in concert with two other groups, the 108th at Ft. Meade, Md., and the 902D, also located in Washington, which reports directly to the assistant chief of staff for intelligence.

Information collected by the 116th is transferred to a file of 5-by-7-inch index cards. The unit has several thousand such cards on file, each referring to a different activist in the Washington area.

The cards contain a picture of the person, his name, address, occupation and background, a list of the political groups to which he belongs, notes on political meetings and demonstrations he has attended, and a summary of his views on political issues.

One person known to be listed in the file is Julius Hobson, civil rights activist and former member of the Washington Board of Education.

Existence of such a file appears to contradict assurances the Army gave Gallagher that political intelligence records at local military intelligence groups would be destroyed.

The Sun-Times received information from the Army, however, that the only file so far destroyed was the computerized data bank maintained at the Army intelligence center at Ft. Holabird in Baltimore.

Information that formerly fed the computer is still at Holabird on paper, and no order has been issued to destroy it or files kept at the local level.

Similar files are located at military intelligence units at Ft. Devens, Mass.; Ft. Meade, Md., Ft. McPherson, Ga.; Ft. Sheridan, Ill.; Ft. Sam Houston, Tex.; San Francisco and Honolulu. Other files are located at Ft. Monroe, Va., and a microfilm file, containing FBI reports as well as Army information, is kept by the Army's counterintelligence analysis division in Alexandria, Va.

Shortly after Army general counsel Robert E. Jordan III gave Gallagher assurances about the destruction of these files, a meeting was held at the 116th to inform agents that the unit would continue most of its activities.

The only activity to be discontinued, the agents were told, was operation of the computer in Baltimore. The agents were told they would continue to infiltrate and monitor local political groups.

However, the agents were informed that all files and operations of the 116th were to be classified to prevent release of any information about them to either the press or Congress.

The agents were warned that disclosure of the information would subject them to court-martial or prosecution in civilian courts "for violation of national security."

UNITED STATES TO TIGHTEN SURVEILLANCE OF RADICALS

(By James M. Naughton)

WASHINGTON, April 11—The Nixon Administration, alarmed by what it regards as a rising tide of radical extremism, is planning to step up surveillance of militant left-wing groups and individuals.

The objective, according to White House officials, is to find out who the potential bomb planters and snipers may be before they endanger others.

Preparations for expanding and improving the domestic intelligence apparatus—informers, undercover agents, wiretaps—were disclosed in a series of interviews with key officials, who requested anonymity.

According to these officials, President Nixon is disturbed by the rash of bombings and bomb scares, courtroom disruptions and reports of small but growing numbers of young people who feel alienated from the American system.

PARALLELS ARE DRAWN

On March 12, the same day that bombs exploded in three Manhattan office buildings, Mr. Nixon met over dinner in the White House with Irving Kristol, professor of urban values at New York University.

One aide who attended the dinner said the discussion included attempts to draw parallels between young white Americans from middleclass backgrounds who are resorting to violence and the Narodniki—children of the mid-19th century Russian aristocracy who murdered Czar Alexander II, and between militant black nationalists here and Algerian revolutionaries.

Mr. Kristol told the President it was not unrealistic to expect the Latin American resort to political kidnapings to spread soon to Washington. Mr. Kristol confirmed the dinner meeting and said, "Some of these kids don't know what country this is. They think it's Bolivia."

Some, but not all, of Mr. Nixon's domestic advisers are convinced that the situation is critical. One of the more conservative aides contended, "We are facing the most severe internal security threat this country has seen since the Depression."

The officials have concluded that attempts to bring militants back into society's mainstream are as futile, as one stated it, "as turning off the radio in the middle of a ball game to try to change the score."

The official view is that extreme radicals cannot be won over with welfare, electoral or draft reforms or by White House rhetoric. "It wouldn't make a bit of difference if the war and racism ended overnight," said a highly placed Nixon assistant. "We're dealing with the criminal mind, with people who have snapped for some reason.

Accordingly, the Administration sees its prime responsibility as protecting the innocent from "revolutionary terrorism." The President said last month, when he asked Congress for broader Federal jurisdiction and stiffer penalties in bombing cases, that they were the work of "young criminals posturing as romantic revolutionaries."

TOUGHER PROBLEM TODAY

To keep tabs on individuals referred to by the President as "potential murderers" will require updating an intelligence system geared to monitoring the Communists three decades ago, the aides said.

They said it was easy to keep track of the Communists because they had a highly organized system that undercover agents could penetrate easily. But today's alleged anarchists are disorganized, operating in groups of three or four, and difficult to detect.

"We know there are people training themselves in certain forms of guerrilla warfare and the use of explosives," said an official, "but it's extremely difficult to answer the who, when and how."

A Nixon aide who is aware of the Justice Department's intelligence operations said there was no advance warning of the arson that destroyed a Bank of America branch in Santa Barbara, Calif., last month. He said that "We knew of the New York bomb factory" in a Greenwich Village townhouse, but only just before it exploded on March 6, killing three young people.

White House officials wonder aloud why one of the victims, Diana Oughton, 28 years old, once active in legitimate reform efforts, became a member of a militant faction of the Students for a Democratic Society.

"If we had a (phone) tap on Diana Oughton," a Presidential assistant said, "we might have arrested her before the bombs went off and nobody would have died."

SURVIVOR IS TRACED

The official said that Federal agents had traced a survivor of the Greenwich Village blast, Cathlyn Platt Wilkerson, to Canada, but he expressed * * * was not capable of pinpointing her activities before she became a fugitive.

Administration sources would not disclose details of the changes they are preparing in the intelligence mechanism, although they said a good deal of interdepartmental discussion about them was under way.

One suggestion was said to be the possibility of the Justice Department providing grants through the Law Enforcement Assistance Administration to local police departments for training in domestic intelligence gathering.

Only New York City and District of Columbia police men have adequate intelli-

gence systems, one official said, adding: "We need better trained people in metropolitan police departments so they can distinguish between a guy with a beard and a subversive."

The White House is aware of the political sensitivity of domestic intelligence gathering, which one aide described as "hangups in the question of snooping." He contended, however, that the Government was less interested in prosecuting individuals than in gathering information to "prevent the perpetration of an act of violence."

LIBERTIES GAIN SEEN

It would help to have "broader public awareness" of the need for improved surveillance techniques, he said. "One of the greatest disservices Senator [Joseph] McCarthy did to this country was to swing the pendulum so far that people no longer want to think about internal security," the official said.

He argued that it would, in fact, increase safeguards of the civil liberties of individuals to have a greater awareness of which members of society posed a threat.

"My concern is that sooner or later this is going to kill innocent people," the official said. "There will be tremendous public outrage and not enough time for restrained, measured response. People will demand that their police start cracking heads.

"The greatest safeguard for rights of individuals is to have good information on what the [radical fringes] are doing. Stop them before the bombings. Bomb legislation [with heavier penalties] is after the fact."

Mr. Nixon, who prefers to decide on Administration policy after receiving a set of clearly defined options, apparently has little choice but to adopt the recommendations of his more conservative staff members for increased surveillance. Liberal advisers have not provided him with alternatives.

Indeed, the liberals do not appear to have any answers to the problem of American radicalism. As one White House Liberal put it: "What does Richard Nixon do for these people, short of resigning the Presidency?"

[From the Computer World, Apr. 8, 1970]

ARMY ADMITS DATA BANKS EXIST

(By Joseph Hanlon)

WASHINGTON, D.C.—The Army had admitted the existence of at least one more data bank on lawful civilian political activity, and is canvassing its own intelligence operations to find out if there are any others.

In addition, the Army has acknowledged the accuracy of charges made in CW (March 11) and elsewhere that there has been no change in the policy as to the collection of data, and that other non-computerized data banks of civilian activity still exist.

ARMY ISSUES DIRECTIVE

The Army's admissions are contained in a directive from Secretary of the Army Stanley R. Resor, dated March 6 and just recently released, and in a letter from Under Secretary of the Army Thaddeus R. Beal to several congressmen.

The Resor directive, "Restrictions on Intelligence Operations Involving Civilian Activities," thanks three generals for the action to eliminate "computer data banks (plural), containing information on civilians." This is the first admission by the Army that there has ever been more than one such data bank.

The directive asks all intelligence unit comanders "to report whether their command has any form of computerized data bank relating to civilians or civilian activity, other than data banks dealing with routine administrative actions," and orders the command to either "destroy" the data bank or request special permission to keep it.

Finally, Resor admitted that the Army is still only reviewing its policy of "direct overt observations of incidents in progress" and of "spot reporting." This could mean that the 1,000 Army intelligence field agents are still collecting information on union meetings, strikes, church meetings, political meetings, and non-violent protests.

ARMY REFUSES COMMENT

The Army has refused to make any comment on its data banks since early last month, but apparently even where it claims to have "destroyed" computerized data banks, it has kept the original data, and possibly data tapes and software as well. "Destroyed" may only mean that computers are no longer being used to access the data.

The Army has cited other more pressing matters, such as providing information on the Army's handling of the mails. More recently, it said that it couldn't answer questions because of the ACLU (American Civil Liberties Union) suit against the Army.

Meanwhile, a full hearing on the ACLU request for an injunction against the Army's collection of data on civilians has been set for April 22 in the U.S. District Court here [CW, Feb. 25].

In its suit, the ACLU charges that the Army's surveillance "casts a pall over lawful political protest" and deters people from exercising their First Amendment rights "for fear they will be made subjects of reports in the Army's intelligence network [and] that permanent reports of their activities will be maintained in the Army's data bank."

TELETYPE NETWORK

In addition to compiling reports on incidents and individuals, the Army also circulates reports through to Army posts throughout the country by Teletype. The ACLU suit contains as evidence the Teletype reports for March 13, 14, and 18, 1968.

Events reported in those teletype reports include:

20 people picketing the federal building in Hartford, Conn.

35 persons demonstrating at Fort Hamilton in Brooklyn.

An anti-draft meeting in Philadelphia.

A speech at Emmanual Methodist Church in Detroit.

21 pro-Vietnam war pickets at the White House.

All were without incident, according to the Teletype reports.

ARMY ACCUSED OF "BIG BROTHER" WATCH ON CIVILIANS

(By Daniel Rapoport)

WASHINGTON.—Is the United States Army, in the fashion of a military dictatorship, maintaining constant surveillance of dissenters and other civilians it classifies as potential troublemakers?

A number of civil libertarians and political activists contend it is. The Army acknowledges that until recently it dabbled in the field but says for all intents and purposes it no longer does.

The chairman of a House subcommittee who initially criticized the Army now says he believes "it has gotten out of the business." The chairman of a similar Senate panel has denounced the Army and is deeply skeptical of claims that it has changed its ways.

ATTACKED IN COURT

A U.S. district court here currently is weighing a request that it declare unconstitutional the Pentagon's surveillance of "lawful political activities" by civilians associated with the military.

The court also has been asked to order the Army to cease spying on such groups and individuals, to stop collecting data about them and to destroy those existing files.

The suit was brought by 13 individuals and organizations whose actions have been monitored by Army intelligence agents.

For years the Army has conducted security checks on civilians working for the service or defense contractors. In 1965 it officially became interested in civilians not related to the military.

WIDENED SCOPE

The justification: To be able to spot in advance potential civil disorders which the Army might be called upon to quell.

Two years later, according to former intelligence Capt. Christopher Pyle, the Army widened its scope "to include the political beliefs and actions of individuals and organizations active in the civil rights, white supremacy, black power and antiwar movements."

Most Americans had taken it for granted that the military served as their defender against foreign aggressors. Civilian agencies, such as local police and FBI, protected them against internal subversion.

Most of the critics of the Army's surveillance program concede the Army's need to acquire certain information to carry out its riot control mission. But they say that when the Army goes beyond what it needs for that mission and begins to spy on individuals it produces, in the words of a celebrated court decision, "a chilling effect" on the right of free speech and expression.

SENATOR OPENS UP

"The right or the business of the Army . . . is to know about the conditions of highways, bridges and facilities," said Sen. Sam Ervin, D-N.C., chairman of the Senate constitutional rights subcommittee.

"It is not to predict trends and reactions by keeping track of the thoughts and actions of Americans exercising First Amendment freedoms . . . regardless of the imagined military objective.

"The chief casualty of this overkill is the Constitution of the United States, which every appointed official has taken an oath to defend."

Even some members of the Army's Counter Intelligence Corps, the unit responsible for the program, reportedly were concerned at the direction the program was taking.

TOUCHED OFF DEBATE

Congressional and journalistic interest in the Army's surveillance of civilians started in January with the publication of an article in the magazine, "Washington Monthly."

The author was Pyle, currently a doctoral candidate at Columbia University, but from 1966 to 1968 a captain in Army intelligence.

Among the specific charges that have been directed against the Army, both in and out of court and by Pyle and others:

Extensive files are maintained on virtually every activist political group in the country.

They include not only extremist organizations with a penchant toward violence like the Revolutionary Action Movement and the Minutemen but such nonviolent groups like the Christian Leadership Conference, the National Association for the Advancement of Colored People and the Young Americans for Freedom.

Dossiers and computerized indexes are maintained on such individuals as Mrs. Martin Luther King, Negro Georgia State Rep. Julian Bond, folk singers Arlo Gutherie and Phil Ochs, a retired admiral and general who oppose U.S. Vietnam policy and an unidentified active duty Army general who somehow or other got on the mailing list of an underground newspaper.

The Army has maintained computerized data banks in which information on individuals or organizations can be instantaneously produced.

Underground operatives from among some nearly 1,000 Army plainclothes intelligence agents, have posed as newsmen and photographers at antiwar demonstrations and as bearded students on college campuses.

In Washington, personnel from the 116th Military Intelligence Group operated a video tape truck carrying the markings of a fictitious outfit known as "Midwest News." Purpose of these activities was to gather information and pictures.

The Army has compiled "blacklists" of individuals and organizations, who in the opinion of the Army, "might cause trouble for the Army."

The Army has answered some but not all of the charges. Its spokesmen point out that the pending lawsuit—instituted by the American Civil Liberties Union—plus the permanent reluctance for security reasons to talk about intelligence gathering activities bar complete discussion.

But in a series of letters from high-ranking officials and a memorandum from Army Secretary Stanley Resor the Army has said that it has dismantled its giant computer bank at the intelligence command headquarters in Ft. Holabird, Md.

The memorandum said the Army has set down a policy that no such computerized files of civilians shall exist without prior approval from the secretary of the Army and consultation with appropriate congressional committees, and has destroyed or will destroy all "blacklists."

Rep. Cornelius Gallagher, D–N.J., chairman of the House of privacy subcommittee, says he is convinced of the Army's "integrity on this point and no longer sees a need to hold the public hearings he had planned."

Critics have charged, however, the written letters from the Army to Gallagher and Ervin contained loopholes, such as a promise to destroy computerized data banks without saying what would be done to the raw, paper files whose information was fed into the computer.

Gallagher who had said an unchecked civilian surveillance system represented a "police state" philosophy, said he had been assured verbally that the backup files also would be destroyed.

"I am convinced that they are out of this business," Gallagher said.

Arthur Pyle, who has been the subject of praise from many congressmen, including Gallagher, thinks the hearings should continue. He says the Army has gone only halfway.

Ervin also remains unconvinced the Army has "gotten out of this business." He still wants to hold hearings and may do so this summer.

[From the St. Petersburg (Fla.) Times, Apr. 19, 1970]

ARMY TOOK INTELLIGENT LOOK AT CRAZIES' FERRYLAND PLOT

WASHINGTON.—A contingent of "crazies" planned to board the Staten Island Ferry a year ago, commandeer the vessel and order its captain to take them to Cuba, according to a document purporting to be an Army counterintelligence report.

The document, dated Feb. 27, 1969, did not indicate whether the Army took the threat seriously. The event, allegedly scheduled for March 1, 1969, did not occur.

Sources close to the intelligence community said the document was an example of the raw material that flows into Army files in its surveillance of civilian activities, a practice now under fire in Congress.

The report said a group known as "the crazies"—including members of the Youth International Party (Yippies), a radical organization that the Army did not mention—planned to announce their "birth" by first stealing a mental patient from Bellevue Hospital in New York City.

After leaving Bellevue, said the report, the crazies planned to board the ferry peacefully.

"When they get on board they plan to threaten the boat's captain by demanding that he take them to Cuba," the report went on. "When the captain obviously refuses to do so, they plan to rush to one side and threaten to 'tip the boat over.' "

Then, in what may have been at attempt to justify Army interest in the caper, the report said:

"Military personnel traveling to NYC often use the Staten Island Ferry."

[From the Washington (D.C.) Evening Star, Apr. 22, 1970]

JUDGE DISMISSES SUIT TO BAR ARMY'S CIVILIAN SURVEILLANCE

(By Donald Hirzel)

A federal judge here dismissed today a suit by the American Civil Liberties Union challenging surveillance of civilian activities by Army intelligence units.

The ACLU sought a preliminary injunction forbidding the Army to keep data on civilian activities such as civil rights, antiwar and anti-draft movements.

U.S. District Judge George L. Hart ruled that the Army is keeping data that is available to all news media and that its surveillance is "not an unconstitutional action . . . and does not threaten the rights of individuals."

He dismissed the case on a motion by Justice Department attorney Kevin C. Maroney, who contended such data is needed by the Army to provide security in time of civil strife.

Frank Askin, a Rutgers University professor who argued on behalf of the ACLU, indicated the dismissal will be appealed.

Hart refused to permit the ACLU to put witnesses on the stand—four persons who had served with Army intelligence—but relied on written affidavits and oral arguments.

In his arguments, Askin said the Army has an intricate system of intelligence which has been carried over into the civilian field from its original use in checking clearances for employees and in the security of Army operations.

He said the Army's "spying" on civilians creates a "chilling effect" on persons who want to protest lawfully and that it violates individuals' constitutional rights.

The government employs hundreds of agents "lurking around the country spying on law-abiding citizens and reporting back to central Army headquarters," he claimed.

The ACLU suit charged that data collected from across the nation is compiled in computers at Ft. Holabird in Baltimore.

The Army has announced that it is doing away with these computer banks. However, the ACLU said, the Army has not said what it plans to do with the data.

Askin had a running dialogue with Hart during his argument.

When Askin contended that the Army cannot lawfully spy on political activities by using undercover agents at demonstrations, Hart contended that such events usually are reported in detail by the news media. If newspapers can keep files on such activities, why can't the Army? he said.

Another argument by Askin was that information gathered today on individuals "might be thrown up to them" in years to come. The courts are here to protect the rights of individuals, Hart replied.

The judge said he felt the Army had an obligation to keep such information because it is called to aid in quelling civil disturbances.

"They could go in cold, but the military doesn't like to be fools," Hart said.

AGENTS TALK LATER

At a press conference following the hearing, the former Army intelligence agents who had expected to testify told of their experiences.

Oliver Peirce, 25, who is now a Massachusetts budget examiner, said he served with Army intelligence in Ft. Carson, Colo., and as an undercover agent, infiltrated church groups, the Young Democrats and a ski club.

His job, he said, was to report on the groups' activities to his commanding officer. Several other agents were doing the same job, he said.

The four told newsmen that information collected eventually filters to Ft. Holabird and the Pentagon.

[From the Washington (D.C.) Post, Apr. 23, 1970]

ARMY CHECK ON CIVILIANS IS UPHELD

The Army's right to "collect, store and circulate" information on the lawful political activities of civilian dissenters was upheld by a federal judge here after a two-hour hearing yesterday.

U.S. District Judge George L. Hart Jr. dismissed a suit challenging the Army's civilian intelligence program brought by the American Civil Liberties Union on behalf of 12 political activists.

At times describing the ACLU's argument as "ridiculous," Hart ruled that the Army's collection of facts about the public activities of dissenters is akin to the collection of facts by newspapers.

"Are they doing anything newspapers are not doing," Hart asked, "keeping information in their morgues?"

Frank Askin, a Rutgers University law professor arguing for the civil liberties group, replied: "Newspapers are transistory, impermanent things . . . ten years from now no one wants to feel that the Army is keeping track of him with a check after his name."

The plaintiffs, who include the Rev. Albert Cleage, a black minister from Detroit, and Conrad Lynn, a black lawyer from New York, claim that the Army's monitoring of their activities casts a "chill and pall" over legitimate political protest.

The Army contends its intelligence gathering apparatus—which is based on various police, FBI and media reports as well as those from more than 1,000 agents—is necessary to gauge the possibility of civil disturbances.

Kevin Maroney, a lawyer for the Justice Department's internal security division, cited in court yesterday such antiwar demonstrations as the 1967 march on the Pentagon and the slum riots in Newark, Detroit and elsewhere.

In 1967-68, just after the civilian data began to be collected, the lawyer said, the National Guard was called out 83 times to aid in disturbances and the Army was called out four times.

In agreeing with Maroney, Judge Hart said: "When they are called in (the Army), if they do not have information they go in cold and if they like it like that, they are stupid."

ACLU lawyers said they would take their case to the U.S. Court of Appeals here to seek a summary reversal of Hart's ruling.

The suit against the Army was brought in February. It was prompted by an article in the Washington Monthly written by a former intelligence agent and detailing the operation of a "computerized data bank" on civilian dissenters kept at Ft. Holabird, Md.

Since that time, in response to congressional pressure, the Army has declared its intention of closing down the computer there, destroying a so-called "blacklist" (identification sheets on activists), and

cutting back on the number of "spot reports" on public protests.

However, the Army is maintaining its files in various other places, including those kept by the Counter-Intelligence Analysis Division and the Continental Army Command at Ft. Monroe.

The ACLU had planned to present as witnesses yesterday two former military intelligence agents, but Hart refused to hear their testimony. At a press conference later, they told reporters what they had been prepared to testify.

Oliver Pierce, 25, who was stationed at Ft. Carson in Colorado Springs, Colo., said he was assigned by his colonel to infiltrate the local "Young Action Project" made up of church groups, the Young Democrats and a ski club.

Pierce, who filed detailed reports on the group's session with his superior, said they were concerned about YAP because its organizer had been in several peace demonstrations. Pierce said the group was nonpolitical.

Ralph Stein, 26, formerly the New Left man for the CIAD, said he did such things as prepare a detailed report on underground newspapers for a CIA official. He said most of CIAD's information was obtained from the FBI.

[From the Chicago (Ill.) Sun-Times, Apr. 23, 1970]

DISMISS SUIT ON ARMY CIVILIAN DATA FILE

(By Morton Kondracke)

WASHINGTON.—A suit challenging the Army's gathering of political intelligence on civilians was thrown out of U.S. District Court here Wednesday.

Judge George L. Hart Jr. ruled that the American Civil Liberties Union had failed to show that the Army went beyond "keeping information available to all news media and stored in the morgues of newspapers."

He said the Army had not engaged in unconstitutional activities or threatened constitutional rights. The ACLU said it would appeal.

Frank Askin, an ACLU attorney, had argued that the Army's infiltration of political groups and its maintenance of extensive files "has a chilling effect" on expression of dissent and is an unauthorized activity for the Army.

Arguing for the government, Justice Department attorney Kevin T. Maroney said domestic intelligence was necessary to prepare the Army to control civil disorders, if called upon to do so.

Hart refused to allow the ACLU to present witnesses. After the court hearing, two former Army intelligence agents appeared at a press conference and revealed hitherto undisclosed details on civilian intelligence activities.

Former Cpl. Oliver Pierce, 25, said he was instructed by officials at Fort Carson, Colo., to infiltrate and report on a group known as the Young Adult Project in Colorado Springs.

Of the YAP's seven constituent member organizations, said Pierce, five were church young adult groups. One was a ski club and the other, the Colorado Springs Young Democrats.

The reason for the infiltration, according to Pierce, was that the YAP's organizer was a member of Students for a Democratic Society who had participated in anti-war activities. The organizer subsequently quit SDS.

Pierce said that "the activities of the group (YAP) were completely innocuous" and never involved anti-war action. The YAP published a calendar of church group events and operated a house where traveling hippies could stay without charge.

Other new details were presented at the press conference by former Sgt. Ralph Stein, 26, who operated as "Mr. New Left" for the Counterintelligence Analysis Division of the office of the assistant chief of staff for intelligence from July, 1967, to late 1968.

Stein said that when he left CIAD, its domestic political section was larger than its foreign intelligence analysis section and domestic files were kept on some 3,000 individuals.

The individuals on file included folk singer Joan Baez, anti-war activist-pediatrician Dr. Benjamin Spock, Georgia State Rep. Julian Bond, Dr. Martin Luther King Jr., at least two anti-war former Army officers and leaders of the Communist Party, Women's Strike for Peace, the American Friends Service Committee, and civil rights groups including the National Assn. for the Advancement of Colored People.

Stein said files also were kept on nonleaders involved in demonstrations. Extensive FBI reports on the 600 persons arrested at the October, 1967, march on the Pentagon are in CIAD's microfilm file.

The CIAD received up to 30 requests a day for information from the files. On one occasion, said Stein, a brigadier general demanded a report on SDS for use by his daughter, a foe of SDS at Briarcliff College in New York.

Stein said he also was ordered on one occasion to brief the Central Intelligence Agency on underground publications.

The ACLU's major source of information was former Army Capt. Christopher Pyle, whose article in the Washington Monthly earlier this year sparked congressional concern over the Army's activities.

Pyle told the press conference that, while the Army has dismantled a political data bank at Fort Holabird in Baltimore, it maintains another at Fort Monroe, Va.

[From the Chicago (Ill.) Tribune, Apr. 23, 1970]

COURT UPHOLDS ARMY PRACTICE OF SNOOPING

WASHINGTON, April 22.—A federal judge today upheld the army's right to infiltrate civilian groups and compile intelligence reports on individuals ranging from Viet Nam war protesters to civil rights activists.

District Judge George Hart ruled the army activity was legal because, he said, it was essentially no different from that of newspapers in gathering information on people and storing it in their files.

He dismissed a suit brought by the American Civil Liberties Union [A.C.L.U.], which contended the effect of the army program was to inhibit free speech guaranteed by the Constitution. A.C.L.U. attorneys said they would appeal Hart's ruling.

During the 75-minute court hearing, a justice department attorney, Kevin T. Maroney, acknowledged the army compiles intelligence reports on individuals aimed at helping identify potential troublemakers in the event the army may be called in to deal with civil disturbances. But he said, and Hart agreed, that the A.C.L.U. had failed to show the army activity was unlawful.

After the court hearing, A.C.L.U. lawyers held a press conference to present two former army intelligence agents whom Hart had refused to hear as witnesses.

Ralph Stein of New York City, a former army counter-intelligence officer, said he helped compile reports on such persons as the late Dr. Martin Luther King Jr., the civil rights leader assassinated in 1968; Georgia legislator, Julian Bond; a folk singer, Joan Baez and Dr. Benjamin Spock, both active in anti-war movements; and several army generals who oppose American involvement in Viet Nam.

[From the Colorado Springs Gazette-Telegraph, May 3, 1970]

ARMY DOESN'T THINK SO: EX-GI SAYS LOCAL SPY DUTY ON CIVILIAN GROUP ORDERED

(By Molly Riffel and Doug Hardie)

Oliver Pierce, an ex-Ft. Carson corporal, told the Gazette Telegraph Saturday that he was ordered by his superiors in the 5th Military Intelligence Detachment to infiltrate a civilian young people's group in Colorado Springs.

Pierce was questioned about his activities while at Ft. Carson after a national news magazine reported last week that Pierce is expected to testify in an appeal of an American Civil Liberties Union suit that he received such orders.

The ACLU suit charges the Army with operating a nationwide surveillance operation to keep track of political activists in the United States and storing its findings in a computerized data bank at Ft. Holabird, Md.

Pierce said Saturday he was ordered to infiltrate the Young Adult Project, a group in existence in Colorado Springs from May 1968 to December 1969.

According to Jerry Kvasnicka, an administrator of the Young Adult Project, the group was formed to administer services for young adults in Colorado Springs and included such projects as a "folk music workshop" and a center at 10 Beverly Place where food and sleeping quarters were available "in emergency situations" to young adults.

The Young Adult Project was made up of various "member" groups, such as the Young Democrats of which Peirce was also a member, and the SNO Jets, a local ski group, which paid $10 to join. At one time the Council of Churches was a sponsor of the Project.

Pierce said Saturday he was ordered to investigate the activities of the group in May, 1969, because "they (his superiors at Ft. Carson) thought the Young Adults Project was getting ready to organize a group at Ft. Carson." He added that officers at Ft. Carson thought that Kvasnicka was a dangerous influence and didn't want him organizing any groups on the base.

Pierce said that he thought that Kvasnicka had no intention of organizing anything on the base.

When Pierce first became acquainted with Kvasnicka he told him he was clerk-typist at Ft. Carson. It was only when he was given a hardship discharge in December that he revealed his true identity to Kvasnicka.

Pierce said the charge that the Young Adult Project presented a danger to the army was "ridiculous", but that he could not convince his superiors that the Project and Kvasnicka were harmless.

He said that while he was stationed at Carson he knew of at least two "undercover agents" from the base who had infiltrated other civilian groups in Colorado Springs.

"They were downtown watching the peace movement," he said.

Pierce said the army was "overstepping its bounds" in infiltrating civilian groups and "creating a dangerous situation." He also said that the order to infiltrate the YAP came "from a colonel in the 6-2 section," not directly from his immediate commanding officer.

The chief of staff of the fifth division at Ft. Carson was unable to confirm or deny Pierce's story.

Referring to the alleged incident, Col. Charles Curtis, fifth division chief of staff, told the Gazette Telegraph, "that was a long time ago and none of the people who were commanding officers (over Pierce) are here now.

"We think he was a bona fide member of the organization," Curtis added.

The Ft. Carson Public information Office released a statement saying, "The fifth military intelligence division of which Pierce was a member has responsibilities only on the Ft. Carson reservation. It is not Army policy to order its members to join civilian groups for any purpose."

Told that Ft. Carson denied his charges Pierce said, "The trouble is that neither the press nor anybody else can get any information from Ft. Carson."

[From the Chattanooga (Tenn.) News-Free Press, May 17, 1970]

ACLU RAPS ARMY SPYING ON CIVILIANS

WASHINGTON.—The American Civil Liberties Union plans to appeal a federal judge's ruling permitting the Army to spy on civilians who might cause disturbances.

The ACLU contended the Army violated the First Amendment rights of free speech and association by keeping civilian activity under surveillance.

U.S. District Judge George L. Hart Jr. dismissed the suit on the grounds the ACLU failed to prove the Army's activity was unconstitutional.

The ACLU wanted the court to order the Army to destroy all records, photographs, recordings and blacklists compiled by the military on civilian and political activity within the United States.

"You're saying the Army can read this information in the newspapers but can't take note of it," the judge said.

The suit was filed after Christopher H. Pyle of New York, a former Army intelligence officer, wrote in a magazine article that the Army has 1,000 undercover agents covering civilian activities from Harvard antiwar protests to Ku Klux Klan rallies.

"The Army has a right to know where trouble might start and the right to know which persons are likely to be troublemakers and to keep an eye on them," the judge said.

JERSEY HIGH COURT BACKS POLICE FILES ON ACTIVISTS

(By Ronald Sullivan)

TRENTON, June 1.—The New Jersey Supreme Court today upheld the compiling by the police of secret intelligence dossiers on civil rights activists and other protesters that had been ordered destroyed last year by a lower court in Hudson County.

In a unanimous decision here by the court, the state's highest, Chief Justice Joseph Weintraub maintained that state and local law enforcement agencies had the right to collect and maintain intelligence files on persons suspected of taking part in civil demonstrations despite charges that such information violated guarantees of freedom of speech and assembly under the First Amendment.

"Lawlessness has a tyranny of its own," the state court ruled, "and it would be folly to deprive the government of its power to deal with that tyranny merely because of a figment of a fear that government itself may run amok."

The files, which remained intact under an injunction that superseded the order to destroy them, were challenged by the Jersey City branch of the National Association for the Advancement of Colored People and members of the Students for a Democratic Society.

The case was handled by the American Civil Liberties Union in a suit that is believed to be the first major court test in the United States of the constitutionality of current police practices of collecting and maintaining intelligence information.

Stephen Nagler, the executive director of the New Jersey Chapter of the A.C.L.U., expressed "shock" at today's ruling and said it would be appealed to the United States Supreme Court.

"I regret the court did not understand the scope or depth of the issue involved," Mr. Nagler said. "It apparently has lost touch with what's going on in New Jersey."

The case involves a new state intelligence system that began in 1968 under the impetus of Arthur J. Sills, then the State Attorney General. The system was formulated in the wake of Negro rioting in Newark and Plainfield in 1967. It was designed to enable local policemen to improve their surveillance and preparation for potential civil disorder in the future.

BASIS OF SYSTEM

The intelligence system was based on a lengthy memorandum from Mr. Sills on the use of two state police security forms—one dealing with potential incidents and the other with intelligence information on persons taking part in them.

On one form, local policemen are advised to report on any civil disturbance, rally, protest, demonstration, march or confrontation. The form gives as examples such types of protest as pacifist, religious, right-wing, left-wing, civil rights, militant, nationalistic, black power, Ku Klux Klan and extremists.

The form says that the incident may either be planned, taking place or have already occurred.

The other form deals with persons taking part in the demonstrations and calls for exhaustive information on suspected participants, including details on their employers, their immediate families, organizations, finances, habits and traits, places frequented and past activities.

OPINION OF COURT

In today's decision, the State Supreme Court said: "Plaintiffs envision that a mere rally, protest, demonstration or march of a pacifist group will precipitate a police dossier on everyone who attends, including his butcher's and banker's opinion of his credit."

The court ridiculed such fears, which it described as "hypothetical horribles" that saw "each citizen harried amid his family, friends and business associates."

"There is not an iota of evidence," the court said, "that anything of the kind has occurred or will, or that any persons have been deterred by the prospect."

Despite the amount of information requested, the court here said that there was "no evidence that the Attorney General intended to intimidate anyone." In fact, the court added, the state's power to investigate is "basic."

"The basic approach must be that the executive branch may gather whatever information it reasonably believes to be necessary to enable it to perform the police roles, directional and preventive," the court said.

The court went on to note that the President's National Commission on Civil Disorders had recommended in 1968 that the local police could head off new disorder by effective surveillance of potential danger spots.

"In the current scene," the court said, "the preventive role requires awareness of group tensions and preparations to head off disasters as well as to deal with them if they appear.

"The police interest is in the explosive possibilities and not in the merits of the colliding philosophies."

Furthermore, the court said, "we think it preposterous to suppose that the memorandum was intended or understood to recommend round-the-clock surveillance of every person who attends an antiwar meeting.

"No doubt there may be situations in which judicial intervention is warranted," the court added, but it said it saw no reason to act before such situations were reported.

The police security forms had been called the tools of a "Gestapo-like network of police spies" by the A.C.L.U.

Superior Court Judge Robert A. Mathews, who had ordered the security forms destroyed, said they would have a "chilling" effect on anyone who wanted to advocate "social and political change."

The judge said in his ruling—upset by today's decision: "It is not difficult to imagine the reluctance of an individual to participate in any kind of protected conduct which seeks publicly to express a particular or unpopular political or social view because of the fact that by doing so he might now have a record or because his wife, his family, or his employer might also be included."

[From the Staten Island (N.Y.) Sunday Advance, July 19, 1970]

MITCHELL DEFENDS JUSTICE DEPARTMENT'S "BIG BROTHER" ROLE

(By Jared Stout)

WASHINGTON.—The Justice Department has asserted a virtually unchecked right—not subject to the Constitution—to keep records on persons who are "violence prone" in their protests of government policies.

The right, Atty. Gen. John N. Mitchell said through a spokesman, arises from the inherent powers of the federal government "to protect the internal security of the nation. We feel that's our job."

It was the first time Mitchell had outlined the legal basis for the collection and computerization of dossiers on protesters within the department's special Civil Disturbance Unit.

The assertion matches in breadth the claim made June 13, 1969 when the government said it had unlimited powers to eavesdrop on those the Justice Department thinks are seeking to "attack and subvert the government by unlawful means."

The eavesdropping claim was made in defense of electronic eavesdropping against some defendants in Chicago Seven riot conspiracy trial.

The extension of this doctrine to the department's domestic intelligence operation came in response to questions arising from Mitchell's news conference last Tuesday.

Mitchell declined to give the legal foundation for the intelligence operation last Tuesday. He said only "there are no court decisions that would restrain us from compiling this type of information."

Later, however, he acknowledged through the department spokesman that the legal argument used to justify the Chicago Seven eavesdropping also applied to the intelligence operation.

In the Chicago case, the department said nothing in the Constitution's ban on unreasonable searches and seizures limits the power of the President—and the Attorney General—to eavesdrop, and now keeps records on, those who try to "foment violent disorders."

This position has been sharply attacked by critics including Sen. Sam Ervin, Jr, (D-N. C.) as a step toward "a police state" and a potential violation of First Amendment rights to free speech and association.

Earlier this past week, it was disclosed that Treasury Department agents had been seeking the names of those who had checked out books on bombs and explosives from public libraries in Atlanta and other cities.

Ervin attacked this step as he has other intelligence efforts, including those of the Secret Service which lists in computer files all those who may pose a threat to the President.

Throughout his opposition to such activities, Ervin has stressed the lack of standards in deciding who shall be listed within such files, and how once a person is catalogued, he may learn of the step and question his inclusion.

The Justice Department spokesman said the definition of "violence prone" persons for its purposes included those who either acted violently, counselled violence or appeared in the ranks of violent confrontations.

He said the dossiers were not kept on "as broad a range as those compiled by the Army," a reference to the watch military intelligence agent have kept on civilian pro-

testers. No notice is given to those whose names have been recorded.

According to the spokesman, this means those individuals listed in department records at least had to be present or in the leadership of violent events. Army records included, for example, those who subscribed to New Left publications.

It was learned, however, that the justice intelligence unit still has access to the records compiled by the Army, which said in February it had discontinued its record-keeping but has hung on to those it made in four years from 1966.

MANPOWER SERVICES AND INDIAN UNEMPLOYMENT

Mr. KENNEDY. Mr. President, on June 16 I offered amendment No. 700 to the Employment and Training Opportunities Act of 1970—S. 3867. This amendment would provide for the establishment of an Office of Indian Manpower Services in the Labor Department and a National Indian Manpower Advisory Committee to advise the Director of the Office of Indian Manpower Services concerning problems and policy relating to Indian employment and manpower. Finally, the amendment provides that a set percentage of appropriated funds for manpower programs shall be used for programs relating to American Indians.

I have discussed with a number of representatives of the Indian community the various issues and bills that Congress is now considering. They are waiting for Congress to act on a number of matters of general interest to them: the bill to return Blue Lake to the Taos Pueblo—H.R. 471; the bill to provide that the head of the Bureau of Indian Affairs should be an Assistant Secretary of Interior—S. 3203; the resolution calling for a White House Conference of American Indians and Alaska Natives—Senate Joint Resolution 168; and others. They also are hopeful that Congress will act favorably on the Indian Manpower Services amendment. I ask unanimous consent to have printed in the RECORD at the end of my remarks a letter from the National Congress of American Indians supporting this amendment.

Mr. President, this spring the BIA put together a report on Indian Reservation Labor Force and Unemployment for 1969. While we are all aware that unemployment has been increasing during the past year, these figures do not even reflect the recent increases. Yet they do reflect that the American Indian and Alaska Native have an unemployment rate running over 80 percent in some areas.

The unemployment figures for Alaska Natives range from a low of 56 percent in the Nome Administrative Agency's jurisdiction to 66 percent and 67 percent in Anchorage and Bethel. A recent task force investigation of hiring in the oil fields discovered, for example, that only eight out of 800 jobs were held by Natives. The Departments of Labor and Interior are this month holding hearings in Alaska on Native unemployment, and I am sure that the results of those hearings will support the need for immediate action and initiative in that State.

At Fort Berthold, N. Dak., 699 Indians are unemployed, out of a labor force of 877, giving an unemployment rate of 80 percent; the rate at Camp Verde, Ariz., is 81 percent. Overall, Indian unemployment runs over 40 percent of the Indian population. Thus, while Indians and Alaska Natives represent only about 1 percent of our total population, they constitute roughly 10 percent of the Nation's unemployed.

Mr. President, I believe that the Indian unemployment figures will be of great interest to my colleagues. These data, relating to Federal reservation populations only, make it clear that we cannot continue to decry a national unemployment rate of over 5 percent while tolerating Indian unemployment at many times that figure. I ask unanimous consent that the BIA table of reservation unemployment be included in the RECORD at the end of my statement.

Finally, I believe that Congress, and the public, should know exactly how things stand in the Labor Department right now with regard to the problems of the American Indian, and incidentally, of other minorities.

In his message to Congress on Indian affairs on July 8, President Nixon spoke of the progress made by his administration since January of 1969.

The President stated:

> New "Indian Desks" have been created in each of the human resource departments of the Federal Government to help coordinate and accelerate Indian programs.

Just a few days before the President issued his statement, the so-called Indian desk at the Department of Labor had been disbanded.

The Indian desk at the Labor Department had been just that—a single desk, with a single employee. He advised the Manpower Administrator on Indian programs, but the actual policies were determined elsewhere, often in the regional offices. The Indian desk, along with two other desks representing blacks and Mexican-Americans, was part of the Office of Minority Groups Affairs of the Manpower Administration. On July 1, 1970, this Office was dissolved and its personnel assigned elsewhere or placed in limbo for an undetermined period. At the present time there is no Office of Minority Groups Affairs in the Labor Department. At the present time there is no official Indian desk in that Department, good intentions or high-level rhetoric to the contrary. This, I believe, strongly suggests the need for congressional action in establishing an Office of Indian Manpower Services in the Department of Labor. I hope that Congress will keep in mind this short history of the Labor Department's Indian desk when it considers the Employment and Training Opportunities Act of 1970 and my amendment to that act.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

NATIONAL CONGRESS OF AMERICAN INDIANS,
Washington, D.C., June 23, 1970.

Hon. EDWARD M. KENNEDY,
U.S. Senate,
Washington, D.C.

DEAR SENATOR KENNEDY: On behalf of the National Congress of American Indians, I would like to thank you for your support of N.C.A.I.'s proposal embodied in S 3867 and introduced by Senator Nelson for the establishment of an Office of Indian Manpower Services in the Department of Labor.

As you know, the problem of unemployment on Indian Reservations is one of the most serious problems facing Indians today. We are hopeful that Congress will swiftly pass this proposal into law and provide a means for real progress in this area.

We have noted the various amendments you have proposed to S 3867. We strongly concur in your recommendation that 10% of all funds appropriated for Manpower Training Programs under the Act be set aside for the special Indian programs. Only if an adequate amount of funds are assured for the establishment and the maintenance of special Indian Manpower Training programs can meaningful progress be made.

We also concur in your proposal to make sure that Indians will serve in administrative, as well as advisory capacities in the design and operation of the Manpower programs.

Yours sincerely,

BRUCE WILKIE,
Executive Director.

CONCLUSION OF MORNING BUSINESS

Mr. ALLEN. Mr. President, is there further morning business?

The PRESIDING OFFICER. Is there further morning business? If not, morning business is concluded.

AUTHORIZATION OF APPROPRIATIONS FOR MILITARY PROCUREMENT AND OTHER PURPOSES

The PRESIDING OFFICER (Mr. HARRIS). Pursuant to previous order, the Chair lays before the Senate the unfinished business which the clerk will state.

The LEGISLATIVE CLERK. A bill (H.R. 17123) to authorize appropriations during the fiscal year 1971 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and other weapons, and research, development, test, and evaluation for the Armed Forces, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes.

The Senate resumed the consideration of the bill.

Mr. ALLEN. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. CANNON. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

REPORT OF THE SPECIAL SUBCOMMITTEE ON TACTICAL AIR POWER

Mr. CANNON. Mr. President, I was pleased and honored to serve once again as chairman of a special subcommittee on Tactical Air Power of the Committee on Armed Services.

Other members appointed to serve on this subcommittee were Senators SYMINGTON, YOUNG of Ohio, THURMOND, TOWER and GOLDWATER, each of whom made an invaluable contribution to the work of the subcommittee and the findings I will present to the Senate today.

Senator STENNIS appointed the subcommittee on January 21, 1970, with the request we thoroughly explore as many tactical aircraft and missile programs as time would permit. Our objective was to determine the justification, or lack thereof, of the funds requested.

Mr. President, the Tactical Air Power Subcommittee reviewed 10 major aircraft programs and 12 major missile programs. The funds requested for these weapon systems was $3.2 billion. The subcommittee recommended reductions of $173.3 million—a reduction of 5.4 percent.

Mr. President, before I review the individual programs investigated and the conclusions arrived at, I would like to speak briefly about the approach used by the subcommittee in discharging its responsibilites.

Secretary Laird stated to the Armed Services Committee that his request for funds represented a "rock bottom" budget. In general, I certainly believe a reasonable budget was presented. It was our duty to carefully review it. We felt strongly that our national security interests and the world in which we live today presented a clear mandate that we not act hastily or arbitrarily. Each Member took his job seriously. We were confronted with many difficult decisions. We deliberated over them at great length. The people, who worked hard and long on these programs, together with the sizable sums either invested or to be invested, required that we exercise the best possible judgment; that we act with caution and restraint; and that we obtain all relevant facts on each weapons system. We made every effort to achieve this objective. I hope, Mr. President, that the Members of the Senate will agree with our conclusions after my presentation.

I recognize, as does every Member, the increasing financial requirements for our domestic programs. I fully support the principles and objectives of these programs. However, I feel strongly, as a representative of the taxpayer, that our domestic programs should receive as careful and thorough a review on the justification for the overall funds requested as do the military programs. Merely because the goals and objectives of our domestic programs are worthwhile, does not warrant the hasty conclusion that billions of dollars should be "shoveled out" indiscriminately. These programs must meet the test of urgent and necessary requirements. The taxpayer of the United States is entitled to

no less—be they military or domestic programs.

In my judgment, justification for wielding a large ax on military programs to "cut for the sake of cutting" lacks wisdom and foresight. Our national security interests are of vital importance. They must not be abrogated or discounted in the pellmell rush to achieve economy in government.

We must not permit the desire for economy to sweep everything before it. I am personally concerned lest we take actions which may be contrary to our national security interests. As long as we have our worldwide commitments and expect the military to be capable and responsible to meet them, we must provide them with the weapons and hardware to do so. Otherwise, we are only "kidding ourselves."

Mr. President, the Soviet and Red Chinese Governments have not disappeared. They have not altered their national or military policies. The Soviet Union continues to substantially build up its military capability. This includes not only a vast increase in its ICBM capability, but sizable improvements in the quality and quantity of its aircraft, submarines, ships, ground forces, and so forth. I would hope their action in part may be as a "chip" in the international arena of SALT negotiations. However, I place little confidence in that conclusion.

Everyone agrees, Mr. President, that a lasting and true peace would be a grand and glorious achievement. I earnestly hope after Vietnam it is a constant environment in which we live. However, history has proven repeatedly that we cannot act on such an assumption.

As every Member of this body realizes, Mr. President, peace is maintained and preserved by the strong and not the weak nations. The aggressor nations in history have traditionally "gobbled up" the weak. The nation who attempts to appease the strong is inevitably struck down.

I would be extremely concerned if the United States were to retreat to a condition of preparedness which existed in this country prior to World War II and Korea when we were woefully unprepared. Fortunately, time was on our side so that we could prepare ourselves. No such assurance exists today or in the future.

Mr. President, I want to assure my colleagues that it is not my purpose in any respect to cry "wolf." I merely want the Members of the Congress to recognize fully the actions it will take this year, whether in the name of economy, expediency, and so forth. Every Member should recognize and accept the potential calculated risks that may be run.

It was with these thoughts in mind, Mr. President, that the Tactical Air Power Subcommittee deliberated at great length over each and every program reviewed and why no cuts were recommended unless we felt they were thoroughly justified.

The Tactical Air Power Subcommittee conducted hearings from February 4 through March 23. The hearings were of great benefit and assistance to us during our deliberations on the justification, or lack thereof, for authorizing the funds requested.

We reviewed 10 aircraft programs involving funds exceeding $2.6 billion. The programs were the Air Force F–15, F–111, AX, A–7, Light Intratheater Transport and the International Jet Fighter. The Navy aircraft programs were the F–14, A–7, and the A–6; the Marine Corps Harrier program; and the Army Cheyenne program. While I will discuss each program briefly, I will talk at greater length about the three major programs, the F–15, F–14, and the F–111, inasmuch as they account for $1.9 billion of the $2.6 billion requested. We recommended a reduction of $64.0 million and the full committee agreed with our recommendations with the exception of the Cheyenne/advanced helicopter development programs about which I will comment on shortly.

The Tactical Air Power Subcommittee reviewed 12 major tactical missile programs, involving a funds authorization request of $545.3 million. We recommended a substantial cut of $108.7 million—a 20 percent reduction—and approval of $436.6 million. The full committee supported each of our missile system recommendations.

Mr. President, the subcommittee was vitally concerned as to the possibility that the Military Establishment may be acquiring too many different types of tactical missiles constituting unnecessary duplication. Of equal importance, we were concerned as to whether the Military Establishment may have established quantity requirements on some of the tactical missiles in excess of those we felt were justified.

Most of the tactical missiles being purchased today, by virtue of their complexity, involve high unit production costs. Most of them cost $20,000 each and up. Therefore, any reductions that can be made, either in the type or quantity of missiles to be purchased, results in sizable savings to the taxpayer.

Mr. President, I want to assure the Senate, however, that our objective was not to eliminate missiles for the sake of elimination itself. This would be unjust and unwise. However, we were most anxious to prevent duplication or unnecessary proliferation. I will speak about each missile system after I discuss our findings on the aircraft programs reviewed.

TACTICAL AIRCRAFT PROGRAMS

Of the 10 tactical aircraft programs studied, I will concentrate on the F–15, F–14 and F–111 programs as they constitute the bulk of the funds requested. The Air Force F–15 and the Navy F–14 are new air superiority fighter programs. The F–15 is to be operational by 1975 and the F–14 will be operational by April 1973.

Mr. President, before discussing each program separately, I would like to discuss why it is so critical for the United States to support these programs this year.

For the United States to fight a successful conventional war it is essential to have an air superiority aircraft that can dominate the battlefield. This requires an aircraft that can meet and defeat any enemy aircraft in air-to-air battle. This, in turn, permits our other tactical aircraft to support our ground combat forces by bombing enemy troops, supply lines, and so forth. Without an air superiority fighter capable of protecting those aircraft which require a "permissive" air environment, we would be faced with a dangerous situation.

The only aircraft the Air Force and the Navy possess today with an acceptable air-to-air combat capability is the F–4. This aircraft has been an excellent weapon system. However, each Member must recognize that the F–4 technology dates back to 1955. In an age of rapidly advancing technological achievement, it is not only questionable but doubtful that it could cope with adversary aircraft in the mid 1970's.

Today, the most likely enemy air-superiority aircraft is the MIG–21. It has been well established that it is equal in performance to the F–4 at normal fighting altitudes. We then must examine what the Soviet Union has done to improve upon the MIG–21 fighter capability and, more importantly, what its capability will be by the mid-1970's. Recognized experts agree the F–4 will be technically outmoded by the mid-1970's and unable to achieve or maintain air-to-air combat supremacy with a potential enemy.

The Soviets since 1955 have flown 18 new models of modern tactical aircraft, Not all of these models went into production. However, it has afforded the Soviets a wide selection of high performance flying prototypes from which it can select the best for production.

Seven of the 18 new models, Mr. President, were seen by the free world for the first time 3 years ago at the July 1967 Moscow Air Show. At this show we first saw the Foxbat—the present holder of the world's speed record. Intelligence sources estimate at least three of the new fighters shown then are currently in production or will be shortly.

Mr. President, it is common sense to realize that a nation, with its eyes on the future and on what potential adversaries may do, will not develop a new aircraft inferior to existing models. Thus, it is fundamental to conclude that Soviet aircraft now in production will be superior to the Mig–21. Consequently, they will be superior to the F–4.

Mr. President, the seven types of tactical aircraft flown by the Soviet Union in July 1967 were designed before 1964. We must asume the Soviet Union, during the past 3 years, has continued its design efforts to improve upon the impressive aircraft flown at the 1967 air show. Unfortunately, the Soviet Union does not even make infrequent announcements of its aircraft or military achievements and the United States has been surprised when the Soviets do ultimately decide to disclose to the world what they have been up to.

I earnestly believe that the high level of aeronuatical effort by the Soviet Union during the past few years and a conservative assessment of its existing capability and future activities requires the United States, of necessity, to undertake the development of new air superiority fighter aircraft.

A modern fighter cannot be developed overnight. It takes several years to de-

velop and produce. This is an inevitable and inescapable fact. Therefore, even though we approve and fund a new fighter today, it will be the mid-1970's before it is operational.

Mr. President, for the reasons just mentioned I believe there is an unquestioned need for the United States to develop and produce a new air superiority weapon system.

Some people ask the logical question: Why do we need both the F–14 and the F–15? The F–15 will be developed by the Air Force for the sole mission of achieving a maximum air-to-air capability. As such, it is to be light, fast, and highly maneuverable. Hence, it will not be able to operate from an aircraft carrier. If it were assigned this mission it would be structurally substantially heavier. The F–14 is designed to operate from an aircraft carrier. Anyone who has witnessed carrier landings and catapult launchings recognizes the structural integrity requirements for such aircraft.

The F–14 will replace the Navy F–4 in the air superiority role. In addition, it must perform the fleet air defense mission. This requires the F–14 to fly long distances and to loiter for substantial periods of time to protect carrier task forces against incoming enemy bombers, fighters, missiles, and so forth.

If the Navy were to restrict the F–14 to the air superiority role alone, it would be necessary to develop another expensive weapon system for the fleet air defense mission—the mission of the now cancelled F–111B program.

Another important factor is each service will have an aircraft optimized for its own operational requirements without compromise. The F–111 is a classic example of compromise. Neither the Navy nor the Air Force realized the performance goals originally established for that aircraft.

The advanced technology engine presently under development will be basically the same engine for both the F–15 and the F–14B. This will save substantial sums of money. Mr. President, I want to emphasize that a common engine makes sense, but a common airframe does not.

Mr. President, I have presented what the Tactical Air Power Subcommittee believes to be a very urgent requirement for the F–14 and the F–15. I would now like to present additional information with respect to each program.

F–15

The Air Force will purchase 20 research and development aircraft and several hundred operational F–15's. The total cost of the program is estimated at $7.2 billion—$1.8 billion for research and development and $5.4 billion for production.

The Air Force requested $370 million in fiscal year 1971 for research and development. Recognizing the urgent need for this aircraft, which I have already discussed, the Senate Armed Services Committee authorized the request in full. If the program proceeds as planned, the F–15 will be operational in 1975.

The F–15 contract was awarded to McDonnell Douglas in December 1969. Over 181 performance specifications are spelled out in the contract. With a keen awareness of the difficulties encountered on previous weapon systems, this contract was carefully drawn. The F–15 will fly 6 to 7 months before any substantial production funds are committed. The contractor has total systems performance responsibility. Demonstrated technical milestones must be achieved before additional steps are taken. The Air Force must be notified 17 months in advance if additional funds are required.

The Air Force eliminated many "nice to have" features not considered essential to obtain a more economical aircraft.

A popular subject discussed in the Congress and the press these days is "cost overruns" and "cost growths." They are generally misunderstood and the F–15 is an excellent example. The original F–15 cost estimate was $6 billion. This estimate was prepared before any cost data was received from the potential manufacturers. It was based on an analysis of what other aircraft purchased in the past had cost. While reasonable men prepared these estimates, it was a "best guess" type of information. When the contractors' proposals were received, it was evident the F–15 program would cost $7.2 billion. Therefore, many people quickly concluded a substantial "cost overrun" had occurred. Nothing is further from the truth.

Mr. President, estimates prepared early in time prior to the receipt of cost proposals from industry certainly should not be used as a valid basis for the original cost of a weapon systems. They lack validity. Yet most people treat them as bona fide, realistic estimates and every dollar spent in addition thereto is represented as an evil "overrun." This should not be.

The United States has encountered serious inflation since 1965. Everyone recognizes this, particularly when they pay their monthly bills. However, many people assume the purchase of military weapon systems is an exception to inflation. Unfortunately, nothing is further from the truth. Inflation is the singlemost important factor resulting in higher costs for our weapon systems.

The Air Force's F–15 will use the same basic engine as the Navy F–14B aircraft. This will result in significant savings as the engine is one of the more costly components of any aircraft.

Mr. President, the committee concluded there was a clear requirement for the F–15 program and fully supported the request for $370 million.

F–14

The F–14 program will cost an estimated $8.2 billion—$1.3 billion for research and development and $6.9 billion for production. The Navy program calls for 12 R. & D. aircraft and 710 production aircraft.

The Navy request this year was $982.2 million—$324.2 million for research and development and $658 million for production. We approved the request except for $5.2 million.

The F–14 program is currently on schedule. The first flight is scheduled for January 1971 and the first squadron is to be operational by March 1973.

I have already disussed the requirement for an air superiority fighter and the need for the F–14 to fulfill the fleet air defense mission.

The funds this year will purchase 26 F–14A aircraft. The Tactical Air Power Subcommittee satisfied itself that this program is on schedule, both in costs and technical achievement. There was a failure recently in testing a wing pivot lug. It was not a failure of the wing box as was reported. A crack occurred beyond the expected fatigue life of the aircraft. The engineering redesign has been completed. The fatigue test will be repeated prior to first flight. The component will be tested to several times the life expectancy of the aircraft. To overdesign structural elements adds unnecsary weight. The objective is to design only to the strength required. Otherwise, we would develop a "flying battleship" which, while structurally magnificent, would be a disaster in the air.

I would like to make one thing very clear, Mr. President. When new weapon systems are being developed with a significant advance in the state-of-the-art, it is not unusual but expected that problems will arise during research and development. If no problems were encountered, then very little technical advancement is being realized. People tend to panic easily and lose their perspective when problems arise during the development phase. I do not dismiss the problems but urge that we examine them objectively to determine whether they are small or large. We should certainly not blow them out of proportion. We intend to follow closely the F–14 as well as other tactical programs presently in R. & D. The F–14A engine has been successfully run in a full-scale inlet. Testing so far indicates higher thrust and better fuel specifics than originally predicted. Weight, always a critical factor, is less than 1 percent over original predictions.

Some people have raised the question: Why did we not reduce the F–14 program from 26 to 15 aircraft in the fiscal year 1971 budget? I would like to comment on that point. We examined it in detail. If we reduced the program 11 aircraft this year and assumed these 11 aircraft would be purchased in subsequent years, it would cost the Government $64 million more, primarily due to inflation.

Mr. SYMINGTON. Mr. President, will the Senator yield?

Mr. CANNON. I am very happy to yield to the distinguished Senator from Missouri.

Mr. SYMINGTON. Mr. President, I am sorry that the time was changed on the address that is being made by the distinguished Senator from Nevada. Unfortunately, I have to leave, after listening to it up to this point, in order to keep a long-standing luncheon engagement. However, Mr. President, it is with pleasure I state that, in my opinion, in the years that I have been in Congress, there has never been a more thorough or more intelligent analysis of the true needs of this country with respect to aircraft, than has been presented as a result of extensive hearings conducted by the able Senator from Nevada, chairman of the Tactical Air Power Subcommittee, of which I have the privilege of being a member.

We do not necessarily agree on every aspect of this report, but the important point is that it is based on careful investigation and analysis by him and his able staff.

Mr. CANNON. I thank the distinguished Senator from Missouri for his very gracious remarks, and wish to say that he was one of the most valuable members of our subcommittee, as I pointed out earlier, and that much of its work is due to his fine efforts as well as those of the other members of the subcommittee.

Mr. President, the cost of 26 aircraft with support equipment and spares in fiscal year 1971 is $598 million. The cost of 15 aircraft would be $477 million. The very important fact to understand, Mr. President, is that the unit cost of the 15 aircraft would be $32 million each versus a unit cost of $23 million each for 26 aircraft. It is clear, therefore, that the Government would spend $9 million more for each of the 15 aircraft authorized this year, or a total of $135 million more than necessary. In addition, the unit cost of F–14 aircraft purchased in subsequent years would cost more money. I hasten to add that the unit cost figures are for this year only. The initial aircraft of any type costs more. The average price is much less as additional planes are produced.

The theory has been advanced, Mr. President, that it would not cost the Government any more money to purchase the 722 F–14 aircraft so long as reductions made this year were reinstated in future years. This involves too much theory and not enough reality. If the Senate reduced the F–14 program in the first production year, then it is only reasonable to assume the Congress would make additional reductions in future years when larger quantities of aircraft are involved.

Mr. President, the committee looked at an extreme example. Suppose the F–14 was a catastrophic failure at the time of its first flight in 1971. The estimated Government liability for the 26 aircraft is $165 million. Its liability, if it purchased 15 aircraft, is $124 million. We did not feel the difference, as to potential Government liability, was sufficient to warrant reducing the program from 26 to 15 aircraft and pay the increased costs as a consequence.

Mr. President, the Navy requires a modern air-superiority fighter at the earliest point in time. The Navy has already waited several years for a high-performance fleet air defense aircraft after the F–111B program was canceled.

The committee denied the request for $5.2 million to initiate development of the F–14C aircraft. The F–14C would incorporate new avionics equipment. We questioned the wisdom of initiating a new avionics program. Its estimated R. & D. cost would exceed $300 million. It would not be operational until the late 1970's. Therefore, we fully supported the F–14A/B programs but denied the funds for the F–14C.

F–111

The Air Force requested $563.3 million for the F–111 program. This included $48.2 million for research and development; $283 million for production; $200.5 million for over-target costs; and $31.6 million for initial spares.

Mr. President, I feel that Senators generally are aware of this program in some detail as it has been discussed many times over recent years.

It was originally anticipated that the $283 million requested this year would provide 40 F–111F aircraft. This would complete one wing of F–111F aircraft, inasmuch as we authorized 58 aircraft last year.

The Air Force plans to live within the dollars requested. Consequently, any additional dollar requirements will result in a lesser number of aircraft being purchased.

As a result of the crash in December 1969, an extensive "proof test" program is underway. The cost will result in four less aircraft being purchased. Also, last year during preparation of the fiscal year 1971 budget, a significant reduction in the program was made which drove up the unit cost. Hence, at the present time it appears that the Air Force will only receive 25 F–111 aircraft with the $283 million requested in this year's budget.

The Air Force still plans on operational F–111 wings. The first few aircraft have now completed the "proof testing" program and have been released to the Air Force for operational flying.

The committee inserted specific language in the authorization bill requiring the Secretary of Defense to assure himself that the F–111 is fully airworthy and that both the House and Senate Armed Services Committees be notified he is satisfied with the program prior to buying the aircraft authorized in this budget.

Mr. President, I believe it is important for Congress to understand that the F–111 is the only Air Force tactical aircraft capable of flying and bombing at night and in all weather conditions. There is no substitute aircraft able to perform these missions. The F–111 can conduct bombing missions by itself as it does not require additional aircraft to fly a "protective cover" against enemy aircraft. It is the only Air Force tactical aircraft with terrain following radar, enabling it to fly at extremely low altitudes in all weather conditions.

The total cost of the program is currently $6.2 billion. Congress has already provided $5.5 billion. Therefore, only $700 million more is required to complete the program. The F–111 is the only aircraft with sufficient range to operate from England against potential enemy targets in Europe without refueling. The F–111 is a "safe" aircraft. Accidents so far, although widely publicized, have been no greater in number than any other fighter aircraft at a comparable point in flying time—that is, with the equivalent number of flying hours. It can take off and land from shorter runways and unimproved air strips. It is the only tactical aircraft that can fly supersonic at low altitudes.

Considering all of the major factors, the committee approved the funds requested for the F–111 with the exception of $6.4 million in research and development funds necessary to continue the Sparrow-G program during fiscal year 1971. We requested the Chief of Staff of the Air Force to examine the wisdom of continuing the Sparrow-G program because of the limited number of F–111 aircraft that would have this capability. After his review, the Chief of Staff terminated the Sparrow-G program on March 18, 1970. Therefore, we denied the funds associated with this program.

HARRIER

The Harrier is a V/STOL aircraft developed by Hawker-Siddley of England.

The Marine Corps request for $118.3 million to buy 18 aircraft was approved.

Mr. President, it is interesting to note that the research and development costs were largely borne by England. We are purchasing the finished product. Last year the House Armed Services Committee stated "the Department of Defense is placed on notice that no further authorizations will be approved by this committee for the procurement of this aircraft unless its production is within the continental limits of the United States." In response to the congressional statement, arrangements were made to produce the Harrier in the United States.

I feel that this is an important step in the right direction. During the past 20 years we have invested several hundred million in various V/STOL programs but never developed one sufficiently successful to warrant production.

I have personally seen the Harrier perform. As a pilot, I can testify to its impressive performance and flying characteristics. Its mission is the close air support of Marine Corps ground forces engaged in combat. It is capable of vertical landings and takeoffs similar to helicopters. It can operate from small-sized naval vessels.

Mr. President, it is incumbent on me to mention that producing the aircraft in the United States rather than England will cost more money. The reason is obvious—increased labor costs. However, this is offset somewhat by creating substantial additional employment in the United States by people who will pay U.S. income taxes. It will bring a much needed advanced technology to this country. It should prevent us from pursuing additional V/STOL research and development programs. Production in the United States will also prevent adding to our existing adverse balance-of-payments situation.

AX

The AX is a new tactical aircraft for the Air Force to provide close air support for Army ground forces. The $27.9 million requested for research and development was approved. Everyone agreed that there is a distinct requirement for an aircraft specifically designed for the close air support mission. Today in Vietnam we are using the A–6, A–7, A–37, F–100, and even the F–4 air superiority fighter in addition to Army helicopter gunships.

The Air Force intends to use existing "off the shelf" technology. It anticipates rapid progress without substantial R. & D. difficulties. The Air Force hopes to make an award soon to the two successful contractors. The present plan is to build competitive prototypes and then

conduct a 6-month flyoff competition. The company that has the best aircraft will receive the production contract. This approach is better than analyzing paper studies. It is unfortunate that because of the high costs, we cannot use this approach on other weapons systems.

The AX will carry 16,000 pounds of ordnance and operate at speeds of 120–450 knots per hour. It is to be a highly survivable aircraft.

A prime factor in favor of the AX is its reasonable cost, presently estimated at less than $1.5 million per aircraft. However, as I have emphasized before, this is only the best estimate available until cost data is received from industry.

CHEYENNE

The Cheyenne is a rigid rotor helicopter being developed by the Army for the close support role. Last year, we denied the $429 million requested as the Army had canceled its production contract due to certain technical problems encountered in research and development.

This year, the Army asked for $17.6 million to continue R. & D. The Tactical Air Power Subcommittee felt that the funds should be authorized. The Government has already invested $168 million in the program. Ten Cheyennes have been built and eight are still on hand. The major technical problem was the rotor control system. An improved system has been installed on one of the Cheyennes currently flying at the Yuma Proving Grounds. The Army said the Cheyenne would be flying in excess of 200 knots soon and a decision on approving production could be made next year.

I believe the great advance in the "state-of-the-art" to be derived from the rigid rotor technology was worth the investment this year. However, the full committee, after a thorough and fair discussion, concluded that with the approval of the AX program, there was no need to proceed with the Cheyenne program. I respect their judgment and abide by it, though I do not agree with it.

My purpose today is to merely explain the actions of the Tactical Air Power Subcommittee.

This was the only recommendation by the Tactical Air Power Subcommittee not concurred in by the full committee.

A–7 PROGRAM

The A–7 is a single-seat, single-engine tactical aircraft developed by the Navy for both close air support and interdiction missions. Both the Navy and the Air Force are purchasing this aircraft.

The Navy request was for 30 A–7E aircraft costing $133 million, including spares. This number of aircraft will only replace aircraft losses during fiscal year 1971.

The Air Force requested $216.7 million for 88 A–7 aircraft, spares, etc. This will complete the second A–7 wing and initiate third wing buildup. The last Air Force A–7's will be requested in fiscal year 1972.

The committee approved the A–7 funds for the Navy and Air Force.

A–6 PROGRAM

The A–6 is the Navy's only night all-weather capable aircraft.

The Navy requested 12 A–6E aircraft at $137.7 million including support equipment, spares, and so forth.

The A–6E is a new version of the A–6A aircraft which performed so splendidly over North Vietnam. There have been over 44,500 carrier landings without a single carrier landing accident.

The 12 aircraft are for attrition to make up for peacetime losses during fiscal year 1971.

INTERNATIONAL JET FIGHTER

The International Fighter aircraft is to be purchased by the Air Force to provide certain free world forces, particularly our allies in Southeast Asia with an adequate air superiority fighter.

Last year, the Congress authorized the Air Force to expend not to exceed $28 million from other aircraft procurement funds for this program. No funds have been expended or obligated as yet. The Air Force requested $30 million for fiscal year 1971.

Competition is presently underway between several U.S. firms to determine which aircraft will best meet the requirement. The aircraft selected must be relatively simple, inexpensive, and easy to maintain.

The committee agreed with the concept of providing our allies with a simple and inexpensive aircraft. However, since none of the $28 million authorized to be expended last year has been obligated, the committee felt it was not necessary to authorize $30 million additional and denied the request.

Mr. President, I want to add here that certainly the committee does approve of this concept. I feel that if the Air Force were to make a decision on what they were going to do and made it clear that they did not have sufficient funds on hand with the $28 million, the committee would probably be receptive to their feelings.

LIT—LIGHT INTRATHEATER TRANSPORT

The Light Intratheater Transport is a proposal by the Air Force to develop a new tactical aircraft to replace the C–7 and the C–123 and to augment the C–130. It would be a tilt-wing turboprop aircraft.

The Air Force requested $2 million for research and development. The committee denied the funds requested for this program last year. Little has transpired since last year to rejustify this program.

The Air Force admitted that total R. & D. costs would be about $500 million. We felt it was important to "nip in the bud" programs of questionable merit and denied the funds requested.

SUMMARY ON AIRCRAFT PROGRAMS

Mr. President, that concludes my comments with respect to the 10 aircraft programs reviewed in detail by the Tactical Air Power Subcommittee. I believe it is extremely important for all of us to recognize that the Air Force request for 350 aircraft this year is the lowest number of aircraft since 1935 and compares more favorably with the 588 aircraft in last year's bill. It is also important to realize that 180 of the 350 aircraft in this year's bill are helicopters to be purchased for other friendly nations. Thus, the Air Force will only receive 170 aircraft this year.

The Navy and Marine Corps request this year for 261 aircraft is the lowest request since 1946 and compares most favorably with the 401 aircraft requested last year. The vast bulk of aircraft will go toward attrition; namely, to make up for peacetime losses and those incurred in Southeast Asia.

During the last 6 years, the average age of Navy aircraft has increased from 6.9 to 8.1 years. By the time the aircraft in this bill have been delivered, the average age will increase to 9.3 years. This age increase continues despite the fact that the total Navy inventory has decreased by 11 percent during the past 6 years.

Mr. President, I feel, in view of the foregoing facts, that the $2.6 billion requested for aircraft funds is extremely reasonable and well justified except for the $65.2 million denied by the committee reducing the total request from $2.655 billion to $2.590 billion.

TACTICAL MISSILES

Mr. President, I would now like to review briefly the actions by the Tactical Air Power Subcommittee with respect to 12 major tactical missile programs. Our recommendations were all approved by the full committee. Funds were requested totaling $545.3 million. We made reductions of $108.7 million and approved $436.6 million. This represents a sizable 20-percent cut in funds requested.

During our deliberations, we were concerned as to the justification for so many different types of tactical missiles, together with the total quantity requirements for each type of missile.

The tactical missiles being purchased today by the military departments by virtue of their complexity involve high production unit costs. Hence, any reductions that can be made either in type or quantity achieves sizable savings to the taxpayer.

I want to stress that our objective was not to eliminate missiles for the sake of elimination itself. However, we were most anxious that no duplication or proliferation of missiles be permitted. I am pleased to see the Department of Defense giving increased attention to this matter. I will now discuss the individual programs and the basis for our actions.

PHOENIX

The Phoenix is a long range air-to-air missile system to be installed on the Navy's F–14 aircraft enabling it to perform the Fleet Air Defense mission (FAD). The Phoenix fire control system will also control and fire the Sparrow, short range missile, and the gun.

The Phoenix was originally developed for the F–111B aircraft. Hence, the research and development program is almost finished. Flight test results so far have been extremely good—24 successes out of 33 attempts. The Phoenix represents a dramatic increase in the state-

of-the-art. It will be able to track-while-scan many targets simultaneously. It will also be able to simultaneously track and launch six Phoenix missiles against six different enemy targets.

The Navy requested $8.5 million for research and development and $101 million in production funds to buy production engineered missiles. This is an important step to insure that the missiles turned out on the production line attain the same necessary performance achieved by R. & D. missiles.

The Phoenix will be an expensive missile. However, a value engineering program was completed which reduced the unit cost by slightly less than half. Another favorable factor is that the AWG-9 fire control system weighs 130 pounds less today than was specified several years ago.

A key feature of the Phoenix is its onboard checkout system that will enable 85 percent of the system to be verified on the aircraft for a go, no-go condition. This will save significant money in contrast to older systems where expensive test equipment is required to determine whether the missile systems are in a satisfactory condition for combat.

We questioned the Navy closely about the total requirement for Phoenix missiles. The exact figure is classified. However, we have told the Navy we intend to follow this matter closely in the future when production missiles are being purchased to insure that excessive quantities are not procured.

The program is currently on schedule and the first fire control system to go into the F-14 will be delivered in January 1971.

The funds requested were approved.

SPARROW

The Sparrow is a supersonic air-to-air missile used by both the Navy and the Air Force. It was originally developed in the late 1940's. The latest operational model is known as the AIM-7E-2 which incorporates modifications required from our experience in Southeast Asia. A new Sparrow missile, known as the AIM-7F, is in research and development which will incorporate solid state rather than vacuum tubes, have extended range, proven reliability, and so forth. The 7F model will constitute a significant advance in the Sparrow missile system capability.

The Air Force requested $14.4 million to buy several hundred AIM-7E-2 missiles. The committee approved this request so the Air Force can maintain a satisfactory inventory position.

The Navy requested $54.1 million for the Sparrow program—$1.4 million for R. & D. and $52.7 million for procurement of both the AIM-7E-2 and the AIM-7F.

The committee reduced the Navy's procurement request by $6.7 million by reducing the number of AIM-7F's by 50 percent. We authorized an increased number of the Sparrow AIM-7E-2 to compensate for the reductions in the F models.

Our reasoning was based on the fact that the 7F program is 2½ years behind schedule. Several problems were encountered. Although corrective actions are underway, we felt one more year of validating the performance characteristics of the 7F was justified before significant procurement was authorized.

The kill capability of the Sparrow AIM-7E's fired in combat in Southeast Asia was much less than desired. We were assured the modifications incorporated on this model will substantially increase its combat capability.

We requested both the Air Force and the Navy to examine carefully the training expenditures of the Sparrow because of the high unit cost. While we fully support adequate and thorough training, we urge great caution be exercised in firing such expensive weaponry for training purposes.

MAVERICK

The Maverick is an air-to-ground tactical missile being developed for the Air Force. It is a TV-guided, rocket-propelled missile designed to destroy small, hard, fixed or moving targets such as tanks and pillboxes.

The Air Force requested $24.7 million for research and development and $25 million for production. The committee recommended approval of the $24.7 million for research and development and reduced the $25 million for production to $3.1 million—a reduction of $21.9 million.

The $3.1 million will enable the Air Force to exercise a delay clause in its contract with the Maverick contractor. It was our judgment it would be profitable to continue this program in research and development for one more year prior to authorizing significant production funds. We were encouraged by the satisfactory test results achieved to date. However, substantial testing remains to be performed during fiscal year 1971. This will enable the Congress to make a wiser decision on the justification for production funds next year.

CONDOR

The Condor is a Navy air-to-surface missile with remote TV guidance from the launching aircraft. Its primary mission is to destroy high-value targets protected by intense local defenses. With a capability to launch the Condor at great distances from the target, the safety of the crew and invulnerability of the launching aircraft is greatly enhanced.

The Navy requested $58.2 million—$23.3 million for research and development and $34.9 million for procurement, of which $6 million was to modify test aircraft.

Mr. President, it was our judgment additional research and development is warranted in view of technical problems already encountered. Therefore, although we authorized the research and development funds and the modifications to the test aircraft, we denied $28.9 million in production funds until more evidence of resolving the technical difficulties is available.

SHORT-RANGE MISSILE

The short-range missile is a proposed new air-to-air missile system specially designed for close-in maneuvering encounters with high-performance enemy fighters. It would be used on the F-15 and F-14.

The Navy and the Air Force have been working on separate missile systems to meet this requirement. It was our judgment a common short-range missile system should be developed so the Navy F-14 and the Air Force F-15 would use the same missile. Secretary Packard is to make a decision relatively soon on this matter.

Mr. President, in view of our support for a common missile, we authorized the $2 million requested by the Navy for advanced development and reduced the Air Force request from $37.2 million to $8 million. Significant funds for the Air Force program from fiscal year 1970 have been deferred by OSD.

It was our judgment it would be premature to authorize $37.2 million in fiscal year 1971 for the Air Force until Secretary Packard reaches a decision on which program should be approved for development.

FALCON

The Air Force requested $15 million to modify some of its existing Falcon air to air missiles. The Falcon performs the same mission as the Sidewinder missile. They are both heat seeking missiles designed to home on the infrared energy emitted from a jet aircraft tailpipe. Both the Sidewinder and the Falcon have been in use for many years. They were designed for use against non-maneuvering enemy bombers. The success rate for earlier versions of both models in South Vietnam was low.

Mr. President, the Committee supported the concept that both the Air Force and the Navy should ultimately use a common Sidewinder missile to prevent further missile proliferation.

The Falcon missile has been modified previously. We saw no benefit in modifying it further. Hence, we denied the request for $15 million to modify the Falcon missile.

SIDEWINDER

The Navy requested $31.5 million to purchase several hundred Sidewinders and the Air Force requested $17 million to modify several thousand Sidewinders. The committee approved these requests.

Once again we feel the services should exercise restraint in shooting large quantities of this missile for training purposes. Also, older models should be used for this purpose.

HARD STRUCTURE MUNITIONS

The hard structure munition is an air-to-ground rocket powered, TV-guided missile being designed for high effectiveness against large hard structure targets.

The Air Force requested $7 million to continue research and development. These funds were disapproved on the basis that $8.9 million previously appropriated is still available and the program has been delayed due to technical problems.

SHRIKE AND STANDARD ARM

The Shrike and the Standard Arm are antiradiation missiles designed to home on and destroy enemy early warning and surface-to-air missile radars. The subcommittee authorized the $17.2 million requested by the Navy and the $9.7 million requested by the Air Force.

While it would be desirable to standardize on a single anti-radiation missile the committee recognized that the Shrike missile, although less capable than the Standard Arm, is also less costly. The vast bulk of the funds authorized is to continue procurement of the cheaper Shrike missile.

TOW

The Tow is a wire-guided antitank missile. It is to be used by Army ground combat troops against enemy tanks.

The Tow uses an open breech launcher. Considerable discussion took place last year over the possible wisdom and feasibility of adapting the Shillelagh missile for this mission. The Shillelagh is a proven antitank missile fired from the Sheridan armored reconnaissance vehicle. In this role, it requires a closed breech gun tube. The committee interrogated the Army at great length relative to these programs. We concluded the Tow offers the Army a vitally needed antitank killing capability now. There would be a 4-year delay if we awaited delivery of the Shillelagh missile in the ground mount mode. No cost savings would be realized to the U.S. taxpayer. Hence, we approved the $113.2 million requested by the Army to continue production of the Tow missiles.

DRAGON

The Committee approved $9.6 million to continue research and development on the Dragon. It is a medium antitank assault weapon. It has been in engineering development since 1966. It complements rather than duplicates the Tow. We intend to monitor progress on this program closely in the future.

Mr. President, that concludes my comments on the 12 tactical missile programs analyzed by the Tactical Air Power Subcommittee.

In summary, the total money requested was $3.2 billion for the 10 aircraft and 12 missile systems we examined. We denied $173.3 million or 5.4 percent of the funds requested. Mr. Laird's budget presentation was by and large a reasonable one. This made our task of finding areas where equitable and nonarbitrary cuts could be made a difficult one indeed.

I will be pleased to answer any questions that the members have with respect to these programs.

Mr. THURMOND. Mr. President, as the ranking minority member of the special Tactical Air Power Subcommittee of the Senate Armed Services Committee, I wish to commend the able junior Senator from Nevada (Mr. CANNON) for his excellent presentation of the findings of the subcommittee.

Further, it should be noted that as chairman of the subcommittee Senator CANNON exercised outstanding leadership in his conduct of the lengthy and comprehensive hearings which probed into the tactical air and missile requests of the military services.

Mr. President, most notable in the work of the subcommittee was its refusal to make arbitrary cuts in our missile and aircraft programs despite pressures to the contrary.

While the subcommittee recommendations of cuts amounting to $173.3 million of the $3.2 billion requested in these areas may seem small, it must be remembered we were dealing with what Secretary of Defense Melvin Laird termed "a rock bottom budget."

Each member of the subcommittee contributed to the close examination of these programs, but we always kept in mind that cuts must be fully justified just as requests must be fully justified.

There was one recommendation of the subcommittee in which the full committee did not concur. This recommendation was to complete the research and development program on the Army's Cheyenne helicopter.

As a strong supporter of this type of close fire support for our combat soldiers in the field, I regret the full committee did not see fit to complete development on this program. This is one area in which I feel the committee cut too deeply. However, I respect the judgment of the full committee and abide by it. I am sure this matter will come up later during the conference between the Senate and the House.

Mr. President, at the direction of the distinguished chairman of the Armed Services Committee, the subcommittee gave close attention to the possibility that the services may be duplicating weapons systems in the missile field.

In this area of study some duplication was found, specifically in the short range air-to-air tactical missile. As a result, the subcommittee made recommendations which we feel will result in a savings to the Government while at the same time not weakening our posture in this important area.

Further, some duplications were found in various types of bombs and once again actions were taken to correct this problem.

Also, it should be noted that particular study was given to several major tactical aircraft programs, specifically the Navy's F–14 and the Air Force's F–15. Senator CANNON's remarks on these two aircraft were quite thorough and appropriate, and reflected the attention given them by the subcommittee.

Finally, Mr. President, I hope the Senate will weigh carefully the report of the Tactical Air Power Subcommittee before undertaking any effort to further cut the military budget.

As I stated last week, in my opinion, procurement requests have already been slashed to an extent where the adequacy of our defense posture may easily come into question during future years.

Again, Mr. President, I wish to commend the able Senator from Nevada for the fine leadership that he has shown in this subcommittee.

Mr. CANNON. Mr. President, I want to express my appreciation to the distinguished Senator for his very great assistance as ranking minority member on the Tactical Air Power Subcommittee. I am sure that much of this report is due to the efforts of himself and the other members of the committee.

Mr. GOLDWATER. Mr. President, will the Senator yield?

Mr. CANNON. I am very happy to yield to the Senator from Arizona.

The PRESIDING OFFICER (Mr. MCCLELLAN). The Senator from Arizona is recognized.

Mr. GOLDWATER. Mr. President, I rise not to question the Senator but to compliment him on what I believe is the best report in this area that I have heard in the years I have served on this committee. The personal knowledge which he has applied has been of great benefit to the committee. As a member of the subcommittee I can testify to the diligent and hard work of the Senator from Nevada in interrogating the military services relative to their need.

I was particularly happy in listening to his report to hear him emphasize time and time again that this is a rock bottom budget for aircraft and components. I personally feel that the requests are too low. But I have agreed with the subcommittee in its findings. I think the blame, if blame is to be placed, will have to be put with the Defense Department in not asking for enough in this very important field.

I was impressed, too, by the chairman's reemphasizing, and very powerfully reemphasizing, the threat—in fact, I should say the growing threat—caused by reason of the Russian Air Force increasing at a much more rapid rate than ours. They have produced a new prototype every 3 years, while most of our aircraft are over 10 years of age. They can outperform us, I think, in the categories of the fighter aircraft. The only thing we have going for us is the type of pilots we have in the three air services—I should say the four air services, recognizing the Marines as a separate force.

One thing that I think comes through loud and clear in the chairman's report—and I am sorry that there are not members of the Peace Through Law group here so that they can hear these comments—is the expertise that the subcommittee and the entire Armed Services Committee has at their command.

I do not think there is any other committee in the Senate that examines a subject as thorougly as does the Armed Services Committee. We must realize that these weapons systems are a long time being born. The Army, the Navy, the Marine Corps, and the Air Force are now thinking of weapons they will ask us for 5 years from now. The requests come from men who have spent their lives in the service of their country. These requests are thoroughly studied by the Joint Chiefs of Staff, reviewed by the separate Chiefs once again, and then sent to the President where the National Security Council reviews them. Then, they are sent to both Houses of Congress and examined by committee staffs comprised of men with years of experience in weaponry and the use of weapons.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. GOLDWATER. Mr. President, before the Senator from New Hampshire (Mr. MCINTYRE) left the Chamber, he said he did not wish to begin his remarks until 1:30 p.m., so we have about 9 minutes remaining until then.

The PRESIDING OFFICER. The Chair would entertain a unanimous-consent request.

Mr. GOLDWATER. Mr. President, I ask unanimous consent that the time between now and 1:30 p.m. be allotted to the Senator from Nevada.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. GOLDWATER. Mr. President, the staff members of both committees of the House and the Senate are fine experts in their fields. The staff of the subcommittee is as knowledgeable as any staff with which I have ever worked.

The thoroughness of the investigation and interrogation not only of this subcommittee, but all subcommittees and the entire committee makes it very questionable to me why these programs should be challenged on the floor of the Senate. I can understand that those of us who do not serve on the Committee on Labor and Public Welfare, for instance having certain questions because we are not considering pieces of hardware or actual demonstrated needs, and are talking about things that in most cases we do not know a lot about.

I hope Members of the Senate will refrain from any lengthy debate, such as was engaged in last year, which was a fruitless effort on the part of those who wanted to cut the military budget to bare bones. I hope that this year we can do as we have done in the past and accept the work of the Committee on Armed Services as the work of experts and recognize that these requests cannot be cut more without endangering the military power of the United States in this time of need. However, I think these words will fall on deaf ears, and I think we will have amendments to cut the program for the F–15, the C–5, and so on. I also feel those efforts will be defeated as soundly this year as they were last year.

Seeing the time is fleeting and the chairman of the full committee is present, I wish to repeat to the chairman, the Senator from Nevada (Mr. CANNON) that it was a real pleasure to serve with him this year, just as it was last year, and just as it has been my pleasure to serve with him during all the years we have been members of this committee. I commend him for the wonderful job he has done.

Mr. CANNON. I thank the Senator for his very kind remarks on my behalf. Also I wish to acknowledge his very valuable contribution to the committee. He is a very distinguished pilot himself and he is an expert in the areas we were considering. I agree with him in the commendation for the very fine staff we have. We have an excellent staff, and one that is highly technically trained. They are capable of going into these matters in great detail.

I share the Senator's views in connection with the attempt to meat ax these programs by people who do not have the expertise to deal with them.

Mr. YOUNG of Ohio. Mr. President, it has been my privilege to serve with the Senator from Nevada as a member of the Committee on Armed Services since 1963. He was a member of that committee before I had the honor to be appointed as a member. Then, since the creation of this special Subcommittee on Tactical Air Power early in January of the present year, I have been brought into almost constant contact with the Senator from Nevada as a member of that committee.

The Senator from Nevada is one of the most dedicated members of this great committee of the Senate. I hope the Senator will not blush or deny my statement. It was a matter of hard work on my part to try to keep up with him. I observed the great work he did for our Nation as a member of this subcommittee. We had many, many meetings. We listened to a great deal of testimony. It is true we also had the assistance of experts, but I marvel at the great work of the chairman, the Senator from Nevada (Mr. CANNON), in saving the taxpayers a great deal of money in connection with the expenditures requested. At the same time he stressed the importance of research and of having all new systems thoroughly examined.

I learned a great deal from him. I feel that our Nation is fortunate that he is a member of this subcommittee having so much to do with research and development.

Of course, I also happen to be a veteran of World War II and I have always said I was the most scared fellow to serve at the Anzio beachhead. But we in the Senate know that the Senator from Nevada in World War II had a distinguished record as a pilot, and that he challenged death, in death's own domain above the clouds over a foreign land. Unfortunately, he was shot down over Germany. Very fortunately, because of his courage, perseverance, and indomitable spirit, he was never a prisoner of war, but after some 40 days and nights finally found his way back to the allied lines. We in the Senate hold him in the highest admiration.

I feel he has not only performed a most distinguished service for his great State of Nevada, but also he has served his Nation well.

Quite frequently in the Committee on Armed Services the votes of the Senator from Nevada and my votes vary, but it may be that ofttimes I am wrong and he is right because I certainly respect his judgment and I hold him in the greatest admiration. He is one of our finest public servants, as the Senator from Arizona (Mr. GOLDWATER) and the Senator from Mississippi (Mr. STENNIS), our distinguished chairman, and others who are here know.

I am pleased that I have not only the privilege of serving with him, but that I had the privilege of listening to the Senator's address today.

Mr. CANNON. Mr. President, I certainly thank the Senator for his overly generous remarks. As a member of the subcommittee he certainly added very greatly to the expertise on the subcommittee and assisted very greatly in compiling the report we presented to the Senate. I thank him again.

Mr. STENNIS. Mr. President, will the Senator yield?

Mr. CANNON. I am happy to yield to the Senator from Mississippi.

The PRESIDING OFFICER (Mr. McGOVERN). The Senator from Mississippi is recognized.

Mr. STENNIS. Mr. President, I have heard a great part of the Senator's speech; and I have looked through all of it in the copy I have on my desk.

I want to point out to Senators and the people of the Nation that this is an extraordinary speech, based upon a highly important and far-reaching examination, hearings, and analyzing of a very complex subject matter, and one that is so vital and so essential to our national security.

I commend highly the work of the very able and outstanding chairman of the subcommittee, the Senator from Nevada, and also commend and thank the other members, the Senator from Missouri (Mr. SYMINGTON), the Senator from Ohio (Mr. YOUNG), the Senator from South Carolina (Mr. THURMOND), the Senator from Texas (Mr. TOWER), and the Senator from Arizona (Mr. GOLDWATER).

There is an unusual array of talent and experience of the highest type and dedication of the very highest caliber. I have pride in them and their work. Notice that there are three members from the majority party and three members from the minority party. There was no appointment there so either party would have a majority over the other. They were appointed with other purposes in mind and in view, and that is what they have done.

Here we have the benefit of their report and their work, and the testimony of witnesses on 10 major aircraft programs and 12 missile programs. There are 2,715 printed pages of testimony, and a very sizable part of it covers every essential phase of the systems examined and also contains testimony by witnesses not only on this subject but the need as a whole.

By the way, the report on the bill sets forth for every Member of the Senate and the press and anyone else interested a very complete analysis and report on all these aircraft programs and procurement requests of all kinds. I shall put these tables into the RECORD later, with the consent of the Senate, but I am referring now to page 32, with reference to the aircraft program, followed by a series of tables, numbering about 10 in all, and, in addition, 19 separate charts on research and development that show everything. It is a strong lead to every single major item in the bill. I call that to the attention of the membership of the Senate.

I also noticed in the Senator's speech reference to the policy recently announced by Mr. Laird, Secretary of Defense, and Mr. Fitzhugh. The "fly before you buy" policy is reflected in the report and in the speech with reference to some of the programs that have been examined.

I join in the fine tribute to the Senator from Nevada for his capacity in this particular field, he being an outstanding pilot in his own right and a veteran of World War II, as are other members of this very fine subcommittee.

When we have the concentrated wisdom, time, talent, and experience of all these men, I am sure that is something that will be taken seriously by the Senate. I do not boast of anything at all, but I do

not believe there will be any appreciable change in the fine work that the subcommittee has done.

Again I congratulate the Senator from Nevada and thank him.

Mr. CANNON. I thank the distinguished chairman of the committee for his generous remarks. I appreciate the comments he has made about the members of our committee, who are outstanding members of the Senate and who have contributed greatly to the work of the committee.

Mr. President, I yield the floor.

Mr. STENNIS. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. McINTYRE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Pursuant to the previous order, the Senator from New Hampshire is recognized for 1 hour.

INDEPENDENT RESEARCH AND DEVELOPMENT

Mr. McINTYRE. Mr. President, I would like at this time to address myself to another of the subject areas examined in depth this year by the Research and Development Subcommittee. I refer to what became known during last year's debate as the subject of "I.R. & D." As I have said before, it is one of the most complicated subjects I have ever encountered.

Pursuant to the agreement reached during floor debate on last year's bill, the committee's Ad Hoc Subcommittee on Research and Development held 4 days of open hearings, supplemented by many hours of more informal sessions, into Department of Defense funding of its contractors' independent technical effort.

The independent technical effort expenditures of defense contractors are those expenditures undertaken by a company largely at its own initiative rather than according to the terms of a direct contract with the Defense Department. These expenditures are classified at present into three different categories—independent research and development—I.R. & D.—bid and proposal—B. & P.—and other technical effort—O.T.E.

The I.R. & D. program of a defense contractor is no different from the ongoing research program which all commercial companies have to have if they hope to keep up with technology and their competitors. Companies selling in commercial markets recover the costs of such programs as overhead costs reflected in the prices of products to their customers. So do defense contractors selling to the Defense Department, but the method and amount of their recovery is not solely of these contractors' choosing.

Since World War II the Defense Department has had a constant need to buy large, sophisticated technological products for which it is the sole customer. It was recognized early by both the Department and industry that very few firms could afford to develop such products on their own. The high risk of failure of the R. & D. effort and the high risk that the final product, even if successfully developed, might not find a customer could not be accepted by even the largest of those defense-oriented firms.

As a result, the Department initiated use of cost reimbursement and other negotiated type contracts as a substitute for the traditional fixed-price type of contract. Under a cost reimbursement contract, the Department agrees to reimburse the contractor for the costs incurred in carrying out the work on the contract and in addition to pay a negotiated amount of profit in the form of a fixed or incentive fee. Determination of the direct costs to be reimbursed under a particular contract is not difficult. It is far more difficult, however, to identify and decide which of a company's indirect or overhead costs are to be charged to a given contract.

An elaborate system has been worked out by the Defense Department and established in the Armed Services Procurement Regulations—ASPR—to solve this problem as far as a contractor's I.R. & D. costs are concerned. In the most elementary terms, this system allows a contractor to recover over the course of a year, an amount approximating that percentage of his total I.R & D. costs as his non-fixed-price sales to the Defense Department represent in relation to his total sales. In furtherance of this goal, the largest defense contractors are required each year to negotiate with the Defense Department advance agreements which establish a ceiling on the total I.R. & D. costs they may recover for the year in payments under their non-fixed-price contracts with the Defense Department.

The B. & P., or bid and proposal, expenditures of defense contractors are those expenditures incurred in the preparation of bids or proposals to the Department of Defense for new weapons systems or components. Such work is often, in terms of technical content, closely akin to the effort involved in a company's I.R. & D. work. The difference between B. & P. and I.R. & D. lies in the purpose for which the work in question is done. If it is done without the intent of including the results in a specific proposal, but has the more general aim of developing processes, products, or service capabilities, it is called I.R. & D.

The O.T.E. classification encompasses a group of miscellaneous technical activities not classified traditionally as either I.R. & D. or B. & P. It is really a hybrid classification which has grown up as an accounting convenience and without any underlying rationale. The Defense Department has proposed the abolition of this account and a reclassifying of the items within it on a reasoned basis into either the I.R. & D. or the B. & P. accounts.

S. 3003

A prime purpose of the committee's hearings was the evaluation of S. 3003, a bill introduced by Senator PROXMIRE for the purpose of revising extensively the manner in which the Defense Department now funds its contractors' independent technical effort.

S. 3003 would prohibit the reimbursement of a company for its I.R. & D. and O.T.E. costs unless such costs were specifically provided for in a given contract. In such event, the contractor in question would have to submit to the Defense Department a technical appraisal of each I.R. & D. project covered, and reimbursement would not be allowed unless the work at issue was of direct or indirect benefit to the work being performed under the contract itself.

S. 3003 would also restrict the instances in which reimbursement for bid and proposal costs would be permitted and would provide that such reimbursements could never exceed 1 percent of the direct material and the direct labor costs of the contract through which they were made.

The committee recommends against enactment of S. 3003. In its view, the enactment of S. 3003 would produce a series of adverse effects which would far outweigh its benefits.

The provisions of S. 3003 relating to I.R. & D. and O.T.E. would eliminate much of the contractor independence which is so important a part of the present administrative controls of these activities. The overall effect of a system under which all I.R. & D. projects had to be contracted for specifically, and subject to individual technical evaluations, would be an elimination of I.R. & D. as it is presently known and the substitution of direct contracting as a national policy.

One result of such a change would be significantly higher administrative costs for the Defense Department. It would be impossible for the Department to evaluate and contract individually for the millions of I.R. & D. projects undertaken annually by defense industry without sizable increases in its scientific and contracting staffs. Increases of such magnitude are not advisable at a time when pressures on the size of defense budgets are forcing significant manpower reductions at the Department.

A second, related result would be a decrease in the amount of research work performed by defense industry. Such a decrease would inevitably occur if an elaborate administrative program had to be gone through before reimbursable work could ever be undertaken.

It might be argued that this decrease in the quantity of work undertaken would be offset by the improved quality of the work dones as a result of the Department's close evaluation of its relevance to future defense needs. The committee strongly doubts, however, whether this would be the case. In the first place, relevance to the Department's needs can be assured in large part by the fact that the defense industry's motive in undertaking the work is always future sales, sales which would not occur unless relevance to the Department's needs existed. Second the Department of Defense simply does not have in-house a monopoly on the best scientific and engineering minds in the country. It is doubtful whether even an expanded technical staff at the Department could consistently outguess industry as to the best potential solution to basic technological problems.

A related consideration is the fact that the solution of such basic technological problems is often a process of trial and error. This implies a flexibility to change directions when a given approach seems doomed to failure, or another significantly more promising. Such flexibility would be lost if an administrative straightjacket were placed on industry's I.R. & D. efforts.

S. 3003's limitation of the reimbursement of B. & P. expense to a maximum of 1 percent of direct material and labor costs in a given contract is also troublesome. To begin with, this limitation establishes a maximum believed to be about half the rate currently being experienced by most defense contractors. Even more important, B. & P. expense has no direct relationship to the cost of direct material and labor. It is related to the contractor's backlog and the magnitude and complexity of the systems and equipment on which he undertakes to quote. As a result, B. & P. expenses fluctuate considerably between contractors and for individual contractors from year to year.

PROBLEMS NONETHELESS NOTED

While the committee is convinced, as a result of its hearings, that enactment of S. 3003 is not advisable, the committee is also convinced that the Department's administration of its contractors' independent technical effort can be significantly improved and the costs of these programs somewhat reduced.

The committee found, for example, that the overall I.R. & D. programs of even the largest defense contractors were subject at times to only cursory technical reviews. The brochures covering these programs were often poorly studied and only brief trips made by department's personnel to the contractor's plants where the work contemplated was to be performed. One side effect of this limited review was the occasional funding by the department of contractor research and development relevant to the companies' commercial as opposed to Defense Department sales.

While the committee recognizes that detailed reviews of a company's individual I.R. & D. projects are neither feasible nor desirable, it sees no reason why greater efforts cannot be made to evaluate more closely the general scope of companies' I.R. & D. programs. The department should assure itself that the areas in which a company is working are, in broad terms, both defense-related and likely to produce technological advances in which there is a clear Defense Department interest. Any increases in technical staff needed to assure this limited objective are, in the committee's view, clearly warranted.

The committee was troubled also by recent increases in the overall magnitude of Defense Department funding of its contractors' independent technical effort. Between 1963 and 1969 the amount of money invested in this program increased from $459 million to $759 million, a rate of growth significantly greater than the rate of growth in the Department's procurement budget. And these figures cover payments to the major defense contractors only.

Among the factors responsible for these increases are several to which insufficient attention has been paid to date.

One of these is the difference between the competitive pressures in the commercial and defense markets. A company manufacturing for the commercial market has no assurance that it will be able to recover even the direct costs of his product, let alone indirect costs such as the costs of an allocable share of his overall research program; it all depends on the reception accorded his product in the market. Defense contractors, however, often bear far less risk. Their contracts with the Government often assure them of reimbursement for both types of costs. Accordingly, while both types of contractors can be expected to pursue research programs which maximize their potential sales, defense contractors have an incentive, other things being equal, to spend more in absolute amounts. This incentive can be counterbalanced only by Government controls designed to replace the competitive pressures of the private market.

The fact that the existing system of Government controls has been deficient in several respects is in large part responsible for the rising costs of contractors' independent technical effort programs.

Advance agreements with major contractors, for example, are designed in theory to set a ceiling on the maximum reimbursable costs which a contractor can recover in a given company's fiscal year. In practice, however, up to 38 percent of these advance agreements have actually not been signed until 6 to 8 months into a contractor's fiscal year, after which time advance cost control is no longer possible.

Moreover, advance agreements have been negotiated in the past only on the I.R. & D. portion of most contractors' programs. Given the similar nature of I.R. & D., B. & P., and O.T.E.-type work, many contractors have sought to circumvent their I.R. & D. ceilings by reclassifying additional desired work in the B. & P. and O.T.E. categories.

DEPARTMENT OF DEFENSE POSITION

In its testimony before the committee, the Department of Defense admitted the existence of these problems. It also proposed the following five-point plan as a means of coming to grips with them:

First. The improved use of individually negotiated advance agreements for the control and reimbursement of these costs for approximately 100 of the largest defense contractors.

Second. A strengthening of the Department's technical review and evaluation procedures in this area.

Third. Establishment of a data bank to provide a centralized body of I.R. & D. project cost and technical information.

Fourth. The use of a standard formula in determining the reimbursable costs of the large number of smaller contractors whose volume of sales to the Department does not justify the negotiation of advance agreements. There are actually several thousand of these smaller contractors.

Fifth. An increase in the resources of the military departments such as is necessary to permit implementation of the first four points.

The committee supports the Department in its efforts to improve its administration in this complex area, and it urges strongly that immediate steps be taken to implement the above plan. The committee believes also, however, that the importance of contractor independent technical effort programs to our security and the amount of money used annually to fund them, both justify broad legislative controls by Congress in this area.

THE COMMITTEE-PROPOSED AMENDMENT

In formulating its legislative recommendations, the committee has been mindful of the limited scope of its legislative authority. While S. 3003, as introduced by Senator PROXMIRE, would regulate the independent technical effort programs of both the DOD and NASA, the committee's proposals are applicable to the DOD alone.

For the same reason, the committee rejected the suggestion in the February 16, 1970, report to Congress by the Comptroller General of the United States, a report entitled "Allowances for Independent Research & Development Costs in Negotiated Contracts—Issues and Alternatives," for a uniform policy encompassing all agencies with independent technical effort programs.

Apart from jurisdictional considerations, the committee questions the wisdom of a uniform policy for a number of agencies with many different programs and customers. It believes, for example, that the policy for the AEC, while suitable for an agency with expertise in and responsibility for a very narrow scientific field, may be improper for the very different and more divergent needs of an entity such as the Defense Department. It notes also, as a practical matter, that companies selling to the AEC generally do only a small fraction of their current business with that agency and have an incentive, in the form of the very large future potential of atomic energy, to maintain all possible contracts with that agency. Companies selling to DOD, on the other hand, are far more dependent on that agency for their immediate economic health and could less easily withstand the effects of a restrictive policy.

The committee's proposed amendment has four main features:

First. It would require the Defense Department to negotiate advance agreements with all contractors who, during their preceding fiscal year, received I.R. & D., B. & P., and O.T.E. payments in excess of $2,000,000.

The number of contractors covered by this provision would be approximately 50, the same rough number with whom advance agreements are presently signed. Accordingly, there would be no major immediate expansion of the number of individual negotiations in which the Department would have to engage.

These agreements, however, would have to cover not only the I.R. & D. programs of these contractors, but their B. & P. and O.T.E. programs as well. The Defense Department itself has acknowledged that an expanded ceiling of this

kind is needed if a solution is to be found to the present practice whereby companies subvert their I.R. & D. ceilings by classifying certain expenditures in the B. & P. and O.T.E. accounts.

While only 50 or so companies will be covered by this $2 million threshold, these companies account for the great bulk of all auditable independent technical effort funds disbursed by the Department, 93.1 percent in 1968 and 95.6 percent in 1969.

Second. It would require that the I.R. & D. portions of these advance agreements be accompanied by technical evaluations of contractors' proposed I.R. & D. programs. These evaluations must be improved if the Department is to be assured that the work done is of great potential value to its future needs.

Third. It would require that no payments be made for I.R. & D., B. & P., and O.T.E. work not relevant to the functions and operations of the Department of Defense. This provision should serve as a directive to the Department to avoid a recurrence of those isolated past instances in which Department funds have been used to fund the research of contractors on commercial products.

Fourth. It would establish a ceiling of $625 million on the payments to be made pursuant to the advance agreements required to be negotiated during fiscal year 1971.

The Department of Defense opposes the establishment of such a ceiling. The committee is convinced, however, that a ceiling is essential if Congress is to be assured that costs in this area do not continue to rise at an unacceptable rate, and to provide the basis for an annual review of this program.

Considerable attention has been given by the committee to the alternative types of ceilings it could establish. It has rejected both line item control and a ceiling based on a given year's funds as administratively unworkable. The approach actually chosen will require the Department to do nothing more than to divide the $625,000,000 available to it among the 50-odd companies with which agreements are required.

The military departments have provided the committee with estimates indicating projected total payments for contractor independent technical effort programs of $656 million for the year 1970 and $645 million for the year 1971, compared with the $759 million reported for 1969. Although these amounts are recognized as estimates, their downward trend is consistent with the ceiling of $625 million recommended by the committee. Indeed, since the $625 million ceiling covers only those large companies who may be expected to receive about 95 percent of the total payments made, the ceiling actually affords the Department leeway to exceed its present estimates.

In conclusion, Mr. President, I would like to voice my conviction that the action taken by the committee will provide Congress with the type of control over these sizable expenditures, which is so urgently required at the present time.

I would also like to add a word of thanks, on behalf of the committee, to the Senator from Wisconsin (Mr. PROXMIRE) for bringing this matter to the committee's attention. While the committee's proposed action differs from his own, and while he may well disagree with the adequacy of our action, he deserves a large part of the credit for bringing this program under improved congressional control.

Mr. President, I want also to extend my thanks to Ross Hamachek, of my staff, for his long hours of grappling with what has been an intricate, complex problem. His work and suggestions to the subcommittee have been of great assistance to me and to the committee.

At this point, Mr. President, I ask unanimous consent to have printed in the RECORD the text of the amendment.

There being no objection, the text of the amendment was ordered to be printed in the RECORD, as follows:

SEC. 203 (a) Funds authorized for appropriation to the Department of Defense under the provisions of this Act or any other Act shall not be available for payment of independent research and development, bid and proposal, or other technical effort costs unless the work for which payment is made is relevant to the functions or operations of the Department of Defense and unless the following conditions are met—

(1) the Secretary of Defense, prior to or during each fiscal year, negotiates advance agreements establishing a dollar ceiling on such costs with all companies which during their last preceding fiscal year received more than $2,000,000 of independent research and development, bid and proposal, or other technical effort payments from the Department of Defense, the advance agreements thus negotiated (A) to cover the first fiscal year of each such company beginning on or after the beginning of each fiscal year of the Federal Government and (B) to be concluded either directly with each such company or with those product divisions of each such company which contract directly with the Department of Defense and themselves received more than $250,000 of such payments during their company's last preceding fiscal year;

(2) the independent research and development portions of the advance agreements thus negotiated are based on company submitted plans on each of which a technical evaluation is performed by the Department of Defense prior to or during the fiscal year covered by such advance agreement;

(3) no payments for independent research and development, bid and proposal, and other technical effort costs are made by the Department of Defense to any company or product division with which an advance agreement is required by subsection (a) (1) of this section, except pursuant to the terms of that agreement; and

(4) the total dollar value of the advance agreements negotiated prior to or during a given fiscal year as required under subsection (a) (1) of this section does not exceed a ceiling to be established annually by the Congress.

(b) In the event negotiations are held with any company or product division with which they are required under subsection (a) (1) of this section, but no agreement is reached with any such company or product division—

(1) no payments for independent research and development, bid and proposal, and other technical effort costs shall be made to any such company or product division during the fiscal year for which an agreement was not reached, except in an amount substantially less than the amount which, in the opinion of the Department of Defense, such company or product division would otherwise have been entitled to receive; and

(2) the amount of money received by that company for independent research and development, bid and proposal, and other technical effort costs during its last preceding fiscal year shall be included in determining compliance by the Department of Defense with the ceiling established by Congress, pursuant to subsection (a) (4) of this section, for the fiscal year in question.

(c) The Secretary of Defense shall submit an annual report to the Congress on or before January 31, 1972, and on or before January 31 of each succeeding year, setting forth—

(1) those companies with which negotiations were held pursuant to subsection (a) (1) of this section prior to or during the preceding fiscal year, together with the result of those negotiations;

(2) the manner of his compliance with the ceiling established by Congress for the preceding fiscal year pursuant to subsection (a) (4) of this section; and

(3) the latest available Defense Contract Audit Agency statistics on the independent research and development, bid and proposal, and other technical effort payments made to major defense contractors whether or not covered by subsection (a) (1) of this section.

(d) The provisions of this section shall apply only to contracts for which the submission and certification of cost or pricing data are required in accordance with section 2306(f) of title 10, United States Code.

(e) The ceiling to be established pursuant to subsection (a) (4) of this section for fiscal year ending June 30, 1971, shall be $625,000,000.

(f) Section 403 of Public Law 91-121 (80 Stat. 204) is hereby repealed.

Mr. PROXMIRE. Mr. President, will the Senator from New Hampshire yield?

Mr. McINTYRE. I am happy to yield to the Senator from Wisconsin.

Mr. PROXMIRE. I congratulate the Senator from New Hampshire on an excellent speech and for the excellent job he has done in respect to the complex subject. I have talked to a number of Senators who have told me that Senator McINTYRE has done remarkable work in this area for several reasons. For one thing, it is complicated. Few people are aware of it. It was brought up last year and a number of the members of the committee said that they knew nothing or very little about it. So that the Senator from New Hampshire has gotten into a field that has been so complicated there has been little knowledge, discussion, debate, or very little understanding about it.

In the second place, as I understand the thrust of the recommendations of the Senator which he has listed to the purpose of the recommendations, they are not to discourage military research. Quite the contrary. The purpose of the recommendations is to encourage research and make it relevant and more effective, and to permit the Department of Defense and those who have the responsibility in Congress and elsewhere to know what is going on and what is being done, so that we will be in a position to appropriate money with critical understanding and knowledge.

I should like to ask the Senator from New Hampshire if that is not his principal objective?

Mr. McINTYRE. I would say to my good friend from Wisconsin that the subcommittee's recommendations to the full committee, and the committee's adoption of them, constitute a genuine at-

tempt to improve rather than curtail our defense research programs.

Last year, when the Senator from Wisconsin offered his amendment, it was a big surprise to me. Even though I had been chairman of the Subcommittee on Research and Development and was, presumably, somewhat knowledgeable in the whole field, I had never heard of independent research and development. As the Senator knows, it does not exist within the R.D.T. & E. section of the budget. It is actually found scattered all through the procurement items.

For this reason, we regarded the amendment of the Senator from Wisconsin as an open invitation to examine into this field, to see what we could do about bringing a quiet hand of control over an area of defense expenditures which no one in Congress knew very much about. We feel that our amendment will serve to keep the feet of the Department of Defense to the fire in its pledge to improve its administration of this program.

Mr. PROXMIRE. Let me see if I understand how the distinguished Senator from New Hampshire would go about this.

In the first place, the committee recommends that the Department of Defense will work with the big contractors, those who receive $2 million or more. This would cover not only what is technically called independent research and development but also bids and proposals and other technical efforts. Those two categories have been vague and ill defined. As a matter of fact, as I recall, even at the hearings, there was some disagreement as to what that meant. But this $2 million would be required in advance to cover those two categories; is that not correct?

Mr. McINTYRE. That is right.

Mr. PROXMIRE. In the second place, as I understand it, it requires that there be a technical evaluation by Defense—the committee recommends that there be—that the agreement be accompanied by a technical evaluation, so that there will be some clear understanding of the negotiations, how it relates to the defense effort, what it would contribute to, and whether it would be worth the amounts required.

Mr. McINTYRE. The Department of Defense does give a certain amount of time already to evaluation of brochures submitted by companies on this S.R. & D. programs.

Mr. PROXMIRE. That is about it. That has been the trouble. They look in the brochures and evaluate them, but this would go farther than just evaluating a brochure put out by a company. Those companies are skillful in making their brochures look attractive, but we must go behind the brochures to determine what the money is actually going to buy, and try to determine not only what the costs will be for each item but whether the items are technically feasible.

Mr. McINTYRE. I agree wholeheartedly. I would also point out to my good friend from Wisconsin that when we speak of brochures, we are speaking of very sizable items.

They are often two or three times the size of a phone book of a large metropolitan area.

The word "brochure," as such, is really a misnomer. These brochures are vast and complicated.

Mr. PROXMIRE. I did not mean to impugn them just because we called them brochures. What I meant was, to be somewhat skeptical about what the DOD is doing, whether it is doing a reasonably good job now in evaluating independent research and development.

The General Accounting Office had a very difficult time getting examples from them, and those we did get indicated very often that substantial expenditures were made in areas that did not have the remotest connection with defense. It would take a great imagination to conceive of ways in which they could have been related to defense. They were connected with urban renewal. One case I recall was devoted completely to domestic efforts, which might have been commendable but should have been specifically authorized and should not have been paid for under the guise of being for defense.

As I understand it, this evaluation will determine not only costs but also the feasibility and its relevance to defense work.

Mr. McINTYRE. That is right.

Mr. PROXMIRE. That is underlined by the third amendment—the third recommendation to which the Senator from New Hampshire referred, that no payment would be made for either I.R. & D. bids and proposals or other technical efforts which are not relevant to the purposes of the Department of Defense.

Mr. McINTYRE. That is our hard-nosed position at this time.

Mr. PROXMIRE. Finally, I think the proposal made by the Senator from New Hampshire, that the ceiling of $625 million be opposed, is realistic and sensible. It is very important to get that ceiling, not only from the standpoint of saving the taxpayers' money in areas where we have not really known what it has gone for, but much more important, to provide an incentive for the Department of Defense to make sure that the limited amounts of money for the projects will be for projects to help give this country its strongest military force.

Mr. McINTYRE. I hope that my good friend from Wisconsin understands that our ceiling is directed to the 50 companies doing $2 million or more work, which, we have found, account for 95 percent of all auditable I.R. & D. payments, but that there is a leeway over and above the ceiling of $625 million that could encompass another $20 to $40 million for the thousands of smaller companies which do some of this I.R. & D. work.

Mr. PROXMIRE. I think that is a practical accommodation, especially for a first effort. I hope that the committee, when giving its attention to this, will watch how it operates, and will consider the possibility of, perhaps, extending the ceiling further, especially if the area of I.R. & D. expenditures, which is exempt, should turn out to be greater than the $25 million or the $30 million which is anticipated.

I once again thank the distinguished Senator from New Hampshire. I do have some remarks to make, but I will wait until the Senator from California proceeds. This is related to I.R. & D.

I understand that the Senator from Arizona (Mr. GOLDWATER) now occupying the chair has an order to be recognized after the Senator from New Hampshire is through.

My remarks will only take 7 or 8 minutes. They are related to the same subject. I would like to make them after the Senator has finished.

Mr. CRANSTON. Mr. President, if the Senator from Wisconsin would like to proceed at this time, it is agreeable.

The PRESIDING OFFICER. The Senator from Wisconsin is recognized.

MAJOR IMPROVEMENTS MADE IN ADMINISTRATION OF I.R. & D.

Mr. PROXMIRE. Mr. President, last fall I introduced a bill to place major new controls on the funding and administration of the independent research and development program. Independent research and development funds are used by contractors to improve their technical capability to meet the demands of the Department of Defense for new weapons systems. As such, they are separate from the regular research and development program. Projects funded under the I.R. & D. program are undertaken largely at the contractor's own initiative. Unlike the regular research and development program, the contractor, and not the Government, chooses the projects he would like to work on.

MAJOR ABUSES

In recent years expenditures for independent research and development have risen very sharply and administration of the program has been very lax. Expenditures have been authorized for independent research projects which have little or no value to Defense contract work. In some cases, money was being spent for the development of commercial products. Little or no effort was being made to control costs. Advance agreements, whereby the contractor agrees in advance with the Department of Defense as to how much money will be spent on a particular project, were rarely negotiated on time, if at all. Technical evaluations to determine the potential benefit of the project to the Department of Defense were conducted on only the most limited scale. In many cases, these "evaluations" amounted to a brief review of a contractor's brochure in which he described the proposed projects to be funded under the I.R. & D. program. Subsequent changes in the projects were rarely reviewed, much less approved.

While very little control was being exercised over the I.R. & D. program, even less was being exerted over two related expense items known as bid and proposal expenses and other technical effort. Bid and proposal expenses are those costs incurred in the submission of unsolicited proposals by contractors. Other technical effort was never clearly defined and included expenses very closely related to regular I.R. & D. costs. Advance agreements were not required for expenses incurred in either of these categories and, as a result, substantial I.R. & D. expenditures which exceeded

negotiated ceilings were charged off to these two expense categories.

SHARP RISE IN COSTS

This virtual breakdown in the administration of I.R. & D. programs was reflected in the sharp increases in costs reimbursed under the program. Between 1963 and 1969, overall I.R. & D. expenditures rose from $459 million to $759 million, an increase of over 65 percent in 7 years.

Mr. President, if we were spending $750 million in almost any other area, there would be a great deal of discussion if there was an increase of this kind. There would certainly be an insistence that we know what we are getting.

During this period, I.R. & D. costs reimbursed by the Government rose almost twice as fast as the increase in sales by the same contractors to the Department of Defense.

It was clear to me that the program was out of control and that legislation was needed to place adequate controls on the administration and funding of the program.

ARMED SERVICES COMMITTEE RECOMMENDS NEW CONTROLS

At this time, I am very pleased to report that as a result of hearings conducted by the Senate Armed Services Committee last winter, substantial new controls have been recommended for congressional action. I would like to commend the efforts of the Senator from New Hampshire (Mr. McINTYRE) and the work of his subcommittee on research and development in their review of this very complicated program. While not all of the provisions of my bill S. 3003 were included in the committee's report, I am very pleased at the recommendations which have been made to insure adequate control over the independent research and development program. I believe the committee came to grips with the most pressing problems and that its recommendations are sound. A quick review of the committee's proposed amendment will bear this judgment out.

ADVANCE AGREEMENTS REQUIRED

As I have already pointed out, one of the worst abuses was the failure of the Department of Defense to negotiate so-called advance agreements with contractors which limit the amount the Department will pay in I.R. & D. costs for any particular project. Thanks to the Senator from New Hampshire, the committee's recommendation requires that the Department of Defense negotiate advance agreements with all contractors who, during their preceding fiscal year, received I.R. & D., B. & P., and O.T.E. payments in excess of $2,000,000. Because this requirement covers all three types of expenditures, it effectively prevents contractors from exceeding ceilings on I.R. & D. expenditures by reclassifying certain additional expenditures as B. & P. or O.T.E.

TECHNICAL REVIEWS

Second, the committee recommends that the I.R. & D. portions of these advance agreements be accompanied by technical evaluations of contractor's proposed I.R. & D. programs. This will insure that no project is funded which has not been carefully reviewed by the Defense Department before work is started on it. This will guarantee not only that costs are reasonable, but that the project is technically feasible.

I.R. & D. WORK MUST BE RELATED TO DEFENSE CONTRACTS

Third, the committee would require that no payments be made for I.R. & D., B. & P. or O.T.E. work which is not relevant to the functions and operations of the Department of Defense. This is extremely important if we are to avoid situations in the past where contractors have used I.R. & D. funds to develop projects related to commercial business or to domestic needs. It will guarantee that all work done is of some direct benefit to our defense efforts.

COST CEILING RECOMMENDED

Finally, and perhaps most important, the committee recommends that a ceiling of $625 million be placed on payments made for I.R. & D. This ceiling represents a $134 million cut from what was spent on the program in 1969. Although I would like to have seen a lower ceiling imposed, this figure represents a substantial reduction from what was spent last year. What is more important, by establishing a ceiling on total expenditures, the committee has provided the Department of Defense with the strongest possible incentive to see that the program is carefully controlled and administered. Without the ceiling, it is doubtful whether costs could be controlled in view of the open-ended nature of research expenditures. The ceiling will force the Department to review carefully all proposed projects and select only those projects which will be of direct benefit to its contract work.

SENATE SHOULD ACCEPT COMMITTEE AMENDMENT

Mr. President, I feel that these recommendations will provide the needed controls over the independent research and development program. While they do not include all of the provisions of S. 3003, I urge the Senate to accept the committee's amendment. Once again I want to commend the fine work of the distinguished Senator from New Hampshire (Mr. McINTYRE) and the other members of the Research and Development Subcommittee for the excellent job they did in looking into this extremely complicated and difficult program. I believe their recommendations will solve many of the problems which have plagued the independent research and development program. They will strengthen not only the administration of the program, but also guarantee that all work done will be of value to the Department of Defense. I am delighted that the committee has accepted the major part of my proposal and that the committee's recommendations have been largely accepted by the Department of Defense. I urge that the Senate approve the committee amendment.

INDEPENDENT RESEARCH AND DEVELOPMENT

Mr. CRANSTON. Mr. President, I am pleased that the present occupant of the chair is the Senator from Arizona (Mr. GOLDWATER). The matter I am going to talk about is, I think, a matter that would be of particular interest to him. I would like to enlist his support at some point on the matter I will present to the Senate.

DEPENDENCY ON DEFENSE CONTRACTS

Mr. President, I am concerned that if the recommendations of the Subcommittee on Research and Development are adopted, defense firms will become even more dependent than they are now on defense contracts for their existence. Past Government policy has encouraged some large contractors to depend almost exclusively upon the Department of Defense for business. The workers employed by these contractors and the communities in which they are located are similarly dependent on defense contracting. In California, for example, 15 percent of all manufacturing jobs are directly related to defense spending. This is not a healthy situation.

CONGRESSIONAL RESPONSIBILITY

As we cut unnecessary items from the Defense budget, as the administration and the Congress, particularly the Senate, have done in the past 2 years, Congress has a responsibility to insure that the workers and the communities who depend on defense work for their livelihood are not abandoned abruptly, thoughtlessly, without concern for them or for our Nation.

In part, this means we must allow and encourage defense firms to diversify. So far we have not lived up to this responsibility.

DEFENSE UNEMPLOYMENT

Mr. President, I ask unanimous consent that I may have printed in the RECORD at the conclusion of my remarks several articles dealing with the plight of workers who are and who will be unemployed as a result of defense cutbacks.

The PRESIDING OFFICER (Mr. GOLDWATER). Without objection, it is so ordered.

(See exhibit 1.)

Mr. CRANSTON. Mr. President, many of these workers are highly trained scientists and engineers who must either live on unemployment compensation or work at jobs that are considerably beneath their abilities or totally unrelated to their skills. Unemployment rates among technical personnel, assembly line workers and clerical staff are higher in communities dependent on defense contracting than in other parts of the Nation.

NEED FOR UTILIZATION OF DEFENSE RESOURCES

It is ironic that the skills that these unemployed people possess are desperately needed in other sectors of the society. To give only one example—in the housing field, a Presidential Commission estimated that we need to construct 2.6 million housing units per year.

Last year we constructed 1.3 million units and this year it is estimated that we will only produce 1 million new units. Not only are we failing to produce a sufficient number of houses to meet the needs of our expanding population, but we have not begun to replace the substandard housing units that create slums in our urban areas.

In testimony before the Senate Committee on Labor and Public Welfare, Walter Reuther contrasted the production methods in housing and space vehicles. He said:

UAW members in the North American Rockwell plant in the suburbs of Los Angeles built the major vehicles for the Apollo program, both the 11 and the 12. That happens to be the vehicle in which they are lifted off the launching pad and put into orbit.

That happens to be the most sophisticated vehicle ever put together by man. It has everything, its own water system, air system, electronic system, communications system, its own computers. That very complicated, sophisticated vehicle was put together with a work force that is 15% skilled and 85% unskilled.

Yet we build a thing as primitive as a house which is a box with some holes punched in it, and the labor mix there is 90% skilled and 10% unskilled.

Now why is that? Well, it is the technology. So here is an industry that has the highest technological and scientific capability in the world. And our job is to get that capability committed to the solution of these urgent domestic problems.

Domestic problems that cry out for the application of technology and skills developed in defense work include pollution abatement, mass transit, air control and safety, law enforcement and many other fields.

AMENDMENTS IMPEDE DIVERSIFICATION

But the Subcommittee on Research and Development proposes that the disbursement of funds for I. R. & D., B. & P., and O.T.E. be limited to work that is relevant to the functions and operations of the Department of Defense—prohibiting its use for the application of defense technology to other pressing social needs. A much more enlightened approach would be to permit a defense firm to spend such funds for work that is relevant to the functions and operations of other agencies, such as the Department of Housing and Urban Development or the Department of Transportation.

AID TO DIVERSIFICATION

Senator BROOKE suggested a very valuable program to aid diversification which is now incorporated into section 205 of the appropriations bill. That section recognizes the need for the application of defense technology to civilian uses by creating an Interagency Advisory Council to seek out such applications.

This will aid defense firms in diversifying, by highlighting uses to which existing capabilities can be put. But I believe that there is a need to develop additional capabilities for the transfer of defense technology to civilian uses. I.R. & D. can accomplish this goal.

Such a policy would not authorize unlimited expenditure of Department of Defense funds for nondefense purposes. Contingent on Department of Defense approval, it would allow firms to prepare to diversify into nondefense business, and to proceed to do so, as they carry on defense work, and particularly as their defense contracts are curtailed, run out or are terminated. The only alternative to such a policy is to utterly neglect workers, countless firms, and communities that have labored so long to maintain national security. There is no sound moral or economic reason to forsake those who have contributed to national needs—especially when their skills are needed in other areas.

If we allow defense firms to use I.R. & D. to diversify into nondefense lines, it will not be at the expense of the Department of Defense. I.R. & D. and related costs are overhead costs—that is, they are expenses that a firm must incur if it is to survive in a competitive economy, but which are not allocable to a particular customer. Since many defense contractors are almost entirely dependent on defense contracts for their existence, it is only fair that the Government pay its share of these overhead expenses.

If the Department of Defense does not allow these contractors to use defense funds to diversify, they will be permanently locked into defense contracting. As defense spending decreases, so will the business of these firms. Along with a decline in business will come high rates of unemployment and depressed communities.

LIMITATION ON I.R. & D. FUNDS IMPEDES DIVERSIFICATION

I am also opposed to placing a limitation on the amount of defense funds that can be spent on I.R. & D. and related expenses. Such a limitation may impair the ability of firms both to diversify and to be as constructive and creative in defense work itself as the national interest demands.

Dr. Arthur Obermayer, president of Moleculon Research Corp. in Cambridge, Mass., testified before the Senate Committee on Labor and Public Welfare that last year's reduction of 7 percent in I.R. & D. funds would hamper diversification.

Defense contractors who want to convert must spend more than a normal amount of time and money seeking out business in these new areas. This means learning new technologies through independent research and development activities and submitting more proposals to new government agencies—just the kinds of expenses this new legislation discourages. This new restriction on allowable overhead expenses for independent research and development, bid and proposal expenses and other technical effort goes in the wrong direction—this type of expenses which is necessary for conversion should be encouraged, not curtailed.

I.R. & D. VITAL TO NATIONAL SECURITY

I am also opposed to placing a limit on the expenditure for I.R. & D. because I view I.R. & D. as an insurance policy for national security. It is the source of up-to-date technological knowledge that is a vital ingredient of our very survival and will be not only as long as we are in an arms race but as long as we live in a lawless world.

We should encourage innovative thinking, and then allow those who under our Constitution make national policy to decide whether further research, and perhaps production, is needed.

I. R. & D. MORE ECONOMICAL THAN PRODUCTION

I.R. & D. enables us to refrain from needlessly producing expensive weapon systems because it cuts the leadtime in deployment of such systems. We would not be forced to deploy weapons out of speculative fear because we would have the capacity to produce weapons on short notice if actual need were to arise.

This ability to refrain from producing needless weapon systems is especially important now that the United States and the Soviet Union have embarked upon the tortuous path toward some form of arms limitation agreement. Production of weapons is provocative, and if such production can be halted, where not essential to our national security, the prospect for success in the SALT negotiations will be improved.

The premium for independent technical effort insurance protection is modest compared with the $6.74 billion spent last year on aircraft procurement, and the $3.6 billion spent on missile procurement. Independent technical effort cost the Government $685 million in 1968. We actually received $1.39 billion worth of research in return. Thus, the taxpayer got two dollars worth of research in return for every dollar invested.

Besides its low cost, the independent technical effort program has been a remarkable success. It speeded, by at least 5 years, development of integrated circuitry, the nerves of intercontinental ballistic missiles. It cut in half the development time of the flying crane, the world's largest helicopter. It helped land a man on the moon less than a decade after that goal was announced by President Kennedy.

Knowing that we have independent technical effort as insurance would also free us from deploying weapon systems which are already obsolete. The administration spent 891.5 million dollars in fiscal year 1970 on producing and deploying the ABM. Now they want to increase this expenditure by $334 million. Eventually the ABM can cost many billions of dollars.

Ironically, our I.R. & D. made the ABM obsolete even before it went into production. The waste of money on the ABM is not a technological failure. It is a political failure.

In a recent colloquy between Senators MCINTYRE and PROXMIRE, Senator MCINTYRE pointed out that the Soviet Union is spending more on defense R. & D. than the United States. In reply Senator PROXMIRE stated:

If our level of research is lower than that of the Soviet Union, then it seems to me it is a matter of misplaced priorities by the Defense Department, because, in absolute dollars, there is $72 billion in the overall budget—and military construction. AEC and military aid spending brings overall defense expenditures up to $75 billion. The London Office of Strategic Studies has stated that Russia is spending $40 billion military total, if we adjust both for the lower cost of living and lower salaries paid in the Soviet Union and for the difference between dollars and rubles. So all together we spend almost twice as much as the Soviet Union does on our defense. Yet the Senator from New Hampshire says we spend less in absolute dollars for military research.

Military research is the name of the game. After all, if we are going to have an effective military force, we have to have military research that bears a very large share of all military expenditures.

I would think we would want to reconsider our overall military priorities, perhaps moving some of the resources we have devoted to other military areas into research.

I agree with Senator PROXMIRE that military research is the name of the

game. I agree that we should consider reallocating some defense resources from production to research. However, the wisest form of reallocation is prevented by subcommittee's amendment to place a limit on the amount of I.R. & D.

EXISTING LIMITATION ON I.R. & D. EXPENDITURES

In the absence of a congressional limitation on I.R. & D. expenditures, such costs would not spiral out of control. Congress places an absolute limit on total defense spending each year. Whether that amount is spent on production or research, it is all allocated and ultimately spent. I believe that the Department of Defense should be given the flexibility to pursue important technical ideas through I.R. & D. if it feels that the need is great enough to curtail some production expenses. The need for the Department of Defense to make that trade-off insures that it will not authorize frivolous projects.

There is another aspect of this matter that I would like to touch upon. I am pleased that the chairman of the Armed Services Committee (Mr. STENNIS) is on the floor at this time, and I invite his attention to this particular aspect of the problem. This aspect relates directly, I believe, to our defense posture and hence, I am sure, to our security, and perhaps to our survival.

DIVERSIFICATION IS A FUNCTION OF DOD

If we assist firms engaged in defense to diversify into nondefense work, we will enable them to hold together teams of experts in defense technology that will otherwise be broken up—disintegrating and dispersing as so many companies find their defense contracts declining or ending totally. The absence of the best of these teams could be a fatal flaw in our security in the sort of emergency that can, unhappily, arise so suddenly and so dangerously in today's unstable, volatile, violence-prone world.

If we would find a way for those companies to diversify and to hold together those teams, I believe we would be serving a vitally important aspect of our national security.

Since it is evident that the Senate will now approve the committee recommendations on I.R. & D., I do not intend to acquiesce in this decision on any permanent basis, but I am not proposing any effort at this time, by the amendment process, to change the committee's decision. I do want to say that I shall renew the fight in the future. I shall also continue to work to maintain sufficient high levels of defense R. & D. through direct contracts so that our national security is not impaired.

Finally, I shall propose, in the near future, legislation of a new sort to aid defense firms in diversifying defense technology to civilian needs. The legislation will be designed to insure that those whose skills and talents have done so much in defense work shall have an opportunity to apply those skills and talents to domestic problems that so gravely concern all Americans.

At this time I would like to address one question to the very able Senator from New Hampshire, who has mastered an incredibly intricate and involved subject on the whole matter of I.R. & D. The present language on page 8, lines 8 and 9 of the bill, refers to "other technical effort costs unless the work for which payment is made is relevant to the functions or operations of the Department of Defense."

The committee report, on page 97, at the bottom of the page, explaining what would happen under the new language, reads:

> It would require that no payments be made for IR&D, BP, and OTE work not relevant to the functions and operations of the Department of Defense. This provision should serve as a directive to the Department to avoid a recurrence of the isolated past instances in which Department funds have been used to fund the research of contractors on commercial products.

I fully understand the desire to prevent private firms from using Government money to expand into commercial production for profit. However, a strong case can be made that firms should be allowed to use I. R. & D. funds to expand into fields where the society has a desperate need for technological innovation, but where the profit incentive is insufficient to lead firms to undertake such innovation because the markets for the products are uncertain. For example, I refer specifically to adapting the technology of communications devices and night-seeing devices, now used in aerospace and defense work and in Vietnam, for use by police in law enforcement in the cities. We have the technology but not the hardware, to make such devices available for use in our hard-pressed cities in their wars on crime. Use of I.R. & D. funds for that purpose would permit a great step forward in law enforcement in our cities.

The PRESIDING OFFICER (Mr. MILLER). The time of the Senator has expired.

Mr. McINTYRE. Mr. President, I ask unanimous consent that I may be allowed to continue for 5 minutes.

Mr. GOLDWATER. Mr. President, reserving the right to object, I have been allowed 30 minutes following the Senator. If my time can be readjusted so that I can have 30 minutes, I will not object.

The PRESIDING OFFICER. The Senator received unanimous consent to proceed for 30 minutes following the Senator from New Hampshire.

Mr. McINTYRE. I have asked to continue for 5 additional minutes.

Mr. GOLDWATER. I do not object.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. CRANSTON. Mr. President, another example I am referring to relates to the crisis of safety around our airports, a subject in which the Senator from Arizona (Mr. GOLDWATER) is particularly interested. We face a crisis there. We need improved radar for air safety around the airports of America. The talents and technical skills needed for the ABM and other defense programs could be used to develop radar and other devices that we need for greater safety around our airports. Again, I.R. & D. could adopt defense technology to civilian use.

Thus, I.R. & D. funds can be used to achieve important domestic goals while at the same time contributing to an important function of the Department of Defense—the preservation of defense company teams and talent which may be needed in future emergencies. These teams and the talent will distintegrate and be lost to the Nation if we do not find a way to hold them together.

I want to ask if, in the opinion of the chairman of the subcommittee, who has great knowledge of this incredibly intricate problem, if this sort of work, which does not relate to commercial enterprise which this language was designed to foreclose, if this work does not possibly relate to the function of the Department of Defense and therefore might not be prohibited under the committee's language.

Mr. McINTYRE. Mr. President, the Senator's critiques of the work of the committee on the I.R. & D. are noted. I think they bear some thinking on our part. It may be that some of the examples the Senator is talking about on a gray area as far as applications of a relevancy test is concerned. What we were trying to do as a subcommittee was to state the basic principle of relevancy, first recognized last year in section 203. There may well be gray areas.

I am aware of the transitional stage that defense industries are going through, with the breakup of these teams, and I have noted very carefully what the Senator has said here today. I think there may well be some types of work which both meet the test of relevancy and which might facilitate a company's conversion.

Mr. CRANSTON. I thank the chairman. I think this is a very fair answer, and all I could expect under the circumstances of give and take at this point in our consideration of the issue.

EXHIBIT 1

[From the Washington (D.C.) Post, July 22, 1970]

CUT OF 592,000 DEFENSE JOBS SEEN IN 13 MONTHS

(By Michael Getler)

Military budget cutbacks have cost workers in the defense industry some 367,000 jobs in the past eleven months, according to latest Pentagon estimates, and the rate at which workers are being displaced is quickening.

Another 592,000 industry employees face lay-off notices within the next 13 months.

(George P. Shultz, newly appointed director of the Office of Management and Budget, told the Joint Economic Committee of Congress on Monday that two million individuals, including military personnel, would be "affected" by the cutbacks between July 1969 and July 1971.)

Because of the general six to eight month backlog of military equipment orders, cuts made last fall in the Pentagon's fiscal 1970 budget are only now beginning to be reflected in higher unemployment rates. In May of last year, unfilled defense orders with manufacturers stood at $22.4 billion. The current backlog is now down to $19.4 billion.

According to Assistant Secretary of Defense Robert C. Moot, the Pentagon's Comptroller, a Bureau of Labor Statistics study has calculated defense-related employment in the private sector of the economy at 3.4 million jobs in fiscal 1969.

Speaking in Washington yesterday to members of the President's commission of Personnel Interchange, Moot said "we are anticipating that this will fall to 2.4 million

by the end of fiscal 1971," on June 30 of next year.

Moot also estimated that the loss of industrial jobs will have a greater impact on the national unemployment picture than an equally sized cutback in military personnel since so many of the younger ex-servicemen go on to school.

Between June, 1969, and May, 1970, some 471,000 military and civilian personnel working within the Defense Department also have been released, with all but 95,000 of these coming from the uniformed services.

Precisely how many of the displaced defense workers, civil servants and military personnel remain on the unemployment roles is impossible to determine accurately. Moot did point out that last June the national unemployment rate was 3.4 per cent and that since then the ranks of those out of work has swelled by 1,137,000 and boosted the rate to 4.7 per cent.

"We do know," Moot said, "that the 838,000 total reduction in defense has been an influencing factor, just as the 803,000 yet to be reduced will have an influence."

In addition to the projected industry cutbacks, the Pentagon plans to scale down the armed forces by another 175,000 men and the civilian defense establishment by some 36,000 by June, 1971.

[From Business Week, Feb. 7, 1960]

Defense related employment will be reduced by 1,322,000 men by mid-1971 under the new budget. Military personnel will be cut by 551,300 to about 3-million, and the military's civilian force will be trimmed by 130,400 to about 1-million. Roughly 640,000 defense plant workers will be dropped from the present 2-million-man payroll. Reductions began last June, but the main impact is yet to be felt. Only about 40,000 of the contractor work force have lost jobs so far. By late spring, layoffs will rise markedly.

[From the New York Times, June 15, 1970]

SKILLED WHITES AFFECTED MOST BY JOBLESS RISE—AIRCRAFT, AEROSPACE, ARMS, AND AUTO INDUSTRIES ARE FOUND CHIEF VICTIMS—LABOR AGENCY REPORTS UNEMPLOYMENT IS CENTERED AMONG WORKERS IN MIDDLE WEST AND ON THE COAST

WASHINGTON, June 14.—The Labor Department said today that the nation's sharp rise in unemployment this year had been felt most by skilled white workers in the aircraft, aerospace, weapons and automobile industries in the Middle West and on the West Coast.

"This suggests that cutbacks in the defense and aerospace fields, the impacts of which are also being felt in many other industries, have been primary factors in halting the growth of factory employment since mid-1969," an analysis by the Bureau of Labor Statistics said.

The housing slump and slower automobile sales also added to joblessness, it said.

Unemployment has climbed by 1.3 million to a total of 4.1 million persons so far this year, increasing the national jobless rate from 3.5 per cent to 5 percent of the civilian labor force.

LESS IMPACT ON BLACKS

Unemployment among Negroes has been less severe, primarily because they have never been largely represented in the industries showing substantial job losses since mid-1969, the report said.

It said that employment in the last 10 months had dropped 21.1 per cent in ordnance and accessories; 9.1 per cent in aircraft and parts production, and 13.2 per cent in motor vehicles and equipment.

Joblessness has been less severe in other industries, but shows signs of spreading, the report said.

"In the other goods-producing sectors of the economy—mining, construction and agriculture—employment has remained at a virtual standstill since last fall," it said.

And while service jobs grew throughout 1969, there has been virtually no further growth since February, it said.

"Although unemployment has been rising across the nation," the Labor Department said, "some areas have been hit much harder than others. Since industries bearing the brunt of the slowdown are concentrated in the Midwest and the Pacific Coast, it is these areas which have experienced the sharpest rise in unemployment."

"The Pacific Coast area, which contains only one-eighth of the nation's labor force, has accounted for about one-fifth of the national increase in state-insured unemployment during the April, 1969-April, 1970 period," the report said. "The principal factor accounting for the sharp rise in joblessness in this area is the reduction in aerospace and defense-related production.

"The unemployment rise in the Midwest is attributable primarily to cutbacks in automobile production and to a general weakness in durable goods production, which is heavily concentrated in this area."

MEN AFFECTED MOST

The pattern of industry slowdowns has mostly affected men, although joblessness has also climbed for women and teen-agers, the report said. Since December, 600,000 men have joined jobless rolls along with 400,000 women and 200,000 teen-agers.

"One of the surprising facts about the recent rise in unemployment has been the extent to which it has affected workers in high-skill jobs," the bureau said.

"The jobless rate for the professional and technical group has now returned to a level last attained—and then for only a very brief period—in 1963," it said. The rate was slightly more than 2 percent.

Unemployment among blue-collar workers climbed from 4.3 per cent in December to 6.2 per cent in May, with the sharpest rise also among skilled men, it said.

[From the Wall Street Journal, June 24, 1970]

COMPANIES' JOBLESS PAY FUNDS RUN OUT FOR AEROSPACE WORKERS ON WEST COAST

LOS ANGELES.—Many laid-off aerospace workers are finding the situation is getting even worse.

McDonnell Douglas Corp., the St. Louis-based aerospace concern, confirmed that it had ended payments of special unemployment benefits to any more workers who are laid off. The move affects union workers only at its facilities in the Long Beach, Calif., area, a spokesman said.

In March unemployment increases forced North American Rockwell Corp. to halt its layoff fund. In both cases there wasn't enough money coming into the funds to make up for the sums going to laid-off workers.

A spokesman for McDonnell Douglas confirmed that last week the company's supplemental unemployment benefits program fund went below a reserve of $18 a worker, and this automatically canceled all payments. The company had paid out over $20 million since the program began.

COUPLED WITH UNEMPLOYMENT INSURANCE

Douglas had negotiated the program with the United Auto Workers union in 1965, under which the company put five cents an hour a worker into a special fund. A worker would receive as much as 75% of his gross earnings in case of a layoff for up to 52 weeks, when the special payment is combined with state unemployment insurance, which provides a maximum of $65 a week.

Until the first of this year laid-off workers at Douglas were getting the full amount, which union sources confirm was almost the same as the net they received after taxes and other deductions.

Less than two years ago, membership in UAW Local 148, the bargaining unit for Douglas in Long Beach—stood at about 36,000. Today the number of workers in the unit is under 13,000.

Tony Hatcher, vice president of the local, said, "We negotiated a fine program, but we never believed unemployment would go down this far." Those laid off, he said, are taking money out many times faster than it can be put back in.

MONEY USED FOR INSURANCE

While the UAW and Douglas representatives are holding meetings to discuss the situation, Mr. Hatcher says he "can't see any more money going in regardless of the meetings." A Douglas spokesman declined comment at this stage in the discussions.

North American ended jobless payments—which were in lump sums instead of weekly benefits—when layoffs during the past few years depleted the company's fund and "continued payments would exceed the company's maximum liability." Shortly before the cut-off date at the end of February, union members ratified a proposal whereby the company would use the unspent money in the fund to provide group insurance benefits for laid-off employes. The program, which is still in force, includes hospital, medical and surgical benefits for employes and their dependents. Money still coming into the layoff fund will go toward the insurance program, a North American spokesman said.

Henry Lacayo, head of UAW Local 887 at North American, said that while North American recently won the huge Air Force contract for the B1 bomber, the expected employment surge won't come fast enough to build the fund back up by fall.

Lockheed Aircraft Co., which recently announced its total employment would drop about 13% by year-end, said it didn't expect its jobless plan to meet a similar fate. A spokesman said Lockheed changed its severance pay program in 1965 from a general fund to the coverage of workers with individual accounts. Not only is there still money in the general fund, he said, but even if those reserves run out they're backed by the individual fund.

[From American Survey, Mar. 28, 1970]

AEROSPACE ON A SHOESTRING

Drive the dreary miles from Los Angeles south to Redondo Beach and north to North Hollywood, or go 60 miles south of San Francisco to Palo Alto and San Jose in Santa Clara county, and you soon see that official figures for employment in aerospace are only the tip of California's aerospace iceberg. As a jovial British machine tools salesman puts it: "the place is stiff with tinbenders," subcontractors supplying bits and pieces to the big firms which have won prime contracts from the government. It is rather worrying, therefore, that the iceberg's tip has been melting of late; the chart shows how visibly. California will get one-fifth, maybe slightly less, of a declining absolute level of prime contracts placed during 1970 by the Department of Defense and the National Aeronautics and Space Administration. In the mid-1960s its share was 28 per cent of a rising total.

One culprit is the government's disenchantment with space as a national priority. A bigger culprit is the Vietnam war, the cost of which has bitten into the Defense Department's budget for sophisticated hardware. On balance California has done reasonably well out of the war, notably because San Francisco and Oakland are the handiest American ports from which to ship men and supplies to Vietnam. But this has not helped the aerospace industries. Since the end of 1967 employment in them has fallen from 38 per cent of all manufacturing employment in California to about 34 per cent today. In numbers it has fallen from a quarterly aver-

age of 615,000 to an estimated 570,000. But in the seven southern counties grouped round Los Angeles, shown in the chart, the chief dynamo since the war of California's entire economy, the dependence on aerospace is particularly high. Ventura and Santa Barbara are dormitory areas relying heavily at one remove on the aerospace factories. Santa Barbara and Riverside are university towns, with research workers largely dependent on government contracts.

Were their other industries simply outstripping a thriving group of aerospace companies, California's southern counties might derive comfort from the fact that each of them depends less each year than the year before on the aerospace industry; at the start of 1968, for example, more than two-thirds of San Diego's manufacturing labour was in the aerospace industry compared with under 60 per cent today. But it is not easy to take comfort from the fact that several of the major companies in these areas are in desperate straits. The problems, like the industry, are massive in scale and they arise because all the big aerospace companies are under-capitalised and dependent on big one-shot contracts; traditionally they need huge progress payments from the Department of Defense, or commitment fees from the civil airlines, several years in advance of coming up with a salable product. When the product then proves unsalable, as has happened in a number of spectacular cases recently, the companies are in the position of the author living off a stiff advance who then writes a useless book.

The Convair division of the General Dynamics Corporation in San Diego spent the 1960s recovering from its fiasco with the Convair passenger aircraft. Now it is in almost as much trouble as a subcontractor for the Lockheed Aircraft Corporation's big military transport, the C5A, on which the government first cut back its initial order by over one-quarter and then rocked both companies by hinting that there might be no follow-up orders.

Lockheed has other problems. Its revolutionary fixed rotor Cheyenne helicopter has had its $875 million Army contract cancelled. The firm is losing the intermediate range airbus race to the McDonnell Douglas Company of St. Louis and lacks the money to start building the long-range version for which it has no orders. As a result of all this, Lockheed, the country's largest defense contractor, has had to appeal to the government for rescue from financial disaster.

Unlike the motor industry, reductions in employment in the aerospace industry are not easy to quantify company by company. All that the communities of Burbank, north of Los Angeles, and Santa Clara county, south of San Francisco, know is that Lockheed is getting rid of professional men every week and will have to lay off about 5,000 workers this year. The aerospace division of North American Rockwell Corporation, hard by Los Angeles airport, had to lay off over 2,000 men after losing the Air Force's F–15 fighter contract to McDonnell Douglas and altogether 13,000 workers, mostly in southern California, will go during the year. At the time of its merger with Rockwell-Standard of Pittsburgh in 1967, North American Aviation was the larger of the companies. Today the predominance of stolid midwesterners in heavy tweed suits at the group's sunny Californian headquarters tells a new story; the high technology company is being baled out by its once junior partner, the maker of steel springs and textile machinery.

Underlying these individual disasters is the fact that the aerospace industry finds itself in a hiatus in all three of its major markets. Trouble with the Air Force and Congress over the C5A, worry over whether the new B1 strategic bomber will ever be funded, indicate general uncertainty over the future shape of American defence strategy, over the cost of hardware, over the tactics of foreign policy itself. How big, for instance, will the anti-ballistic missile system eventually be, or what is the future value of submarine missile defence? Similarly, there is doubt about space, although this will soon be over now that Washington has decided on the shape, although not on the detailed contracts, for the next stage of the programme; it is a much reduced one. In civil aviation, subcontracts in California (notably Northrop's fuselages) for the Boeing 747 are in full swing. But production of the Douglas DC10 airbus and the Lockheed 1011 is in suspense because their prototypes have yet to fly, while work on the DC8 and DC9 and subcontracts for the Boeing 707 are all tailing off. And what will eventally happen to supersonic airliners?

On all these fronts both the government and the civil airlines, each strapped for money, are tending to favour more research and development but less actual production. This is true of space, of the ABM, of spy aeroplanes, of the SST, of the Cheyenne helicopter and will quite possibly be true of the BI. This may be good for the country; it is not so good for the aerospace and electronics manufacturing reservoirs in California.

Mr. McINTYRE. Mr. President, the Senator from California (Mr. CRANSTON) has focused in his remarks on an issue considered by the subcommittee but not addressed in my earlier comments this afternoon—the conversion of our great defense industry to increasingly commercial uses.

I share the Senator's concern about this conversion process. Conversion is essential, as our defense expenditures decline, if large-scale regional unemployment is to be averted and if we are to make maximum use of the Nation's productive resources. I recognize also that a larger supply of I.R. & D. dollars can facilitate a company's conversion process.

For several reasons, however, our subcommittee rejected the option of letting this consideration influence the legislation we proposed.

To begin with, the I.R. & D. program was initiated and has always been administered with other aims in mind. As I see it, the program has had essentially two aims.

First, it has been designed to enable defense contractors to recover research and development costs which all manufacturers and contractors—commercial or Government in nature—must recover if they are to keep up with technological progress without going bankrupt.

Second, however, the I.R. & D. program has been a device whereby the Defense Department has sought, for its own purposes, to sponsor or fund research projects which it has felt could better be undertaken other than through direct contracting. It has been a conscious part of the Department's research and development program.

It is because of this second aspect of the I.R. & D. program that it has grown as rapidly as it has in recent years. And it is for the same reason that the Director of Defense Research and Engineering, Dr. John S. Foster, Jr., argued before the subcommittee that there should be no necessary relationship between the volume of defense contractors' sales to the Government and the I.R. & D. dollars they receive.

The use of I.R. & D. dollars to enable firms to convert their facilities to commercial activities would wreak havoc with the second of these aims. Dollars going to the firms to conduct research relevant to the needs of the Department would be diverted to other uses.

Moreover, there would be no equity as between firms. Some would use the dollars they received essentially for defense purposes, making no progress in the conversion process, while others—given the choice—would use them almost exclusively for conversion.

It was for reasons such as these that the subcommittee did not believe that I.R. & D. dollars should be used to facilitate the conversion of defense industry. This problem, it felt, should be addressed separately and carefully considered on its own merits. Only in this manner can a solution be proposed which treats all contractors equitably and does not interfere with our legitimate defense needs.

One final point: The committee's recommendation recognizes the value of our I.R. & D. programs and effects only a small reduction in them, a reduction consistent with the Department's own estimates of its projected fiscal 1970 and fiscal 1971 expenditures. Our ceiling does not preclude a rise in these expenditures in future years. It serves only to give them a visibility which they have lacked too long, a visibility essential for meaningful debate as to what their level should properly be.

Mr. STENNIS. Mr. President, before the Senator from New Hampshire yields the floor, I wish to thank him and his subcommittee not only for their further contribution to this part of the bill on research and development for this fiscal year, but for the work he and his subcommittee have done to further lay the groundwork and foundation for guidelines that I think we sorely need, which will serve us over future years.

Mr. McINTYRE. I thank the Senator.

Mr. STENNIS. I say to the Senator from California that I am impressed with his point also. He knows where the problem lies, and, as always, is constructive in his suggestions.

The Senator from New Hampshire has impressed me as having proceeded very carefully in going into this matter. You could not push him around, or push him off the cliff, either. He has mastered the subject matter enough to know how serious it is. He, too, points with great caution, and at the same time in a very constructive way, toward finding the ultimate solution.

I believe that, with this bill and one more, we will have evolved a fine policy.

Mr. McINTYRE. I thank the distinguished chairman of the committee.

Several Senators addressed the Chair.

Mr. McINTYRE. Mr. President, how much time do I have remaining?

The PRESIDING OFFICER (Mr. MILLER). The Senator's time has expired. Under the previous order, the Senator from Arizona is now recognized for 30 minutes.

AIRCRAFT AND MISSILES

Mr. GOLDWATER. Mr. President, there can be no doubt that we are again embarked upon a prolonged discussion of Government spending as it affects the Nation's Military Establishment and the defense of the Nation's 204 million people.

I suspect that we are perhaps letting ourselves in for yearly bouts of exhaustive discussions of all aspects of the military authorization bill.

Many times in the past 18 months I have reminded my colleagues that there is an organized effort to downgrade and weaken the defense posture of this Nation by many persons associated with the left-wing political elements in this country.

So, Mr. President, I believe we have to come to grips once and for all—or at least once every year—with the fundamentals involved in this tug-of-war over defense expenditures. If I may, I should like this afternoon to cut across all of the individual arguments and contentions for and against specific items in the authorization and deal primarily with the overall aspect of a proper ordering of our national priorities.

Mr. President, to listen to some of the more vocal and extreme critics of our Defense Establishment, you would be inclined to suspect that the whole idea of setting up a list of priorities for the expenditure of public funds was invented by them last year and unveiled for the first time when the Nixon administration took over the Pentagon.

Some of us as far back as the early 1960's pleaded in vain for some kind of an ordering of the national crises which were reported to the Congress from President Kennedy. As Senators may recall, everything that came from downtown in those years was an emergency of immediate and dire nature. Everyone of them called for large expenditures of the taxpayers' money on the theory that the answers to all of our national problems rested in the expenditure of more and more public money.

But we got no list of priorities from the New Frontier. If Senators will recall the only item of drastic concern during the campaign seemed to be a missile gap which was forgotten the day after election. Nor did we get any priority list of what was most important, what was second most important, what was third most important or what was least important in the long list of items submitted for funding under the Great Society program of President Johnson.

No, Mr. President, the loud outcry for a system of priorities had to await the advent of a Republican administration. By the same token, the great concern over waste and inefficiency and cost overruns and similar problems in the Department of Defense were never mentioned by the critics of the so-called military-industrial complex when former Secretary Robert McNamara was in charge of the Pentagon.

What is more, the critics of our defense spending and the most prominent advocates of the process of reordering our national priorities do not appear to be greatly interested in learning the former Secretary's views. It is true that at my request the Senator from Wisconsin (Mr. PROXMIRE) issued a couple of invitations for Mr. McNamara to appear before his subcommittee on waste and inefficiency. As I recall, the former Secretary declined because of the press of business attendant to his new post as President of the World Bank. To my knowledge, no effort was made to obtain from the busy Bank president his written observations on the huge expenditures and the vast waste which were permitted to grow up in the Defense Establishment during his regime as Secretary.

One of the things which bothers me most about the argument for a reordering of national priorities is the fact that it is a handy tool which can be and is used by any and all critics of the Military Establishment. Any time any liberal in the Nation wants to solve a new problem, he argues that it could be wiped out if the Government were not spending so much on defense. As the President of the United States said on July 18, 1970, it has become "almost a cliche" to say that all we need do to resolve any dilemma arising on the domestic front is to cut our space and defense outlays and change our national priority.

The President was pointing out that his administration has changed our national priority for the first time in 20 years. He pointed out that in the budget he proposed for 1971 spending for defense is exceeded by the amount earmarked for human resources. He explained:

> In all of the last three administrations, military spending ran far above the spending for other purposes. In 1962 under President Kennedy, the Federal Government spent 48 percent of its budget for defense and only 29 percent for human resources. By 1968, the comparison was 45 percent to 32 percent. My budget for 1971 sharply reversed these priorities. It calls for spending 37 percent for defense and 41 percent for human resource programs. To accomplish this massive change in emphasis, military and space expenditures were cut by some $6 billion.

That was the President speaking.

Even so, the Senate is again ringing with demands for huge reductions in the Defense budget by persons who appear to want to ignore the reordering of priorities which has been achieved by the Nixon administration. For example, on Friday, July 24, the Senator from Wisconsin (Mr. PROXMIRE) asked for a cut of $10 billion in the $72 billion Defense budget, asserting:

> We must reorder our priorities and reduce the excessive claim of the military in order to redress our glaring social need here at home.

Mr. President, there can be no doubt that this administration has acted courageously and forthrightly to change the order of our expenditure priorities. This is nondebatable. It is an accomplished fact, but it is completely unacknowledged by people who are bent on unilateral disarmament of the United States.

I suggest that the critics of our military system—or at least some of the loudest and most persistent—have only a casual side interest in the whole subject of economy and the saving of the taxpayers' hard-earned dollars. If priorities were really their major concern, they would be heaping congratulations upon President Nixon and Defense Secretary Laird and urging them on to greater effort. However, I fear that too many of these critics of the military prefer to ignore the reordering of our national priorities by a Republicn administration. I believe in all honesty these people would much rather use the myth of needed priorities to buttress their continuing arguments for drastic and harmful reduction of our defense expenditures. It almost seems to me that these people are far more interested in isolating this Nation and making it a second- or third-class world power than in saving money and in solving domestic problems such as unemployment, urban renewal, and pollution.

The critics of our Military Establishment would like us to forget two fundamental points in this whole argument. One, they would like us to forget that our national priorities got all loused up and our defense expenditures ran out of control as a direct result of policies foisted on the American people by liberal Democrats who not only controlled the White House but the Congress of the United States while these things were taking place. No. 2, these critics would like us to overlook and ignore the tremendous job performed against mountainous odds by the Nixon administration in coming to grips with a public heritage left to it by the Democrats.

If we accept these arguments, if we overlook the two points mentioned above, we move ahead to a new wave of irresponsible criticism and reckless demands for unrealistic cuts in the Nation's defense expenditures.

Mr. President, mark me well, we will hear this word "priorities" used over and over and over again during the debate on the military authorization bill. It will be put forth as a reason for slowing or crippling the Safeguard anti-ballistic-missile system. It will be used as an argument against the development of many offensive weapons systems which we desperately need in the face of growing challenges to our national strength from both the Soviet Union and Communist China. We will hear the argument of priorities used to justify proposals for canceling new weapons and for phasing out old ones. It will underline contentions that we need to phase out the Safe early warning system of defense. It will be used to underscore argument for the elimination of 14 attack carrier task forces and the cancellation of funds for a 15th nuclear carrier. It will crop up in arguments for elimination of programs for the C–5A and for manned aircraft generally, for expenditures on antimissile submarine warfare, new antiaircraft artillery. And it will be used to promote a fast, unrealistic reduction on the personnel of our Armed Forces.

I think, Mr. President, that the whole idea of cutting down or wiping out weapons systems and military equipment items should be viewed more pragmatically and with a greater sense of present day developments and recent history.

Much of the justification for the more radical proposals aimed at reducing our

defense forces below an adequate permissible minimum rests on some highly questionable assumptions. We do not have to look far for this list of items I would describe as wishful thinking at best and out-and-out fantasy at worst.

They presume that an accommodation will be reached with the Soviet Union on a significant reduction in both nuclear and conventional armament. It is pointed out, perhaps a trifle euphemistically, that such an accommodation is a requirement imposed on both Russia and the United States by provisions of article VI of the Nuclear Nonproliferation Treaty which was promulgated simultaneously in Moscow, London, and Washington.

I treat this lightly for a definite reason. Long experience has taught us that the Soviet Union almost never abides by the basic requirements of any treaty or agreement which at some time in the future might work against its own strategic national interests. We may rest assured that if the United States and Britain are naive enough to go ahead with armament reduction, the Russians will gladly stand by and applaud. However, the Nonproliferation Treaty has been in existence for some period of time, during which the Nixon administration has drastically cut our defense expenditures. But do we detect any reciprocal action on the part of the Soviets? I think not.

All we have seen in the months since the Nonproliferation Treaty was approved has been an accelerated proliferation of all kinds of Soviet armaments, both nuclear and conventional. In fact, Mr. President, I suspect that a careful study would show that never in its history has the Soviet Union moved more quickly, more decisively, and more deliberately to establish itself as the world's No. 1 military power as it has since the Senate of the United States puts its stamp of approval on the Nonproliferation Treaty. We can no longer ignore the facts of international life. We now definitely know that the Russians are extending their military reach into many vital and strategic areas beyond the borders of the U.S.S.R. In the Mediterranean they are becoming so dominant that that strategic body of water may soon qualify for the description of Russia's mare nostrum—our lake. Every day we learn more details about Russian military might in the tinderbox area of the Middle East. Not only Russian equipment but also Russian technicians and pilots are now arrayed on the side of Arabs in the Israeli crisis. More and more often Soviet warships make surprise appearances in the strategic waterways of the world.

Just in the past few days, our newspapers have bristled with news stories and pictures showing the extent of the Soviet armaments buildup.

According to a report by the Joint Atomic Energy Committee, the Soviet Union now has ballistic missiles submarines patrolling off both coasts of the United States. In fact, a picture in the July 27 edition of the Washington Post actually shows a Russian submarine maneuvering 30 miles south of Key West, Fla. It was accompanied by a Soviet cruiser, a missile carrier, a tanker, and a second submarine.

Two days earlier the commander of the Soviet Navy boasted in Moscow that his missile-carrying nuclear submarines have—and I use his own words—"bound the hands of the imperialists" and are ready to give a "crushing rebuff to any aggressor."

The Soviet boast came from Adm. Sergei Gorshkov on the occasion of Soviet Navy Day. He said the submarines are the basis of the "striking might" of the navy, while up-to-date surface ships "with perfect weapons" are assigned another major role. At the same time, Soviet Defense Minister Andrei Grechko indicated that the unprecedented Soviet naval buildup will continue at its present pace.

So it would seem, Mr. President, that we had better find much better reason for further cuts in our defense budget than the possibility that Russia will join in an accommodation to produce a significant reduction in nuclear and conventional arms.

At the same time, it would be well to forget another much quoted reason why we must rechannel billions of defense dollars into other projects. This reason urges the American people to develop "an understanding of the present and probably continuing weakness of mainland China." This interesting suggestion was put forth in a report by an organization called the Coalition on National Priorities and Military Policy. This organization, which I shall mention more fully from time to time, is headed by our former colleague from Pennsylvania, the Honorable Joseph S. Clark. We have this organization to thank for a panel of inquiry on the subject of "An Alternate Defense Budget for the United States." The report of that inquiry holds that Red China is so weak economically, politically, and socially that it is incapable of serious offensive action of a military nature outside its own borders. The panel, which includes Dr. Adrian Fisher, former Deputy Director of the U.S. Arms Control and Disarmament Agency and W. Willard Wirtz, former Secretary of Labor, would also like the American people to extend this assumption of Chinese weakness into the indefinite future.

A third reason which the coalition cites for a proposed reduction in the size of the Defense budget is that it would not seem wise to embark now on new and untried weapons systems which might put a heavy strain on the Defense budget in future years.

The coalition's panel report is studded with claims that millions of Americans go to bed hungry every night, that the entire educational system is inadequate, that pollution cannot be remedied nor living conditions improved nor drug addiction reduced unless money is made available from Federal sources. The contention, of course, is that the only place to find this money is in funds budgeted for defense and space needs.

The coalition, like most other critics of the defense system and Military Establishment, pay very little attention to the whole question of our national security, the defense of 204 million Americans, and our responsibility for maintaining the forces of freedom throughout the world. The casual American is supposed to assume that it is entirely possible to completely withdraw American forces from Vietnam, erect a barrier against any future involvement of the Vietnam type, and cut billions of dollars from the cost of maintaining an adequate defense.

This is wishful thinking at its worst. In fact, it is so untenable that for reasonable men to set forth such arguments is to presume the universal stupidity of the American people.

But the kind of priorities that the Clark coalition and other liberal politicians are working toward, seem to take for granted the continued defense of our shores and security of our people. For example, there is one approach which suggests that the President regulate spending priorities along the following lines: First, irreducible claims such as interest on the national debt; second, all the various requirements of the domestic economy; and, third, the basic needs of the military for national security.

The idea here, of course, is to have the Government determine the requirements of the domestic economy first and provide for the military and national security out of what is left over. And I believe we have seen enough grandiose and extravagant spending schemes hatched by the liberals to understand that if they ever got charge of determining requirements on the domestic fronts, there would be little or nothing left over for the military.

When you listen, Mr. President, to the more extreme intemperate claims about waste and inefficiency and cost overruns in the Department of Defense, a system of priorities ordered along these lines would appear to make some sense. However, we do not live in a peaceful and perfect world where all nations and all powerseekers are moved primarily with warmhearted concern for the unemployed, the poorly housed and the undereducated. Because we live in a real world ruled by men whose natures include ambition and greed and power-hunger, along with unselfishness and loving kindness, it is necessary for an important nation to think first of its own protection and the security of its population. Heavens knows, I certainly yearn for the day—should it ever come—when we can give primary concern to human needs and final consideration to military preparedness. But I see nothing in the actions of other nations, especially those who are arrayed ideologically against us, to warrant any such comfortable assurance.

When I read a report such as the "Report on the Panel of Inquiry," put out by the Coalition on National Priorities and Military Policy, I wonder whether some of these alleged experts which the liberals keep summoning actually live in the same world with the rest of us. For example, the March 25 coalition report, which our former colleague, Senator Clark, of Pennsylvania, was kind enough to send me included a summary of testimony by one Dr. Seymour Melman, professor of industrial en-

gineering at Columbia University. Dr. Melman was important enough to be one of only five witnesses called to testify on an alternate defense budget. He is the author of a book entitled "Pentagon Capitalism: The Political Economy of War," which was published just last month. Consequently, one would expect Dr. Melman to be qualified to estimate the financial needs of our Defense Establishment better than most laymen. Yet, a synopsis of his testimony shows that he recommended a cut in President Nixon's current budget for fiscal 1970 of $54.794 billion. He suggested that a budget for 1971 of approximately $23 billion would be adequate to, first, operate a strategic deterrent force; second, guard the shores of the United States; and, third, participate in international peacekeeping operations.

Mr. President, I suggest that this kind of irresponsible and ridiculous recommendation by a supposedly qualified expert is indicative of how dangerous a game we are playing with the Nation's defense.

I would remind you that Dr. Melman's figure is nearly 5½ times the amount suggested by the Senator from Wisconsin (Mr. PROXMIRE). I believe very sincerely that a cut of even $10 billion is dangerous, and dangerous in the extreme, when you consider the powerful offensive buildup taking place in the Soviet Union. Dr. Melman's figures takes us into Alice's "wonderland." It is the stuff that dreams are made of and demagogs use for headline-seeking purposes.

I repeat again here today a statement I have made many times before and shall undoubtedly make many times again—that the security of 204 million Americans is nonnegotiable. I am saying, Mr. President, that we cannot tamper with our national security like it was a classroom debate project at Columbia University. We cannot do anything but provide adequate funds for the defense of this Nation regardless of how pressing are the requirements which crop up on the domestic front. Strangely enough, it seems that we—like many complacent nations of the past—need constant reminding that without freedom we have nothing. Without adequate protection and security, we cannot even spend the time to identify, much less correct, the problems that plague our economy and society.

Every time we get into one of these debates, Mr. President, I feel like rubbing my eyes to see if I am awake because some of the arguments set forth show absolutely no appreciation for the realities that confront us. For example, on my desk right now is a request that I sign with a group of other Senators another appeal to President Nixon that the United States provide Israel with the aircraft needed for its defense. Earlier this year, Mr. President, I signed such a letter because I firmly believe that the United States as well as all other freedom-loving nations has a large stake in the maintenance of Israel's liberty from Communist agression. My feeling about Israel is just as strong and equally as clear as my feeling in support of freedom's battle against Communist aggression in Indochina. I am not one of those who change hats or philosophy on the basis of geography.

But the reason I draw attention to this communication at this time, Mr. President, is that the petition to the President carries the signatures of some of my colleagues who vote consistently against the authorization of additional funds for up-to-date military equipment, including aircraft. I believe it might be time for everyone in the Senate who seriously believes that we should give aircraft for Israel's defense to understand that if they had had their way on past military authorization bills, we might be in the position of asking Israel to defend itself with obsolete aircraft. If the Israelis obtain from us aircraft adequate to their defense, they will have to obtain equipment that can match the latest and fastest aircraft put out in Soviet Russia. I wonder if these colleagues who feel so strongly for the defense of Israel would like that country to defend itself with one arm tied behind it. It stands to reason that, if we turn down Defense Department requests for new research and development, new aircraft prototypes, and new military equipment to match the Soviet weapons, we certainly cannot expect to provide nations like Israel with the sinews of military protection.

The situation in the Middle East is more than a threat to Israel. It is also a warning to us that all the talk we hear on the left about reaching an armaments accommodation with the Soviet Union is meaningless. There are some military critics who ask us to believe that a new era is about to dawn in United States-Soviet relations on military matters. Yet they seem to think that Indochina and the Middle East—by some strange alchemy of liberal reasoning—do not involve the strategic interests of the United States and its allies. Regardless of what the proponents of detente believe, the rest of the world knows that the Communists in Indochina are being supplied and advised and encouraged by the Soviet Union just as are the Arab militants in the Middle East. The view from beyond our shores can be nothing but one of amazement. Other foreign capitals, I know, cannot understand a nation, which is meeting new and serious challenges from a principal adversary, rushing to cut down on its military expenditures and cancel weapons programs.

The whole question of our credibility abroad is another subject upon which I will perhaps speak on at greater length on another occasion. But I can assure you that our credibility throughout Europe and especially in the Middle East gains nothing from the attacks in this country on the President of the United States and the Government's policies in Southeast Asia.

Mr. President, from all I can learn from my friends who have traveled in Europe this summer our credibility as a world leader is coming into very definite question. Foreign observers talk more and more about symptoms that they see in this country which they regard as something like a failure of our national will. I do not see how anyone reading the sensational accounts of minority sentiment in this country could come to any other conclusion. So much publicity and attention has been given to this minority viewpoint that many foreigners and overseas observers regard this as the American norm. Thus, our Nation to them, would seem to be seething with antimilitary sentiment, student revolt against the draft, congressional revolt against American foreign policy, and a rejection of all foreign commitments old as well as new.

Mr. President, a national news magazine summed up the entire situation well with the claim that Europeans are beginning to believe that they see in this country "the symptoms of a great power losing its nerve."

Mr. President, in closing I would like to repeat in part something I said this morning. I would hope that those who are bound to cut the military structure to the bone give second thought to the matter. They will not win. We will prevail. They will go down to humiliating defeat as they did last year. We are taking the time of the Senate at a time when we are months behind in our work, listening to arguments from people who may be extremely well qualified in the fields of law and humanity and government, but who know nothing about weapons or strategy.

I hope that the committee bill which has been reported by the Committee on Armed Services under the chairmanship of the distinguished Senator from Mississippi (Mr. STENNIS) is approved and approved rapidly without attempting to cut it in the days ahead.

Mr. STENNIS. Mr. President, will the Senator yield?

Mr. GOLDWATER. I yield.

Mr. STENNIS. Mr. President, we are all indebted to the Senator from Arizona for a very timely and forceful statement in which he not only champions the security and military preparedness provisions in the bill, but also points out the fallacy—as I see it and as the Senator from Arizona sees it—of any serious threat to reduce the amount beyond the minimum which we believe we have already included in the bill for these items.

I hope that the Senator does continue in the debate. He is very capable, not only in this field but also in other fields.

I commend the Senator from Arizona very highly for the challenging statement he has made today and for those that he promises to make in the future.

I commend the reading and studying of his statement to the entire membership of the Senate.

Mr. GOLDWATER. Mr. President, I thank the distinguished chairman of our committee. I have enjoyed working with him throughout the years.

I assure the chairman that I intend to continue speaking. As he knows, I have spent most of my weekends at the different defense bases around the country inspecting the C–5A, the F–111—which I think I will be able to fly again next week—and the A–7, the F–4, and the F–15.

I am prepared to speak, not at great length, but in some detail so that my colleagues may gain a better understanding

of the problems that we face, the problems that we have overcome, and the achievements we have made in this field.

Mr. STENNIS. Mr. President, I am glad for the committee to share with the entire Senate the valuable information that we have received through the experience of the Senator from Arizona, and it is up-to-the-minute experience.

When we get a problem before the committee, many times the Senator from Arizona will go out and ride the plane and fly it himself. He has not gone up in any missiles as yet, but he knows a lot about those, too.

It means so much to have his practical commonsense and experience on our side at all times. It is valuable to the full committee and will also be to the Senate.

Mr. GOLDWATER. Mr. President, I thank the chairman of the committee. Mr. President, I yield the floor.

Mr. STENNIS. Mr. President, I shall not detain the Senate long. I understand that the Senator from Massachusetts (Mr. BROOKE) has an amendment that he wants to present and speak on.

Mr. President, in keeping with the purpose of the Armed Services Committee to bring to the Senate and to the public a very complete and documented and supported analysis and report on the bill—which, by the way, is backed up by 2,572 pages of printed hearings—I now refer specifically to page 32 of the report filed on the bill, which is report No. 91–1016.

Mr. President, from time to time the issue has arisen as to why the committee does not attempt to report the military authorization bill on what might be termed a fully and strictly line item basis. There is the implication that as a result of the present method there is insufficient information on these various weapons systems for the members to make a judgment and also to offer amendments if they desire.

I am inserting in the RECORD at this point certain pages from the committee report on the pending bill—H.R. 17123, report 91–1016—setting forth on a line item basis the full details of each system which is subject to committee action in this bill. The Senate will note that the total being recommended for each major activity is of course identical to the total figure in the bill itself. For instance, the total new obligational authority being recommended for the procurement of Army aircraft is $292,100,000. This sum is the amount which the bill itself would authorize for appropriation and is contained on page 6 of the bill. As a result of long legislative history, these charts in the committee report are treated for the same effect in law as if they were in the bill itself.

Both the procurement and the research and development charts showing page numbers in the report are set forth below and I ask that they be printed as a part of the RECORD.

There being no objection, the charts were ordered to be printed in the RECORD, as follows:

PROCUREMENT

ARMY AIRCRAFT PROCUREMENT REQUEST—FISCAL YEAR 1971

[Page 32]

[Dollar amounts in millions]

	Fiscal year 1970 program (appropriated)		Fiscal year 1971 request		House				Senate Armed Services Committee			
					Change from request		Authorized		Change from House		Recommendation	
	Quantity	Amount	Quantity	Amount	Quantity	Amount	Quantity	Amount	Quantity	Amount	Quantity	Amount

RESEARCH AND DEVELOPMENT

The tabulations below show a comparison of the amounts authorized and appropriated for research, development, test, and evaluation in fiscal year 1970 with the amounts requested in the President's budget for fiscal year 1971, as adjusted by the actions of the House (H.R. 17123), and as recommended by the Committee.

RESEARCH, DEVELOPMENT, TEST, AND EVALUATION COMPARATIVE SUMMARY OF ACTIONS ON AUTHORIZATION REQUEST

[In millions of dollars]

	Fiscal year 1970		Fiscal year 1971		
	Authorized	Appropriated	Request	H.R. 17123	As reported by the Committee
Army	$1,646.0	$1,596.8	$1,717.9	$1,647.9	$1,627.2
Navy (including Marine Corps)	1,968.2	2,186.4	2,197.3	2,197.3	2,209.3
Air Force	3,156.6	3,060.6	2,909.7	2,909.7	2,736.0
Defense agencies	450.2	450.0	470.7	460.7	450.0
Emergency fund	75.0	75.0	50.0	50.0	50.0
Total R.D.T. & E. program	7,296.0	7,368.8	7,345.6	7,265.6	7,072.5

[1] In the preceding four charts the House did not identify the specific programs to which these reductions will be applied. However, the adjustments recommended by the Senate Armed Services Committee, with the exception of $2,400,000 for DCA, are identified to individual programs, and include the application of the total reductions made by the House. Therefore the total reductions made by the House and recommended by the Senate Armed Services Committee should be combined to arrive at the total reduction from the amount requested.

[Page 76]

Research and development programs with excess funds

The Committee recommends reductions totalling $50.2 million in the programs listed below because these amounts are not needed to finance the work planned in fiscal year 1971. Witnesses have testified that these programs all have been delayed so that fiscal year 1970 funds, provided for these programs, will not be needed during that year, and will be carried over and available to pay for work to be performed during fiscal year 1971. This permits funds to be deleted from the fiscal year 1971 request without affecting requirements for such programs. A number of other major programs, which fall into this same category, are discussed elsewhere in this report.

[In millions of dollars]

	Requested	Change	Recommended
Army:			
Strategic army communications	7.6	−2.2	5.4
Tracked and special vehicles	9.8	−7.5	2.3
Navy:

Advanced surface ship sonar	11.0	−8.0	3.0
Air Force: Truck interdiction	10.0	−5.0	5.0

[Pages 76–77]

Behavioral and social sciences

The Behavioral and Social Sciences program has been a subject of Congressional criticism in the past and was specifically reduced by the Congress in fiscal year 1970 primarily because certain elements were considered to be appropriate to the State Department rather than the Department of Defense. These are foreign area research efforts involving the categories of "Foreign Military Security Environments" and "Policy Planning Studies."

The Committee has screened the fiscal year 1971 proposed program in the behavioral and social sciences in critical detail. The Committee is pleased that the Department of Defense recognizes the importance of its personnel force and chooses to focus research attention on those programs which can contribute to the welfare, safety, efficiency and combat effectiveness of our military personnel.

While the Committee believes the department has submitted an austere program, it is evident from a careful review of the proposed fiscal year 1971 projects that they represent a substantial range in terms of their near-term utility and other efficiencies to be derived. However, it is the view of the Committee that certain portions of the program can be carried on at reduced levels of support or deferred entirely to future years.

The details of this program are presented below and indicate the amounts involved in the fiscal year 1969 and fiscal year 1970 programs, the request for fiscal year 1971, and the Committee recommendations (in millions of dollars):

	Fiscal year 1969	Fiscal year 1970			Fiscal year 1971		
		Budget request	Approved by Congress	Current program	Requested	Change	Recommended
Human performance	$6.9	$6.3	$6.3	$4.5	$4.9	−$0.5	$4.4
Manpower selection and training	21.5	25.3	25.3	21.4	27.2	−2.1	25.1
Human factors engineering	3.3	3.7	3.7	2.6	3.2		3.2
Foreign military security environments	7.2	6.9	4.8	4.7	5.7	−1.8	3.9
Policy planning studies	6.4	6.4	4.0	4.3	4.2	−1.3	2.9
Total	45.3	48.6	44.1	37.5	45.2	−5.7	39.5

[Pages 78–79]

Defense research sciences

Section 203 of the fiscal year 1970 Military Procurement Authorization Act limited the use of funds authorized for research to effort which "has a direct and apparent relationship to a specific function or operation." Discussion of the continuation of this limitation as a section in the fiscal year 1971 act is being treated separately in this report.

The fiscal year 1971 request for Defense Research Sciences totals $297.0 million which compares with $293.8 million in fiscal year 1970. This increase is not consistent with the concern expressed last year by the Congress that the high level of research sponsored by the Department of Defense should be reduced with compensating increases in research sponsored by other federal agencies. The Bureau of the Budget, partially in recognition of the sense of Section 203, added $10 million to the fiscal year 1971 budget for the National Science Foundation.

The Committee wishes to emphasize its continued concern that research should be supported to a greater degree by other federal government agencies and, recognizing the action of the Bureau of the Budget in increasing the National Science Foundation budget, recommends a reduction of the Army and Navy programs to the same amounts approved for fiscal year 1970. The Air Force fiscal year 1971 request which is below their fiscal year 1970 program is recommended for approval. The Defense Agencies request is recommended to be reduced by $6.0 million because of their transfer of a major segment of a single project, which was carried under Defense Research Sciences in fiscal year 1970, to the Exploratory Development Program in fiscal year 1971. This permitted the addition of research projects in fiscal year 1971 to make up the reduction, but in fact constitutes an increase of $6 million over the fiscal year 1970 program.

The effect of these recommendations, which is detailed below, is to reduce the $297 million requested for fiscal year 1971 by $12.1 million to $284.9 million. This is a four percent reduction from the amount requested and $8.9 million less than in fiscal year 1970.

[In millions of dollars]

	Fiscal year 1970	Fiscal year 1971	Change	Committee recommendation
Army	65.6	69.4	−3.8	65.6
Navy	104.3	106.6	−2.3	104.3
Air Force	80.7	78.3		78.3
Defense Agencies: ARPA	43.2	42.7	−6.0	36.7
Total	293.8	297.0	−12.1	284.9

[Page 85]

Chemical and biological warfare (CBW)

The Committee has devoted considerable attention to the fiscal year 1971 chemical and biological warfare program because of its continuing interest in this area. As a result of its review, the Committee recommends a reduction of $3.8 million in the R&D portion of this budget, together with the enactment of three regulatory provisions.

A comparison of the final fiscal year 1970 and the requested fiscal year 1971 CBW R&D programs, together with an identification of the $3.8 million reduction (Army only) recommended for fiscal year 1971 by the Committee follows:

CBW RESEARCH AND DEVELOPMENT PROGRAM

[In millions of dollars]

	Fiscal year 1970	Fiscal year 1971		
		Requested	Change	Recommended
Chemical program:				
Chemical research	8.6	9.5	−0.9	8.6
Lethal chemicals	4.3	5.2	−.8	4.4
Incapacitating chemicals	2.1	2.8		2.8
Defensive equipment	16.6	21.2		21.2

Total program	71.6	78.7	−3.8	74.9

SUMMARY OF RESEARCH AND DEVELOPMENT AUTHORIZATION BY BUDGET ACTIVITY

MILITARY SCIENCES

[In millions of dollars]

	Requested	Committee report		
		H.R. 17123	Change	Recommended
Army	176.2	176.2	−9.6	166.6
Navy	142.2	142.2	−3.0	139.2
Air Force	134.6	134.6	−.5	134.1
Defense agencies	131.5	131.5	−16.8	114.7
Total	584.5	584.5	−29.9	554.6

This budget activity consists largely of research and exploratory development. Within the research program each military department has budgeted amounts for in-house laboratory independent research and for Defense research sciences. The in-house independent laboratory research programs permit the chiefs of laboratories operated by the military departments and the Defense Agencies to use funds on projects suggested by persons in these laboratories.

The program element entitled "Defense Research Sciences" consists of basic research in the fields of physics, chemistry, mathematical sciences, electronics, materials, biology, and astronomy. The work in this program element is conducted by laboratories of the military departments, by colleges and universities, and by industry.

The Committee recommends a reduction of $29.9 million in this budget activity, which consists of $12.1 million for Defense Research Sciences, $4.3 million for programs

included under Behavioral and Social Sciences, and $3 million for Biological and Chemical Warfare programs. All of these are discussed in detail elsewhere in the report. In addition, it includes a reduction of $.3 million for the Army Studies and Analysis program and $10.2 million for the ARPA Advanced Engineering program relating to Surface Effects Vehicles. There is doubt regarding the operational need for such a vehicle, and the $5 million of fiscal year 1970 funds which are unobligated will be used to complete the work planned for fiscal year 1970 but not to initiate new work.

AIRCRAFT AND RELATED EQUIPMENT

[In millions of dollars]

	Requested	H.R. 17123	Committee report: Change	Committee report: Recommended
Army	110.2	110.2	−21.6	88.6
Navy	694.0	694.0	+65.8	759.8
Air Force	831.3	831.3	−97.8	733.5
Total	1,635.5	1,635.5	−53.6	1,581.9

This activity funds research, development, test, and evaluation related to airframes, engineers, avionics, and other installed aircraft equipment. Applied research in a wide variety of supporting technologies, including flight dynamics, advanced aircraft propulsion systems, avionics, and biotechnology is included.

The Committee recommends a reduction of $53.6 million in this activity.

For the Army, the Committee recommends a reduction of $21.6 million of which $17.6 million is applied against the Cheyenne helicopter proposed for termination and $4 million on the Advanced Helicopter Development program. These are discussed in detail elsewhere in this report.

The net increase of $65.8 million recommended for the Navy includes a transfer of $79 million from the Procurement Appropriation for two test S–3A anti-submarine warfare aircraft which are properly to be included under research and development as explained elsewhere in this report. This increase is offset partially by a reduction of $5.2 million for the F–14 air superiority fighter which is discussed earlier in the report, and a reduction of $8 million from the $13.5 million requested for the Destroyer Helicopter system. The amount recommended for reduction was requested for initiation of contract definition and engine qualification for this helicopter. This program has been delayed because the Navy has not completed and submitted the technical development plan to the Secretary of Defense for his approval. The remaining $5.5 million may be used for development of avionics equipment and continuation of investigations at sea.

The Committee recommends a reduction of $97.8 million in the Air Force program. This includes the B–1 Advanced bomber, $50 million; Subsonic Cruise Armed Decoy (SCAD), $33.6 million; the F–111 aircraft, $6.4 million; Light Intratheater Transport, $2 million; CONUS Air Defense Interceptor, $2.5 million; Advanced Fire Control/Missile Technology, $2.8 million; and the Advanced Tanker, $.5 million. Each of these is discussed at length elsewhere in this report.

The Army programs supported under this activity also include development of aircraft weapons, avionics and propulsion subsystems. The Navy program includes $47.7 million for continued development of the E–2C Early Warning Aircraft and $10 million for the Crane Helicopter Lift. Programs being continued by the Air Force include the AX Close Air Support Aircraft for $27.9 million, the F–15A Advanced Fighter for $370 million and the C–5A for $11.6 million.

MISSILES AND RELATED EQUIPMENT

[In millions of dollars]

	Requested	H.R. 17123	Committee report: Change	Committee report: Recommended
Army	896.4	896.4	−35.0	861.4
Navy	494.3	494.3	−27.5	466.8
Air Force	762.8	762.8	−61.2	701.6
Defense agencies	66.0	66.0	.....	66.0
Total	2,219.5	2,219.5	−123.7	2,095.8

This activity provides for research, development, test, and evaluation of missile systems of all types. In addition to funding contracts with industry, this activity supports the operation of certain test and evaluation facilities of the Department of Defense such as the Eastern and Western Test Ranges, the White Sands Missile Range, the Naval Weapons Center at China Lake, and the Research and Development programs at the Army's Redstone Arsenal.

The Committee recommends a reduction of $123.7 million in this activity. The Army portion is $35 million and includes a $15 million reduction for SAM–D Surface-to-Air missile and $20 million in the Advanced Ballistic Missile Defense program, both of which are discussed elsewhere in the report. The continued development of the SAFEGUARD ABM system is included for $365 million.

The reduction of $27.5 million for the Navy, recommended by the Committee covers two items, $14 million for the Air Launched/Surface Launched Antiship missile (HARPOON), and $13.5 million for the Point Defense System development. These items are discussed elsewhere in this report. The Navy request includes $122.7 million for continued development of the Fleet Ballistic Missile System (POSEIDON), $75 million for the Advanced Surface Missile System (AEGIS) development which is needed for fleet defense against aircraft and antiship missile attack, and $44 million for the advanced development program Undersea Long Range Missile System (ULMS).

A reduction of $61.2 million is recommended in the Air Force request, comprised of $5 million for the Advanced Ballistic Reentry System (ABRES), $29.2 million for the Short Range Air-to-Air missile for the F–15 aircraft, and $27 million in the MINUTEMAN Rebasing program. These are discussed elsewhere in this report. The program of $701.6 recommended by the Committee will provide $224.2 million for continued development of the MINUTEMAN III ballistic missile system, and $46 million for continuation of the Short Range Attack Missile (SRAM) to be used with the B–52 strategic force and later the B–1 Advanced Bomber.

MILITARY ASTRONAUTICS AND RELATED EQUIPMENT

[In millions of dollars]

	Requested	H.R. 17123	Committee report: Change	Committee report: Recommended
Army	10.7	10.7	−2.2	8.5
Navy	29.1	29.1	.....	29.1
Air Force	437.7	437.7	.....	437.7
Defense agencies	3.0	3.0	.....	3.0
Total	480.5	480.5	−2.2	478.3

This activity provides for programs directed toward the improvement of space technology for military purposes and investigations and development of specific military applications of space vehicles. Major programs include military communications satellite systems and ballistic missile early warning systems. Support is also included for flight experimental programs, and ground base research and technology development programs in such areas as secondary power sources and navigation, guidance, sensor, reentry, and propulsion systems. Both contractual and in-house efforts relating to space technology are funded from this activity.

The Committee recommends a reduction of $2.2 million which relates to the Strategic Army Communications program (STARCOM), and is discussed elsewhere in this report.

The relatively small amount of Army and Navy funds under this budget activity is for ground and shipboard elements of the worldwide Defense Satellite Commnications System and for tactical application of satellite communications.

The Air Force request, which is the lowest amount for this activity in nine years, following the cancellation of the Manned Orbiting Laboratory (MOL) last year, will provide for advanced development of a wide range of space technology programs. It also provides for development and improvements to the Titan III space booster and support of the Satellite Control Facility at Sunnyvale, California.

The amount budgeted for defense agencies is for work by the Defense Communications Agency on the defense communications satellite.

SHIPS, SMALL CRAFT, AND RELATED EQUIPMENT

[In millions of dollars]

	Requested	H.R. 17123	Committee report: Change	Committee report: Recommended
Army	1.1	1.1	.....	1.1
Navy	377.5	377.5	−20	357.5
Total	378.6	378.6	−20	358.6

This activity provides for design of new types of ships and for development of mine warfare weapons, shipboard equipment including command and control systems, and nuclear and nonnuclear propulsion plants. Antisubmarine warfare continues to be emphasized with development of ships and submarine sensors and countermeasures systems. A significant portion of the effort at the Naval Ships Research and Development Center is funded under this activity.

The Committee recommends a reduction of $20 million in this activity which applies to the Navy Advanced Surface Ship Sonar Development program, $8 million, and the Surface Effect Ship program, $10 million, both of which are discussed elsewhere in this report. The remaining $2 million reduction involves the Antisubmarine Warfare Acoustic Warfare program for which $8.5 million was requested. This is a new engineering development program and the $6.5 million remaining should be adequate for this purpose. The Navy program will support a wide range of advanced and engineering development programs relating to ship and small craft development.

The Army program provides for design of marine craft and amphibious lighters needed to support Army operations.

ORDNANCE, COMBAT VEHICLES, AND RELATED EQUIPMENT

[In millions of dollars]

	Requested	H.R. 17123	Committee report: Change	Committee report: Recommended
Army	153.2	153.2	−8.3	144.9
Navy	89.0	89.0	.....	89.0
Air Force	78.3	78.3	−12.0	66.3
Total	320.5	320.5	−20.3	300.2

This activity provides for the development, test, and the evaluation of improved artillery, guns, rocket launchers, mortars, small arms, mines, grenades, torpedoes, nuclear and chemical munitions, and conventional air launched weapons, as well as exploration and evaluation of new fuses, propellants, explosives, detonators, dispensers, and armor. This activity also provides principal support for research and development activities at several Army arsenals and the Naval Ordnance Laboratory at White Oak, Maryland.

The Committee recommends a reduction of $20.3 million in this activity, the details of which are discussed elsewhere in this report. This includes $8.3 million for the Army involving $7.5 million for Tracked and Special Vehicles development, $.5 million for Lethal Chemical Investigations and $.3 million for Lethal Chemical Munitions Concepts. The Air Force is reduced by $12 million, of which $7 million relates to Armament/Ordnance Development and $5 million to Truck Interdiction.

The major items included for the Army are the main battle tank for $36 million and a wide range of munitions and ordnance. For the Navy, major items included are $17 million for Undersea Warfare Weaponry and $36.3 million for continued development of the MK–48 torpedo. The Air Force request provides $20.9 million for continued development of an Improved Aircraft Gun System, and for work in conventional munitions and weapons.

OTHER EQUIPMENT

[In millions of dollars]

	Requested	H.R. 17123	Committee report: Change	Committee report: Recommended
Army	317.8	317.8	−14.0	303.8
Navy	226.7	226.7	−3.3	223.4
Air Force	359.6	359.6	−2.2	357.4
Defense agencies	258.7	258.7	−2.9	255.8
Total	1,162.8	1,162.8	−22.4	1,140.4

This activity provides for research, development, test, and evaluation of equipment not separately provided for under other activities. Examples of the types of programs included are ocean engineering systems and technology development, chemical and biological agent detection and protective devices, combat clothing, tactical data processing systems, communications and electronic warfare equipment, improved logistics and material handling, mapping and geodetic systems, and biomedical projects. This activity also supports research and development effort at the Army Electronic Research and Development Laboratories.

The Committee recommends a reduction of $22.4 million in this activity including $14 million for the Army Project Mallard which should be terminated, as discussed elsewhere in this report, $3.1 million for the Navy Laboratory Independent Exploratory Development program which is reduced to the fiscal year 1970 level, $.2 million in the Navy Manpower effectiveness program, $1.7 million in the Air Force Project Mallard, $.5 million in the Air Force Human Resources program, and $.5 million in the Defense Agencies (ARPA) Overseas Defense Research program. The reductions in Manpower Effectiveness, Human Resources, and Overseas Defense Research also are discussed elsewhere in this report.

Major Army development programs included under this activity are Surveillance, Target Acquisition and Night Operations Systems (STANO), General Combat Support, and Testing. For the Navy, it includes such programs as Undersea Target Surveillance exploratory and advanced development, and Command and Control exploratory development. The Air Force program emphasizes Ground Electronics exploratory development, Penetration Aids for aircraft, Electronic Warfare Systems, the Airborne Warning and Control System (AWACS), and technical support provided by Lincoln Laboratories and Mitre Corporation.

Defense Agency programs supported under this activity include the Advanced Research Projects Agency Nuclear Monitoring Research program (VELA), and Defense Atomic Support Agency program for Nuclear Weapons Effects test.

PROGRAMWIDE MANAGEMENT AND SUPPORT

[In millions of dollars]

	Requested	H.R. 17123	Committee report: Change	Committee report: Recommended
Army	52.3	52.3	.....	52.3
Navy	144.5	144.5	.....	144.5
Air Force	305.4	305.4	.....	305.4
Defense agencies	11.5	10.5	.....	10.5
Total	513.7	512.7	.....	512.7

For the Army and the Navy, this activity provides for those costs of operation, management, and maintenance of research, development, and test facilities which are not distributed directly to the other budget activities. For the Air Force it provides for certain costs of central administration such as the Air Force Systems Command Headquarters and divisions, as well as several large research, development, test, and evaluation centers.

The Committee recommends approval of the amounts requested under this budget activity except for the defense agencies program. The Committee concurs with the House reduction of $1 million relating to the Defense Documentation Center under the defense agencies program. Costs covered under this budget activity include civilian salaries and benefits, travel, communications, real property maintenance, and supplies and equipment.

The overall program presented by Defense is below the level of fiscal year 1970 and reflects a continuing decline in number of employees engaged in the operation and maintenance of the Department of Defense research and development activities supported under this activity. The austere level of this program can be better appreciated if it is recognized that average salaries for civilian personnel have been rising year after year without a corresponding increase in appropriated funds for that purpose.

[1] Authorization for other weapons not required prior to fiscal year 1971.

[2] Of this amount, $350,000,000 to be derived by transfer from stock funds.

Mr. STENNIS. Mr. President, I think that in the broadest way speeches have been made on behalf of the bill by several members of the committee. There may be others who want to speak on behalf of the committee. The chairman of the committee and the ranking minority member have now spoken on the bill in a major way.

The chairman of the Special Subcommittee on Tactical Airpower, the Senator from Nevada (Mr. CANNON), has presented a speech at length on provisions of the bill. That is also true as to the chairman of the Subcommittee on Research and Development, the Senator from New Hampshire (Mr. MCINTYRE), who had two different speeches on the major parts of the research and development portion of the bill. We have had the Senator from Arizona (Mr. GOLDWATER), who has just concluded a very fine exposition regarding the bill, and there have been other speeches.

In an affirmative way I think that covers the bill in a fairly full scope for the committee. We present the bill to the Senate on that basis. We are ready to answer such proposals in addition thereto as may be filed. I would hope we could move along on these amendments sometime reasonably soon.

I was about to ask for the adoption of the Senate amendment, but I see the Senator from Massachusetts (Mr. BROOKE) in the Chamber and I understand he has an amendment he wishes to introduce.

I yield the floor.

MESSAGE FROM THE HOUSE

A message from the House of Representatives by Mr. Hackney, one of its reading clerks, announced that the House had agreed to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 17548) making appropriations for sundry independent executive bureaus, boards, commissions, corporations, agencies, offices, and the Department of Housing and Urban Development for the fiscal year ending June 30, 1971, and for other purposes; that the House receded from its disagreement to the amendments of the Senate numbered 8, 9, 12, 14, 19, and 25 to the bill and concurred therein; and that the House receded from its disagreement to the amendments of the Senate numbered 7, 30, 39, and 55 to the bill and concurred therein, severally with an amendment, in which it requested the concurrence of the Senate.

ENROLLED BILL SIGNED

The message also announced that the Speaker had affixed his signature to the enrolled bill (H.R. 16916) making appropriations for the Office of Education for the fiscal year ending June 30, 1971, and for other purposes.

THE PLIGHT OF JACKSON, KY.

Mr. COOK. Mr. President, I wish to speak on a subject that is not germane to the bill presently, but I must state that I strongly protest the action announced yesterday by officials of the Department of Health, Education, and Welfare, pledging a matching grant of $100,000 to buy furniture for welfare recipients in the District of Columbia.

I do this as one who has experienced the ultimate in frustration in attempting to secure Federal money to aid a depressed area in my own State of Kentucky. Even though the difficulties I have been experiencing are with another agency, the Economic Development Administration, I believe the HEW action illustrates quite well an important point. The bureaucratic maze in this town responds more to threats than to orderly procedures to secure assistance. The HEW "handout" seems to be superseding the EDA "hand up."

I speak today for the people of the city of Jackson, Ky., who have been put through the bureaucratic wringer during the past 6 months. This city is located in the Appalachian area. Senators who are familiar with Appalachia know that a proliferation of Government programs have continually failed to solve the problems of these depressed areas of our Nation.

But the people of Jackson, Ky., have never given up. Officials of that city have secured an industry for their town—the first major industry ever to locate in Breathitt County—which is currently suffering from over 20-percent unemployment. This firm will employ around 400 persons and when the plant reaches

full production, in less than a year's time, a massive weekly payroll will be added to the community. This will make productive citizens and taxpayers out of hundreds of welfare recipients.

Nearly $2 million of private money will go into this plant. Local money from the city of Jackson has already purchased the site for this operation at a cost of $49,000. A local bank has pledged $80,000 of development money. The State of Kentucky has constructed $165,000 in access roads to the site. And the company, U.S. Shoe Corp., will eventually spend between $1,400,000 and $1,500,000 to build and equip a factory, and has already invested $180,000 in preliminary development.

In order to break ground for this factory, the city of Jackson must obtain approval of a pending Economic Development Administration application for $385,000. Since January of this year, one of my staff members has worked with officials of Jackson in trying to obtain this approval, and the application has been continually held up by one technicality after another. It took 2½ months to clear the area office in Huntington, W. Va., and it has been in the Washington office of EDA since June of this year.

Jackson, Ky., is asking an agency of the Federal Government—EDA—to help a community supply jobs for people who want to work. We all know economic development is the only real solution to the poverty of this Nation. Yet those charged with assisting such growth allow the people of my State who seek to build a new life to languish while they wallow in the hopeless maze of bureaucratic red-tape.

In summary, the right hand knows not of the activities of the left and it appears the handout continues to take precedence over the hand up. I denounce the decision by HEW to dole out $100,000 while productive EDA projects such as that of Jackson, Ky., remain unfunded.

AUTHORIZATION OF APPROPRIATIONS FOR MILITARY PROCUREMENT AND OTHER PURPOSES

The Senate continued with the consideration of the bill (H.R. 17123) to authorize appropriations during the fiscal year 1971 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and other weapons, and research, development, test, and evaluation for the Armed Forces, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes.

MIRV, SALT, AND STRATEGIC STABILITY: A DUAL APPROACH

Mr. BROOKE. Mr. President, Senate consideration of the defense procurement authorization comes at a moment of extreme delicacy in many realms of national security policy—the Strategic Arms Limitation Talks are in a crucial phase, the strategic balance is poised at the edge of far-reaching changes, defense spending is tottering under the challenge of competing domestic demands. Among the many issues we must consider in this debate, none is more critical than that of MIRV, the multiple independently targetable reentry vehicles whose incipient deployment is drastically changing the composition and capabilities of American strategic forces.

As Members of the Senate will recall, I have long argued that our security and that of the Soviet Union would be best served by a mutual suspension of MIRV testing and deployment. If such weapons were deployed in large numbers and were developed to levels of very high accuracy, they could seriously threaten hardened missile silos and could undermine the stable deterrence on which both countries depend.

It is, of course, reassuring to know that any such "hard-target MIRV" systems are years away from being perfected and that the initial systems now being deployed do not in fact pose a threat to the Soviet Union's retaliatory forces. Yet, as has often been pointed out in this Chamber, unless clear safeguards are established, technical improvements could eventually transform the first-generation MIRV systems which are capable only of a retaliatory mission into more dangerous weapons which might seem capable of a first strike. This could only induce a larger arms race, as the Soviets would be obliged to increase the number of offensive weapons or take other countermeasures to insure their ability to deter us, just as we are determined to do whatever is necessary to guarantee that we can deter them.

Under these circumstances, how we resolve the dilemmas posed by the development of MIRV technology will do much to shape the stability of the strategic balance. I remain convinced that a mutual ban on MIRV testing and deployment is the wisest course, and I am still hopeful that the SALT negotiations will eventually produce such an understanding. However, we do not know when, how, or if SALT will address the complicated problems of MIRV, and we must seek to shape a sound policy which will deal with two contingencies: either mutual limitation on MIRV in the SALT negotiations, or a continued deployment of MIRV in the absence of such a limitation.

In line with the sentiments voiced by the Senate in Senate Resolution 211, which urged a limitation on both offensive and defensive strategic weapons, particularly MIRV, we should do everything possible to facilitate a reasonable agreement on this difficult issue.

Toward this end I am today proposing an amendment which could make a major contribution to this objective. This amendment will direct the Department of Defense to initiate development of single reentry vehicle systems for both the Minuteman III and the Poseidon missiles, which are presently designed specifically as MIRV launchers.

So long as the United States has only MIRV systems for deployment on these two missiles, a proposed MIRV limitation would be tantamount to a de facto reduction in U.S. strategic forces. This is an especially critical factor with regard to the Poseidon system, since a number of submarines are being converted to carry this missile and a MIRV ban would mean that those subs could not be on station for a number of months, that is, until the Poseidon missile was altered or boats refitted to Polaris missiles.

Thus, as a matter of simple prudence, the United States needs to prepare for the contingency of a MIRV limitation by developing single reentry systems which could be mounted on these weapons. Dr. John Foster and other Defense Department spokesmen have alluded to precisely this possibility in remarking that Minuteman III and Poseidon could be fitted for single warheads. It is important to delay no longer in undertaking the work to make this a live option. This amendment would authorize and mandate such work, and I believe it will meet with the Department's approval.

I should perhaps mention that there are several advantages to pursuing such a development. Mounting a single reentry vehicle on the Poseidon could permit the submarines to operate at greater ranges from their targets. By increasing the maneuvering room for the boats, this option would contribute substantially to their invulnerability to attack by antisubmarine warfare forces. This is a significant advantage in its own right, but it could become even more so if the United States were gradually to evolve toward heavier reliance on the so-called blue-water option, that is, concentrating the largest fraction of its deterrent forces at sea and reducing or phasing out fixed-site land-based missiles. I consider it premature to elect this option at this time, since I believe it could best be pursued in the context of a larger strategic arms agreement which limited ASW forces as well as other weapons. If ASW forces were not so limited, the invulnerability of sea-based forces might erode over the longer term. Nevertheless, the blue-water option is a serious candidate for coming decades and there could be a special value in the added operating space which a single RV Poseidon would give our boats.

A further consideration is also worth noting. It is quite possible that, even in the absence of a MIRV ban, other agreements in SALT might make it desirable to substitute a single-reentry vehicle for the MIRV systems presently planned for Minuteman III and Poseidon. For example, since our MIRV is designed to assure U.S. ability to penetrate any Soviet ABM deployment, a very low limit on ABM coupled with a freeze on the number of offensive launchers might make it desirable to elect the single-warhead option. Under that contingency, MIRV would not be required to penetrate an ABM and a single-warhead system would contribute more to nuclear stability than a multiple RV deployment.

This is a question we will need to reassess in coming months as, hopefully,

the results of SALT become visible. The MIRV-capable missiles authorized in the fiscal year 1971 bill will not be deployed for many months. As we approach that date we can then determine whether they should be MIRVed or fitted with single warheads. But we can only do so, if the single-reentry vehicle systems are ready. It is for that reason that this amendment is essential. The Department has long studied this option and I believe it will welcome congressional guidance in initiating such a development.

A second and even graver contingency also confronts us and it is imperative that the Congress prepare to meet it. That is the possibility—one might say the probability—that the initial MIRV deployments will continue and that these weapons will be in the arsenals of the United States and probably the Soviet Union for the indefinite future. If that trend continues, our fundamental concern must be to insure that the MIRV's that are deployment reinforce strategic stability. They can do so only if they are exclusively, explicitly, and credibly designed for the retaliatory, second strike mission. In short, we must erect standards which make clear that the United States will not deploy MIRV systems capable of threatening the Soviet strategic forces.

The United States has, of course, been committed to a second strike posture for many years. The task here is to see that MIRV systems are compatible with that posture. President Nixon has consistently stressed this principle in his decisions and declarations on strategic weapons. For example, in proposing the Safeguard anti-ballistic-missile system, the President wisely underscored his concern to avoid actions which appeared to threaten the Soviet retaliatory forces. In his remarks of March 14, 1969—surely one of the most important and enlightened strategic statements by any statesman—Mr. Nixon repeatedly applied the American doctrine of deterrence. He rejected the possibility of a heavy ABM defense because "it might look to an opponent like the prelude to an offensive strategy threatening the Soviet deterrent." He also decided against meeting the Soviet build-up by increasing U.S. offensive capabilities, since such an increase "could be misinterpreted by the Soviets as an attempt to threaten their deterrent. It would therefore stimulate an arms race." And the President partially justified the reorientation of the U.S. ABM system to defense of the Minuteman force by stating:

> The program is not provocative. The Soviet retaliatory capability is not affected by our decision.

President Nixon applied the same standard in his redirection of the U.S. MIRV program. As the Senate will recall, Mr. Nixon informed us some months ago that a proposed development of a hard-target MIRV system had not been approved and that the United States has no such program.

In testimony before the Armed Services Committee, Secretary of Defense Laird further commented on this important decision by pointing out:

> The President has made it perfectly clear that we do not intend to develop counterforce capabilities which the Soviets could construe as having a first-strike potential.

I believe the Secretary, who has been so deeply concerned by the deployment of Soviet weapons with an evident potential for attacking U.S. ICBM's, must have a special appreciation of the hazards of such destabilizing weapons. It is clear to every careful analyst that weapons capable of counterforce attacks only make the existing strategic balance more dangerous and the ensuing arms race more costly.

There is, obviously, no disagreement that, if MIRV is required to penetrate a Soviet ABM system and to maintain a credible second strike capability, then this country will continue deploying such systems. However, the retaliatory mission can be performed with relatively modest yields and limited accuracies that would be unsuitable for any first strike against enemy missile forces. The truth of this simple axiom is apparent when one recalls that Hiroshima was almost obliterated by a 20-kiloton atomic bomb—much smaller than today's missile-borne payloads—delivered with an accuracy which has long since been surpassed.

The Armed Services Committee has expressed its concern about the implications of MIRV for the credibility of America's commitment to a second strike or mutual deterrence doctrine. In reducing the funds for the so-called ABRES—advanced ballistic reentry systems—program, the Committee has stressed in its report that the reduction is related to "any future hard-target kill capability." The report points out that the strictly retaliatory objective "can be met with substantially less accuracy and more modest yields than needed for the counterforce mission." Thus, the committee has thoughtfully discouraged even preliminary development work which might be viewed as pointed toward a destabilizing counterforce capacity—a capacity that is unnecessary and indeed highly detrimental to deterrence.

In pursuit of this same objective, so clearly enunciated by the President, the Secretary of Defense, and the Armed Services Committee, I am proposing a second amendment setting the standards for deployment of a retaliatory MIRV capability. This amendment would prohibit the use of funds for operation development, testing or procurement of a hard-target MIRV system and would specifically define what a hard-target MIRV system capability is.

Much discussion of this issue has been impeded by the absence of an agreed definition of hard-target capability. Obviously it is meaningless to declare that the United States will forgo a capability to attack Soviet strategic forces unless that capability is defined in believable and understandable terms. Both in the interest of our own understanding, and even more, of Soviet perceptions of our intentions, this amendment would limit U.S. MIRV systems to yields and accuracies no greater than one-third the level considered necessary to enable a single warhead to neutralize a hardened missile silo.

I have have developed this definition in extensive discussions with the Department of Defense and with colleagues in and out of Congress. As I am sure the Department of Defense agrees, it provides more than ample latitude for MIRV systems to meet the requirements of a second strike, while it establishes a threshold well below that which could jeopardize Soviet missile forces. I believe it to be an even more urgent provision than the first amendment I have presented. On the real likelihood that MIRV deployment may continue, we must have firm guidelines for our subsequent action in this field.

Because of their deep concern on this matter, more than half the members of the faculty of the Massachusetts Institute of Technology have individually joined in a petition to the President and the Senate to forgo any hard-target MIRV development. Growing numbers of responsible spokesmen in the technical community, including many proponents of MIRV, recognize that we do not need and in fact cannot afford to move toward hard-target MIRVs, since the result can only be a diminution of our own security. This amendment can be a decisive affirmation of our determination to avoid ambiguous or provocative improvements in MIRV systems.

The logic for this proposal is rooted in mutual deterrence itself, as President Nixon has so well indicated. Stable deterrence requires that neither side threaten the other side's capacity to retaliate. This is necessary not only to avoid endless cycles in the arms race, as one or the other side moves desperately to protect its retaliatory capacity. It is primarily important because, should a nation find its forces to be vulnerable, those weapons can only be used if they themselves are launched first. If they are withheld, they run the risk of destruction. This is the insight which years ago led Albert Wohlstetter and others to note that the "balance of terror" is delicate, and that security in the nuclear age demands that strategic weapons be invulnerable.

Thus, U.S. security is in no way served by an capability to threaten Soviet strategic forces. Such a capability would only raise the prospect that Soviet weapons might be launched in some moment of crisis out of fear that otherwise they would be disarmed in a first strike. The same is no less true of any Soviet deployment threatening our retaliatory forces.

We cannot tolerate hair triggers in an era of instant and total devastation. The only sane policy for both countries is to refrain from such destabilizing systems and to take those measures which create unambiguous and invulnerable second strike forces.

That is the purpose of this amendment. By setting this criterion for American MIRV systems, we can enhance our own security and set a model for the Soviet Union to match. Even if they fail to do so, we will have insured that any American MIRV systems are compatible with the

policy to which the United States is dedicated. We will also have struck a note of prudence which could respond very helpfully in the strategic arms limitations talks.

To sum up, the subject of MIRV is complex but the case for these two amendments is itself quite simple. In the event that the SALT negotiations produce an agreement limiting MIRV systems, we will need to have the option of installing single-reentry vehicles on the expensive Minuteman III and Poseidon missiles in which we are investing. In the event that such an agreement is not reached and MIRV deployment continues, we shall need to insure that the American MIRV systems remain strictly retaliatory weapons which do not undermine the stable deterrence on which our security rests.

The two amendments I offer will serve these vital objectives. I commend them to the Senate.

Mr. President, I ask unanimous consent that the two amendments I have submitted be printed in the RECORD.

The PRESIDING OFFICER. The amendments will be received and printed, and will lie on the table; and, without objection, the amendments will be printed in the RECORD, in accordance with the Senator's request.

Mr. BROOKE'S amendments, ordered to be printed in the RECORD, are as follows:

On page 14, at the appropriate place, insert a new section as follows:

SEC. 206. The Secretary of Defense is authorized and directed to initiate a program of research to develop at the earliest possible date, a single re-entry vehicle system for the Minuteman III missile and a single re-entry vehicle system for the Poseidon missile. For purposes of this section "a single re-entry vehicle system" is a system capable only of deploying a single re-entry vehicle and its associated penetration aids. The funds to be expended in carrying out the provisions of this section shall be funds transferred from other projects by the Secretary pursuant to his authority under existing law to transfer funds from one project to another.

At the end of the bill add a new section as follows:

No funds authorized to be appropriated pursuant to this or any other Act may be used for operational development, testing or procurement of any Multiple Independently Targetable Re-entry Vehicle (MIRV) system in which an individual re-entry vehicle provides a capability to destroy a hardened target. For purposes of this section, "a capability to destroy a hardened target" means that combination of warhead yield and accuracy required to generate the equivalent of one third the level of blast over-pressures and related effects considered necessary to enable a single warhead to neutralize a hardened missile silo.

Mr. PROXMIRE. Mr. President, will the Senator from Massachusetts yield?

Mr. BROOKE. I am very pleased to yield.

Mr. PROXMIRE. Mr. President, I commend the Senator from Massachusetts on a very important and significant speech. It is important that we hold down expenditures for the American taxpayer, to prevent inflation and to provide for an opportunity for securing other national objectives in addition to the immediate military purposes involved in defense.

The Senator from Massachusetts goes much farther with this amendment and much farther in his speech. As I understand, the purpose of this amendment is primarily to increase the security of the American people, and of the world, for that matter.

Mr. BROOKE. That is correct.

Mr. PROXMIRE. By conforming our actions to the expression by President Nixon that he did not want to take any action, or want us to take any action, that would in turn provoke the Soviet Union to feel that we were going after a first strike; and what the Senator's amendment would do would be to provide that we act, with this terrific increase in firepower that we will have with the multiple independent reentry vehicle, in a way that would make clear that what we are trying to do is to strengthen our own forces so that we could continue to have a credible second strike capability, but make it obvious and clear that we are not trying to develop a capability that would destroy the Soviet Union's missiles. Is that correct?

Mr. BROOKE. The Senator is correct; yes.

Mr. PROXMIRE. I think that this is most significant, not only from the standpoint of actually, I presume, saving funds, although that is important—in this case it is certainly secondary—but also, it is very significant in terms of the security of our country.

As I understand it, the proposal of the Senator from Massachusetts has the great advantage, too, of being logical and appropriate, regardless of whatever position one might take on the SALT talks. Is that correct?

Mr. BROOKE. The Senator is correct.

Mr. PROXMIRE. The Strategic Arms Limitation Talks are viewed differently by various Senators. Some feel that because of them, we should provide everything that the administration and the Defense Department have requested in the way of military force. Others have argued that that might not be the wise course, for various reasons.

But, regardless of the position one takes with respect to the SALT talks, in view of the President's statement that we should not take any action that would convince the Soviet Union that we were trying to develop a first strike, the amendment of the Senator from Massachusetts is completely logical and consistent with that view of President Nixon, and the amendment is one which I can support enthusiastically.

Mr. BROOKE. I am very pleased to have the support of the distinguished Senator from Wisconsin.

The Senator is quite correct in his analysis of the amendment and what the amendment would do. As the MIRV technology has developed to date, we do not have the accuracy which would enable us to have a first strike against the Soviet Union. The Russians know this and the United States, of course, knows this. But if we were to continue improving and perfecting our MIRV technology, the time would come when obviously we would have a first strike capability.

The President and the Secretary of Defense have said that we are not seeking a first strike capability. One of our military leaders at one time made a statement which was interpreted as meaning the United States was seeking a first strike capability. But the President denied this in a letter, which I made public to the Armed Services Committee and to the Senate, in which the President made clear that we are not seeking such a capability. As the distinguished Senator from Wisconsin has well pointed out, this would be most provocative, and we do not seek it.

All we are trying to do by this amendment is make explicit, write into law, the expressed policy of this administration that we will not perfect this MIRV technology to the point where it could become a first strike capability and be considered by the Soviet Union as having a first strike capability. Such a threat could easily provoke them into further development and deployment to the point where they would have a first strike capability, and the arms race could continue on indefinitely, out of balance.

So long as we are able to keep the mutual deterrents—and we can do this by limiting the MIRV technology, as would be done by this amendment—then, of course, there will be no fear of either side having a first strike capability.

This amendment would by no means stop our deployment of MIRV. I want to make that very clear. I think the Senate should understand that.

Senate Resolution 211, which I introduced in the Senate a year or so ago, and which was passed by the Senate by a vote of 72 to 6, never suggested a unilateral cessation of operational testing of MIRV. It was a mutual cessation of operational testing of MIRV. This, of course, would be something that would have to be done by the United States and the Soviet Union in the SALT talks. But we just do not know at this point what is going to come out of SALT. I think we are all hopeful and prayerful. In the interim, we are going ahead with MIRV, as the Senator well knows, so far as our Poseidon and Minuteman III are concerned. We know that. That is public information. That is not secret information at all.

The Senator was not in the Chamber when I discussed the other amendment in my prepared text. The other amendment would direct the Defense Department to develop a single warhead weapons system that could be used on Poseidon or on Minuteman III. In the event that we are able to reach an agreement with the Soviet Union at the SALT talks for a ban on MIRV, then we would have a single reentry vehicle system that could be put onto our Minuteman III missile and our Poseidon missile.

Mr. PROXMIRE. As I understand, the position of the Senator from Massachusetts is that in the event we did go ahead—if we did go ahead—with the multiple MIRVing, which the Senator's

amendment is designed to prevent, we would greatly increase the likelihood that the Soviet Union in turn would feel compelled to go ahead with multiple MIRVing.

Mr. BROOKE. The Senator is correct.

Mr. PROXMIRE. Furthermore, we would greatly increase the likelihood that they would consider a first strike, for fear that we might initiate a first strike before they did, because they would feel that we were developing a first strike capability.

On the other hand, if we do not go ahead, some will argue that we are not advancing our technology, that we are not advancing our capability, but how do we know, absent effective unilateral inspection, that the Soviet Union is not going ahead with theirs? I take it that this is the reason why the Senator's amendment would provide for a stronger second strike capability.

Mr. BROOKE. That is correct.

Mr. PROXMIRE. So that whatever technological advance they might have, it would be most unlikely to be preemptive. We not only would have the submarines, which seem to be pretty much invulnerable to a first strike—and nobody I know of has argued that they would not be—but also, we would have the bombers, which are mobile and highly invulnerable to a first strike, and the second strike weapons which the Senator's amendment is designed to improve.

Mr. BROOKE. Yes. Because the existing single reentry vehicle systems have not been improved—the old Polaris and the old Minuteman I. So we would have to improve our single reentry vehicle systems if we were to enter into an agreement with the Soviet Union on a limitation on MIRV's.

Mr. PROXMIRE. I thank the Senator.

I hope the Senator from Massachusetts—and I know the Senator from Mississippi would join me—will call up his amendment as soon as he can. I know that there are considerations he may have as to the exact timing of that. I am hopeful that we can get some amendments before the Senate, and I know that the Senator from Mississippi and other Senators would like to have action as soon as possible.

Mr. BROOKE. As I have said, I am very pleased to have the support of the distinguished Senator from Wisconsin. It is certainly my intention, as I have said to the distinguished chairman of the Committee on Armed Services, to call these amendments up very soon.

Mr. STENNIS. Mr. President, will the Senator yield?

Mr. BROOKE. I yield.

Mr. STENNIS. Mr. President, I commend the Senator for the clarity and completeness of his speech. It is a subject matter in which he is well versed. He has worked on it this year and last year and perhaps before. The committee heard his presentation with great interest. I am sure the entire membership of the Senate will be interested in this question.

I want to get the quotations again of just what the President of the United States said about this. The Senator has this matter now before the Department of Defense, as I understand.

Mr. BROOKE. That is correct. I have asked the Secretary of Defense to give the department's position on both of these amendments, and I expect a reply momentarily.

Mr. STENNIS. I am really glad the Senator did ask that. I do not think we ought to take them up until the Senator has received a response.

This morning, in anticipation that this matter was coming up, because the Senator had told me so, I initiated inquiry over there, also, that the committee was interested in the subject. Can the Senator give any indication when he might offer them? I am thinking about the prospect of getting them up tomorrow, say, or this week?

Mr. BROOKE. I had thought the early part of next week.

Mr. STENNIS. Yes. We are really in a distressing situation here. I know that the Senator is always willing to cooperate——

Mr. BROOKE. I certainly am always glad to do so.

Mr. STENNIS. With the committee, even though we do not vote together.

Mr. BROOKE. In response to the inquiry of the Senator from Mississippi, a great deal will depend upon the response I receive from the Department of Defense.

Mr. STENNIS. Well, it is a very important matter. I was not suggesting any hasty consideration here, but if we could get it up this week, we could start debate. I do not know whether we could finish it or not, but the Senator makes a good suggestion that we should find out what the Secretary of Defense will say.

Mr. BROOKE. I am certainly sympathetic to the Senator's problems here and assure him that I will move as expeditiously as possible in calling up the amendments.

Mr. STENNIS. I thank the Senator very much. As of now, though, he merely submits his amendments for the information of the Senate?

Mr. BROOKE. That is correct.

Mr. STENNIS. The Senator does not propose to call them up until further notice?

Mr. BROOKE. That is correct.

Mr. STENNIS. I thank the Senator.

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. BENNET). The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

MERCURY CONTAMINATION OF THE WISCONSIN RIVER

Mr. PROXMIRE. Mr. President, the Nation is facing its first water pollution crisis. While most people have always thought of water pollution only in terms of dirty, unsightly water, the present crisis involves, according to Secretary Hickel, "an intolerable threat to the health and safety of Americans." The cause of this new crisis is mercury contamination.

Within the past 3 weeks, mercury has been found in large quantities in many streams and rivers throughout the United States. Unrecognized as a threat until just over a month ago, mercury poisoning has already caused the deaths of four persons in New Mexico. Waters now threatened by mercury contamination include Lake Onondaga, parts of the Tennessee River, the Mobile and Tombigbee Rivers in Louisiana, the Mississippi River above New Orleans, the Rio Grande River in Texas, Lake Ontario, much of Lake Erie, and many rivers in Alabama. New reports of contamination are being received almost daily and the Federal Water Quality Administration has established a special emergency task force to deal with the crisis.

Wisconsin, my State, has been particularly hard hit by the crisis. Recently I learned that the Wisconsin River is heavily contaminated. According to a spokesman from the Federal Water Quality Administration—FWQA—concentrations up to 1,000 parts per million have been found in sludge deposited at the bottom of the river near Port Edwards. This sludge contains the highest concentration of mercury reported to FWQA anywhere in the country, according to the same spokesman. Fish tested at various points along the river have been found to contain concentrations of mercury ranging from 1 part per 10 million to 1.83 parts per million. While these quantities appear to be extremely small, mercury is toxic to certain species of fish in concentrations as low as .004 parts per million. The Federal Water Quality Administration is presently attempting to enforce a standard of .000 parts per million. Needless to say, the concentrations reported in fish in the Wisconsin River are well above the danger levels.

Perhaps the most frightening thing about the situation is that the threat posed by the mercury may persist for many decades. Sludge containing as much as 1,000 parts per million now resting at the bottom of the Wisconsin River may pose a permanent source of contamination. While the transfer process between the sludge and the river water is not completely understood, it is clear that the mercury does not sink harmlessly to the bottom, as previously believed. Michigan State University geologist, Dr. Robert Ehrlich, points out that:

> We failed to take into account a process called organic complexing—the way organic matter in lake bottom sediment and lake waters pick up electrically charged atoms of a metal like mercury and force them into solution throughout a lake.

From evidence already gathered, it is clear that mercury contamination may threaten man for up to 100 years. Commenting on suggestions that all plants

dumping mercury be forced to cease all discharges immediately, Richard Ronk, mercury project officer for the Food and Drug Administration, pointed out that:

> Even if we close all the plants today, the problem won't go away. The mercury will still be there, and nobody can really tell you how long it will take the biosphere to take care of it.

In Sweden, where mercury poisoning has caused a drastic decrease in the bird population, scientists have predicted that the threat will persist for 10 to 100 years unless the mercury is made inactive.

The symptoms in man of mercury poisoning may occur weeks to months after an acute exposure to toxic concentrations. For this reason, no one really knows how much damage may have already been done. Mercury is a slow acting poison which gradually destroys the brain, a few cells at a time. One of the first signs is the impairment of the coordination of muscle movement. With severe intoxication, the symptoms are irreversible and death follows within a matter of months. The most serious threat caused by mercury is to human fetuses. Methyl mercury easily penetrates to the fetus via the placenta, and the concentration of mercury in the fetal blood may be as much as 20 percent higher than in the mother. Infants with congenital brain damage from methyl mercury are born to mothers who show no symptoms of methyl mercury poisoning. Thus, we have no way of knowing how many unborn children may have already suffered brain damage as a result of their mothers eating contaminated fish.

In Wisconsin, contamination of the Wisconsin River did not originate with the present crisis. The dumping of mercury into the river has been going on for many years. The Wyandotte Chemical Co., identified as a major contributor, has been dumping huge quantities of sludge containing more than 20 pounds of mercury per day into the river for over 3 years. This sludge, containing as much as 20,000 pounds of mercury, has accumulated on the river bottom and now covers a huge area, several feet in depth. The danger posed by this huge accumulation is clear. Unless it is removed or made biologically inactive, it could serve as a permanent source of contamination which would infect the river water for decades. In view of the extreme danger, the question now is, what can be done to remove the threat?

Unfortunately, we have no quick or easy solutions available. The only extensive research conducted to date on the problem has been done in Japan and Sweden where mercury poisoning has already been held responsible for the death of almost 100 people. We still do not understand the process by which the mercury is liberated from the sludge and then picked up by fish and other forms of aquatic life. In view of this, there is an immediate need for stepped up research on all levels. We need to concentrate the resources of every applicable federal, state, and scientific agency. We need a solution as rapidly as possible—only by working intensively on the problem at all levels will we obtain the needed solution quickly. We cannot afford the delays caused by different agencies of the government working at cross purposes. Cooperation is needed on all levels. For these reasons, I have today asked the Federal Water Quality Administration to undertake a joint study with the National Academy of Sciences to find a solution as quickly as possible. The Wisconsin Department of Natural Resources has already moved to sharply reduce the amount of mercury being dumped into the river. The Wyandotte Chemical Co. plant has cut its discharge to below 1 pound per day. The need now is for intensive study of ways to render harmless the mercury which is already in the river.

The Federal Water Quality Administration has already established a special task force to deal with the problem. Murray Stein, the chief enforcement officer of FWQA, has indicated that he is ready to provide immediate assistance to any State which requests help. He points out that the Federal Government has had to deal with the crisis nationwide and that FWQA has gained much valuable experience which may be very useful to the individual States in dealing with their own particular problems. Only by sharing the experiences gained on both the Federal and State levels can we avoid duplication and futile efforts which only lead down blind alleys.

In the battle which lies ahead of us, time will be a crucial factor. Each day that goes by without a solution represents an added threat to the health of possibly millions of people. Mercury is a deadly poison. Every Federal official whom I have contacted has termed the present crisis extremely serious—so serious that FWQA has just recently refused to release any further information on new sources of contamination. The Federal Government is prepared to enforce a standard of zero parts per million in interstate waters. The sludge in the Wisconsin River contains as many as 1,000 parts per million. Under the circumstances, it is difficult to exaggerate the danger. We need a solution as quickly as possible.

THE VISTA PROGRAM

Mr. JAVITS. Mr. President, with the President's personal support, the Congress approved last December a 2-year extension of the poverty program, including the essential and highly successful program known as Volunteers in Service to America—VISTA. I might mention that my own daughter has worked in two summer programs for VISTA.

Mr. President, as I have always been very solicitious and deeply involved with the development and success of VISTA, I felt it my duty to acquaint the Senate with the problem so that at least information on the matter might be available.

Begun in 1965, VISTA is now beset by differences between its administrators in Washington and what is claimed to be quite a number of volunteers in the field as to the goals of the program and the most effective means of achieving them.

How these differences are resolved may well determine whether this and other poverty programs continue with the commitment and involvement of young America—an involvement as essential as the involvement of the poor themselves if we are to make the needed inroads on the pervasive problems of poverty.

Mr. President, among these oppositional features which have been called to my attention are the following:

Certain of the VISTA personnel in the field assert that the Office of Economic Opportunity—VISTA's parent agency—intends to move its VISTA volunteers away from organizing the poor to be effective participants in antipoverty efforts, toward the less controversial task of providing the poor with social services.

The Office of Economic Opportunity takes the position that it is merely attempting to provide "focus" for VISTA programs, and that it favors a concept of community organization as being a group of Americans who want to accomplish an agreed upon social purpose in program areas such as health, education, and manpower, economic development, housing, community planning, and general services.

VISTA volunteers are also greatly concerned by the recent decision of the President regarding occupational draft deferments, under which the Office of Economic Opportunity will no longer recommend draft deferments for VISTA volunteers. And, by the fact that VISTA has been without a permanent director for more than 2 years.

Some VISTA volunteers also claim that:

The VISTA budget is woefully inadequate and that this has resulted in program and volunteer cut-backs, in lack of administrative and logistical support, and in stifling of initiative regarding development of new projects.

The VISTA policy is determined in Washington without adequate consultation with community groups and volunteers in the field.

Unlike other Office of Economic Opportunity programs, the Economic Opportunity Act of 1964 has no provision for over-riding a State Governor's veto of VISTA projects, and that this has forced VISTA to be politically responsive to the established government structure which itself may not be responsive to the needs of the poor.

That VISTA training has been inadequate as to the nature of VISTA service—its problems and possibilities—and VISTA projects.

That VISTA has changed its recruiting policies to emphasize attracting older, more conservative volunteers in an effort to reduce the level of controversy connected with the program but at the same time to make it more pedestrian and unimaginative.

Concerned with these matters in the VISTA program and with the poverty program in general, some VISTA volun-

teers began meeting in local and regional groups in an attempt to enlist congressional and community support for their position; and a number of VISTA volunteers formed the National VISTA Alliance to press these and other issues.

In an effort to present their case, I am informed the National VISTA Alliance has sponsored a 3-day national conference ending today in Washington, D.C. It is claimed that approximately 350 to 400 volunteers and exvolunteers, including some elected representatives of VISTA volunteers in the Nation's 10 VISTA administrative regions, have gathered in Washington and have been discussing their proposals for the improvement of the poverty program and have been meeting with Members of Congress.

As I am the ranking minority member of the committee which handles this matter, I met with them yesterday. My conclusions are as follows:

Mr. President, first, I hope my colleagues in Congress similarly will receive members of the National VISTA Alliance Conference. We must make every effort to maintain the faith in our government among them. Only then will we be able to call on them for their boundless initiative and energy, so necesary for the revitalization of our troubled society.

Furthermore, I would commend to the members of the National VISTA Alliance a course of action most likely to result in the same openess that characterized the reception by Members of Congress 2 months ago of college youth over the issue of the war in Indochina. In this era of the rhetoric of "confrontation," "demand," and "mass meetings," I urge them to help prove that young Americans are not concerned with "confrontation for the sake of confrontation" and with "nonnegotiable" proposals. I urge them to show that they are much more concerned with truly improving our system of Government through a reasoned, more active participation in that system such as the VISTA program itself represents. I urge them to proceed not by coercive demand, but through petition for redress of grievances to the Members of Congress.

Mr. President, I will not attempt to prejudge the case put forth by the VISTA Alliance, for I am sure that the Office of Economic Opportunity has reasoned answers to many of these points.

I intend personally to look into each of these and other assertions to determine which, if any, of these claims require clarification or even changes of policy on the part of the Office of Economic Opportunity.

Finally, Mr. President, if these issues cannot be resolved in this way, it may well be necessary to request hearings in the Subcommittee on Employment, Manpower, and Poverty of the Senate Committee on Labor and Public Welfare of which I am the ranking minority member.

The use of the machinery which is readily available and has worked so well for college youth in respect of protests of the Indochina war can work just as effectively for those in VISTA who feel these are real grievances. I strongly urge they take advantage of that course rather than something more sensational but something which I feel would be a regressive course.

Mr. President, I ask unanimous consent to have printed in the RECORD an article relating to some of the problems of VISTA which was published in the New York Times on July 14, 1970.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NIXON SEEKING A SOFTER IMAGE FOR VISTA

WASHINGTON.—The Nixon Administration has begun changing the image, composition and role of VISTA, the so-called "domestic peace corps."

One purpose apparently is to end complaints from local politicians and establishment groups, particularly in the South, about the poverty agency.

A spokesman for the agency here said that the changes would eliminate the confrontation tactics employed by past and present volunteers and result in a less controversial organization better geared to serving the rural and urban poor.

But many of VISTA's more than 5,000 volunteers believe the Nixon Administration is actually intent on ending the agency's technique of organizing the poor to achieve specific goals.

They are convinced that the Administration wants VISTA project workers themselves to solve the problems in the areas where they are assigned, rather than to teach the poor how to handle those problems—often through activism that upsets local establishments.

Informed estimates of the number of active VISTA dissidents run as high as a third of the program's personnel. Many of them are young white males who were stunned on April 21 when Donald Rumsfeld, director of VISTA's parent agency, the Office of Economic Opportunity, announced that job deferments from the draft would not longer be sought for volunteers.

The dissidents have been meeting in small and medium sized groups during the last two months in an attempt to drum up Congressional and community support to resist the current policy changes.

POLITICAL ROLE URGED

Angry newsletters, denouncing the national leadership of VISTA and the Office of Economic Opportunity, were mailed to 2,500 volunteers in early May. Regional meetings have been held in North Carolina and Chicago. Another is taking place this weekend in Waterloo, Iowa.

The conference in Chicago, held June 7, set the tone. A statement denounced President Nixon as unconcerned about the poor and said: "VISTA should be more community oriented and less work-project oriented so that volunteers can become involved in a more political role."

One generally acknowledged problem in VISTA is an admitted lack of communication between the leadership and field workers. Another is the fact that almost 40 per cent of the top administrative positions are either empty or held by "acting" personnel.

VISTA, whose full title is Volunteers in Service to America was started six years ago. It appeared at the start to be one of the most promising and successful of poverty programs. The program was based on the concept that volunteers could go into poverty areas and work with the poor for one or two years. It attracted a large number of young people who believed in political activism within the system. Many saw in VISTA an opportunity for public service that was preferable to the military.

In the early stages, the program had no problem getting funds. There was a common belief by volunteers and staff members that the agency's philosophy of community organizing had gained widespread acceptance.

But the Nixon Administration found when it came to office that criticism of VISTA was increasing chiefly over the activism encouraged by the volunteers.

This was particularly true in rural areas, especially black rural communities in the South. But Mayors and Governors outside the South have also had their battles with volunteers.

As recently as June 8, The Governors of Arizona, Hawaii and Utah complained at the opening session of the annual Western Governors conference that VISTA volunteers were spreading discontent among the poor, particularly the Indians.

The Alaskan Legislature has voted to cut $85,800 from the state budget that was intended as Alaska's share in the VISTA program, thus ending, at least temporarily, the program in the state.

Chester Robert Lane, a civil servant who is acting director of VISTA, said in a recent interview that he supported the Administration's effort to change the poverty agency's role and reputation.

"Vista is no longer going to be this place where you can do your own thing . . . especially if that means confronting the establishment," he commented.

"We hope, predict and are striving for a new type of volunteer who will work within the system and lower the noise level. It might make VISTA more popular and more accented."

The agency's leadership has already made some changes in its recruiting and training programs and will make more before the next annual group of 2,000 new volunteers begin training this July.

Older volunteers are being sought. Teenagers and active radicals are being discouraged from applying. New guidelines are being drawn up that reinforce old rules forbidding political involvement and add new limits on what is permissible for volunteers.

The dissidents questioned in person or by telephone, who preferred not to be identified for fear that the communities they were working in would suffer retaliation by some zealous employes, believe that the new approach means the eventual end of VISTA.

A volunteer from the Southwest commented, "They're returning to the Band-Aid approach where we patch up a wound but don't do anything about the cause."

Another noted that the end of draft deferments would probably mean that a lot of young professionals would leave VISTA. "It was an honorable way of serving your country without having to kill Vietnamese," he said.

Many observers in Washington, inside and outside of VISTA, are, however, hopeful about the long-range future of the program. They say that even mild, conservative volunteers tend to become radicalized by a year's work with the poor.

But a major current worry is the long time the Republicans have taken in filling the top posts in the agency. Some observers fear that without the political clout of Presiedntial appointees, the agency will lose out to others in the fight for a portion of the increasingly tighter budgets.

VISTA has been without a permanent director since June 30, 1968, when William H. Crook resigned to become United States Ambassador to Australia. The post was filled by Padriac M. Kennedy until January of this year, and by Mr. Lane since then.

The director that Donald Rumsfeld is said

to want is Ralph Blumenthal, 24 years old, a former White House aide. But Mr. Blumenthal is currently serving a six-month stint in the Marine Corps and will not be available until after the summer.

Many connected with VISTA say that the lack of political leadership has confused the making and implementation of policy and has led to anticipatory self-censorship by permanent staffers who do not know the agency's new directions.

But Mr. Lane believes that the O.E.O. leadership is providing all the guidance necessary. "Whenever I'm confused, I just walk in and talk with Rumsfeld," he said. "Then I'm not confused anymore."

ORDER FOR RECOGNITION OF SENATOR STENNIS TOMORROW

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that tomorrow, following my remarks, the able Senator from Mississippi (Mr. STENNIS) be recognized for not to exceed 30 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

AGRICULTURE FAILS TO BAN DDT

Mr. PROXMIRE. Mr. President, last November the Department of Agriculture announced that all nonessential uses of DDT would be phased out by 1971. At that time, the news was welcomed by conservationists and scientists who had become increasingly concerned over reports that DDT was causing widespread damage to the environment. It was considered a major victory for conservation forces.

Last week the Department reversed the tough stance it had taken almost a year ago. It refused to order an immediate suspension of all nonessential uses of DDT pending a full review. This decision represents a severe setback for the environmental cause. It represents a major victory for industry forces which had argued that claims made against the pesticide have been greatly exaggerated. In a statement submitted to the U.S. Court of Appeals the Department flatly declared that DDT is not sufficiently dangerous to pose an imminent hazard to human health. In making the decision, the Department chose to ignore the pleas of hundreds of biologists and concerned public officials who have viewed the continued use of the pesticide with alarm.

The Department's decision raises several fundamental questions regarding the future use of DDT. Until the decision, it had been widely assumed that DDT was being rapidly phased out and that it was being replaced by new, less persistent pesticides. Until last week, it was assumed that the Department of Agriculture shared this view. Under the Federal Insecticide, Fungicide and Rodenticide Act, the Department of Agriculture has the authority to rule on the sale of all pesticides in interstate commerce. No pesticides may be sold in interstate commerce unless they are registered with the Department. Under the act, the Department has the power to cancel the registration of pesticides causing harm or injury to man, animals, and the environment.

Up until last week, it was widely assumed that the Department agreed with most scientists that DDT had served its usefulness and that it would shortly be a thing of the past. Last week's decision appears to have changed all of that. Reversing its position, the Department concluded that "DDT poses no imminent hazard to human health." In effect, the decision not to suspend the general use of DDT gives the manufacturers of the pesticide another year to delay further attempts to restrict its use. In making the decision, the Department is telling the pesticides manufacturers that DDT has a future, when before they were told it had none.

Perhaps the most important question which the decision raises is, does the Department of Agriculture actually recognize DDT as a threat to man and his environment? In a statement submitted to the U.S. court of appeals, the Department declared that: "We know of no reported injury to any human as a result of the use of DDT in accordance with directions." To further buttress its position, the Department cited a study in which human volunteers had received as much as 35 milligrams of DDT per man per day for 21 consecutive months and extensive medical examinations failed to show any adverse effects as a result of such exposure. This would seem to suggest that the Department believes that concentrations of DDT far in excess of those levels now allowed may be perfectly harmless to humans. Based on the evidence submitted, it is open to question whether the Department actually believes that DDT poses a threat to human health, except in massive doses.

Unfortunately, many scientists are convinced that DDT represents a serious threat to both man and his environment. Dr. Charles F. Wurster, a prominent environmental biologist, recently stated:

> DDT has long been known to be an extremely serious environmental hazard, although the extremity of the situation has become more obviously apparent in recent years.

Among the dangers cited by Dr. Wurster and others are the following:

DDT causes carnivorous birds, sea birds, and many other species to lay eggs with abnormally thin shells. These eggs break prematurely resulting in catastrophic declines in the populations of these species. Controlled experiments confirm that DDT residues were the causative agents. DDT also directly kills large numbers of birds.

DDT inhibits reproduction of fish, with abnormal mortality of the fry following the contamination of the adult fish and their eggs. This has occurred in several fresh water species, with mortalities of 100 percent of the fry in some instances. Controlled experiments confirmed that DDT residues were the causative agents. DDT also directly kills large numbers of fish.

DDT residues do great damage to useful invertebrates of many species. Insect communities are frequently disrupted by the killing of beneficial predatory and parasitic insects, thereby frequently aggravating the insect pest problem DDT was intended to control. It kills pollinating insects. It also damages various crustaceans such as crabs and shrimp. Even the bases of the oceanic chains, the phytoplankton, can have their photosynthetic activity reduced by a few parts per billion of DDT in the water.

Probably most serious is the impact which DDT has on man. The Mrak report published by the Commission on Pesticides and Their Relationship to Environmental Health established clearly the fact that DDT is causing widespread injury to man, animals, and the environment. Despite the Department's claim that DDT has never been responsible for any human injuries, a study done at the University of Miami Medical School showed that human victims of terminal cancer contained twice as much DDT residues in their fat as did victims of accidental death. To quote the Mrak report:

> A remarkable degree of concurrence has been found to exist between chemical carcinogenesis in animals and that in man where it has been studied closely.

Despite this evidence, the Department of Agriculture maintains that DDT poses neither an imminent hazard to human health nor to fish and wildlife. The implications of this new position are extremely disturbing. It brings into question the policy announced by the Department last November that all nonessetnial uses of DDT would be phased out by 1971. If the Department stands on the evidence presented in its statement last week, there is really no reason for ever phasing out DDT. Based on the studies quoted by the Department, DDT does not now, nor will it ever, constitute an imminent hazard to fish, wildlife, man or the environment. To quote the Departments statement:

> We have concluded that the presently available evidence indicates that there are some adverse effects upon certain species of fish and wildlife as a result of the use of DDT, but that such effects do not constitute an imminent hazard to fish, wildlife, or the environment.

In view of this statement, it is difficult to believe that the Department of Agriculture intends to press for the cancellation of all non-essential uses of DDT by 1971. One year from now, will the Department suddenly decide that DDT does pose an imminent hazard to man and the environment? In 1 year will DDT residues build up to such an extent that Agriculture will feel justified in terming the pesticide a threat to human health? Based on the past record of the Pesticides Regulation Division, the division responsible for ruling on all registrations of pesticides, it is very doubtful whether the Department will press for cancellation of all general uses of DDT by the promised date of 1971.

Last year in a report released by the House Government Operations Committee, the Committee stated:

> The Pesticides Regulation Division did not take prompt or effective cancellation action in cases where it had reason to believe a registered product might be ineffective or potentially hazardous. Although the division

has had specific cancellation authority for more than 5 years, *it has never secured cancellation of a registration in a contested case* (italic added.)

In fact, the committee reported that Agriculture really took no action at all when a registrant contested a cancellation notice. To again quote the committee report:

Until a few weeks ago, the Pesticides Regulation Division did not even have procedures for conducting hearings or studies which registrants may request as a matter of right before cancellaton action can become effective. When registrants receiving cancellation notices requested hearings or studies, prosecution of the cancellation action was halted and the product left on the market.

What is more, the Committee reported that the Department of Agriculture had approved for sale more than 1,600 pesticide products over the strenuous objections of the Department of Health, Education, and Welfare during the 5-year period ending June 30, 1969. To quote the report once again:

The exact number is not known because the Pesticides Regulation Division does not keep records of products registered over HEW objections and has failed or even refused to inform HEW of action taken with respect to its objections.

Although an interdepartmental agreement between HEW and Agriculture requires that unresolved HEW objections be referred to the Secretary of Agriculture before a registration if approved, not one of the more than 1,600 HEW objections was so referred.

Mr. President, it is extremely doubtful, in view of this record, whether the Department of Agriculture actually intends to ban all general uses of DDT by 1971 as promised. And yet, the Department recognizes that it has made a public commitment to ban all such nonessential uses. It is only too aware of the bad name which DDT has acquired in recent years. To attempt to convince the general public at this stage that DDT is not really dangerous would be virtually impossible. If DDT is to remain as a major pesticide, new justifications for its continued use must be developed. Last week's statement to the court of appeals suggests that the Department may have found the needed justification for the continued use of DDT. The key to the new policy is the concept of essential use. If it can be demonstrated that a particular use of DDT is absolutely essential to the public health or welfare, that use can be continued despite the risks to the environment. Evidence that the Department is placing new emphasis on this essential use doctrine is found in last week's statement:

We conclude that the use of DDT should continue to be reduced in an orderly, practicable manner which will not deprive mankind of uses which are essential to the public health or welfare. To this end, there should be a continuation of the comprehensive study of essentiality of particular uses and evaluation of potential substitutes.

The key word in this statement is "essential." Unfortunately essential use is open to subjective interpretation. Most important, it is the Department of Agriculture which has the legal authority to determine which uses of DDT are essential and which are nonessential to the public health or welfare. As has already been pointed out, the Department has never secured cancellation of a registered use of DDT, essential or nonessential, in the case which has been contested. Every single time a pesticide manufacturer has challenged a possible cancellation of a particular use of DDT, the Department has chosen to abandon the case and allow the product to remain on the market.

Which side, the public or the industry, will the Department take in the event of future disputes? No one can predict with certainty, but once again the past record of the Pesticide Regulation Division suggests that industry may have an influential voice in such decisions. The House Government Operations Committee reported on three individuals who advised the PRD on registration questions while serving in various capacities with major pesticide manufacturers. Each of the individuals were involved in actions which raised serious questions of a conflict of interest. I shall only cite one of the three cases examined by the Committee. The following account is quoted from the House Committee report:

Although Shell Chemical Co. is one of the largest producers of registered pesticide products, Dr. T. Roy Hansberry, an official of one of the company's affiliates, was appointed to a 1965 task force examining criteria used by the Pesticide Regulation Division in determining whether pesticide registration applications should be approved. Before the appointment was made, an individual in the Agriculture Research Service personnel division certified on Dr. Hansberry's personnel clearance form that the agency did not know of any official business with his private employer which might constitute a conflict of interest.

The other two cases involve similar direct conflicts of interest.

How much influence the pesticide industry has had on recent Department decisions is impossible to determine. One measure of industry's influence is seen in the preliminary results of a full scale review of all uses of DDT which is still underway within the Pesticides Regulation Division. According to a Department spokesman, 54 out of an estimated 100 uses of DDT have already been identified as "essential to the public health or welfare," and additional uses are now undergoing review. It is almost impossible to guess how many uses of DDT will eventually be protected as "essential," and thus exempt from any general ban on the pesticide by the time the study is completed.

Even in the event that the Department rules that a particular use of DDT is nonessential, and thus should be banned, the appeal process virtually insures that no ban can be imposed for at least 2 years. A long series of hearings and official reviews must be made before any final action can be taken against a particular use of DDT. In most cases, a company appealing a possible cancellation can expect at least another 2 years of unrestricted use, regardless of the final outcome. Should the appeal be successful, and so far every single appeal ever made has been, the company is free to continue to market the product.

These facts, alone, cast grave doubt on the Department's intention to enforce its decision of last November to ban all nonessential uses of DDT by 1971. A number of companies whose sole product is DDT have vowed to fight the Department's policy to the very end. This means that every single cancellation notice will be contested, in all likelihood. Knowing this, the Department certainly was aware that last week's decision not to impose an immediate suspension of all nonessential uses of DDT will allow these companies to delay any general ban planned for next year at least another 2 years. The appeals will virtually insure that no effective limitation on DDT can be imposed before early 1973.

The Department's decision is particularly unfortunate in view of the fact that good substitutes now exist for virtually all general uses of DDT. Alternative integrated control techniques, including the use of chemical, biological, and other pest management procedures are available which are as effective as DDT and do not have the adverse effects of DDT on the environment. A number of new pesticides have been developed which are much less persistent than DDT which are equally effective. A number of these are now on the market and are available for general use.

Mr. President, the refusal by the Department of Agriculture to issue an immediate suspension of all nonessential uses of DDT raises grave questions concerning the future of the pesticide. Contrary to the position taken by the Department, many scientists are convinced that DDT poses a continuing threat to man and his environment. They point out that the pesticide persists for many years and that it is difficult to predict what the long-range effects on human beings will be. In view of this uncertainty, the Department should have taken every precaution against the continued use of DDT, rather than issue a blanket statement that it "poses no imminent hazard to human health." It may be impossible to reverse the damage done by DDT to the environment—our aim now should be to prevent further damage, not encourage the continued, indiscriminate use of the pesticide.

I urge the Department of Agriculture to carefully reconsider its decision. We must take immediate steps to restrict the further use of this pesticide. I would hope that after reviewing all the facts the Department will reverse its decision and immediately suspend all general use of DDT pending the completion of a full investigation. We cannot afford further delay.

Mr. President, last night's issue of the Evening Star carried a story which illustrates the dangers which I have just referred to. In a story entitled "Defense Department Selling Banned Pesticide," the Star reported that the Defense Department has offered for sale 94,000

pounds of the highly toxic pesticide Dieldrin, whose use has been banned by the Department of the Interior. Dieldrin, a persistent pesticide estimated to be five to 50 times as toxic as DDT, is one of the most deadly poisons known to man. The Defense Department did not notify the Department of Agriculture of its intention to sell the pesticide, despite the fact that the quantity offered for sale is three times the amount Agriculture has approved for nationwide use this year.

Mr. President, this type of action has got to be stopped. It is another example of the lack of control over the use and sale of very dangerous pesticides. The lack of coordination between the Department of Agriculture and the Department of Defense in such matters is truly shocking. Clearly, there is a need for a single pesticide control agency which will supervise the use of these deadly chemicals by all agencies of the Government. We can no longer allow each department to set its own policy in this vital area. A uniform Federal policy is vital.

I ask unanimous consent to have printed in the RECORD the article which appeared in last night's Washington Evening Star.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DIELDRIN IS SURPLUS: DEFENSE DEPARTMENT SELLING BANNED PESTICIDE

(By Roberta Hornig)

The Defense Department is selling as surplus property 94,000 pounds of the highly toxic pesticide, dieldrin, whose use has been banned by one federal agency and reduced by another because of its potential hazard to the nation's environment.

The dieldrin—a persistent pesticide estimated to be 5 to 50 times as toxic as DDT—is included in a catalog of items for sale through the department's surplus sales office in Ogden, Utah. It is in liquid form and is being stored at the Umatilla Army Depot in Hermiston, Ore. Bids are to be opened Aug. 4.

The sales offer to the highest bidder estimates the pesticide to have a value of $33,732. It is being offered in 5-gallon pails and is advertised as being "unused" and in "good condition."

The item is casually listed among other such surplus items as an electric range, a dishwasher, film and a popcorn machine.

Interior Secretary Walter J. Hickel last month unconditionally banned use of dieldrin on any Interior lands after department scientists linked the death of seven bald eagles—the U.S. national bird and a vanishing species—to dieldrin.

The Agriculture Department, responsible for registering pesticides, has outlawed its use near any bodies of water and is considering a cutback in other uses.

The Defense Department sale represents more than three times as much dieldrin as Agriculture has approved for use nationwide this year.

A Defense Department spokesman said yesterday that the sale had the approval of the armed forces pest control review board.

When asked why the department was selling the pesticide, the spokesman said that it "is in excess to our needs." He said Defense had offered the 94,000 pounds to all other federal agencies and when it had no takers, decided to put it on the open market as a surplus item.

The spokesman said the Defense Department had "unofficially" heard about the Interior ban and Agriculture's cutback proposals but that it was going ahead with the sale because it had no "official word" on any bans.

Defense did not notify Agriculture of its sales intention, but both departments said notification by Defense is not required.

Friends of the Earth, a conservation organization, has written Deputy Defense Secretary David Packard urging him to withdraw the dieldrin from the surplus sale but has received no reply.

Joe B. Browder, Washington director of the organization, told Packard in a letter that if no non-insecticide use can be determined for the dieldrin, that it be destroyed by using a procedure that will prevent contamination of the environment.

At least five states—Michigan, Wisconsin, Florida, Pennsylvania and California—have restrictions on the use of dieldrin and other states are considering them.

Like DDT, dieldrin is "persistent," meaning that it stays around in the environment a long time. It is not as long lasting as DDT but is considered as bad because of its toxicity.

ORDER FOR RECOGNITION OF SENATOR ALLEN TOMORROW

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that on tomorrow the able Senator from Alabama (Mr. ALLEN) be recognized for not to exceed 15 minutes immediately upon conclusion of the remarks of the able Senator from Mississippi (Mr. STENNIS).

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR TRANSACTION OF ROUTINE MORNING BUSINESS TOMORROW

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that upon the conclusion of the remarks of the able Senator from Alabama (Mr. ALLEN) there be a period for the transaction of routine morning business, with statements therein limited to 3 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR CONSIDERATION OF UNFINISHED BUSINESS TOMORROW

Mr. BYRD of West Virginia. And that at the conclusion thereof the unfinished business be laid before the Senate.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. KENNEDY. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

RAILROAD RETIREMENT ACT AMENDMENTS—CONFERENCE REPORT

Mr. EAGLETON. Mr. President, I submit a report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 15733) to amend the Railroad Retirement Act of 1937 to provide a temporary 15-percent increase in annuities, to change for a temporary period the method of computing interest on investments of the railroad retirement accounts, and for other purposes. I ask unanimous consent for the present consideration of the report.

The PRESIDING OFFICER (Mr. BENNETT). The report will be read for the information of the Senate.

The legislative clerk read the report.

(For conference report, see House proceedings of July 28, 1970, page 25999, CONGRESSIONAL RECORD.)

The PRESIDING OFFICER. Is there objection to the present consideration of the report?

There being no objection, the Senate proceeded to consider the report.

Mr. EAGLETON. Mr. President, as chairman of the Senate conferees on H.R. 15733, the bill to provide a temporary 15-percent increase in railroad retirement benefits, I urge adoption of the report of the conference committee.

This is a very important bill to the more than 1 million persons who receive benefits under the Railroad Retirement Act and I know that there is a great deal of interest in this bill in the Congress. Last December we enacted legislation to provide a 15-percent increase in social security benefits. Since that time, recipients of railroad retirement benefits have been asking: "What about a similar increase for us?"

Their concern is understandable and certainly justified. We all know the particularly harsh impact of inflation on retired persons living on limited, fixed incomes.

The delay in enacting this legislation does not result from any lack of congressional concern for retired railroad workers and their dependents and survivors. Soon after the first of the year the House Interstate and Foreign Commerce Committee began hearings on this bill. The committee's able and distinguished chairman, Mr. STAGGERS, took a personal interest in this bill and made every effort to expedite its progress. The House passed the bill on April 7 and, as chairman of the Senate Railroad Retirement Subcommittee, I immediately scheduled hearings on the House bill. These hearings were held within 10 days after passage by the House. The bill was reported, with amendments, to the full Labor and Public Welfare Committee on May 5, reported by the full committee to the Senate on June 16, and passed by the Senate on June 25.

The House did not concur in the Senate amendments and requested a conference. The conference committee met six times before finally reaching agreement last Thursday.

All of us who dealt with this bill in both Houses were in agreement that railroad retirees were eminently entitled to a 15-percent increase in benefits, the same as social security recipients. We were further agreed that the benefit increase should be made retroactive to January 1, 1970, the same effective date as the recent social security increase. The difficulty, however, lay in finding a

suitable method of financing the increase. Unlike social security, the railroad retirement system does not enjoy the luxury of a financial surplus. In fact, because of an ever declining number of railroad workers, the railroad retirement account has an actuarial deficit even though, at present, its annual income exceeds its annual expenditures.

The House proposed to pay for the benefit increase by increasing the interest rate on funds in the railroad retirement account, which are invested in U.S. Treasury obligations. The House version of this bill would have required the Secretary of the Treasury to determine each month the highest rate of interest paid on any U.S. obligation forming part of the public debt and having a maturity date of longer than 3 years. If the rate determined by the Secretary should be higher than the rate of interest then being paid on any of the special obligations in the railroad retirement account, the Secretary would be required to reinvest the railroad retirement special obligations at the higher rate. The Secretary would be required to follow this procedure each month, with the result that all special obligations in the railroad retirement account would have to be reinvested every month in which interest rates went up. The bill included no requirement for reinvestment when interest rates went down so the railroad retirement account would have been guaranteed the unique advantage of the highest possible rate at all times. It would be a truly "no risk" investment policy.

I was concerned, along with the other members of the committee, that such a substantial departure from past investment practices should not be undertaken without a complete study of the merits of the proposal and its likely consequences. It may be that the railroad retirement account is deserving of a greater return on its investment. On the other hand, an increased yield for the railroad retirement account could be viewed as a precedent for all similar Federal Government trust funds. According to the Treasury Department, if the same investment policy provided in the House bill for the railroad retirement account were to be applied to all similar trust funds, the annual cost to the government would be approximately $2.5 billion.

The Senate therefore amended the House bill to delete the interest rate provision. Thus, the Senate bill provided no new financing for the benefit increase. It was felt that the railroad retirement account could carry the benefit increase for the limited term of this legislation while a study was being made of the best methods to finance benefits.

This amendment was at the core of our differences in conference. The House conferees felt that some financing should be provided for the benefit increase. The Senate conferees were very much in accord with that desire, but were also of the opinion that any new financing should be provided in a manner that would not establish a precedent that might be exploited by other Government trust funds.

The dispute was resolved by a very constructive proposal from the Treasury Department having to do with a revision in the redemption policy applied to obligations held by the railroad retirement account. The details of the proposal are set out in a letter from the Secretary of the Treasury and I ask unanimous consent that the Secretary's letter be reprinted at the completion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. EAGLETON. I want to emphasize that the agreement of the conferees was premised upon the revision in redemption policy expressed in the Secretary's letter and our decision was made in reliance upon the Secretary's offer. If there were to be any later departure from that policy, I feel certain that we would want to reconsider our decision which permits the necessary financing to be provided through administrative policy, rather than through legislation.

The conferees have determined that it is possible for additional funds to be provided for the railroad retirement account by anticipating the effect of a recommendation by the Advisory Council on Social Security with respect to a revision of the statutory formula establishing the interest rate on trust fund investments. I have a paper which explains this revision in detail and ask unanimous consent that it also may be appended to my remarks.

The PRESIDING OFFICER. Without objecting it is so ordered.

(See exhibit 2.)

Mr. EAGLETON. The bill as reported by the conferees contains legislative language to facilitate this aspect of the investment policy.

The benefits to the railroad retirement account from these two changes in investment practices—one administrative and one legislative—will amount to nearly $200 million over the next 10 years, almost the same amount as would have been provided through the financing provisions contained in the version of the bill passed by the House.

Because of continuing uncertainty as to the future prospects of the railroad retirement account, and because of the need to provide additional income for the account in order to avoid serious actuarial deficiencies, the conferees agreed that the increase provided herein shall be a temporary one expiring on June 30, 1972. This was the original termination date established by the House and is 6 months longer than the termination date contained in the Senate version of the bill.

I should note that the committee reports on this legislation, both the Senate and the House, call for new legislation prior to the expiration of this bill so that railroad retirement beneficiaries will not suffer a reduction after June 30, 1972.

The bill also provides that a complete study of the railroad retirement system shall be made by an independent Commission jointly appointed by the President and by Congress for that purpose. I am very pleased that the House receded from its position and accepted the Senate amendment providing for this study of an independent Commission. The Commission must report back to Congress its findings and recommendations no later than June 30, 1971. The bill also provides that the Commission shall employ an independent actuary, who is qualified in the evaluation of pension plans, to make an actuarial evaluation of the railroad retirement account.

We are hopeful that the Commission study will provide us with guidelines for the future in dealing with this fund, which is so important to the welfare of hundreds of thousands of railroad workers and retirees. It is anticipated that the results of this study will, among other things, provide a basis for extending the present 15-percent increase beyond June 30, 1972.

I am particularly grateful, Mr. President, for the kindness and cooperation of Mr. STAGGERS, chairman of the House Interstate and Foreign Commerce Committee, whose constructive suggestions were responsible in large measure for the settlement of differences between the Senate and House on this bill. Mr. STAGGERS has long been known for his devotion to the welfare of workers in the railroad industry and his performance on this bill again demonstrated his interest and concern.

I also want to commend the representatives of the Treasury Department who worked with us closely on this bill. The two Under Secretaries of the Treasury, Mr. Paul A. Volcker and Mr. Charls E. Walker, worked closely with us along with Mr. Phil Potter of the Treasury congressional liaison office. Their intelligent and constructive assistance was enormously helpful to us in our labors on this bill.

EXHIBIT 1

THE SECRETARY OF THE TREASURY,
Washington, D.C., July 28, 1970.

HON. THOMAS F. EAGLETON,
Chairman, Subcommittee on Railroad Retirement, Committee on Labor and Public Welfare, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: The House-passed version of H.R. 15733, a bill to provide a temporary increase in railroad retirement benefits, included a provision which would change the method of investing funds of the retirement account. This provision was designed to increase the account's income as a way of financing the increased benefits. As you know, the Treasury opposed this provision in the House-passed bill on the ground that the proposed formula was an unsound procedure and that it would be an unwise and costly precedent. The provision was deleted from the bill as it passed the Senate.

I understand that this difference has been a principal matter of disagreement between the conferees. In order to assist in the resolution of that disagreement, the Treasury has carefully reviewed the investment procedures of the Railroad Retirement account. On the basis of this review, we are prepared, as a substitute for the House's proposed change in the investment procedure, to change the procedure under which special obligations issued to the account are redeemed to make benefit payments. We estimate that this change, which can be made administratively, would produce $168 million of additional interest income for the account over the next 8 years, after which the change in redemption procedure would not increase income

(although the additions to the account through increased income in those 3 years would, of course, continue forever to earn interest).

Under the present procedure, receipts during a fiscal year are invested in temporary special obligations which mature on the last day of that fiscal year; on the last day of the fiscal year, all available funds, including the temporary special obligations maturing that day, are invested in special obligations maturing in seven years, the maximum permissible because of the statutory interest-rate ceiling on longer-term obligations. To make benefit payments and other outlays, temporary special issues maturing within the current fiscal year are redeemed first, starting with the ones with the lowest yields; if funds are needed for outlays and there are no current-year maturities, special issues maturing in the earliest year after the current year are redeemed, beginning with those with the lowest yield and working through the year.

Since the account runs at a substantial deficit through the fiscal year, until the social security interchange and interest payments are made at the end of the year, redemption of current-year investments does not provide enough money to meet outlays, and it is always necessary to redeem throughout the year a substantial amount of special issues maturing in later years. Through this process, over half a billion dollars of special obligations issued when rates were lower in earlier years are redeemed before maturity each year (even though permanent investments in an even greater amount are made at current higher rates at the end of the year). Our proposal would speed up this conversion of the account's portfolio to higher yields by moving to the end of the redemption cycle those special obligations whose maturity had to be shortened because of the statutory ceiling on long-term bond rates.

The attached table, showing the account's investments in special issues at the time of the annual permanent investment last June 30, will illustrate how this will operate. Since receipts will not be adequate during the current year to cover outlays, under the present procedure the first redemptions will be the 4% notes of 1974, next the 4⅛% notes of 1974, then the 4¾% notes of 1974, and, if that is still not enough, the 4% notes of 1975 will be used. The proposal is to change this procedure in only one respect: after the 4% notes of 1974 and the 4⅛% notes of 1974 are used, the 4¾% notes of 1974 will be skipped, the 4% and 4⅛% notes of 1975 will be redeemed, and so on. The 4¾% notes of 1974 can be skipped because the reason those notes mature in that year is that the statutory interest-rate ceiling, which does not permit the issuance of obligations with rates over 4¼% at maturities of over seven years, prevented the use, when these obligations were issued in 1967, of maturities of up to 15 years, as had been the policy when interest rates were below 4¼% and the statutory rate ceiling did not inhibit the use of longer maturities.

By speeding up the conversion of the portfolio to higher yields, the proposed change will substantially increase the account's interest income. The Treasury recognizes that, in all the circumstances, there may be valid reasons for the proposed method of handling redemption of special issues in the Railroad Retirement Account.

Assuming the Congress approves a Conference Report deleting the House-passed provision changing the method of investing funds of the Railroad Retirement account, the Treasury will adopt immediately this new redemption procedure.

Sincerely,

DAVID M. KENNEDY.

EXHIBIT 2

EXPLANATION OF REVISED FORMULA FOR CALCULATING RETURN ON INVESTMENT OF RAILROAD RETIREMENT ACCOUNT

Present law provides that the special obligations issued to the railroad retirement account shall bear interest at a rate equal to the average market yield, computed at the end of the month preceding the date of issue, borne by all marketable Treasury obligations not due until after the expiration of three years. For obligations issued during July, this formula produces a rate of 7⅝%.

The interest rates on special obligations issued to the social security trust funds are governed by similar statutory formulas. The current Advisory Council on Social Security (such a Council is set up every five years to make recommendations on social security matters) is recommending that, if the statutory limits on interest rates (which now prevents the issuance of long-term bonds, leaving for investment of the funds only notes, which can be no more than seven years to maturity) is not repealed, the statutory formula governing interest rates on special obligations issued to the social security trust funds should be changed to make the interest-rate computations consistent with the fact that only notes can be issued. This would be done by eliminating, in computing the average yields on outstanding obligations, the yields on Treasury bonds, which would result in a formula producing a higher yield.

The reason it would produce a higher yield is that outstanding bonds, all of which were issued in earlier years when rates were lower, have lower market yields than notes because of two tax advantages: (1) a substantial part of the income earned on them is taxable at the capital-gain rate, and (2) they can be used at par value to pay estate taxes. Since neither of these tax advantages has any value to a Government trust fund, there is logic in eliminating these lower-yielding bonds from the average used in computing the rate which will be applied to the obligations which can be issued to the funds, whose permissible maturity excludes bonds. H.R. 15733 includes the necessary legislative language to make this change as to the railroad retirement account.

If such a formula were used to compute the rate on obligations issued to the railroad retirement account, it would produce a rate of 7¾% for obligations issued during July. This is ⅛% higher than the rate derived from the present statutory formula. It is estimated that the higher rates under the proposed formula would increase the account's interest income by $27.5 million over the next 8 years. The attached table shows the increase by years:

Estimated increase in interest income to railroad retirement account

[In millions]

1971	$0.1
1972	.5
1973	.8
1974	1.7
1975	2.8

1978	10.2
Total	27.5

The PRESIDING OFFICER. The question is on agreeing to the conference report.

The report was agreed to.

ADJOURNMENT UNTIL 11 A.M. TOMORROW

Mr. KENNEDY. Mr. President, if there be no further business to come before the Senate, I move, in accordance with the previous order, that the Senate stand adjourned until 11 a.m. tomorrow.

The motion was agreed to; and (at 4 o'clock and 46 minutes p.m.) the Senate adjourned until tomorrow, Thursday, July 30, 1970, at 11 a.m.

CONFIRMATIONS

Executive nominations confirmed by the Senate July 29, 1970:

IN THE COAST GUARD

The nominations beginning Wayne R. Gronlund, to be lieutenant (junior grade), and ending Robert A. Melvin III, to be lieutenant, which nominations were received by the Senate and appeared in the Congressional Record on July 9, 1970; and

The nominations beginning Frederick K. Farner, to be lieutenant (junior grade), and ending Gary F. Van Nevel, to be lieutenant, which nominations were received by the Senate and appeared in the Congressional Record on July 21, 1970.

HOUSE OF REPRESENTATIVES—*Wednesday, July 29, 1970*

The House met at 12 o'clock noon.

The Chaplain, the Reverend Edward G. Latch, D.D., offered the following prayer:

We are laborers together with God.—I Corinthians 3:9.

Almighty God, from whom we come, with whom we live, and in whose fellowship is our true life, we bring our spirits to Thee in the quiet of this moment of prayer. From the tumult and turmoil of the world we enter the sanctuary of Thy presence seeking peace and strength and wisdom as we face the duties of this day.

Empower all within these hallowed and historic walls who labor for the good of our country and who endeavor to lead our people in just ways to bring to their tasks the very best that is within them, ever standing up for the truth, siding with justice, and strengthening the good will in our world.

In the spirit of the Master we pray. Amen.

THE JOURNAL

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. Arrington, one of its clerks, announced that the Senate had passed the following resolution:

S. RES. 434

Resolved, That the Senate has heard with profound sorrow the announcement of the death of Hon. Michael J. Kirwan, late a Representative from the State of Ohio.

Resolved, That a committee of two Senators be appointed by the Presiding Officer to join the committee appointed on the part of the House of Representatives to attend the funeral of the deceased Representative.

Resolved, That the Secretary communicate these resolutions to the House of Representatives and transmit an enrolled copy thereof to the family of the deceased.

Resolved, That, as a further mark of respect to the memory of the deceased, the Senate do now adjourn.

The message also announced that the Senate agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 16916) entitled "An act making appropriations for the Office of Education for the fiscal year ending June 30, 1971, and for other purposes."

The message also announced that the Senate agreed to the House amendments to Senate amendments numbered 3 and 38.

PERMISSION FOR HOUSE MANAGERS TO FILE CONFERENCE REPORT ON H.R. 16915, LEGISLATIVE BRANCH APPROPRIATIONS, 1971

Mr. ANDREWS of Alabama. Mr. Speaker, I ask unanimous consent that the managers on the part of the House may have until midnight tonight to file a conference report on the bill (H.R. 16915) making appropriations for the legislative branch for the fiscal year ending June 30, 1971, and for other purposes.

The SPEAKER. Is there objection to the request of the gentleman from Alabama?

There was no objection.

CONFERENCE REPORT (H. REPT. No. 91–1354)

The committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 16915) "making appropriations for the legislative branch for the fiscal year ending June 30, 1971, and for other purposes," having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses as follows:

That the Senate recede from its amendment numbered 34.

That the House recede from its disagreement to the amendments of the Senate numbered 36, 42, and 43, and agree to the same.

Amendment numbered 33: That the House recede from its disagreement to the amendment of the Senate numbered 33, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$572,900"; and the Senate agree to the same.

Amendment numbered 44: That the House recede from its disagreement to the amendment of the Senate numbered 44, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$5,178,000"; and the Senate agree to the same.

Amendment numbered 45: That the House recede from its disagreement to the amendment of the Senate numbered 45, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$74,020,000"; and the Senate agree to the same.

The committee of conference report in disagreement amendments numbered 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 35, 37, 38, 39, 40, and 41.

GEORGE W. ANDREWS,
SIDNEY R. YATES,
BOB CASEY,
FRANK E. EVANS,
GEORGE MAHON,
FRANK T. BOW,
ODIN LANGEN,

DEL CLAWSON,
Managers on the Part of the House.

JOSEPH M. MONTOYA,
RALPH W. YARBOROUGH,
JAMES B. PEARSON,
NORRIS COTTON,
Managers on the Part of the Senate.

STATEMENT

The managers on the part of the House at the conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 16915) making appropriations for the Legislative Branch for the fiscal year ending June 30, 1971, and for other purposes, submit the following statement in explanation of the effect of the action agreed upon and recommended in the accompanying conference report as to each of such amendments, namely:

SENATE

Amendments Nos. 1 through 31: Reported in technical disagreement. Inasmuch as these amendments relate solely to the Senate and in accord with the long practice, under which each body determines its own housekeeping requirements and the other concurs therein without intervention, the managers on the part of the House will offer motions to recede and concur in Senate amendments Nos. 1 through 22 and Nos. 24 through 31.

The managers on the part of the House will offer a motion to recede and concur in Senate amendment numbered 23 with an amendment providing that $200,000 shall be available for obligations incurred in fiscal year 1970 for inquiries and investigations, as requested by the Senate.

HOUSE OF REPRESENTATIVES

Amendment No. 32: Reported in technical disagreement. The managers on the part of the House will offer a motion to recede and concur in the Senate amendment with an amendment providing gratuities to the widows of two deceased Members.

JOINT ITEMS

Amendment No. 33: Appropriates $572,900 for the Joint Economic Committee instead of $542,900 as proposed by the House and $592,900 as proposed by the Senate.

Amendment No. 34: Appropriates $236,110 for salaries and expenses of the Joint Committee on Printing as proposed by the House instead of $255,243 as proposed by the Senate.

Amendment No. 35: Reported in technical disagreement. The managers on the part of the House will offer a motion to recede and concur in the Senate amendment with an amendment to appropriate $253,110 for the Joint Committee on Printing instead of $272,243 as proposed by the Senate, including $17,000 for compiling, preparing, and indexing material for the 1970 edition of the Biographical Congressional Directory as proposed by the Senate.

ARCHITECT OF THE CAPITOL

Amendment No. 36: Appropriates $2,442,526 for Capitol Buildings as proposed by the Senate instead of $2,431,600 as proposed by the House.

Amendments Nos. 37 through 40: Reported in technical disagreement. These amendments relate solely to Senate activities and the managers on the part of the House will offer motions to recede and concur in the Senate amendments.

Amendment No. 41: Reported in technical disagreement. The managers on the part of the House will offer a motion to recede and concur in the Senate amendment providing for the transfer of fiscal year 1971 funds for Library Buildings and Grounds, Furniture and Furnishings, to the Librarian of Congress by the Architect of the Capitol for expenditure in accord with Public Law 91–280, approved June 12, 1970.

LIBRARY OF CONGRESS

Amendment No. 42: Appropriates $21,573,100 for salaries and expenses as proposed by the Senate instead of $21,330,000 as proposed by the House.

Amendment No. 43: Appropriates $3,594,500 for the Copyright Office as proposed by the Senate instead of $3,548,000 as proposed by the House.

Amendment No. 44: Appropriates $5,178,000 for the Legislative Reference Service instead of $5,013,000 as proposed by the House and $5,286,800 as proposed by the Senate.

GENERAL ACCOUNTING OFFICE

Amendment No. 45: Appropriates $74,020,000 for salaries and expenses instead of

$73,712,000 as proposed by the House and $74,750,000 as proposed by the Senate.

THE POLLUTION CRISIS

(Mr. VANIK asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. VANIK. Mr. Speaker, I do not know how the pollution inversion affected others yesterday—but I had a dreadful time—breathing. The air outside was unfit for living things. The air inside was cooled—but just as foul. The pollution crisis descended on Washington for a cruel and silent visit.

The problem calls for drastic action. The problem calls for a demonstration effort to provide a public measurement of the pollution effect of the internal combustion engine. These conditions warrant an emergency pollution alert under which all but emergency vehicle movement is suspended until the foul, contaminated air is cleaned out. This kind of a demonstration effort would give every citizen in the area an opportunity to measure what pollution is doing to us. This kind of a demonstration would bring the message home to Congress and the administration which have failed to provide a realistic solution.

What are we doing to ourselves and how long can we wait? My neighbors are frightened. They properly wonder whether their children will be permitted to live a full lifespan. I share their concern.

The most dreadful damage occurs in the central city, where the pollution inversion takes its heaviest toll. I am requesting a comparison of death records from respiratory diseases during these days of pollution inversion with the days of the previous week. These records will tell in death an irrefutable story that, by our delays and indifferences, innocent people have been condemned to death by pollution.

Several weeks ago, I requested the administration to designate the Lewis Research Center laboratory as the official Government agency to study methods of controlling the pollution emission of the internal combustion engine and to review alternate methods of propulsion. This agency with its 2,800 engineers and facilities designed for propulsion analysis is the best equipped facility in America to meet this challenge.

I urge that Congress and the administration act with dispatch to face up to the urgency of this crisis.

INSPECTION OF MOTOR VEHICLES BY STATES TO REDUCE AIR POLLUTION

(Mr. GUDE asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. GUDE. Mr. Speaker, today the citizens of several eastern cities are suffering from a severe air pollution situation because of a stagnant inversion layer which covers the eastern seaboard. Everyone suffers, but particularly those with respiratory problems such as asthma, hay fever, emphysema, and bronchitis.

Here in the Washington area we have made some headway in reducing the levels of sulphur dioxide from fuels and particulate matter from open burning. But such pollutants, as carbon monoxide, and nitrates of oxygen from automobile exhaust, are a major part of the summertime problem.

There are Federal requirements for antipollution devices on many classes of automobiles, but presently State government has the opportunity and, indeed, the responsibility to the extent possible to see that these devices are functioning. I have high praise for the District of Columbia for moving ahead to incorporate the checking of PCV valves on those cars requiring them in their regular inspections. If the valve is not operating, the motorist must replace it. The Department of Motor Vehicles is also in the process of installing emission monitoring devices in its inspection stations. This monitoring system will enable the inspector to inform a motorist if his car is polluting at excessive rates. As soon as the Federal standards for used car emissions are set, the District will be ready to enforce them.

I wish I could say that Maryland were cooperating in reducing exhaust pollution in our metropolitan area, but the State has no regular auto inspections. We all suffer from this gap in enforcement. I have long urged regular automotive inspection in Maryland, and I hope Maryland and all States which do not have regular automotive inspection will assume their responsible roles in the fight against air pollution. Air pollution cannot be licked by one level of government alone—it is a team effort.

CONFERENCE REPORT ON H.R. 17548, INDEPENDENT OFFICES AND THE DEPARTMENT OF HUD APPROPRIATIONS, 1971

Mr. EVINS of Tennessee. Mr. Speaker, I call up the conference report on the bill (H.R. 17548) making appropriations for sundry independent executive bureaus, boards, commissions, corporations, agencies, offices, and the Department of Housing and Urban Development for the fiscal year ending June 30, 1971, and for other purposes, and ask unanimous consent that the statement of the managers on the part of the House be read in lieu of the report.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

CALL OF THE HOUSE

Mr. BOW. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

Mr. ALBERT. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 237]

Anderson, Tenn.	Edwards, La.	Murphy, N.Y.
Baring	Eshleman	Ottinger
Berry	Fallon	Pelly
Biaggi	Flood	Pollock
Blanton	Flowers	Powell
Bray	Flynt	Rarick
Brock	Gallagher	Reid, N.Y.
Bush	Goodling	Rivers
Button	Gubser	Rogers, Colo.
Byrne, Pa.	Hawkins	Rooney, Pa.
Celler	Hébert	Rosenthal
Chisholm	Howard	Roudebush
Clark	Ichord	Ryan
Clay	Karth	Scheuer
Conyers	King	Schneebeli
Coughlin	Lloyd	Sebelius
Cramer	McEwen	Sikes
Cunningham	Matsunaga	Tunney
Dawson	May	Weicker
de la Garza	Mayne	Wydler
Diggs	Meskill	
	Morton	

The SPEAKER. On this rollcall 367 Members have answered to their names, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

CONFERENCE REPORT ON H.R. 17548, INDEPENDENT OFFICES AND DEPARTMENT OF HUD APPROPRIATIONS, 1971

The SPEAKER. The Clerk will read the statement of the managers on the part of the House.

The Clerk read the statement.

(For conference report and statement, see proceedings of the House of July 28, 1970.)

Mr. EVINS of Tennessee (during the reading). Mr. Speaker, I ask unanimous consent that further reading of the statement be dispensed with.

The SPEAKER. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

The SPEAKER. The gentleman from Tennessee is recognized for 1 hour.

Mr. EVINS of Tennessee. Mr. Speaker, we bring back to the House a conference report on the Independent Offices and the Department of Housing and Urban Development Appropriation bill for 1971. This is a big bill. It is a good bill. It is certainly an important appropriation bill serving the needs of this Nation.

The bill provides $18,009,525,300 for some 22 departments and agencies of Government, including the Department of Housing and Urban Development.

We began the hearings on this bill in February. It passed the House on May 12. The Senate passed the bill on July 7. Since then we have had some long, hard conferences.

The bill is the result of some hard compromises, and the conference report sets forth those compromises.

Mr. Speaker, by way of summary, the budget considered by the House was for $17,216,823,500. The amended budget now totals $17,468,223,500.

The bill passed by the House was $17,390,212,300. This is less than the amended budget submitted to the Congress for these agencies.

However, the Senate bill totaled $18,655,019,500 and was about $1.2 billion over the amended budget. The Senate bill was $1.264 billion over the House bill.

We had to give some. We have made some adjustments. This conference report is, like all conference reports, the result of give and take.

First let me identify the major increases in the conference report.

For construction of Federal buildings by the GSA the conferees added $31,895,800 above the budget. There are some 21 Federal building projects in this bill, and the $31 million added for these projects is necessary largely for cost escalation of Federal building construction since the projects were initially funded.

Another increase, which is one of the major increases, is $105 million for veterans medical care. I want everyone to hear and understand this. The House added $25 million, as Members will recall, on a vote for veterans medical care. The Senate added $80 million more, which makes a total of $105 million added to the budget for the veterans medical care.

There has been some talk about vetoing the bill. I believe it is idle rumor. When the facts are known and understood about this bill I do not believe the President will entertain the thought of vetoing it—money needed for veterans medical care and the housing programs.

Another major increase is $350 million for urban renewal. The amount approved by the Senate was $700 million above the House bill and we brought it down to $350 million.

Members will recall that $350 million was added on the House floor for grants for basic water and sewer facilities. The House voted on this popular program—and it was overwhelmingly approved. It is needed. The Senate committee took it out, but it was put back in the bill on the Senate floor.

I repeat, the three major increases in this bill are: $105 million for veterans medical care, $350 million for water and sewer grants adopted by both the House and Senate, and $350 million for urban renewal.

The funds for urban renewal are, by far, less than the cities of this Nation want and need.

In addition, there was $10 million added for the housing for the elderly and handicapped. This item was not in the budget. Members all know the popularity of that program and the need for housing for the elderly and the handicapped. The Senate added $25 million, and the conference report provides $10 million for this program.

Now let me briefly summarize some of the cuts and reductions. I have given you the increases. Here are the reductions we made: $165 million for interest subsidies to the Federal Home Loan Banks. The request was for $250 million for these interest subsidies. We cut this to $85 million. We made cuts in the NASA program below the budget totaling $64,325,000. This will be the sixth year that the space program has been cut. We cut some of the Department of Housing and Urban Development programs about $60 million. Cuts to independent agencies and other boards were $16.3 million for a total in cuts of $305,594,000.

Mr. Speaker, we have cut from this bill $305 million.

The major increases that I mentioned are for medical care, urban renewal, and water and sewer grants.

The Senate bill at one time was $1.2 billion above the budget. As we have cut this back, we are now only $541 million above the budget in this conference report.

This is a big bill. We feel that your House conferees won the conference. Let me tell you that there were 55 items in disagreement. We were able to reduce 26 of them while only one was increased. That one addition was for Federal building construction. The remaining 28 items in conference were primarily language changes, technical differences, and limitations on expenditures. The increase of $105 million for medical care will provide the highest level of medical care in the history of the Veterans' Administration. We are going to insist on quality medical care for the veterans of this Nation. The largest item in the bill is $9,065,528,000 for all of the programs of the Veterans' Administration, which includes about $2 billion for medical care and veterans hospital construction. We also have an expanded veterans hospital construction program in this bill.

We were able to cut, I repeat, $645,494,200 from the Senate bill.

Mr. Speaker, let me say that in the 18 years I have served on this bill and 6 years as chairman, it has become harder to hold the line, but we have fought for a proper balance.

Mr. Speaker, this is an important bill and a good bill. I urge the adoption of the conference report.

I shall include at this point in the RECORD a complete summary of the legislative history for the amounts recommended by appropriation item, for the Department and agencies that are being funded herein.

[10] Reflects increase of $10,500,000 contained in H. Doc. 91-273.
[11] Estimate contained in S. Doc. 91-85 not considered by House.

Mr. EVINS of Tennessee. Mr. Speaker, I yield such time as he may consume to my distinguished friend the gentleman from North Carolina (Mr. JONAS).

Mr. JONAS. Mr. Speaker, the chairman of the subcommittee has made a detailed explanation of what transpired in the conference and what happened to this bill since it was first considered by your Committee on Independent Offices and the Department of Housing and Urban Development. I will speak discussing the same figures but will make an explanation of what transpired from a little different direction than that used by the distinguished chairman. I present the following figures for the information of those who are not as familiar with the bill as those of us are who worked on it and participated in the conference.

Those of you who are interested in the figures should take these down. The subcommittee considered total budget requests of $17,216,823,500. Some additional budget requests went directly to the Senate after we had marked up our bill. That accounts for the discrepancy between the figures cited by the gentleman from Tennessee and the ones that I have just given.

I would like to trace for you what happened to the bill after we completed our hearings on it and our markup in the subcommittee.

We considered, as I have said, $17,216,823,500. When we reported that bill to the House, it had been reduced by $201,611,200 below the budget. That is, your subcommittee cut the budget with respect to the items contained in this bill by $201 million. If the bill had remained as we originally reported it, it would today be $201 million below the budget.

But let me remind you what happened on the floor of the House. Amendments were adopted on the floor increasing our bill by $25 million for veterans' medical care and by $350 million for water and sewer grants for smaller communities. That is a total of $375 million by which the House increased the committee bill. So, when the bill left the House, instead of being $201 million below the budget, it was $173 million above the budget. That is what we had to start out with in our conference with the other body. But I remind you that, as usually is the case, the other body in its wisdom proceeded to add $1,264,807,200 to the House-passed bill. So when the other body finished work on the bill it was $1.2 billion more than the House-passed bill and $1,186,796,000 above the budget.

We wound up with the conferees recommending appropriations which amount to only $541 million above the budget, which means that the appropriations recommended in this conference report are $645 million below the bill that came out of the other body.

Now, Mr. Speaker, I have just said that the conference report is $541 million above the budget.

Let me cite a few items that make up these increases.

First, there is the $350 million to which I have already alluded that was added on the House floor for water and sewer grants. The other body added $700 million to our bill for urban renewal. We were able only to achieve an even split on that item so we find another $350 million above our bill in the conference report for urban renewal, but it is $350 million below the sum put in the bill by the other body.

Another item above the budget is $105 million for the veterans' medical program.

I do not know how you can have a conference with a co-equal body unless you are willing to give and take. The only alternative—and this conference lasted 2 days—the only alternative is for one group of managers representing one body or the other to just say they will not budge and the results would be no bill at all.

Mr. Speaker, we did not feel that we could afford to report that we could not have a bill which provides for the operation of the Veterans' Administration, especially in view of all the talk that we hear today about the need for more medical care.

Mr. Speaker, more than half the money contained in this conference report is to run the Veterans' Administration, to pay the compensation and the pensions that are fixed by law, and to operate the hospitals and to provide the medical care and the other programs for our veterans.

Mr. EVINS of Tennessee. Mr. Speaker, will the gentleman yield?

Mr. JONAS. I yield to the chairman of the subcommittee.

Mr. EVINS of Tennessee. Does not the gentleman feel that from the high level of $1.2 billion above the budget, to bring this conference report back only $541 million above the budget, that this is no small achievement or accomplishment?

Mr. JONAS. I will have to agree, and I have just said, and I would like to repeat for emphasis, we were faced with a situation where the other body was $1.2 billion about the budget, and we came out of that conference having reduced that deficit by $645,494,200 and with a conference report only $541 million above the budget.

You must remember that $375 million of that was added right here on the House floor. If the subcommittee's bill had stood up through the House and the other body, and the conference, we would be $201 million below the budget.

I have some reservations about this conference report. I reserved on two items because I could not agree that it was advisable to go above the budget with respect to those items. But by and large I am able to say that I concur in the views of the gentleman from Tennessee (Mr. EVINS) that we argued these points out with the representatives of the other body over a period of two days, and we got the best deal I think we could possibly have gotten if we had remained in conference indefinitely. I do not know, as I have said before and will repeat, how one group of conferees can prevail all of the time in a conference. Those of you who have participated in conferences know that it is necessary to have a meeting of the minds of the conferees on both sides of the table.

We worked very hard to hold this bill down in conference. I am disappointed that we did not succeed in keeping it below the budget. I thought we should have won all points at issue but it became apparent as the conference continued that it would be impossible. We argued with the representatives of the other body, but we simply were unable to get them to go beyond the point that they did go, which was to reduce their bill by $645 million.

If we had caved in or supinely sat there and allowed the other body to roll over us, this conference report would be $645 million more than it is. If you think we should have been more obstinate and stubborn and held out longer, you have a right to that view if you entertain it. But it is my considered judgment, after having participated in the conference, that we got the best compromise that we could negotiate with the conferees on the other side who were representing a bill that was $1 billion higher than ours. And when you look at it in that light I suspect the gentleman from Tennessee (Mr. EVINS) is correct in saying that the House conferees came out of the conference having won more points than we lost.

Mr. Speaker, if the House wishes to recommit this bill to the conference committee, I certainly have no objections and will gladly go back to conference again and renew our efforts to get the conferees from the other body to yield further. But I must say that they seemed adamant and indicated that since they had already yielded more than we yielded that was as far as they should go.

Mr. EVINS of Tennessee. Mr. Speaker, I yield 5 minutes to the distinguished ranking minority member of the Committee on Appropriations, the gentleman from Ohio (Mr. BOW).

Mr. BOW. Mr. Speaker, I did not sign this conference report, and neither did the gentlemen from California, Mr. TALCOTT and Mr. DEL CLAWSON. We believed this report was much too high; that it added to the problems of inflation; and that it is not an appropriate amount to ask the House to accept.

In the present form, this bill provides $350 million over the $1 billion budget request for urban renewal. It provides $350 million over the $150 million budget request for grants for water and sewer facility construction. It provides $71,675,000 over the House bill for space research and construction. It provides $16 million over the House bill for the National Science Foundation.

Now, they reduced the particular area in which I was in favor of an increase of $10 million. This was the program concerned with research directed at achieving improvements in housing systems design, production, assembly, management, financing, and marketing and also designed to provide a high level of environmental quality, efficient land use, and low-cost maintainability. It is called "Operation Breakthrough."

The House had provided $30 million. The Senate had increased this to $55 million. I had hoped that we might have agreed on about $45 million because this is research that may permit us to develop new methods of construction that would help people of all income levels. I believed it was a very important part of this bill.

Now the only significant reduction in any program in this bill is the $165 million reduction in funds requested by the Federal Home Loan Bank Board for interest subsidy payments. These funds would have been used to help reduce interest rates for people who want to purchase their own home. One of the most critical factors affecting the construction of homes today is the problem of the high interest rates. This program was not considered in the House. It was considered in the Senate and only after the authorization appeared well on the way toward enactment. They provided $250 million in their bill, but this was reduced in conference by $165 million.

So the substantial reduction in this bill is in the one area that might have helped to reduce the interest rates that affect the construction and sale of private homes. The House provided only $85 million. So what looks so good here, a $165 million reduction, is actually in the one area that affects housing for people who want to purchase their own home.

Mr. JONAS. Mr. Speaker, will the gentleman yield?

Mr. BOW. I am glad to yield to the gentleman.

Mr. JONAS. May I say that I concur in the views being expressed by the distinguished gentleman from Ohio. I am one of those who is in favor of this particular program, but it should be understood that the $250 million was no year funds to be available until expended. What we decided was to put up $85 million for the first year and reserve $165 million for consideration in the supplemental which will soon be forthcoming and after we can have some hearings. This item has never been considered at all by the House committee.

Mr. BOW. I appreciate the position of my distinguished friend but I believe we should have provided more for this purpose in the bill.

Mr. EVINS of Tennessee. Mr. Speaker, will the gentleman yield?

Mr. BOW. I yield to the gentleman.

Mr. EVINS of Tennessee. I might say to my friend that the bill authorizing this program was just signed into law by President Nixon last Friday.

We have not yet had hearings on it in the House Committee on Appropriations. The committee should review all of the items contained in the Emergency Home Finance Act of 1970 before they are fully funded.

Mr. BOW. The point I am making is that the one substantial reduction in the bill, $165 million, was the program that would have helped reduce interest rates for those who want to purchase their own home.

Mr. KUYKENDALL. Mr. Speaker, will the gentleman yield?

Mr. BOW. I yield to the gentleman.

Mr. KUYKENDALL. Would the gentleman not agree then that the cut in research technology primarily manifests itself in a cut in Operation Breakthrough and this is a cut in the one area where we need to help, and that is new technology in housing?

Mr. BOW. I quite agree with the gentleman. This is one area where we should go forward.

Mr. KUYKENDALL. One of the designated breakthrough cities is my own city of Memphis, Tenn. This is one of the areas in which it has already been proved that we are getting $5 of private investment for every $1 of Federal money. It seems to me that that is the type of thing we have been looking for. We want to be able to get private money, private know-how, private initiative, instead of the Federal Government having to do everything. So I think it is quite disappointing to get a bill $650 million over the budget and yet take cuts in the very areas that are showing the most promise for the future of this country.

The SPEAKER. The time of the gentleman from Ohio has expired.

Mr. EVINS of Tennessee. Mr. Speaker, I yield 2 additional minutes to the gentleman from Ohio with the understanding that he will yield one of them back to me.

The SPEAKER. The gentleman from Ohio is recognized for 2 minutes, and the gentleman has control of that time.

Mr. BOW. I thank the Chair.

Mr. ARENDS. Mr. Speaker, will the gentleman yield?

Mr. BOW. I yield to my friend from Illinois.

Mr. ARENDS. I would like to ask the gentleman from Ohio if any member of the conference committee, either conferees on the part of the Senate or of the House, at any time made the suggestion that if Congress wants to continually spend more than the budget requests, we well could be forced to raise additional taxes.

Mr. BOW. No; I do not believe that subject was considered at all. Now I yield to the gentleman from Tennessee.

Mr. EVINS of Tennessee. Mr. Speaker, the conference report provides $30 million of new obligated authority in the bill for housing research in 1971. This is the full level provided by the House bill. There is also a carryover balance of $27,100,000 of unexpended funds that can be spent in 1971 for such research. So this will give them $57,100,000 for expenditure for housing research during the next year. There are many explanations for this, but this is the amount available for expenditure for housing research in the next year. With the $30 million made available in this bill, we feel this is a substantial sum for expenditure in this program.

Mr. BOW. I must say to the gentleman that I believe the $27,100,000 he refers to was committed last fiscal year and is not available for new contractual efforts in housing research during fiscal year 1971.

May I also say, before my time expires, that at the proper time I shall offer a motion to recommit this report to the committee of conference.

Mr. TEAGUE of Texas. Mr. Speaker, will the gentleman yield?

Mr. BOW. I yield to the gentleman from Texas.

Mr. TEAGUE of Texas. Could the gentleman tell the House the comparison of the amount of money requested by

the President for the space program and the amount of money contained in this conference report?

Mr. BOW. I am sorry, I do not have that information at my fingertips, but let me obtain it.

Mr. TEAGUE of Texas. Will the gentleman tell us, then, the difference between what the House provided and what the conferees came out with; also what the President asked for?

Mr. BOW. The President asked for $3,333,000,000, and the amount agreed to in conference is $3,268,675,000.

Mr. TEAGUE of Texas. I would just like to point out that the amount is less than what the President asked for.

Mr. DORN. Mr. Speaker, will the gentleman yield?

Mr. BOW. I yield to the gentleman from South Carolina.

Mr. DORN. Would the gentleman also inform us of the amount recommended in the conference report for medical care for veterans as compared with the amount proposed in the President's budget?

Mr. BOW. The conference report provides $105 million more than was requested in the President's budget.

The SPEAKER. The time of the gentleman from Ohio has expired.

Mr. EVINS of Tennessee. Mr. Speaker, I yield 5 minutes to the distinguished chairman of the Committee on Appropriations, the gentleman from Texas (Mr. MAHON).

THE FEDERAL BUDGET SITUATION

Mr. MAHON. Mr. Speaker, the spending pot is boiling at both ends of the Capitol Building, at the White House, in the press, and in many households throughout the country. I think it is a healthy sign, and I, for one, would like to see this caldron continue to bubble and boil in order that the Congress and the country might be constantly aware of the problems confronting the Nation in the field of Federal programs and Federal spending. Someone must undertake to keep this vital matter in the forefront of our thinking.

Certain things—popular or unpopular, pleasant or unpleasant—must be said.

The dollar at the grocery store and elsewhere is buying less and less, month by month.

THE PENDING CONFERENCE REPORT

The bill before us, the independent offices-HUD appropriation bill for 1971 agreed to in conference is too high in the present national fiscal and economic situation.

A majority of the House conferees worked valiantly to reduce the overall appropriation figures in the bill, and we did persuade the conferees of the other body to compromise downward on some of the Senate add-ons, reducing the measure below the Senate figure by about $645 million.

But even so, the bill as agreed to in conference is $541 million above the President's budget requests for appropriations for the purposes included in the measure.

I commend the subcommittee headed on the Democratic side by the distinguished gentleman from Tennessee (Mr. EVINS) and headed on the Republican side by the distinguished gentleman from North Carolina (Mr. JONAS). They did an outstanding job and I am here to support their best efforts. I was a part of that conference, of course, and joined in the efforts to improve the bill.

THE DISTURBING BUDGET DEFICIT FOR FISCAL 1970

The fact that the conference bill exceeds the budget requests for appropriations by more than a half billion dollars is especially significant in the light of the alarming announcement in this morning's press that the Government went in the red in the fiscal year 1970, just closed on June 30, by more than a billion dollars more than had been estimated in May.

It was announced yesterday that the budget deficit—under the unified budget plan—for the fiscal year which ended less than a month ago was $2.9 billion. When the borrowings from the social security fund and the other trust funds are added to the Federal funds, this is the deficit. But actually what the announcement of yesterday means is that when we take out of account the borrowings of surpluses in the trust funds, which must be repaid with interest, there was a deficit in Federal funds of about $13 billion for the fiscal year which ended less than a month ago.

That is an alarming figure, in my judgment, and it ought to be printed boldly on the front pages of the papers and called to the attention of all our people.

The press at times appears to lie awake at night to draft criticisms of Congress for secrecy, but often in reporting on fiscal matters shields from the public the real magnitude of Federal deficits. This secrecy on the part of the press, intended or not intended, tends to create complacency. It tends to generate a tendency for more Federal spending at a time when we are in dire fiscal straits. To me, the omission of the clarifying information is most unfortunate.

It is most regrettable that the administration itself in reporting on the deficit made no mention of the huge size of the Federal funds deficit. In fact, insofar as I am aware, no mention was made of it.

We must face up to the fact that we have had a continuation of deficits from year to year. The biggest one in recent years was in fiscal 1968, $25 billion. I am not speaking in a partisan vein when I call attention to the actual facts of life with respect to Federal spending.

The morning paper very properly stated the figures, indicating the announced deficit of $2.9 billion, but it failed to state that this figure, taken without explanation, is very inadequate and will be misunderstood by the American people generally. Federal finances are very complex at best and require at least some explanation of two or three major facts. It would have taken only a sentence or two to clarify the $2.9 billion figure. It could have been added that if surplus trust funds, which were borrowed for general Federal expenditure purposes during the previous year and which must be repaid with interest, are eliminated from the picture, The Federal deficit last year was $13 billion. That would be more awakening than the release of yesterday.

This morning's Wall Street Journal quotes the President's adviser, George Shultz—a very able, dedicated, and delightful gentleman—as indicating that the budget results, or at least the spending results for fiscal year 1970 represent "a strong and satisfactory performance." The Under Secretary of the Treasury, according to the Wall Street Journal, told reporters that the "modest deficit" of $2.9 billion on the unified budget basis—which, I would add, is in effect a deficit of $13 billion on the Federal funds basis—is "not disturbing."

Well, in my judgment and, I believe, in the judgment of a lot of people, there is something to be disturbed about when a deficit of that size is not disturbing in the mind of such a key official in the Government. I am surprised and disturbed to find that this deficit is apparently not greatly disturbing.

Let us take a closer look. The actual Federal funds deficit for fiscal 1970 was $13 billion. In view of the great store which the administration has laid, and properly so, on the need for a budget balance since it took office, it is a bit surprising and disturbing to read that the administration aides now seem to evidence something of a turnabout in view.

Here is the picture in brief: The original administration review of the fiscal year 1970 budget, in April of 1969, projected a tentative surplus of $5.8 billion under the unified budget plan. Now, instead of a surplus of $5.8 billion, it is a deficit of $2.9 billion. In other words, deterioration of the budget situation to the tune of about $8.7 billion. And this final report for fiscal year 1970 shows that the administration actually spent about $12.2 billion more than was spent in the previous year 1969. That likewise ought to be disturbing also to us and to the executive branch of the Government.

In my judgment, Congress has been unwise in increasing certain appropriations above the President's budget requests. I have deplored and opposed many of them. We did it last year, and we are doing it again this year.

The Congress, last year, reduced the President's fiscal 1970 appropriation budget requests by about $5.6 billion, but increased spending authority through nonappropriation bills or by inaction on certain budget items—for which we must assume full responsibility—by a very large sum, resulting in approximately a standoff in terms of the budget impact.

The fact that I want to nail down hard and fast is that in the overall, the Congress did not provide spending authority for fiscal year 1970 substantially different from the President's aggregate budget requests, and thus it cannot accurately be said that the Congress is by any means chiefly responsible for the deficit in fiscal year 1970. Certainly, both the executive and legislative branches had a part in creating the situation.

I should add that in respect to the tax bill last year, the changes made by the Congress in the administration's request had a minimum adverse impact on projected budget receipts for fiscal 1970; the principal impact had to do with projected revenues for fiscal years 1971 and 1972 and beyond.

Mr. EVINS of Tennessee. Mr. Speaker, will the gentleman yield?

Mr. MAHON. I yield to the distinguished chairman of the subcommittee.

Mr. EVINS of Tennessee. The gentleman has made an excellent speech regarding the overall budget and fiscal situation, but he did sign the conference report, and he advocates the adoption of the conference report; is that correct?

Mr. MAHON. The gentleman is correct.

The SPEAKER pro tempore (Mr. HAYS). The time of the gentleman from Texas has expired.

Mr. EVINS of Tennessee. Mr. Speaker, I yield the distinguished gentleman 2 additional minutes.

Mr. MAHON. Mr. Speaker, I should like to nail down hard and fast the fact that the Congress did not, last year, provide spending authority for fiscal year 1970, substantially above that requested in the budget.

THE CURRENT BUDGET OUTLOOK FOR FISCAL 1971

So, Mr. Speaker, the gnawing problem of spending in excess of revenues continues in an almost unbroken chain. As Presidential adviser George Shultz told a congressional committee a week or so ago—

The outlook for the current year—1971—is clouded with uncertainty and for the most part the clouds are dark and threatening.

I agree with that assessment. I would not be surprised, as I have said before, if the unified budget deficit for 1971 goes as high as $10 billion and the Federal funds deficit for 1971 goes to $20 billion. Interest on the debt went up last year, fiscal 1970, by $2.7 billion, to $19.2 billion.

Certain big spending is, of course, inevitable. There are many needs, but big spending without having the revenues in hand or in sight means that we are not getting a dollar in value for a dollar expended.

The Committee on Appropriations is doing its best to hold the line in this conference report. I urge the members to support it. I believe it is the best we can do on the pending measure. I urge support of the conference committee.

THE PENDING CONFERENCE REPORT

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. MAHON. I yield to the distinguished gentleman from Iowa.

Mr. GROSS. I believe, despite the disclaimers and the urging to support this conference report, the gentleman has made the best speech I expect to hear in behalf of support for the motion to recommit by the gentleman from Ohio. I do not know how anyone could listen to the gentleman and do otherwise than vote for the motion to recommit this bill.

Mr. MAHON. The gentleman to some extent has misinterpreted my remarks. One cannot go to a conference and have his own way completely. We got better than an even split. We tried to do better. We fought hard against those who wanted larger and larger sums for a number of these programs.

The SPEAKER pro tempore. The time of the gentleman from Texas has again expired.

Mr. EVINS of Tennessee. Mr. Speaker, I yield the distinguished gentleman 1 additional minute.

PUBLIC CONCERN ABOUT FEDERAL SPENDING

Mr. ARENDS. Mr. Speaker, will the gentleman yield?

Mr. MAHON. I am glad to yield to the distinguished gentleman from Illinois.

Mr. ARENDS. Mr. Speaker, I listened very attentively to the gentleman. I know how strongly he feels about spending. Spending is inevitable. You may recall, though, in the late 1950's when the American people became aroused about spending they did something about it. If there is some way we can again arouse the American people on spending, I am sure that the Congress will behave a little differently than we are at the present time.

Mr. MAHON. I thank the gentleman for his comments. The reason why I am in the well is to try to arouse our concern in this direction in order that we may do a better job. I believe we are doing a reasonably good job in many respects, but we must undertake to do an even better job.

Mr. EVINS of Tennessee. Mr. Speaker, I yield 3 minutes to the distinguished gentleman from Massachusetts (Mr. BOLAND).

(Mr. BOLAND asked and was given permission to revise and extend his remarks and include extraneous matter.)

Mr. BOLAND. Mr. Speaker, I share the concern of the very distinguished gentleman from Ohio (Mr. Bow) the ranking minority member of the full Appropriations Committee with respect to the item of urban research and technology. I supported the $55 million request by the department in this regard in our subcommittee when we marked up this bill. When we went to conference I supported the Senate's position of restoring $25 million for this activity. As the Members will recall, $30 million was allowed by the House and $55 million was allowed by the Senate. In conference the Senate receded to the House request. This report carries $30 million.

The congressional record on support of research to solve the problems of our urban areas—our cities and towns—is not good. If we go back as far as 1957 and add up all of the research that was requested by the executive branch, the total comes to only $135 million. But the Congress appropriated less than $50 million through the current fiscal year. The total obligations, that have been made through fiscal year 1969 for research on urban problems, in the Department of Housing and Urban Development or its predecessor agencies, is less than $28 million.

The record shows that from 1962 to 1965, less than $400,000 was provided for research annually. In 1966 the amount passed by the Congress went up to $750,000 and in 1967 it went back down to $500,000. Finally, in 1968, it appeared, that we were recognizing the urgent need for research in this important area. The administration requested $20 million but the Congress provided only $10 million. In 1969 the administration again requested $20 million and the Congress passed only $11 million. In 1970 the administration asked for $30 million and the Congress passed $25 million. And now, the administration has asked for $55 million. It should really be a request for several hundred and $55 million. But the Congress is prepared to cut urban research to $30 million.

The Defense research budget is almost $8 billion by comparison with the urban research budget. Far more money is spent determining the properties of materials under various pressures and temperatures than is spent on measuring the properties of our cities, our towns, our need for housing.

Inadequate research funds seriously impair the ability to meet the crisis that exists in providing mass production of housing for low and middle income groups. That research, would permit looking ahead, at the means, for improving the whole business of housing, so that modern production, management, marketing and financing methods and improved building codes and zoning regulations can be brought into the development of housing.

Mr. Speaker, the $30 million carried in this bill is completely inadequate to carry on the important work of research that the Department of Housing and Urban Development needs if it is to meet and attempt to solve the myriad problems that perplex this country in the matter of providing housing for millions that are today ill-housed.

Operation Breakthrough needs $35 million alone to carry out necessary research and demonstrations. It has been said here today that there are carryover funds of some $27 million that can be added to the $30 million provided by this bill for a total of $57 million available for fiscal year 1971. This simply is not so. All of the $27 million has been completely obligated. Thus, the only funds available for research and technology for fiscal year 1971 will be the $30 million that this conference report provides.

Mr. Speaker, refusal to allow the $55 million requested for research by the Department of Housing and Urban Development will result in damaging cutbacks in its research activity. The effects of the reduction in the research and technology budget to $30 million from a request of $55 million are as follows:

First. Under Operation Breakthrough, two and possibly three of the 10 prototype sites and one subsite would have to be dropped.

Second. Only minor studies and evaluations rather than action programs could be undertaken to solve the problems of abandonment and inadequate management in housing developments. This effort would be reduced from an amount of $3.6 million under the original request to $300,000 under the new request.

Third. No new building technology work could be undertaken under this $30 million budget.

Fourth. No work will be conducted on the followup of ongoing studies to implement tax revisions to encourage housing development and proper maintenance and rehabilitation.

Fifth. Essentially all funding will be eliminated for work on avoidance of thermal pollution by useful application

in urban areas, noise abatement, demonstration of advanced solid waste disposal methods, improved methods of installing utilities, application of available but advanced communications technology to improving urban functions will be eliminated, and other urban utilities and environmental factors. Only $200,000 is left for work in that area.

Sixth. No funds will be provided to the urban observatory program in which universities and 10 cities are working together to help improve urban operations. In addition the plan for extension of that program to five smaller metropolitan areas will be eliminated.

Seventh. No new commitments will be made to the Urban Institute.

Eighth. The work in six cities to develop municipal information systems will be stretched out and planned support reduced.

Ninth. The housing and urban data series work that assembles information on the housing market, the characteristics of new housing, the sale of new one-family homes, single family home construction, and so forth, will be reduced.

Tenth. Research work on fair housing, zoning improvements, new ownership approaches will be eliminated.

Mr. EVINS of Tennessee. Will the gentleman yield?

Mr. BOLAND. I yield to the gentleman.

Mr. EVINS of Tennessee. We have been hearing a great deal of speeches about economy. I believe that the gentleman is not speaking for economy now.

Mr. BOLAND. I would suggest that the chairman of the subcommittee economize in other areas. I submit that in the field of research for housing we have not done the job so far and we are not doing it in this bill.

Mr. EVINS of Tennessee. Mr. Speaker, I yield myself such time as I may use.

Mr. Speaker, expenditures for housing research and technology in 1970 were only $8,278,000. The appropriation was $25,000,000. There is a $27.1 million unexpended balance carried forward from last year, and we are providing another $30 million of new obligational authority in the bill. This makes a total of $57.1 million available for housing research expenditures in 1971. The President's budget estimates that outlays will only be $23,500,000 in 1971. The $57,100,000 should be fully adequate for orderly expansion of this program with proper administration.

Mr. Speaker, I yield 2 minutes to the distinguished gentleman from California, a member of the Committee on Appropriations, Mr. COHELAN.

Mr. COHELAN. Mr. Speaker, I want to say, since I have spoken on this topic before, I shall be brief but wish to commend the conference committee for the very fine job which it has done.

Mr. Speaker, I rise in support of the Conference Report on Independent Offices and HUD.

As many of my colleagues are aware, I offered an amendment to increase the supplemental appropriations by $587.5 million for urban renewal. Unfortunately this amendment was defeated, but I am now encouraged that the conferees on the HUD appropriations have increased urban renewal by $350 million over the House figure. This makes a total of $1.350 billion available for urban renewal programs.

The chairman of the Subcommittee on Independent Offices and Housing and Urban Development, the gentleman from Tennessee (Mr. EVINS), is to be complimented for his diligent and careful work in handling this major bill. The other conferees are also to be commended for their dedication in continuing the process of urban renovation.

The conference report, Mr. Speaker, is the latest example of this Congress dedication to rebuilding our Nation. This cannot be done by press releases or by formulating committees to study the problem, but by funding vital urban renewal projects. This battle is joined in earnest; the Congress again leads the way in attempting to alleviate our pressing social needs.

The needs are obvious and are there for all to see. In my previous statement, I pointed out that there is an existing need for $3 billion in Federal funds for urban renewal projects. Many cities—of all sizes—under conventional urban renewal plans, cannot proceed with necessary local improvements until they receive grant reservations. This $1.35 billion will go a great distance in lessening this backlog.

This figure is a more realistic appropriation to continue our attack on urban blight. We must continue to fund these programs and plan new methods to combat urban decay. We cannot delude ourselves. It is a costly battle, but one, I submit, that must be won. These increases are another step in attempting to stem the tide of urban decay, but it must be followed by an ever-increasing Federal, State, and local financial commitment.

Urban renewal, funds for education and health, a more realistic defense budget are all new directions that are being charted by this Congress. This action by the conferees—the HUD appropriations—is another step to improve the quality of life in America.

I urge its adoption.

Mr. EVINS of Tennessee. Mr. Speaker, I yield 2 minutes to the gentleman from California (Mr. TALCOTT), a member of the Subcommittee on Independent Offices Appropriations.

Mr. TALCOTT. Mr. Speaker, I did not sign the conference report, and I would like to use my minute or so, if I may, to explain why.

Mr. Speaker, some of the items, of course, are satisfactory. The increased funding for the Veterans' Administration is praiseworthy. However, I want to commend the committee and the conference and the chairman, the gentleman from Tennessee (Mr. EVINS), for doing a superb job in many respects. But this conference report, and the bill, in its present form simply has reversed or subverted many of our national priorities. As a result of the action of the other body, and the conference, there was added additional funds which amount to over one-half billion dollars over the budget.

Mr. Speaker, these additional funds include $16 million for the National Science Foundation. The bill now contains an increase of $73 million over the amount appropriated for this agency last year.

There are additional funds for space research. The bill now contains $65 million over the amount allowed by the House. This is in addition to the $2.5 billion already appropriated for research and development for the space program.

There are additional funds in the amount of $10 million for section 202 loan funds, a program for which nothing was requested and for which nothing was provided by the House.

Mr. Speaker, this is a program which is being phased out because the elderly and handicapped themselves would rather participate in the section 236 program where the interest subsidy is much better.

Mr. Speaker, there were additional funds added to the extent of $5 million for the rent supplement program. This is contract authorization and could cost us as much as $200 million in payments in future years.

There are additional funds to the extent of $350 million over and above the budget for urban renewal. The administration requested $1 billion and the House had allowed the full $1 billion, and I think the people back home would prefer this amount to remain at $1 billion. On the other hand, the President's request for funds to carry out the Emergency Home Finance Act was reduced by $165 million. We also drastically limited the program Operation Breakthrough, a research effort designed to explore new techniques in home construction in order to improve housing and lower the cost of construction, which is very, very important.

Mr. Speaker, many of our priorities are cockeyed and this conference report aggravates some of the inequities. There are billions for research in space and pennies for research in housing. I believe that the American citizen would prefer our priorities to be reversed.

Therefore, Mr. Speaker, I would suggest that we recommit this conference report back to the conference. I believe we can do better.

Mr. EVINS of Tennessee. Mr. Speaker, I yield 1 minute to the distinguished gentleman from South Carolina (Mr. DORN).

Mr. DORN. Mr. Speaker, I want to thank the distinguished chairman of the subcommittee, the gentleman from Tennessee (Mr. EVINS) for yielding to me at this time. I thank the gentleman from Tennessee for his devotion and dedication to our veterans.

Mr. Speaker, I urge the House to act wisely and compassionately to provide the necessary funds for our veterans' medical care. This committee and the conferees are to be commended for appropriating $105 million more for veterans' medical care than was recommended by the administration.

This timely action in behalf of our veterans is a tribute to the House Committee on Veterans' Affairs and to its

great chairman, "TIGER" TEAGUE of Texas. I am proud to serve with him on the only committee of the Congress devoted solely to veterans' affairs.

Mr. Speaker, it was only after exhaustive hearings and field trips on the part of the Veterans' Hospital Subcommittee of the Committee on Veterans' Affairs, headed by the distinguished and able gentleman from Florida (Mr. HALEY), that the inadequacies of the veterans medical program were carefully documented and brought forcefully to the attention of the American people. We found conditions warranted more appropriations to meet pressing needs.

Mr. Speaker, I would like to remind the Members of the House that the Bureau of the Budget did not recommend sufficient funds for medical care for our veterans. Furthermore, those of us so deeply concerned with veterans medical care were astounded to read that the Veterans' Administrator, speaking for the administration, told the other body that extra money was not needed above the amount suggested by the administration. One might hope that through our action today the House can encourage the administration to adopt a more compassionate attitude with respect to our veterans' medical care.

I urge this House to reject the motion to be made in behalf of the administration which would have the effect of cutting these desperately needed funds.

Mr. Speaker, I commend the Appropriations Committee for acting on the recommendations of the House Veterans' Affairs Committee in providing for this larger appropriation. I urge the House to approve this money for those veterans who so urgently need it.

Mr. Speaker, may I remind my colleagues that Congress appropriates money for our veterans. Not one penny can be made available without authorization and appropriation by Congress. Our veterans desperately need new hospitals, air-conditioned facilities, nursing care, more doctors and an improved diet. This additional appropriation provided by the Congress will provide for these urgent needs.

Mr. EVINS of Tennessee. Mr. Speaker, I yield 1 minute to the gentleman from Georgia (Mr. THOMPSON) to whom I promised to yield, and then I will yield to other Members.

Mr. THOMPSON of Georgia. Mr. Speaker, I thank the gentleman for yielding.

Mr. Speaker, I would first like to ask the gentleman from Tennessee if he has any figures on how many dollars are to be used in the so-called open communities program, wherein the Government takes the taxpayers money and places low-income housing in affluent suburban areas to destroy the property values in those areas?

Is there a breakdown on the turnkey program in the conference report?

Mr. EVINS of Tennessee. It is not in a separate item, I will say to my colleague.

Mr. THOMPSON of Georgia. I would like to state that in my own city of Atlanta, Ga., according to a newspaper article yesterday, we have 12,356 low-income subsidized housing units, and the housing authority plans to more than double that amount in the next 24 months, using Federal taxpayers funds to add 16,000 more units

In addition, these are to be placed in many cases in the suburban areas.

Mr. Speaker, I was awake until 3 o'clock in the morning yesterday morning answering telephone calls because a $6.5 million grant for 300 units was announced in an area of $75,000 homes. One particular doctor said that the low-income housing was going to be within 50 feet of him.

Mr. Speaker, I favor many items in the report such as medical aid for veterans, but I do not intend to vote money to destroy the property value of these people. I do not intend to tax the people's own tax dollars and in trying to accomplish what some call desirable (removing economic stratification) destroy the property values with the people's own tax money.

Mr. Speaker, another thing that the addition of 16,000 more Government-owned housing units will do is to bring more people from the rural areas to the city to be supported by the taxpayers.

The SPEAKER. Time of the gentleman has expired.

Mr. EVINS of Tennessee. Mr. Speaker, I yield 1 minute to the distinguished gentleman from Illinois (Mr. ANDERSON).

Mr. ANDERSON of Illinois. Mr. Speaker, I am going to vote to recommit this conference report because I find it completely anomalous that a bill which is more than half a billion dollars over the budget has virtually slashed in half the one thing in the bill that might permit some people in the lower income groups to have low-cost housing.

Low-cost housing in America is one of the most critical problems facing this Nation today. The costs of providing a low-cost home to the average American has risen to that degree where 60 percent of those in need of the home can no longer afford it. The cost of land, labor, material, and money have all increased sharply in recent years, making the low-cost home unavailable to those who need it.

Secretary Romney at HUD has undertaken what I believe to be the only meaningful approach which can bring the costs of these houses back into that price range where they can be afforded by those Americans who need them most. This is Operation Breakthrough, which is currently in its research and experimental stages. They have selected 10 sites throughout the country together with developers and system builders to encourage the large, mass-producers of houses who can deliver a quality, long-lasting house at a reasonable cost. This is done through the application of technology and a systems approach that has been applied to the space programs and other areas, but has been, as yet, untried in the housing field.

For fiscal year 1971 they requested $55 million—certainly a modest sum to perform this very necessary and vital effort. They needed this amount desperately to pursue this program. Without these funds the program will be seriously curtailed and the housing goals seriously jeopardized. The House originally granted $30 million; the Senate restored the balance to $55 million. Yesterday the conferees agreed to the $30 million level. It is hoped that HUD will come back for a supplemental budget for this vital project as soon as possible. By denying these funds to this Operation Breakthrough the House and this committee assumes the responsibility of this program's failure. If you believe in the need for low-cost housing; if you believe in the need for quality housing at a reasonable cost, then I ask for your support when this supplemental comes up in the future.

The effects of the reduction in the research and technology budget to $30 million from a request of $55 million are as follows:

First. Under Operation Breakthrough, two and possibly three of the 10 prototype sites and one subsite would have to be dropped.

Second. Only minor studies and evalutions rather than action programs could be undertaken to solve the problems of abandonment and inadequate management in housing developments. This effort would be reduced from an amount of $3.6 million under the original request to $300,000 under the new request.

Third. No new building technology work could be undertaken under this $30 million budget.

Fourth. No work will be conducted on the followup of ongoing studies to implement tax revisions to encourage housing development and proper maintenance and rehabilitation.

Fifth. Essentially all funding will be eliminated for work on avoidance of thermal pollution by useful application in urban areas, noise abatement, demonstration of advanced solid waste disposal methods, improved methods of installing utilities, application of available but advanced communications technology to improving urban functions will be eliminated, and other urban utilities and environmental factors. Only $200,000 is left for work in that area.

Sixth. No funds will be provided to the urban observatory program in which universities and 10 cities are working together to help improve urban operations. In addition the plan for extension of that program to five smaller metropolitan areas will be eliminated.

Seventh. No new commitments will be made to the Urban Institute.

Eighth. The work in six cities to develop municipal information systems will be stretched out and planned support reduced.

Ninth. The housing and urban data series work that assembles information on the housing market, the characteristics of new housing, the sale of new one-family homes, single family home construction, and so forth, will be reduced.

Tenth. Research work on fair housing, zoning improvements, new ownership approaches will be eliminated.

Mr. EVINS of Tennessee. Mr. Speaker,

I yield 1 minute to the distinguished gentleman from Michigan (Mr. BROWN).

Mr. BROWN of Michigan. Mr. Speaker, I thank the gentleman for yielding.

Mr. Speaker, I wish to join those of my colleagues who have criticized the reduction in the budget request for research and technology by $25 million, while increasing the urban renewal program $350 million.

The unwise slash of the request for HUD's research and technology program, a cut of 45 percent, will have serious short and long-range effects. I think that too often we think too much of brick and mortar and not enough about the planning of the activities that can be done by the appropriations that we make in the brick and mortar field.

I concur with the gentleman from Illinois (Mr. ANDERSON). I think it is a serious mistake to have made this cut in research and technology.

I certainly trust that the bill will be recommitted for the purpose of correcting this inequity.

The SPEAKER pro tempore. The time of the gentleman has expired.

Mr. EVINS of Tennessee. Mr. Speaker, let me summarize the bill once more.

Regarding the item for housing research, funds were denied for this purpose by the Congress some years ago when it was felt the industry should be able to support its own research instead of having it financed and controlled by the Government. Modest support was provided in 1962 at the level of $375,000. In 1968 a big jump was made to $10,000,000 and the general level was continued in 1969 at $11,000,000. Last year it went up to $25 million, a 100-percent increase last year. These large increases have not yet been digested. The carryover unexpended balance this year is $27,100,000.

This year we are giving a further increase of $5 million over the fiscal year that has just ended, and there is the $27 million unexpended balance still available to be spent in 1971, which makes a total of $57.1 million available for expenditure for such housing research in the next year. Mr. Speaker, these are the facts—a 100-percent increase in appropriations for research in recent years and $30 million in new funds for next year in addition to carryover of last year's unexpended funds. HUD spent less than $9 million for this purpose last year—why this sudden urge for large expenditures at this itme? We should sustain the House position.

Mr. Speaker, as to the overall bill, we bring back from conference a cut of $645,494,200 below the sum proposed by the Senate, which was $1,200,000,000 above the budget. To repeat, the increases are $105 million for veterans' medical care; $350 million for water and sewerage grants; and $350 million for urban renewal. These are to meet urgent needs in these vital areas.

These are the increases—water, sewerage grants, urban renewal, and veterans' medical care.

If any Member wants to vote against these increases in the bill for these needed programs, certainly it is your privilege to do so.

Mr. GIAIMO. Mr. Speaker, will the gentleman yield?

Mr. EVINS of Tennessee. I yield to the gentleman from Connecticut, a valued member of the subcommittee on appropriations.

Mr. GIAIMO. Mr. Speaker, I think it is important that we get this problem of Operation Breakthrough and support of urban research and technology in the proper perspective.

I support the conference report, but I do think we need additional money for Operation Breakthrough and for urban research and technology. I hope we can correct this situation in a supplemental appropriation bill at a later date.

Reference has been made to the fact that we are providing $30 million for Operation Breakthrough and for research, and reference is also made to the fact that there is a $27 million carryover of unexpended funds. Then reference is further made that this makes a total of $57 million available.

I think we are giving the House the wrong impression here, because even though this $27 million is unexpended, the fact is these funds have been committed. They have been committed to bringing a breakthrough—a very much desired breakthrough—in this area of construction of housing.

So I do not think we can properly say that this $27 million is available. It has already been committed—regardless of when it will actually be expended. By not giving them additional funds, I think we are setting the program back and we are delaying the breakthroughs in this area.

Mr. EVINS of Tennessee. Mr. Speaker, I yield myself 1 additional minute.

Mr. Speaker, less than $9 million was expended from this item last year. As I have said, there are carryover obligations of $27,100,000 that will be available for expenditure on the program in 1971. This is from previous appropriations. The bill provides another $30,000,000, yet the President's budget shows outlays—or expenditures will only be $23,500,000 in 1971. So we have been building up the funding for housing research rapidly. The $30,000,000 of new obligational authority is a further increase of $5 million over last year. These funds are available until expended.

Again I repeat—there is a total of $57 million available for housing research expenditures in the next year. This is a significant sum and represents a rapid escalation of support for this item.

Mr. BOLAND. Mr. Speaker, I am happy to point out that this conference report provides $1,857,200,000 for the Veterans' Administration's medical care programs, an increase of $105 million over the amount sought in President Nixon's budget. Earlier this year the House added $25 million to the budget request. And the Senate, citing "the goal of attaining for all veterans the best medical service obtainable," added $80 million more. The House-Senate conferees have agreed to maintain the entire $105 million increase.

As a ranking member of the Appropriations Committee and as a conferee on this legislation, I strongly supported the additional funds for medical care. Certainly, Mr. Speaker, our veterans are entitled to nothing short of the very best medical care. Thousands of Vietnam veterans are entering VA hospitals, making great demands on the facilities and staff of these institutions. Articles in the popular press—Life magazine, for example, published what amounts to an exposé—maintain that VA hospital care falls far short of adequacy. The VA denies these allegations, contending that the individual cases selected for the Life article are not representative of hospital conditions. Even so, Mr. Speaker, the need for better medical care is obvious. If just one veteran is receiving less than adequate medical care, if just one VA hospital is lagging behind conventional hospital efficiency, we are justified in our alarm.

We spend tens of billions of dollars each year on the war in Vietnam.

Certainly we can afford to spend a few million dollars more on the men wounded in fighting that war.

Mr. Speaker, I include in the RECORD telegrams and letters that veterans' organizations have sent me in support of increased funds for medical care:

PARALYZED VETERANS OF AMERICA,
Needham, Mass., July 11, 1970.

Congress EDWARD BOLAND,
House of Representatives Office Building, Washington, D.C.

DEAR REPRESENTATIVE BOLAND: We wish to make known to you our deep concern about the appropriation for the Veterans Administration budget.

We understand that the House and Senate have passed differing versions, the greater amounts being in the Senate bill.

One of the areas most affected will be the Spinal Cord Injury Program. At present we are at a low help level which makes it impossible to give proper care or better the programs to care for the needs of the new injuries.

We implore you to provide the needed funds so that our veterans can be treated in a manner better than what Life Magazine portrayed.

Sincerely,
WILLIAM P. GREEN, *President.*

SPRINGFIELD, MASS.,
July 13, 1970.

Hon. EDWARD P. BOLAND,
House Office Building, Washington, D.C.

DEAR ED: Will appreciate if you would support Senate amendment for 100 million dollars to increase VA appropriations for medical and hospitals for fiscal year 1971.

Sincerely,
SIDNEY J. HARRIS,
Executive Secretary, Springfield Post No. 21 American Legion.

LEOMINSTER, MASS.,
July 13, 1970.

Representative EDWARD P. BOLAND,
House of Representatives, Washington, D.C.

We support the amendment increasing appropriations for VA hospitals and medical care for fiscal 1971.

HARRY E. PARKS,
Adjutant, American Legion Post 191.

REHOBOTH, MASS.,
July 15, 1970.

Representative EDWARD P. BOLAND,
House Office Building,
Washington, D.C.

SIR: As commander of American Legion District Nine we the officers and members wish to go on record as being in favor and support of the Senate amendment for $100,000,000 VA hospital and medical care for fiscal 1971.

LAURENT E. BEAUVAIS,
Commander District 9, American Legion,
Department of Massachusetts.

BOSTON, MASS.,
July 14, 1970.

Representative EDWARD BOLAND,
Washington, D.C.:

The 20,000 members of the American Legion Auxiliary Department of Massachusetts Inc. actively supports that part of the Senate version of HR 17548 the 1971 Appropriations Bill adding 100 million dollars for Veterans medical care.

Mrs. ELSIE L. MORSE,
Secretary-Treasurer, American Legion
Auxiliary, Department of Massachusetts.

IPSWICH, MASS.,
July 16, 1970.

Hon. EDWARD BOLAND,
Member, Subcommittee on Independent
Offices Housing and Urban Development,
U.S. House of Representatives, Washington, D.C.

DEAR MR BOLAND: As the commander of the department of Massachusetts Veterans of Foreign Wars, representing some 60,000 overseas veterans, I strongly urge your support on behalf of our members for the $100 million which has been added to the Veterans' Administration hospital and medical program for 1971 in H.R. 1748, the Independent Offices Appropriation Bill.

It is certainly an act, that despite the financial problems of the times the wealthiest nation on earth must provide proper and adequate medical care for the veterans who gave of their physical well-being for its survival.

Sincerely yours,
RICHARD T. LAWLER,
Commander, Department of Massachusetts Veterans of Foreign Wars.

Mr. BARRETT. Mr. Speaker, I rise in support of the conference report on the bill, H.R. 17548, making appropriations for the Independent Offices and the Department of Housing and Urban Development for fiscal year 1971. As in most conference reports, there are many items which I am sorry to see left out. This is the case especially with this appropriations bill. But I am pleased that this conference report contains more money for the Department of Housing and Urban Development's Federal housing programs that was originally passed by the House when we considered this bill on the floor. I would liked to have seen the full $1.7 billion for urban renewal retained, but I believe that the compromise arrived at which provides an addititonal $350 million for urban renewal over and above the House action was a good compromise. Urban renewal needs more funds as we have heard from mayors in both large and small cities from all over the country. Hopefully, next year, the Appropriations Committees of both Houses will see fit to increase the urban renewal appropriations. I was particularly happy to see that the conferees agreed to provide more funds for the section 202 housing for the elderly program. Everyone agrees that this is one of the most popular HUD housing programs, to provide for a direct 3-percent loan from the Government to build units for our elderly citizens. There were no funds in the House-passed version, but there was $25 million provided for elderly housing which was put into the Senate appropriations bill by the distinguished Senator from New Jersey, my good friend, PETE WILLIAMS. The conferees adopted a $10 million figure for housing for the elderly, and I wholeheartedly endorse this action.

For the third time, there have been no funds appropriated for tenant services. I believe that this is the most glaring gap in this appropriations bill. As chairman of the Housing Subcommittee, I have heard time and again from people all over the country pleading for funds to provide essential services for our public housing tenants. Such services, I believe, would make public housing tenants more responsible and more willing to make the atmosphere in public housing more respectable and more pleasant to live in.

The research and technology appropriations that the conferees agreed on was for $30 million and not the $55 million that the Senate and the administration requested. The main reason for this increase for urban research and technology was to fully fund the Operation Breakthrough program. I believe as the House Appropriations Committee report stated that before more money is made available to Operation Breakthrough, we in Congress must see the results of this program before we give them more money. I am sorry to see that the House conferees could not agree with the Senate on providing full funding for the rent supplement program. We could have used the full $75 million that the Senate appropriated, instead of the $55 million that is contained in the conference report. Again, I do not believe that sufficient funds were made available in this conference report for the fair housing and equal opportunity program. The full $11.3 million as proposed by the Senate is greatly needed, and I am sorry to see that only $8 million is being provided by this conference report.

So I would say that this is a good compromise, although not the best that I would have liked to see, but I urge the House to adopt this so that the funding for these vital HUD programs can be made available immediately.

Mr. ANDERSON of California. Mr. Speaker, I rise in support of the conference report on H.R. 17548, the HUD and independent offices appropriations bill. I wish to specifically commend the conferees for their actions in accepting the Senate-passed funding level for the Veterans' Administration medical program.

This past weekend, I was privileged to attend the annual convention of the Disabled Americans Veterans in Los Angeles. At the convention, I spoke with men who are all too familiar with the conditions which exist in our 166 veterans' hospitals. Their feeling was unanimous—more funds are needed for increased staffing; more funds are needed for maintenance and repair; more funds are needed for dental care.

Mr. Speaker, I have voted for cuts in the administration's overall budget for 1971 which total well over one-half billion dollars. I realize the need to hold down Federal spending, but we cannot let our returning servicemen bear the brunt of our fight against inflation by allowing them to have second-class medical care.

For fiscal year 1971, the administration recommended spending $1,752,200,000 for VA medical care. The House of Representatives, on May 12, passed H.R. 17548 appropriating $25 million more than requested by the administration. The Senate, chiefly through the efforts of the chairman of the Veterans Affairs Subcommittee, Senator ALAN CRANSTON, passed an appropriation for medical care totaling $1,857,200,000. I agree with Chairman TEAGUE that the Senate-passed amount will not accomplish all that is needed but "these additional funds which the Senate added will make a significant step toward overcoming the serious shortages which exist in fulfilling America's obligation to its sick and disabled veterans."

Chairman TEAGUE, perhaps the most knowledgeable person regarding the veterans' program in the United States, has conducted a study which concludes that veterans' hospitals are in great need of $180.5 million more than the amount recommended by the administration. In other words, the directors of the 166 Veterans' Administration hospitals feel that $70 million more than the conference level is needed in order to properly and promptly care for America's disabled veterans.

California veterans hospitals have been especially hard-hit by both an influx of patients and insufficient funding. Directors of the California VA hospitals and outpatient clinics report that their proposed funding level for 1971 is $20.4 million less than is necessary to maintain quality care.

In commenting on over $4 million in funding deficiencies at the Los Angeles medical complex, the director said:

> In spite of our constant efforts to improve nursing and building management services, the progressive needs which are developing are advancing more rapidly than our means.

Mr. Speaker, this reflects the frustration which is prevalent in our hospitals today.

Thus, Mr. Speaker, I commend the conferees for their foresight and for their compassion. While the funding level is not as great as I feel it should be, it will allow a beginning toward assuring the veterans of this country the best possible medical care.

Mr. RANDALL. Mr. Speaker, it is my intention to be against any straight or general motion to recommit without enumerated instructions. I submit that such a procedure is in itself a sort of exercise in one-upmanship. Who among us can possibly believe that simply to recommit the bill to the conferees would

lead to any different result than we have before us today. It is an effort in make believe to try to fool the uninformed observer that a sincere effort is being made to save money.

I make this statement only because I must explain it is with a disturbed feeling that I find myself with no available alternative other than to vote against the motion to recommit the conference report on the independent offices and Housing and Urban Development appropriation bill. This unhappy circumstance exists because of the practice of lumping together controversial items in a single bill. It is a procedure which places all Members in an untenable position, requiring them to continually to seem to have to accept the bad with the good.

To illustrate, this bill carries more than $1⅓ billion for urban renewal. This is an enormous amount of money. It is directed to one phase of our urban problems—housing. No one can be unsympathetic to the plight of those unfortunates who live in substandard environment. But what we are doing is starting on an endless cycle. The appropriation is at best a sort of a stopgap measure. It does not take in account that much greater sums will be needed in these same urban areas to rehabilitate the schools, to provide job opportunities and restore the commercial properties in the areas to a more serviceable condition.

I am no expert on urban renewal; yet those who do possess an expertise say that to do any kind of a thorough job on urban renewal it would require $20 billion a year for the next 5 years or a total of $100 billion. The point I would hope to make is that such huge an enormous expenditures is far too great to pledge or even consider until after there is a study of the cost-benefit ratio for revitalizing rural areas of America. I have reference to inaugurating a program that would encourage millions of people who have crowded into metropolitan areas the past few years to return to our smaller towns and communities.

It is my sincere hope that none of my friends from the Chicago area will regard the following comments as any slight toward that great city. That huge metropolis has always been one of my favorite places. Recently, however, a well known scholar in urban affairs stated the reason for a city the size of Chicago had ceased to exist. He added that the time had past when such a large city was needed as a rail hub or even as a distribution center. Of course, this particular author can be wrong about Chicago but his opinion is buttressed by other students of urban affairs as to other cities who say as long as people continue to congregate or concentrate in our great cities it is a hopeless task to try to eliminate the ghettos. As soon and as surely as one is cleaned up or rebuilt another will spring up somewhere else in the same city. I am firmly convinced there is not enough money in the U.S. Treasury to eliminate all of the ghettos in America. It is for that reason I had hoped the minority would offer a motion to recommit with instructions to reduce this huge amount for urban renewal.

In this bill there is $30 million for urban research and technology. No one can oppose such research. I wish I could be sure that the brain trust down at HUD would break the shackles that have chained them to those old wornout ideas which commit them to rebuilding our present cities where they stand. Instead, they should open their minds to become receptive to the great opportunities existing in rural and small-town America for better housing, better job opportunities with the restoration of life and hope to all the inhabitants of our crowded cities. If only we would spend $1⅓ billion on a well-planned and well-coordinated program of rural revitalization, we would be much farther ahead toward the solution of the great problem of rural-urban population imbalance.

If there was an opportunity to have a separate vote on such a huge appropriation for urban renewal, I am sure the sum would be reduced. As it exists today, urban renewal is nothing but a band-aid or just some very expensive first aid or resuscitation for our big cities at the very time when there are such bright prospects for better alternatives in rural America.

With these objections spread on the record, I will oppose a straight or general motion to recommit because such action would only delay other meritorious items in the bill. For example, the $500 million item for water and sewer grants, while not in conference, should be given immediate approval without any further delay. Those who really believe in trying to clean up our environment and give meaning to the impetus that started on Earth Day and also believe that the science of ecology can have pactical applications with beneficial results recognize that the $150 million contained in the budget was only a token appropriation when you spread it across all of our 50 States. We in the House by separate vote this year approved $500 million or an increase of $350 million. The Senate concurred in our action. A general motion to recommit would imperil or delay this program to adequately fund efforts to eliminate pollution which is an existing domestic problem of the very highest priority.

Now, Mr. Speaker another one item in disagreement which would be periled by a straight motion to recommit is the item for medical care in our veterans hospitals. Have any of us forgotten the recent story in Life magazine and the large volume of mail that story generated over the charge our Vietnam veterans were not receiving top quality medical care? I applaud the conference committee's work for their increase in these sorely needed funds.

Recently I had occasion to visit our veterans hospital in my own district in the eastern portion of Kansas City, Mo. At that time the Administrator outlined his many needs. On that visit I saw patients who had been waiting to see a doctor for 6 or 7 hours. When faced with facts such as these, which I know are duplicated all across America, $1¾ billion is just not enough for good medical care for our deserving veterans and particularly those whose bodies have been torn by the Vietnam conflict.

The final figure in the bill for medical care for veterans is $1,857,200,000. It is $105 million over the President's budget figure and is even $80 million over our House figure. I hope that I had the reputation over the years for being economy minded. I have opposed both authorization and appropriation bills in this second session of the 91st Congress. There are countless items of Federal expenditures that can be reduced. Notwithstanding good veteran care is one of those irreduceable items that is completely consistent with federal financial responsibility.

We are currently engaged in a seemingly endless debate over the change of rules of the Congress. Some call it reorganization and some may call it reform. Surely there is a better way to accomplish an appropriation effort than bundling so many different items into one package. Why is it we should have to swallow this staggering amount for urban renewal with its questionable benefits in order to be sure there are adequate funds for water and sewer treatment facilities? Should we any longer be forced to support a program of rebuilding the ghettos which will never be fully completed in order to see there is top-quality medical care for our deserving veterans. That is the situation which may hopefully, before the debate is over on congressional reform, receive some attention. For the time we have no choice but to accept the conference report because of the many meritorious appropriations it provides.

Mr. EVINS of Tennessee. Mr. Speaker, I move the previous question on the conference report.

The previous question was ordered.

The SPEAKER pro tempore (Mr. HAYS). The question is on the conference report.

MOTION TO RECOMMIT OFFERED BY MR. BOW

Mr. BOW. Mr. Speaker, I offer a motion to recommit.

The SPEAKER pro tempore. Is the gentleman opposed to the conference report?

Mr. BOW. I am, Mr. Speaker.

The SPEAKER pro tempore. The Clerk will report the motion to recommit.

The Clerk read as follows:

Mr. BOW moves to recommit the conference report on H.R. 17548 to the Committee of Conference.

The SPEAKER pro tempore. Without objection, the previous question is ordered on the motion to recommit.

There was no objection.

The SPEAKER pro tempore. The question is on the motion to recommit.

The question was taken; and the Speaker pro tempore announced that the "ayes" appeared to have it.

Mr. YATES. Mr. Speaker, I ask for a division.

Mr. EVINS of Tennessee. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The question was taken; and there were—yeas 156, nays 228, not voting 46, as follows:

[Roll No. 238]

Dent	Meskill	Wilson, Charles H.
Edwards, La.	Ottinger	Wydler
	Pelly	

So the motion to recommit was rejected.

The Clerk announced the following pairs:

On this vote:

Mr. Baring for, with Mr. Dent against.

Mr. Berry for, with Mr. Reid of New York against.

Mr. Cramer for, with Mr. Button against.

Mr. Bush for, with Mr. Matsunaga against.

Mr. Cunningham for, with Mr. Ryan against.

Until further notice:

Mr. Sikes with Mr. Roudebush.

Mr. Rogers of Colorado with Mr. Sebelius.

Mr. Fallon with Mr. Wydler.

Mr. Charles H. Wilson with Mr. Pollock.

Mr. Tiernan with Mr. Weicker.

Mr. Howard with Mr. Pelly.

Mr. Carey with Mr. Conyers.

Mr. Ottinger with Mr. Clay.

Mr. Gallagher with Mr. Meskill.

Mr. Edwards of Louisiana with Mr. Mayne.

Mr. Anderson of Tennessee with Mr. Brock.

Mr. Colmer with Mr. Lloyd.

Mr. Ichord with Mr. McEwen.

Mr. McMillan with Mr. King.

Mr. Flynt with Mr. Tunney.

Mr. Hagan of Georgia with Mr. Rarick.

Mr. Rees with Mr. Powell.

Messrs. JACOBS, WHITTEN and JONES of Alabama changed their votes from "yea" to "nay."

Messrs. FINDLEY and SCHWENGEL changed their votes from "nay" to "yea."

The result of the vote was announced as above recorded.

The SPEAKER pro tempore. The question is on the conference report.

The conference report was agreed to.

A motion to reconsider was laid on the table.

AMENDMENTS IN DISAGREEMENT

The SPEAKER. The Clerk will report the first amendment in disagreement.

The Clerk read as follows:

Senate amendments No. 7: On page 9, line 12, strike out: "Augusta, Georgia, Honolulu, Hawaii, Indianapolis, Indiana, Houma, Louisiana, Albany, New York, Providence, Rhode Island, Denton, Texas, and Seattle, Washington," and insert: "Honolulu, Hawaii, Indianapolis, Indiana, Frankfort, Kentucky, Fitchburg, Massachusetts, Albany, New York, Bronx, New York, and San Antonio, Texas,".

MOTION OFFERED BY MR. EVINS OF TENNESSEE

Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. EVINS of Tennessee moves that the House recede from its disagreement to the amendment of the Senate numbered 7 and concur therein with an amendment as follows: In lieu of the matter stricken out and inserted by said amendment insert: "Honolulu, Hawaii, Indianapolis, Indiana, Albany, New York, and Bronx, New York,".

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 8: On page 9, line 12, strike out: "Independent Offices Appropriation Acts, 1964, and 1967, and the Independent Offices and Department of Housing and Urban Development Appropriation Act, 1968," and insert: "Independent Offices Appropriation Act, 1967, and the Independent Offices and Department of Housing and Urban Development Appropriation Acts of 1968 and 1970,".

MOTION OFFERED BY MR. EVINS OF TENNESSEE

Mr. EVINS of Tennessee. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. EVINS of Tennessee moves that the House recede from its disagreement to the amendment of the Senate numbered 8 and concur therein.

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 9: On page 10, line 13, insert:

"Post Office and Federal office building, Augusta, Georgia, in addition to the sum heretofore appropriated, $2,694,000;".

MOTION OFFERED BY MR. EVINS OF TENNESSEE

Mr. EVINS of Tennessee. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. EVINS of Tennessee moves that the House recede from its disagreement to the amendment of the Senate numbered 9 and concur therein.

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 12: Page 10, line 24, insert:

"Post Office and Federal office building, Houma, Louisiana, in addition to the sum heretofore appropriated, $2,064,000;".

MOTION OFFERED BY MR. EVINS OF TENNESSEE

The motion was agreed to.

Mr. EVINS of Tennessee. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. EVINS of Tennessee moves that the House recede from its disagreement to the amendment of the Senate numbered 12 and concur therein.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 14: Page 11, line 21, insert:

"Post Office and Federal office building, Providence, Rhode Island, in addition to the sum heretofore appropriated, $1,355,600;".

MOTION OFFERED BY MR. EVINS OF TENNESSEE

Mr. EVINS of Tennessee. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. EVINS of Tennessee moves that the House recede from its disagreement to the amendment of the Senate numbered 14 and concur therein.

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 19: Page 21, line 9, insert: "of which $10,000,000 shall be available only for use at the Mississippi Test Facility/Slidell Computer Complex and at other NASA facilities which can accommodate earth environmental studies to furnish, on a nonreimbursable basis, basic institutional and technical services to Federal agencies, resident at the complexes, in pursuit of space and environmental missions:"

MOTION OFFERED BY MR. EVINS OF TENNESSEE

Mr. EVINS of Tennessee. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. EVINS of Tennessee moves that the House recede from its disagreement to the amendment of the Senate numbered 19 and concur therein.

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 25: Page 24, line 24, insert: "including necessary funds to complete the Institutional Investors Study."

MOTION OFFERED BY MR. EVINS OF TENNESSEE

Mr. EVINS of Tennessee. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. EVINS of Tennessee moves that the House recede from its disagreement to the amendment of the Senate numbered 25 and concur therein.

The motion was agreed to.

The SPEAKEER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 30: Page 31, line 17, strike out:

"COUNCIL ON ENVIRONMENTAL QUALITY

"SALARIES AND EXPENSES

"For expenses necessary for the Council on Environmental Quality, in carrying out its functions under the National Environmental Policy Act of 1969 (Public Law 91–190), including partial support of the Environmental Quality Council and the Citizens' Advisory Committee on Environmental Quality, $650,000."

And insert:

"COUNCIL ON ENVIRONMENTAL QUALITY AND OFFICE OF ENVIRONMENTAL QUALITY

"SALARIES AND EXPENSES

"For expenses necessary for the Council on Environmental Quality and the Office of Environmental Quality, in carrying out their functions under the National Environmental Policy Act of 1969 (Public Law 91–190) and the National Environmental Improvement Act of 1970 (Public Law 91–224), including hire of passenger vehicles, and support of the Cabinet Committee on the Environment and the Citizens' Advisory Committee on Environmental Quality established by Executive Order 11472 of May 29, 1969, as amended by Executive Order 11514 of March 5, 1970, $1,500,000."

MOTION OFFERED BY MR. EVINS OF TENNESSEE

Mr. EVINS of Tennessee. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. EVINS of Tennessee moves that the House recede from its disagreement to the amendment of the Senate numbered 30 and concur therein with an amendment, as follows: In lieu of the sum named in said amendment insert: "$1,000,000".

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 39: Page 38, line 7, insert:

"LOANS FOR HOUSING AND RELATED FACILITIES FOR ELDERLY OR HANDICAPPED FAMILIES

"For loans authorized by section 202 of the Housing Act of 1959 (42 U.S.C. 1701q), $25,000,000."

MOTION OFFERED BY MR. EVINS OF TENNESSEE

Mr. EVINS of Tennessee. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. EVINS of Tennessee moves that the House recede from its disagreement to the amendment of the Senate numbered 39 and concur therein with an amendment, as follows: In lieu of the matter proposed by said amendment insert on page 41 after line 15:

"HOUSING FOR THE ELDERLY OR HANDICAPPED FUND

"For the revolving fund established pursuant to Section 202 of the Housing Act of 1959, as amended (12 U.S.C. 1701q et seq.), $10,000,000, to remain available until expended."

The motion was agreed to.

The SPEAKER pro tempore. The Clerk will report the next amendment in disagreement.

The Clerk read as follows:

Senate amendment No. 55: Page 56, line 9, insert:

"SEC. 512. No part of any appropriations contained in this Act shall be available for the procurement of or for the payment of the salary of any person engaged in the procurement of any hand or measuring tool(s) not produced in the United States or its possessions except to the extent that the Administrator of the General Services Administration or his designee shall determine that a satisfactory quality and sufficient quantity of hand or measuring tools produced in the United States or its possessions cannot be procured as and when needed from sources in the United States and its possessions or except in accordance with procedures prescribed by section 6–104.4(b) of Armed Services Procurement Regulation dated January 1, 1969, as such regulation existed on June 15, 1970."

MOTION OFFERED BY MR. EVINS OF TENNESSEE

Mr. EVINS of Tennessee. Mr. Speaker, I offer a motion.

The Clerk read as follows:

Mr. EVINS of Tennessee moves that the House recede from its disagreement to the amendment of the Senate numbered 55 and concur therein with an amendment, as follows: In lieu of the matter proposed by said amendment insert:

"SEC. 512. No part of any appropriations contained in this Act shall be available for the procurement of or for the payment of the salary of any person engaged in the procurement of any hand or measuring tool(s) not produced in the United States or its possessions except to the extent that the Administrator of General Services or his designee shall determine that a satisfactory quality and sufficient quantity of hand or measuring tools produced in the United States or its possessions cannot be procured as and when needed from sources in the United States and its possessions or except in accordance with procedures prescribed by section 6–104.4(b) of Armed Services Procurement Regulation dated January 1, 1969, as such regulation existed on June 15, 1970. This section shall be applicable to all solicitations for bids opened after its enactment."

The motion was agreed to.

A motion to reconsider the votes by which action was taken on the several motions was laid on the table.

GENERAL LEAVE

Mr. EVINS of Tennessee. Mr. Speaker, I ask unanimous consent that all Members who have spoken on the conference report may have 5 legislative days in which to revise and extend their remarks, and that I may be permitted to include extraneous matter and tables.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

REPRESENTATIVE ALBERT HAILS HUD APPROPRIATION BILL

(Mr. ALBERT asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. ALBERT. Mr. Speaker, the House of Representatives today in giving final approval to the HUD appropriation bill has demonstrated in no uncertain terms that the 91st Congress is fully committed to a reordering of this Nation's national priorities. The Congress has acted to increase the President's budgetary requests for both urban renewal and water and sewer facilities by $350 million each. We have thus showed an awareness of the magnitude of the problems of urban decay and pollution with which this country is now faced. While in the light of the seriousness of those problems, these increases are undoubtedly quite modest, their significance is vital. Congressional increases in Presidential requests for urban renewal and water and sewer facilities funds are unprecedented. These increases, therefore, underline the urgency, and commitment to immediate and dynamic action in these areas, with which this Democratic Congress views these problems. I earnestly hope that President Nixon shares that view

and that not only will he sign this vitally needed measure, but of equal importance use the funds which we have provided to make a modest start in countering urban decay and in curbing pollution.

PERMISSION FOR COMMITTEE ON RULES TO FILE PRIVILEGED REPORTS

Mr. SISK. Mr. Speaker, on behalf of the Committee on Rules, I ask unanimous consent that the Committee on Rules may have until midnight tonight to file certain privileged reports.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from California?

There was no objection.

LEGISLATIVE REORGANIZATION ACT OF 1970

Mr. SISK. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill (H.R. 17654) to improve the operation of the legislative branch of the Federal Government, and for other purposes.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from California.

The motion was agreed to.

IN THE COMMITTEE OF THE WHOLE

Accordingly, the House resolved itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill H.R. 17654, with Mr. NATCHER in the chair.

The Clerk read the title of the bill.

The CHAIRMAN. When the Committee rose on yesterday, the Clerk had read section 118, ending on page 39, line 4 of the bill, and there was pending an amendment offered by the gentleman from Texas (Mr. WHITE) and an amendment to the amendment offered by the gentleman from Iowa (Mr. SMITH).

The question is on the amendment offered by the gentleman from Iowa (Mr. SMITH) to the amendment offered by the gentleman from Texas (Mr. WHITE).

The amendment to the amendment was rejected.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Texas (Mr. WHITE).

PARLIAMENTARY INQUIRY

Mr. WHITE. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. WHITE. Mr. Chairman, under what procedure at this time, insofar as we adjourned last evening and agreed to reconvene today for consideration of the amendment pending, offered by me, could the amendment be explained to the membership prior to this vote being taken?

The CHAIRMAN. The Chair would like to inform the gentleman from Texas that there was no Member on his feet seeking recognition, and for that reason the Chair put the question to the Committee.

Mr. WHITE. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I hope the membership will recall the debate that transpired last evening. Those who were here will recall it. Some of the Members were not here and do not know what is contained in this amendment.

This amendment is an opportunity for real progress. In essence, this amendment will prove that at the time a quorum call is ordered, at the discretion of the Speaker or the Chairman of the Committee of the Whole House, he could call for tally sheets to be laid out, at which time the Members present shall be recorded.

Now, when a quorum is reached, of 100 Members in the Committee of the Whole House, or a quorum of the House, whichever was involved, the Clerk could advise the Speaker or the Chairman of the Committee of the Whole that a quorum was present, at which time a motion could be entertained that the further call of the roll be dispensed with.

At that time business would then resume. But for 30 minutes from the commencement of the quorum call the Members could come in and have their presence recorded.

The language is such that it does not restrict the manner in which this can be done. Tally sheets can be laid at any place in this hall that will cause least confusion and conflict.

I submit to the Members that this will cut down 20 minutes of our 30 to 35 minutes the quorum calls take today.

This does not conflict with the McClory amendment, which provides for electronic voting in the House itself. That amendment does not touch the Committee of the Whole House. My amendment does touch the Committee of the Whole House, to save considerable time there.

As an alternative, it also allows such a procedure in the House itself. If the electronic system which is to be provided for breaks down, then we would have this alternative. If we have not acquired an electronic system by the next Congress, then this alternative would be available.

It is strictly discretionary, and it does not disturb present procedures.

Mr. McCLORY. Mr. Chairman, will the gentleman yield?

Mr. WHITE. I yield to the gentleman from Illinois.

Mr. McCLORY. I just want to point out that the rules of the House do provide that the rules of the proceedings of the House shall be observed in the Committee of the Whole House so far as may be applicable, so if we do install an electronic voting system it would be capable of use in the Committee of the Whole as well as in the House.

Mr. WHITE. The gentleman may be right on that, but this would not conflict. This an alternative proceeding which may be used.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. WHITE. I yield to the gentleman from Iowa.

Mr. GROSS. Is the gentleman saying that this is discretionary both with the Speaker and the Chairman of the Committee of the Whole?

Mr. WHITE. Respectively, yes.

Mr. GROSS. Why does the gentleman want to give that kind of discretionary authority?

Mr. WHITE. Because there may be occasions when we would find there could be a considerable saving of time. In his discretion and in his judgment he could use this system, if there might be a saving of time.

Mr. UDALL. Mr. Chairman, will the gentleman yield?

Mr. WHITE. I yield to the gentleman from Arizona.

Mr. UDALL. I commend the gentleman from Texas on the leadership he has shown in bringing forward this amendment. I am proud to be a cosponsor.

It is permissive. It is discretionary. It is optional. It is simply another tool by which the Speaker and the Chairman of the Committee of the Whole can seek to cut 15 or 20 minutes off of the time required every time we have a call of the House.

Mr. WHITE. I thank the gentleman.

Mr. SCHEUER. Mr. Chairman, will the gentleman yield?

Mr. WHITE. I yield to the gentleman from New York.

Mr. SCHEUER. I should like to add my congratulations to the gentleman from Texas. He has been working on this for a long period of time in an extremely professional and thoughtful way. I believe this amendment would save each Member untold hundreds of hours every year. Mr. WHITE has informed me that, averaging two quorum calls per day, the House consumes one-sixth of its working day on quorum calls. If at least 350 Members out of 435 answer their names as is usual, each such day 43 8-hour man-days are used in quorum calls, or the equivalent of over $7,000 per day in the money value of the Member's time. We are all in the gentleman's debt for the fine job he has done.

Mr. WHITE. I thank the gentleman.

If this is found not to be useful, then of course it will remain dormant. If it is useful it will save a considerable amount of time of the Members of the Congress.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Texas (Mr. WHITE).

The question was taken; and the Chairman being in doubt, the Committee divided, and there were—ayes 68, noes 20.

So the amendment was agreed to.

AMENDMENT OFFERED BY MR. BINGHAM

Mr. BINGHAM. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. BINGHAM: On page 39, after line 4, insert the following new section:

"SEC. 120. Clause 6 of Rule XXIII of the Rules of the House of Representatives is amended by adding at the end thereof the following new sentence: 'If time for debate on such section or paragraph is limited under this clause, a Member shall not be recognized to speak on such pending amendment.'"

Mr. BINGHAM. Mr. Chairman, I ask unanimous consent that the Clerk reread the amendment. I believe he eliminated part of it.

The CHAIRMAN. Is there objection to the request of the gentleman from New York?

There was no objection.

The Clerk reread the amendment.

Mr. BINGHAM. Mr. Chairman, I ask unanimous consent that the amendment as read include the following language, which was intended: "during that limited time if he has previously spoken thereon."

The CHAIRMAN. Is there objection to the request of the gentleman from New York?

Mr. SISK. Mr. Chairman, reserving the right to object, and I will not object, the copy of the amendment that was delivered to us by the gentleman from New York certainly is not in line with what I understood to have been read. Is the gentleman striking out part of what he originally proposed to offer?

Mr. BINGHAM. That is correct.

Mr. SISK. If the gentleman will yield further, what I am trying to do is simply get to what we have pending before us. Under my reservation to object at what point, in the matter which we have before us and which has been distributed, does the gentleman propose to cut off the language?

Mr. BINGHAM. Everything following the words "if he has previously spoken thereon". I think if I could explain the amendment, Mr. Chairman, I could answer some of the questions which have been posed by the gentleman from California.

The CHAIRMAN. Is there objection to the request of the gentleman from New York?

Mr. HALL. Mr. Chairman, reserving the right to object, we cannot write legislation on the floor this way. May I respectfully suggest that the gentleman from New York withdraw his amendment until it is perfected and then present it to both desks and give sufficient time until some of us have had an opportunity to review it. We cannot give unanimous consent that amendments be restructured in the well of the House. I have absolutely no objection to the gentleman offering his amendment, but I certainly recommend that he ask unanimous consent that it be withdrawn, perfected and presented to both desks.

Mr. BINGHAM. Mr. Chairman, I ask unanimous consent at this time to withdraw the amendment.

The CHAIRMAN. Is there objection to the request of the gentleman from New York?

There was no objection.

AMENDMENT OFFERED BY MR. JACOBS

Mr. JACOBS. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. JACOBS: On page 39, after line 4, add the following new section:

"SEC. 123(a) Clause 23 of Rule XI of the Rules of the House of Representatives is amended by adding at the end thereof the following: 'In addition, the Committee on Rules shall not report any rule or order for the consideration of any legislative measure which limits, restricts, or eliminates the actual reading of that measure for amendment or the offering of any amendment to that measure.'.

"(b) Clause 7 of Rule XXIII of the Rules of the House of Representatives is amended by adding at the end thereof the following: 'When any measure is reported from a Committee of the Whole House, it shall be in order, immediately after the adoption of the order for the engrossment and third reading of the measure and before consideration of the question of final passage, for any Member of the committee which has reported that measure to offer a motion that all necessary changes in that measure, which are purely technical and perfecting in nature and are subject to approval by such committee, be made in its engrossment. Such motion is of the highest privilege and shall be decided with debate. If such motion is adopted, then the technical and perfecting changes approved by the committee shall be deemed to have been read in the third reading, and shall be included in the engrossment, of that measure.'."

Mr. SISK. Mr. Chairman, I reserve a point of order on the amendment. However, I would be perfectly happy to have the gentleman from Indiana explain what he proposes to do, but I would like to reserve a point of order against the amendment.

Mr. SMITH of California. Mr. Chairman, I was going to make a point of order against the gentleman's amendment because it clearly limits and violates the rule under which we are proceeding. But if the gentleman has a desire to speak on it, I shall reserve a point of order until after the gentleman speaks on it.

Mr. JACOBS. I have expressed no such desire.

Mr. SMITH of California. Mr. Chairman, I raise the point of order that this very definitely limits the jurisdiction of the Rules Committee and would prohibit us from issuing a closed rule and other types of rules. The rule under which this measure was considered strictly prohibits the changing of any jurisdiction of any committee.

The CHAIRMAN. Does the gentleman from Indiana desire to be heard on the point of order?

Mr. JACOBS. Mr. Chairman, as I understand the term "jurisdiction," it means the territory or subject matter over which legal power is exercisable, not the rules by which such power proceeds.

The CHAIRMAN (Mr. NATCHER). The Chair is prepared to rule.

The Chair would like to point out to the gentleman from Indiana that under House Resolution 1093 we have the following language, beginning in line 11:

No amendments to the bill shall be in order which would have the effect of changing the jurisdiction of any committee of the House listed in Rule XI.

Therefore, the Chair sustains the point of order.

PARLIAMENTARY INQUIRY

Mr. JACOBS. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state his parliamentary inquiry.

Mr. JACOBS. Mr. Chairman, my parliamentary inquiry is for some enlightenment about the word "jurisdiction" itself, the definition of the word "jurisdiction"? Does it refer to subject matter and territory, or relate to the manner in which the Committee on Rules can make a report within its jurisdiction?

The CHAIRMAN. The Chair would like to point out to the gentleman from Indiana that under the amendment offered by the gentleman from Indiana there is the following language:

The Committee on Rules shall not report any rule or order for the consideration of any legislative measure which limits, restricts, or eliminates the actual reading of that measure for amendment or the offering of any amendment to that measure.

Therefore the amendment offered by the gentleman from Indiana restricts the jurisdictional powers of the Committee on Rules. For that reason the point of order must be sustained.

Mr. JACOBS. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I take this time, my amendment having been ruled out of order, simply to say for the record that one of the most intolerable shackles of the legislative process of the House of Representatives and its Committee of the Whole House on the State of the Union in my judgment is the so-called closed rule.

Now, it may well be—although I do not think so—that the petroleum industry in the United States is entitled to deduct for tax purposes an expense which it in fact has not incurred. Where I come from this is known as back-door spending by the Federal Government. Where I come from my constituents have some question about whether they should each pay from 50 to 75 to 100 or even more dollars a year above their fair share of taxes just so the petroleum industry in this country might pay substantially less than its fair share of Federal income taxes.

Now, it may well be that this is the will of the House of Representatives. It may well be that this is the will of the Committee of the Whole House. I think it is more likely that this loophole is not the will of the American people because of the billions of dollars that they have to pay in lieu of a fair share's being paid by the big oil companies.

But if it is the judgment of the House of Representatives that such loopholes or such excusing from the payment of tax should be accorded that industry, it strikes me that the day should come when this House of Representatives should be given the opportunity to vote specifically on that question.

In none of the days that I have served in the House of Representatives or in this committee has that opportunity ever been presented. And the device of the so-called closed rule has been the device by which I, as a Representative of nearly half a million Americans who pay taxes to make up for the taxes that the petroleum industry does not pay, have been denied the opportunity to vote upon that question. It is difficult for six

people to carry a piano. But it is especially difficult when two of the biggest ones are riding on it.

Now, I hear it said that ordinary, mere, mortal Members of Congress are not smart enough or well-informed enough or educated enough on the subject of taxes to comprehend the tax bill when it comes to the floor; to understand all its complications and complexities; we just do not understand it well enough to be allowed to offer amendments. And I submit to you that, more likely, one reason that such bills are reported in such a way is that Members of Congress such as myself understand the loophole tax bills all too well.

And speaking of "well"—some oil wells in this country have been depleted, as I understand, three, four, five, and 15 times.

So I merely take this time and I do not think I can fully do my duty to my conscience or to my constituents without saying that I hope the means will be afforded to the Members of the Congress to vote on the record either for or against these loopholes.

Mr. CLEVELAND. Mr. Chairman, will the gentleman yield?

Mr. JACOBS. I yield to the gentleman from New Hampshire.

Mr. CLEVELAND. It is true, however, is it not, that when one of these closed rules, to which the gentleman just stated he had objection—and I agree with his objection—comes to the floor of the House, the Members do have an opportunity to vote on the rule?

Mr. JACOBS. Yes; and if the majority of the Members—and I understand the gentleman's point and I will respond to it in this way—it is almost exactly the same as the bill itself—take it or leave it. If you vote on a closed rule that relates to one good and one bad matter you cannot reject the bad without rejecting the good.

I am saying I think a major issue of this kind should come to the vote of the House of Representatives as an issue itself and not bootlegged with other elements of true tax reform. In the notorious so-called tax reform bill we just passed, not a hair of the head of the petroleum industry was touched.

I do not like to talk personalities or talk about individuals. I do not care who is right. But I have the deep suspicion and belief myself about what is right in this situation, and I would like to have the opportunity to vote on it.

We are concerned about oil slicks in this country and I am beginning to be just as concerned about slick oil.

Mr. CLEVELAND. Mr. Chairman, will the gentleman yield?

Mr. JACOBS. I yield to the gentleman.

Mr. CLEVELAND. Again I just want to make the point that on a closed rule if a majority of the membership objects to it, it will be turned down.

Mr. JACOBS. The point is not quite the same. It is like saying when you are drowning, you can have a life raft only if you will agree to have a tiger on it—which is a rather difficult choice to make.

Or putting it another way: "Give them someday our daily bread"—under certain conditions. I just do not think that an issue of this kind should be blocked from a vote in the House of Representatives since before I was born.

AMENDMENT OFFERED BY MR. VANIK

Mr. VANIK. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. VANIK: on page 39, after line 4 and before line 5, insert the following:

"ADDITIONAL LIMITATION ON RULES AND ORDERS OF THE COMMITTEE ON RULES

"SEC. 119. Clause 23 of Rule XI of the Rules of the House of Representatives is amended by inserting immediately before the period at the end thereof a semicolon and the following: nor shall it report any rule or order which shall operate to prevent a vote to approve or disapprove any individual section of a bill or resolution"."

Mr. SISK. Mr. Chairman, I reserve a point of order against the amendment.

Mr. SMITH of California. Mr. Chairman, I also reserve a point of order against the amendment.

The CHAIRMAN. The gentlemen from California (Mr. SMITH and Mr. SISK) have reserved points of order against the amendment offered by the gentleman from Ohio (Mr. VANIK).

The Chair recognizes the gentleman from Ohio (Mr. VANIK).

Mr. VANIK. Mr. Chairman, since the ruling of the Chair on this point of order would probably be identical with the ruling on the amendment that was offered by my distinguished colleague, the gentleman from Indiana (Mr. JACOBS), I will address the Committee within this reservation.

Mr. Chairman, I want to point out that what I was endeavoring to do in this amendment was to give the House an opportunity to vote section by section on a bill that comes to the House on a closed rule.

Now this would not permit the introduction of any new matter. It would not put the House in a position of writing a bill. But it would be a way of providing the membership of the House with a way of expressing itself on a specific section to which there may be great objection.

Under the closed rule procedure, we have developed a system of conglomerate legislation in which there are many different unrelated parts of legislation that are combined. The legislation comes here on a closed rule and the membership of the House has to either take the whole package or reject it.

I think that somehow or other if we gave the House an opportunity to vote on a proposal under a closed rule, section by section, it would permit the membership to express itself and we probably would end up improving the legislative product.

Under these circumstances, I expect to ask the Rules Committee, when the trade bill is submitted sometime in the next week or so, to recognize this principle and give the membership of the House the opportunity to reject a section which it may find unworthy or to which a majority may find objectionable. This would permit us, I believe, to perfect the legislative product without taking over from the appropriate committee the right to legislate in the general area.

Mr. Chairman, in light of the point of order that is made, I would like to have unanimous consent to withdraw my amendment.

The CHAIRMAN. Is there objection to the request of the gentleman from Ohio that his amendment be withdrawn?

Mr. VANIK. With the understanding that I can approach the Rules Committee later on and ask for this kind of language in a closed rule on bills such as the trade bill and other issues during the course of this session.

Mr. ANDERSON of Illinois. Mr. Chairman, with the gentleman yield?

Mr. VANIK. I am happy to yield to the gentleman from Illinois.

Mr. ANDERSON of Illinois. I do not think the gentleman should be under any illusions that the Rules Committee can grant the kind of rule the gentleman is suggesting he may request in connection with the trade bill. I realize he can request virtually any kind of rule, but I doubt very much that we would be able to furnish you with a rule telling the House how it shall conduct its voting on a particular bill, that it should vote at the end of every section. You would have to have a change in the Rules of the House rather than expect the Rules Committee, in a resolution reporting a bill to the House, to assume that burden.

Mr. VANIK. What rule of the House would prohibit the kind of rule I suggest? What prevents a separate vote on the bill section-by-section, if a rule permits this procedure?

Mr. ANDERSON of Illinois. I cannot point the gentleman to any rule that would prohibit it. Maybe it is something that might be barred by custom rather than a specific rule. But to my knowledge we have never attempted—and I see the ranking member on our side of the aisle here and he perhaps is in a better position than I am to attest to the customs of the committee—but I do not think you should suggest that we are to bear the responsibility of fulfilling that kind of request.

Mr. VANIK. Then I might suggest to the gentleman that the reform we have adopted on a teller vote has no effect when you deal with the difficult sections of a conglomerate bill that is presented to this body. I certainly hope some way might be developed to permit the membership of the House to express itself with respect to obnoxious sections in a bill.

The CHAIRMAN. Is there objection to the request of the gentleman from Ohio to withdraw his amendment?

There was no objection.

Mr. GROSS. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chariman, I am particularly impressed with the fact that some of those who, only a few moments ago were so

insistent about changing the rules with respect to quorum calls, apparently for the purpose of seeing to it that the Members are on the floor and present for business, are conspicuous now by their absence.

Therefore, Mr. Chairman, I make the point of order that a quorum is not present.

The CHAIRMAN. The Chair will count.

Seventy-four Members are present, not a quorum. The Clerk will call the roll.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 239]

Abbitt	Fallon	Meskill
Adams	Feighan	Ottinger
Alexander	Flynt	Pelly
Anderson, Tenn.	Foley	Pollock
Ashbrook	Fraser	Powell
Baring	Fuqua	Rarick
Berry	Gallagher	Reid, N.Y.
Blanton	Giaimo	Rogers, Colo.
Brock	Gilbert	Rosenthal
Bush	Gubser	Roudebush
Button	Harsha	Ryan
Clark	Hawkins	Scheuer
Clay	Hébert	Sebelius
Conyers	Ichord	Sikes

Accordingly the Committee rose; and the Speaker having resumed the Chair, Mr. NATCHER, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill H.R. 17654, and finding itself without a quorum, he had directed the roll to be called, when 366 Members responded to their names, a quorum, and he submitted herewith the names of the absentees to be spread upon the Journal.

The Committee resumed its sitting.

(Mr. VANIK asked and was given permission to speak out of order.)

MEMORIAL SERVICE FOR THE LATE HONORABLE MICHAEL J. KIRWAN

Mr. VANIK. Mr. Chairman, I take this time to advise the House that on Tuesday, August 4, at 10:30 a.m. at St. Peter's Church, 313 Second Street SE., there will be a memorial service for our former distinguished colleague from Ohio, the late Honorable Michael J. Kirwan.

This will be the only memorial service for Mike Kirwan in the Washington area. I hope the Members of the House will endeavor to be present.

AMENDMENT OFFERED BY MR. STEIGER OF WISCONSIN

Mr. STEIGER of Wisconsin. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. STEIGER of Wisconsin: On page 39, immediately after line 4, insert the following:

"PRINTED RECORD OF HOUSE FLOOR PROCEDURES

"SEC. —. The Rules of the House of Representatives are amended by adding at the end thereof the following new Rule:

"'Rule XLV

"'Printed Record of Floor Procedures

"'1. The body of the Congressional Record for the House of Representatives shall contain an accurate and verbatim account of remarks actually delivered on the floor of the House together with such permitted tables, statistics, and other supporting data dealing directly with the subject matter under discussion; and such remarks and data shall appear in the order in which they were delivered.

"'2. Extensions and revisions of remarks in the Congressional Record delivered on the floor of the House shall be limited to the correction of grammatical and typographical errors; and in no event shall such corrections make any change in the meaning, content, or substance of those remarks.

"'3. Members shall be entitled to make insertions in the Congressional Record of remarks not actually delivered on the floor. As appropriate, such insertions shall appear following the record of the entire debate to which they are germane and prior to the record of a vote: *Provided*, That such insertions shall be printed in a type face distinctively different from that used for verbatim remarks.'"

And make the appropriate and necessary technical changes in the bill.

Mr. STEIGER of Wisconsin. Mr. Chairman, I hesitated for some time before offering this amendment. This amendment would create a new rule in the House of Representatives relating to the CONGRESSIONAL RECORD.

In essence, it does three things.

One, it says that the body of the RECORD shall contain an accurate and verbatim account of the remarks actually delivered on the floor and such remarks and data shall appear in the order in which they were delivered.

Two, it says extensions and revisions of remarks delivered on the floor shall be limited to the correction of grammatical and typographical errors and in no event shall such corrections make any change in the meaning, content, or substance of such remarks.

Number three is: Members shall be entitled to make insertions in the CONGRESSIONAL RECORD of remarks not actually delivered, but such insertions shall appear in a distinctly different type face from that used for the verbatim remarks.

Mr. Chairman, the Joint Committee on the Organization of the Congress in its report in 1967 said:

> The Congressional Record is intended to fulfill a number of functions. It is a chronology of the floor proceedings of both Houses. It is a basic source document for information on current legislative issues. It is a tool for the transmission of the views of the officeholder to his constituents.

In a chapter in the book "We Propose: A Modern Congress" the distinguished and able gentleman from Arizona (Mr. RHODES) in his chapter on "Floor Procedure" on page 213, said this:

> Finally, I would call attention to the privilege of Members to "revise and extend" remarks in the *Congressional Record*. The privilege is useful, and in the light of the very heavy burden today's Congressman carries, perhaps even necessary. In the interest of historical accuracy, however, I would recommend (1) that all remarks not actually delivered on the Floor of the House be set forth in different print from recorded debate, and (2) that the privilege of revising one's remarks be confined to grammatical correction and never allowed to alter the meaning or to misrepresent the circumstances of debate in colloquy between Members.

In essence this ought to be called the Rhodes amendment, because the substance and content of this amendment comes from that chapter of "We Propose" as written by the distinguished gentleman from Arizona (Mr. RHODES).

Mr. SISK. Mr. Chairman, will the gentleman yield?

Mr. STEIGER of Wisconsin. I am happy to yield to the gentleman from California.

Mr. SISK. I appreciate the gentleman's yielding.

I should like to get clear exactly what the gentleman seeks to do here. Under present procedures, of course, Members can extend their remarks only by unanimous consent; is that not right?

Mr. STEIGER of Wisconsin. That is correct.

Mr. SISK. And they can revise only by unanimous consent. Do I correctly understand that the intent of the language is to provide for Members a right under the rules to simply insert their remarks and have them printed, or to make such revisions as are outlined in No. 2, for example? There is no longer any necessity for unanimous consent or anything of that kind? Is that basically what the gentleman seeks to do?

Again, I am not discussing the merits. I am trying to get clear what the effect would be. As the gentleman knows, at the present time all this must be done by unanimous consent.

Mr. STEIGER of Wisconsin. My response to the distinguished chairman of the subcommittee of the Committee on Rules would be that unanimous consent would still be required or, as is the system that we use today, if, for example, in general debate a blanket unanimous consent were granted for all Members to extend their remarks in the body of the RECORD on the subject matter, that would still be required also.

What the intent of the amendment is is to say that the RECORD shall be a proceeding of those remarks actually delivered on the floor of the House, and those remarks which were not delivered but for which permission is granted would be set in a different type face than those which were actually delivered.

Mr. SISK. If the gentleman will yield further, I am sympathetic, I believe, with respect to what I believe my colleague and friend is attempting to get at. As the gentleman knows, our RECORD very often is criticized for all kinds of things it contains and for the fact that it does not necessarily contain exactly what a Member said, and so on.

I do raise this point, because it seems rather important to me, as I understand the rules today, that we can do these things only by unanimous consent. If the gentleman will note the language, for example, in number 3 of his amendment, it says, "Members shall be entitled to make insertions in the CONGRESSIONAL RECORD," et cetera et cetera. It would seem to me, if we put this into the rules, then we would be eliminating any necessity for unanimous consent.

Again I am not discussing the merits. Perhaps this is all right. Perhaps it is not. But I do believe we ought to know exactly what the impact of this would be

in connection with present practice and procedures.

(By unanimous consent (at the request of Mr. SISK) Mr. STEIGER of Wisconsin was allowed to proceed for 5 additional minutes.)

Mr. STEIGER of Wisconsin. May I say to the distinguished gentleman from California that my intent was that there would not be a change in the present practice or procedure as used in the House of Representatives insofar as extensions are concerned in the House.

Mr. ECKHARDT. Mr. Chairman, will the gentleman yield?

Mr. STEIGER of Wisconsin. I am happy to yield to the gentleman.

Mr. ECKHARDT. Do I understand this to be the intent of the bill in a practical situation. In the last session of Congress, as I recall it, in the debate on the anti-riot bill there was a question addressed on the floor to one of the authors as to whether or not the element of engagement in interstate commerce would include travel by interstate facility from one town that was in a State to another town that was in the same State. The reply to the inquiry was no, that it would require travel between two States. Later the gentleman who made the answer, and made it utterly in good faith, discovered that he was in error. So he talked to the inquirer and told him that he was going to have to change his answer. Of course, the person who made the inquiry made no protest because it was of no interest to him particularly and the second gentleman was acting with great cordiality and in the proper process. However, the result was that the next day we had a history of legislative enactment which, if used by a court, would indicate exactly the opposite matter before the House than that which was before the House as far as the legislative history is concerned. It was not just a matter between A and B, but it was the important necessity of having the true history before the House so that the court could properly interpret it that was in issue.

A I understand your amendment, this sort of thing would not be permitted even by unanimous consent, but an ordinary correction of grammar, for example, could be permitted by unanimous consent but only by unanimous consent. Is that the proper construction of the amendment?

Mr. STEIGER of Wisconsin. My answer to the gentleman from Texas is to say that the language of the amendment says, "in no event shall such corrections make any change in the meaning, content, or substance of those remarks," which is to say explicitly those remarks were the remarks that were delivered on the floor of the House.

Mr. ECKHARDT. I understand. I think it is a very laudable amendment. Without it we actually mislead the courts as to what the legislative history of a bill is in the instance of the type that I described.

Mr. STEIGER of Wisconsin. I appreciate the gentleman's comment.

May I say in further response to the gentleman from California that the rule, since this comes as a rule, which is not now the case, since this is under title 44 of the United States Code and the Joint Committee on Printing, I structured it in a way that says Members shall be entitled to make insertions to make very clear that that right is granted and not that the present practice and procedure in the House would be changed. Is that helpful to the gentleman in terms of trying to understand the intent of the amendment?

Mr. SISK. Will the gentleman yield?

Mr. STEIGER of Wisconsin. I yield to the gentleman from California.

Mr. SISK. I appreciate the statement that the gentleman makes as to the intent, but, of course, these rules will have to be interpreted in future years. I believe as I read this language it would eliminate any necessity of any unanimous-consent request because it makes it a part of a right. As the gentleman knows, to cite an example, I can get up and get unanimous consent, I suppose, to move the U.S. Capitol to Denver, if there was no objection. You can do almost anything here by unanimous consent, if no one objects. And if you want to proceed with it, that is. The point that I am making here is, then when we act to put in a rule, if we make it a rule, that the Members shall be entitled to make insertions, and I cited that also to some extent with the same kind of language in 1 and 2, it seems to me by rule it makes these things possible. There would be no point then in unanimous-consent requests. And, that there would be no point in having a unanimous-consent request, because a Member would have as a matter of privilege under the rules of the House the right anyway.

Again, I am not saying it is bad but I am not sure how we are going to do it.

The CHAIRMAN. The time of the gentleman from Wisconsin has again expired.

Mr. SISK. Mr. Chairman, I move to strike the necessary number of words.

Mr. Chairman, I appreciate the interest of the gentleman from Wisconsin in connection with this matter regarding the CONGRESSIONAL RECORD, because over the years there has been a considerable amount of criticism of the content of the RECORD. There have been charges at times that the RECORD does not necessarily represent the actual occurrences on the floor of the House or exactly the words spoken. However, to the extent that some way could be devised to correct that criticism, of course I am all for it.

However, I would feel that without a better study of exactly how this language might be interpreted, I would almost have to oppose it because it does substantially revise what I understand to be our procedures today.

It seems to me that the language makes very clear that a Member shall be entitled to make insertions in the CONGRESSIONAL RECORD of remarks not actually delivered, and so on. But I would like to raise one further point with my friend, the gentleman from Wisconsin (Mr. STEIGER), in connection with this matter. Again, the gentleman may feel this is not a meritorious point, but it does go to the matter of expediting the work of the House.

Take for example, the bill which we are on right now, and on which we have been working for the better part of 3 weeks. We have from time to time sought unanimous consent for Members to have 5 legislative days in which to extend their remarks. Many Members have come to me and have asked for time and unanimous consent to extend their remarks and we have yielded for that purpose.

The point I am making is that in most cases I could visualize Members who would desire to have their statement in the RECORD on a given subject as though it was given at the time indicated by its place in the RECORD.

But I am inclined to think that if they were going to be tagged with a change in format or a change in type or the use of italics, or whatever the provision might be for setting up those remarks as not having been given on the floor, that most Members will insist upon their time to speak, which they have a right to do.

Again, I can visualize that this could double or triple the time element involved on so many matters that come before the House.

As the gentleman knows, in many cases there is a general unanimous-consent request here and that there may be as many as 50 Members or 75 Members who extend their remarks on a given subject because of their interest in and the work they have done on it. But under this procedure, I feel that a substantial percentage of those Members would probably insist upon taking the time to actually make their statement on the floor. Thus, it would seem to me that it would become a substantial delaying operation.

I yield to the gentleman from Wisconsin (Mr. STEIGER) to comment upon that observation.

Mr. STEIGER of Wisconsin. I appreciate the gentleman yielding, and I appreciate his comments. However, let me be perfectly clear and honest with the gentleman. Yes, you do run the risk that debate might be extended by virtue of making it so that there is a different type face used on those remarks not actually delivered. However, my point is that it seems to me that is the only fair way to do it, that we should differentiate between those who did deliver their remarks and those who did not. The RECORD today is simply not accurate.

If the gentleman will yield further, let me ask the gentleman——

Mr. SISK. I would be glad to yield to the gentleman, but let me say that I was looking around for the gentleman from Ohio (Mr. HAYS) who is here, and I do not know, but I hope he may contribute to this colloquy.

Because at the present time the CONGRESSIONAL RECORD is under the Joint Committee on Printing, and they have the jurisdiction over the type of printing and the arrangements of the RECORD, and things of that kind. And I recognize that this amendment, if it becomes part

of the rules, could change that situation possibly.

I am concerned about a thorough understanding of the change in procedure as well, and of the possibility that it could delay debate on the floor of the House in connection with matters before the House.

The CHAIRMAN. The time of the gentleman has expired.

(By unanimous consent, Mr. SISK was allowed to proceed for 5 additional minutes.)

Mr. SISK. I will yield to the gentleman from Wisconsin on that matter.

Mr. STEIGER of Wisconsin. Mr. Chairman, I appreciate the gentleman yielding again.

First, let me say that I did show this amendment to the gentleman from Maryland (Mr. FRIEDEL), the chairman of the Joint Committee on Printing, and to other Members—the gentleman from Pennsylvania (Mr. DENT) and the gentleman from Ohio (Mr. DEVINE) so that they were aware of the amendment, of its impact, and what it proposed to do.

Second, let me ask the gentleman from California if he is saying that what I have stated as the legislative intent is not sufficient to get by this problem by saying by the way the rule is being rewritten, that unanimous consent must still be requested.

As I said, it is not my intent to disrupt the present practice, that unanimous consent still is required, but I suppose one could add those words if that would help.

Mr. SISK. If I understand what the gentleman is saying, the gentleman is saying that in spite of the language of—let us take No. 3 in the amendment, because I think it is more obvious there, the language says:

> Members shall be entitled to make insertions in the Congressional Record of remarks not actually delivered on the floor.

Now, what would be the point of a unanimous-consent request? What would you be seeking unanimous consent to do beyond the authority granted in that part of the RECORD, as I understand it?

Mr. STEIGER of Wisconsin. It is my understanding that permission is now possible for Members to extend their remarks with a unanimous-consent request. Am I wrong in that understanding?

Mr. SISK. That is correct. At any time the gentleman can get unanimous consent to do that.

Mr. HAYS. Mr. Chairman, will the gentleman yield?

Mr. SISK. I yield to the gentleman from Ohio.

Mr. HAYS. Mr. Chairman, it seems to me that if you read the gentleman's amendment it does away with unanimous consent, and gives any Member a right to extend without restricting anybody in any way.

Mr. SISK. That is exactly the point.

Mr. HAYS. I do not think there is any question about that.

Mr. SISK. That is the point I was attempting to make. And it is my understanding the gentleman from Wisconsin said he did not intend to do that, but in spite of his intent the language says that, and certainly I believe would be so interpreted by any parliamentarian. At least, that is the concern I have.

Mr. HAYS. Mr. Chairman, it seems to me that what ought to be done here, and that is what was done yesterday with another amendment offered by a different gentleman, but with the same name, and that is withdraw the amendment and rewrite it to do what the gentleman intends it to do. I do not believe the gentleman intends to do away with the asking of unanimous consent, but that is the way his amendment is written. I think it certainly does do that.

Mr. STEIGER of Wisconsin. Mr. Chairman, if the gentleman from California would yield further, it is not my intent to do that, and I will ask unanimous consent to withdraw the amendment, if the gentleman will yield for that purpose, with the understanding it can be reoffered.

Mr. SISK. I yield to the gentleman from Wisconsin for that purpose.

Mr. STEIGER of Wisconsin. Mr. Chairman, I ask unanimous consent to withdraw the amendment with the understanding that it may be reoffered later.

The CHAIRMAN. Is there objection to the request of the gentleman from Wisconsin?

Mr. ECKHARDT. Reserving the right to object, Mr. Chairman, would the gentleman repeat his request?

The CHAIRMAN. The gentleman from Wisconsin will restate his request.

Mr. STEIGER of Wisconsin. Mr. Chairman, I had asked unanimous consent to withdraw the amendment, with the understanding that it could be reoffered later.

The CHAIRMAN. The Chair would like to inform the gentleman that the gentleman may request that the amendment be withdrawn.

Is there objection to that request?

Mr. ECKHARDT. Mr. Chairman, reserving the right to object, it would appear that a small amendment to the amendment could cure the matter. I happen to have one on the desk, and I should like to offer it.

Mr. STEIGER of Wisconsin. All right, I will be willing to withdraw my request.

The CHAIRMAN. Is there objection to the request of the gentleman from Wisconsin?

PARLIAMENTARY INQUIRY

Mr. GROSS. Mr. Chairman, a parliamentary inquiry, was not the amendment withdrawn?

The CHAIRMAN. The Chair has not passed on that question.

Mr. ECKHARDT. Mr. Chairman, I object.

The CHAIRMAN. Objection is heard.

Mr. SISK. Mr. Chairman, has my time expired?

The CHAIRMAN. The gentleman from California has 1 minute remaining.

Mr. SISK. Mr. Chairman, I may not necessarily have to use it, but I am trying to find out exactly where we are here.

I will simply say, it is my hope that the amendment which the gentleman from Texas apparently proposes to offer may clarify this issue. This does not mean we are prepared to accept the amendment. We will discuss the merits of the amendment at that time.

AMENDMENT OFFERED BY MR. ECKHARDT TO THE AMENDMENT OFFERED BY MR. STEIGER OF WISCONSIN

Mr. ECKHARDT. Mr. Chairman, I offer an amendment to the amendment offered by the gentleman from Wisconsin.

The Clerk read as follows:

> Amendment offered by Mr. ECKHARDT of Texas to the amendment offered by Mr. STEIGER of Wisconsin.
>
> Strike out No. 3 of the amendment and add in lieu thereof:
>
> "3. The custom of Members making insertions and corrections in the Congressional Record by unanimous consent should not be otherwise altered."

The CHAIRMAN. The gentleman from Texas (Mr. ECKHARDT) is recognized.

Mr. ECKHARDT. Mr. Chairman, I recognize that this somewhat limits the amendment.

But I do not think it limits it in its essential purpose.

The amendment as offered by the gentleman from Wisconsin (Mr. STEIGER) did two things. First. It prevented material changes in colloquy between Members during floor debates.

Now that appears to me is so eminently correct that no one could disagree with it. If such changes are permitted, fundamental changes in colloquy, we falsify the legislative history of a bill—and we have done this several times in my short period in this House. I do not think that should be permitted.

I think if the rule prohibited it, the Members would abide by the rule voluntarily.

But the other thing that the Steiger amendment did was to provide for a different kind of type in inserted material from that which is used in actual statements on the floor. Now that, it seems to me, is not so fundamental and is arguable both ways. One of the reasons we permit a Member to insert remarks is because we frequently limit debate and we do not want to prevent the man from expressing fully what his position was, even if he does not have a full opportunity to explain it. We do not want to point him out to his constituents as having thought of the matter later—which is perhaps not true. I do not agree with the latter part of the amendment. I do agree with the first part strongly. The section 3 which I have added, I think answers the entire question of unanimous consent.

Mr. SISK. Mr. Chairman, will the gentleman yield?

Mr. ECKHARDT. I yield to the gentleman.

Mr. SISK. I appreciate that. I think that would eliminate that objection.

Let me ask the gentleman though, if the language as he understands it, and I

would assume, in (2) would preclude a Member under our procedure here in the morning hours—or maybe I should not use that term—I think it is used in the other body—but at the start of the session under the 1-minute speeches from extending his remarks? That is, he would ask unanimous consent to address the House for 1 minute and to revise and extend his remarks. Would this preclude him from doing that? In other words, the RECORD would only carry that portion of his statement given on the floor?

Mr. STEIGER of Wisconsin. Mr. Chairman, will the gentleman yield?

Mr. ECKHARDT. I yield to the gentleman.

Mr. STEIGER of Wisconsin. May I say to the distinguished gentleman from California that number (2) has nothing to do with that question because (3) has to do with extensions and revisions of remarks in the CONGRESSIONAL RECORD delivered on the floor.

What the gentleman from California has just asked goes to number (3) which the gentleman from Texas proposes to amend.

Mr. ECKHARDT. I would state further in answer to the gentleman from California's question that if there is any question about that, the provision in paragraph 3 would take care of it because it envelops into the amendment the customs of the House with respect to the enlargement or correction of remarks.

Mr. HAYS. Mr. Chairman, will the gentleman yield?

Mr. ECKHARDT. I yield to the gentleman from Ohio.

Mr. HAYS. If we could have the attention of the gentleman from Wisconsin, going back to what the gentleman from California said about 1-minute speeches, frequently I have seen a Member get permission to speak for 1 minute, to revise and extend his remarks, and in the middle of his remarks, when he is cut off, he puts in the balance that he did not get to speak because of the amount of time that was given. It seems to me that under the gentleman's amendment we would have part of the speech in one type, part of it in another type, and the part spoken printed in one place in the RECORD, and the part extended in another. How would you get around that situation?

Mr. STEIGER of Wisconsin. Mr. Chairman, will the gentleman yield?

Mr. ECKHARDT. I yield to the gentleman from Wisconsin.

Mr. STEIGER of Wisconsin. The gentleman from Ohio is correct. If the Eckhardt amendment is not adopted and we went back to the old language in my original amendment, the gentleman from Ohio would be absolutely correct. We would have one type and then another. The gentleman from Texas proposes to maintain the custom we now follow, which is that a Member can extend and revise his remarks and they would be in the same type. If that is the pleasure and will of the House, frankly that is what we ought to do. The major thrust is to try at least to make accurate in the RECORD what is said on the floor, so we do not get into the position where substance is changed from what one has said through revision.

The CHAIRMAN. The time of the gentleman from Texas has expired.

(On request of Mr. HAYS, and by unanimous consent, Mr. ECKHARDT was allowed to proceed for 5 additional minutes.)

Mr. ECKHARDT. In striking all of section 3, we would strike all reference to different type faces, and also we would include in section 3 the provision that the custom of the House with respect to correction and extension is continued.

Mr. HAYS. Mr. Chairman, will the gentleman yield?

Mr. ECKHARDT. I yield to the gentleman from Ohio

Mr. HAYS. I think we ought to make a little legislative history here in the event that this amendment is adopted. I would like the gentleman from Wisconsin to comment: As I understand what the gentleman is saying, if the Eckhardt amendment is accepted, then under section 2 of his amendment, which would limit corrections to grammatical and typographical errors, and so on, a Member could, in making a 1-minute speech, put in the balance of the speech that he did not get to deliver when he was cut off by the limitation of time. Nothing in the gentleman's amendment would preclude that; is that correct?

Mr. STEIGER of Wisconsin. Mr. Chairman, will the gentleman yield so that I may respond?

Mr. ECKHARDT. I yield to the gentleman from Wisconsin.

Mr. STEIGER of Wisconsin. The answer is yes.

Mr. ECKHARDT. I agree that the answer is yes.

Mr. FASCELL. Mr. Chairman, will the gentleman yield for a parliamentary inquiry?

Mr. ECKHARDT. I yield to the gentleman from Florida.

PARLIAMENTARY INQUIRY

Mr. FASCELL. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state his parliamentary inquiry.

Mr. FASCELL. If there is no prohibition in the rule for the Speaker to recognize any Member for a unanimous-consent request, is it not true that the Speaker can recognize any Member for a unanimous-consent request?

The CHAIRMAN. The power of recognition is in the Speaker. He has the right to recognize any Member on the floor.

Mr. FASCELL. Mr. Chairman, a further parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. FASCELL. The point specifically is that by rule the Speaker can be prohibited from recognizing a Member for a unanimous-consent request; is that not correct?

The CHAIRMAN. The Chair would like to inform the gentleman that his statement is correct.

Mr. FASCELL. Mr. Chairman, a further parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. FASCELL. Is it not true, therefore, that if there is no prohibition in the present amendment, any Member could rise and the Speaker could recognize him for a unanimous-consent request to waive that particular rule at that moment?

The CHAIRMAN. The Chair would like to inform the gentleman that under those conditions it would require unanimous consent. Any Member could object. The Speaker could object.

Mr. FASCELL. Mr. Chairman, one further parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. FASCELL. May a rule be waived by unanimous consent, either temporarily or permanently?

The CHAIRMAN. The Chair would like to inform the gentleman that there are rules of the House that the Speaker himself does not have the right to waive.

Mr. FASCELL. Mr. Chairman, I cannot quite reconcile that ruling with the previous ruling of the Chair as to the present rules of the House which specifically point out the instances in which the Speaker is prohibited from recognizing a Member for a unanimous-consent request, aside from the right which a Speaker has to recognize or not to recognize a Member who may stand and want to speak. For example, may I read what I refer to?

The CHAIRMAN. The gentleman may proceed.

Mr. FASCELL. Clause 8 of rule XV says:

> It shall not be in order for any Member to introduce to or to bring to the attention of the House during its sessions any occupant in the galleries of the House; nor may the Speaker entertain a request for the suspension of this rule by unanimous consent or otherwise.

That is a direct prohibition on the Speaker, as I understand it. Therefore, that is the reason for my parliamentary inquiry, Mr. Chairman.

The CHAIRMAN. In answer to the gentleman, the Chair would like to state again that there are rules that the Speaker does not have the right to waive.

Mr. FASCELL. And the one I read is an example of that.

The CHAIRMAN. The gentleman is correct.

Mr. FASCELL. Therefore, we are able to reconcile the previous rulings of the Chair, which is that the present amendment does not contain a direct prohibition on the Speaker to recognize, and therefore, as I understand the rulings of the Chair, if the language of this amendment is adopted, a Member may ask unanimous consent to do what he may not do under this amendment; is that not correct?

The CHAIRMAN. The Chair would like to inform the gentleman at this time that the Chair will not endeavor to place an interpretation upon the amendment now pending before this Committee and for that reason could not give the gentleman an answer to his inquiry.

Mr. ECKHARDT. Mr. Chairman, may I state that as I understand the amendment, it does not purport to limit the Speaker in any way. If a wrong answer, for instance, has been given, and a Member wants to correct that answer, he may ask specifically for unanimous consent to change his answer from yes to no, but it appears in the RECORD that the request was made.

What this gets at is the general request for a revision and extension of remarks so that the man who makes the wrong answer, without ever asking permission for unanimous consent to change it, changes it and at no place in the RECORD does it appear that he was given unanimous consent to change his answer from yes to no.

Mr. SMITH of California. Mr. Chairman, I rise in opposition to the amendment and I am opposed to the amendment to the amendment.

I have sympathy with both gentlemen in connection with the problem, and I do think we have problems in this area. But I think we are going to run into a tremendous amount of trouble if we try to write something like this into the rules.

Title 44 of the United States Code sets forth laws for the Government Printing Office to follow, and the House and the Senate, through the Joint Committee on Printing, interpret the laws as set forth therein. To some extent we would be writing into the rules of the House of Representatives a change in the laws in connection with the Government Printing Office.

I realize the amendment to the amendment suggests we strike out paragraph 3, but if we go down to printing in type face distinctly different, we could cause nothing but confusion with the Government Printing Office.

Then there is a regulation, I think, that if the cost is too great, or the insertions, let us say on Extensions of Remarks, "The Public Printer shall withhold any Extensions of Remarks which exceed economical press fill or exceed production limitations." Sometimes the Member has to come back to the House and say the copy exceeds more than a certain amount, and ask unanimous consent for it to be placed in the RECORD regardless of the excessive cost.

In addition to that, without in any way being critical of our very fine reporting staff, sometimes we do not speak too clearly around here, maybe too fast at times, sometimes it is pretty difficult to get accurately when a number of us are talking at once, and we could have some very definite factual errors in our statements when we get them back unless they are corrected. That could mislead the entire body. The only person who can give an accurate and verbatim account is the individual who made the remarks on the floor.

If we do not give an individual a right to correct his remarks and to make them as accurate and verbatim as possible, the RECORD could be erroneous. I believe we would be making a mistake in writing this into the rules of the House. I believe we could clutter up the RECORD.

I believe that 300 words is the limit for a 1-minute speech. That might be prohibited.

Then, when there are special orders for the day, I am not certain where they would come in the RECORD, if this is passed. I do not know whether they would be at the end, in the middle, during the business of the House, or whether they would get lost in the RECORD.

Mr. Chairman, although I have sympathy for the gentleman's position, I believe it would be bad for us to try to write this into the rules on the floor of the House today. I oppose both the amendment and the amendment to the amendment.

Mr. HAYS. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I have a great deal of sympathy for what the gentleman is trying to do. I would say to the gentleman, I have been a member of the Joint Committee on Printing for a great many years, up to the beginning of this Congress, when I relinquished the chairmanship of the Subcommittee on Printing to take the chairmanship of the Subcommittee on Accounts.

I would say to the gentleman, under the present rules and the present law the Joint Committee on Printing has jurisdiction over the RECORD, and the Joint Committee has not been adamant in maintaining the rules as they were written originally. There have been many changes.

During my tenure one change was the limitation of insertions to a certain number of words.

I will say to the gentleman further, that it is against the rules now to make substantial changes in the language in a revision of remarks, which changes the content or meaning of what was said on the floor. That is already in the rules. The only trouble is, how does one enforce it? One does not enforce it unless the person affected makes a complaint. Frequently, when they read it in the CONGRESSIONAL RECORD, they do not want to raise a fuss about it, they do not want to rise to a question of personal privilege, and they do not want to move to have it stricken from the permanent RECORD.

Again let me reiterate that I am sympathetic with what the gentleman is trying to do. I believe something can be worked out.

I do not want to oppose the gentleman's amendment and ask for it to be defeated, but if we could get the amendment withdrawn, the gentleman could go to the Joint Committee on Printing and make his proposals and let them work out the mechanics of it. I cannot guarantee that they would accept the gentleman's proposals, but I do know from my experience that they would get a friendly reception, and I believe probably would be accepted, and then it would not disturb the whole mechanism which we have now of allowing this committee to supervise the CONGRESSIONAL RECORD.

This is not an easy task and, frankly, it is not done by the committee members. Let me be candid about it. It is done by a bipartisan staff. The staff director is a Democrat. The assistant staff director is appointed by the Republicans. When a rules change is made by the committee, they work out the mechanics of how it is to be done. I am talking about a rules change so far as the composition and makeup of the RECORD is concerned.

I do not want to belabor this, but another thing we worked out during my tenure there—and it was not easy—related to the fact that always, up to a year or two ago, the CONGRESSIONAL RECORD started with the proceedings of the Senate first and those of the House second. We worked out a procedure where they now alternate. Some days the RECORD opens with the House proceedings first, and on the subsequent day with the Senate proceedings first.

That does not seem very important, but it is a matter that we are two coequal bodies.

I do not believe the gentleman has any problem. I believe what he is trying to do ought to be done, and there ought to be some way for a layman who reads the RECORD to know what was really said on the floor as against what was inserted. I believe that can be worked out.

If the gentleman really wants to meet with the committee, I believe they can do it.

Mr. McCORMACK. Mr. Chairman, will the gentleman yield to me?

Mr. HAYS. I yield to the distinguished Speaker.

Mr. McCORMACK. A moment ago you made reference to the makeup of the RECORD where for years the Senate always appeared first.

Mr. HAYS. I want to give the Speaker credit. He is the one who really saw that through.

Mr. McCORMACK. No. I did not want all credit, but I just wanted to have the RECORD show that I had a little something to do with it.

Mr. HAYS. The Speaker instigated this reform.

Mr. STEIGER of Wisconsin. Will the gentleman yield?

Mr. HAYS. I yield to the gentleman from Wisconsin.

Mr. STEIGER of Wisconsin. I appreciate very much the statement that the gentleman from Ohio made and the fact that he made a suggestion. I am more than willing, quite frankly, because I did not think it was possible to amend title IV. I did it in this way, therefore, which is an amendment of the rules. If the gentleman from Texas is willing, I will withdraw the amendment and let the committee get on with its work.

Mr. ECKHARDT. Mr. Chairman, will the gentleman yield?

Mr. HAYS. I yield to the gentleman from Texas.

Mr. ECKHARDT. I understand that the gentleman is referring to the rules of the Joint Committee on Printing.

Mr. HAYS. That is right. Which has jurisdiction over the CONGRESSIONAL RECORD.

Mr. ECKHARDT. It seems to me this amendment properly acts on the conscience of the Members, asking them to enforce the same rule with respect to

material changes. It is for that reason I feel it is quite important that this be made as a change to the rules themselves.

Mr. STEIGER of Wisconsin. Would the gentleman from Ohio yield?

Mr. HAYS. I yield to the gentleman from Wisconsin.

Mr. STEIGER of Wisconsin. My suggestion would be in those circumstances we go ahead and vote on the amendment and I will pursue it with the Joint Committee regardless of the outcome.

The CHAIRMAN. The time of the gentleman from Ohio has expired.

(By unanimous consent, Mr. HAYS was allowed to proceed for 1 additional minute.)

Mr. HAYS. I have no objection to voting on the amendment. I would hope that the amendment would not be agreed to, because I think that the other way is a better way. I will say to the gentleman I think his amendment is subject to a point of order. I knew it when it was offered. I did not make it because I thought under the rule that this comes down here under, you cannot change the jurisdiction or the rules of a committee and this does change the jurisdiction of the Joint Committee, but I did not make the point of order because I thought we ought to have some discussion on this. I think the discussion has been worthwhile, and I hope something comes of it.

Mr. STEIGER of Wisconsin. If the gentleman will yield, I appreciate that. It was my understanding it was rule XI of the legislative committees that was subject to a point of order and the Joint Committee on Printing would not fall under it.

Mr. HAYS. I am talking about the whole subject of the amendment because it does fall under the jurisdiction of the Joint Committee on Printing. There is no question about that. But it is a moot question now, anyhow.

Mr. SISK. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I think that the colloquy here has been worthwhile discussing the situation with respect to the rule. I appreciate the attitude of the gentleman in offering it. As has been indicated, we are sympathetic to it, but since an opportunity will be afforded to pursue it through another method suggested by the gentleman from Ohio, I would ask that the amendment be voted down, and I ask for a vote on it.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Texas (Mr. ECKHARDT) to the amendment offered by the gentleman from Wisconsin (Mr. STEIGER).

The amendment to the amendment was rejected.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Wisconsin (Mr. STEIGER).

The amendment was rejected.

AMENDMENT OFFERED BY MR. CLEVELAND

Mr. CLEVELAND. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. CLEVELAND: On page 39, immediately following line 4, insert the following:

"SEC. —. (a) Clause 1 of rule X of the Rules of the House of Representatives is amended by adding at the end thereof the following new paragraph:

"'(v) Minority Committee on investigations, to consist of fifteen members as follows: Ten members of the minority party and five members of the majority party.'"

"(b) The rules of the House of Representatives are amended by adding at the end thereof the following new rules:

"'RULE XLV

"'MINORITY COMMITTEE ON INVESTIGATIONS

"'1. The Minority Committee on Investigations is authorized, acting as a whole or by any subcommittee thereof, to conduct studies and examinations of any activity of any department, agency, wholly owned Government corporation, establishment, or instrumentality of the Government of the United States or the government of the District of Columbia.

"'2. The Minority Committee on Investigations is further authorized to sit and act at such times and places within the United States, whether the House is in session, has recessed, or has adjourned, to hold such hearings, to require the attendance of such witnesses, and the production of such books, papers, documents, or vouchers by subpena or otherwise, and to take such testimony and records as it deems necessary.

"'3. Subpena may be issued over the signature of the chairman of the committee or subcommittee, or by any person designated by him, and shall be served by such person or persons as the chairman of the committee or subcommittee may designate.

"'4. The chairman of the committee or subcommittee, or any member thereof, may administer oaths to witnesses.'"

Mr. SISK. Mr. Chairman, I make a point or order against the amendment, but I shall be happy to reserve the point of order if the gentleman from New Hampshire wishes to speak on it.

Mr. CLEVELAND. I would appreciate it if the gentleman would reserve the point of order.

The CHAIRMAN. Under the reservation, the gentleman from New Hampshire (Mr. CLEVELAND) is recognized for 5 minutes.

Mr. CLEVELAND. Mr. Chairman, the purpose of this amendment is to establish an investigatory committee which would be controlled by the minority party.

The subject matter of this particular amendment is treated in part at least in two sections of the book, "We Propose a Modern Congress." The first treatment of the subject is in a chapter which begins at page 14 of the book and later in the book there is a chapter written by our colleague, the gentleman from Illinois (Mr. MICHEL), which appears at page 163 of that book. I will ask consent that these be included following my remarks.

Mr. Chairman, one may ask why the minority should be given the control of an investigatory committee. The reason for this is that particularly when the majority party controls both Congress and the executive branch, there has been a feeling—and I think there have been some facts to back up that feeling—that Congress has not exercised its oversight function as vigorously as it should.

I think it can be safely said that even when the minority party in the House does control the executive branch questions will arise which should give the minority party an opportunity to exercise oversight and investigatory functions over the executive branch of the Government which would in my opinion be a very salutary situation.

Of course it can immediately be said that this is something that we who are in the minority, the Republican Party, is asking for, but would not be willing to grant it in the event we became the majority party. I am pleased to be able to inform the membership of this House that there is historic precedent for precisely such a situation.

When the Teapot Dome scandal broke in the 1920's, the Republican Party at that time did control both the House and Senate and the White House. The investigation of that scandal was turned over to a Democratic Senator, Senator Walsh, of Montana.

So, there is solid precedent for this proposal.

Second, there is another precedent for this proposal. In the British Parliament there is a tradition that the chairmanship of the fiscal oversight committee is usually given to a member of the minority party.

Now, Mr. Chairman, I recognize that because of the rule under which we are operating this amendment of mine may be subject to a point of order. At first I did not think it would be because it does not take away jurisdiction from any committee. However, it certainly duplicates the jurisdiction of the Committee on Government Operations.

Therefore, Mr. Chairman, I ask unanimous consent to withdraw the amendment.

The CHAIRMAN. Is there objection to the request of the gentleman from New Hampshire?

There was no objection.

AMENDMENT OFFERED BY MR. CLEVELAND

Mr. CLEVELAND. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. CLEVELAND: on page 39, immediately below line 4, insert the following:

"MINORITY PARTY CONTROL OF ONE SUBCOMMITTEE OF THE COMMITTEE ON GOVERNMENT OPERATIONS

"SEC. —. The Rules of the House of Representatives are amended by adding at the end thereof the following new rule:

"'RULE XLV

"'MINORITY PARTY CONTROL OF ONE SUBCOMMITTEE OF THE COMMITTEE ON GOVERNMENT OPERATIONS

"'A majority of the members of no fewer than one subcommittee of the Committee on Government Operations shall consist of members of the largest minority party in the House of Representatives.'"

And make the necessary technical changes in the table of contents, section numbers and references in the bill.

Mr. SISK. Mr. Chairman, I make a point of order against the amendment.

The CHAIRMAN. The gentleman will state his point of order.

Mr. SISK. Mr. Chairman, I make a point of order against the amendment on the grounds that the amendment also affects the jurisdiction; it changes jurisdiction within the Committee on Government Operations, and in view of the language of the present rules of the House, in clause 8 of rule XI regarding the jurisdiction of the Committee on Government Operations, near the bottom of page 338:

(d) For the purpose of performing such duties the committee, or any subcommittee thereof when authorized by the committee—

And so on, that this language would definitely affect the jurisdiction of other subcommittees of the Committee on Government Operations, and, therefore, is subject to a point of order as I understand the rule under which we are proceeding at the present time.

The CHAIRMAN. Does the gentleman from New Hampshire desire to be heard on the point of order?

Mr. CLEVELAND. Yes, Mr. Chairman.

I did not think, nor do I admit, that this amendment is subject to a point of order. With my previous amendment, I expressed doubt because, although it did not take away jurisdiction from any committee, the establishment of a minority investigatory committee would duplicate the jurisdiction of the Committee on Government Operations and perhaps other committees.

But now, in the amendment I have offered, it simply states:

A majority of the members of no fewer than one subcommittee of the Committee on Government Operations shall consist of members of the largest minority party in the House of Representatives.

I do not see how that can possibly or conceivably be construed to affect the jurisdiction of the Committee on Government Operations. It does not mention the name of the committee; it does not mention the jurisdiction that will be exercised by the committee. If this amendment is adopted the Committee on Government Operations, which will still be in control of the majority, of course, can designate, as the committee to be controlled by the minority, one of the most innocuous of all their committees.

It is the principle that I am striving for here. I have not attempted to designate the subcommittee by name or state what the jurisdiction will be. How can that effect the jurisdiction or change it?

Mr. Chairman, this substitute amendment of mine was drafted quite recently with the assistance of at least one or two members of the Committee on Rules. And I had in mind the very strict rule under which we are proceeding, and they had in mind the very strict rule under which we are proceeding. There is not a single scintilla, by either implication or word, in this particular amendment, that goes to the jurisdiction of any committee. It does not even mention the subcommittee that will be given to the minority party. The only thing it does is to give to the minority party just one—just one subcommittee.

People in speaking of the legislative process speak of settling for half a loaf as better than none. I might say that as far as the principle is concerned here I am attempting to settle for a crumb. One, only one of the eight subcommittees of the Committee on Government Operations will be controlled by the minority. Now, if the Committee on Government Operations in its wisdom chooses to designate, as that committee which they are going to give to the minority, one of the committees with very unimportant jurisdiction or very unimportant duties, that is their prerogative—that is their power—and we recognize they have the power, but I think it would be a healthy thing to have at least one place in the House where the minority can go to have some power over a committee to investigate and call witnesses.

Mr. Chairman, I would be very disappointed if this point of order were upheld because I cannot see how this language can be interpreted as affecting the jurisdiction of the Committee on Government Operations.

The CHAIRMAN. The Chair is ready to rule.

As the gentleman from New Hampshire knows, the House resolution under which we are now operating, House Resolution 1093, specifically provides, in part:

No amendment to the bill shall be in order which would have the effect of changing the jurisdiction of any committee of the House listed in rule XI.

The amendment offered by the gentleman from New Hampshire would change the jurisdiction and the makeup of the Committee on Government Operations to the extent that it would force the Committee on Government Operations to set up a subcommittee for the purpose to which the amendment goes.

Therefore, the Chair sustains the point of order that was raised by the gentleman from California (Mr. SISK), that the amendment violates that part of the resolution under which we are operating and, therefore, for the reasons the Chair has given, the point of order is sustained.

Mr. CLEVELAND. Mr. Chairman, I move to strike out the last word.

Mr. HAYS. Mr. Chairman, I do not wish to cut the gentleman off, but I think it is important on things like this that we should be legislating with a quorum. We do not have 100 Members here, so I make the point of order that a quorum is not present, Mr. Chairman.

The CHAIRMAN. The Chair will count.

Fifty-five Members are present, not a quorum. The Clerk will call the roll.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 240]

Abbitt	Bush	Diggs
Addabbo	Button	Dulski
Albert	Byrne, Pa.	Edwards, La.
Alexander	Carey	Eshleman
Anderson, Tenn.	Celler	Evins, Tenn.
	Clancy	Fallon
Baring	Clark	Flynt
Barrett	Clay	Fulton, Tenn.
Berry	Conyers	Gallagher
Boggs	Cramer	Garmatz
Bow	Cunningham	Giaimo
Brock	Dawson	Gilbert
Brotzman	Dennis	Gray
Buchanan	Devine	Grover
Hawkins	Nix	Roudebush
Hébert	O'Neill, Mass.	Ryan
Ichord	Ottinger	Scheuer
Karth	Passman	Sebelius
King	Patman	Sikes
Kuykendall	Pelly	Smith, N.Y.
Lloyd	Podell	Springer
Lukens	Pollock	Stuckey
McEwen	Powell	Teague, Tex.
Macdonald, Mass.	Price, Tex.	Tiernan
	Rarick	Tunney
MacGregor	Reid, N.Y.	Weicker
Matsunaga	Rivers	Wilson, Charles H.
Mayne	Rogers, Colo.	
Meskill	Rooney, N.Y.	Wydler
Murphy, N.Y.	Rooney, Pa.	Wyman

Accordingly the Committee rose; and the Speaker having resumed the chair (Mr. NATCHER) Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill H.R. 17654, and finding itself without a quorum, he had directed the roll to be called, when 343 Members responded to their names, a quorum, and he submitted herewith the names of the absentees to be spread upon the Journal.

The Committee resumed its sitting.

The CHAIRMAN. The gentleman from New Hampshire (Mr. CLEVELAND) is recognized.

Mr. CLEVELAND. Mr. Chairman, before the quorum call I asked for these 5 minutes to urge the Chair to reconsider its ruling that the amendment I offered was out of order under the rule.

The amendment I offered was very brief. It simply said that a majority of one of the subcommittees of the Committee on Government Operations would be Members of the minority party.

We are proceeding under the rule, House Resolution 1093, and it says:

No amendment to the bill shall be in order which would have the effect of changing the jurisdiction of any committee of the House.

Regardless of the merits of my proposal to give the minority party control of a subcommittee of the Government Operations Committee, regardless of the merits of that proposal, this ruling which states that to afford the minority control of one of the subcommittees of the Government Operations Committee is in effect changing the jurisdiction of that committee to me, at least, is very hard to understand.

There has been talk here about the fact that there are a lot of amendments being offered. It would seem to me that if the strictness of this ruling is going to be applied to other amendments, there need be no fear about talking this bill to death or, for that matter, loading it up so it will sink. The strictness of this ruling would almost indicate that we have in effect a closed rule.

If simply suggesting that the constitution of one subcommittee of the eight subcommittees that make up the Government Operations Committee be given to the minority, is interpreted as changing the jurisdiction of that committee, then it seems to me that almost any one of the amendments that I have heard discussed here at some length on the floor somehow or other, remotely or indirectly, could be interpreted as effecting or changing the jurisdiction of some committee.

I think the House Rules Committee

and the House Administration Committee has in effect some jurisdiction over almost everything that we have been debating for the past 4 or 5 days. I would hope that the Chair would reconsider this ruling, because I think the ruling is unnecessarily strict in this connection, and it is regrettable that I will not have an opportunity to offer the amendment, which I think is significant and important.

Mr. GERALD R. FORD. Mr. Chairman, will the gentleman from New Hampshire yield?

Mr. CLEVELAND. I yield to the gentleman from Michigan.

Mr. GERALD R. FORD. The proposal that the gentleman sought to offer is a modification of a proposal that he and others, including myself, have sought to develop over the last 4 or 5 years. I think there is considerable merit to the substance of the idea. Obviously, the House is not in a mood to embrace such a far-reaching proposal, but there is precedent for the idea in the Government of Great Britain and the Teapot Dome situation. It seems to me that the gentleman should be commended for seeking to promote this thought, even though under the circumstances it is not possible to see it debated and to see it voted on in the House of Representatives.

Mr. CLEVELAND. I thank the gentleman. As I have said, it is regrettable that this proposal, which has been the subject of considerable discussion and debate and, as I have mentioned earlier in my remarks, has been written about in various periodicals and books, cannot be debated and voted on. The ruling that to change the constitution of a subcommittee of the House Government Operations Committee is in effect changing its jurisdiction, is regrettable to me. This ruling denies the House an opportunity to actively consider and vote on this measure.

The references to this proposal in "We Propose: A Modern Congress" to which I referred earlier follow. The first few paragraphs from my chapter on staffing, and second, Mr. MICHEL'S entire chapter:

WE PROPOSE: A MODERN CONGRESS

CHAPTER I

In this connection, I wish to mention a Republican-sponsored proposal to give to the minority party control of an investigative committee of the House whenever the majority party controls both houses of Congress and the executive branch. Sponsors of the bill are headed by Minority Leader Gerald Ford of Michigan, and include Congressman Robert H. Michel of Illinois, whose chapter in this book is devoted solely to a detailed explanation of the proposal.

Here I merely want to point out that the adoption of the Republican proposal would ease considerably some of the problems of a minority party seeking to fulfill its functions under the present state of affairs. It would help insure against whitewashes of wrongdoing and gross errors on the part of government officials.

While outsiders and members of the majority party may be forgiven a feeling of suspicion at Republican motives in making the proposal, in refutation of these I point out that there is good Republican precedent for the idea.

In 1923, when both the executive branch and both houses of Congress were controlled by the Republican Party, rumors of improprieties surrounding the leasing the Teapot Dome oil reserve whirled through the Capital. As they grew to a point requiring formal investigation, Republicans prevailed upon Democratic Senator Thomas J. Walsh of Montana to take charge of the investigation. This is a dramatic example of a case in which Republicans gave to the Democrats control of an investigation into a major scandal involving high-ranking members of a Republican Administration. The results were salutary and of great benefit to the whole country. There should be formal provisions enacted so that this would always be the case.

(It should also be noted that the British House of Commons has a Committee of Public Accounts whose chairman is by tradition a leading member of the Opposition, usually a person who has been Financial Secretary of the Treasury. The committee is charged with responsibility for insuring that all public money is spent in the manner intended by Parliament. It promotes economy and efficiency and helps to maintain high standards of morality in all public financial matters.)

REORGANIZATION OF THE COMMITTEES ON GOVERNMENT OPERATIONS AND MINORITY CONTROL OF INVESTIGATION

(By Robert H. Michel, M.C.*)

The President of the United States is the sole executive authority in the United States. The Constitution vests the executive power in him, with little guidance as to the manner of its exercise other than that he shall take care that the laws be faithfully executed. As Commander-in-Chief of the Armed Forces, he can order the military forces of the United States virtually anywhere he chooses. For example, the substantial increase of military forces in Vietnam was carried through within the powers invested in the Presidency. Similarly, the decision to intervene in Korea was the President's.

In contrast, the political leadership of the Soviet Union is divided. As Chairman of the Council of Ministers, Kosygin is the formal head of the Soviet Government and thus exercises all the formal authority inherent in that office. As General Secretary of the CPSU, Brezhnev is head of the Soviet Communist Party, which is the real source of political power in the Soviet system. And as a member of the Politburo, Kosygin shares in this power. Under present conditions both sources of power, governmental and political, complement one another, but it is unlikely that either the Soviet Premier or General Secretary could act independently on a crucial question, for example, making a military commitment in the same manner as the President of the United States, who commands sole executive authority.

In the American constitutional system it is extraordinarily difficult to remove a President before his 4-year term of office ends. The most significant attempt of this sort, the impeachment of President Andrew Johnson, failed. Thus, except for death or virtually total disability, the President can exercise his authority for four years and even eight if re-elected.

Tenure of office for the political leader is not necessarily a guarantee in the Soviet political system, except during the Stalin years of totalitarianism. Within a few months after assuming Stalin's mantle, Malenkov was divested of his authority as General Secretary of the CPSU, retaining only the Premiership of the Government. In February, 1955, Malenkov was forced to resign from this office to be replaced by Bulganin. Khrushchev retained the position of General Secretary of the Party. In July 1957, Bulganin was removed, and Khrushchev assumed both positions as Premier of the Government and First Secretary of the Party. But even in this position his power was limited by various political forces acting within the Soviet political system. Some scholars have referred to Khrushchev's leadership not as a dictatorship but rather as a collegial leadership in which he played a major role. Of course, Khrushchev himself was removed from both offices in October 1964. And there are no assurances that Brezhnev and Kosygin will hold their posts for two, three, four, or any determined number of years.

Thus, by virtue of having a constitutional tenure of four years and perhaps even eight, it could be said that the President has an advantage in exercising the power he holds over that of the present Soviet political leadership. This power has been building up for over 30 years; so that the omnipotent executive has become the nation's greatest spender in its taxpayers' money in all its peacetime history. The Chief Executive concerns himself with the air we breathe and the water we drink, with junkyards and with beauty—not to mention building houses for us, planning our cities, and reclaiming blighted areas. All of these things require money—tax money. Moreover, attention to these matters leaves the executive short on time to defend the nation against its enemies and to conduct its foreign affairs, which are the primary duties laid upon him by the Constitution.

Very recent events demonstrate dramatically the growing power of the executive. The *New York Herald Tribune* of November 9, 1965, reported:

"There is a more fundamental issue in the President's crackdown on aluminum than his use of the stockpile for purposes clearly beyond the intent of Congress in authorizing its creation. Mr. Johnson has moved his Administration into the business of administering industrial prices. . . . The proper extent of the government's coercive powers is . . . of much greater significance than whether the price of aluminum should be a half-cent higher or a quarter-cent lower. Mr. Johnson is concerned over inflation, and rightly so (though not sufficiently concerned to balance his own budget). . .

"We have a far better mechanism than Presidential judgment for determining 'justified' price levels; the forces of a free market. . . . In the short run, prices may go higher than they should; in the long run, they could hardly be sustained in a competitive market . . . The President has every right to 'state the public interest,' as he himself might put it; but when he begins trotting out the Federal arsenal of economic weapons, he risks launching a dangerous spiral of his own—a spiral of coercion that is not easily stopped."

The matters covered by the executive directly affect the daily lives of millions of people. There is no question that big government has been getting bigger as well as more intrusive.

Minimal effective checks on executive power require that: (1) each individual whose interests are directly affected by government action shall, if he wishes, have a meaningful day in court (not necessarily a court of law). If before a congressional committee, he should be allowed to present his case upon the assumption that someone with real authority will in good faith seriously consider his statement; (2) the congressional committee should be independent and objective—free from external direction by party or executive officials; and (3) the congressional committee should reveal to the public the facts presented and the details of procedure, thus avoiding either arbitrary

---

Footnotes at end of article.

departures from general rules or unfair application of general rules.

Committee decisions are accepted in part because they are supported and enforced by the power of the Congress. They are also accepted because they are regarded as fair and just in their own right and are viewed as the product of a legislative body which is regarded as serving a common need and indispensable function in our society.

There are certain attributes which we usually look for in determining the fairness and justice of a committee decision in its own right, as far as procedure is concerned. We are more willing to attribute these qualities to judgments arrived at (1) manifestly on the basis of the weight of testimony; (2) after all parties brought forward by both the majority and minority[1] have had a chance to present their case fully; (3) undominated by the special interest of the chairman in the outcome of the investigation; or (4) not on the initiative of the chairman, but at the request of the minority.

Committee decisions often depart widely from these standards for what are deemed compelling reasons. Thereby, committees may forfeit public confidence in their fairness and justice and rely for acceptance instead upon public respect for Congress.

For example, committee members may rely partly on information and arguments presented by the Administration without holding a full hearing for presentation of conflicting views. Chairmen may consent to committee action only after pressure from the news media and even then may have a special interest in the outcome.

Such factors greatly weaken the moral force, so to speak, of committee decisions. But the possibility of investigation by the government operations committees under minority control, in those cases where these conditions are present, may do much to restore the moral force otherwise lacking and thus secure public acceptance of the fairness and justice of congressional actions. The existence of minority control would be a constant reminder to the official that excessive actions risk legislative inquiry and reversal. It would be a constant source of assurance and security to the individual citizen that he has a forceful method of vindicating his rights against the executive before an independent tribunal.

If the executive process is part and parcel of a necessary delegation of power to government officials to enable them to handle adequately the problems of modern society, then congressional review seems essential to insure that this power be exercised conscientiously, within the minimum demands of procedural fair play, without the requirement of a judicially determinable violation of constitutional or statutory rights. The delegation of discretionary powers to the minority party in Congress is neither new nor foreign to a congressional "rule of law." What is novel is the enormous amount of discretion entrusted to modern executive officials.

Rule XI, section 691, 8(c)(2), of the House of Representatives, states that the Committee on Government Operations "shall have the duty of studying the operation of Government activities at all levels with a view to determining its economy and efficiency." Control of the Executive has long been one of the main functions of the Congress. For example, from 1789 to 1925 there were upwards of 300 congressional investigations of executive conduct. Since Congress has yielded more and more authority to the executive, I feel it must seek ways of insuring that the executive carries out Congress' intentions. For that reason, I introduced H.R. 9252 to provide—(See Appendix III for full text.)

"That the majority of the membership (including the chairman) of the Committee on Government Operations of the Senate and House of Representatives, respectively, shall be composed of members of a major political party other than the political party of which the President of the United States is a member."

The requirement that the chairman be a Member of the minority party would not permit the chairman to play the part of an autocrat with impunity since the chairman and the committee would have to depend upon the whole House or Senate for legislative acceptance of their proposals. But it would tend to give the chairman a spirit of independence and freedom to criticize the operations of the executive.

Quite often a minority Member will have information which it would be in the public interest to disclose in the press; a newsman will recognize this but will be reluctant to use the information which does not have an "official stamp". H.R. 9252 would provide an official minority outlet to the news media.

Although I have been unable to find any legislative precedents for H.R. 9252, there certainly are many precedents for minority control of investigations—the most famous being the minority investigation of the Teapot Dome scandal. In 1923, the executive and both houses of Congress were under the control of Republicans, but Senator Thomas J. Walsh, Democrat of Montana, was prevailed upon to take command of the Public Lands Committee to investigate improprieties surrounding the leasing of the Teapot Dome oil reserve.

The most recent instance occurred when Senator Harry Byrd was permitted to retain his chairmanship of the Joint Committee on Reduction of Nonessential Federal Expenditures in the Republican 80th and 83rd Congresses, although the executive was not Republican in the 80th Congress. Also, in the 63rd Congress, when the Senate had 72 standing committees, 51 Democrats, and a one-committee-chairmanship rule, 21 committees were perforce chaired by Republicans.[2]

It is true that in the early days of the House, and at least up through 1898 in the Senate, some standing (and select) committees had majorities on them from the minority party or were chaired by a Member of the minority party, but to our knowledge the resolutions or rules creating them did not specify such a result. It usually occurred because the committees were relatively minor in nature, or because distinction was given to a Member with long service in a particular area.

In his *Forge of Democracy*, Neil MacNeil (p. 157) states:

"Down until the Civil War, in fact, it was not unusual for the Speaker to give political control of some of the less important House committees to the political minority and even appoint minority stalwarts to be chairmen of them. John Quincy Adams, for example, normally chaired a House committee, no matter which party controlled the House."

McConachie, *supra*, records that as a result of committee elections in the Senate in 1816, the Finance Committee came under minority control, and the Chairman of the Senate Committee on Commerce and Manufactures was a Member of the minority (p. 275). He also records that the Chairman of the Senate Committee on Pensions in 1845 was a Member of the minority (p. 282), and that in the early days of the House, some committee chairmen were from the minority (p. 139). Samuel Randall, of Pennsylvania, a Democrat and Speaker during the 44th and 45th Congresses (1876, 1878), was Chairman of the House Committee on Public Expenditures (a minor committee) in the Republican controlled Congress of 1883 (p. 140)

In 1898, of 59 Senate committees in a Republican-controlled Senate, 11 were chaired by Democrats and 2 by Populists (p. 293).

In all such instances, to our knowledge, however, these situations occurred from factors other than specific resolutions and rules specifying minority control or minority chairmen. We thus have been unable to find any precedents for H.R. 9252 as a considered and definite policy of Congress.

Minority parties have formed their own *ad hoc* committees on an informal basis, such as the Republican Congressional Food Study Committee, which was created in 1943. It consisted of 44 or 45 Members of the Republican Party in the House, under the chairmanship of the Honorable Thomas Jenkins of Ohio,[3] but it had no official sanction or authority.

Of course, when the Presidency has been in control of one party and one or both houses of Congress have been in control of the other party, congressional committees will be created of majorities in the party not of the President, but such situations are the result of politics and not of determined policy.

The provisions in the House rules relating to selection of committees are found in Rule X:

"1. There shall be elected by the House, at the commencement of each Congress, the following standing committees: . . .

"2. The Speaker shall appoint all select and conference committees which shall be ordered by the House from time to time.

"3. At the commencement of each Congress, the House shall elect as chairman of each standing committee one of the members thereof; . . ."

The provisions in the Senate rules relating to selection of committees are found in Rule XXIV:

"1. In the appointment of the standing committees, the Senate, unless otherwise ordered, shall proceed to ballot to appoint severally the chairman of each committee, and then, by one ballot, the other members necessary to complete the same. A majority of the whole number of votes given shall be necessary to the choice of a chairman of a standing committee, but a plurality of votes shall elect the other members thereof. All other committees shall be appointed by ballot, unless otherwise ordered, and a plurality of votes shall appoint."

Taken literally, the rules of both houses do not prohibit the selection of committees controlled by a minority as long as the consensus in both Chambers is in agreement with such a prospect.

Secondly, the concepts of separation of powers and checks and balances support the thesis that the committee in each house charged primarily with oversight of the expenditure of funds by the executive branch and the efficient operation of that branch should be in the control of the party opposite to the President's. The swing of power away from Congress to the executive, the vast authorization of administrative powers by Congress to the executive branch, the huge growth of that branch, the great enlargement of the policy and legislation proposing functions of the executive, and the consequent need for a thorough oversight by Congress are conditions which support H.R. 9252.

Perhaps the major function of Congress today is oversight of the sprawling administrative structure; this function is necessarily diminished when the party of the President and the majority party in Congress (and thus the majority on every committee) is one and the same.[4]

The most certain way to assure that funds are being expended by the administrative agencies in accordance with law, that waste and misfeasance will be ferreted out, is to place general authority regarding oversight

Footnotes at end of article.

of expenditures and efficiency in committees where the party opposite to that of the President is given control. It is the most certain way that the Congress and the public will be fully informed, that the public welfare is receiving maximum benefit, and that "whitewashing" will be eliminated.

The principle behind the bill was expressed by John Stuart Mill, in his *Representative Government* (Everyman Edition, page 239):

"Instead of the function of governing, for which it is radically unfit, the proper office of a representative assembly is to watch and control the Government; to throw the light of publicity on its acts; to compel a full exposition and justification of all of them which anyone considers questionable; to censure them if found condemnable; and, if the men who compose the Government abuse their trust or fulfill it in a manner which conflicts with the deliberate sense of the Nation, to expel them from office, and either expressly or virtually appoint their successors."

Joseph P. Harris, in his *Congressional Control of Administration,* (1964) (pp. 292–293), states:

"Congressional investigations of administration, and especially of charges of mismanagement or misconduct of executive officers, are seldom free of partisanship. Many result in divided reports, the members of one party absolving the executive officers of any serious blame for shortcomings, and those of the other party finding them guilty of misconduct or incompetence as charged. This obvious partisanship seriously impairs the utility of the inquiry except as a weapon of party warfare; the public is more likely to be confused than informed by such conflicting findings."

Lindsay Rogers, in *The American Senate,* (1926) (p. 202), states—

". . . party control in the House of Representatives is now so strong as to shut off that body from embarrassing inquiries into Executive performances. Only when the majority of the House and the President belong to different political parties do the latter's agents suffer any scrutiny. This, for example, was the case during Mr. Wilson's last 2 years. Then 51 congressional investigations were in progress. But when a President has a Congress of his own political faith, inquisitions are not so frequent, their institution by the House of Representatives is extremly rare, and Senate majorities are not anxious to act."

Dr. George Galloway, in his *The Investigative Function of Congress,* (supra, page 59) states:

"In the final analysis, therefore, investigation may be viewed as the legitimate function and duty of a political party. It would appear to be part of its duty to reveal the errors, shortcomings, and misdeeds of the representatives of the other party in office."

He then lists some of the purposes of the investigative function (pp. 64–65).

"It is a safeguard against imbecilities as well as corruption. It is the American method of achieving ministerial responsibility without reducing power. It is one of the checks in a system of checks and balances. . . .

". . . it is a substitute for a system of administrative courts needed to protect the citizen from the arbitrary action of subordinate officials."

". . . it is a security against the misuse of opportunity. There is always the danger that public positions will become places of profit, that office will be employed as a means of private plunder."

But, he reports (pp. 66–67)—

". . . in order to secure the appointment of a committee of investigation, the support of a majority of those present in the Chamber is necessary, which is difficult to obtain when both the majority of the House and the Executive belong to the same party. The administration leaders will resort to every parliamentary stratagem to avert the danger. Many inquiries are proposed which fail to receive the support of the Rules Committee or the House and consequently fall through. Others are authorized but never reach completion. . . ."

Possible examples of such consequences in recent years might include the TFX investigation, the Bobby Baker investigation, the failure to investigate alleged pressure put upon federal employees to contribute to Democratic "Galas," and the considerable activity of the Legislative Oversight Subcommittee of the House Interstate and Foreign Commerce Committee during the Eisenhower years as contrasted with its relative inactivity since 1961.

As Dr. Galloway points out in his book *Congress and Parliament.*

"The use of committees of inquiry by legislative bodies dates back to the practice of the British House of Commons in the seventeenth century. The Commons used them in disputed election cases as early as the end of the sixteenth century, and as an aid in the legislative process after 1688. Later, the inquisitorial power was assumed by the American colonial assemblies, which modeled themselves after the House of Commons, and asserted the same privileges. The practice of the Continental Congress and of the state legislatures in the period following the Revolution furnished further evidence of the heritage of this device by U.S. legislatures. Likewise, the Federal Congress after 1789 assumed that the legislative power implied the use of committees of inquiry with power to send for persons and papers."

The British still have devices for the efficient and expeditious conduct of investigations that Congress could well copy. Since 1861, the select committee of Public Accounts of the House of Commons has been a critic of Treasury administration, and by reporting its findings to the Commons has fastened financial responsibility on the executive. Secondly, about half of the time of the House of Commons during a normal session is devoted to the criticism of government policy and administration, and is largely controlled by the opposition.

The select committee on Public Accounts has 15 members and is chaired by a member of the opposition. The financial control exercised by the Accounts Committee is both retrospective and deterrent. As Basil Chubb states:

"Select committees cannot, of course, ensure efficiency and economy; only the efforts of the administration itself can do that. But they are sufficient to assure the House of Commons that its wishes are carried out, that government is conducted honestly and faithfully, and that where business is not transacted efficiently there is a fair chance that notice will be taken. . . . Active select committees, criticizing and appraising the conduct of public business, have a powerful effect at once deterrent and stimulating, and they go as far as it is possible to go under our present system of government to enable the House of Commons to see that it gets twenty shillings' worth of goods for every pound it spends." [5]

Like our own Committee on Government Operations, the Accounts Committee is effective largely because it has at its disposal the reports and investigations of the Comptroller and Auditor General. Also like our Government Operations Committee, the Accounts Committee is not concerned with financial policy (which is reserved for our Appropriations Committee), but rather with insuring that government expenditure conforms with the orders of the House of Commons and that public business is conducted faithfully and economically.

However, unlike our present Government Operations Committee, the Accounts Committee is always chaired by the opposition. Therefore, the Accounts Committee would receive and examine the reports of the Comptroller and Auditor General and would submit such recommendations as it saw fit in connection with such reports, a function not always performed by our government operations committees with respect to reports of our Comptroller.

With respect to the second point, Dr. Galloway asserts:

"As it works in the English Parliament, question-time has several beneficial results. It keeps the ministry alert to the temper of the Commons and keeps the civil service on its toes. It provides a safety valve for the daily escape of parliamentary steam that might otherwise accumulate and explode in sensational investigations. It directs the attention of the Cabinet to inconsistent or conflicting departmental policies and programs and to instances of administrative inefficiency or private grievance." [6]

I am reluctant to suggest the creation of special investigating committees and would leave the performance of the investigative function of Congress to its standing committees. I believe that H.R. 9252, without the need for any additional specific language, provides for the effective devices just discussed: (1) more significant use of the reports of the Comptroller General and, (2) public discussion of government policy and administration, thereby eliminating executive secrecy.

I also favor codes of fair conduct voluntarily adopted by congressional committees and codes of fair play mandatory upon all congressional investigating groups by statute or standing order.

One must be realistic about the current chances for adoption of any one or more of the many proposals for congressional reform including: "resident agents for Congress," "joint committee on legislative-executive relations," "automated information systems," use of "congressional specialists," "institutional devices for improved congressional intelligence,' establishment of "oversight calendars" pertaining to oversight of the Administration, and, many other fine recommendations.

And what I propose in H.R. 9252 is a long, long way from every getting a favorable vote with the present complexion of the Congress.

Hearings before the Joint Committee on the Organization of Congress were held in 1945, and many alarms for reform sounded at that time are still ringing over 20 years later. Dr. W. Y. Elliott, professor of Political Science at Harvard, then Vice Chairman of the War Production Board, testified on June 26 of that year that there had been some improvement over the early days of President Franklin Roosevelt's first administration, but "there is still in my judgment need for the closest legislative scrutiny of the actions taken by the executive and administrative agencies of the Government."

Dr. Elliott pointed out that the operation of committees through the service of hearings is a method of getting *ex post facto* accountability of the administrative agencies—a problem that is still with us today. Reorganization of the committees on government operations, as I have outlined, will, by its nature, prevent errors at the formative stages, both of legislation and of administrative policy.

Dr. Elliott reminded the Committee—

"that legislative and representative government is on trial the world over as to its ability to survive in a period when crises are recurrent and when often the very safety of the Nation or its economic stability may be involved as much by delay as by ill-considered decisions."

He also emphasized:

Footnotes at end of article.

"The Committee on Appropriations of the House reviews the budget of every part of the Government. But it cannot in the nature of things do more than express the views of the committee as to the functions being performed. The power of the purse is always an ultimate power in the legislative body and a very useful one." [7]

The fundamental purpose of H.R. 9252 is to assure that funds are being expended by the administrative agencies in accordance with law and that waste and misfeasance will not go undetected. With the swing of power away from the Congress to the executive, the vast authorization of administrative powers by the Congress to the executive, the huge growth of the executive, and the great enlargement of the policy and legislative proposing functions of the executive, the need for thorough and persistent oversight by the Congress of administrative activities is heightened. The interest of good government demands determined, persistent, and independent examination into and evaluation of the manner in which the executive branch is carrying out the legislative mandates under which it operates. The function of critically analyzing executive use of legislative authority and the transactions which flow therefrom is one of the most important responsibilities the legislative branch must fulfill. Fulfillment of this responsibility is essential to an informed citizenry, the very touchstone of our democratc processes. With the majority party in Congress the same as the party of the President, thereby giving rise, under present procedures, to each committee being chaired by a member of the President's party and having a majority of its members of the same political party, it is only realistic to recognize that a climate exists in which the important oversight function of the Congress is subject to political pressures inimical to the necessity for full disclosure and critical scrutiny of executive actions.

My bill proposes to assure more aggressive inquiry by the Congress into executive actions through removing the political compatibility between membership of the key oversight committees of both houses and the executive. I believe the proposals contained in the bill—that the chairmanship and majority membership of the House and Senate committees on Government Operations be comprised of Members of a major political party other than that of the President—would provide the most direct and efficient way to assure that inappropriate political considerations will not obtrude upon the oversight function.

I realize that the matter of how any committee of the Senate and House is to be organized is one peculiarly within the provisions of each particular Congress to resolve unless a constitutional amendment is enacted. I am also well aware of the fact that the problems which we are attempting to overcome are ones which are rooted in the political processes of our governmental structure.

Therefore, I think it is important to point out that the various proposals for congressional reform are not the only means available for minimizing the degree to which the oversight functions of the Congress are subject to political persuasions.

It is in the very interest of obtaining the independent examination and evaluation of executive activities, which are essential to the proper functioning of our governmental processes, that the Congress in 1921 established the General Accounting Office. The General Accounting Office was created as an independent agency in the legislative branch and is headed by the Comptroller General of the United States under a 15-year appointment. The Comptroller General is not subject to removal except for cause and he may not be reappointed for a second term. The office functions as an agent of the Congress. As an arm of the Congress, one of the main functions of the General Accounting Office is in the area of great concern which led me to introduce my bill—to assure the conduct of administrative agency programs in accordance with law and to detect waste and misfeasance where they occur. In executing this important function the General Accounting Office has consistently been guided by the principle that its effectiveness depends upon a reputation for independence of action and objectivity of view. Not only has it remained completely free from political influence, but I believe that it is constantly alert to the dangers of being placed in a position where its actions and decisions could be construed as being motivated by political considerations.

There is no need to detail the extent to which the General Accounting Office is responsive to the undertaking of examinations and investigations at the request of the Congress, its committees and its individual members. Nor is it necessary to detail the valuable work undertaken by that office upon its own initiative in carrying out its statutory responsibilities. A cursory review of the annual reports of the Comptroller General and the direct contacts members of both houses have had with the office would make obvious the fact that the General Accounting Office is a valuable tool toward accomplishment of the objectives my bill is designed to attain. For example, during the 88th Congress, the Comptroller General of the United States submitted a total of 668 audit reports and other communications to the Congress on fiscal and related operations of the Government. During the 1st Session of the 89th Congress there were 75 different references in the *Congressional Record* relating to use by minority members of General Accounting Office reports and recommendations. Hearings conducted by the various congressional committees are replete with references to findings of the General Accounting Office.

Reports of the General Accounting Office are available for whatever use the minority will make of them. These reports and responses to inquiries from Members of the Congress contain objective views with respect to the issue covered therein and recommendations for corrective actions indicated. If the minority concludes that the subject of a General Accounting Office report or any other subject indicates a need for further investigation, within the purview of that Office as a nonpartisan, nonpolitical agency of the Congress, it is free to bring that matter to the attention of the Comptroller General with a request that he furnish advice on his findings.

A heightened appreciation by all the minority Members of the valuable assistance available to them through the services of the General Accounting Office, together with an increased utilization of those services to help bring to light matters relating to Government operations and expenditures, might go a long way toward obviating any immediate need for committee membership realignments as put forth in my bill.

However, in the final analysis, I believe that a reasonable man would agree that it is a fact that the substance of our desires cannot, in reality, be completely achieved through greater minority use of the General Accounting Office. It would not appear, particularly from some of the examples to which I have referred, that the assistance the Government Accounting Office could render in such situations would be sufficient to accomplish our purposes.

The efforts of the General Accounting Office are no substitute for investigation by congressional committees. The General Accounting Office has no power of subpoena: it is not organized and does not operate in the context of conducting hearings for the taking of testimony regarding factual matters which might be in dispute. To say that the efforts of the General Accounting Office are not a substitute for H.R. 9252 is not to say, of course, that the General Accounting Office cannot be of considerable use to minority Members of a committee who desire to obtain information.

Obviously, no need would exist for H.R. 9252 if one or both houses were controlled by the major party other than the President's. This is probably the best argument for the enactment of H.R. 9252 and the most realistic as far as presenting this to the Congress for a vote.

Since 1858 there have been 16 instances of one or both houses of Congress controlled by the President's opposition party:

Congress and President

86th, R—Eisenhower.
85th, R—Eisenhower.
84th, R—Eisenhower.
80th, D—Truman.
72nd, R—Hoover.
66th, D—Wilson.
62nd, R—Taft.
54th, D—Cleveland.
52nd, R—B. Harrison.
50th, D—Cleveland.
49th, D—Cleveland.
48th, R—Arthur.
46th, R—Hayes.
45th, R—Hayes.
44th, R—Grant.
36th, D—Buchanan.

The effect of opposition control of one or both houses goes far beyond the provisions in H.R. 9252 and surely the nation has been the better for the checks and balances in our history. In fact, notwithstanding the statements by some political scientists that the magisterial and doctrinaire years between the 72nd and 80th Congresses did irreparable harm to our system of government, any one or all 16 instances cited above could very well have saved this nation from executive dictatorship. Some form of opposition control should not be left to chance.

As Lord Acton said, "Power tends to corrupt; absolute power corrupts absolutely." We pointed out in the beginning that a President whose party controls both houses of the Congress has, in some respects, more power than that of the present Soviet political leadership. Caesar took in hand the army, the empire, and the opposition. "All is Caesar's"; there was no opportunity for what we would call legislative oversight. Thus, the birth of executive dictatorship was the beginning of the decline and fall of the Roman Empire.

Our three-branch system of government has helped to prevent a dictatorship from arising in our nation. The deterrent to dictatorship would be strengthened by the existence and operation, on a regular basis within the legislative branch, of minority control of the investigations and reports of the powerful committees on government operations.

FOOTNOTES

* A Member of the House Committee on Appropriations, Mr. Michel was first elected to Congress in 1956 and has served on the Government Operations Committee. He represents the 18th Congressional District of Illinois and served as administrative assistant to his predecessor in office.

[Mr. Michel's article was delivered as a speech on the Floor of the House April 25, 1966.—Ed.]

[1] The word "minority" will refer to the major minority party when both Houses of Congress are controlled by the same major party as that of the President, unless otherwise indicated.

[2] A search through Hinds' and Cannon's *Precedents of the House of Representatives,*

as well as Haynes' volumes on the U.S. Senate, and other volumes on Congress, including *Congressional Committees*, L. G. McConachie (1898); *The Jeffersonians*, Leonard White (1954); *Government by Investigation*, Alan Barth (1955); *Congressional Investigation Committees*, Marshall E. Dimock (1929); *Congressional Control of Administration*, Joseph P. Harris (1964); *The History of Legislative Methods in the Period Before 1825*, Ralph V. Harlow (1917); *The American Senate*, Lindsay Rogers (1926); *History of the House of Representatives*, George B. Galloway (1961); *Forge of Democracy*, Neil MacNeil (1963); *Party Government in the House of Representatives*, Paul D. Hasbrouck (1927); *Congressional Investigations*, Ernest J. Eberling (1928); *The Investigative Function of Congress*, George B. Galloway, 21 American Political Science Review, 47 (1927); *Legislative Procedure*, Robert Luce (1922); The United States Senate, 1787–1801, Senate Document 64, 87th Congress, 1st Session, uncovered no instances of the adoption of a bill such as H.R. 9252. All resolutions providing for investigations by standing or select committees that are produced in Hinds's and Cannon's Precedents merely provide for committees of a specified number, and in a rare instance, during the 1920's, a specification that the select Senate committee be composed of three members of the majority (Republicans) including one "progressive" Republican and two members of the minority (Democrats). Cannon's, *Precedents of the House of Representatives*, vol, VI, par. 364.

The general rule, particularly over the last hundred years, seems to have been committee representation in accordance with party strength in both Houses. *Ibid*, vol. VIII, pars. 2184, 2187, 2188. Hinds' *Precedents of the House of Representatives*, vol. IV, pars. 4467, 4477, 4478, 4551.

AMENDMENT OFFERED BY MR. MEEDS

Mr. MEEDS. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. MEEDS: On page 39, immediately below line 4, insert the following:

"DEBATE ON MOTION TO RECOMMIT WITH INSTRUCTIONS AFTER PREVIOUS QUESTION IS ORDERED

"Sec. — Clause 4 of Rule XVI of the Rules of the House of Representatives is amended by adding at the end thereof the following new sentence: 'However, with respect to any motion to recommit with instructions after the previous question shall have been ordered, it always shall be in order to debate such motion for ten minutes before the vote is taken on that motion, one half of such time to be given to debate by the mover of the motion and one half to debate in opposition to the motion'."

And make the appropriate technical changes in section numbers and references, as necessary.

(Mr. MEEDS asked and was given permission to revise and extend his remarks and insert the names of the 71 cosponsors of the amendment.)

Mr. MEEDS. Mr. Chairman, the Members will be happy to know that after the fiasco of yesterday with this amendment, I have taken the precaution of checking it with the counsel on both sides of the Rules Committee, with the Parliamentarian, and with a number of other people in the House—indeed with everyone except the House Restaurant Committee, and I am looking for them.

We seek by this amendment to change clause 4 of rule XVI and to guarantee a minimum of 10 minutes' debate on a motion to recommit with instructions, 5 minutes for the person who proposes the amendment, and 5 minutes in opposition to that amendment.

I submit to this House that probably all Members are aware that often the most important motion of any bill on any day occurs with the motion to recommit. Yet, there is no guarantee of time to explain what are often very complex motions covering a number of sections in a bill. Under the provisions of this amendment we would have at least 10 minutes to discuss it.

Mr. ARENDS. Mr. Chairman, will the gentleman yield?

Mr. MEEDS. I yield to the gentleman from Illinois.

Mr. ARENDS. Mr. Chairman, I am asking for information.

Since the motion to recommit is the right of the minority, would this mean the mover of the motion would have his 5 minutes, and then the minority would have the right to the other 5 minutes?

Would this remain with the minority?

Mr. MEEDS. The 5 minutes would be by the mover of the motion.

Mr. ARENDS. Which would be a minority side Member?

Mr. MEEDS. Yes, automatically, and I assume the other 5 minutes would probably go to the committee chairman on the other side.

Mr. ARENDS. I do not necessarily think that would be true, because that would be taking it away from the minority, and it is the right of the minority to explain this particular motion to recommit, which is a minority privilege.

Mr. MEEDS. I think the gentleman will agree the purpose is to have a full disclosure of that motion—at least as full as possible within 10 minutes—and, therefore, both sides of that should be explained.

Mr. ARENDS. We ought to have that on this side.

Mr. STEIGER of Arizona. Mr. Chairman, will the gentleman yield?

Mr. MEEDS. I yield to the gentleman from Arizona.

Mr. STEIGER or Arizona. Mr. Chairman, I think this is a point worth commenting on momentarily. As the gentleman from Washington recognizes, as I am sure he does recognize, it is true normally and conventionally the majority would have the other 5 minutes, but not necessarily. It is entirely possible under the gentleman's amendment to have both halves of the time by individuals from this side if there should be no Member on the majority side who desired to oppose.

Mr. MEEDS. If there were no opposition on this side, that is correct. I am sure the Members of this House can recall much better than I a number of instances when, because of a lack of time with the motion to recommit, there has been a lack of information and a lack of knowledge about what actually we are voting on when it comes time to vote on the motion to recommit. I recall recently in a military procurement authorization bill when the motion to recommit was made which actually cut $500 million out of the military procurement, this motion was interpreted by some people as a vote on another matter entirely, and people who really were in favor of that motion ended up voting against it, and those who were against it ended up voting for it simply because there was no proper explanation. I do not care how Members stood on it, but I think we should have had knowledge of what we were voting on. We should be able to vote informed. I know some will say there are other methods by which this can be taken care of.

Mr. SISK. Mr. Chairman, will the gentleman yield?

Mr. MEEDS. I yield to the gentleman from California.

Mr. SISK. Mr. Chairman, this amendment is a revised version of the amendment we had under discussion on yesterday, as I recall.

Mr. MEEDS. That is correct.

Mr. SISK. I should like to develop a little legislative history and make certain exactly what we are doing.

As I understand it, the division of time here would mean that the Member proposing the motion to recommit would be entitled to up to 5 minutes. I believe it is good wording now. It would not necessarily have to come to 10 minutes, but they could have 5 minutes on each side.

It would be assumed, under the language the gentleman proposes that the opposition to the motion to recommit could be recognized for 5 minutes.

Normally, if I might use an illustration, in the Congress as it is composed, a committee having proposed a legislative matter, a Member from the minority party makes a motion to recommit with instructions. He would speak for 5 minutes. The probable procedure, under the precedents of the House and custom, is that then the chairman of the committee or the manager of the bill, a proponent of the bill, would be recognized and considered in all probability to be opposed to the motion to recommit.

Is that the intent of the language in the amendment?

Mr. MEEDS. That is certainly the way I envision it would work. The overriding purpose here is to give 5 minutes in favor of and 5 minutes in opposition to that motion, so it can, in a type of adversary proceeding, be fully exposed to our information.

Mr. SISK. If the gentleman will yield further, I have no objection to the amendment.

The CHAIRMAN. The time of the gentleman from Washington has expired.

(On request of Mr. GROSS, and by unanimous consent, Mr. MEEDS was al-

lowed to proceed for 1 additional minute.)

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. MEEDS. I yield to the gentleman from Iowa.

Mr. GROSS. In the case of a proposer of a motion to recommit with instructions who does not desire to use the time, would the minority then be given 5 minutes under those circumstances? Not the minority, but the opposition?

Mr. MEEDS. No. He would control that time. The mover of the motion to recommit would control the 5 minutes in favor of that motion.

Mr. HANSEN of Idaho. Mr. Chairman, will the gentleman yield?

Mr. MEEDS. I yield to the gentleman from Idaho.

Mr. HANSEN of Idaho. I thank the gentleman for yielding.

There may still be a little confusion as to the effect of the proposed amendment. Let me ask the gentleman if I am not correct in my understanding that the amendment leaves with the minority party the prerogative it has always enjoyed to propose the motion to recommit.

Mr. MEEDS. Absolutely.

Mr. HANSEN of Idaho. And then it provides for 5 minutes on each side of the question, regardless of whether it is the majority or the minority, so that both sides of the question can be heard and explained before we vote on the motion to recommit. Is that not about how simple it is?

Mr. MEEDS. That is the intent of the amendment.

The CHAIRMAN. The time of the gentleman from Washington has again expired.

(On request of Mr. STEIGER of Arizona, and by unanimous consent, Mr. MEEDS was allowed to proceed for 1 additional minute.)

Mr. STEIGER of Arizona. Mr. Chairman, will the gentleman yield?

Mr. MEEDS. I yield to the gentleman from Arizona.

Mr. STEIGER of Arizona. I thank the gentleman from Washington.

I should like also to point out to the Members that nothing is being taken away from anyone by virtue of this amendment. There is now no time permitted for debate on a motion to recommit with instructions. All this amendment would do is permit 10 minutes of debate and discussion. It would not take away any prerogative; indeed, it would add a prerogative both to the minority and to the majority.

I thank the gentleman.

Mr. ARENDS. Mr. Chairman, will the gentleman yield?

Mr. MEEDS. I yield to the minority whip.

Mr. ARENDS. I really have no opposition to what the gentleman is trying to do, but I still say that both the proposal of the motion to recommit and the opposition should remain with the minority. Someday the gentleman may be in the minority of his side of the aisle. I believe that giving away the rights of the minority in this body is bad precedent.

Mr. MEEDS. I hope that does not occur, I say to the gentleman. I understand his problem.

The real purpose is to get an adversary proceeding during the 10 minutes.

Mr. SISK. Mr. Chairman, I move to strike the last word.

Mr. Chairman, as I have already indicated, I have no basic objection to the amendment, but I am merely trying to establish the legislative history.

If I can have the attention of my good friend from Illinois, I do not think we have any difference of opinion, but I want to make crystal clear, if possible, what the intent of the language is here. As I understand it, it is that the proposer of the motion to recommit with instructions would be given 5 minutes to explain what his motion is about and whatever statement he desires to make on the motion to recommit in support of it. The opposition to that would, I assume, normally, assuming that in this case the majority party or whichever party it might be opposing it would probably be the one that was recognized by the Speaker—again recognizing that the Speaker has the prerogative to make this recognition—that party would have control of the time. I just want to be clear on this. I was having a little difficulty in following the statement of the gentleman from Illinois, but I want to make it completely and clearly understood that, of course, I would not understand the entire 10 minutes would necessarily fall to the minority party merely because normally the right of offering a motion to recommit falls to the minority party.

Mr. GERALD R. FORD. Mr. Chairman, will the gentleman yield?

Mr. SISK. I am glad to yield to the distinguished minority leader.

Mr. GERALD R. FORD. Unfortunately I have had a little experience in working on who should offer and what the contents should be of a motion to recommit. Let me say from our point of view and from my experience I do not believe it is necessary to freeze into the rules such a provision as provided by the amendment. I cannot see that in the last five and a half sessions where I have had some responsibility in this regard that we have ever found it necessary to have this kind of frozen-in opportunity. We have always had under the rules of the House an opportunity to explain our motion to recommit. We have learned that you have to look ahead and plan your time so that the individual who was going to offer it does get the time to explain what will be the contents of the motion to recommit.

Mr. SISK. That is exactly my understanding of the meaning of this amendment.

Mr. GERALD R. FORD. It seems to me unclear why we should add something to the rules that I do not think is a necessity or essential when the present practice I think is satisfactory, at least to us in the minority. I think our experience ought to be the guideline for the other side when they become the minority. The amendment does not harm although I do not believe it essential.

Mr. SISK. If the gentleman will permit me to comment there, of course I agree completely with what the gentleman is saying. We do not propose this in this legislation and it is not contained in it. As my distinguished colleague from Michigan knows, this matter was debated yesterday and was originally proposed by the gentleman from Arizona (Mr. STEIGER). The situation is that our committee and the staff people cooperated in a rewrite of the language that attempts to make clear exactly what is intended here. All I say at this point is if it is the will of the House to adopt this 5 minutes on either side and if it will be helpful to the procedure of the House, then certainly I as an individual have no objection to it. I agree completely with the gentleman from Michigan that normally this is a matter for the person proposing it or the people involved in making such a motion to make arrangements to explain it.

Mr. MEEDS. Will the gentleman yield to me on that point?

Mr. SISK. Yes. I yield to the gentleman.

Mr. MEEDS. Both of the gentleman who have spoken on this matter have been here longer than I have and have had much more experience, but I can recall instances when you got to the motion to recommit which had not been explained and we were operating under a limitation of time on a motion to recommit when there was an attempt made to explain it in one minute or less than that. I do not think that is sufficient time to explain motions, which are usually the most complex and usually cover the most complex subject matters of any motion that is made ordinarily and become the most important motion of the day.

Mr. SISK. I thank the gentleman for his comment.

Mr. SNYDER. Mr. Chairman, will the gentleman yield?

Mr. SISK. I yield to the gentleman from Kentucky.

Mr. SNYDER. While we are talking about what usually happens here, of course, if no Member of the minority seeks recognition for the purpose of making a motion to recommit, then the time would go to the majority side. Would it be the gentleman's thinking that the second 5 minutes would go to the majority side?

Mr. SISK. I might say to the gentleman, since I was involved in one occasion where I actually offered a motion to recommit, I would assume that a Member of the minority party would be in a position to be recognized.

The CHAIRMAN. The time of the gentleman from California has expired.

(By unanimous consent, Mr. SISK was allowed to proceed for 1 additional minute.)

Mr. SNYDER. Mr. Chairman, if the gentleman will yield further, it is also my understanding—and I would like to know if I am correct in this, that a motion to recommit with instructions under

this amendment applies to conference reports as well as to original legislation?

Mr. SISK. I would assume that that would be true. Now, there again there is the question——

Mr. SNYDER. I think we ought to have the legislative history spelled out, even though I would favor the amendment in that instance also.

Mr. MEEDS. Mr. Chairman, will the gentleman yield?

Mr. SISK. I yield to the gentleman from Washington.

Mr. MEEDS. Under the section that is sought to be amended, I would disagree. I think it is not true. The section which is sought to be amended appears on page 387 of the House Rules and Manual, rule XVI, clause 4, and a part of it there says:

> After the previous question shall have been ordered on the passage of a bill or joint resolution, one motion to recommit shall be in order . . .

I assume the amendment would be restricted to the same subject matter since it does not change that subject matter.

Mr. SISK. I stand corrected. I think the gentleman is right because under rule XVI the subject matter that is being dealt without would not make it in order on a motion to recommit.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Washington (Mr. MEEDS).

The question was taken; and the Chairman being in doubt, the Committee divided, and there were—ayes 43, noes 16.

So the amendment was agreed to.

AMENDMENT OFFERED BY MR. ARENDS

Mr. ARENDS. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

> Amendment offered by Mr. ARENDS: On page 39, after line 4:
>
> "SEMI-ANNUAL PUBLISHED REPORTS OF OFFICE PAYROLLS OF HOUSE MEMBERS
>
> "SEC. 123. Clause 30 of Rule XI of the Rules of the House of Representatives is amended—
>
> "(1) by inserting "(a)" immediately before "Each committee shall report"; and
>
> "(2) by adding at the end thereof the following new paragraph:
>
> "'(b) The Clerk of the House shall report to the House, within fifteen days after December 31 and June 30 of each year, the name, position, title, and total salary of each person paid, during the period covered by such report, from the clerk hire allowance of each Member and the Resident Commissioner from Puerto Rico, listed under the name of that Member and the Resident Commissioner and including the aggregate total of all such salaries paid from the clerk hire allowance of that Member and the Resident Commissioner. Such information, when so reported, shall be published in the Congressional Record.'."

Mr. ARENDS. Mr. Chairman, this is a simple amendment. It hardly needs an explanation. There should be no opposition to it.

My amendment simply provides that the Clerk of the House shall publish twice a year in the CONGRESSIONAL RECORD the full names, dates of service, and total gross salary of each employee of each Member during the period paid out of his clerk hire allowance, as shown by the official records of the Finance Office.

This is nothing more than an enlargement of the rules of the House which now provide that the chairman of each committee shall report for publication in the RECORD the names, dates of service, and gross salary paid to each committee employee.

It should be evident by now that the primary purpose of this legislation is not to make the machinery of Congress more efficient to the end that we can act more expeditiously. Its primary purpose—at least it is the main thrust of the arguments for the bill—that the Congress should be made more responsible to and more responsive to the will of the people.

Over and over again we have heard the argument—here on the floor and in the editorial columns of the newspapers and by radio and television commentators—there is too much secrecy. It is proposed that virtually all committee sessions be public. It is proposed that how each and every committee member voted on each and every proposition be made public. It is proposed that teller votes on the floor be recorded and made public.

Public disclosure—that is the battle cry today. There is too much secrecy in the Congress, some argue.

All right, let us have public disclosure of what the public is entitled to know. All right, let us disclose to the public what we do with the taxpayer's money that is allotted to us as clerk hire allowance to enable us to transact public business. We are now talking about public funds—funds that do not belong to any one of us, but funds which belong to all the people.

By this amendment I am proposing no more than the public is entitled to know—what we do with their money.

Mr. HALL. Mr. Chairman, will the gentleman yield?

Mr. ARENDS. I yield to the gentleman from Missouri.

Mr. HALL. Mr. Chairman, if I understand the amendment offered by the gentleman in the well, it says it will be reported in the form of gross salary?

Mr. ARENDS. That is right; it will be reported in the form of the gross salary.

Mr. HALL. Second, it will be published twice a year, and it will make the Members' staff hire reportable, the same as committee hire is now made public?

Mr. ARENDS. There is nothing different. It is the same as the committees do with the committee staffs, which is now being done.

Mr. HALL. If the gentleman will yield further, is it the intention of the gentleman to include some of the supernumeraries who are on committees, or are not hired by Members that allegedly aid and abet in the functions of the House, including some of the employees of the House such as those on the staff of the Clerk of the House, and the Doorkeeper of the House?

Mr. ARENDS. I have not gone that far. I have set it to the Members, the staff of the Members that each Member has.

Mr. HALL. I think that the amendment proposed by the gentleman from Illinois is noteworthy, but I believe it should include some of the other functionaries of the House.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. ARENDS. I yield to the gentleman from Iowa.

Mr. GROSS. Mr. Chairman, the gentleman said in the offices, or does the gentleman mean the entire payroll?

Mr. ARENDS. The payroll of the office.

Mr. GROSS. The payroll of each individual Member, and the entire payroll of each individual Member?

Mr. ARENDS. Of each individual Member; his entire payroll.

Mr. GROSS. Not merely those in the specific office, but those who may be elsewhere and who are on the payroll?

Mr. ARENDS. His entire payroll, the name and gross salary.

Mr. GROSS. I support the amendment offered by the gentleman from Illinois.

Mr. SMITH of California. Mr. Chairman, will the gentleman yield?

Mr. ARENDS. I yield to the gentleman from California.

Mr. SMITH of California. Mr. Chairman, I am not quite certain as to how the gentleman's amendment reads. Does it say the gross salary, or the total salary, the total gross salary?

Mr. ARENDS. It says the total gross salary; that is the way my amendment reads. I think that is the intent, anyway.

Mr. SMITH of California. I suggest that we have the Clerk recheck that.

Mr. ARENDS. Let me read my amendment, that portion of it. It says:

> The Clerk of the House shall report to the House within 15 days after December 31st and June 30th of each year the name, position title, and total salary of each person paid, during the period covered by such report.

Mr. BOLLING. Mr. Chairman, will the gentleman yield?

Mr. ARENDS. I yield to the gentleman from Missouri.

Mr. BOLLING. Mr. Chairman, I have not the slightest objection to this appearing in the RECORD, and appearing monthly. It already appears as the gentleman provides, but his amendment provides that it appear twice a year.

Mr. ARENDS. Semiannually.

Mr. BOLLING. It already is available on a monthly basis now, and is on public display in, I believe, the Disbursing Office, and that is in plain dollars and not base pay. I do not have the slightest objection to it also appearing in the RECORD, but it does seem to me that is one time when we could save a little money because it would cost money to print it.

Mr. ALBERT. Mr. Chairman, if the gentleman will yield, why does the gentleman want it printed in the CONGRESSIONAL RECORD when it is something that is already public knowledge?

Mr. ARENDS. I would say to the gentleman from Oklahoma that this is really not public knowledge—of course it is if someone wants to take the time to go over there and look it up. If it were in the CONGRESSIONAL RECORD it would be easier for all of us to look at it. And the people back in my district do not have this in-

formation readily available. Of course, they can come to Washington and do so if they want to come here, but not all of them can do that. If it is in the CONGRESSIONAL RECORD then it would be a simple matter for them to look it up in the CONGRESSIONAL RECORD.

I see nothing wrong with it. We are disclosing everything else, as we should.

Mr. ALBERT. If the gentleman will yield further, we are disclosing this information already.

Mr. ARENDS. This would be semiannually, it should not involve very much money to do that.

Mr. ALBERT. You can go every month, or any month you want, to the Office of Finance, and find out the salary of the staff of every Member.

Mr. ARENDS. I know that you can do that, but I think this is something that the people back home should have available to them, and this way they will be able to look it up in the CONGRESSIONAL RECORD twice a year.

The CHAIRMAN. The time of the gentleman has expired.

Mr. BOLLING. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I really do not have any objection to the amendment, but I think it is a sort of waste of time and waste of money and although I dislike to disagree with and oppose the gentleman from Illinois, I ask for a vote and I ask that it be a vote against the amendment.

Mr. GERALD R. FORD. Mr. Chairman, will the gentleman yield?

Mr. BOLLING. I am delighted to yield to the gentleman.

Mr. GERALD R. FORD. Mr. Chairman, I have long felt that the method by which we determine the compensation for member staffs and committee staffs is archaic, outdated, and the wrong way to go about it.

Perhaps an amendment of this kind will lead to the necessary reforms so that we will do something to better the method by which we indicate the compensation, or determine the compensation, for members' staffs and committee staffs.

Mr. BOLLING. The gentleman from Michigan is somewhat embarrassing me because I do not wish to get into this kind of colloquy with the minority leader and the minority whip.

But an amendment, which this gentleman is going to support, because I have thought for years that the business of base pay, which does not mean anything, should be changed to gross pay, is as I understand, and I am trying to find out, going to be offered by the gentleman from Virginia (Mr. BROYHILL); or is planned to be offered. I would assume that it would pass overwhelmingly.

I entirely agree that the technique of base pay is not a fraud—but a joke—and we ought to go to that. But I do not want to get too involved in something I do not think is terribly important. I really do not think there is much point in the proposal made by the gentleman from Illinois (Mr. ARENDS).

Mr. GERALD R. FORD. Mr. Chairman, will the gentleman yield?

Mr. BOLLING. I am delighted to yield to the gentleman.

Mr. GERALD R. FORD. I was not familiar with this proposed amendment which the gentleman from Missouri indicates will be subsequently offered.

Since I believe in that amendment of Mr. BROYHILL of Virginia, which I did not know was going to be offered, I think that the amendment of the gentleman from Illinois is a way of forcing some affirmative and constructive action to achieve that end.

Mr. BOLLING. I have no disagreement with the gentleman. I think that is right. But I think the Broyhill amendment would actually be strengthened if we do not bother with this one.

Mr. HUNGATE. Mr. Chairman, will the gentleman yield?

Mr. BOLLING. I yield to the gentleman.

Mr. HUNGATE. Will the gentleman from Illinois have any objection to an amendment providing that annually the income of Members from all sources be printed in the RECORD?

Mr. BOLLING. What did the gentleman say?

Mr. HUNGATE. I asked the gentleman to yield further to inquire of the gentleman from Illinois if he would have objection to a further amendment providing that the annual income be filed as a matter of public record from all sources of the Members.

Mr. BOLLING. I believe that I have the time, and I do not intend to answer for the gentleman from Illinois, but the gentleman from Missouri who is now speaking has been on public record as favoring such a provision as part of the rules of the Committee on Official Conduct.

But I really appreciate the gentleman's intervention. I really think we ought to have a vote on this amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Illinois (Mr. ARENDS).

The question was taken; and on a division (demanded by Mr. ARENDS) there were—ayes 28, noes 49.

So the amendment was rejected.

AMENDMENT OFFERED BY MR. THOMPSON OF GEORGIA

Mr. THOMPSON of Georgia. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. THOMPSON of Georgia: On page 39 after line 4 insert a new section:

"COPIES OF AMENDMENTS

"Upon the offering of any amendment by a member, when the House is meeting in the Committee of the Whole, the clerk shall promptly transmit to the majority committee table 5 copies of the amendment, and 5 copies to the minority committee table. Further the clerk shall deliver at least one copy of the amendment to the majority cloak room and at least one copy to the minority cloak room."

Mr. THOMPSON of Georgia. Mr. Chairman, those who were present yesterday will remember that I offered an amendment to provide a written or printed copy to each Member present on the floor of the House when an amendment is offered. There were some questions that developed around that. I asked unanimous consent to withdraw the amendment.

The amendment offered today would provide that whenever any Member offers an amendment when we are meeting in the Committee of the Whole, the Clerk shall immediately make at least 12 copies. Five copies shall be delivered to the majority committee table so the managers on that side of the aisle can see the amendment, and five copies shall be delivered to the minority committee table.

It further provides that at least one copy will be delivered to the majority cloakroom and one copy to the minority cloakroom so that it may be posted in plain view in order that Members may see the amendment.

Mr. GIBBONS. Mr. Chairman, will the gentleman yield?

Mr. THOMPSON of Georgia. I yield to the gentleman from Florida.

Mr. GIBBONS. I think the gentleman has offered a good amendment. I support it, and I urge the Committee to adopt it.

Mr. THOMPSON of Georgia. I thank the gentleman.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Georgia (Mr. THOMPSON).

The amendment was agreed to.

The CHAIRMAN. Are there further amendments under this title?

Mr. WAGGONNER. Mr. Chairman, I make the point of order that a quorum is not present.

The CHAIRMAN. The Chair will count.

Mr. WAGGONNER. Mr. Chairman, I withdraw the point of order.

The CHAIRMAN. The point of order has been withdrawn.

Are there additional amendments under this section? If not, the Clerk will read.

MOTION OFFERED BY MR. GROSS

Mr. GROSS. Mr. Chairman, I move that the Committee do now rise.

The CHAIRMAN. The question is on the motion offered by the gentleman from Iowa.

The question was taken; and on a division (demanded by Mr. GROSS) there were—ayes 6, noes 46.

So the motion was rejected.

The CHAIRMAN. Are there additional amendments under this title? If not, the Clerk will read.

Mr. GROSS. Mr. Chairman, I make a point of order that a quorum is not present.

The CHAIRMAN. The Chair will count.

Mr. GROSS. Mr. Chairman, I withdraw the point of order.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

CONFERENCE REPORTS

SEC. 119 (a) (1) The section caption of section 135 of the Legislative Reorganization Act of 1946 (2 U.S.C. 190c) is amended to read as follows:

"SENATE CONFERENCE REPORTS"

(2) Section 135 of the Legislative Reorganization Act of 1946 (2 U.S.C. 190c) is

amended by adding at the end thereof the following new subsections:

"(c) Each report made by a committee of conference to the Senate shall be printed as a report of the Senate. As so printed, such report shall be accompanied by an explanatory statement prepared jointly by the conferees on the part of the House and the conferees on the part of the Senate. Such statement shall be sufficiently detailed and explicit to inform the Senate as to the effect which the amendments or propositions contained in such report will have upon the measure to which those amendments or propositions relate.

"(d) If time for debate in the consideration of any report of a committee of conference upon the floor of the Senate is limited, the time allotted for debate shall be equally divided between the majority party and minority party.".

(3) The item relating to section 135 contained in the table of contents of the Legislative Reorganization Act of 1946 (60 Stat. 813) is amended to read as follows:

"Sec. 135. Senate Conference Reports.".

Mr. SISK (during the reading). Mr. Chairman, I ask unanimous consent that the portion of section 119 dealing with the other body be considered as read, printed in the RECORD, and open to amendments at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from California?

There was no objection.

The CHAIRMAN. The Clerk will read the remainder of the section.

The Clerk read as follows:

(b) (1) Paragraph (c) of clause 1 of Rule XXVIII of the Rules of the House of Representatives is amended to read as follows:

"(c) Each report made by a committee of conference to the House shall be printed as a report of the House. As so printed, such report shall be accompanied by an explanatory statement prepared jointly by the conferees on the part of the House and the conferees on the part of the Senate. Such statement shall be sufficiently detailed and explicit to inform the House as to the effect which the amendments or propositions contained in such report will have upon the measure to which those amendments or propositions relate.".

(2) Clause 2 of Rule XXVII of the Rules of the House of Representatives is amended by adding at the end thereof the following new sentence: "The time allotted for debate in the consideration of any such report shall be equally divided between the majority party and the minority party.".

Mr. SISK. Mr. Chairman, I move that the Committee do now rise.

The motion was agreed to.

Accordingly the Committee rose; and the Speaker having resumed the Chair, Mr. NATCHER, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 17654) to improve the operation of the legislative branch of the Federal Government, and for other purposes, had come to no resolution thereon.

LEGISLATIVE PROGRAM

(Mr. GERALD R. FORD asked and was given permission to address the House for 1 minute.)

Mr. GERALD R. FORD. Mr. Speaker, I take this time for the purpose of asking the distinguished majority leader the program for the remainder of this week.

Mr. ALBERT. Mr. Speaker, will the gentleman yield?

Mr. GERALD R. FORD. I yield to the gentleman from Oklahoma.

Mr. ALBERT. Mr. Speaker, tomorrow we plan to take up two of the bills which we had announced last week as the program for this week:

H.R. 13100, to extend programs for training in the allied health professions, under an open rule with 1 hour of general debate; and

H.R. 14237, to amend the Mental Retardation Facilities and Community Health Centers Construction Act of 1963, under an open rule with 1 hour of general debate; and we are adding at the request of the gentleman from Alabama (Mr. JONES) the bill H.R. 18104, Tennessee Valley Authority financing, which is under an open rule with one hour of debate.

We are adding that bill because we do not yet have the rule on the Defense Production Act, and we did not get the rule on the agricultural bill in time to take it up today.

Members know that the funeral for our late distinguished colleague, Mike Kirwan, is tomorrow in Youngstown, and a large number of Members are attending.

ORDER TO PUT OVER ROLLCALL VOTES UNTIL 4 P.M. THURSDAY

Mr. Speaker, I ask unanimous consent at this time, if the gentleman will yield further, that any rollcall votes other than on rules or procedural questions which may be demanded on tomorrow, Thursday, July 30, be put over until 4 p.m. on that day.

Mr. HALL. Mr. Speaker, reserving the right to object, and I certainly have no objection to this request insofar as tomorrow is concerned, and insofar as honoring our distinguished colleague is concerned.

I therefore shall not object. I take this means of asking the majority leader if he intends to announce whether or not there will be votes after the cortege returns on tomorrow, or on Friday following, the day after tomorrow?

Mr. ALBERT. May I say that if votes are required tomorrow we will take the votes after 4 o'clock tomorrow.

The SPEAKER. The Chair would like to inquire whether the gentleman's unanimous consent request was for 4 o'clock or 4:30?

Mr. ALBERT. It was intended to be 4 o'clock, Mr. Speaker.

Mr. HALL. Mr. Speaker, in view of the change of program and in view of this unfortunate event, is it the plan for us to convene on Friday?

Mr. ALBERT. It is.

I may make this statement: We have requested a rule on the Defense Production Act Amendments, tomorrow morning. If that is granted, we will take up on Friday H.R. 17880, which is the Defense Production Act Amendments.

Mr. HALL. Mr. Speaker, I withdraw my reservation.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

DEFICIT SPENDING

(Mr. BOGGS asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include extraneous matter.)

Mr. BOGGS. Mr. Speaker, I notice the distinguished minority leader on the floor, a man who has said that the prospect for a recession was nil.

I know we will have a conference report up in a few minutes, and he will say it is wild spending.

Some months ago this administration was boasting that it would complete fiscal year 1970 with a $1.3 billion surplus. Last May, just a couple of months ago, this estimate was revised—or, to use their euphemism "adjusted downward" to show again a slight deficit for the fiscal year just completed.

On yesterday the Nixon administration disclosed—from California—that its budget deficit for the fiscal year 1971 amounted to $2.9 billion, which is $1.9 billion more than was projected only 2½ months ago.

This miscalculation of more than $4 billion was being predicted in this Chamber just a few months ago by myself and others of the Joint Economic Committee.

The administration also admitted that we have spent something like $1 billion less in 1970 than had been projected, contrary to the loose talk we have heard about this being a spendthrift Congress.

I submit to you that these charges are politics—pure and simple—they are not economics—they distort reality.

What we are seeing is an effort to shift blame from where it belongs to where it does not belong. Someone once said that truth will out. I am sad to report this morning the truth. The reason for this deficit can be found on the front pages of every newspaper in this country today—the New York Times, the Wall Street Journal, the Washington Post, the Baltimore Sun—all of which articles are included in this statement. This deficit is a direct result of a grave shortfall in revenues and not from overspending.

The fact is that outlays by our Government totaled $1.4 billion less in 1970 than was predicted last May. Every economic indicator tells us the real reason why we have a deficit. President Nixon cannot pursue an economic policy which throws 1 million Americans out of jobs, reduces corporate profits, maintains the highest interest rates in a century, designed to create what they call a mild recession, and expect our Government's revenues not to decline also.

Some weeks ago President Nixon used an analogy of docking a boat to explain his economic policies or his economic plight. Today I would say we are still miles away from the dock; our sails are down; and the captain and the crew are blaming the passengers.

The administration's budget totals

for fiscal year 1970 show a deficit in the unified budget of $2.91 billion. Expenditures totaled $196.15 billion while receipts were $193.84 billion. Both expenditures and receipts were lower than the estimates made by the administration in February and in May.

Expenditures were down by $1.1 billion from the May projections and $1.4 billion from the February budget projections. The major change, however, came in receipts. They fell by $2.6 billion since the estimates released in May and by $5.5 billion from the estimates in February.

The major sources of the shortfall in revenues, of course, were the collections from individual and corporation income taxes. In fact, the shortfalls in these two major tax sources were greater than the total shortfall for all receipts.

Since the February estimates, the yearend figures show a decline in individual income taxes of $1.8 billion and in corporate income taxes of $4.2 billion, a total decline of $6 billion since February. Since the estimates in May, the shortfall has been $1.8 billion for individual income taxes and $1.2 billion for corporation income taxes, for a total drop of $3 billion in the 6-week period since the May estimates.

The cause of these declines is the current recession which in turn is caused by the administration's fiscal policy. Unemployment and less overtime produce a lower income base for current withholdings which are reflected in individual income tax payments. The decline in business which has occurred in the forepart of this year accounts for the lower corporation profits reported in the quarterly payments made in April and June.

While the downturn seems to have leveled off somewhat it is by no means clear we have reached the bottom. Unemployment may well rise in the months ahead even at the same time as inflationary pressures cause continuing price rises.

Following are the articles I refer to:

[From the New York Times, July 29, 1970]

A Lag in Revenues Pushes U.S. Deficit Up to $2.9 Billion—Spending Excess for Year Ended June 30 Is Modest but Above Expectations

(By Edwin L. Dale, Jr.)

Washington, July 28.—The Government announced today that the Federal budget showed a relatively small deficit of $2.9-billion in the fiscal year that ended June 30.

The deficit was a little bigger than was estimated as recently as last May, a result of revenues that were lower than expected. Spending came out a shade lower than estimated.

Total outlays were $196.7-billion and receipts $193.8-billion.

Paul A. Volcker, Under Secretary of the Treasury for Monetary Affairs, said that a "modest" deficit in the present circumstances, where a sluggish economy cuts into revenues, "is not disturbing in any sense."

CONCERN CITED

However, officials ranging up to President Nixon are known to be very concerned about the outlook for the current fiscal year 1971. If all of a number of possible things go wrong, including actions and inactions by Congress, the deficit could mount as high as $15-billion.

Mr. Volcker termed a figure that high "sheer speculation at this point" and said it was certainly not regarded as "the most probable result."

At the Western White House in San Clemente, Calif., George P. Shultz, Director of the Office of Budget and Management, made the same point. He said that the Administration was not projecting a deficit figure nearly so high as $15-billion.

FACTORS IN CALCULATION

Other officials, simply adding up all the things that could go wrong, have reached a deficit figure close to $15-billion, without predicting it. The following are the main factors in such a calculation:

The "uncontrollables." These items, such as interest on the national debt, Medicare, Social Security and grants to the states for welfare have sometimes run billions of dollars above the estimates, particularly in the last few years, though officials hope estimates are closer to the target this time.

Congressional inaction on revenue. About $4.5-billion is counted on in the Nixon budget from higher postal rates, a speed-up in collection of estate and gift taxes, and a new tax on lead additives for gasoline, none of which have yet made any headway in Congress.

Congressional action and inaction on spending. Congress is in the process of increasing some appropriation bills above the President's request and is showing no movement on requests totaling almost $1-billion, which are counted on in the budget.

Lower revenue collections than expected, particularly from the corporate profits tax.

The budget figures disclosed today showed a massive shortfall of $4.2-billion in profits tax collections against the estimate of last January. Mr. Volcker said there was still no complete explanation for this shortfall, although one reason is that corporate profits in calendar year 1969 turned out to be lower than the Government at first thought.

Individual income tax collections, which during the years of the economic boom regularly exceeded the Treasury's estimates, were $1.8-billion below the January estimate. One reason, reflecting the decline in the stock market, was lower-than-expected capital gains.

On the expenditure side of the budget there were, as usual, sizable variations both up and down from the estimates made as recently as January, when the fiscal year was half over. In this case the downs offset the ups by $1.1-billion, but most of them did not reflect conscious "savings" by the Administration or Congress.

A striking feature of the figures was that military spending turned out slightly below that of the previous fiscal year, the first time this had happened since the nation's heavy engagement in Vietnam began in 1965. At $77.1-billion, military outlays were about $600-million higher than the January estimate, but this was entirely accounted for by the retroactive pay rise enacted in April. Outlays in the fiscal year 1969 were $77.9-billion.

WAR COSTS DECLINING

Mr. Shultz in San Clemente estimated the peak Vietnam war costs at an annual rate of $29-billion. He said that by the time the text scheduled reduction of 150,000 troops is completed next spring, the cost of the war will have dropped to half that amount, or an annual rate of $145-billion.

Although the final figure for total outlays in the budget, at $196.7-billion, was below the estimate of last January, it was nearly $4-billion above the $192.9-billion figure fixed by the new administration in April, 1969, after its review of the budget submitted by President Johnson. This $192.9-billion figure was adhered to up until the end of last year and then had to be abandoned, mainly because the "uncontrollables" ran so far ahead of estimates.

The original Johnson estimate for the fiscal year 1970 was $195.3-billion. Although Mr. Nixon aimed to reduce this figure, in the end the spending total came out a little higher.

U.S. Budget $1.1 Billion More in Red—Revenue Decline Swells Deficit—Shultz Hails Curbs on Spending

(By Art Pine)

Washington, July 28—The Nixon administration disclosed today that its budget deficit for fiscal 1970 was $1.1 billion more than was projected last May, but said it resulted from a shortfall in revenues, not overspending.

Officials reported that despite the $2.9 billion deficit, outlays totaled a full $1.4 billion below what was predicted two months ago—even with additional expenses brought on by the postal pay raise and higher interest rates.

Spokesmen here explained that the deficit instead was caused by reduced corporate tax revenues—due mainly to lower profits as a result of the economic slowdown—which left receipts $2.6 billion below what was expected.

SATISFACTORY PERFORMANCE

George P. Shultz, director of the new Office of Management and Budget, in a statement transmitted from the Western White House at San Clemente, Calif., called the figures "a strong and satisfactory performance from our standpoint."

Noting that the administration had been "successful in holding the expenditure line" during the 1970 fiscal year ending June 30, he again implored Congress to help keep expenditures down during the current 1971 fiscal year.

But Mr. Shultz, as well as Treasury officials in Washington, dismisses as groundless speculation that the fiscal 1971 budget already was heading for a whopping deficit of $15 billion or $20 billion.

SHEER SPECULATION

"That's just sheer speculation," said Paul A. Volcker, under secretary of the treasury, echoing Mr. Shultz at a briefing here. So much depends on congressional action on tax proposals, he said, that the exact deficit is too early to measure.

In his statement today, Mr. Shultz told reporters that the decrease in corporate earnings during fiscal 1970 had acted as "a stabilizing force . . . and helps the economy . . . to now be in a position to move upward."

But figures released by the Department of Commerce a few hours earlier failed to show any distinct upward trend in the so-called leading indicators used to predict changes in the economy—hinting that any upturn may be slight.

DECLINE IN INDEX

The agency's index of leading economic indicators, whose movement often foreshadows reversals in the economy, declined one-tenth of a point last month—a dip that economists regard as statistically insignificant, leaving the indicators virtually unchanged.

While some analysts saw the decrease as the start of a "bottoming out," especially in the wake of a drop of 2.0 points in May, most agreed that it seemed to preclude any substantial economic upswing before mid-fall.

SECOND DECREASE IN LAYOFFS

Meanwhile, however, a separate Labor Department report showed the demand for factory workers indicated signs of strengthening in June, with new hirings up slightly and layoffs down moderately.

The June figures represented the second consecutive reduction in layoffs following

nearly a year of small but steady increases. Analysts said the new data could figure favorably in upcoming unemployment statistics to be released next week.

In reviewing the fall in corporate tax receipts during fiscal 1970, officials here were hard-pressed to explain why such revenues fell a full $4.2 billion—even with a $2 billion shortfall in corporate profits.

Treasury officials speculated that a portion of that decline stemmed from the timing of corporate tax payments, which usually are sent in much earlier. If that is true, they said, the government can expect a windfall in fiscal 1971.

[From the Washington (D.C.) Post, July 29 1970]

U.S. DEFICIT FOR 1970 WAS $2.9 BILLION

(By Ken W. Clawson)

SAN CLEMENTE, CALIF., July 28.—The federal budget for Fiscal 1970 went $2.9 billion in the red, the Western White House announced today.

It marked the ninth time in the last 10 years that the federal government has spent more money than it has collected in taxes. Only in Fiscal 1969 was there a budget surplus in the last decade.

George P. Shultz, director of the Office of Management and Budget, announced the 1970 deficit today following a 2½-hour meeting with President Nixon and other top administration officials at the presidential compound here.

Shultz said the government spent $196.8 billion, including $77.8 billion for defense, while revenues flowing into the federal treasury totaled $193.8 billion.

The actual deficit was in contrast to a $1.8 billion deficit predicted by the administration last May, and a $1.5 billion surplus that President Nixon projected last February.

However, the final expenditures of $196.8 billion were less than either of the earlier projections, and Shultz hailed this as a "strong and satisfactory performance from our standpoint."

The deficit figure does not agree exactly with income and expenditures because of rounding off.

The revenue shortfall, Shultz said, was in large part due to a decline in corporate profits in the last six months of Fiscal '70, which ended June 30. He said that a projected upturn in the economy during the last half of this year should boost business profits and "give a better picture for Fiscal 1971."

"This deficit in 1970 can be seen as an example of a situation where the expenditure line was held within revenues that would be produced by the tax system at full employment. The deficit results from the automatic operation of the fiscal system, and that in itself is a stabilizing force," Shultz said.

NIXON'S RULE-OF-THUMB

Spending within revenues that would be generated by full employment, Shultz said, is Mr. Nixon's rule-of-thumb in looking toward Fiscal 1971 and 1972 budgets.

But the OMB director would not move beyond the administration's May projection that the 1971 budget will result in a $1.3 billion deficit. Most congressional estimates have ranged from a $6 billion to $10 billion deficit, and one key committee chairman has privately estimated that the deficit will be $15 billion.

(In Washington, meanwhile, Treasury Under Secretary Paul A. Volcker called the $10 billion to $15 billion deficit prospect for Fiscal 1971, cited by some government officials, "sheer speculation at this point."

(Volcker said that the Treasury does not have enough evidence at this time to revise the $1.3 billion deficit forecast.

(But other government officials who could not be named noted that Congress had not acted on Mr. Nixon's proposals for a tax on lead in gasoline, a speedup in collection of estate and gift taxes, and an increase in postal rates. Without those items, the Fiscal 1971 budget will be an additional $4.5 billion in the red.

(Moreover, as indicated by the Commerce Department's leading economic indicators yesterday, the economic upturn sought by the administration has not begun. This suggests a further shortfall in revenues that would add more to the prospective deficit.)

URGES TAX ACTION

Shultz said he is "explicitly restraining" himself from an updated 1971 estimate, but he again urged Congress to pass the President's tax proposals.

He stressed that the administration would continue to exert pressure on Congress to hold the line on spending this year. Mr. Nixon has already threatened to veto the education bill, which received final congressional approval today, because it exceeds the President's request by $453 million. Shultz called the bill "one of many bills of increased spending that are causing" great concern in the administration.

The objective, Shultz said, is a balanced budget in 1972 with full employment without inflationary price increases.

In discussions this week with the President and budget officials, Shultz acknowledged that a possible tax increase proposal next January is one of the options being prepared for Mr. Nixon's consideration.

Shultz would not address himself to a published report that a secret administration analysis projects a $23 billion deficit for fiscal 1972, but it was believed that the report was based on an analysis attributed to government sources on what would happen under the most adverse economic circumstances.

[From the Washington (D.C.) Evening Star, July 29, 1970]

U.S. BUDGET DEFICIT LAID TO SLUMP

(By Lee M. Cohn)

The federal budget swung from a predicted surplus of $1.5 billion to a $2.9 billion deficit last fiscal year because the economic slowdown curtailed tax collections, and a bigger deficit is expected this year.

Disclosing the budget results for fiscal 1970, the year ended June 30, the Nixon administration yesterday called the outcome "strong and satisfactory."

The deficit had a "stabilizing" effect on the economy, George P. Shultz, director of the Office of Management and Budget, said at the White House offices in San Clemente, Calif.

Shultz emphasized that expenditures were held below predicted levels.

While accepting revenue reductions as the inevitable and helpful consequence of an economic slowdown, the administration maintains that restraint of spending is crucial to curbing inflation.

Neither Shultz in San Clemente nor Treasury Undersecretary Paul A. Volcker at a news conference here would predict the deficit for fiscal 1971, the year that started July 1, but it is known the administration expects it to exceed last year's $2.9 billion.

Some analysts outside the administration predict a deficit as large as $15 billion, compared with the $1.3 billion officially projected in May.

Shultz said the administration expects "a much more moderate" deficit than that.

EXPENDITURES RISE

For fiscal 1970, expenditures totaled $196.8 billion, up from $184.6 billion in 1969. Outlays were $1.1 billion below the forecast in the budget submitted to Congress in February and $1.4 billion below the revised estimate issued in May.

Revenues rose to $193.8 billion from $187.8 billion in 1969, but were $5.5 billion below the February forecast and $2.6 billion below the May estimate.

The deficit of $2.9 billion contrasted with a surplus of $3.2 billion in 1969. A $1.5 billion surplus was predicted in February and a $1.8 billion deficit was projected in May.

Tax collections fell short of projections mainly because the economic slump was more severe than anticipated, reducing taxable incomes and profits.

Individual income taxes totaled $90.4 billion, up from $87.2 billion in 1969, but $1.8 billion below the February budget estimate. The Treasury said taxable capital gains were below expectations—presumably reflecting the stock market's slump—and thus accounted for part of the revenue slippage.

CORPORATE TAXES DOWN

Corporations paid $32.8 billion of income taxes, down from $36.7 billion in 1969 and $4.2 billion below the February projection.

Corporate profits in calendar 1969, which affected fiscal 1970 tax payments, were $1.8 billion below the Treasury's estimate of $93 billion. This accounted for only part of the revenue reduction, Volcker noted, but he was unable to explain the balance.

Other taxes, net, were about $500 million above estimates.

Shultz and Volcker emphasized that total expenditures were held $1.1 billion below the February forecast despite the $1.1 billion federal pay rise, increases in outlays for interest on the debt and other "uncontrollable" items, and congressional action raising some appropriations above budget recommendations.

OTHER INCREASES

Major spending increases above the February budget included $595 million for military functions of the Defense Department, $457 million for interest, $267 million for the Post Office, $251 million for farm price supports, $236 million for military foreign aid and $127 million for the Labor Department, mainly for unemployment compensation

The defense spending bulge resulted entirely from the pay raise, the administration said. Even with the pay raise, military outlays by the Pentagon declined $777 million below 1969 to $77.1 billion.

Major spending decreases below the February estimates included $381 million for loan disbursements by the Export-Import Bank, $321 million for medicare, $254 million for the Department of Transportation, $173 million for model cities, $137 million for space, $132 million for agriculture programs other than price supports and $106 million for the Justice Department, mainly because the law enforcement assistance grant program proceeded behind schedule.

HOLDING THE LINE

"This dramatic and successful effort to hold expenditures in line will be continued in the interests of promoting a healthy, as well as a growing, economy," Shultz said.

Pressing the administration's campaign against "big spenders" in Congress, Shultz said President Nixon had asked him "to express again his hope that the Congress will join him in a similarly successful effort to keep expenditures under control in the current year."

Shultz said Defense Secretary Melvin R. Laird expects outlays for the Vietnam war to decline to about half the peak annual rate of $29 billion by next spring when the withdrawal of 150,000 more U.S. troops is completed.

For fiscal 1971 and 1972, Shultz said, the administration is trying to stick to the principle that expenditures must be held within the level of revenues the Treasury would collect if the economy were operating at full capacity.

BELOW CAPACITY

This principle of a theoretical "full employment budget" balance of surplus produced a deficit in fiscal 1970 and is expected to result in another deficit in 1971, because the economy is operating below capacity.

But Shultz said the administration is aiming for an actual balance in fiscal 1972, the year starting next July 1, when the timetable calls for restoration of normal economic growth and full employment.

[From the Wall Street Journal, July 29, 1970]

FEDERAL BUDGET DEFICIT RAN TO $2.91 BILLION IN FISCAL 1970—SPENDING TRAILED ESTIMATES

WASHINGTON.—The Federal budget ran a deficit of $2.91 billion in the fiscal year that ended June 30, although spending was actually less than had been forecast in May.

At press briefings here and at the Western White House at San Clemente, Nixon Administration officials hailed the lower-than-expected outlays, noting that the widening in the deficit from the $1.8 billion drain predicted two months ago was due solely to smaller revenue resulting from the sluggish economy.

George Shultz, Director of the Office of Management and Budget, called the results "a strong and satisfactory performance" at a news conference in San Clemente. And Paul A. Volcker, Treasury Under Secretary for Monetary Affairs, told reporters here that the "modest deficit" isn't "disturbing."

But these officials declined to discuss the specific budget outlook for the current fiscal year, except to disassociate themselves from estimates by Congressional and other Government sources that the deficit is likely to run as high as $10 billion to $15 billion in the new fiscal year that began July 1.

The deficit for the just-ended fiscal 1970 contrasts with a $3.24 billion surplus in fiscal 1969, which was the first budget surplus in nine years and the largest in 12 years. Before leaving office in January 1969, President Johnson projected a $3.4 billion surplus for fiscal 1970, and in April 1969 President Nixon forecast a $5.8 billion surplus. The Nixon Administration last February scaled this projected back to a $1.5 billion surplus and then issued the $1.8 billion deficit estimated in May.

Expenditures for the last fiscal year totaled $196.75 billion, down from both the $198.2 billion estimated in May and the $197.89 billion projected in February. In fiscal 1969, Federal outlays totaled $184.56 billion.

Revenues in fiscal 1970 totaled $193.84 billion, well below both the $196.4 billion estimated in May and the $199.93 billion forecast in February. In fiscal 1969, total Government receipts were $187.79 billion.

Officials noted that fiscal 1970 outlays were held below earlier estimates despite Federal pay boosts that added about $1.1 billion to expenditures and increases in "uncontrollable" spending such as interest on the public debt. Outlays were still slightly higher, however, than the $192.9 billion spending initially forecast by President Nixon in April 1969.

JOINT STATEMENT

In a joint prepared statement, Treasury Secretary Kennedy and Mr. Shultz listed numerous areas that contributed to the less-than-anticipated outlays in fiscal 1970.

The largest downward revisions from the February estimate, the statement said, included a $381 million reduction in projected outlays of the Export-Import Bank due "primarily to lower-than-anticipated levels of loan disbursements"; a $321 million reduction in predicted outlays of the Department of Health, Education, and Welfare resulting from "lower-than-expected spending" in the Medicare program; program "unrerruns" of $251 million in the Transportation Department; a $173 million reduction in outlays by the Department of Housing and Urban Development due to "slower-than-projected" spending for model cities; program "deletion" and "rephasing" in the National Aeronautics and Space Administration resulting in a $137 million spending reduction; a reduction of $132 million in Agriculture Department outlays, and a $106 million reduction in projected Justice Department spending due primarily to "delays in awarding law-enforcement assistance grants."

These decreases from earlier estimates more than offset increases in some other areas, including $457 million more in interest payments on the public debt and a $267 million increase over the budget estimate for the Post Office Department due to the postal pay raise.

REDUCTION IN RECEIPTS

The $5.5 billion reduction in actual receipts from the February estimate was more than accounted for by shortfalls in income-tax receipts, the statement said. Individual income-tax payments ran $1.8 billion below the estimate and corporate receipts were $4.2 billion below.

About $450 million of the shortfall in individual income-tax receipts reflected higher-than-expected refunds, the officials said. They said most of the remaining shortfall "represents payments of final taxes on calendar year 1969 liabilities and declaration payments on 1970 income that were substantially below the amounts estimated, largely reflecting lower-than-expected capital gains."

The smaller-than-anticipated corporate-tax revenues was accounted for by about $300 million of "larger-than-expected" refunds and about $3.9 billion of "shortfalls" in projected final payments of 1969 tax liabilities and declaration payments of 1970 liabilities.

Officials said it's still "too early" to revise the budget estimates for fiscal 1971, which currently put revenues at $204.3 billion and outlays at $205.6 billion for a projected deficit of $1.3 billion, although Mr. Shultz said "it is clear enough that the situation has changed somewhat."

ESTIMATES TOO HIGH?

Other officials have privately suggested that the sluggish revenues in fiscal 1970 probably signified that the fiscal 1971 estimates are also a bit too high. But Mr. Shultz noted that there has been "a better-than-expected" performance of corporate profits in the second quarter that could point toward "a somewhat better picture" for this fiscal year's revenues.

Some Congressional sources have indicated it now appears the budget deficit this fiscal year will reach $10 billion or even $15 billion and a few Administration analysts have privately agreed this is a likelihood. But Mr. Shultz emphasized that "we're working for a much more moderate result," and Mr. Volcker declared: "We aren't ready to concede the kind of figure those people are talking about." The Treasury official said these figures are "sheer speculation at this point."

Mr. Shultz told reporters officials have been discussing the fiscal 1972 budget with the President, with the talks centering on the defense sector. But, he said, "We haven't tried to pin down any particular number" for either the budget generally or defense outlays. Total defense spending in fiscal 1970 was $78.31 billion, down slightly from $79.15 billion in fiscal 1969.

DEFICITS

(Mr. GERALD R. FORD asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. GERALD R. FORD. Mr. Speaker, I doubt if I will take 1 minute at this point. I deplore the anticipated or the announced deficit of $2.9 billion under the Nixon administration. Let me remind my friend from Louisiana that does not compare with the $25 billion deficit of the last Democratic administration. I yield back the balance of my time.

TAFT SEES ECONOMIC IMPROVEMENTS—CITES RISE IN MACHINE TOOL ORDERS

(Mr. TAFT asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. TAFT. Mr. Speaker, a recent article in the New York Times reports an 11.4 percent increase in machine tool sales in June over May of this year.

I believe this is a most encouraging sign that the economy has bottomed out and we are now moving up again.

Machine tool orders, traditionally, have been closely watched as an indicator of economic conditions, since most machine tool orders represent an expansion of plant capacities.

Until now, however, machine tool orders have been significantly lower than last year, and, while the latest sales figures are still down, there was an 11.4 percent increase in June sales over May's.

I believe this is evidence that the Nixon administration's fiscal policies are taking hold.

Following is the article from the New York Times:

MACHINE-TOOL ORDERS ADVANCED A MODERATE 11.4 PERCENT LAST MONTH

(By Robert Walker)

New orders for machine tools, considered an important indicator of future business activity, increased by 11.4 per cent in June from the May total, but this moderate advance left the order books of the tool builders at extremely depressed levels.

Orders in June were down 52.7 per cent from those of the comparable 1969 month. For the first half of 1970, the total was $537,650,000, slightly more than half the bookings in the first six months last year, when they came to $1,031,850,000.

The National Machine Tool Builders Association reported yesterday in Washington that new orders in the latest month were $76,850,000, an advance from $60-million in May but a decline from $162.4-million in June, 1969.

Of the June, 1970, bookings, $57,350,000 came from domestic buyers and the remaining $19.5-million represented foreign orders.

These orders for machine tools—the equipment used to build other equipment—are considered an extremely accurate indicator of how many assembly lines are being planned by industry in general.

Thus, they usually give analysts an early signal of major changes in capital-spending intentions. The figures compiled by the Washington-based association count only orders for new tools from domestic builders.

However, sales of foreign tools and used machines in this country are believed to be following a similar trend. The Machinery Dealers National Association has reported that sales of used machine tools in May, the latest available figure, were up about 2 per cent from the April level but were down 26 per cent from those of May, 1969.

As reported by the National Machine Tool Builders Association, orders for new, Ameri-

can-made tools are divided into those for metal-cutting and metal-forming machinery.

Orders for metal-cutting tools in June, 1970, were $61.4-million, a gain of 16.4 per cent from the May level, but a drop of 45.4 per cent from the total in June, 1969.

Bookings for metal-forming machinery in the latest month were $15,450,000, down only 4.9 per cent from the May level but off 68.9 per cent from orders in the year-earlier month.

In the first half of this year, metal-cutting orders were $404,400,000, a decline of 42.9 per cent from the level in the 1969 first half. Metal-forming orders in the latest six months were $133,250,000, a decline of 58.8 per cent from the 1969 level.

PACE COMPARED

Reflecting the fact that new orders were received at a much better pace near the end of last year, shipments of finished machines in the latest half were almost unchanged from those of the first six months of 1969.

Shipments in the 1970 period were $805,050,000, down less than 1 per cent from $806,850,000 in the 1969 first half.

Shipments in June, 1970, were $143.4-million, an increase of 1 per cent from $143.2-million in May. However, the figure was down 11.6 per cent from $162.2-million in June, 1969.

PROF. HARDIN JONES, OF THE UNIVERSITY OF CALIFORNIA AT BERKELEY, ON CAMPUS VIOLENCE

(Mr. SCHERLE asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. SCHERLE. Mr. Speaker, the recently publicized memorandum sent by that expert on campus violence, Alexander Heard, to the President is deserving of reply for a number of reasons, chief of which is it served no useful purpose and offered no sound suggestions.

Fortunately, all members of the academic community do not feel as President Heard feels, either about violence on campus or about the ways to cope with it.

I have in my possession a wire sent to the President by Prof. Hardin Jones of the University of California at Berkeley and made public by him. Professor Jones is a different kind of academician from President Heard.

I insert Professor Jones' wire in the RECORD:

BERKELEY, CALIF.

DEAR MR. PRESIDENT: I am a professor at Berkeley. I know the subject of unrest on the campuses through 30 years of university teaching and administration. I have written extensively on this subject. The report to you by Alexander Heard is in my opinion, invalid because it is largely self-serving to the very political movement corrupting education and contributing to the student unrest. There is much evidence that this unrest results from use of the educational process to marshal students in a political force. The key issue allowing the corruption of education is that institutions so affected follow the example of Berkeley and allow advocacy of illegal activities using college facilities. Much of this is directed to influence students and to involve them in unlawful activities. The educational process has become a political force for illegal social change and to propagandize acceptance of social views not espoused by the people who support these institutions. I observe, too, that students are idealistic. They can be idealistic and misled at the same time. Certainly violence is not a civilized display of idealism. Your advisor has not given weight to the awful evidence that there is a minority of organized Marxists in education who advocate revolution and other anti-social commitments. The evidence is that radical political pressures will continue to come from minorities of alienated students and their faculty sponsors. There will continue to be controversy as to whether they do or do not represent the majority of students. I believe that all evidence points to the likelihood that this disturbance will not stop with our withdrawal from Southeast Asia. I urge leadership to solve the real problem of students. They are miseducation and the problems and hazards created by the confrontation tactics of the activists. I hope that the Heard report justifying campus unrest will not be expanded by the Scranton Commission to the political benefits of the revolutionists. We should instead move to lessen the blight in education which is also a peril to our country.

HARDIN B. JONES,
Professor of Physiology, Professor of Medical Physics, Assistant Director, Donner Laboratory, University of California, Berkeley.

MISS KAREN BOLTON AND MISS LENNIE RADEMACHER, WISCONSIN REPRESENTATIVES TO GIRLS NATION

(Mr. SCHADEBERG asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. SCHADEBERG. Mr. Speaker, this morning I had a most memorable experience in meeting with the two State of Wisconsin representatives to Girls Nation, Miss Karen Bolton, age 17, who attends Beloit Memorial High School in Beloit, and Miss Lennie Rademacher, age 17, who attends St. Catherine's High School in Racine. It is a rare honor to be the Representative of both State choices to this program sponsored by the American Legion Auxiliary.

These two fine young women are here in Washington this week as a result of democratic elections made in Wisconsin Girls State. They were selected by their peers from the 503 representatives who went to Madison to participate in a program designed to promote an understanding of State government. They are now with us learning about National Government and practicing the procedures of democracy.

Mr. Speaker, I am sure that my colleagues join me in extending my appreciation to the American Legion Auxiliary for sponsoring this program in the National Capital since 1947, and my congratulations to the two refreshing representatives from my First District, Wisconsin, who are representing the great State of Wisconsin so well.

FRANK STEWART

(Mr. LOWENSTEIN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. LOWENSTEIN. Mr. Speaker, I am very concerned about the case of Frank Stewart, a young black man who is under indictment in Louisiana for conspiracy to commit murder in Baton Rouge Parish. Stewart, a former Peace Corps and current VISTA volunteer, is being held in lieu of $100,000 bond on a charge of plotting the assassination of the mayor-president of Baton Rouge. The indictment grew solely out of the testimony of a police informer. The mayor is alive and well; there has been no attempt on his life.

In his capacity as a VISTA volunteer, Mr. Stewart has been engaged in community organizing in Baton Rouge. He has earned the respect of his colleagues in VISTA and of the black community of Baton Rouge, so one inevitable effect of the indictment has been to exercise a chilling effect on VISTA and other Federal antipoverty activities in the Baton Rouge area.

If there has been such a conspiracy and Mr. Stewart is involved, he and any others who are involved must be brought to justice. But if local officials are harassing leaders or organizers of the black community—or if they are attempting to minimize the effectiveness of Federal programs or eliminate altogether programs or workers they do not happen to like—then such harassment cannot be tolerated. In any event, I am sure everyone will agree that the constitutional rights of all concerned must be rigorously protected.

But the events in East Baton Rouge have unusual national significance because the morale of VISTA workers all across the country will suffer severely if the constitutional rights of one VISTA worker—especially one as highly regarded as Frank Stewart—are denied, or if it turns out that a VISTA worker has been subjected to official harassment for doing his job effectively.

Anyone who knows many VISTA workers knows that they are generally a remarkable group. The American people can be proud that we have produced young people—and some not so young—who work gladly for subsistence pay in difficult circumstances with little or no recognition to try to help fellow citizens who live in social and economic adversity improve the conditions of their lives.

For these reasons, I will reopen this discussion tomorrow. I hope that many colleagues will join in an effort to establish what the facts are in this volatile situation, as a necessary step toward assuring justice and safety for everyone involved.

PANAMA CANAL

The SPEAKER pro tempore (Mr. STAGGERS). Under a previous order of the House, the gentleman from Florida (Mr. BURKE) is recognized for 10 minutes.

Mr. BURKE of Florida. Mr. Speaker, once again the Panama Canal has become the subject of dispute within the Halls of this Congress. This was brought about by the White House's recent designation of Daniel W. Hofgren, a 33-year-old former Wall Street investment manager, to take over negotiations with Panama for a new Atlantic-Pacific canal.

In 1967, I joined with Congressman DANIEL FLOOD, who has spearheaded Concurrent Resolution 592 in the House call-

ing for the United States to maintain and protect our sovereign rights and jurisdiction over the Panama Canal and insisting that we in no way forfeit, cede, negotiate, or transfer any of these sovereign rights or jurisdiction to any other nation or international organization. My action followed the unofficial announcement that the Johnson administration and the Republic of Panama had reached agreement on the contents of new treaties between the two nations pertaining to the control, construction, and defense of the Panama Canal.

I am unable to understand the thinking of those who would give away our rights to the Panama Canal. Recent testimony by military experts before the House Foreign Affairs Committee, of which I am a member, pointed out the necessity of our maintaining American armed forces in the Canal Zone. At the present time, we maintain in the Canal Zone an Army infantry brigade, two Air Force plane squadrons, six air transports, and a Navy-provided LST. The wave not too long ago of assassinations, kidnapings, riots, and other acts of violence pointed out the need when our military forces were called upon to support the civilian police during mass disturbances. I have little doubt that the activities of Communists and leftists operating in the Canal Zone stem directly from Soviet-dominated Communist Cuba. The Soviet has long considered the new and undeveloped nations of Latin America to be fertile ground for their doctrines and policies of economic and political penetration.

In 1967, under the Johnson administration, a three-man team was appointed from Panama to negotiate with the United States for the three unsigned canal treaties which would have recognized Panama's sovereignty over the canal area, allow the highly unstable and dubious Government of Panama to jointly administer and defend the canal along with the United States, increase the annual payments that the United States must make to Panama, increase the tolls on ships and cargoes using the canal, and which would have provided for the construction of a new sea-level canal which would have rendered the present lake and lock canal unnecessary.

As chief negotiator on the canal, Mr. Hofgren would be directly under the supervision of Ambassador Robert B. Anderson, Chairman of the Atlantic-Pacific Interocean Canal Study Commission, which is the organization that is leading the proposal for a new sea-level canal. The proponents of this new sea-level canal must, in my opinion, bear a large portion of the responsibility for the tenuous situation which now exists between the United States and Panama over the issue of the canal. It is the Commission which has steadfastly ignored the criticism that a new sea-level canal is economically and physically unfeasible. Despite the fact there is not one shred of substantive evidence to their arguments that the present canal is obsolete and subject to sabotage and nuclear attack, the Commission continues its relentless pursuit for the construction of a new canal. It chooses to ignore the fact that the differences in the tidal range of the two sides of the Isthmus, measuring 22 inches on the Caribbean side and 22 feet on the Pacific side, present serious navigational hazards. It ignores the impossible engineering problems in connection with the terrain of Panama. And it completely ignores a report by the National Academy of Sciences that a serious ecological imbalance would result in both bodies of water if the present fresh water barrier in the present lock canal is abolished.

Now, having failed in their attempts to justify their obsession with a new canal, the Commission is trying other routes, some through dense jungle foliage so thick they are apparently unable to meet their 5-year deadline of December 1. The Commission has requested an extension for submitting its report on a new canal and has asked for an additional $1.5 million to complete its survey. The total cost to the American taxpayer for these jungle peregrinations have totaled some $24 million to date.

The Commission is apparently equally obsessed with the thought of using nuclear power to excavate their fanciful version of a new sea-level canal, despite the fact an atomic explosion within 10 miles of the present Canal Zone would most likely destroy the entire population by nuclear fallout. For this reason, the Atomic Energy Commission has declined to lend its support to the use of atomic power for the proposed digging of the new canal.

It is interesting to note that nowhere is there more than a vague estimate of the astronomical price of a new sea-level canal, although a 1960 estimate placed the amount at $2,368,500,000, exclusive of any indemnity to Panama.

Mr. Speaker, I have not seen one shred of evidence that the United States should abandon the present Panama Canal. The Congress has already appropriated $81 million for the widening and deepening of the summit channel of the canal and for new equipment and lighting. The existing dual locks can today be utilized for the construction of a third channel. The Terminal Lake-Third Locks modernization would not require any new treaties with Panama but could be carried out under existing treaties. Appropriations requests now before the Congress in the amount of $850 million would allow sufficient improvement to the canal to serve all necessary sea traffic requirements well into the 21st century.

On two previous occasions—in 1962, under President Kennedy, and in 1964, under President Johnson—attempts by the executive branch to disclaim our Nation's sovereignty over the Panama Canal failed due to the outcry from some Members of Congress and an enraged American public who are aghast at the attempt by some to weaken our treaty position and surrender our historic rights to the canal.

The United States has had full sovereign rights, power, and authority over the Canal Zone territory and the canal since the Hay-Bunau-Varilla Treaty of 1903. Not only Colombia, the sovereign of the Isthmus before Panama's independence, but the world has long recognized the right of the United States to the canal as "entirely and absolute." It is obvious that the United States would not have assumed the responsibility it has had since 1901 for the construction, operation, and defense of the Panama Canal without some legal title.

The two major issues, then, Mr. Speaker, are the retention by the United States of its unquestionable sovereign rights to the Canal Zone territory and the canal, and the modernization of the existing canal, which does not require any new treaty negotiations.

The Constitution gives to the Congress, and to the Congress alone, the sole authority to dispose of territory belonging to the United States and this is clearly outlined in article IV, section 3, clause 2 of that document. This provision vests the power to dispose of territory and other property of the United States in the entire Congress—House and Senate—and not in the treaty-making power of our Government—President and Senate.

The continuance of our foreign policy which dilutes or repudiates entirely our sovereign rights, power and authority with respect to the canal might lead eventually to the domination of the Republic of Panama by the Communists and thereby place this strategic waterway in the direct control of the Soviet Union. The consequences of such action would not only weaken the United States but the ultimate consequences would be staggering to the imagination.

Mr. Speaker, it is unthinkable that anyone in our Nation could honestly believe that the national security of the United States would be served in the surrendering of our rights to the Panama Canal, or that we should, with present world unrest, make Panama an equal partner with us in the present canal or in any future canal that might be built until perhaps some later time, which certainly is not now with world conditions as they are.

The Panama Canal is a priceless asset of the United States in both a military and an economic sense, and I, for one, will never be a party to any agreement which would authorize our surrender of our sovereign rights to the canal at the expense of our national security if I can prevent it.

CONGRESSMAN CRANE REPORTS ON CON SON

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Illinois (Mr. CRANE) is recognized for 45 minutes.

Mr. CRANE. Mr. Speaker, let me begin this discussion by disposing of two questions which were alluded to by several of my colleagues in yesterday's proceedings:

First. That I violated the standards of the House of Representatives and that I questioned the integrity of the distinguished gentleman from California (Mr. HAWKINS). To any of my colleagues who believe that I questioned the integrity of my colleague, I will simply and humbly repeat what I told that gentleman per-

sonally: that there was certainly no personal affront intended, and that I certainly do not question the motives or the integrity of the distinguished gentleman from California.

Second. That I singled out the distinguished gentleman from California for particularly harsh treatment, and that the gentleman from Tennessee (Mr. ANDERSON) was somehow—intentionally or inadvertently—ignored. My simple response is contained in the report of the Select Committee on U.S. Involvement in Southeast Asia. In his supplementary views in that document, the gentleman from Tennessee notes:

A detailed report of conditions is contained in the Supplementary Views of Congressman Hawkins.[1]

In the effort by the Members of Congress to investigate the question of possible inhumane or brutal treatment of prisoners in the prison at Con Son Island, it is vitally important for all of us to make sure our attention is focused on that problem rather than on personalities.

In this connection, we have previously heard the testimony of these two of our colleagues who visited the prison on July 2. I visited the same prison 20 days later, and can only report what I saw.

Permit me to focus for a moment on the attitude with which I embarked upon my visit to Con Son. My expectations were to a large extent based on what I had read: no accounts in the media that I now know to have been somewhat less than accurate. For example, I had read in the Economist that the tiger cages were "pits dug by the French."[2] Imagine my surprise when the tiger cages turned out to be two-story, above-ground buildings—not pits at all.

I had also seen photographs like the pair on page 27 of Life magazine of July 17, 1970.[3] Let me emphasize that this is a pair of photos—virtually everyone with whom I have discussed this article had assumed them to be a single picture of a single cell housing seven inmates. In fact, they are two photos of separate cells with three and four inmates, respectively.

Another example: my distinguished colleague (Mr. HAWKINS) has described the island as "remote."[4] Actually, Con Son is a weekend retreat from Saigon for both Vietnamese and American citizens, who swim and fish off its lush, tropical shoreline, a mere 50 miles from the mainland.

The charges that have been made regarding conditions at Con Son prison can be considered in two groups: those pertaining to physical conditions, and those that have to do with the treatment of the prisoners. Let us examine them in turn.

CONDITIONS AT CON SON

The "tiger cages" have been reported to be cells of inadequate size, filthy, stupefyingly hot, and lacking ventilation.[5] The report of the five students who had been in the tiger cages at Con Son indicated that rain water poured into these cages through the tile roof.[6]

According to Life magazine, the July 2 visitors gained the impression that "all the prisoners were sick: with TB, open sores, eye diseases, and malnutrition."[7] It was reported that lime dust was used to quell rebellion on the part of prisoners.[8] The "Report of the Five Students" further tells us that they regularly sustained beatings, and were fed rice containing sand and pebbles.[9] It has been further charged that the prisoners were so paralyzed from being shackled that few of them could stand.[10] Life states that they were forced to eat insects and the like.[11]

It is extraordinary how different were the conditions that I observed on my visit only 20 days later. I had the opportunity to inspect both the "tiger cages" and the "cow cages," which the earlier visitors admittedly did not see. Permit me to describe what I saw.

The tiger cages measure 5½ feet in width, 10½ feet in length, and 10 feet from floor to ceiling. One enters through a door at ground level. There are no windows in the walls, but the bars are at the ceiling of the cell. Two-thirds of the cell at ground level is elevated approximately 1 foot. It is on this platform that the prisoners sleep on straw mats. At the ground level in each cell is a small wooden box which serves as a latrine and is covered and is emptied once a day.[12]

Anchored in the cement of the elevated platform is a metal bar almost flush with the platform. This is for manacling prisoners between the hours of 5 p.m. and 6 a.m.[13] Colonel Ve indicated that this is necessary for security reasons. After inspecting the doors to most of the cells, I concluded his concern for security was valid since a solid kick on most of the doors would open them.

It should be pointed out that none of the guards at Con Son prison are armed and the prisoner-guard ratio is 100 to 1, in contrast to the Cook County, Ill., jail where the ratio is 7 to 1. The escape of these hard-core Vietcong prisoners from their cells could prove to be a very real security threat.

Each cell, in addition, contains a bucket of water for laundering articles and bathing. Clotheslines were strung in the cells where prisoners had laundered articles and they were hung to dry. Each prisoner had a flight bag containing personal belongings hanging from the walls, and there were other personal articles such as eating utensils, bowls, and embroidery work which is done by prisoners to sell to acquire money to buy special articles periodically from the prison canteen.[14]

The walls of the prison are concrete, approximately 1½ feet in thickness. Con Son Island is at 9° N. latitude. It is hot and humid most of the year. There is one rather large window at the second floor level for every two cells, and there are airspaces in the doors to the cells. At no place in the "tiger cages" does the sun hit the prisoners directly, although there is ample diffused light throughout. Since the concrete walls, 1½ feet thick, would act as insulation against the heat, one can readily see that for the cells to be "stupefyingly hot" that it would have to be even more "stupefyingly hot" outside.

I saw no evidence of filth on the floors of the cells. The walls had not been freshly repainted but were not particularly dirty, and there was even less foul odor than a westerner generally detects in the ricefields of the mainland.

PRISONER CONDITIONS

As for the condition of the prisoners themselves, I saw no evidence of malnutrition, no evidence of eye infections, no evidence of open sores with the exception of one male prisoner with a small bandaid on his cheek bone, and no evidence of paralysis of limbs except for one young girl who explained to me that her inability to use her limbs traced back to an incident antedating her arrival on the island of Con Son by 6 months. I saw all of the women prisoners—over 300 of them—and approximately 50 of the men. The latter are now all housed in the "cow cages." I saw no prisoners with any evidence of beatings, and none of the prisoners I spoke to mentioned anything about physical beatings. I saw no prisoners with evidence of bruises or abrasions on ankles or wrists from manacles.

The "cow cages" are so called because they are located in close proximity to a cattle feeding shed. They are square rooms measuring approximately 12 feet by 12 feet. There are no ceilings on these rooms but the ceiling space is covered with taut barbed wire at an elevation of approximately 8 feet. This is to permit maximum ventilation between ceiling level and the rafters. Each cell has one window near the ceiling measuring approximately 3 feet by 2 feet that is barred and looks out upon the yard in front of the building. These buildings are also of concrete.

There were eight prisoners in each of

[10] *Op. cit., Life*, p. 27.

[11] *Ibid.*

[12] Don Luce, "The Tiger Cages of Con Son," Congressional Record, July 28, 1970, p. 26007.

[13] The "Report of 5 Students . . ." states that the cage is about 3 meters (10 feet) long and 1½ meters (5 feet) wide. ". . . and that the prisoners' legs were shackled to a metal rod about 4 or 5 meters (14 to 17 feet) long." P. 38. Mathematically, it is impossible for the rod to be this long inside a single cell.

[14] Assorted eating utensils and bowls are clearly visible in the lower picture in *Life* (*op. cit.*) p. 27.

the cow cage cells I visited. All of the prisoners appeared to be in good health and not undernourished. In fact, clad as most of them were in undershorts, it was apparent that some of them carried excess weight. I have photographs available taken inside the cells of prisoners that will verify this point.

I am in no more position to comment on the alleged mistreatment of prisoners based upon hearsay than are those who visited the prison on July 2 of this year. I can, however, comment on both condition of the cells and condition of the prisoners which was, of course, observable to me.

COULD THE PRISONERS HAVE BEEN SWITCHED

The question arose in my mind during my visit as to the possibility that a different set of prisoners had been moved into the cells than those who had been there on July 2. There are approximately 9,500 prisoners on the island of Con Son, slightly over 300 of whom are women.

Since the U.S. Navy patrols the waterways between Con Son Island and the mainland, a distance of approximately 50 miles; and since the island is dependent upon the U.S. Government for air transportation; and since the transportation of the 300 odd women from Chi Hoa prison to Con Son 8 months ago represented a rather major logistical problem; I cannot conceive that there has been a switch of the 300 odd women who were there on July 2 with 300 others during the time that elapsed between July 2 and July 22. In addition, our AID officials, Mr. Frank Walton and Mr. Randolph Berkeley, who accompanied my colleagues on their visit on July 2 and myself on July 22, and in the interim made another visit to the island to inspect the tiger cages and cow cages, testified to the fact that they recognized prisoners who were there during all three of their visits.

Mr. Donald Luce, the journalist who acted as translator to the two members of the select committee, has since written to my distinguished colleague from California. He very accurately states why it would have been very difficult for the South Vietnamese Government to change prisoners:

I think we can be sure that the press here will carefully watch prison conditions.[15]

With a vigilant press, and with a large logistic problem involved, and with the eyewitness accounts of various officials, I believe it highly unlikely that a change of prisoners could have taken place. If any suggestion is made that a change did take place, the burden of proof should fall on those who maintain that a switch was made.

Permit me to call to the attention of my colleagues the distinguished backgrounds of the two gentlemen who direct U.S. activity in this area:

FRANK E. WALTON

Mr. Frank E. Walton is serving his second tour of duty as the Chief Public Safety Advisor to Vietnam in the Agency for International Development, having served in that capacity from 1959 to 1964 and having returned to the post in April 1969, after an interim assignment as Chief of the Vietnam Division of the Office of Public Safety, AID, Washington, D.C.

Mr. Walton came to Federal Government service after serving for 23 years with the Los Angeles Police Department and the Los Angeles County Sheriff's Office as a law enforcement officer in all phases of police operations, supervision, administration, training, and corrections. He holds a B.S. in police science and administration and an M.S. in government.

His experience included 2 years in command of the Los Angeles Police Training Academy and a period as deputy chief in charge of corrections for Los Angeles County for a confinement system of 10 division jails, a main jail and a rehabilitation center.

RANDOLPH CARTER BERKELEY, JR.

Randolph C. Berkeley, Jr., the Chief of the Correction and Detention Branch and Division, Public Safety Directorate of the Agency for International Development in Saigon, is a retired career Marine Corps colonel who entered on active duty with the Marines directly upon his graduation from the U.S. Naval Academy in 1938. He served in increasingly responsible posts, being assigned to Cherry Point and Camp Lejeune, N.C., as chief of staff and commanding officer in 1958 and rising to the top Marine intelligence position at Marine Corps Headquarters, Washington, D.C., in 1961, which post he held at the time of his retirement from active duty in 1965.

His varied experience throughout his Marine Corps career, including command intelligence and counterintelligence assignments in the early 1960's and command aviation assignments throughout the 1950's, makes him uniquely qualified for the administrative duties involved in overseeing the prisoner detention program in South Vietnam.

A part of the debate on this issue apparently centers on the credibility of their testimony. It strikes me as not altogether proper to draw conclusions as to conditions at Con Son Island without having had the advantage of talking to these two gentlemen who were eyewitnesses during the July 2 visit as well as the July 22 visit. In addition to these gentlemen, three other Americans accompanied me on my visit to the prison: Mr. James Nach, embassy political officer, Lt. Carl Mallet, U.S. Navy, and Sp4c. A. Hill, who took photographs of the prison during my entire visit. These are unusually clear and detailed pictures of both the "tiger" and "cow" cages, and of other parts of the prison.

INTERVIEWS WITH PRISONERS

The prisoners in these cells at Con Son are there, according to the testimony of *Lt. Col. Nguyen Van Ve*, and by the admission of the 32 whom I interviewed, for two reasons:

First, they were imprisoned under the An Tri law of the Vietnamese Government, which enables the government of Saigon, working through provincial security committees at the local level, to jail Vietnamese citizens suspected of Vietcong—National Liberation Front—associations for a period of up to 2 years and reserves to the government the power to secure extensions at the convenience of the government.

Second, there is a rule at Con Son prison that all prisoners must salute the flag of the Government of South Vietnam. The prisoners in the "tiger cages" and "cow cages" had refused to do this.

There is a third point that should be mentioned about the women prisoners at Con Son: they had instigated a riot in the prison of Chi Hoa in Saigon 8 months earlier, which was the immediate cause of their transfer to Con Son.

I think it is important to realize in this context that I spent approximately 2½ hours talking to prisoners in the tiger cages and cow cages in contrast to the one-half hour spent by the earlier delegation. This means I had a five times greater period in which to interrogate prisoners. I indicated to the prisoners that I was not a representative of the American military but rather a representative of the U.S. Government. I encouraged them to talk but I did not ask specific questions that might be considered "loaded." I had the services of three interpreters—one American and two Vietnamese nationals—rather than a single source. All of those to whom I spoke acknowledged membership in the National Liberation Front and were proud of that fact. The major preoccupation of each of the 32 prisoners to whom I spoke was politics. All of them indicated their opposition to the Government of South Vietnam. They were also critical of the United States for providing military support to South Vietnam against both the National Liberation Front and the Government of North Vietnam. Several prisoners indicated their loyalty to the Government of North Vietnam.

On the second point, one may reasonably question Colonel Ve's insistence that all prisoners at Con Son salute the flag. Still, all prisons have their rules, and conformity to this rule by any prisoner would result in his transfer out of either the tiger cages or the cow cages. The action of defiance of this particular regulation at Con Son by prisoners in the isolation cells was a voluntary one. In the interviews I had with 20 women and 12 male prisoners, they took pride in their refusal to honor the flag that represents a government they view as iniquitous.

Specifically regarding the women prisoners, their attempts to generate a prison riot at Chi Hoa—near Saigon—provide yet another evidence of their commitment to offer as much resistance as a prisoner can to his captor. Resistance, of course, is the prerogative of any prisoner. But, as I said, it was for this action that the women were transferred to Con Son Island.

Some of the prisoners indicated their displeasure with the prison diet. The 18-year-old English-speaking girl showed me some dried fish she had in a small plastic bag as proof of the unpalatability of the prison fare. However, the dried fish she produced was the same type of

[15] Letter from Don Luce to the Honorable Augustus M. Hawkins, CONGRESSIONAL RECORD, July 28, 1970, p. 26006.

dried fish I saw prisoners in Camp 4, outside the tiger cage and cow cage areas, eating with their rice.

Some prisoners indicated that prior to 2 weeks before my visit they did not have enough water for bathing purposes. This has been corrected.

None of the prisoners mentioned an insufficiency of drinking water.

Quite significantly, I believe, not a single prisoner raised the question of the use of lime dust to quell unruly prisoners.

The use of lime dust, I have been informed, is not novel in that area of the world. It is, in fact, apparently a cheap substitute for tear gas such as we use in the United States and is considered preferable since it can be localized more effectively than can tear gas.

When I spoke to the attractive 18-year-old English-speaking woman previously mentioned, a self-admitted member of the National Liberation Front, she explained to me that she was an idealist, that she viewed the government in Saigon as oppressive, that she had been jailed without trial by that government and, therefore, would not honor the flag of that government. I explained to her that one must pay a price for such idealism and, in this instance, the price was confinement in her isolation cell. She acknowledged to me that she obeyed certain rules as a member of the National Liberation Front. I pointed out to her that we all live under rules, and that now she was in a position where she had to obey the rules of Con Son prison or else continue her defiance within the confines of her isolation cell. She indicated to me that she preferred to carry on her private war in this manner, which is her choice.

The question legitimately arises as to whether there was not an attempt by the prison authorities to clean conditions up between July 2 and July 22 when I visited. In response to that suggestion, let me offer the following: First, virtually the only physical change in the cells that could have occurred in that interim was that the floors could have been swept. There was no evidence, as I indicated earlier, of fresh paint or whitewash on the walls. The cells could not have been made noticeably cooler. Regarding the condition of the prisoners, their reported malnutrition could not be cured in less than 3 weeks. Open sores cannot be healed in less than 3 weeks and paralysis of limbs cannot be remedied in less than 3 weeks. As for the reported TB cases, I saw approximately 16 women in the dispensary across the yard from the barracks containing the tiger cages, all of whom were suffering from TB, all of whom are under treatment, and all of whom are seen by a doctor on a weekly basis. I examined the records of the orderly in charge of requisitioning and dispensing medicine for the tiger cages. His books are well kept and entries made every 10 days. I inspected entries for the last 8 months. He indicated that there are some shortages of medicines, particularly streptomycin and penicillin, but an examination of his books revealed that approximately 90 percent of needed supplies was routinely filled and the 10-percent shortage, I suspect, is true throughout most of South Vietnam.

AN TRI LAW

The An Tri law offends the sensibilities of most Americans. But it must be recognized that every government reserves unto itself the right to protect itself against destruction.

In our own Constitution, under article 1, section 9, the denial of writ of habeas corpus is permitted in times of internal insurrection or external aggression.[16] Under this provision of the U.S. Constitution, President Abraham Lincoln made thousands of political arrests without benefit of counsel and without benefit of trial during the Civil War.

More recently, in the memory of most of those here present, during a time of emergency, we arrested the entire Japanese population of our Nation not because of any suspicion of individuals, but simply because they were Japanese.

This is not to say that Americans look back on either one of these examples with pride; it does, however, suggest that during times of national emergency, when the Nation has been under attack, we have resorted to the exercise of this prerogative, which governments have always claimed, and we are not in a very good position to describe "actions of this sort (as) characteristic of totalitarian dictatorships, not democratic societies." [17]

No one denies that there were any number of innocent individuals who suffered in these United States by these actions, and there are undoubtedly instances in South Vietnam today where innocents have been jailed under the An Tri law. But when one considers that the Government of South Vietnam has been under consistent attack since 1956, and when one considers further that the people of South Vietnam have had 14 years' experience at self-government instead of several centuries, it is not reasonable to condemn the South Vietnamese Government for an action that has in our own recent past been exercised by a government "of the people, by the people, and for the people."

AN OFFER TO LIFE MAGAZINE

I will publicly state that if Life magazine is so inclined, it can pay me $10,000, the sum reportedly paid to Mr. Tom Harkin, for my more distinct and superior photographs taken on July 22, and that I will in turn contribute that $10,000 to the purchase of streptomycin and penicillin for the prisoners on Con Son Island. Mr. Harkin informed the congressional committee when they requested the photographs he took of the tiger cages that he would not give them up because he had "a higher obligation to those 500 human beings who are jammed in those cages." [18] I submit Mr. Harkin's humanitarian instincts would find their greatest gratification in joining with me in this worthy effort by contributing his $10,000 to the purchase of medicine and food for the prisoners. Surely, considering the fact that there is always suffering in any prison system, Con Son not excluded, no one would want to make pecuniary gain from the misfortune of others.

CONCLUSION

In conclusion, Mr. Speaker, permit me to make the following observations:

First. The An Tri law may be a serious restriction on individual rights as we in America know them, but the war in Vietnam is serious too. Clearly, this law has precedents throughout the history of democracies including our own.

Second. If conditions at the South Vietnamese prisons need improving, and I believe they do, let us constructively suggest how they might best be performed without indicting a whole government and a whole people who are trying, under very adverse circumstances, to build a viable democracy.

Third. Those who would encourage the United States to exercise still more influence over the South Vietnamese Government's action—such as my distinguished colleague from Tennessee does [19]—should realize that they cannot have it both ways. If the United States is to disengage and "Vietnamize" the war—as I believe it should—it will have less and less influence over the actions of the South Vietnamese Government. In other words, we cannot have a disengagement and a "puppet" government in Saigon—as some unfortunately describe the Thieu-Ky regime—at the same time.

I have not attempted to whitewash conditions at the Con Son prison. I went there, after hearing the reports made by earlier visitors, expecting the worst. I was most surprised at what I saw. In fact, it even caused me to consider the possibility of a rotation of prisoners for show. It was only after realizing that this would have been impossible with the female prisoners and at least unlikely with the men that I felt impelled to elaborate on the conditions I found. I do not presume to do so in any official capacity. I went to Con Son, and I have reported what I saw there, as an American citizen concerned that the cause of full information and of truth be served.

CORPS OF ENGINEERS SHOULD INFORM POLLUTERS OF REQUIREMENTS OF 1899 REFUSE ACT

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Wisconsin (Mr. REUSS) is recognized for 20 minutes.

Mr. REUSS. Mr. Speaker, recently the Corps of Engineers prepared a tabulation of existing corps permits for industrial waste discharges into the Nation's navigable waterways since enactment of the 1899 Rivers and Harbors Act. That study showed that there are no existing corps permits in 22 States. Also in all but three States, there are less than 25 existing permits for such discharges.

---

[16] Article 1, section 9 of the Constitution reads, in part: "The Privilege of the Writ of Habeas Corpus shall not be suspended, unless when in Cases of Rebellion or Invasion the public Safety may require it."

[17] Joint statement of Messrs. Moss and Reid, July 23, 1970, page 1 (mimeo).

[18] *Op. cit., Life,* p. 2A.

[19] *Op. cit.,* "Supplementary Views of Repr. Wm. R. Anderson . . ." Report of the Select Committee, p. 52.

Yet we know that there are thousands of other industrial polluters discharging wastes into our waterways who have failed to obtain a corps permit and are violating the 1899 law. It is for this reason that I yesterday sent a letter to the corps urging it to begin now to conduct a program of notifying these polluters of their obligations under the 1899 law. This should be accomplished by the most expeditious means possible, "through the news media, correspondence with various industrial and trade associations, the Chambers of Commerce, the National Association of Manufacturers," and other equally effective means.

If the discharger complies with the 1899 law and applies for a permit, he will have to obtain a certificate from the appropriate State water pollution control agency pursuant to section 21(b), only this year added to the Federal Water Pollution Control Act. When a State grants a certificate, it certifies that the applicant's activity "will be conducted in a manner which will not violate" applicable Federal, State, or local water quality standards. No corps permit shall be granted until the certification is granted or waived. Without a permit, the discharger can no longer discharge his wastes and pollute our waterways.

I believe this little-used law will greatly complement our water pollution control laws and bring us much closer to the ultimate goal of clean water.

I append the text of the letter I sent to the Corps of Engineers on July 28, 1970:

JULY 28, 1970.

Lt. Gen. F. J. CLARKE,
Chief of Engineers, Department of the Army, Washington, D.C.

DEAR GENERAL CLARKE: Your letter of June 24, 1970, enclosed at our request, data in tabular form on existing permits issued by the Corps of Engineers for industrial waste discharges into navigable waterways since enactment of the 1899 Refuse Act (Table A), and for dredged materials since January 1, 1965 (Table B).

Table A shows that there are *no* existing Corps permits for industrial wastes in 22 States (Arizona, Colorado, Connecticut, Iowa, Kansas, Maine, Maryland, Michigan, Montana, Nebraska, Nevada, New Hampshire, New Mexico, North Dakota, Ohio, Oklahoma, Rhode Island, South Dakota, Utah, Virginia, West Virginia, and Wyoming). In Massachusetts, the only existing Corps permit was suspended on February 13, 1970, because of unspecified complaints by State officials. Except for New Jersey, California, and Louisiana, there are less than 25 existing Corps permits for industrial waste discharges in each of the remaining States and Puerto Rico. The dischargers covered include some of the Nation's producers of pulp and paper, synthetic fibers, chemicals, petroleum products, steel and aluminum.

This meager number of existing Corps permits issued for the discharge of industrial wastes is disgraceful, when one contemplates the numerous industries in each State that undoubtedly discharge pollutants into our waterways. The time has long passed for these industries to stop flouting the 1899 law and to either comply with it and the regulations issued thereunder, or to cease discharging their wastes into our waterways.

As we have said time and time again, the 1899 law affords an opportunity to determine whether these dischargers are, in fact, in compliance with applicable water pollution control laws. Section 21(b) of the Federal Water Pollution Control Act, as amended by Public Law 91-224 of April 3, 1970, and the recently revised Corps regulations (Cong. Rec., p. 20252, June 17, 1970) require that an applicant for a Corps permit provide the Corps with a State certification. The State must certify "that there is reasonable assurance" that the applicant's activity "will be conducted in a manner which will not violate applicable water quality standards." No Corps permit "shall be granted" until such certification is obtained or waived. Presumably, a State will not issue a certification without careful review of the applicant's activity. But, unless the Corps requires discharges to comply with the 1899 law, section 21(b) will not become operative.

We therefore urge the Corps to begin now to notify *all* present and future dischargers of refuse materials into this Nation's waterways about the requirements of the 1899 law and section 21(b) of the FWPC Act. This notification should be done as expeditiously as possible, through the news media, correspondence with various industrial and trade associations, the Chambers of Commerce, the National Association of Manufacturers, and other appropriate means of disseminating this information.

Please advise us when you initiate such notification.

Recently, the following notice was brought to the Subcommittee's attention:

Corps of Engineers, Department of the Army, P.O. Box 1715, Baltimore, Maryland 21202, Telephone 962-4646.

Warning Notice.—Federal Acts Prohibit The Discharge Or Overflow Of Any Oil, Sludge, Bilge Oil, Dirt, Dredgings, Ashes Cinders, Mud, And Refuse Of Any Kind Into Navigable Waters That Lie Within The Jurisdiction Of The United States.

Violation Of These Regulations May Result In A Penalty Of Not More Than $10,000, Or Not More Than One Year Imprisonment Or Both.

Applicable United States Laws: The Oil Pollution Act of 1924, As Amended, The Act of 29 June 1888, River & Harbor Act of 3 March 1899.

The notice fails to advise the public that, under the 1899 law, one-half of the fine imposed by the court under that law shall "be paid to the person or persons giving information which shall lead to conviction." (33 U.S. Code 411). As the Committee on Government Operations said in its recent report (House Report No. 91-917, March 18, 1970, pp. 17-18):

"The informer payment provides a monetary incentive to citizens to furnish information to the Corps concerning violations of the Refuse Act."

Information supplied by citizens can aid the Corps, not only in the enforcement of the criminal provisions of the Act, but also in obtaining injunctions requiring a violator to cease future discharges or to apply for a Corps permit in the manner mentioned above. Further, such information can be useful to the Corps in requiring the discharger to remove pollutants already discharged. Informing the citizen about this little-used provision of the law will undoubtedly result in greater information being provided to the Corps or the U.S. attorneys and some savings to the Government of the cost of investigations of violations.

We therefore urge the Corps to revise the above notices by adding the following:

"One-Half of the Fine Imposed For Violation of the 1899 Act is Paid To Any Person or Persons Giving Information Leading To Conviction."

Since these notices must be revised anyway because the Oil Pollution Act of 1924 was repealed by section 108 of Public Law 91-224 on April 3, 1970, the addition of this language to the notices should not be too costly to the Corps.

Please advise us when the Corps revises these notices.

Sincerely,

HENRY S. REUSS,
Chairman, Conservation and Natural Resources Subcommittee.

TRIBUTE TO THE HONORABLE MARIO BIAGGI

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. LOWENSTEIN) is recognized for 60 minutes.

Mr. LOWENSTEIN. Mr. Speaker, I think we all know by now that MARIO BIAGGI is one of the outstanding Members of this body. It is good to learn that the leading newspaper of a city he will soon represent here, the Herald-Statesman of Yonkers, N.Y., has already noted and praised him for the high quality of the service he renders his community and the Nation. I include in the RECORD at this point an unusually wise editorial from the Herald-Statesman:

BIAGGI SHOWS COURAGE, WISDOM IN ITALIAN RALLY REMARKS

Mario Biaggi, the Congressman who more than likely will be representing part of Yonkers next Jan. 1, appears to have an interesting combination of courage and common sense.

He showed both Monday in addressing thousands of demonstrating Italian-Americans in Manhattan.

The courage came when he spoke words of moderation to the up-tight crowd; the common sense resided in the words themselves.

He told them: "Of 22 million Italian-Americans in this country, only 5,000 were involved in organized crime.

"Because of the misconduct of a few, let us not use a wide, black brush on the FBI and let not the FBI, or any other law enforcement agency, use the same brush on us."

The Congressman from the 24th District is so right.

No one, to our knowledge, looks with jaundiced eye at any person simply because he is of Italian descent. The FBI does not thumb through an Italian "Who's Who" looking for people to arrest. They act on evidence painstakingly collected in the face of a growing legal hostility to law enforcement.

It appears to us that we are approaching a strange age of anti-heroes, where the bad guys are cheered and the good guys are hissed.

Joe Columbo, identified by the FBI as one of the biggest mobsters in the New York area, received what a reporter called "a tumultuous ovation" while the FBI, long one of the most loyal adherents to American democratic principles, was brought to task.

While we can understand the Italian-Americans' growing feeling of frustration as they read and hear constantly about a Mafia crackdown, we find it difficult to fathom how they can equate this with any anti-Italian feeling on the part of either the FBI, the government or the news media.

The word "Mafia" or its modern counterpart, "Cosa Nostra," perhaps have been overused by zealous reporters who assign them to any criminal suspect with an Italian surname. But there is too much evidence . . . too much data to simply deny the existence of this crime cartel.

That is why Rep. Biaggi is right when he says Americans should refrain from using a wide brush in appraising each other.

This advice holds true for more than the Italian-American issue. It can be applied to the way we assess today's youth and the way they assess adults; to the simplistic "get-a-job" approach to the welfare problem; to the

racial hangs-ups of many whites and blacks; and to the gross generalization of what is called "the news media."

We support the FBI in its fight against organized crime, regardless of who is arrested. We deplore the implication that any defamatory conspiracy exists. And we urge all Italian-Americans in Yonkers to back such law enforcement officials as District Attorney Carl Vergari, Yonkers Public Safety Commissioner Frank Vescio and the President of the Police Benevolent Association, Al Portanova.

If Rep. Biaggi, a highly decorated ex-policeman, wins as expected in November, Yonkers will inherit still another outstanding Italian-American.

No, we hardly think the actions and notoriety of a few bad men can tarnish the reputation of a happy, industrious people who not only helped build this country, but sent a man over to discover it and put it on the map.

The magnitude of the contribution made by Americans of Italian descent to the development of this country is self-evident to anyone who understands our history, our hopes, or even our name. MARIO BIAGGI is himself a significant addition to that contribution.

Millions of Americans who are not especially of Italian descent join in protesting broad-brush generalizations that denigrate Americans of Italian descent, as millions of Americans who are not black protest broad-brush generalizations that denigrate black Americans—as all Americans should, in fact, always protest any broad-brush generalizations that denigrate any other Americans because of their racial, religious, or ethnic background.

No doubt some people want to use protests against these stereotypes for improper purposes of their own. We will not be used for such purposes, but neither will we stop protesting against such stereotyping. The motives of some of the protesters may be self-serving, but wrongs are not made less wrong because some people protest the wrongs for unworthy purposes.

Many of us in the House of Representatives are proud to support Congressman BIAGGI in the fight to stop discrimination against Italian-Americans. His leadership means a great deal to all of us in this fight. His example of "courage and commonsense," as the Herald-Statesman put it, has inspired each of us to try to do more to end all such discrimination as soon as possible, and to prevent its ever recurring in this country again.

TELLER VOTING

(Mr. BOGGS asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. BOGGS. Mr. Speaker, yesterday, in a move which will have profound historic significance, this House of Representatives voted to remove secrecy from the procedure of teller voting.

It was, I think, a victory for democracy, for representative government, and for this body. No one can ever deny the accurate and memorable description of this House by Alexander Hamilton when he said, "Here, sir, the people govern."

The right of a free people to know how their representatives vote is as fundamental a right as the rights of free speech, of religion, and of voting.

This is the topic of editorials in newspapers around the country. I am inserting three in the RECORD and calling them to the attention of my colleagues:

[From the Washington Post, July 29, 1970]

OPEN HOUSE

Those cheers that echoed in the House of Representatives on Monday may have violated Cannon's Rules but they were nevertheless very much in order. They were cheers for democracy, for the basic idea of representative government, for the concept of government by the consent of the governed. They came in response to a historic House decision to put an end, at long last, to its ancient practice of voting in secret on amendments to pending legislation. By an almost unanimous voice vote, the members of the House approved an amendment to the congressional reorganization bill providing that in the future they shall be recorded by name as they pass up the aisle to vote on amendments.

The House, at the same time, approved some other exceedingly salutary changes in its procedures. It agreed to permit at least 10 minutes of debate on any amendment printed in advance in the Congressional Record. And it approved the installation of electronic voting equipment to speed up roll calls—provided that later on the House decides that it wishes to tally its divisions in this modern, efficient and sensible fashion. More's the pity that it did not decide also to make committee meetings open to the public as a general rule. All these changes are simply devices for transacting the public business in public. They will serve at once to help the representatives themselves to know what they are doing and to help their constituents to know what they have done.

Because in their present form the changes are amendments to a bill which must have the concurrence of the Senate before it can become law, one cannot yet regard them as *faits accomplis*. But the support for them in the House was so strong, so healthy and so overwhelming that one can reasonably suppose the House would adopt them as rules of its own if the Senate should fail to translate them into an act of Congress. They reflect great credit on the House and will surely enhance the confidence of the country in its government.

Secrecy in the House is one of those curious folkways perpetuated as tradition long after the purpose for which it was originally contrived has been forgotten. The House of Commons in England undertook to keep its proceedings secret in order to protect its members from reprisals by James I and Charles I in the 17th century. The practice, designed to offset despotism, soon proved itself despotic. It led to all sorts of abuses difficult to unmask and to rebuke because responsibility for them could not be discerned. "Next to the existence of open constituencies, and a fair mode of election," the historian Lecky wrote, "the best security a nation can possess for the fidelity of its representatives is to be found in the system of parliamentary reporting. But this was also wanting. The theory of the statesmen of the first half of the 18th century was that the electors had no right to know the proceedings of their representatives, and it was only after a long and dangerous struggle, which was not terminated until the reign of George III, that the right of printing debates was virtually conceded."

The right of a free people to know how their elected representatives vote is a right without which elections can be considered neither free nor meaningful. The House of Representatives honors its best values in joining them now as a genuinely representative body.

[From the Baltimore Sun, July 29, 1970]

IN THE HOUSE

The House of Representatives should have a much more important place than it has in the operation of the federal government in Washington, and its individual members, by and large, should figure more than they do in the public business of their home districts. Congressman Boggs of Louisiana, the Democratic whip, says he is concerned that "young people say this House has ceased to be relevant." Mr. Boggs has good reason to be concerned, for the fact is that the House of Representatives spends much of its time in its own world of prerogatives, procedures and seniorities, with the result that the people, whom it represents in Washington, pay little attention to it.

The political trend of recent years, in which the membership in the House has remained remarkably stable despite the ups and downs of party fortunes in presidential elections, may be caused more by indifference toward the House than to a general satisfaction with its work. Young people are not the only ones who think that the House, at least for a good bit of the time, has ceased to be relevant.

In the legislative reorganization bill it has been considering for the past week the House shows a recognition of some of its time-encrusted faults. Take the matter of teller votes, for example, in which the members walk up the center aisle to vote anonymously on important amendments to bills. The procedure, which is traced to the British House of Commons during the reign of Charles I, enables members to vote on major issues without going on record. * * *

[From the New York Times, July 29, 1970]

NEW DAY ON CAPITOL HILL

Those who were not quite convinced by the moon landings that this is an era of change should be persuaded by the recent behavior of the House of Representatives. A few days ago it agreed to reveal, on request, the way its members vote in committee and to allow hearings to be televised. Now it has decided, at least in a preliminary way, that if only 20 members object, the rest may no longer hide behind that monument of secrecy, the unrecorded teller vote. The amending process, in which the teller vote is used, may not much longer allow Representatives to vote on such vital matters as the Cooper-Church proposal, Federal outlays for pollution programs and controversial anticrime procedures without their constituents ever being able to tell how they stood.

This historic step, made in the Committee of the Whole, was not taken without a price. To get it this far along required a major concession by the main body of reformers. They made no effort to include in the bill any modification of their old target, seniority, nor did they encourage the vain moves to do so yesterday.

We expect that on another occasion they will tackle that fundamental evil—and soon. But because the bill as a whole involves the Senate and the executive branch as well, it has yet to be passed not only by the full House but by the Senate, and then be signed by the President. Overloading it now with antiseniority and other changes, however desirable they might be, would invite almost certain defeat for the entire measure—an excellent way for secret opponents of reform to cancel the gains already made and do it in the name of reform.

A NATIONAL BANK FOR PUBLIC AND PRIVATE PRIORITY PURPOSES

(Mr. PATMAN asked and was given permission to extend his remarks at this point in the RECORD, and to include extraneous material.)

Mr. PATMAN. Mr. Speaker, today, Senator SPARKMAN and I have jointly introduced legislation developed to meet what we are convinced is a rapidly growing financial crisis for the Nation's State and local governments and the Nation's businesses and industries.

Continuing inflation and tight-money, high-interest-rate conditions are making it increasingly impossible to achieve urgently required development of the Nation's communities.

By the same token, these conditions are strangling the Nation's businesses and industries.

Week by week and month by month, both the public and private capital needs for national priority purposes are increasingly unmet. The result is the steadily mounting failure of State and local governments to obtain the funds necessary for streets, water, sewers, schools, hospitals, airports, mass transit systems, and air and water pollution control facilities. It is also the rising inability of businesses and industries to acquire adequate capital at a cost they can afford in order to finance the expansion and development that is absolutely vital to remain competitive and to assure achievement of a full-employment economy.

THE ANSWER

The answer to these twin problems exists in the creation of a National Development Bank designed to make direct loans and to guarantee loans to State and local governments and to businesses and industries when adequate funds at reasonable rates cannot be obtained from conventional lending sources to provide vital public services and facilities and to bolster the economy and increase employment opportunities of our people, especially those of our citizens who are unemployed or who have a low income.

In effect, the answer is the creation of a bank for public and private priority purposes to help check our deteriorating economy and move the Nation toward full utilization of our resources—both human and material.

ESTABLISH A NATIONAL PRIORITY BANK

The Bank would be authorized to make loans to finance the construction of public facilities and public works for State and local governments at an effective interest rate which does not exceed 6 percent. In addition, the Bank could purchase obligations of State and local governments and guarantee loans from conventional lending institutions to provide capital for the same purposes.

Whenever possible, the public facilities and public works financed through the Bank are to be of direct, substantial benefit to residents of slum and depressed rural areas.

Loans carrying an interest rate no greater than 1.5 percent higher than the current Federal Reserve discount rate could be made by the Bank to businesses and industries to provide working capital and to assure that adequate funds are available to these enterprises so that they will have adequate skilled manpower, resources, technical and plant facilities to compete in the market place. Loan guarantees would be available too, and the Bank could purchase obligations of business and industries for the same purposes.

The bill specifies that financial assistance to the private sector from the Bank is available on condition that borrowers agree to fill a specified number of job openings and to conduct training programs when these are considered necessary by the Bank Board of Directors to strengthen business and industries and to expand employment opportunities for those in greatest need of suitable work at adequate wages.

Direct loans, guaranteed loans and the purchase of obligations would apply to both existing and new industry and business.

CAPITALIZATION

Capitalization of the Development Bank would be achieved through issuance of up to $500 million worth of stock which would be subject to call in whole or in part by the Board of Directors. The Secretary of the Treasury would be required upon request to purchase Bank stock in amounts up to the $500 million total. In addition, the Bank would be authorized to issue notes, debentures, bonds, guarantees, and other debt instruments, the total of which would not exceed 20 times the paid in capital stock of the Bank at the time.

Designed in this way, Bank funding would have minimum impact on the Federal budget. Most of its capital would be raised in the open market where Bank obligations, by virtue of the fact that they would be fully guaranteed by the Government, would be able to successfully compete with other obligations which offer less security and have far less priority in terms of national need.

NOT COMPETITIVE

In no way is the National Development Bank meant to compete with conventional lending institutions. No loan may be made or guaranteed by the Bank if the borrower is otherwise able to obtain funds on reasonable terms, something which will be determined by the Bank's Board of Directors after considering the financial condition of the borrower and the borrower's ability to meet prevailing market loan costs.

The Bank's Board of Directors would be composed of the Secretaries of the Treasury, Commerce, Labor, and Agriculture, and seven other persons appointed by the President and representing private enterprise, organized labor, agriculture, and State and local governments.

The bill provides that the Development Bank is to have an adequate staff not only to investigate and process applications from borrowers, but to seek out and confer with leaders and officials in both the public and private sectors in order to provide information about the Bank and to lend necessary technical assistance to borrowers so that the full benefits of financial assistance from the Bank may be achieved.

Mr. Speaker, the proposed National Development Bank described here is similar in many respects to a bill which I introduced several months ago. That measure emphasized the need for such a bank in terms of meeting the Nation's critical housing needs. Since that time the Senate and the House have passed the Emergency Home Finance Act of 1970 and benefits from that legislation are now available to the Nation's homeowners.

The National Development Bank bill which Senator SPARKMAN and I are now introducing goes to those sectors of the Nation's economy which continue to have enormous unmet financial requirements.

The need for such action is recognized by many Members of Congress, both in the House and the Senate, indicated by introduction of legislation during the past few days to provide loan guarantees to business and industry. Both Senator SPARKMAN and I think this measure has great merit but we also think that additional aid in the form of direct loans is necessary if the financial problems of State and local governments and business and industry are to be realistically approached.

IMPERATIVE NEED

Mr. Speaker, continuing inflation, tight money, high interest rates, and unemployment conditions make establishment of the National Development Bank absolutely imperative.

Financial market conditions during the past 18 months have forced thousands of communities across the Nation to curtail or completely delay financing of vital public facilities. When these communities are able to market obligations, the cost in terms of the yield demanded by purchasers has been intolerably exorbitant. Moreover, the high cost of money today greatly reduces the ability of our States, cities, and towns to obtain additional funds for still greater community investments that will be required in the near future.

The same basic situation confronts a large segment of the small and medium-size businesses and industries in the country. These firms are being strangled by the lack of available capital at reasonable cost on the one hand and the absolute need to expand, improve, and remain competitive on the other. The result can only be a mounting toll of business and industrial failures and a continuing climb in the unemployment rate. The pressures such conditions will inevitably produce in our urban centers and rural areas cannot be tolerated if democracy and the free enterprise system are to survive.

Mr. Speaker, I am inserting herewith the text of the National Development Bank bill to be printed in the RECORD.

H.R. 18701

A bill to establish a National Development Bank to provide loans to finance urgently needed public facilities for State and local governments and to help achieve a full employment economy by providing loans to business and industry when adequate loan funds at reasonable rates cannot be obtained from conventional lending sources, and to provide needed capital for other socially useful purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SHORT TITLE

SEC. 101. This Act may be cited as the National Development Bank Act of 1970.

FINDINGS AND DECLARATION OF PURPOSE

SEC. 102. (a) The Congress hereby makes the following findings:

(1) Inflation and tight money-high interest rate conditions make it impossible to achieve sound and orderly development of the Nation's communities to accommodate our growing population. Adequate and timely provision of a wide variety of public works and community facilities, such as streets, water, sewers, schools, hospitals, airports, mass transit, recreation as well as facilities to reduce and eliminate air and water pollution are immediately needed to provide required social services, safeguard the health and welfare of the population and halt rising unemployment.

(2) Tax and other financial sources currently available to State and local governments to finance such public works and facilities are strained beyond capacity yet the demand for such funds will multiply many times in the near future.

(3) Public investment in our Nation's communities, when efficiently planned and carried out, will add to the wealth of individual communities as well as the wealth of the Nation as a whole.

(4) It is absolutely necessary to provide an adequate source of loan funds at reasonable rates to help finance expansion and development of businesses and industries in order to achieve a full employment economy, especially for those Americans trapped in depressed urban and rural areas.

(b) It is the purpose of this Act to establish a National Development Bank to make and guarantee long term loans to State and local governments for public works and facilities and for business and industrial expansion and development to provide urgent, vital public services, safeguard the health and welfare of our people, and to achieve a full employment economy for our citizens.

DEFINITIONS AND RULES OF CONSTRUCTION

SEC. 103. (a) The definitions and rules of construction set forth in this section apply for the purposes of this Act.

(b) The term "public facility" means the structures and equipment owned and operated by State and local governments to provide medical, social, education, transportation, pollution control, and other services.

(c) The term "supporting public facilities" means those facilities which are usually publicly owned and are necessary for the operation of businesses and industries, such as roads and sewer and water systems.

(d) The term "effective interest rate" means the total amounts paid on a loan for interest, commission, bonuses, discounts, premiums, and other similar charges.

ESTABLISHMENT

SEC. 104. There is created a body corporate to be known as the National Development Bank (referred to in this Act as the Bank).

BOARD OF DIRECTORS

SEC. 105. The management of the Bank shall be vested in a Board of Directors consisting of the Secretary of the Treasury, the Secretary of Commerce, the Secretary of Labor, the Secretary of Agriculture, and seven other persons who shall be appointed by the President with the advice and consent of the Senate. Persons so appointed shall include representatives of State or local governments, private enterprise, organized labor, and rural organizations dealing with economic and social problems of depressed areas. In making such appointments the President shall (1) seek to achieve a balanced representation of the interests of urban and rural areas, and (2) select persons who, among other relevant considerations, are knowledgeable in the social and economic problems of low-income persons. The terms of directors appointed by the President shall be two years, commencing with the date of enactment of this Act. Any director appointed to fill a vacancy shall be appointed only for the unexpired portion of the term. Any director may continue to serve as such after the expiration of the term for which he was appointed until his successor has been appointed and has qualified.

APPOINTMENT OF OFFICERS AND EMPLOYEES

SEC. 106. The Board of Directors of the Bank shall appoint a president of the Bank and such other officers and employees as it deems necessary to carry out the functions of the Bank. Such appointments may be made without regard to the provisions of title 5, United States Code, governing appointments in the competitive service, and persons so appointed may be paid without regard to the provisions of chapter 51 of subchapter III of chapter 53 of such title relating to classification and General Schedule pay rates. The president of the Bank shall be an ex officio member of the Board of Directors and may participate in meetings of the board except that he shall have no vote except in case of an equal division. No individual other than a citizen of the United States may be an officer of the Bank. No officer of the Bank shall receive any salary or other remuneration from any source other than the Bank during the period of his employment by the Bank.

CONFLICT OF INTEREST

SEC. 107. (a) No director, officer, attorney, agent, or employee of the Bank shall in any manner, directly or indirectly, participate in the deliberations upon or the determination of any question affecting his personal interests, or the interests of any corporation, partnership, or association in which he is directly or indirectly personally interested.

(b) The Bank shall not engage in political activities nor provide financing for or assist in any manner any project or facility, involving political parties, nor shall the directors, officers, employees, or agents of the Bank in any way use their connection with the Bank for the purpose of influencing the outcome of any election.

GENERAL CORPORATE POWERS

SEC. 108. Except to the extent inconsistent with the provisions of this Act, the Bank shall have the general corporate powers of a corporation organized and existing under the laws of the District of Columbia.

PRINCIPAL OFFICE; BRANCHES

SEC. 109. The principal office of the Bank shall be located in the District of Columbia, and it may establish agencies or branch offices in any city of the United States.

CAPITAL STOCK

SEC. 110. (a) The Bank shall have capital stock of $500,000,000 subscribed by the United States, payment for which shall be subject to call in whole or in part by the Board of Directors.

(b) The Secretary of the Treasury is authorized to, and upon request of the Board of Directors shall, purchase stock in amounts designated by the Board of Directors up to a total of $500,000,000.

BORROWING AUTHORITY

SEC. 111. (a) The Bank may issue notes, debentures, bonds, guarantees, and other evidences of indebtedness in such amounts and on such terms and conditions as the corporation may determine subject to the limitations prescribed in this Act.

(b) The aggregate outstanding indebtedness of the Bank at any time, including contingent liabilities on outstanding guarantees, may not exceed twenty times the paid-in capital stock of the Bank at that time.

(c) The obligations of the Bank under this section shall be fully and unconditionally guaranteed both as to interest and principal by the United States and such guarantee shall be expressed on the face thereof.

(d) In the event that the Bank is unable to pay upon demand, when due, any of its lawful obligations, the Secretary of the Treasury shall pay the amount thereof and thereupon to the extent of the amount so paid by the Secretary of the Treausry shall succeed to all the rights of the holder of the obligations.

PURCHASE OF ASSETS BY TREASURY

SEC. 112. The Secretary of the Treasury is authorized to purchase from the Bank any asset of the Bank at such price as may be agreed upon between the Secretary and the Bank.

INVESTMENT STATUS OF OBLIGATIONS OF BANK

SEC. 113. All obligations issued by the Bank shall be lawful investments for, and may be accepted as security for, all fiduciary, trust, and public funds the investment or deposit of which is under the authority or control of the United States or of any officer or officers thereof.

LIMITATIONS ON LOANS AND GUARANTEES

SEC. 114. (a) No loan may be made or guaranteed by the Bank if the borrower is otherwise able to obtain funds on reasonable terms.

(b) The Bank may not make or guarantee any loan to finance any enterprise or activity outside the United States, its territories and possessions.

LOANS FOR COMMUNITY DEVELOPMENT

SEC. 115. (a) The Bank may make or guarantee loans or purchase obligations to finance capital expenditures for comprehensive land use planning, public works, community facilities, land for housing development, public transportation, and similar community facilities, such projects and facilities to conform with comprehensive area land use plans. Whenever possible such facilities and projects are to be of direct and substantial benefit to residents of urban slum and depressed rural areas, or provide other benefits specified by the Bank to carry out the purposes of this Act.

LOANS TO COMMERCE AND INDUSTRY

SEC. 116. (a) The Bank may make or guarantee loans for the purchase of real and personal property, for working capital, and for training purposes to assure that existing businesses and industries have adequate funds and skilled manpower resources to compete in the market place for establishment of new businesses and industries. Any such loan shall be made upon such of the following conditions as the Bank may require:

(1) That the borrower agrees to fill a specified number of job openings to be determined by the Bank with people who, prior to such employment, were unemployed and underemployed.

(2) That the borrower agrees to conduct training courses for a specified number of unemployed and underemployed persons to be determined by the Bank with the result that these persons will, within a period of time to be determined by the Bank, be employed full time by the borrower.

(3) That the borrower agrees to any other requirements laid down by the Bank to carry out the purposes of this Act.

LOANS FOR SUPPORTING PUBLIC FACILITIES

SEC. 117. (a) To carry out the purposes of this Act, the Bank may make or guarantee loans or purchase obligations to finance the purchase or construction of roads, sewer and water systems, power and similar facilities necessary for the operation of businesses and industries or the operation of public facilities providing social, health, welfare, educational and other services to residents of urban slum and depressed rural areas.

(b) The effective interest rate for such loans shall not exceed the Federal Reserve discount rate.

TECHNICAL AND OTHER ASSISTANCE

SEC. 118. (a) The Bank may provide to borrowers whatever assistance, technical or otherwise, it considers necessary to protect its investment and to carry out the purposes of this Act.

(b) To assure fulfilling the purposes of this Act, the Bank shall direct an adequate number of staff members to seek out and confer with respresentatives of State and local governments, public agencies, nonprofit private organizations, companies, corporations, partnerships and individuals, in order to provide information about the services furnished by the Bank and to provide whatever assistance is necessary for utilization of such services.

SECURITY REQUIRED

SEC. 119. The board of directors of the Bank shall when practicable make whatever arrangement it considers adequate to secure loans made by the Bank.

MAXIMUM MATURITY

SEC. 120. (a) Each loan made by the Bank to any State or local government may be made for a period not exceeding twenty years, and the Bank may from time to time extend the period of payment.

(b) Each loan made by the Bank to any private corporation, company or individual may be made for a period not exceeding ten years, and the Bank may from time to time extend the period of payment until the loan is retired or until the loan is refinanced through another lending institution and the borrower's obligation to the Bank is extinguished.

GUARANTEED LOANS

SEC. 121. The Bank may fully guarantee the entire principal of any loan made by any bank, savings bank, trust company, building and loan or savings and loan association, insurance company, mortgage loan company or credit union, if

(1) the loan is made to carry out the purposes of this Act; and

(2) the effective interest rate for the loan is not less than the Federal Reserve discount rate, or more than such rate plus 1½ percentum per annum.

DIRECT LOANS

SEC. 122. To carry out the purposes of this Act, the Bank may make direct loans to State and local governments, public agencies, nonprofit private organizations, corporations, companies, partnerships and individuals. The effective interest rate for such loans, (1) in the case of state and local governments and public agencies shall not exceed the Federal Reserve discount rate; and, (2) in the case of other eligible entities and individuals, shall not be less than such discount rate, or more than such discount rate, plus 1½ percentum per annum.

TAXABLE STATUS

SEC. 123. The Bank, its property, its franchise, capital, reserves, surplus, security holdings, and other funds, and its income shall be exempt from all taxation now or hereafter imposed by the United States or by any State or local taxing authority; except that (1) any real property and any tangible personal property of the Bank shall be subject to Federal, State, and local taxation to the same extent according to its value as other such property is taxed, and (2) any and all obligations issued by the Bank shall be subject both as to principal and interest to Federal, State, and local taxation to the same extent as the obligations of private corporations are taxed.

AUDIT BY GENERAL ACCOUNTING OFFICE

SEC. 124. The General Accounting Office shall audit the financial transactions of the Bank, and for this purpose shall have access to all its books, records, and accounts.

AUTHORIZATION OF APPROPRIATIONS

SEC. 125. (a) There is hereby authorized to be appropriated, to remain available without fiscal year limitation, the sum of $500,000,000 for subscription to the capital stock of the Bank.

(b) There are authorized to be appropriated such sums as may be necessary to pay the difference, if any, between the interest paid by the Bank on its obligations and interest received by the Bank on its loans, and to reimburse the capital of the Bank to the extent of any defaults.

(c) There are authorized to be appropriated such sums as may be necessary for payment of $125 a day to members of the board of directors for each day they are engaged in the performance of their duties to the Bank together with such sums required for travel expenses by members of the board of directors when the performance of their duties requires them to be away from home.

SINGLE TRANSPORTATION TRUST FUND

(Mr. KOCH asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. KOCH. Mr. Speaker, the Congress is now considering what it shall do with the highway trust fund which is scheduled to terminate in 1974 with its revenue authority expiring on September 30, 1972. The fund was established in 1956 and is principally supported by a 4-cent Federal gasoline tax. That may sound like pennies but since the highway trust fund came into existence, it has spent over $50 billion—50 times what the Federal Government has put into mass transit.

Mr. Speaker, the Congress must not allow the present imbalance of funding to go on, particularly when it is at the expense of mass transit. As we look around the country we see continual breakdowns in our inadequate and deteriorating mass transit facilities. Transit delays and accidents have become the rule rather than the exception. Just this week the New York Times reported that the city of New York has had more serious accidents in its subways in the last 10 years than any other major subway system in the world. Furthermore, in the last year there have been more accident injuries in the city's subways than on any other subway system. This year alone New York's transit system has had three crashes; two people have been killed and 107 injured.

The issue before the Congress now is whether highway and airport trust funds will continue without regard to the needs of urban mass transit and railroad passenger service. Surely, it makes sense to have a single transportation trust fund with the moneys used in accordance with a rational plan to provide a balanced transportation system. The bankruptcy of the Penn-Central and the inadequate service on the Long Island Railroad and other commuter railroads, the enormous need for more and better subway lines in the city of New York and elsewhere require that this Congress not permit the highway trust fund to be extended to 1977 as requested by Secretary of Transportation John A. Volpe.

The cities of this country are being strangled by traffic congestion and the automobiles piling into the cities are the major cause of air pollution. What we must have is a single transportation trust fund to provide the moneys needed for the kind of transportation that is best suited to do the job in a particular locality.

In today's New York Times, there is an excellent editorial on this subject which I know our colleagues will find of interest. The editorial follows:

NEW YORK TIMES' EDITORIAL

TOO MUCH FOR HIGHWAYS

Congress and the American people are hearing a fundamental decision on transportation policy revolving about the Highway Trust Fund, which is scheduled to go out of existence on Sept. 30, 1972. The Nixon Administration has asked Congress to extend it for another four years, and House and Senate committees have begun hearings.

Established in 1956 to finance the Interstate Highway System, the fund is fed by the Federal tax of four cents a gallon on gasoline and by lesser excise taxes. Since this money can only be used to build new highways and since the Federal Government pays 90 per cent of the construction, the mere existence of the fund is a self-perpetuating engine which generates tremendous pressure on the states to go ahead with ever more ambitious road projects. The fund's annual revenue now approximates $5 billion and over the next several years will inexorably rise to $6.5 billion. Is it really necessary to spend this vast sum each year on new highways?

By contrast, only $156 million was spent in the last year in Federal aid for subways, buslines and other forms of urban mass transit. In the past dozen years, $50 billion has been spent to build highways, fifty times as much as the Federal Government has devoted to mass transit. It is now expected that the Interstate Highway System will cost almost twice the original estimate by the time it is completed, i.e. $75 billion instead of $41 billion.

It is not sound public policy for Congress to freeze such large tax revenues in any fund devoted to a single narrow purpose. But Congress has become wedded to the trust fund concept, and private interest group pressures make its abolition highly unlikely. Indeed, a law enacted this year creates a new fund to finance airports.

As a practical matter, the issue before Congress is whether the highway and airport funds can be broadened into a single Transportation Trust Fund. Urban mass transit, railroad passenger service and other transport needs could then be considered and reconciled in accordance with a rational plan. The bankruptcy of the Penn Central, the inadequate service on the Long Island Rail Road and other commuter railroads, the headlong decline in railroad passenger service and its actual disappearance in many states, the ever-intensifying traffic jams in every city, and the shortage and undependability of bus service in both cities and suburban towns are the exhausting evidence of the lack of a coherent policy.

The nation's governors and mayors are urging Congress to introduce flexibility into the operations of the highway fund. They want each state to have the option to use part of its Federal highway funds for mass transit. Representative Edward I. Koch of Manhattan and other members of Congress are pushing bills to allocate the 7 per cent auto excise tax, which now goes into the Treasury's general revenues, to a new Urban Mass Transportation Trust Fund as a transitional step toward a merger of all the transportation funds. Senator Jennings Randolph of West Virginia has introduced a

modest measure to permit the diversion of Federal highway funds for operation—but not construction—of mass transit in urban areas.

Secretary of Transportation John A. Volpe is well aware of these rising pressures. But he has been notably timid in offering any leadership for reform. In presenting the Administration recommendations for extension of the Highway Trust Fund, he recognized the desirability of balancing mass transit against the imperious demands of the truck and the private automobile but he ventured nothing more than a pious acknowledgement. He suggested no change except to make safety research and the pathetically starved program for removal of billboards eligible for comparatively small sums from the Highway Trust Fund.

Naturally this feeble proposal evoked ritualistic outcries from those well-known enemies of common sense, Representatives John C. Kluczynski, the Chicago Democrat who is chairman of the roads subcommittee, and William C. Cramer, the Florida Republican who is the ranking minority member. Messrs. Kluczynski and Cramer have been vocal and attentive servitors of the highway lobby for many years.

If Secretary Volpe defaults to the highway lobby, the nonpolicy of the last fifteen years will continue to prevail with increasingly disastrous consequences. The time of decision is rapidly approaching. Whenever it comes the battle for a rational, balanced transportation policy is sure to be hard and the longer Secretary Volpe is timid and evasive the less likely is a victory for the public good.

NOT ENOUGH FOR RAILS

"My God, my God, now I know what hell looks like," a dazed young woman gasped as she was led from a stalled train through the Penn Central Railroad's smoke-filled Park Avenue tunnel.

This commuter's vision of Hades was the result of what another Penn Central passenger grimly described as "our semimonthly Monday-morning fire," a blaze that flared up after a third-rail short circuit. It followed by just two weeks another fire on the Penn Central's tracks—at the Harlem River drawbridge—that also caused anguishing delays, though less discomfort and peril, for thousands of railroad patrons.

Rail commuters have been relatively lucky—so far. At least there have been no serious injuries in Penn Central's latest two major mishaps. Two weeks ago 37 subway passengers were injured in Brooklyn in an accident that also sent commuters groping their way through darkness in the Metropolitan Transportation Authority's own version of the netherworld. That was the second major subway accident in New York within two months, the fourth in seven months.

These ominous breakdowns in the metropolitan area's mass transit system have been met with bland assurances by transit authorities. "Believe it or not," a railway spokesman commented, "service on the Penn Central is getting a lot better.' One thing is sure: it could hardly get worse. Dr. William J Ronan, chairman of the the MTA, boasted after the latest subway accident: "The New York subway system is still the safest in the world."

A New York Times survey of the record of other major subway systems in the world casts doubt on the validity of that claim. At any rate, commuters who have experienced the dark in the tunnels are not going to be satisfied with such evident complacency, nor will anyone else who has watched the mounting record of mishaps.

It is time transportation authorities owned up more frankly in public to the gross and dangerous inadequacies of the neglected facilities they have inherited and more vigorously led the fight for the massive public investment that is essential to give this city and the nation the safe and reliable mass transit systems they urgently need.

RETIREMENT INCREASE FOR RAILROAD WORKERS

(Mr. HARSHA asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. HARSHA. Mr. Speaker, I appeal today to my colleagues for immediate approval of the House-Senate conference committee report on railroad retirement annuities. This legislation has been delayed for an extraordinary length of time while the meager retirement benefits of retired railroad workers and their survivors were eroded even further by inflation.

The committee report calls for a 15-percent increase in retirement benefits for railroad workers that will be retroactive to January 1, 1970. As we are all aware, the cost of living has continued to climb and retired workers depending on fixed incomes are suffering because of this. The 15-percent increase recommended in conference will offset some of these rising costs for retirees who have not had regular cost-of-living increases. Under the present law they must depend on Congress to improve their benefits, when economic conditions create hardships for them, and I feel Congress has delayed unnecessarily in fulfilling its obligation and responsibility.

I regret that this is so, for I feel that when employees have planned for the future by contributing to a retirement program, they should be able to receive equitable benefits from that program without being penalized. When social security amendments were enacted recently, railroad workers were not given equal consideration for benefit adjustments.

At this juncture, it is inexcusable to allow the thousands of retirees to suffer any longer because of inadequate benefits while Congress delays action. This bill only serves to provide these deserving people with the necessities of life at the level of decency and comfort they have worked so hard to obtain.

I strongly support this legislation and I call on Congress to expeditiously pass the House-Senate conference committee report on railroad retirement annuities.

COMMUNITY HEALTH ACT

(Mr. GALIFIANAKIS asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. GALIFIANAKIS. Mr. Speaker, this afternoon I introduced the Community Health Act of 1970, a bill to relieve the shortage of physicians, dentists, and other health personnel in our small communities and medically deprived areas.

This bill and two others with identical language have the sponsorship of more than 65 of my colleagues in the House—Republican and Democratic, urban and rural.

It provides that the Government will repay in full the educational debt of any physician, dentist, optometrist, or other critically needed health specialist who signs a contract agreeing to practice for 3 years in a medically deprived area.

The bill will afford graduating doctors the chance to begin practice debt-free. And it should provide the incentive they need to go out into our communities and meet what President Nixon has called "a massive crisis" in health care.

Mr. Speaker, I include the text of the Community Health Act at this point in the RECORD:

H.R. 18689

A bill To amend the Public Health Service Act to encourage physicians, dentists, optometrists, and other medical personnel to practice in areas where shortages of such personnel exist, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That—

(a) Section 741(f) of the Public Health Service Act (42 U.S.C. 294(f)) is amended by striking the second sentence thereof.

(b) Section 741 of such Act is amended by adding at the end thereof the following new subsection:

"(i) Any physician, dentist, or optometrist who practices his profession—

"(1) in an area in a State determined by the appropriate State health authority, pursuant to regulations provided by the Secretary, to have a shortage of and need for physicians, dentists, or optometrists; and

"(2) who signs a contract with the Secretary or his designee agreeing to practice in said area for a period of not less than three years;

"then the Secretary shall pay in full the principal and interest on any outstanding educational loan incurred by that physician, dentist, or optometrist during his professional-level training, including: tuition, fees, books, supplies, and other related costs as determined in accordance with regulations provided by the Secretary. As such need is established, the Secretary may add new categories of medical personnel to those incorporated in this subsection. This subsection applies to loans from both public and private sources."

Mr. Speaker, we are all familiar with the health care crisis facing the United States today. We all know of how America has a shortage of 48,000 physicians. We know that we are short 17,800 dentists today and will be nearly 57,000 short in 1980. We know that if present trends continue, we will be 210,000 nurses short in another 10 years, and 432,000 short in the allied health fields.

We all know the story. Yet, somehow, when these statistics are written down coldly on paper, they do not convey the personal effects of the health shortage—and the health misallocation— of physicians and other medical personnel in the United States.

These statistics do not show, for example, that in California, motorists involved in traffic accidents which occur on rural roads are four times as likely to die as those who have their wrecks in urban areas, even though the rural drivers have more survivable accidents. The difference is in emergency room facilities.

The statistics do not show that in Buf-

falo, nearly four times as many children from upper-income families are vaccinated against measles than are the children of the poor.

They do not show that there are towns in Utah where there are no physicians *and none for* a radius of 75 miles.

They do not show the many small towns in America which for months have been advertising for physicians without luck.

These conditions do not merely reflect a doctor shortage in the United States, they reflect a misallocation of the physicians we have.

The demands of a dispersed population heighten the burdens on the few doctors who do locate in our rural areas and make a rural practice into a grueling chore.

Because our rural areas tend to have low-family incomes, the financial rewards of a small town or rural practice may not be as great as the rewards of an urban specialty. Many of our smaller communities also lack the cultural diversions which make urban areas so attractive to the medical community. They may also lack adequate clinical and hospital facilities.

So the physicians set up practice elsewhere, or they go into research. This should not be surprising. But what does it do to our rural areas or to the pockets of urban poverty where there is a scarcity of health care?

The statistics are not encouraging. In 1964, the rate of maternal deaths in childbirth was 40.9 per 100,000 live births in our rural areas, as compared to a national average of 33.

For the same age groups, our rural citizens have nearly twice the amount of chronic illness than the residents of our large metropolitan areas.

In 1967, the Presidents National Advisory Commission on Rural Poverty reported that—

> Because the rural poor do not have easy access to appropriate health services early in the illness, the result is much greater disability.

Conditions are little better among the urban poor. In a study conducted in New York City, researchers found that two-thirds more babies die at birth in 16 poverty areas than in the rest of the city. In these same 16 areas, more than twice as many mothers died in childbirth. Nearly three times as many mothers either received late prenatal care, or none at all. And the tuberculosis rate in these 16 areas was more than twice that of the city at large.

In fact, it is difficult to find a health statistic in which the urban and rural poor and the residents of our small communities rank better than the more affluent majority of the Nation.

As Drs. Bergner and Yerby concluded:

> It appears that the people most in need of medical services are the ones who least often obtain them.

Mr. Speaker, I do not pretend that the bill we have introduced today is a palliative which will cure the shortage of medical personnel in America today. But it is an incentive for young physicians to begin reversing the misallocation of physicians in America.

Under the terms of this bill, graduating physicians, dentists, and optometrists would be offered the chance to begin practice debt free in exchange for 3 years' practice in a medically deprived area.

And as critical shortages in other health professions became apparent, the Secretary of Helath, Education, and Welfare could add new categories to this original listing.

Frankly, I cannot give you an accurate estimate of the cost of this program. But if every student who graduated from medical, dental, and optometry school in 1969 were to enroll in the program, and if each of them owed the entire cost of his education, the cost would not exceed $130 million each year.

And if we take a more realistic estimate of participation in such a program—with one out of every 10 graduating doctors signing contracts—then the cost would be nearer to $10 million each year.

For that amount, with 10 percent of our graduating doctors participating, we could disperse nearly 3,500 doctors into medically deprived areas at the end of 3 years.

I think $10 million each year is a sum we cannot afford to spend on less important programs while much of the Nation suffers from inadequate health care.

This would not be wasted money. We would not be subsidizing the purchase of new cars, or television sets, or luxury apartments. But we would offer the doctor who borrowed to get through school the opportunity to begin practice with no financial problems.

Mr. Speaker, the House may be aware of the fact that 15 other nations in the world rank ahead of the United States in life expectancy and infant mortality.

Much of the reason for the U.S. standing in these areas lies in the inadequate health care afforded to the rural and urban poor and to our small communities.

I think this bill will do much to improve that inadequate care. If it does not, if it proves to be too small an incentive to encourage doctors to move out into the community, then we should not hesitate to try another approach.

Perhaps we will have to make massive infusions of aid into our medical schools, with the stipulation that certain percentages of their new graduates will enter practice in medically deprived areas.

This bill would do much to meet our present need. I urge the rest of my colleagues to support it, and hope that others will add their names to the more than 65 sponsors of this legislation.

I AM THE NATION

(Mr. PEPPER asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PEPPER. Mr. Speaker, Mrs. Gershon Miller dramatized the attached reading at the B'nai B'rith Independence Day rally, Thursday, July 2, 1970, at the Miami Beach Auditorium, which is in my district.

Mrs. Miller, or Jeanette, as we all know her, is a graduate of Northwestern University School of speech. She had been in radio broadcasting for 13 years both in Miami Beach and Chicago, as director of women's and children's programs. She is a dramatist and storyteller and when performing for children she also uses her ability as a puppeteer.

Mr. Speaker, I include Mrs. Miller's ever beautiful and inspiring Independence Day reading in the RECORD immediately following these remarks:

I AM THE NATION

I was born on July 4, 1776, and the Declaration of Independence is my birth certificate. The bloodlines of the world run in my veins, because I offered freedom to the oppressed. I am many things, and many people. I am the Nation.

I am 200 million living souls—and the ghost of millions who have lived and died for me.

I am Nathan Hale and Paul Revere. I stood at Lexington and fired the shot heard around the world. I am Washington, Jefferson and Patrick Henry. I am John Paul Jones, the Green Mountain Boys and Davy Crockett. I am Lee and Grant and Abe Lincoln.

I remember the Alamo, the Maine and Pearl Harbor. When freedom called I answered and stayed until it was over—over there. I left my heroic dead at Valley Forge, Pearl Harbor and on the bleak slopes of Korea. . . . and in the steaming jungle of Vietnam.

I am the Brooklyn Bridge, the wheat lands of Kansas and the granite hills of Vermont. I am the coalfields of the Virginias and Pennsylvania, the fertile lands of the West, the Golden Gate and the Grand Canyon. I am Independence Hall, the Liberty Bell and the Statue of Liberty.

I am big. I sprawl from the Atlantic to the Pacific . . . My arms reach out to embrace Alaska and Hawaii . . . 3 million square miles throbbing with industry. I am more than 5 million farms. I am forest, field, mountain and desert. I am quiet villages, and cities that never sleep.

You can look at me and see Ben Franklin walking down the streets of Philadelphia. You can see Betsy Ross with her needle. You can hear the strains of "Auld Lang Syne" as the calendar turns.

I am Babe Ruth and the World Series. I am 130,000 schools and colleges, and 320,000 churches and synagogues where my people worship God as they think best. I am a ballot dropped in a box, the roar of a crowd in a stadium and the voice of a choir in a cathedral. I am an editorial in a newspaper, a letter to a Congressman, and the right to appeal.

I am Longfellow, Walt Whitman, Thomas Paine and Carl Sandburg. I am Eli Whitney and Stephen Foster. I am Tom Edison, Albert Einstein and Billy Graham. I am Horace Greeley, Will Rogers and the Wright brothers. I am Martin Luther King, John F. Kennedy and his brother, Robert. I am Jonas Salk and the American astronauts walking on the moon.

Yes, I am the Nation, and these are the things that I am. I was conceived in freedom and, God willing, in freedom I will spend the rest of my days.

NATIONAL AVIATION DAY

(Mr. PEPPER asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PEPPER. Mr. Speaker, Mr. R. Franklin Brown, Jr., executive secretary of Aviation Distributors and Manufacturers Association, has just written me a

letter advising that the association is making an effort to revive recognition and observance of National Aviation Day on August 19 and enclosing a brief history of how National Aviation Day came into being. I have responded to Mr. Brown's letter giving him further details of how I introduced Senate Joint Resolution 111, which made Orville Wright's birthday, August 19, National Aviation Day. I hope the Members of Congress will take note of National Aviation Day and will encourage observance of it in honor of American air heroes, particularly Orville and Wilbur Wright, and to reflect the development and progress of aviation as well as to further stimulate interest in aviation in the United States.

Mr. Speaker, I insert R. Franklin Brown's letter to me with the enclosed history of National Aviation Day and my letter in reply giving further details of how National Aviation Day came into being, in the RECORD immediately following my remarks in this part of the RECORD:

AVIATION DISTRIBUTORS AND MANUFACTURERS' ASSOCIATION,
Philadelphia, Pa., July 17, 1970.

Representative CLAUDE PEPPER,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN PEPPER: Our Association is most interested in reviving recognition and observance of National Aviation Day, which you were instrumental in initiating in 1939.

Public awareness of the value of aviation is still limited primarily to military and commercial applications. Stimulating public interest in aviation in many other areas continues to be a worthwhile goal.

To this end, ADMA is embarking on a long-range campaign to build up greater observance of National Aviation Day. We are planning events at four airports across the country this year to use as demonstrations of techniques that can be used by other airports in the coming years. In this way we hope to expose the public to the role general aviation is playing and can play in improving our lives.

The enclosed Aviation Education News Bulletin, which is circulated among 1,800 educators and aviation officials, contains a news item regarding our plans. I have also enclosed a short history of the facts as we know them about the creation of National Aviation Day. I would greatly appreciate any amplification you can provide of how National Aviation Day came to be and what happened to it.

In addition, we would greatly appreciate if you could provide us with your current thinking on the value of commemorating National Aviation Day; we would be pleased to quote such a statement or message from you in our publicity efforts.

Sincerely,

R. FRANKLIN BROWN,
Executive Secretary.

NATIONAL AVIATION DAY

The idea apparently came from two identifiable sources; there are probably others, but these two are identifiable.

1. A January 1939 edition of the St. Petersburg Independent ran an editorial in that newspaper which proposed the creation of a National Aviation Day to honor American Aviation Heroes, particularly Orville and Wilbur Wright. (This information was obtained from January 28, 1939 Congressional Record)

2. A proposal read by Representative Jennings Randolph was contained in the Congressional Record of February 28, 1939 citing the appropriateness of Orville Wright's birthday (August 19) for designation as National Aviation Day.

Senate Joint Resolution #111 was introduced in the U.S. Senate on April 3, 1939 by Senator Claude Pepper of Florida. (The Senate sponsor of SJR–111 was Senator Claude Pepper of Florida, the House sponsor of SJR–111 was Representative Jennings Randolph of West Virginia—Representative Randolph is now a Senator).

The measure SJR–111 was approved by both houses of the 76th Congress on May 11, 1939 and was officially referred to as Public Resolution #14.

A Presidential Proclamation was provided for by Public Resolution #14.

National Aviation Day—August 19 was officially created by a proclamation signed by President Franklin D. Roosevelt and Secretary of State Cordell Hull on July 25, 1939.

A general statement of purpose is that Aviation Day was created to honor American Air Heroes, particularly Orville and Wilbur Wright, to reflect the development and progress of aviation, and to further and stimulate interest in aviation in the United States.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., July 29, 1970.

Mr. R. FRANKLIN BROWN, Jr.,
Aviation Distributors & Manufacturers Association, Philadelphia, Pa.

DEAR MR. BROWN: Your letter of July 17th telling me that your association is most interested in reviving recognition and observance of National Aviation Day, which came into being by virtue of Senate Joint Resolution 111 introduced by me on April 3, 1939, and asking me for additional information I might have about the matter, has been received and I am very much pleased to have it.

I introduced S.J. Res. 111 upon the personal request of Orville Wright who came unannounced to my Senate office shortly before April 3, 1939 and said that friends of his had suggested that it would be a gracious thing if Congress passed a law making National Aviation Day August 19, his birthday, and saying further that friends had suggested that I might be willing to introduce such a resolution. I, of course, assured Mr. Wright that I would be delighted to introduce such a resolution. I had a very pleasant visit with Orville Wright on this occasion.

After my bill became law and President Roosevelt had issued the proclamation declaring August 19th National Aviation Day, July 25, 1939, Mr. Wright came back to my office and gave me a photograph of the first flight made by him at Kitty Hawk in 1903, signed "To Senator Claude Pepper" and underneath that "Orville Wright." I cherish this photograph which I keep on my office wall.

I am so pleased that your association is beginning to revive observance of National Aviation Day. I would like to participate in any helpful way I could. I hope you will make it an industry-wide event as it should be.

I am putting your letter to me, including your history of how National Aviation Day came about, together with this letter, in the CONGRESSIONAL RECORD in order to excite, I hope, interest on the part of members of congress in your celebration of National Aviation Day this year. I will send you a copy of it.

Kind regards, and
Believe me,
Very sincerely yours,

CLAUDE PEPPER,
Member of Congress.

BOYS BEHIND BARS

(Mr. PEPPER asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PEPPER. Mr. Speaker, one of the most significant aspects of crime in the United States today is the rate of recidivism in the commission of crime by those who are once adjudged guilty of crime and confined in correctional institutions. The Chief Justice of the United States has given the rate of recidivism from our correctional institutions as up to as high as 75 percent. We on the House Select Committee on Crime have visited many such institutions for young people and the rate of recidivism ran from one low of 19 percent to more than 70 percent. That is one of the principal concerns of the House Select Committee on Crime. I recently wrote an article in the Tropics section of the Miami Herald which appeared on July 19, 1970 as part of the Sunday paper. The article is entitled "Boys Behind Bars" and relates to the young people of Florida being confined in correctional institutions. Since it is a subject of concern to all of us I request that it be put in the RECORD immediately following these remarks:

BOYS BEHIND BARS

(By Representative CLAUDE PEPPER)

Among the most legendary and identifiable characterizations of youth to be found in American folklore are Tom Sawyer and Huck Finn. As reported by Mark Twain, that pair managed a good deal of boyhood mischief during their adventures.

Yet I imagine that only the most punctilious of readers would have thought to suggest a prison sentence as a price for such roguish behavior.

Perhaps it was an identification with such youthful misdeeds which caused so many Americans to react with outrage to the sentencing of two Florida boys to adult prison some months ago for several comparatively minor offenses.

The case of Richard Copas, 15, and Donald Douglas, 14, of Fort Pierce, Fla., led the State Pardon Board to nullify the three-year adult prison sentences imposed on the youths and to move jurisdiction to the state's juvenile correction agencies where, properly, it should have been all along.

The juvenile court judge who made the adult sentence mandatory by transferring the case to Circuit Court explained that he believed an adult prison facility offered a better place to rehabilitate "incorrigibles." Both boys had a history of truancy and running away and, the judge noted, the state's juvenile correctional institutions had long had a serious runaway problem.

To many, the action appeared to be an attempt to warehouse the boys, especially since Florida in recent years has moved to correct the deficiencies in its juvenile corrections programs through multi-purpose approaches to rehabilitation. Ironically, one yardstick for the success of this effort is evidenced by a drop in the rate of runaways from the state school at Marianna from 168 for the first three months of 1969 to 23 for the first three months of 1970.

One of the more enlightenend men in the field of juvenile corrections is O. J. Keller, the director of Florida's Division of Youth Services, who has instituted many changes in the handling of young offenders. On the matter of jailing youthful offenders, Keller told our Select Committee on Crime at its Miami hearings:

"Children should not be sent to prison. Eventually, the young person will emerge from prison. What happens to him in an adult prison may well make him a sexual deviate, a career criminal, or a permanent welfare case. It is almost impossible to protect a young boy from that portion of the prison population seeking homosexual contacts."

Regrettably, however, the practice of sending juveniles to adult prisons is far from isolated.

During the past seven years, judges in Florida alone have sentenced two 13-year-olds; thirteen 14-year-olds; 73 fifteen-year-olds; and 283 sixteen-year-olds to adult prisons.

In many of these cases the action was taken because, like many other states, Florida does not have a necessary intermediate facility to house youths who are likely to run away but are not otherwise lost to society, and who might be helped by rehabilitation measures.

The controversy that surrounded the Copas-Douglas case—including the offer of movie actor Steve McQueen to find a home for the youngsters in California—revealed two significant facts concerning the state of juvenile corrections throughout the country.

Simply stated, these are that: (1) juvenile corrections are in dire need of higher-paid and better-trained staffs who can administer innovative and imaginative approaches in corrections, and (2) efforts to rehabilitate the youthful offender are a dismal failure in most parts of the United States.

This last point was dramatically portrayed in a series of articles on juvenile corrections by Pulitzer Prize-winning reporter Howard James of the *Christian Science Monitor*.

James concluded with the startling statement that "society would be better off if the youthful offender were never caught."

"Obviously," in the words of Dr. James Bax, secretary of Florida's Department of Health and Rehabilitative Services, "there is a failure in a system of 'corrections' which produces trained adult felons from juvenile delinquents."

In our hearings in Washington, D.C., and in other cities and towns across America, the Crime Committee has been told repeatedly by the most eminent authorities that if we are to make a real impact on crime, we must cut down on the rate of recidivism, or repeaters. This is especially true in the case of juvenile offenders.

I have seen, as have other members of the committee, fledgling, innovative programs in juvenile corrections which are achieving remarkable successes despite bush-league budgets and semi-trained personnel.

What is needed is a diversity of approaches toward rehabilitation rather than what Dr. Bax described as an all-too-frequent "impersonal crank-them-in and crank-them-out, next-case-please approach to youths."

As Bax explained further to our committee:

"We need imaginative programs to reach the downward-bound youngster the first time he gets into trouble and seems headed for the youth corrections program. The possibilities here are limitless. We think one such important step would be the starting of halfway-in houses. These would be in the community environment with the youth still attending public schools, but breaking the home or other neighborhood environments which often lead him into trouble.

"Here such techniques as group therapy and a form of discipline could be brought to bear on the youth without exposing him to the alienating effects of an institution and its repeaters with their hardened attitudes."

The matter of early detection of anti-social traits, I believe, is of critical importance. In Florida, for example, we do not allow vocational education below the 10th grade. Yet a lot of youngsters, going down to fourth, fifth, sixth, and later grades, for some reason or another, cannot keep up with their classmates.

They feel frustrated and begin to have a sense of failure. Then they drop out and want to do something, to show that they can do something, and they often get in trouble.

HALF THE PEOPLE CHARGED WITH CRIMES IN 1969 WERE JUVENILES

We should start some kind of vocational training program as early as the elementary school years so that young persons will stay in school and feel real achievement.

Our school curriculums do not accentuate the talents of the low academic achiever but seem, rather, to create failure for some children. They foredoom social promotion by putting them in an environment where they cannot succeed.

It is here that the real roots of crime can be successfully removed.

Any effort to reach the potential youthful offender must entail a good deal more spending than this country has to date been willing to spend. Much of this reluctance is based on a sense of false economy and belief that such expenditures would be prohibitive. I submit that just the opposite is true.

One reputable study from the District of Columbia reveals that an average 25-year-old prisoner has already cost society more than $30,000 in juvenile and adult court costs, probation, detention, and imprisonment.

During the course of a year, the prisons in the country have a total inmate population of more than 2.5 million, of whom 50 to 75 per cent are repeaters. There is no way to compute this loss to society both in terms of dollars and waste of human resources.

Yet programs for correction and rehabilitation of prisoners—both juvenile and adult—are treated as if they are among the lowest of our priorities.

The meager $5 million budget of the Office of Juvenile Delinquency under the Department of Health, Education and Welfare was largely responsible for the resignation of director-designate Frank A. Orlando, an eminent juvenile court judge from Fort Lauderdale.

This allotment came despite the fact that last year nearly half of all persons charged with crime were juveniles, while adult arrests only increased four per cent.

This failure is also evident in the allocation of federal funds to local communities through the Law Enforcement Assistance Administration. Of a total budget for fiscal year 1969 of $63 million, only 7 per cent of the total went for programs to prevent juvenile delinquency and 15.4 per cent for combined juvenile and adult programs for correction and rehabilitation.

The Administration's budget request for L.E.A.A. for fiscal year 1971 totals $480 million, a great sum in isolation but little more than an opening salvo to attack a crime problem that costs society an estimated $30 billion a year.

And there is no indication that the percentage of money diverted to corrections will appreciably increase in the coming months.

For this reason, I have proposed increasing the L.E.A.A. budget for 1971 to $1 billion. I also advocate a substantial increase in the budget of HEW's Office of Juvenile Delinquency and encourage more federal investment in the training of correctional personnel and the improvement of techniques and facilities for the treatment and rehabilitation of young offenders.

There is no more important matter in the entire criminal justice system than the matter of corrections and rehabilitation. Yet until recently, the problem was consistently ignored by the federal as well as state and local governments.

The price we have paid for this failure is reported daily in a spiraling crime rate.

We must dedicate our efforts to the task of breaking the crime cycle. Not by filling our prisons—but by rehabilitating our prisoners.

THE DISTRICT OF COLUMBIA CRIME BILL

(Mr. PEPPER asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PEPPER. Mr. Speaker, the passage of the District of Columbia Court Reform and Criminal Procedure Act of 1970 marks a significant step in this country's fight against the rising tide of crime. Although marked by strenuous debate and great divergence of opinion, everyone concerned agrees that something had to be done. This bill will hopefully serve as a meaningful response to a desperate situation.

The Select Committee on Crime held hearings in the District of Columbia this past February. Much of the testimony we received was shocking and disturbing. Small merchants have suffered immeasurably from crimes perpetrated against them and their business. Even the largest retail corporations have been gravely affected. However, we were most disturbed by the testimony of honest law-abiding citizens from all walks of life and from every segment of our community who movingly stated that they were afraid to walk the streets of their city, our Nation's Capital.

Police Chief Jerry Wilson recently stated that the crime rate in the District of Columbia has been increasing at a less rapid pace. Hopefully, this trend will continue. The District of Columbia crime bill will not be a panacea to cure all the crime in the District but it will be a beginning.

However, we cannot neglect the critical social problems which so often form the basis of an attitude of community lawlessness. Enforcement machinery alone will not abate the attitude of disenchantment of those who feel their Government has failed them.

The courts in the District will by virtue of this bill be reorganized into a system closely resembling one to be found in the States. This, coupled with an increase in the number of judges, will hasten the processes of the criminal justice field.

But the whole machinery of the administration of justice must be more efficiently and effectively coordinated and directed if we are to achieve the expedition which is essential to the proper administration of justice. Perhaps through the increased alacrity of the court system, the preventive detention service so strongly debated will not be used as much as it is feared by some critics.

The entire concept of preventive detention and the attendant possibility that such detention could be used to wrongfully detain an innocent man

causes me grave concern. I am not unmindful of the fact that certain criminal defendants in this District who have been admitted to bail have committed additional crimes while awaiting trial. Our committee has heard testimony about the problems of narcotic addicts who commit auxiliary crimes while on bail to support their habits. However, it is my considered judgment that we could have devised a more effective instrument to achieve the avowed objectives of the District of Columbia crime bill rather than depend upon the seemingly facile umbrella of preventive detention. The guarantee of a speedy trial, which is the right of a defendant, within 60 days of arrest appears to be a viable alternative and has the meritorious advantage of the noncircumvention of a cherished constitutional right.

Our committee has heard often, most recently and forcefully at our New York drug hearings, about the essential necessity of court-approved wiretapping to combat organized and syndicate crime. Now, in the District of Columbia, we will have an opportunity to observe just how effective this device can be.

The conversion of the Legal Aid Agency into a full-powered, fully complemented Public Defender's office is a most valuable and widely acclaimed action. Representation of the poor, defense of the indigent, adequate advocacy for all people is a concept which I unflinchingly endorse. The provisions of this bill bring to a culmination in the District of Columbia a trend begun by the Gideon against Wainwright.

The Select Committee on Crime has devoted a substantial amount of time and concern to the problems of juvenile crime and delinquency. Certain provisions in this bill provide for special attention and consideration of juvenile offenders. However, the bill falls short of an adequate treatment of this critical problem.

I deplore the absence of any provision in the final version of this bill providing for administrative changes in the district correctional system whereby persons properly adjudicated guilty would be confined in a system providing effective rehabilitation services. Recently the Chief Justice directed our attention to the shocking fact that there is a 75 percent recidivism rate in the District. As a result of our committee's recent investigations and public hearings we are exploring the possibility of future legislation, and are currently preparing a series of recommendations in this area.

Finally, the strengthening of the District of Columbia Bail Agency, an experiment started some years ago, can only lead to a strengthening of the entire juvenile justice system.

Once again, I must point out that passage of this bill is not a cure for the entire crime problem in the District. We in the Congress must be ever mindful of the multiple problems and continually searching for new and more creative and imaginative solutions and programs. The passage of this bill hopefully initiates the commencement of a vigorous and humane program to make our streets safe and temper justice with compassion.

TAKE PRIDE IN AMERICA

(Mr. MILLER of Ohio asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. MILLER of Ohio. Mr. Speaker, today we should take note of America's great accomplishments and in so doing renew our faith and confidence in ourselves as individuals and as a nation. The number of engineers and scientists coming to the United States from other nations increased from 5,345 in 1965 to 12,973 in 1968.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to:

Mr. BOW (at the request of Mr. GERALD R. FORD), for from 5 o'clock today for a period of 24 hours, on account of official business in Ohio.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

Mr. REUSS (at the request of Mr. ANDERSON of California), for 20 minutes, today; to revise and extend his remarks and include extraneous matter.

Mr. LOWENSTEIN (at the request of Mr. ANDERSON of California), for 60 minutes, today; to revise and extend his remarks and include extraneous matter.

Mr. BURKE of Florida (at the request of Mr. HANSEN of Idaho), for 10 minutes, today; to revise and extend his remarks and include extraneous matter.

Mr. CRANE (at the request of Mr. ANDERSON of California), for 45 minutes, today; to revise and extend his remarks and include extraneous matter.

EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. VANIK and to include extraneous matter.

Mr. CLEVELAND to include extraneous matter with his remarks made today in the Committee of the Whole on H.R. 17654.

(The following Members (at the request of Mr. HANSEN of Idaho) and to include extraneous matter:)

Mr. BUCHANAN in two instances.
Mr. LANGEN.
Mr. NELSEN.
Mr. MORSE.
Mr. TAFT.
Mr. WYMAN in two instances.
Mr. MIZE.
Mr. BOB WILSON.
Mr. SHRIVER.
Mr. WIDNALL in two instances.
Mr. WIGGINS.
Mr. SNYDER in three instances.
Mr. WOLD.
Mr. CONTE.
Mr. FOREMAN.
Mr. WHITEHURST.
Mr. BRAY in three instances.
Mr. SCHWENGEL.

(The following Members (at the request of Mr. ANDERSON of California) and to include extraneous matter:)

Mr. VANIK in two instances.
Mr. COHELAN in five instances.
Mr. BOGGS in three instances.
Mr. PICKLE in five instances.
Mr. DELANEY in two instances.
Mr. MOORHEAD in six instances.
Mr. HATHAWAY in two instances.
Mr. MARSH.
Mr. JONES of Tennessee.
Mr. DINGELL in two instances.
Mr. HAGAN in three instances.
Mr. RODINO in three instances.
Mr. ROSENTHAL in two instances.
Mr. DANIELS of New Jersey in two instances.
Mr. SATTERFIELD in two instances.
Mr. HUNGATE in two instances.
Mr. STEPHENS.
Mr. KLUCZYNSKI.
Mr. GONZALEZ in two instances.
Mr. FOUNTAIN in two instances.

ENROLLED BILL SIGNED

Mr. FRIEDEL, from the Committee on House Administration, reported that that committee had examined and found truly enrolled a bill of the House of the following title, which was thereupon signed by the Speaker:

H.R. 16916. An act making appropriations for the Office of Education for the fiscal year ending June 30, 1971, and for other purposes.

ADJOURNMENT

Mr. ANDERSON of California. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 6 o'clock and 10 minutes p.m.), the House adjourned until tomorrow, Thursday, July 30, 1970, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

2256. A letter from the Secretary of Health, Education, and Welfare, transmitting a report of actual procurement receipts for the medical stockpile of civil defense emergency supplies and equipment for the quarter ended June 30, 1970, pursuant to subsection 201(h) of the Federal Civil Defense Act of 1950, as amended; to the Committee on Armed Services.

2257. A letter from the Assistant Administrator for Program and Policy, Agency for International Development, Department of State, transmitting copies of Presidential Determination 71-1; to the Committee on Foreign Affairs.

2258. A letter from the Executive Director, Federal Communications Commission, transmitting a report on the backlog of pending applications and hearing cases in the Commission as of June 30, 1970, pursuant to section 5(e) of the Communications Act, as amended; to the Committee on Interstate and Foreign Commerce.

2259. A letter from the Secretary of the Treasury, transmitting a draft of proposed legislation to amend the Tariff Act of 1930 to grant to the transferee of merchandise in

bonded warehouse the right to administrative review of customs decisions; to the Committee on Ways and Means.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. JOHNSON of California: Committee on Interior and Insular Affairs. H.R. 16987. A bill to authorize the Secretary of the Interior to construct, operate, and maintain the Minot extension of the Garrison diversion unit of the Missouri River Basin project in North Dakota, and for other purposes; with amendments (Rept. No. 91–1346). Referred to the Committee of the Whole House on the State of the Union.

Mr. STAGGERS: Committee on Interstate and Foreign Commerce. H.R. 18434. A bill to revise the provisions of the Communications Act of 1934 which relate to political broadcasting (Rept. No. 91–1347). Referred to the Committee of the Whole House on the State of the Union.

Mr. HALEY: Committee on Interior and Insular Affairs. H.R. 13434. A bill to provide for the disposition of judgment funds on deposit to the credit of the Hualapai Tribe of the Hualapai Reservation, Ariz., in Indian Claims Commission dockets Nos. 90 and 122, and for other purposes (Rept. No. 91–1348). Referred to the Committee of the Whole House on the State of the Union.

Mr. HALEY: Committee on Interior and Insular Affairs. H.R. 14097. A bill to authorize the use of funds arising from a judgment in favor of the Citizen Band of Potawatomi Indians of Oklahoma, and for other purposes; with amendments (Rept. No. 91–1349). Referred to the Committee of the Whole House on the State of the Union.

Mr. HALEY: Committee on Interior and Insular Affairs. H.R. 14827. A bill to provide for the disposition of funds to pay a judgment in favor of the Sac and Fox Tribes of Oklahoma in Indian Claims Commission docket No. 220, and for other purposes (Rept. No. 91–1350). Referred to the Committee of the Whole House on the State of the Union.

Mr. BOLLING: Committee on Rules. House Resolution 1164. Resolution for consideration of H.R. 18275, a bill to amend the Federal Property and Administrative Services Act of 1949, as amended, to provide for the disposal of surplus Federal property for park and recreational uses, and for other purposes (Rept. No. 91–1351). Referred to the House Calendar.

Mr. SISK: Committee on Rules. House Resolution 1165. Resolution for consideration of H.R. 18546, a bill to establish improved programs for the benefit of producers and consumers of dairy products, wool, wheat, feed grains, cotton, and other commodities, to extend the Agricultural Trade Development and Assistance Act of 1954, as amended, and for other purposes (Rept. No. 91–1352). Referred to the House Calendar.

Mr. KASTENMEIER: Committee on the Judiciary. H.R. 11032. A bill to prohibit the use of interstate facilities, including the mails, for the transportation of salacious advertising; with amendments (Rept. No. 91–1353). Referred to the Committee of the Whole House on the State of the Union.

Mr. ANDREWS of Alabama: Committee of conference. Conference report on H.R. 16915 (Rept. No. 91–1354). Ordered to be printed.

PUBLIC BILLS AND RESOLUTIONS

Under clause 5 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. GALIFIANAKIS (for himself, Mr. ADDABBO, Mr. ANDREWS of North Dakota, Mr. ASHLEY, Mr. BEVILL, Mr. BRADEMAS, Mr. BRASCO, Mr. BURKE, of Florida, Mr. BURKE of Massachusetts, Mr. BURTON of California, Mr. CEDERBERG, Mr. DON H. CLAUSEN, Mr. CLAY, Mr. COLLIER, Mr. CONTE, Mr. CORMAN, Mr. EDWARDS of Louisiana, Mr. EILBERG, Mr. FASCELL, Mr. FEIGHAN, Mr. FISH, Mr. FUQUA, Mr. GETTYS, Mr. GRIFFIN, and Mr. HALPERN):

H.R. 18689. A bill to amend the Public Health Service Act to encourage physicians, dentists, optometrists, and other medical personnel to practice in areas where shortages of such personnel exist, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. GALIFIANAKIS (for himself, Mr. HAMILTON, Mr. HANLEY, Mr. HANNA, Mr. HARRINGTON, Mr. HELSTOSKI, Mr. HENDERSON, Mr. HICKS, Mr. HOGAN, Mr. HUNT, Mr. JACOBS, Mr. JONES OF Tennessee, Mr. JONES of North Carolina, Mr. LANGEN, Mr. LENNON, Mr. MCKNEALLY, Mr. MADDEN, Mr. MILLER of California, Mr. MONTGOMERY, Mr. MOORHEAD, Mr. MORSE, Mr. O'KONSKI, Mr. PEPPER, and Mr. POWELL):

H.R. 18690. A bill to amend the Public Health Service Act to encourage physicians, dentists, optometrists, and other medical personnel to practice in areas where shortages of such personnel exist, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. GALIFIANAKIS (for himself, Mr. PRYOR of Arkansas, Mr. REES, Mr. RUPPE, Mr. SCHWENGEL, Mr. STEPHENS, Mr. TAYLOR, Mr. PREYER of North Carolina, Mr. TEAGUE of California, Mr. THOMSON of Wisconsin, Mr. TIERNAN, Mr. VANDER JAGT, Mr. WALDIE, Mr. WHITE, Mr. DENT, Mr. BROWN of California, Mr. GILBERT, Mr. SCHNEEBELI, Mr. HAWKINS, and Mr. YATRON):

H.R. 18691. A bill to amend the Public Health Service Act to encourage physicians, dentists, optometrists, and other medical personnel to practice in areas where shortages of such personnel exist, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. O'NEILL of Massachusetts:

H.R. 18692. A bill to provide a program of national health insurance, and for other purposes; to the Committee on Ways and Means.

By Mr. PEPPER:

H.R. 18693. A bill to amend section 165(1) of the Internal Revenue Code of 1954; to the Committee on Ways and Means.

By Mr. PETTIS:

H.R. 18694. A bill to designate the third Sunday in October of each year, as "Foster Family Day", and for other purposes; to the Committee on the Judiciary.

By Mr. CAMP (for himself, Mr. ALBERT, Mr. BELCHER, Mr. EDMONDSON, Mr. JARMAN, and Mr. STEED):

H.R. 18695. A bill to provide for the disposition of funds appropriated to pay a judgment in favor of the Iowa Tribes of Kansas and Nebraska and of Oklahoma in Indian Claims Commission docket No. 79A and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. CEDERBERG:

H.R. 18696. A bill to amend title 13 of the United States Code to provide for a recount (by the State or locality involved) of the population of any State or locality which believes that its population was understated in the 1970 decennial census, and for Federal payment of the cost of the recount if such understatement is confirmed; to the Committee on Post Office and Civil Service.

By Mr. FRIEDEL:

H.R. 18697. A bill to amend the Railroad Retirement Act of 1937 to provide a 5 percent and cost-of-living increases in annuities, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. GONZALEZ:

H.R. 18698. A bill to amend section 7275 of the Internal Revenue Code of 1954 (as added by the Airport and Airway Revenue Act of 1970) to require that airline tickets, with respect to the transportation of persons by air which is subject to Federal tax, show the amount of such tax separately from the cost of the transportation involved; to the Committee on Ways and Means.

By Mr. KYROS:

H.R. 18699. A bill to amend the Fish and Wildlife Coordination Act to assure adequate consideration of the views and recommendations of the Secretary of the Interior in connection with certain water modification projects, and for other purposes; to the Committee on Merchant Marine and Fisheries.

By Mr. LOWENSTEIN (for himself, Mr. STEIGER of Wisconsin, and Mr. HAWKINS):

H.R. 18700. A bill—Voluntary Military Manpower Procurement Act of 1970; to the Committee on Armed Services.

By Mr. PATMAN:

H.R. 18701. A bill to establish a National Development Bank to provide loans to finance urgently needed public facilities for State and local governments and to help achieve a full employment economy by providing loans to business and industry when adequate loan funds at reasonable rates cannot be obtained from conventional lending sources, and to provide needed capital for other socially useful purposes; to the Committee on Banking and Currency.

By Mr. PUCINSKI:

H.R. 18702. A bill to amend title 13 of the United States Code to provide for a recount (by the State or locality involved) of the population of any state or locality which believes that its population was understated in the 1970 decennial census, and for Federal payment of the cost of the recount if such understatement is confirmed: to the Committee on Post Office and Civil Service.

By Mr. PURCELL:

H.R. 18703. A bill to amend title 10 of the United States Code to establish an equitable survivors' annuity plan for the uniformed services; to the Committee on Armed Services.

H.R. 18704. A bill to amend section 117 of the Internal Revenue Code of 1954 to exclude from gross income up to $300 per month of scholarships and fellowship grants for which the performance of services is required; to the Committee on Ways and Means.

By Mr. QUILLEN:

H.R. 18705. A bill to amend title 10 of the United States Code with respect to determining the eligibility of certain persons for retirement benefits; to the Committee on Armed Services.

By Mr. SISK (for himself, Mr. JOHNSON of California, Mr. LEGGETT, Mr. MCFALL, Mr. MOSS, Mr. O'KONSKI, Mr. TALCOTT, Mr. ULLMAN, and Mr. WYATT):

H.R 18706. A bill to create a National Agricultural Bargaining Board, to provide standards for the accreditation of associations of producers, to define the mutual obligation of handlers and associations of producers to negotiate regarding agricultural products; and for other purposes; to the Committee on Agriculture.

By Mr. WOLFF:

H.R. 18707. A bill for the relief of the city of Glen Cove, N.Y.; to the Committee on the Judiciary.

By Mr. EDMONDSON:

H.R. 18708. A bill to establish a Commission on Fuels and Energy to recommend programs and policies intended to insure,

through maximum use of indigenous resources, that the U.S. requirements for low-cost energy be met, and to reconcile environmental quality requirements with future energy needs; to the Committee on Interstate and Foreign Commerce.

By Mr. JOHNSON of California (for himself and Mr. KYL):

H.R. 18709. A bill to establish a Commission on Fuels and Energy to recommend programs and policies intended to insure, through maximum use of indigenous resources, that the U.S. requirements for low-cost energy be met, and to reconcile environmental quality requirements with future energy needs; to the Committee on Interstate and Foreign Commerce.

By Mr. MILLER of Ohio:

H.R. 18710. A bill to amend title 13 of the United States Code to provide for a recount (by the State or locality involved) of the population of any State or locality which believes that its population was understated in the 1970 decennial census, and for Federal payment of the cost of the recount if such understatement is confirmed; to the Committee on Post Office and Civil Service.

By Mr. DON H. CLAUSEN:

H.J. Res. 1334. Joint resolution proposing an amendment to the Constitution of the United States extending the right to vote to citizens 18 years of age or older; to the Committee on the Judiciary.

By Mr. JOHNSON of Pennsylvania:

H.J. Res. 1335. Joint resolution proposing an amendment to the Constitution of the United States extending the right to vote to citizens 18 years of age or older; to the Committee on the Judiciary.

By Mr. PATMAN:

H.J. Res. 1336. Joint resolution to extend the effectiveness of the Defense Production Act of 1950 to August 15, 1970; to the Committee on Banking and Currency.

By Mr. BOB WILSON (for himself and Mr. VAN DEERLIN):

H.J. Res. 1337. Joint resolution to establish a national music of the United States; to the Committee on the Judiciary.

By Mr. HOWARD (for himself, Mr. BUTTON, Mr. CORBETT, Mr. DERWINSKI, Mr. DINGELL, Mr. FRIEDEL, Mr. HANNA, Mr. HELSTOSKI, Mr. HORTON, Mr. LEGGETT, Mr. MCKNEALLY, Mr. MIKVA, Mrs. MINK, and Mr. MOORHEAD):

H. Con. Res. 696. Concurrent resolution expressing the sense of the Congress with respect to an international conference on the creation of an International Environmental Agency; to the Committee on Foreign Affairs.

By Mr. HOWARD (for himself, Mr. OLSEN, Mr. OTTINGER, Mr. PIKE, Mr. PODELL, Mr. QUIE, Mr. ROSENTHAL, Mr. RYAN, Mr. SCHEUER, Mr. TIERNAN, Mr. TUNNEY, Mr. WHITE, Mr. WILLIAMS, Mr. WOLFF, and Mr. WRIGHT):

H. Con. Res. 694. Concurrent resolution expressing the sense of the Congress with respect to an international conference on the creation of an International Environmental Agency; to the Committee on Foreign Affairs.

By Mr. PURCELL:

H. Con. Res. 695. Concurrent resolution providing that the Chief Justice of the United States be invited to address a joint session of Congress on the state of the judiciary; to the Committee on Rules.

By Mr. DON H. CLAUSEN:

H. Res. 1166. Resolution to express the sense of the House of Representatives that the U.S. maintain its sovereignty and jurisdiction over the Panama Canal Zone; to the Committee on Foreign Affairs.

By Mr. MILLER of California:

H. Res. 1167. Resolution expressing the sense of the House of Representatives with respect to the issuance of a commemorative postage stamp honoring the fifth anniversary of the U.S. participation in the International Biological Program; to the Committee on Post Office and Civil Service.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. CONTE:

H.R. 18711. A bill for the relief of Michael P. Buckley; to the Committee on the Judiciary.

By Mr. DANIEL of Virginia:

H.R. 18712. A bill for the relief of Mr. and Mrs. Waverly E. Wilkerson; to the Committee on the Judiciary.

By Mr. DOWNING:

H.R. 18713. A bill for the relief of David Capps, formerly a corporal in the U.S. Marine Corps.; to the Committee on the Judiciary.

By Mr. JOHNSON of California:

H.R. 18714. A bill to authorize the Secretary of the Interior to rectify a public land transaction; to the Committee on the Judiciary.

By Mr. TEAGUE of California:

H.R. 18715. A bill for the relief of Gheorghe Jucu and Aurelia Jucu; to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII,

562. The SPEAKER presented a petition of Henry Stoner, York, Pa., relative to cataloging the statutory and treaty powers of the President of the United States, which was referred to the Committee on Government Operations.

EXTENSIONS OF REMARKS

THE THREE R'S OF LAW AND ORDER

HON. JACK R. MILLER

OF IOWA

IN THE SENATE OF THE UNITED STATES

Wednesday, July 29, 1970

Mr. MILLER. Mr. President, recently a distinguished attorney from Cedar Falls, Iowa, Margaret E. Santee, delivered an address focusing on what she calls "The Three R's of Law and Order."

She reminded her listeners that since law is the relationship of man and men, it must be properly coordinated through a basic understanding of the three R's of reverence, rights, and responsibilities. Her speech offers a somewhat different perspective of this critical question. I ask unanimous consent that it be printed in the Extensions of Remarks.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE THREE R'S OF LAW AND ORDER

(By Margaret E. Santee)

Years ago discussion centered on the 3 R's of readin', 'ritin', 'n' 'rithmetic as the basic for our learning. Today, as we face the issues of law and order, we focus our attention on the 3 R's of reverence, rights and responsibilities.

Albert Schweitzer once said the one thing man cannot live without is reverence. Christ explains basic law as the reverence of Creator, neighbor, and self as he summarizes law as the law of love.

Thou shalt love the Lord thy God with all thy heart, with all thy mind, with all thy soul. Thou shalt love thy neighbor as thyself. If we substitute for the words of Christ the word "Creator" for God and "attachment" for love we discover this is a complete, yet succinct, summary of the law of artistry, of mechanics, of science, of sports—of every creative activity of any nature, including the law of MAN in a social world, in a world created by God in a spirit of love.

Law is the relationship of man and men—of unit and units—of all working parts of any creation—properly coordinated through the basic understanding of the 3 R's of—

Reverence: for the individual unit as it performs as part of the whole; for the individual unit in fulfilment of its particular function at its maximum usefulness; for the creator of the master plan for which and to fulfill the purpose of whom it was set up.

Responsibility: for performing in accordance with the needs of the entire creation; for permitting all other units the right to accept their responsibility of performance as they develop their abilities to perform with utmost skill; to accept the direction of the creator and coordinator of the creation;

Rights: merited by proper performance of the individual unit and all units as they perform to carry out the plan of their creator who has the right to coordinate the functioning of the units to secure that purpose for which he designed the creation.

The development of law and order comes through:

1. A study of the basic plan,
2. Through disciplined practice in the development of the individual unit,
3. Through coordination of performances or placement according to the plan of the creator, and under either the creator's direction, or under that of his chosen coordinator.

Mrs. Billy Graham, in her delightful book "Our Christmas Story," writes that on Christmas Eve the Graham family read the story of the birth of the Saviour Jesus. The use of the word "saviour" challenges them to find the sin for which God sent His son Christ to the world. The Graham family return to the book of Genesis to seek the purposefulness of the creation of man, the story of the original sin. They decide that God made man with the power of choice because His creations which did His will without protest could not provide that companionship, that "give and take" of relationships which provide the incentive for sparkling the ingenuity of the human race in seeking new ways of fulfilling God's law of love. The original sin was not the choice of Adam and Eve in eating the apple. They had the right of choice. They lacked understanding of God's need for companionship, the purposefulness of their creation, when they ran from Him. Their sin was their failure to accept their responsibility in the building of that attachment of love for which they had been created, to provide companionship for their Creator.

God created human beings with the right of choice subject to the law of love which would satisfy His purpose of creation. God expects each human to accept his individual responsibilities in building a world of love as He gives men the blessings of His love. According to the family of Billy Graham, when God created men with the right of choice, He decided that He should send His son to clarify His plan of creation, to guide His loved ones in their search for a better understanding of their rights and responsibilities as part of God's world of love and companionship.

When God created man, He created the Judases, the bawdy fishermen, and the weak, vacillating Peters and Thomases. He also

created the Hitlers, the Stalins, Kosygins, Nassers, and Lenins. God did not send Jesus to change the nature of man, to take away man's right to choose. God sent Christ not to destroy the law, but to fulfill the law by giving that direction to men in their relationships with each other which would make them responsive to the creative plan of God. Christ did not assume the responsibility of each man to develop and use his skills, his strengths, in that type of relationship with his fellow men which would fulfill the purposes of God in His plan of life. God has never taken away either the rights or the responsibilities of men. He has made them subject to His law if they expect to enjoy His blessings. He has, through His son, given men another chance if the choices they make, their acts, are contrary to His law, but they occur because of lack of understanding or training in the three Rs, and they do not jeopardize the effectiveness of the other members of God's world entitled to enjoy the blessings of God's love.

Christ drove the money changers from the Temple. He did forgive the weaknesses of God's people but expected them to follow his direction of "Go, and sin no more." Christ believed in the use of rules as guidelines to build the skills, the performance, of a well-coordinated group, God's family created to provide the companionable relationships of love. Christ criticized the Pharisees for their insistence on the rigid enforcement of rules which, by their very nature, did not develop satisfactory relationships among the group. He advocated the SPIRIT of love, the relationships of love, as he suggested "The Sabbath was made for man, and not man for the Sabbath."

Our country has won victories in war because the discipline of our soldiers is tempered by their permissive use of the power of choice as they show REVERENCE for the organization of our country and its military system, accept responsibility in doing well the particular tasks assigned to them, and expect responsibility from all other members of their units who are entitled to share in the RIGHTS to which they—and all of their loved ones—are entitled. Through their basic understanding of the plan of attack, their plan for survival, through their respect for the direction given them as members of a group assigned to carry out certain strategic moves, they discover the possibilities of success through their basic training in the three Rs. They continue operations with success as they exercise that power of choice which is the strength of their reverence for and understanding of the master plan and the need to carry out the command thou shalt love.

It has been said that other armies cannot survive when their leadership is gone. Our American heritage is one of "team play" which finds solutions for the problems which are disrupting to the world relationships of love and understanding.

Our legal philosophy accepts the fact that Christ was not sent into the world to assume responsibilities for those acts which prevent a smoothly functioning and loving relationship among men. His mission was to prevent undue hardship for wrong choices of men. We train our citizens to "play position"—to function according to their strengths and the particular needs of the group. We train them to accept responsibility for "filling in" for other units than the ones for which they have been assigned only in the case of a potential failure of the original plan. Thou shalt love demands understanding of the three Rs—reverence, responsibilities, and rights—as the basic principles of the law of love which gives a flexibility of movement which makes colorful the sharing of the prejudices and strengths of our people as we set our goals toward the attainment of a world of love according to the purposeful planning of our Master. Thou shalt love requires the disciplined direction through practical, as well as theoretical training, which permits all units to act under those pressures which tend to temporarily weaken the performance of the units in the fulfillment of the plan of creation. The right of choice requires the disciplined development of the particular strengths, and the overcoming of the destructive weaknesses, of those who demand the rights, the blessings of God's love. Thou shalt love is an inflexible law based on Reverence, responsibility, and rights, the 3 Rs of law and order.

MEDICAL FACILITY CONSTRUCTION PROJECTS IN WISCONSIN

HON. DAVID R. OBEY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1970

Mr. OBEY. Mr. Speaker, I should like to insert in the RECORD a table of approved hospital and medical facility construction projects in Wisconsin that cannot be built in the next 2 years at present levels of Federal funding of the Hill-Burton program.

The table itemizes planned general hospital projects, long-term care facilities, public health centers, diagnostic and treatment centers, and rehabilitation centers.

It also lists 12 projects which could be approved under the program for construction of community facilities for the mentally retarded if there were adequate Federal funds available in these two fiscal years.

Mr. Speaker, I think this list provides eloquent evidence of why we needed the health emergency amendment of the gentleman from Massachusetts (Mr. BOLAND), which would have added $80 million for hospital construction grants to the fiscal 1971 appropriation.

The table follows:

PROJECTS WHICH COULD BE APPROVED UNDER THE HOSPITAL AND MEDICAL FACILITIES CONSTRUCTION (HILL-BURTON) PROGRAM, IF THERE WERE NO LIMITATIONS ON FEDERAL FUNDS, FISCAL YEARS 1971 AND 1972

[List by category of facility: All general hospitals listed together, all long-term care facilities, all public health centers, etc.]

Category of facility, county, and city	Name of facility	Type of construction: New facility	Addition	Addition and remodeling	Addition and replacement	Addition, remodeling, and replacement	Remodeling only	Replacement only	Remodeling and replacement	Beds provided	Estimated cost: Total cost	Federal share: Fiscal year 1971	Federal share: Fiscal year 1972
GENERAL													
Barron, Rice Lake	Lakeside Methodist Hospital			X						50	$2,000,000	$800,000	
Brown, Green Bay	St. Mary's Hospital		X							100	3,500,000	1,400,000	
Chippewa, Chippewa Falls	St. Joseph's Hospital							X		160	6,000,000	2,400,000	
Columbia, Portage	Divine Savior Hospital								X	26	1,000,000	400,000	
Crawford, Prairie du Chien	Prairie du Chien Memorial Hospital		X							20	600,000		$240,000
Dane, Madison	St. Mary's Hospital		X							233	3,750,000	1,500,000

Total (number of projects, 12)										1,270	7,643,900	2,040,000	500,000

ROOM FOR ALL

HON. F. BRADFORD MORSE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 29, 1970

Mr. MORSE. Mr. Speaker, living as we do, with frequent national crises, we sometimes appear to be deserting rationality in our relations with one another and choosing instead confrontation, vituperation, recrimination, and violence. It is refreshing and reassuring to hear voices of reason, restraint, and understanding.

We in Massachusetts have been spared much of the civil turmoil which has plagued many areas of the Nation in recent years, but a few days ago we were sharply reminded that we, too, have much yet to learn if we are to continue to build the just and free society to which all men of good will aspire.

In the wake of our recent troubles, an editorial appeared in the Lowell Sun which reflects such a deep comprehension of the tragic frailties which divide us that I want to share it with our colleagues. It is from such acute perceptions that we can see the reflection of our failures, and from which we can rally our dispirited hopes in an effort to return, in peace and understanding, to the hard tasks ahead.

[From the Lowell Sun, July 25, 1970]

ROOM FOR ALL

It seems to be a matter of communication. Or blindness.

We refer to the inability of our citizens to assimilate new ideas, new thoughts, new words or new people into their daily existence.

Gone is the day that the pride of the poor keeps them off the welfare rolls. No longer will the immigrant sit idly by and watch the natives deprive him of his basic rights. The city doesn't have the same complexion it had during the depression, during the milltown days or any other period in its history. There are new things, new words, new ideas and new people. And all are a part of our community.

We're appalled at the number of old residents who abhor the "blow-ins" but never have met one. We listen to men all up and down Merrimack street who can't stand "those people" in Bishop Markham Village, the Acre, or Shaughnessy Terrace—and then admit they're afraid to even go near those areas.

We listen to those from the above-mentioned areas who are getting sick and tired of being lumped in to one generalization—generally from an unfavorable light. Particularly those who are proud to show their homes and have absolutely no apologies for the behavior of their children.

We're used to new languages and accents intruding on our broad "A" Boston accents—yet we mistrust the quiet, rapid-fire beauty of the Spanish language being spoken by more and more of our neighbors.

We listen to the Puerto Rican lad tell us how hard it is to make friends with an Irish kid in the Acre and then patiently try to explain that to a woman whose teenage boy has been assaulted by a group of youngsters speaking a foreign tongue.

There's room in town for every color, creed and idea—if all of us make an effort to meet each other.

$321 MILLION IN TAX-FREE DIVIDENDS DISTRIBUTED BY 40 IOU'S

HON. LEE METCALF

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Wednesday, July 29, 1970

Mr. METCALF. Mr. President, the Consumer Federation of America recently compiled and released the figures on tax-free dividends paid by 40 investor-owned utilities in 1969.

At a time when the Nation faces a power crisis and IOU's are requesting record rate increases, despite high profits, it seems incredible that the industry would handle its tax windfalls in this manner.

Mr. President, I ask unanimous consent to insert at this point in the RECORD, CFA's release of July 8 and accompanying tables listing company-by-company figures.

There being no objection, the items were ordered to be printed in the RECORD, as follows:

ELECTRIC FIRMS HAND OWNERS $321 MILLION IN 1969 TAX-FREE

WASHINGTON.—Forty electric utilities paid out $321 million in tax-free dividends to their stockholders last year, Consumer Federation of America announced today.

"This represents a new, all-time high since the utilities started this practice in 1954," Erma Angevine, CFA's executive director, said in releasing the report.

"If these utilities had invested these funds in their own facilities, they'd need to borrow less capital at high interest rates, and they'd thus have reduced their operating costs and saved consumers money," she said.

These tax-free dividends result from fast tax write-offs and double bookkeeping, Mrs. Angevine explained. "The utilities keep one set of books for Internal Revenue Service, another set for Federal Power Commission and state regulatory bodies.

"If their rate base reflected their tax windfalls, consumers would have kept this $321 million in their own pockets, instead of paying it to utilities, who handed it tax-free to their stockholders.

"Consumers are concerned that in the 1969 tax reform act, Congress failed to deny these fast tax write-offs to firms whose rates, whose prices of services are set by public bodies," Mrs. Angevine said. "We must end either fast tax write-offs for utilities or double bookkeeping, for since 1954 the practice has enabled 72 electric utilities to overcharge consumers $1,880 million and pay this money to their stockholders tax-free."

Consolidated Edison easily led the 1969 list with $74 million in tax-free dividends. Public Service Electric & Gas Company was a poor second with $25 million; Northeast Utilities, third with $24 million; and Pacific Gas & Electric, fourth with $22 million.

CFA developed the information from publications of Prentice-Hall and Moody.

CFA is a federation of 160 community, state, regional, and national consumer-oriented organizations with millions of members.

TAX-FREE DIVIDENDS PAID BY PRIVATE POWER COMPANIES IN 1969

For total dividend payments, company reports to FPC and Moody's services. Computations by CFA. Dividend payments are those made on common stock, except where noted. Where company paid tax-free dividends on both common and preferred, each is identified: (C) on common stock; (P) on preferred stock.

A MERCHANT: FRIEND OR FOE

HON. ODIN LANGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 29, 1970

Mr. LANGEN. Mr. Speaker, we hear a great deal lately about consumer protection and truth-in-lending. A place has even been made on the President's staff for an adviser on consumer affairs.

It is good that we show concern for the consumer, who in the free market system has become the victim on different occasions of false advertising, exaggerated claims, shoddy products, complicated and misleading warranties on merchandise purchased, hidden and excessive finance and service charges, and the like. A case has been made and has brought the buying public to a new awareness of its right to protection from such excesses.

However, while this flexing of the consumer muscle is both good and necessary, we must guard against unreasonable demands and encroachments on the business community, since excess by any standard is wrong.

It is with this thought in mind that I commend a letter written to me by a businessman—a man who appeals for fairness for merchants as well as consumers. So thought-provoking is this fine letter, that I am including its contents here with the hope that each of my colleagues will benefit from reading it:

JULY 23, 1970.

Hon. ODIN LANGEN,
House of Representatives,
Washington, D.C.

DEAR MR. LANGEN: This is a letter of protest in regard to what is being said in the current hearings on consumer credit. I recognize this is not a legislative matter at this point, but it may become one, and I feel that it is time for someone to step up to defend the retail merchant. He has been depicted in the newspapers as a greedy, grasping person, willing to pull the unsuspecting customer into his credit trap, and then using the bill collector to take everything the poor fellow has. Too, Senator Proxmire seems to believe that every grantor of credit is endowed with superhuman powers and never makes a mistake. His attack on computerized billing is absolutely ridiculous.

Let's look at reality.

The average credit grantor is a merchant in your home town. His customers are your friends. Most pay their bills promptly and never complain. They are probably not charged for the privilege of credit. Possibly, five percent represent a statistical risk. This can be calculated mathematically. Of these five percent, occasionally there will be one who does not pay because of personal problems. His intentions are good, but something happens and he can't come up with the money. In most instances, the merchant goes along with the debtor. Almost none of these people are turned over to collection agencies. The final type is the credit criminal or deadbeat. This person gets credit under false pretenses and then finds some way not to pay. He is part of the vocal minority who seem to be heard lately complaining about harassment. Why is he given consideration over the honest merchant who has to pay his bills, meet a payroll, and who supports his local community?

Only the deadbeat is turned over for collection. I know because we operate a collection agency in conjunction with our association. These people buy without thought to payment. They lie to get credit and then "skip." When they are found, they scream harassment. This isn't fair. Why doesn't Congress give consideration to protective laws for businessmen? Aren't they entitled to use legal means to collect money owed them? The merchant pays 40% to a collection agency to handle an account. This means the creditor is giving up not only his profit, but part of the cost of the merchandise, too. (Average gross profit in the retail lumber industry is 25–28%—net profit under 4%). A merchant won't do this if there is any other way to get his money.

It is disheartening to find that consumer groups are becoming champions of deadbeats. This means that the merchant will have to screen people for credit much more thoroughly. It means people will be refused credit. Then we will probably hear that we must give consideration to everyone who requests credit regardless of his past record and probably a federal law will be passed forcing the merchant to grant credit to bad risks.

There is no question in my mind that truth-in-lending has been a snare and delusion to the consumer. He is being told what he pays for credit privileges, but he undoubtedly is paying more for credit than he did before. He is paying for it in higher prices to begin with since bookwork costs money, in higher prices because of the elimination of discounts for cash because of onerous reporting provisions, and the elevation of service charges. He really can't shop for credit because every credit grantor has about the same terms. Regulation Z almost guarantees this. Now, garnishment is about wiped out as a means for collecting money from the deadbeat type of debtor. This means that overall credit is going to cost each of us more. As more legislation is passed giving the debtor more room to maneuver, it will continue to cost each of us more to get credit, and terms will become more restrictive.

I think we all realize that our system of government has been stable because there has always been credit available for growth. Now it appears that certain elements want to cause problems which will restrict growth. We give credit now because we can reasonably be expected to be repaid. If debtors can run to the government for protection against paying bills, how can government expect that credit will be granted freely?

How do we get out of this mess? Frankly, I don't know. Laws once passed seldom are taken off the books. What would help is for someone with stature in government to defend the home town merchant, to tell the world that the merchant isn't Scrooge. Our only spokesmen are industry and association people representing retailers. Their impact before committees is nil because they are representing the very people the committees are out to get. Our only salvation is to get some congressmen on our side like Proxmire et al. If this isn't done soon, the small merchants will quit, small towns will die and we will all be at the mercy of the giant merchandiser. We won't like this but we will have to accept it. Will the consumer like it? No, but he won't have any choice.

Any comments and suggestions you have will be gratefully received.

ARTICLE SPEAKS PERSUASIVELY FOR THE FUNDING AND CONSTRUCTION OF THE DICKEY PROJECT

HON. WILLIAM D. HATHAWAY

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 29, 1970

Mr. HATHAWAY. Mr. Speaker, the waters of the St. John River flow idly to the sea, their potential for generation of electric energy wasted as Congress delays the inevitable construction of the Dickey-Lincoln School hydroelectric power project.

Meanwhile, helpless citizens pay the price in the form of curtailed services and needless inconvenience. In New York City and elsewhere in the Northeast, earlier predictions of power shortages have become a grim reality.

The consequences are well documented in an article published in today's issue of the Wall Street Journal. Thinking my colleagues would find it of interest, I submit the article for publication in the RECORD.

The facts, as I have so often said, speak persuasively for the funding and construction of the Dickey project.

The article follows:

ONE-THIRD OF NEW YORK'S SUBWAYS HALTED AS POWER SHORTAGE HITS NORTHEAST U.S.

The long-prophesied power crisis arrived yesterday in large sections of an Eastern Seaboard already sweltering in humid, 90-degree-plus temperatures.

New York City suffered the greatest impact. One-third of the subway system's electrically powered trains were sidelined in mid-afternoon, and the remainder ran at 18 m.p.h. Express subway trains normally travel at 40 m.p.h. to 45 m.p.h. on long runs between stops. The subway cutback followed a 1:15 p.m. appeal by Consolidated Edison Co. of New York which asked customers to cut all nonessential services and began bringing in power from other areas. That move forced the New York State power pool to slash voltages in the eastern half of the state. At 5:40 p.m., after the peak demand for electricity had eased, normal power levels were restored.

In New England, Boston Edison Co., New England Electric System and all other utility companies reduced voltage by 5%, just as demand for electricity hit record levels.

The immediate cause of the crisis is a protracted spell of hot, humid weather. Weather Bureau officials said a stable high-pressure area from the Gulf of Mexico to New England has trapped air beneath it, in effect baking the areas under it and sending air pollution to dangerous levels. It is in periods of such extremely high temperatures that utilities experience their greatest demand as residential and commercial air conditioners run full tilt along with other power uses.

In New York City, though, the problem was compounded.

Consolidated Edison, which serves nearly all of New York City and Westchester County, has been crippled by the loss of 17% of its electric generating capacity in the last month. As demand climbed higher yesterday, the utility asked the Metropolitan Transit Authority and about 250 other major users of electricity to cut their electric usage as much as possible.

These included the New York Telephone Co., which immediately switched to its own 35,000 kilowatts of emergency generating capacity, the multibuilding Rockefeller Center complex and the Empire State Building.

Many buildings were unable to switch some operations to their own emergency power generators, while relying on the utility for other power.

But many other companies without standby facilities had to curtail operations. American Express Co., for example, received a call from Con Ed at about noon. It promptly closed down the air conditioning units at its travel operations center at 30 Church St., and sent all personnel "nonessential" to full-scale operations home, a spokesman said.

For many subway riders, the power cutback meant crowded subway platforms and even more crowded trains. The subway platforms aren't air conditioned, and some including the busy Lexington Avenue IRT station under Grand Central Station were much hotter than the 90 degrees outside. Most subway trains aren't air conditioned, either.

The transit authority said 4.5 million persons ride the subways each day, but couldn't estimate the number affected by the service curtailment. Many responded to the cutback by attempting to reach their homes by taxis, buses or by walking.

Other main transportation lines, which also operate on electricity, weren't affected. These include the Long Island Railroad, the Penn Central Railroad and the Port Authority Trans-Hudson system.

At Rockefeller Center, elevator operations were cut back about 20%, with 62 of 303 elevators being closed down. All escalators not deemed essential also were stopped.

Rockefeller Center wasn't the only building complex to relinquish some electricity. At mid-afternoon, many buildings around the city cut their lighting in lobbies, halls and reception areas. Among them were the U.S. Steel offices at 71 Broadway, where the lobby was darkened in sharp contrast to the glare of the 90-plus degree heat outside.

With no immediate break in the heat wave anticipated, many officials expect more difficulties today.

New York's Gov. Rockefeller ordered state government offices in the eastern and southeastern section of the state to reduce their use of electricity in peak hours. He didn't say how the reduction was to be achieved, only

that it had to be done, the Associated Press reported.

Meanwhile, Sen. Muskie (D., Maine) said a Senate subcommittee will hold hearings Aug. 3 on New York City's power crisis. He said he was concerned that efforts to solve the power problems may implement "hasty, ill-conceived steps which might lead to greater damage to our environment," the AP reported.

PROCESS TO SAVE MERCURY FROM WASTE IS DEVELOPED

HON. CHARLES A. VANIK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 29, 1970

Mr. VANIK. Mr. Speaker, I would like to direct attentiton of the House to an article appearing in The Evening Star of July 28, 1970, entitled "Process to Save Mercury from Waste is Developed." Ray J. Donlan, a chemist and chief of the water laboratory in Lawrence, Mass., experimental station of the public health department, relates in this article a simple process that he claims can remove 99 percent of the mercury from liquid chemical wastes.

The process precipitates impure mercury from the liquid chemical wastes. Mr. Donlan claims that it is a commonly known process among chemists which involves simply leaving pieces of aluminum metal in the solution over night.

I commend Chemist Donlan on his recent research and request that the U.S. Public Health Service continue to drive ahead on mercury research. Also, the U.S. Public Health Service should be responsible for keeping tighter tabs on mercury levels at water purification stations throughout the country and should report mercury levels to the public monthly as present air pollution levels are done daily.

If chemist Donlan's method of mercury removal should become available on a large scale. I suggest the installation of such units in all water purification stations and reservoirs throughout the country. Humans have a very low tolerance level for mercury consumed in drinking water. Mercury can produce irreversible damage to the liver, kidneys, and central nervous system as well as to mothers during pregnancy.

Now is the time to act on mercury poisoning in our drinking water before it further reduces the quality of our present environment and future generations.

The article is as follows:

[From the Evening Star, July 28, 1970]

PROCESS TO SAVE MERCURY FROM WASTE IS DEVELOPED

LAWRENCE, MASS.—A state chemist says he has developed a simple process to screen out 99 percent of the mercury from chemical wastes—and make money too

Chemist Ray J. Donlan, chief of the water laboratory at the Public Health Department experiment station here, said yesterday the process has been used successfully at the station for more than four months.

Donlan's comments came three days after the U.S. Justice Department announced it will file suits to require 10 companies to end discharge of mercury into navigable lakes and rivers.

Donlan said the process he developed involves placing a few scraps of aluminum into a mercury bearing solution and leaving them there overnight.

The mercury precipitates out and can be recovered and sold, in impure form, for about $4.50 a pound, he said. Purified, it is worth around $30 a pound.

Donlan said he thinks "every chemist is aware of the process," but he believes his laboratory is the first to make use of it.

"We discharge our wastes into the Lawrence sewage system, which flows into the Merrimac River, so we thought we should do a little housekeeping ourselves."

Donlan said the Lawrence laboratory began trying the process months ago, long before the discovery of potentially dangerous mercury concentrations in some fish.

AIR POLLUTION—THREAT TO AGRICULTURE

HON. CHESTER L. MIZE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 29, 1970

Mr. MIZE. Mr. Speaker, it seems incredible, but air pollution costs American agriculture more each year in crop and livestock damage alone than the Congress has appropriated to control its ill effects on everyone, rural as well as urban.

Urban dwellers are not the only ones with a vital interest in the control of air pollutants from automobiles, factories, and solid waste disposal units.

Perhaps when all Americans realize that every citizen has a stake in the restoration of our environment and an improved quality of life, private industry and government can cooperate to fulfill the commitment that President Nixon has made for this decade.

Since so few persons realize the stake rural America has in containment of air contaminants, I should extend my remarks in the RECORD at this point by including an excellent article entitled "Pollution" from the August 1970 issue of The Farm Journal.

The article follows:

POLLUTION: HERE ARE THE FACTS TO HELP YOU COPE WITH THE OUTCRY AGAINST AIR POLLUTION

(By Glenn Lorang)

Almost overnight, air pollution threatens to spawn a rash of legal restrictions that could work a real hardship on many farmers.

That would be ironic because agriculture suffers much more from city air pollution than any damage it causes.

Air pollutants already cause an estimated $500 million a year in crop and livestock damage, whereas *agriculture adds less than 1% of the contaminants spewed into the atmosphere.*

Actually, farm crops, grasses and trees are air purifiers that metabolize some noxious gases and release oxygen as a by-product.

"If you could bag the oxygen given off by 625 square feet of turf, it would sustain a grown man for a year," says George McVey, scientist with O. M. Scott & Co., Marysville, Ohio. The company is telling that fact in its advertisements on lawn care.

Some of the damage to plants comes from stack gases which contain sulfur dioxide, fluorides, lead and hydrogen sulfide. *But the major source of air pollution is the gasoline-burning engine.* Just one automobile consumes more than 1000 times as much oxygen as does a person. Says Philip Leighton, Emeritus Professor of Chemistry, Stanford University: "To dilute an automobile's exhaust gases to harmless concentrations requires from 5 to 10 *million* times as much air as does the driver. In other words, just one automobile, driving continuously along a Los Angeles County freeway, needs as much air to disperse its waste as do all the people in the County for breathing."

Other figures that point up the problem come from John T. Middleton, Director of the National Center for Air Pollution Control, U.S. Dept. of Health, Education and Welfare. He estimates that of the 142 million tons of pollutants released into the air over the nation each year, 86 million tons comes from motor vehicles. Other sources include manufacturing, 23 million tons; generating electric power, 20 million tons; heating, 8 million tons; and refuse disposal, 5 million tons.

"Damage to vegetation is one of the most widespread effects of polluted air," says Middleton. "Indeed, many plants are more sensitive to air pollution than are humans."

SO, YOU HAVE A STAKE IN KEEPING AIR POLLUTION UNDER CONTROL

Sulfur dioxide from fuels used in homes and factories can slow down and stunt the growth of alfalfa, cereal grains, sweet corn, orchard grass, red clover and a number of other crops.

"Especially damaging to vegetables in the East are photochemical gases formed by the reaction of sunlight on chemicals in the exhaust of motor vehicles, says Robert Daines, Rutgers University, New Brunswick, N.J.

Ozone, one of these air toxicants, is a threat to tobacco, field and forage crops, leafy vegetables and fruit trees as well. It is responsible for the kill of the Ponderosa pine in the San Bernardino National Forest 80 miles east of Los Angeles.

"Ozone in the atmosphere at $\frac{1}{10}$ of a part per million for two hours will burn back the tips of onions and kill 20% of the foliage," says W. H. Gabelman, University of Wisconsin. "Every once in awhile, some fields get plastered with enough to make them look like hay fields and the yield will drop to less than half of what it might have been."

Peroxyacetyl nitrate (PAN), another chemical created by the reaction of sunlight on exhaust gases, will kill both ornamental plants and field crops including tobacco, alfalfa and a long list of leafy vegetables.

Some gases, like nitrogen dioxide, may slow plant growth with no visible injury.

Except in the Far West and East, damage from sulfur dioxide, ozone and PAN is limited to the areas, immediately surrounding urban areas. Because pollution in these areas is likely to persist, the best way to avoid crop losses is the development of resistant strains. For instance, Wisconsin scientists have developed hybrid onions which are highly resistant to ozone damage.

It is tough to collect damages from a big corporation when your crops or animals suffer, as James F. Noerr, Mifflin County, Pa., will tell you. Noerr filed suit against Sitkin Industries, Inc., after some of his 56 cows died and others had to be destroyed because of lead poisoning. Sitkin denies that lead from its melting of old batteries and radiators is the cause. But the company has installed filters.

"Now we believe we have evidence of chronic lead poisoning on two other dairies," says David C. Kradle, Pennsylvania State University. "It is a very subtle form with no clinical signs, but it does interfere with reproduction and cuts milk production 20% to 25%.

Fluorides from aluminum smelters and phosphate plants have killed trees and crops and harmed animals.

"A little fluorine makes teeth better, but too much softens them," says C. S. Hobbs, University of Tennessee.

"By the fourth year, our Hereford brood cows had worn their teeth to the gum line," says Walter Proffitt, Knox County, Tenn., who grazed pasture next to an aluminum plant. "Now that the aluminum plant has installed filters, the problem has cleared up."

A threatened ban on fired burning has Pacific Northwest grass seed growers racing against time to find other ways to control a hundred different diseases, weeds and insect pests. Originally used only to control disease, burning stimulates some kinds of grass and greatly increases seed yields. Tests at Oregon State University showed fine fescue seed yields dropped 75% when alternate-year burning was substituted for burning every year.

"No one wants to stop burning more than the grass seed grower," says Charles Kizer, Marion County, Ore. "But if there is a complete ban on burning next year, there isn't one grower in 10 who would survive." Kizer and other growers sponsored legislation to control burning, which Oregon Governor Tom McCall labeled "totally inadequate," even though it permits a complete burning ban "for the public safety."

Compared with other sources of air pollution, field burning is not large. In the Willamette Valley, the Air Pollution Authority estimates that grass and wheat stubble burning emits only 5 to 10 thousand tons of pollution each year, while 180,000 motor vehicles release 160,000 tons. "The 2000 acres we burn put less toxic material into the air than 5 automobiles each driven 30,000 miles a year," says Arden Jacklin, Spokane County, Wash.

But the field burning is done during a 6-week period in late summer. "And when you burn, everyone knows it," says Herb Jacobson, Spokane County, Wash. Jacobson is president of the Intermountain Grass Growers Assn., which is sponsoring research to find new ways to eliminate burning.

The association also finances a half dozen weather stations, and its members burn only when winds favor smoke dispersion.

They also keep the public informed so non-farmers will know that growers are attempting to phase out burning. *"If we take a negative attitude on pollution, our sins will be jammed down our throats real fast,"* says Gerald W. Barnes, Lane County, Ore. "The best plan is to try to adapt and to support research to find alternatives to such practices as burning grassland."

WHY WE AMERICANS CHOSE THE EAGLE AS OUR NATIONAL SYMBOL

HON. G. WILLIAM WHITEHURST

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 29, 1970

Mr. WHITEHURST. Mr. Speaker, on the occasion of the visit of Prince Charles and Princess Anne to Washington, some question was raised as to why we Americans have selected the eagle as our national symbol. It is noteworthy that so few people were able to answer this question. The best answer that I have seen came from a Latin master at the Norfolk Academy in my district. Mr. Hansford Lee Farris in a letter to the editor of the Virginian-Pilot on Wednesday, July 22, wrote in part:

Many of our founding fathers, who quite literally fought for our freedom, were ardent admirers and highly capable students of Roman civilization. And since they knew that from the time of Marius (157–86 BC) the eagle (aquila) had been the standard of the Roman legions whose duty it was to fight for that civilization, it was clearly no accident that this symbol of the power of republican government in the Ancient World should become the symbol of the first republic in the New World.

With this explanation, I hope that everyone is now in a position to answer this simple but rather important question which we as Americans should have full knowledge of.

WELCOME, DR. JOHN BUNZEL

HON. DON EDWARDS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 29, 1970

Mr. EDWARDS of California. Mr. Speaker, a new president has been appointed at San Jose State College. He is Dr. John Bunzel, formerly chairman of the political science department at San Francisco State College and now with the center for advanced studies in behavioral science at the University of Santa Clara. His impressive professional credentials are matched by a record of equally impressive courage and personal integrity, demonstrated by his conduct during the faculty strike at San Francisco State last year. I would like to join with the rest of my community in welcoming Dr. Bunzel to San Jose and wishing him all success in his new position. There being no objection, I would like to add the following editorial from the San Jose Mercury on the importance of this most welcome appointment:

NEW PRESIDENT OF SAN JOSE

Dr. John Bunzel, the newly-appointed president of San Jose State College, comes to his new post with an impressive record of qualifications and experience. He will need them.

San Jose State, perhaps more so than any other California state college today, is overcrowded, under-funded and—to a lesser degree than some other state colleges—beleagured and belabored by a minority of politically-oriented students and faculty.

The job of a college president is never easy. It is harder than it needs to be in California today precisely because society is in a state of flux. Confusion abounds—about the nation's war aims, about its own internal priorities and about the state and direction of its economy. Public institutions of higher education are a focus for these tensions and confusions, and the college president is truly the man in the middle.

Dr. Bunzel, as a political scientist and sociologist, is surely familiar with the problems he will face at San Jose State, but knowing what to expect and coping effectively with it when it arrives are often two entirely different things. If he is to do the best possible job, Dr. Bunzel will need the confidence and cooperation of his faculty, his fellow administrators, the students of the college and the citizens of San Jose. He deserves them, if for no other reason than that every man deserves a fair chance to succeed.

There are, of course, more and better reasons for strong community cooperation with the new San Jose State College president. The college is a precious community asset. It can provide—and has on occasion provided—leadership and manpower for many community development projects. It would be a loss both to the school and the community if this relationship should be weakened.

Equally important, San Jose State College has the potential to become a first-rate university. It is well on the way to that status now, and it is imperative therefore that its president be a man dedicated to the pursuit of truth and knowledge and demanding of scholarship and professional competence from his faculty.

Dr. Bunzel's record as a professor of political science and, most recently, as chairman of the political science department at San Francisco State College, suggests that he understands the nature and value of scholarship and the responsibilities of a college—responsibilities to itself, to academic freedom and to society as a whole.

It is a pleasure to welcome Dr. Bunzel to San Jose and to wish him a successful and productive tenure as president of San Jose State College.

FOUNDER'S AWARD

HON. JOHN O. MARSH, JR.

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 29, 1970

Mr. MARSH. Mr. Speaker, recently the Izaak Walton League of America at their 48th annual convention held at the Golden Triangle Hotel in Norfolk, Va., in July of this year, presented the "Founder's Award," which is their highest award, to our colleague, JOHN SAYLOR of the 22d District of Pennsylvania.

The nature of the award and Congressman SAYLOR's achievements which led to his selection, are more fully set out in the news release of the Izaak Walton League, which I call to the attention of the membership.

Although it is not mentioned in the news release, I bring to the attention of the House that Mr. SAYLOR serves as a trustee of the Massanutten Military Academy which is located in my congressional district at Woodstock, Va. Inasmuch as I have the opportunity to serve with him as a trustee on that same board, I can state that the distinguished service reflected in the award of the Izaak Walton League is also found in his service to Massanutten Military Academy.

The article follows:

NORFOLK.—Congressman John P. Saylor (R–Pa.) has been selected to receive the prestigeous Founders Award of the Izaak Walton League of America. It is the highest award given by this citizen-conservation group which is presently holding its annual convention in Norfolk, Va.

The Founders Award is given in honor of the 54 men who organized the League in 1922, and is awarded "to that person, group or institution judged to have made an outstanding contribution to the conservation of America's renewable natural resources."

In announcing the Award to Congressman

Saylor, Raymond A. Haik, president of the Izaak Walton League of America, noted, "Congressman Saylor has always been one of the first to stand up and really fight for clean air and water, the establishment of parks and our other environmental needs. He has been one of the strongest conservation leaders in Congress."

Saylor, who has served in Congress continuously since 1949, has been a staunch supporter of conservation legislation and the efforts of conservation groups. Notable among his efforts in Congress is his strong support of the Clean Water Restoration Act of 1966 and its annual funding. Saylor was one of seven key Congressmen who successfully sparked a House vote to increase the funding of the Act in 1969 from $214 million to an $800 million Senate-House agreement. He also gave strong support to the measure's $1 billion funding this year in the House.

Saylor has also been a prime supporter and cosponsor of other air and water pollution legislation and of national parks' bills. He has been a strong supporter of youth conservation legislation presently pending in Congress. This measure would annually provide summer jobs in outdoor related federal government programs for youngsters 13 to 17 years of age.

He is the first member of Congress to receive the National Parks Association award for Distinguished Service on behalf of national parks and monuments, 1954; a recipient of the National Conservation Award for distinguished service to conservation given by major conservation groups, 1958; named Conservationist of the Year by the Pennsylvania Outdoor Writers Association, 1965; received the National Wildlife Federation's Conservationist of the Year Award, 1964.

He served on the President's Outdoor Recreation Resources Review Commission and the Public Land Law Review Commission which just submitted its final report to Congress and the Administration. Saylor is presently serving on the American Revolution Bicentennial Commission; National Forest Reservation Commission, and the House Interior and Insular Affairs Committee.

A native of Johnstown, Pa., Saylor is a graduate of Mercersburg Academy, Franklin, Pa., and Marshall College, Dickinson Law School. He received an Honorary LL.D. from Saint Francis College.

A World War II Navy veteran, he is a Captain in the Naval Reserve.

THE DISTRICT OF COLUMBIA CRIME BILL

HON. RICHARD T. HANNA

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 29, 1970

Mr. HANNA. Mr. Speaker, the District of Columbia crime bill has been signed by the President. The task now is to calm unreasonable fear and to make the law work as fairly and effectively as possible. It should be remembered by liberals that when the income tax bill was enacted, conservatives cried, "the power to tax is the power to destroy." Justice Holmes' reply should be applied to this crime bill: "Not while this Court sits."

Let us, however, be cognizant of the basic and compelling facts that remain unchanged with the passage of the new crime bill package. The conditions in the streets and in the prisons are turning out criminals faster than society has a present ability to control. However, it is a mistaken premise that short cuts are possible in effectively coping with the complex problem of crime. Crime has many tangled roots. To treat correctively its basic feeders requires large sums of money. Society should not expect impressive progress until it has effectively applied and invested substantial sums. The cost of crime is enormous. The cost of lasting cures is equally impressive.

Unfortunately, the cost of crime is indirect and not tagged as such in the budget of governments. It is, therefore, more readily tolerated even while being decried by political leaders. To provide sufficient money to carry out the reforms in the new crime bills and to effect other needed reforms would require budget commitments of identified and directed funds. Political leaders and this administration are not likely to assume the burdens this implies.

On the other hand, those who expect that mandatory sentences, wiretapping, preventive detention, and the "no knock" provision, will make either a dramatic or lasting imprint on the pervasive presence of antisocial behavior are heading for a port of disillusionment and disappointment.

SALT AND SAFEGUARD

HON. JEFFERY COHELAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 29, 1970

Mr. COHELAN. Mr. Speaker, the Senate is about to begin debate on the military procurement authorization for fiscal 1971.

A vital component of this bill is the authorization for phase 11 of the Safeguard ABM. As is well known by my colleagues I have opposed deployment of the ABM since its inception nearly half a decade ago.

While the House voted to authorize the funds for Safeguard for fiscal 1971, it appears likely that the Senate will delete this program when it considers the bill.

This deletion would be a most constructive step.

In its lead editorial for July 27, 1970, the New York Times forceful case for this deletion. I strongly recommend it to my colleagues.

The editorial follows:

SALT AND SAFEGUARD AND THE FUTURE

The Administration's claim that success in the Strategic Arms Limitation Talks (SALT) with Russia requires Congressional authorization of an expanded Safeguard program is the least credible of the many unconvincing arguments made for this antiballistic missile (ABM) system in the past year.

The Soviet Union has suggested that ABM's could be limited at "zero level," rather than at low or higher levels. This apparent readiness to ban missile defense entirely opens an attractive prospect. The hypothetical Pentagon thesis that the Soviet Union might clandestinely "upgrade" its thousands of antiaircraft missiles into an effective antimissile defense is based on the theory that they would be secretly linked to the giant ABM radars. If those radars and the rest of the embryo Soviet ABM system around Moscow are dismantled, that would also demolish the argument that Russia could alter the power balance quickly by deploying secretly manufactured ABM launchers around those radars, which take five or six years to construct.

If missile defense were entirely banned, the Pentagon's argument for deploying MIRV multiple warhead missiles at this time would also collapse. MIRV (multiple independently targeted re-entry vehicle) is sought to insure penetration of a heavy Soviet missile defense if Moscow should build one. With a "zero ABM" agreement at SALT, no one could argue that the Soviet Union could deploy a missile defense in the future faster than the United States could increase its offensive capability to overcome it.

Yet the Nixon Administration, in its new Vienna proposals, reportedly has not proposed a MIRV ban; on the contrary, it has made unnecessary demands for intrusive on-site inspection, something it knows is anathema to Moscow, in discussions at SALT of a possible MIRV deployment halt. For eighteen months the Pentagon has been permitted to press ahead on testing and, more recently, deployment of the American MIRV.

The Soviet suggestion of an ABM ban evidently has not been rejected; it reportedly remains among the alternative "low level" ABM limits presented in the American proposals. But there are indications that the Administration prefers, and will seek at SALT, an ABM agreement that would permit both sides to have systems equal to or larger than the obsolete 64-missile defense the Soviet Union has deployed.

The agreement the Administration now projects at Vienna would not halt the strategic arms race, but would continue it in a seemingly controlled form. The degree of control, however, would be an illusion.

With ABM systems deployed on both sides, even at a low level, there would be a continuous race for qualitative improvement and, every few years, replacement of the system with a new generation of antimissiles, radars and computers. Far more dangerous, absence of limits on MIRV would permit a rapid multiplication of separately-targeted nuclear delivery vehicles in the strategic offensive missile forces of both sides. A five-fold increase is now under way in the American forces, from 1,700 to about 8,000 nuclear delivery vehicles.

Moreover, a race to improve the accuracy of MIRV warheads would also be beyond control, giving each side at some point the capability of destroying the other's fixed land-based ICBM's. Fixed land-based missiles would be made obsolete by this development and both countries would be forced to replace them with sea-based or mobile land-based ICBM's.

The tens of billions of dollars that would be devoured in this post-SALT arms race is reason enough to seek to avoid such an evolution. But even more important would be the dangerous instabilities that would be repeatedly introduced by permitting the stable nuclear balance that now exists to give way to a new kind of missile race.

The issue that confronts the Senate as it opens debate on the defense authorization bill, which includes funds both for ABM expansion and the rapidly growing MIRV deployment program, is not how to help the Administration achieve the SALT agreement it seeks. The real issue is how to influence the Administration to seek the kind of SALT agreement the country and the world needs. That would be an agreement banning both ABM and MIRV.

The Senate has already overwhelmingly voted a resolution urging the Administration to propose a halt in ABM and MIRV deployment on both side while SALT talks proceed. The need now, is voting the defense authorization bill, is to put "in escrow" whatever funds are voted for ABM and MIRV deployment until the Administration, which has ignored the moratorium vote, implements the Senate resolution.

It may be inconvenient to permit the ABM and MIRV programs to grind to a halt pending the outcome of the SALT negotiations. But no strategic necessity requires that they go forward at this time, while every imperative of arms control demands that they be halted before it is too late.

HEW PROGRAMS NEED URGENT REVISION

HON. LAURENCE J. BURTON

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 29, 1970

Mr. BURTON of Utah. Mr. Speaker, revising and consolidating anachronistic governmental systems can be an awesome and often obliterative task. HEW, under the able leadership of Secretary Elliot L. Richardson, has accepted the challenge of attempting to improve the operation and delivery of its program services.

In defining HEW's place under President Nixon's "New Federalism," Secretary Richardson emphasizes the necessity for expedient reforms in his department. Specifically, the four areas under consideration are: Grant consolidation, fund transfers, grant streamlining, and decentralization.

In past administrations we have watched the burgeoning of governmental bureaus beyond all possible organizational control. Let us take stock of these bureaucratic expansions and try to consolidate and correct with a sense of urgency. For 1 year now, a grant consolidation bill has been dormant in Congress, while thousands of federally subsidized agencies are forced either to shut down operations or are temporarily in limbo waiting for funds. I urge immediate attention to Secretary Richardson's proposals and commend the text of his July 27, 1970 speech to the National Association of Counties, in Atlanta, Ga., to the attention of my colleagues:

"TOWARD A WORKABLE FEDERALISM"

(An address by the Honorable Elliot L. Richardson)

An historian looking back on our epoch might record something totally unique in human experience. He would see that within the working lifespan of a generation we have reached the moon, conquered and eradicated age-old crippling diseases, and provided a vast majority of our citizens with a previously unimaginable standard of material welfare.

That incredible flowering of our abilities has created the expectation that our social problems can be solved by application of the same visionary dynamism. We have learned to hope, for the first time in human experience, that a society can be constructed which is at once free of poverty, abundant in educational opportunity, tolerant of racial and ethnic diversity, and liberating for the human spirit.

The full potential for achieving the objectives of social and human renewal never existed before. At the same time, the very existence of that potential has created the expectation that these objectives can be quickly reached.

I speak for our whole Department when I say we are imbued with a sense of excitement, urgency and mission in our own determination to confront these problems. And HEW, (in its interdisciplinary approach, represents the cutting edge of the Federal thrust.

Yet we who are among those Mencken once called the "chronic hopers of the world" have also learned to temper optimism with caution. We have or should have learned that it is easier to articulate problem dimensions than problem solutions. It's too easy to fall prey to the "Washington syndrome"—the simple-minded theory that social problems will just disappear if the Federal government throws enough dollars and statute books at them. And we should also have learned that the cruel and exaggerated rhetoric of unkept promises can threaten the very credibility of government itself.

But with these high hopes—with all of our resources and dedication—what is the problem? What are we waiting for? Why hasn't the war on our social problems been won? Some would say the problem is more money, and they would be correct insofar as the spending possibilities for improving mankind's lot are virtually limitless. Some would say manpower is the problem. They would be right to the extent that skilled manpower distributed throughout the spectrum of human service professions is always a scarce commodity.

But there is something else—less visible than dollars or manpower, but at this stage even more vital to our success as a nation than those alone. I am speaking of the very structure of our Federal system, and the innate capacity of our pluralistic governmental institutions at all levels to respond and deliver in an orderly, viable, and coordinated way. This, to appropriate the title of Samuel Lubell's new book, is the hidden crisis in American politics.

In the arena of Federal, State, and local relations we are embarked on a great new mission of reform.

In a task as noble and urgent as that of the Founding Fathers, we are redefining for our own age the meanings and functions of the Federal system. Very few new values have emerged in the American political tradition. The ideals of liberty, equality, and justice have always been enshrined in our ethos. The question is how to realize them—and that is why—as it is now—issues of organization and procedure, and of the rational allocation of power and responsibility, have always been at the heart of our political debate.

Our reform effort is proceeding under great pressures. In some areas, the present nonsystem is near breakdown. Many of our overlapping and cumbersome institutional vehicles could have been suited for the Age of the Baroque—but they are not for ours. Crises are no longer so kind as to occur one at a time. We know that our powers as a society are very great. We know, by the same token, that the potential human consequences of error or inattention have been magnified beyond comprehension. No longer can we rely on the adage that the good Lord will look out for orphans, idiots, and the United States of America.

We know these things—and that is why I want to reaffirm to this assembly our unequivocal commitment to the fundamental structural reform essential for a workable Federal system.

In articulating his concept of the New Federalism, the President has spoken eloquently of the need to "test new engines of social progress." The first priority item on that list of initiatives is the Family Assistance Plan. Having now testified on the bill in depth before the Senate Finance Committee, I am more convinced than ever of the critical need for welfare reform, as embodied in the Family Assistance Act. I hardly need convince his audience of that need. You who work daily wtih the welfare problem see the human tragedies of deprivation and despair. I daresay you also must live with the administrative morass—the costly, dependency-creating patchwork of disincentives that is the present system. We welcome your strong support—and we have profited by your questions. We need the bill, and we need it now—and I trust that by continuing our close working relationship, we will prevail.

Welfare reform is only one of the pillars underlying the New Federalism. Revenue sharing, as the President affirmed in his message a year ago, is a reform equally vital to strengthen our Federal political structure and enhance its responsiveness.

Revenue sharing is a fiscal tool *and* a political instrument. Given the present budgetary and taxation structures, Federal revenues in the near future are likely to increase at a rate faster than the National economy. The reverse is true at the local level—a fact with which you county officials are all too familiar. State and local revenues depend heavily on sales and property taxes. In spite of unpopular increases, these sources have not kept pace with economic growth, even as expenditures at the local level are tending to exceed that growth. The result is what President Nixon termed a "fiscal mismatch" characterized by Federal surpluses and local deficits.

The President's proposal supplements existing Federal assistance. It encourages maintenance of existing tax efforts. It is simple and understandable, and by its pass-through provisions, it is equitable in dividing funds between State and local governments.

The proposal, however, is more than a device for fiscal relief. It is a political instrument of first importance for decentralizing the intergovernmental effort and for giving greater decision-making authority to chief executives on the State, county, and city levels. Here is where the problems lie; and it is a matter of our most profound philosophical commitment that you should have the resources and flexibility to confront them.

But there is yet another obstacle to an effective federalism. It is less visible, but no less important, both in itself, and because it constitutes an incredibly wasteful diversion both of money and manpower. I speak now of the virtual strangulation of Federal efforts as grant programs proliferate and as more resources are continually forced into narrow constricting funnels long since inadequate to the task.

This subject has been of concern to me since my earlier tenure in HEW more than a decade ago.

Without attempting to qualify myself as a prophet, I want to recall my prediction of four years ago as a Massachusetts State official explaining the purposes of my proposed Community Services Act. I quote:

We are beginning to forge a whole new arsenal of weapons for the conquest of educational, emotional, and economic and physical handicaps. And in the process, we are discovering that the most serious barriers to the effective use of these weapons are barriers of communication, of jurisdictional jealousy, and of structural rigidity.

The needs of people are seldom adequately met by any single one of the narrow categorical programs through which help has traditionally been channeled. The existing sources of help, moreover, are too numerous, too scattered, and too much isolated from each other. Their administration tends to be both cumbersome and impersonal. The result is greatly to impair the effectiveness as well as the efficiency with which we are able to bring to bear on human needs our available resources of funds and manpower.

The inevitable result will be overlap, discontinuity, confusion, and—in consequence—disappointment of the very expectations to which (these programs) gave rise.

I can only report that in the four years since that statement, the situation has worsened.

A Border State neighborhood health center recently reported to us in dismay that its most serious operational mistake was to apply to numerous Federal agencies for funding. Grant application expenses exceeded $51,000. Expert staff time diverted from productive work was irreparably lost. Federal agency guidelines were inconsistent, application procedures varied widely, and review levels were multilayered and complex. I quote from the Project Director's letter to the Department:

I see now that I made a gross mistake to encourage my staff to make approaches to a broad spectrum of Federal agencies to fund different aspects of our program. None of the agencies seem to understand that we do not run categorical programs at the Health Center, but that we conduct integrated, family-oriented team delivery of service, and the task of educating all our reviewers to this is really too much. The other Neighborhood Health Centers . . . who receive the large bulk of their funds . . . from a single agency have certainly been wiser and more productive. It would be so much easier to deal with one agency which would be completely familiar with our program and we in turn knowledgeable of their procedures and requirements.

Most of the phenomenal growth of Federal programs in recent years has occurred within the Department of Health, Education, and Welfare. When asked recently what it was like to return to HEW, I thought a minute and replied that it was like meeting an old long lost friend who had grown very fat. The Department now administers 260 programs, over double the figure of a decade ago, and more in number than all of the other domestic agencies combined. Almost $19 billion is spent through some 40,000 institutions and agencies.

The ability of these State and local agencies to secure funds and to spend them effectively is, therefore, crucial to the success of HEW's central mission. But countless examples of the experiences of Federal grant recipients similar to the story of the border State health center strongly suggest that all is not well. Their stories remind me somewhat of Bob Benchley's treatise, "Fishing from the Viewpoint of the Fish."

A Neighborhood Health Program in Denver which utilized twelve different governmental funding sources encountered almost insuperable difficulties in grant administration.

The obstacle course they faced included diverse grant periods, inconsistent program regulations, varying payment methods, and dissimilar reporting requirements. At one point, chaos ensued because all funding agencies conducted separate audits within a 45-day period. As a final insult, some agencies cut back funds based upon more generous allocations by others.

The problem is by no means limited to health care.

Approximately 30 HEW grant programs can and do support some portions of social work training in universities. These include training grant programs in support of such specialties as aging, juvenile delinquency, mental retardation, crippled children, mental health, alcoholism, and family welfare.

Yet the Dean of a major university's School of Social Work recently bemoaned the fact that his school has had to apply for and administer as many as nine training grants from HEW to assist in the provision of undergraduate and graduate social work training.

This inevitably distorts training programs in ways unrelated to the goals of the school or the students.

These anomalies do not result from the actions of venal, obstructionist, or unintelligent men. The professionals in my Department and throughout the government are as dedicated, industrious, and competent as any professionals anywhere.

Nor does the solution lie in a vast dismantling operation. We cannot retreat, even if we wanted to, to a mythical golden age of self-help in which the government—out of despair, incapacity, or indifference—abandons the attempt to conquer the age-old problems of poverty, disease, and suffering. In that sense, to paraphrase the title of Thomas Wolfe's novel, we can't go home again. And we should not want to.

We have experienced some false starts and some promising ones in the last decade. But I believe we are now at or near the point where our ability to reform and renew the Federal grant effort could determine the fate of our entire governmental system.

I have been deeply gratified to discover how much was already underway in HEW to initiate reforms. Administration officials have identified the problem and elaborated a corrective approach which recognizes how serious the situation really is. In a message to the Congress on April 30 of last year, President Nixon called attention to the fact that the most serious impediment to the accomplishment of a program's objectives may be the very existence of other programs with the same humane objectives. Seen as such, the question of organization and procedure is not peripheral, but central. It is not a mere housekeeping function, but the most important task we confront.

President Nixon's message has set in motion a concerted effort to reform the system by means of a whole series of interrelated measures.

I would like to describe, by way of thumbnail sketch, four of the most important efforts under way. These four efforts—Grant Consolidation, Fund Transfers, Grant Steamlining, and Decentralization—attempt consciously to reverse the top-heavy trend of governmental programs. They proceed from the premise that further proliferation of programs without comprehensive structural reform will be counterproductive—counterproductive in the worst sense because Federal dollars will not alleviate the human needs for which they were targeted.

The first and most important of these reform proposals is Grant Consolidation. The President has sought authority to consolidate existing grant-in-aid categories if Congress, within 60 days, does not overrule his proposals. If the all-too-typical examples I spelled out at the beginning demonstrate anything at all, they demonstrate a crying need for coordination of the Federal effort and a comprehensive view at the community level.

At the present time, just to give you a sense of the spectrum, public library grants are available in five separate programs, medical library grants in seven, health service grants in three separate formula grants and six project grant programs, and vocational education in nine separate formula grant programs and six separate project grant authorizations.

Categorical programs by themselves too often encourage a narrow view. They focus on a specific product to the detriment of the needs of the group to be served. We have no objection to a diversity of programs and approaches; pluralism is high in the hierarchy of American values. But as the recent McNerney Task Force on Medicaid aptly put it, "One man's pluralism is another man's incoherence." In the design and execution of public programs, we must have a coordinated strategy; and a pluralism of approaches can never be as important as a coherence of outcome.

Apart from relatively minor administrative steps which are now underway, Grant Consolidation as we have formulated it will require Congressional legislation.

Unfortunately, it seems to be difficult to persuade Congress to pass the legislation. A grant consolidation bill has been dormant in Congress for about a year despite overwhelming bipartisan support for such a measure. Much of the red tape now hindering the grants programs would be eliminated if Congress were to act this session.

Each program has an interest group constituency; some legislators are reluctant to see national program mandates altered, even in the face of local needs. But we believe the governing units you represent should make the decisions on specific allocations in accordance with a closer perception of need and a more flexible approach. We believe this is the direction in which responsible and responsive government must move. The task is formidable, and the time to confront it short.

The second major effort is our proposal for *Fund* Transfers. The Administration's Social Services Reform Amendments to the Family Assistance Act embody just such an approach. It is frequently and correctly argued that over-centralization of decision-making at the Federal level has served to sap State and local initiative in identifying and addressing major social problems.

Under our legislative proposal, States and localities will be given incentive to coordinate and integrate their service programs in return for submission of a consolidated HEW plan.

A Governor could transfer up to 20 percent of his Federal grant funds from any one included categorical program to another of higher priority. This critical reform would allow greater flexibility in meeting county and local needs, in conjunction with State agencies and governors' offices. And we hope it would minimize the chain reaction of disaffection when last minute Federal budget alterations create major dislocations in high priority Federally-assisted State programs.

The third of our interrelated thrusts toward reform is grant streamlining. The Federal Assistance Streamline Task Force, appointed by Secretary Finch, mounted a major effort to analyze each step of every one of the 260 separate HEW grant-in-aid programs. Grant processing under each of these programs involves an average of 28 steps, and each of these steps might contain as many as 50 separate actions.

The results obtained in our first 50 program reviews have been startling and clearly demonstrate the value of reform—particularly for the grantee.

A simplified grant processing system was developed at the regional level, resulting in a decrease of total review time from six months to less than two.

We eliminated non-productive documentation in 22 State Plan programs, with the result that 6,800 fewer pages have to be prepared and submitted annually by each State. We thus saved over $8 million and 867 man years of State and Federal effort each year.

We eliminated 182 of the 516 steps in the review process for the 23 project grant programs studied.

We freed 351 man years of State and Federal manpower annually by eliminating or reducing reports required from grantees.

The final major reform effort underway is decentralization. It is an axiom of our operations that we should bring the decision-making process of the Federal Government close to the State and local areas in which the problems lie. In the first months of his Administration, President Nixon restructured the regional boundaries of the major domestic agencies in the field so that now their headquarter cities are the same, and the regions which they cover are uniform in their boundaries. This eliminated a great amount of wasteful and unnecessary travel time.

Taking this reform as a point of departure, HEW has moved to strengthen its 60,000 man regional organization.

Traditionally, HEW Regional Offices have had little authority. We have now shifted line authority to Regional Directors and Regional Agency Heads, and reduced the lines of reporting from 38 to 9. We have made the basic policy decision that, so far as possible, headquarters staff will concentrate on policy development, program direction, and evaluation.

Field personnel will be responsible for detailed planning and implementation of programs, as well as technical and individual grant awards and compliance review.

Throughout this brief inventory of new departures emerge certain common themes. These are, first of all, structural reforms designed to make governmental action responsive more quickly, more effectively, and more visibly to the areas of greatest human need. In tandem they rationalize and integrate numerous programs and funding sources and target them comprehensively. At the same time, they upgrade State and local leadership in its effort to identify and articulate human needs.

These reforms include a long overdue emphasis upon creative use of Federal programs to build capacity at State, county, and local levels, rather than to undermine elected and appointed executives of general government by bypassing them with each new Federal initiative. There is no more important thrust in the entire Administration's program of "New Federalism" than this stress on capacity building; we feel that our Government Assistance Grants in the services amendments represent the most significant initiative in HEW in this effort.

At the same time that we seek to strengthen capacity for planning, evaluating, and training personnel for State and local programs, we also stress significantly increased accountability of State, county, and local executives for the programs operating in their jurisdictions. We will seek new combinations of governments across city, county, and State lines, to accomplish the tasks of revitalization.

All of these steps, I would reiterate, are products of bitter experience, and major components of an absolutely critical task of governmental reform.

I believe that government service can be consistent with efficiency and with human dignity. But to achieve this balance, we must recapture a sense of urgency about reform.

This same kind of concern—this sense of urgency and mutual interdependence was expressed recently by an author writing on the problem of mental retardation.

Why, the author asked, after a long history of neglect, has a grassroots movement to combat this handicapping condition at last developed such momentum? Answering her own question, in words I would like to appropriate as my own, she replied:

It is because the world is very much with us today. We know (many of us perhaps only subconsciously) that if our way of life is to survive, every individual, be he handicapped or whole, be he a privileged American of an under-privileged peasant in India, every individual must be counted an individual and accorded his place in the sun.

In the last analysis, it is to that end—the cause of individual self-realization . . . each man's place in the sun—that we bend our efforts at reform. No task is more challenging, and no cause more worthy of our concern.

A LETTER TO THE PRESIDENT

HON. DAVID R. OBEY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 29, 1970

Mr. OBEY. Mr. Speaker, I am inserting in the RECORD today an article which appeared in the July 28 issue of Look magazine in the form of a letter to the President from Maj. Murray H. Helfant, U.S. Army Medical Corps, who recently resigned his commission.

Major Helfant's letter communicates more effectively than anything I have seen the difference between viewing a war in a far off place from the vantage point of grand national strategy and viewing it from the vantage point of some of its most tragic victims.

Major Helfant's letter speaks for itself and requires no further elaboration.

The letter follows:

[Illustrations not printed in RECORD]

BOSTON, MASS.,
July, 1970.

DEAR MR. PRESIDENT: I apologize for not writing sooner, but it was the difficulty I had in resuming the care of civilian patients that delayed this letter. I had never completed an assignment before without stopping by the boss's office to check out and say good-bye. However, I hope this note will in some way make up for what may seem to you the discourtesy of relinquishing a commission before completing the job. I know that you've been busy, and even though I once found myself in Washington this past winter, I didn't try to see you. Instead, I'm hoping that these notes and pictures will get my thoughts straight through to you better than I could if we had talked at the White House.

I've tried several times now to explain or describe my past few years to others, but I must admit that I've never felt satisfied with the results. Whether it was the distance in miles between there and here, or just the passage of months that blunted by sensibilities, I do not know. But I've inevitably been chagrined and depressed after trying to make my points. I still awaken at night, confronting scenes that cannot be obliterated. But maybe someday they will be gone. I'm beginning to forget some of my recent patients' names by now, and I'm hoping that in a few years, all my reminiscences will be fainter. Nevertheless, I think I owe it to you, and certainly to the boys and men who were once my patients, to see that this letter somehow reaches you. I want to provide you with the most straightforward view of what it was like by letting some pictures speak for themselves.

I had been practicing neurosurgery before my commissioning, and naturally enough assumed I'd soon be in Vietnam. The Army does move in strange ways at times, and I found myself outside Tokyo for somewhat less than two years. C–141 transport planes would pick up our patients at various staging facilities in South Vietnam, wherever large enough airfields were secure, and would fly them to the next hospital in the evacuation chain. This meant the Philippines, Japan, occasionally Okinawa or the United States. It was never clear how the evacuation system worked. We had been told that a computer in Saigon controlled the disposition of those who were evacuated, but at times it seemed that the Vietcong were feeding data into the computer. Yet we were privileged at the 249th General Hospital in Japan to see the majority of seriously injured patients with wounds of the central nervous system, and thus had a fair overview of how things were in military neurosurgery during this time.

I'm certain that many of our patients would not have survived long after initial wounding in previous wars. It was not unusual for us to receive gravely brain-injured men who had had their initial brain surgery within one to two hours of wounding. Needless to say, because of the tactical situation, it was sometimes impossible for a helicopter to reach a man for twenty-four hours or more, but these isolated delays were more the exception than the rule. I do not know much about how the North Vietnamese handle the problem of their wounded, but I do not think their medical-evacuation system or the early care of their seriously ill is as sophisticated or efficient as ours.

I assume you've never seen the 249th General Hospital, where I worked. It's located in Asaka, just northwest of Tokyo, and it's a one-thousand-bed general hospital. We received about one thousand wounded each month and either evacuated or returned to duty slightly less than that number. The hospital gates were manned by local Japanese security guards, and the hospital complex was protected by a high wire fence. I may be mistaken, but to the best of my knowledge, during none of the demonstrations while I was there did any of the local Japanese succeed in breaking into the camp or the hospital itself. Security was indeed excellent, not only that provided by the guards but also that by the riot-trained police who came into the camp during the more violent demonstrations. I couldn't help thinking that we could have used some of their know-how during the riots at home that we were hearing about.

Each ward in the hospital had its own medical flavor, and one could tell at a glance which subspecialty was represented. We had a full service hospital of course and did just about anything you could think of, except for heart transplants. Things were sort of topsy-turvy over there, contrasted with our transplant centers back home; we had lots of potential donors but no recipients.

The two neurosurgical wards had between sixty and eighty beds, and the evacuation system kept our census fairly high. We had two fully trained neurosurgeons, myself and an awfully nice fellow from southwest of Worcester, Mass. All our patients had something wrong with one part or another of their nervous system—usually something was missing after injury. Although we usually kept patients between five days and several weeks, the turnover could be quite brisk. During times of stress—for instance, during Tet when the enemy was acquiring its psychological victory—we continued our patients' evacuations to the United States as briskly as possible. I would usually write out the patient's discharge and transfer summary at the same time that I did his admission history and physical.

May I suggest that if another "Tet-like" period occurs in this non-war, it would save a lot of time and effort if patients were sent

directly back to the United States from Southeast Asia rather than to Japan. Undeniably, Japan is a wonderful land, and its culture is fascinating, but so few of our patients really enjoyed the time they spent there. Mostly, they wanted to know why they had come to Japan, and what were they doing in that part of the world. I never really did find the answer to that question in my one year, eleven months and twenty-eight days of active duty, and must further confess that I never heard a very reasonable explanation of what any American was doing over there.

I wonder if you ever got that report from the costs analyst who visited with us in Japan. He evidently came from the Department of Defense and was an awfully pleasant fellow. I tabulated a list of patients on our ward about that time, and tried to determine from a medical point of view what percentage actually benefited in their treatment by coming to Japan instead of taking an extra five or six hours to go directly home. We had somewhat more than sixty patients on the two wards then, and I could honestly say that two or perhaps three of them might have benefited by not taking the more direct route. I'm not quite certain of the final figure the Pentagon was given, but I was told that the costs analyst received from our medical command in Japan the statement that fifty to fifty-five percent of our men benefited from their time with us. It is interesting to see how the assessment of the situation varies depending on what level in the chain of command you are watching from.

This young fellow has a fairly typical wound. What he's lost are his maxillary sinus, both eyes, and both frontal parts of the brain. We saw a lot of this type of injury, and it was handled very well in Vietnam. It involved the combined services of ear, nose and throat, ophthalmology and neurosurgery. Fortunately, the loss of both frontal lobes of the brain dulls one's emotions somewhat, and these patients were not as distressed at their plight as would be a similar patient without associated brain injury.

Many of our patients with this degree of brain injury showed very little resentment against the circumstances that found them in Vietnam. It was, of course, not feasible to consider the question of the possible effects of lobotomies on large numbers of patients who were also wounded but were more resentful and angry. In one sense, the more severely brain-injured were fortunate in that they were less aware of their deficits and certainly experienced less anguish. I doubt the same would hold true of their families.

I was never entirely satisfied with treating a slightly more severe type of problem. Briefly, the difficulty arises because such a large amount of nose, middle face and base of skull are destroyed, along with brain substance. Infection and continued leaking of spinal fluid were most difficult to manage. I do not think we have found an ideal way yet of treating this type of injury.

The loss of tissue in land-mine injuries is rather common. Such wounds are extensively debrided in Vietnam, and after five to seven days of care, they are either further debrided of dead and necrotic tissue or sutured. Many of our men had multiple-fragment wounds from rockets, land mines, booby traps or mortars. When the brain or spinal cord was also damaged, they'd be assigned to our neurosurgical service and we'd have an opportunity to extend and broaden our general surgical experience with caring for their associated injuries.

Injuries such as the ones I photographed in my operating room are really what prompted me to write you the letter. The burden of what's on my mind these days is really about patients such as these. I admit I'm not terribly interested in dominoes, or in Laos, or in who's threatening whom in Cambodia or Thailand. My background is not in power politics, or in Southeast Asian culture; it's in caring for patients and in trying to make sick people well. I must admit I've had a terribly difficult time trying to understand why these young kids were being mashed in Vietnam when I thought they should be back home growing up a little, or with their wives and children, or with parents and friends.

This particular patient has had a penetrating wound of the brain. Many of our patients had such wounds. Their course after injury covered a fairly wide spectrum. Some men died in hospitals in Vietnam, some died in the Philippines or in Japan, and some died back in the States. Some survived to reach veterans' hospitals, and some returned to civilian life. There are some brain-injured men who will one day resume the support of their families and eventually return to ways of living pretty much the same as before they went off to non-war. These are the luckier ones who'll bear only a few scars. Their less lucky comrades will have a paralyzed limb, or two or three or four. Some will be quite bright and alert again, but some will not be able to speak, reason, protest or assent. It's for these, a sort of silent majority, that I'm writing you.

If you had visited our ward, you might have seen young soldiers on their sides and facing down so that they will not aspirate or breathe into their lungs any excess secretions or vomit that would make their situation more precarious. Tubes carry moist air through small holes cut in their windpipes, and this makes it easier for the staff to aspirate secretions and prevent pneumonia. With a large number of unconscious patients, these measures greatly reduced the incidence of pulmonary complications. As you can appreciate, these patients are unable to cough if they are deeply comatose, and they're not aware of the need to empty their bladders or evacuate their bowels.

The Vice Presidents' recent remarks that if we had shown a little more backbone in the Republic of Vietnam we would have won the war sooner reminded me of one young man I had treated. He had had a complete loss of spinal-cord substance in his midback with resultant inability to feel or move his legs. A small amount of bone protruded through his surgical incision and this was obviously infected, as was the surrounding tissue. We discovered that the whole vertebral body, a fairly vital part of this boy's backbone, was infected. When I grasped the bone itself and pulled gently, the entire segment released from its surroundings. This is a fairly easy maneuver in the autopsy room on a cadaver, but I confess I had never before done this or heard of it being done to a living person.

The Red Cross and other girl workers were awfully helpful to our troops as they returned from the combat zones. In cases like this boy's, for instance, they would write home and let the Stateside family know how the young soldier, soon to be veteran, was getting along. Their aid was invaluable with the sightless, paralyzed, amputated and mentally subdued, of course. In our ward, these girls often helped with patients confined to CircOlectric beds. These beds were so useful that I often thought the Veterans Administration should see to it that each quadriplegic patient who reached home received one along with his discharge papers. These powered beds were most useful at our hospital in Japan, as the staff could adjust a patient's position not only for comfort but also for nursing wounds other than crippling spinal injuries. As you may realize, one of the biggest problems in these cases is that not only do the patients have no movement of their limbs, but they also have no sensation of their paralyzed parts, and these areas may break down, become necrotic and thus rather difficult to manage.

The wounds could be quite devastating to the brain. I was impressed by the amount of brain one could lose and still live, in a way. As I'm sure you know, in most people, the brain is a fairly important organ, and when mortar fragments, or dirt, or splinters of bone scatter through the head, it's pretty hard not to cause some fairly extensive injury. One boy with a very damaged head was so ill when he reached Japan that it was apparent he was not going to survive to make the trip home. His parents came over to spend his last days with him. I might just mention the local problem with the wound. You see, he had lost a great deal of skull and brain covering along with his scalp, and the wound and underlying brain were infected and under very increased tension.

Well, in any event, Christmas Eve arrived, and the children from one of the local schools were serenading the wards of the hospital while this boy's parents maintained their vigil. As the youngsters came onto the ward, you could have hoped for a little bit of a miracle, but instead, the patient passed on at that moment. We all celebrated Christmas in different ways that year.

I must sadly confess that from my vantage point, we weren't winning very much. Clearly, it was a long time ago that we were told we'd soon be done with it. We were assured and reassured that victory was almost in sight. Now, I wouldn't presume to contradict men who were my military superiors, and I wouldn't for a moment question the statements of either the elected representatives of the South Vietnamese people, or of our own field commanders and generals in the Republic of Vietnam, but I would in all humility submit that these boys and men who came under my care were not cheered by the thought that we were winning. These boys felt that they had lost; and, of course, in a simplistic sense, I guess that they had lost—an arm, a few legs, some brain, a little bone, a kidney, a lung or spleen, perhaps some liver. I must sadly observe that despite our cheery casualty figures and the statistic that we've killed fifteen times as many North Vietnamese and Vietcong as they've killed of us, the fact remains that many of my patients felt that they had lost.

Still, I have nothing but praise for your attempts to extricate us from that part of the world. If I could ever help in any way, short of reentering the military, please feel free to call on me. But back to the main substance of why I wanted to write you.

I guess it's difficult to avoid giving you the impression that I'm sort of an anti-war kind of person. I admit that I didn't feel too strongly one way or the other before putting on my uniform. It really took very little time to realize that there were better ways of dying for one's country than the ways we devised for our younger brothers and neighbors. Not all my patients were draftees or short-termers who were anxious to serve their hitch and get out; we often had patients on the ward who were career soldiers, and at times we even had some officers.

My own ward was fairly characteristic. Comatose patients certainly can be seen wherever much neurosurgery is being done, but we had a rather large volume of them. The Army cared for its paraplegic and quadriplegic patients with Stryker frames and CircOlectric beds that provided movements and changes of position the men could not provide themselves. In our ward, we had quite a bit of difficulty trying to decide who should continue evacuation back to the States and who should return to combat. I'm glad to hear that the burden of making this decision has been eased, and that all patients who reach Japan are now able to continue home. I must confess this seems quite

reasonable; the other way seemed somewhat cruel—almost like sending men back to combat because they hadn't been hurt badly enough the first time.

Enlisted men or officers, the most common problem we had was the patient who had his skull and brain and overlying scalp debrided and remained in Vietnam. After some days, if there was much tension on the wound margins, and sometimes even if there wasn't, the margins would begin to separate, and blood, pus or brain tissue would extrude through the original incision. We'd treat such problems by reopening, carefully cleaning and resuturing and leaving a few tubes and drains under the scalp through which the staff would insert antibiotics in the postoperative period. With the aid of these drugs and excellent nursing care, many of these potentially lethal wounds were healed.

I'd like just once more to reemphasize that I do not intend this letter as criticism or expression of disapproval. Why, you weren't even my Commander-in-Chief during most of this time, and the President who preceded you was being reassured that the end was just around the corner, that the enemy was on his last legs, that we had just to buckle down a little longer and the coonskin would be on our wall, etc.

I was happy to read not long ago that the Army Chief of Staff has stated that the Vietnam war has technologically been a great success. I assumed he must have had in mind such developments as a MUST unit. This is a Medical Unit Self-contained Transportable and will certainly be useful in situations where a small hospital must be rapidly set up near a large disaster area. If I understand the concept correctly, the idea is to send the hospital to any area where large numbers of casualties are being generated. I must apologize at this point for a temporary diversion.

I had never before thought of sick or wounded people as being generated. It's a concept I learned during my indoctrination period at Fort Sam Houston in Texas. You will agree, surely, that it is a modern way of thinking about these problems. It's clearly much nicer to sit in conference and hear about five hundred or five thousand casualties being generated in a given situation. It's a much nicer way to think of large groups of people in this manner, somewhat like electricity being generated at some power plant or other. Well, in any event, I just could never get it into my own head, or discipline myself to think of my patients in this fashion—being generated here, stored there, transported, re-stored, etc. This probably accounts for my hesitancy in being more outspoken with that costs analyst from the Pentagon. I just couldn't convince him that we were dealing with patients, not packages.

I must confess that despite the nice commendation the country has given me, and despite your enthusiastic support during this conflict, I didn't ever come to feel that being part of the Army team was really my cup of tea. I just never managed to get into the spirit of it. Perhaps for future doctor-draftees, you might have someone in the Pentagon devise a drill somewhat like the one they use in the military chaplain's school—something to get the men in the mood. If my sources are correct, and I believe they are, then the young chaplains at one stage in their training were expected to join in the ritual chanting of "kill, kill, kill."

This letter has far exceeded my original intention of just jotting down a quick note; but if it's provided you with any information or a viewpoint somewhat different from what has reached you through more standard and orthodox channels, then it has certainly been worth my time. I do hope I have not bored you, either, with my thoughts or these photographs.

When I left active duty and was being discharged through Oakland, I was gratified to see a welcoming sign in the corridor. I regretted only that my own patients who had been evacuated through medical channels were unable to see the concrete expression of their nation's gratitude.

I appreciated the opportunity of visiting Japan and of broadening my medical experience during that time. I regret that we lost so many men, not only in Vietnam, but also in our overseas hospitals. Some of the casualties were more difficult to retrieve or repair than others. Caring for the wounded is indeed a privilege; but I was never able to convince myself that they had been wounded for any good end. They were, after wounding, and I'm certain before wounding also, the finest men I've seen. But I cannot help but point out my feeling that this war was unworthy of them. They gave too much in that far-off place—and we should not have sent them there.

I know that you deplore this conflict as much and as intensely as I, perhaps for different reasons. I did hope that sharing these few pictures and thoughts with you would in some way explain why I felt compelled to submit my resignation as I did, rather than to extend my time in the Army. There are, happily enough, younger men now available to carry on the neurosurgical tradition in and after combat. I do hope that they are made of stronger stuff inside than I, and that their tours of duty will not remain in their minds quite so indelibly as has mine.

Knowing how the military operates, I'm certain that neither you nor your predecessors have had the opportunity to see these scenes. We who were fortunate enough to be brought into active service as two-year doctors have, of course. When we reported for duty, the threats that our orders would be changed for Vietnam if we didn't extend for a third year seemed somewhat hollow. None of our group being indoctrinated at San Antonio was cowed. Things evidently later changed, for we had several men appear in Japan this past year after having extended their tours of duty for that very reason. I must admit that I was never terribly impressed by the personnel procedures or procurement policies of the Army. But if the courts allow this practice to continue, then I suspect the military may have found a way to get one-and-one-half times as much wear out of this former group of two-year doctors. I congratulate your planners.

I really had hoped to send you this note while I was still on active duty, but we were somewhat busy most of the time, and my colleagues and superiors cautioned me that it might be more appropriate to allow a seemly interval to pass before trying to record my recollections for you. I'm afraid I'm leaving out a great deal that seemed important to me at the time, but I'm nevertheless able to recall a few glimpses of what was occurring. I had been told that if I waited long enough, perhaps the war would go away. I did wait, but it didn't seem to go away at all.

Yours very truly,

MURRAY H. HELFANT,
Major (Resigned), U.S. Army Medical Corps.

EXPLANATION OF DIGEST NEWS ITEM

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 29, 1970

Mr. BOB WILSON. Mr. Speaker, A reference was made yesterday to the manner in which the Republican congressional committee reported in its Daily Digest the death of one of our colleagues, Michael Kirwan. As you know, the Digest is a summary of news items carried on the Associated Press and United Press International news wires in our committee headquarters. Unfortunately, the Digest item about our colleague's death consisted of the first paragraph of a UPI story which was far from complimentary in capsuling Mike Kirwan's distinguished career in the House. I regret that this item was carried in the Digest. Those of us who worked with Mike Kirwan admired and respected him. Even though he and I squared off every election year as chairmen of our respective parties' congressional campaign committees, I considered Mike a friend and know he would understand the sincerity of my apology regarding this matter.

HOW LONG, MR. PRESIDENT, BEFORE YOU REPLY?

HON. WILLIAM (BILL) CLAY

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 29, 1970

Mr. CLAY. Mr. Speaker, on July 23, Congressmen STOKES, HAWKINS, and I wrote to President Nixon indicating our concern for the President's failure to give audience to black representatives or consideration to the problems of black Americans.

In Vietnam, the President says he is pursuing an honorable peace which will allow him to "save face." And I maintain—that if the policy of this Government shall be to "save face" or to pursue honor—the policy should begin at home, particularly with black Americans.

Much has been said about the Nixon administration plotting great plans for directing funds into the hands of black businessmen. Much has been said about the creation of a special office of minority enterprise to coordinate programs to serve black citizens aspiring to take part in the capitalist system.

But in truth, there is no money for black business nor any authority or directive for the office of minority enterprise to follow. The hoax would be humorous were it not so tragic.

I call the attention of my colleagues to the following accounts of the Nixon failure to follow through on their rhetoric. Upon reading the account from the Detroit Free Press of July 1, 1970, and the report by columnist Jack Anderson carried in the Washington Post, July 13, 1970—my colleagues may better understand the alienation of black America.

The articles follow:

[From the Detroit Free Press, July 1, 1970]

AID TO BLACK BUSINESSES FIZZLES

WASHINGTON.—The administration's plan to produce more minority-group capitalists, one of President Nixon's major campaign pledges, has fallen far short of its goals.

Under programs announced last fall, hundreds of companies in partnership with the federal government were to make millions of dollars available to minorities by June 30. It has not happened.

Last October, Commerce Secretary Maurice H. Stans named 18 companies that planned to set up investment firms to finance minority-group businessmen under a program called "Project Enterprise." He said the list would grow to 100 companies, with financial leverage of up to $500 million by June 30.

So far only nine companies have kept their pledge, at $150,000 each with 2-to-1 federal matching money. Not all nine have yet granted loans.

The secretary also reported in October that 20 major oil companies had promised to increase the number of gas station franchises held by members of minority groups to 25,000 within five years and to bring the percentage of ownership up to the minorities' percentage of the population. The companies have four years to go, but they have made a slow beginning, an official said.

Most participants in the program are black, and it began as "black capitalism." But under pressure from Spanish-speaking groups, officials now refer to it as minority entrepreneurship. One official pointed out that the Dallas investment agency financed a cargo airline, Aztec Airways, owned by Mexican-Americans.

Another program pushed by the Commerce Department was to induce companies to place their franchises, especially food franchises, in minority communities. That effort is doing poorly.

Interviews with officials and visits to several cities demonstrated that the programs were moving much more slowly than anyone had anticipated, and that the administration was being criticized for it.

Two exceptions are automobile dealerships that have gone to minority-group members and community development programs operated by the Office of Economic Opportunity.

Deputy Commerce Secretary Rocco C. Siciliano said general progress had not kept pace with expectations and we blamed the cooling of the economy.

"I think we've made extraordinary progress, considering the state of the economy," he said. "It's hard to imbue businessmen with social consciousness when business is bad. And social consciousness doesn't stop at just talking to them.

"The problem isn't getting them to serve on committees or give donations, but to make capitalists out of people who don't have a business heritage."

Siciliano echoed complaints heard from persons in several cities about getting banks to go along with the programs.

"One of our big problems is that we still have to get the banking community to understand and to participate fully," he said. "A number of individual banks are in the vanguard, but we're still working to get the bulk of them committed."

Under the minority business plan, a company puts up $150,000, which is doubled by the Small Business Administration. The SBA also guarantees up to $15 of bank money for every $1 of original capital. Thus, an agency capitalized at $300,000 could produce up to $4.5 million of financing for minority businesses.

[From the Washington Post, July 13, 1970]

STANS OFFERS MINORITIES PIPEDREAMS

(By Jack Anderson)

The Nixon administration has used a public relations fraud to build up the hopes of blacks, Puerto Ricans and Mexican-Americans who dream of owning their own businesses.

The Commerce Department has publicized opportunities that do not exist and promised money that is not available. The glowing statistics put out by the Commerce Department have turned out to be based, in part, on shaky figures and wishful thinking.

During the 1968 presidential campaign, Richard Nixon held out hope that the minorities could share in the full fruits of capitalism. He promised to help the people of the ghettos acquire their own shops. Conservative business sense could deal with poverty, he said, more effectively than could liberal pipe dreams.

Traveling salesman for the Nixon plan is Secretary of Commerce Maurice Stans, who has whirled through 10 cities gusted by a snowstorm of press releases. In troubled urban centers such as Harlem and Chicago, Stans has gathered together hundreds of blacks, Puerto Ricans and Mexican-Americans to tell of the opportunities awaiting them.

He has dangled before minority audiences $301 million in federal funds that are supposed to be available this year to help them become businessmen. He has boasted of commitments the Nixon administration has gained from chain companies willing to franchise shops and stores to minority owners.

The program, indeed, offers opportunities for minority businessmen. But the prospects are neither as plentiful nor as golden as the official ballyhoo proclaims.

ELUSIVE $301 MILLION

All too often, those who pursue the government promises are rewarded only with false hopes. The $301 million figure, for example, was never more than a public relations guess. This column has spent three weeks tracking down the funds that were supposed to make up the $301 million. Our discovery: The actual amount available to promote minority capitalism had painfully shrunk.

The biggest cut of the $301 million pie was supposed to be provided by the Small Business Administration, which was marked down for $74.3 million in direct loans. The final figure for the fiscal year, which ended on June 30, isn't available yet. But with only a couple of weeks unreported, the SBA had laid out only $68.1 million. The agency had also made only $81.7 million in guarantees, as contrasted with their trumpeted goal of $144.4 million.

At many agencies, the officials knew nothing about the funds they supposedly were contributing as their part of the $301 million goal. The search for the correct figures often led reporters for this column into a hopeless bureaucratic quagmire.

Back at the Commerce Department, spokesman Israel Rubin said the $301 million figure was "just a goal," but he couldn't identify who had set the goal.

Secretary Stans, on his whirlwind visits, preaches to a folder labeled "Minority Enterprise Profile." The folder is stuffed full of glowing facts prepared for him by the Office of Minority Business Enterprise Information Center. Copies of the summaries for several cities, marked "Not for Distribution, Official Use Only," have been examined by this column.

The Chicago summary, for example, boasts: "Twenty franchisors have committed more than 44 Chicago franchise opportunities." A check of the franchisor list, however, revealed that most had committed no specific number of franchises. Some weren't planning offerings in the Chicago area at all and had no idea how their names got on the list.

In New York City, Stans visited Harlem and the Puerto Rican community with pledges of 300 franchises from 38 companies. A check of several on the list revealed they, too, are trying to place minority businessmen but aren't committed to specific numbers.

OMBE's Walter Sorg talked enthusiastically to this column about minority franchising. About 2,000 franchises have been placed, he said, since the program began a year ago. He admitted that there had been a "slip up" in some of the statistics and that few franchisors had made "firm commitments." He also agreed that minority franchising isn't proceeding as rapidly as the Nixon administration had hoped. But he blamed the erratic economy and tight money.

EDITORIALS SUPPORT ANTI-SECRECY AMENDMENTS

HON. WILLIAM S. MOORHEAD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 29, 1970

Mr. MOORHEAD. Mr. Speaker, editorials from around the country continue to support the adoption of antisecrecy amendments to the Legislative Reorganization Act. These amendments would help penetrate the veil of secrecy which currently shrouds House procedures and operations.

I would like to draw particular attention to the editorial which appeared in this morning's Washington Post entitled "Open House," which deals with passage on Monday of the O'Neill-Gubser amendment to record teller votes. In my judgment, and in the judgment of the Post, the House on Monday went a long way toward restoring public confidence in our governmental institutions generally and in the Congress particularly.

In addition to the Post editorial, I include a sampling of other editorials from around the country supporting the antisecrecy amendments. The editorials are from the Los Angeles Times, the Pittsburgh Post-Gazette, the New Orleans Times-Picayune, and the Detroit Free Press.

OPEN HOUSE

Those cheers that echoed in the House of Representatives on Monday may have violated Cannon's Rules but they were nevertheless very much in order. They were cheers for democracy, for the basic idea of representative government, for the concept of government by the consent of the governed. They came in response to a historic House decision to put an end, at long last, to its ancient practice of voting in secret on amendments to pending legislation. By an almost unanimous voice vote, the members of the House approved an amendment to the congressional reorganization bill providing that in the future they shall be recorded by name as they pass up the aisle to vote on amendments.

The House, at the same time, approved some other exceedingly salutary changes in its procedures. It agreed to permit at least 10 minutes of debate on any amendment printed in advance in the Congressional Record. And it approved the installation of electronic voting equipment to speed up roll calls—provided that later on the House decides that it wishes to tally its divisions in this modern, efficient and sensible fashion. More's the pity that it did not decide also to make committee meetings open to the public as a general rule. All these changes are simply devices for transacting the public business in public. They will serve at once to help the representatives themselves to know what they are doing and to help their constituents to know what they have done.

Because in their present form the changes are amendments to a bill which must have

the concurrence of the Senate before it can become law, one cannot yet regard them as *faits accomplis*. But the support for them in the House was so strong, so healthy and so overwhelming that one can reasonably suppose the House would adopt them as rules of its own if the Senate should fail to translate them into an act of Congress. They reflect great credit on the House and will surely enhance the confidence of the country in its government.

Secrecy in the House is one of those curious folkways perpetuated as tradition long after the purpose for which it was originally contrived has been forgotten. The House of Commons in England undertook to keep its proceedings secret in order to protect its members from reprisals by James I and Charles I in the 17th century. The practice, designed to offset despotism, soon proved itself despotic. It led to all sorts of abuses difficult to unmask and to rebuke because responsibility for them could not be discerned. "Next to the existence of open constituencies, and a fair mode of election," the historian Lecky wrote, "the best security a nation can possess for the fidelity of its representatives is to be found in the system of parliamentary reporting. But this was also wanting. The theory of the statesmen of the first half of the 18th century was that the electors had no right to know the proceedings of their representatives, and it was only after a long and dangerous struggle, which was not terminated until the reign of George III, that the right of printing debates was virtually conceded."

The right of a free people to know how their elected representatives vote is a right without which elections can be considered neither free nor meaningful. The House of Commons recognized this long ago. The House of Representatives honors its best values in joining them now as a genuinely representative body.

Congress, Heal Thyself

(Issue: How democratic can the House of Representatives claim to be when it conducts so much important business secretly?)

Offhand, we can't think of any democratic legislative body that conducts as much of its important business in secret as the U.S. House of Representatives.

Congressmen cast crucial votes anonymously on issues as important as the anti-ballistic missile, the Indochina war, crime prevention and funds for the supersonic transport.

The powerful House Appropriations Committee holds every one of its 300 annual meetings behind doors closed to press and public. In fact nearly half of all House committee hearings are held in secret.

Committee votes are taken secretly.

And even when House hearings are open, radio and television are never permitted.

This week the House has the opportunity to make itself a more open, democratic institution. A bipartisan group of Congressmen is trying to reform some of the old procedures.

The most important reform would abolish the medieval practice of avoiding a roll call—not voting by name—on some of the most important and sensitive matters that come before the House.

This procedure, which occurs while the whole House is sitting technically as a committee to amend bills, was devised by Parliament several centuries ago to protect the members under a cloak of anonymity from the king's displeasure. Parliament gave up the practice in 1832 as no longer necessary; the Senate does not have it; but the House, perhaps from laziness, perhaps from fear of constituents' displeasure, has kept it up. It ought to go.

Congressmen sometimes hide behind the practice to vote secretly in contradiction to their publicly announced positions. And because the votes are not recorded, such ballotings often bring only a third of the House to the floor. Yet it is in these anonymous ballots that the heart of important legislation is often written. The unrecorded but crucial vote on continuing funds for the supersonic transport plane recently was decided by only 194 of the 435 members of the House.

The other proposed reforms, though less important, would be useful: committee hearings to be closed only by a majority vote of the committee, committee meetings to be less dependent on the whim of the chairman, committees to be opened to radio and television coverage on majority vote of a committee, the votes taken in a committee to be made public.

There is a good deal of argument in Washington about the effect on legislation of removing some of the secrecy from House business, but there can hardly be much dispute about the principle. The public's business really ought to be conducted in public.

Incidentally, the crucial votes taken this week on these reforms will probably be cast anonymously.

Anti-Secrecy Rules Deserve Passage

If secrecy is abhorrent in law-making, and it usually is, the House of Representatives this week has an opportunity to mend its ways.

Many of the telling votes in the federal House are on amendments. But when representatives vote on these amendments, how they vote is a secret. For many of them this is a cosy arrangement; people back home don't know how their congressman voted.

Under the proposed reform—one of the more than 100 involving rules and procedures—the public would know who voted how. Aside from the elimination of secrecy, the rule change would also have the effect of stimulating attendance on the House floor. So the public would not only know who voted how but who didn't vote at all.

The House Democratic whip, Hale Boggs, is for the rules change as is the majority leader, Carl Albert of Oklahoma.

A companion betterment in rules would also have the benefit of opening more House committee meetings to public and press. About half are now held behind closed doors.

Few reform measures have been in the public eye as these to conduct public business publicly. They have the backing of a bipartisan group of House member-reformers and should likewise enjoy widespread popular support. We believe the public would be willing to hold Congress in higher esteem if Congress deserved it.

Secret Balloting Reduces Responsibility in House

Though the U.S. House of Representatives, of all American political institutions, is supposed to be the most responsive to popular will, its members in fact often function in genteel obscurity. By the very force of numbers they are shielded from the glare of public attention that follows the movements of the President or even of a United States senator.

Many of the members like it that way. They can, with a little luck, enjoy the prerogatives of office free of voter interference. It can be a pleasant sinecure, like a safe and obscure vice presidency in the family firm.

Moreover, we the people have permitted the House from colonial times to operate by rules that make it more difficult to tell what the boys have done. Because of numbers, roll call votes in the House are time-consuming. So much of the House's business is done in committee-of-the-whole, by teller vote or division of the House or voice. It is an efficient way of doing legislative business.

Efficient, yes—but it also encourages the protection of House members from the vagaries of public opinion. In other words, it lets them hide from their constituents what they are really doing. By voting on a preliminary vote in a way that he would not on a final roll-call, the member may seem to stand for one thing and actually work a quite opposite end.

There are times, certainly, when this has worked for the long-term public interest, when a congressman has been more responsible in private than he would have been in public. But it has also tended to make the House less responsive, so that it seems to be less influenced than the Senate by public opinion.

Now a vehicle is at hand for changing the practice of permitting secret preliminary votes. The House is considering a relatively mild bill to reorganize its rules. That in itself is something: The last time any major changes were made was in 1947.

A group of insurgent congressmen, reacting to the wave of demands for more responsive government, is seeking an amendment to end secret votes on preliminary motions. The House Administration Committee is also considering a proposal to establish electronic voting machines in the House, which would make roll calls simpler and faster.

The House might not really be all that much better with its members' records laid out for all to see. At least, though, representatives would know that an unruly newspaper or a ruthless opponent might haul out the old record and expose what the members had done. That, after all, is supposed to be the idea in a representative government.

Which is, we are sure, what the House members want to provide us.

How Congress Keeps Its Secrets

Although it is supposed to be the people's branch of government, Congress has devised a number of trade secrets to keep the public from knowing too much—antiquated voting procedures; an inaccurate and unreadable daily journal, concealed employes payrolls, a habit of passing backdoor pay increases that avoid record votes, and various other prerogatives that come in handy at election time.

Members of the House of Representatives borrowed the habit of nonrecord voting from the English Parliament, which abolished the practice in 1832—and went on to achieve new greatness. A bipartisan group of House members now is seeking to reduce the number of nonrecord votes, open up committee meetings, and preserve roll-call votes in committee sessions for public inspection.

Nonrecord votes usually are taken when the House is sitting as a whole committee amending bills. Amendments, many of them going to the essence of the bill, are decided by voice votes, by "divisions" in which members simply stand in their places to be counted, or by "teller" votes in which members troop chummily and anonymously up the aisle in "yea" and "nay" lines, with no official record taken. To the casual visitor, it may look like mass confusion, but crucial amendments on such matters as appropriations for the supersonic transport and anti-ballistic missile have been decided in this manner. To be sure, there is a formal vote later on whether to kill or pass the bill, but often these votes have no real significance, once controversial amendments are disposed of.

The reform-minded congressmen may be acting not so much in the interest of disseminating public information, but because

various lobbies have taken to publicizing unofficial and probably inaccurate tallies of nonrecord votes. Not surprisingly, House members have expressed resentment over the gallery "snoopers," especially if the report is not accurate. But the condition is easily cured. The House might follow the example of supposedly more unprogressive state legislatures and install voting machines. If this be too great a shock in an electronic age, some other simple device (a bakeshop customer tag?) could be used.

All that is lacking, really, is the will of our elected representatives to play fair with their constituents and achieve a reform Parliament brought about nearly 140 years ago. It is ironic—and possibly an indication of the legislators' collective mood—that voting on all the proposed amendments probably will be done on a nonrecord basis. Bad habits are hard to break.

FOR ORGANIZED CRIME PROSECUTORS

HON. WILLIAM D. FORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 29, 1970

Mr. WILLIAM D. FORD. Mr. Speaker, I would like to announce my cosponsorship of H.R. 16133, a bill to provide training for Federal, State, and local officials engaged in the prosection of organized crime.

The rising crime rate is no secret to anyone in this country as we are bombarded by statistics with every newspaper we pick up. But one element of the rising crime problem which escapes such mathematical scrutiny is organized crime. This scourge has worked its way into nearly all facets of our society, and in spite of concentrated efforts still remains largely elusive and uncontrolled.

For organized crime is a business; a deadly but successful business which takes its toll in the lives of unsuspecting citizen. The men behind these organizations, though often known to police, many times escape prosecution because of familiarity with loopholes in the law, and financial resources to hire the most competent minds in the legal field.

My experiences as a former municipal judge, defense and prosecuting attorney have repeatedly impressed upon me the urgent need for specialized training in dealing with organized crime. We have a large number of extremely talented attorneys in this country, but for the most part these persons have had no experience in the particular subtleties peculiar to organized crime. H.R. 16133 will be instrumental in preparing prosecuting attorneys for problems they may be expected to face in dealing with elements of organized crime.

There are of course existing laws which can be utilized in this effort, but no law school deals with subjects related to organized crime prosecution, and only recently have such civil laws as tax, securities, and antitrust legislation proven their worth in combatting organized crime.

In addition to establishing a national advisory committee on the training of organized crime prosecutors, this bill would direct the Attorney General to conduct an annual conference of Federal, State, and local officials on organized crime, and require the Attorney General to make an annual report to the President and Congress on the progress of eliminating this blight from our society.

Further delay will only serve to complicate an already difficult problem. We cannot afford to sit back and watch our legal system become distorted to benefit criminals. The legislative means to combat organized crime are at our disposal; proper training will insure their effective utilization. Organized crime has cast its shadow on our Nation for far too long—H.R. 16133 will prove a powerful weapon in its destruction.

IT'S GETTING HARD TO TELL THE MEN FROM WOMEN

HON. WILLIAM L. HUNGATE

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 29, 1970

Mr. HUNGATE. Mr. Speaker, a recent issue of the Vandalia Leader and Laddonia Herald, a weekly newspaper, carried the following article that I think is helpful:

P.S.

It's getting hard to tell the men from women, but here are some suggestions that might be helpful:

If it smiles when you address it as "Ma'am," it is feminine. If it grunts and growls, it is masculine.

If it strikes a kitchen match on the seat of its trousers, it's a him. If it waits for you to light its cigarette, it's a her.

If it takes off its shoes at the movies, it's a woman. If it gets down on its hands and knees and starts looking for the shoes, it's a man.

Does it do its fair share of pushing while going through a revolving door? It's a gentleman for sure. Does it leap in front of you and grab the taxi you just flagged down? It's a lady—every time.

If it brags about the steaks it cooked in the backyard, it's a man. If it dimples when you praise the roast it cooks indoors, it's a woman.

If it wears a red ribbon in its hair, it's a lass. If it combs its hair down over its eyes—well, there you've got me.

If it says it has given you the best years of its life—"and for what, I ask you?"—it's a wife. If it asks for lunch money before going to work, it's a husband.

If two go to the supermarket the one that pushes the loaded cart is the mister. The missus is the one that holds up the line at the checkout counter as she fumbles through the wilderness of her purse.

If it likes to dine by candlelight, because this is romantic it's the mamma bear. If it grumbles, "I can't see what I'm eating," it's the papa bear.

If you open the door to it and it tries to sell you a box of cookies, it's a Girl Scout. If it helps old ladies across the street, it's a Boy Scout.

Does it bring its paycheck home in its mouth? It's a man. Does it think money grows on trees? It's a woman.

If it writes newspaper columns like this, it's a him. If it reads columns such as this and loses its temper, it's a her.

Now, then, any questions?

A MEMORABLE SPEECH

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 29, 1970

Mr. PHILBIN. Mr. Speaker, under unanimous consent to revise and extend my remarks I include herewith a recent excerpt from the Clinton Daily Item of May 26, 1970, containing a most appropriate, timely, eloquent and very well received speech of Col. Nicholas A. Canzona, commanding officer of the 25th Marines at Worcester, Mass., at the very impressive Memorial Day exercises held May 25 at South Cemetery in Berlin, Mass.

Rev. Howard A. Andrews, the able distinguished and beloved pastor of the First Parish Church in the historic town of Berlin which traces its founding back to the early days of the Colonies, and a chaplain and colonel in the U.S. Army Reserve, read Colonel Logan's general orders for the first Memorial Day in 1868. While I did not have the privilege of hearing this remarkable tribute to those who have offered their lives and their blood upon the altar of American patriotism, Reverend Andrews classified it as the finest tribute he had ever heard and that it expressed his own sentiments in a very timely and forceful way, and he also stated that Colonel Canzona's delivery was fully as effective as his expression of thought.

I would like to associate myself with Reverend Andrews' appraisal of these very moving, deeply touching Memorial Day remarks of a marine and Vietnam veteran who dedicated his entire life to the service of this great Nation, fought bravely for our freedoms and knows what the bitter sacrifices of war truly mean.

I want to commend Colonel Canzona for his absorbing Memorial Day message that poignantly described the deep patriotic meaning of the supreme sacrifice and the ghastly profanity of those who would debase it by symbols of disloyalty, utterances, behaviorisms and expressions having the overtones of treason, if indeed they do not constitute treason itself.

If these people were truly responsible for their words and actions they deserve the contempt of our people and appropriate punishment in the courts of justice. But it is difficult to reconcile such behavior with rationality and it is probably more charitable simply to ask "forgive them, O Father, for they know not what they do."

The American people demand respect.

gratitude and reverence for all our departed heroes regardless of race, color, or creed. They are Americans, all who fought, bled, and died for their country, and for the cause of freedom throughout the world.

Their memories are imperishable. Their glorious deeds will be enshrined in the most sacred annals of our history, and in the hearts of our people as long as time shall endure, and every one who lives in this great country must recognize that the American people will not tolerate disrespect of our departed heroes, or disrespect for the living Commander in Chief of this great Nation.

People who demean themselves in such a manner must expect to pay a heavy price for their treasonable talk and conduct.

I would like to commend Colonel Canzona for his strong, powerful speech on Memorial Day and I am sending a copy of the CONGRESSIONAL RECORD containing excerpts from the Clinton Daily Item and my own remarks to him, and to the Commandant of the Marine Corps, who will be proud, I am sure, to know of the enthusiastic response to his fine speech:

BERLIN SPEAKER HAS PRAISE FOR WAR DEAD

(By Mary Ellen Matthew)

("We honor these men, these sacred dead, because they served us well in simple obedience to a nation that they loved and respected." These words gave true meaning to the Memorial Day exercises held yesterday afternoon at the South Cemetery in Berlin.)

Colonel Nicholas A. Conzona, commanding officer of the 25th Marines in Worcester, recently returned to this country from Vietnam. His speech which included the above quotation gave the people much to think about.

Under cloudy skies, members of the American Legion, the Legion Auxiliary, Boy Scouts, Cub Scouts, and Girl Scouts paraded into the South Cemetery led by the Tahanto Regional High School Band.

Greetings were given by Commander Chester R. Stone of the H. Wallace Woodward Post 162 of the American Legion of Berlin. Rev. Howard A. Andrews, chaplain and Lt. Colonel, U.S. Army Reserve and pastor of the First Parish Church read Col. Logan's General Orders for the First Memorial Day in 1868. Following the address by Col. Canzona, the Rev. Phillip McNamara of St. Joseph's Church of Berlin offered prayer. The Legion Firing Squad gave a salute to the dead followed by taps.

At the conclusion of this program, the parade proceeded up Pleasant Street and on to the Berlin Memorial School for the following program:

Tribute by Commander Stone, Prayer by Legionnaire Henry A. Nutting, Placing of wreaths at the World War I and II honor rolls by Legionaries Harry Bradley and Chester Cole, a salute to the dead by the Legion Firing Squad and the sounding of taps.

At the Old Burying Ground in the center of town, the Tahanto Band offered a selection followed by the recitation of the Gettysburg Address by Boy Scout Robert Leveille. Commander Stone then presented the Legion Oratory Medal to Scout Leveille. Rev. Frederick A. Krackhardt offered prayer, followed by a salute to the dead and taps.

The Tahanto Band gave a concert on the Common under the direction of Frederick W. Cronin.

Chief Marshal for the exercises was Francis E. Underwood, past commander of the American Legion; Honorary Chief Marshal was Harry F. Bradley and Captain of the Firing Squad was Bruce Barter.

Colonel Canzona's speech follows:

Today is a time set aside to honor the dead, those special dead who in life fought our nation's wars. It makes little difference now whether they fell on the battlefield in the flower of youth or whether they returned home to die in later years. It makes little difference whether they fought in France, Africa, Guadalcanal, Okinawa, Korea or Vietnam, whether they fought on land, at sea, or in the air. Or whether they were generals or privates. Nor does it make any difference whether they were white, black or yellow. Death is a great equalizer. Now all of them rest in peace, away from the ceaseless tumult of the world of the living.

We honor these men, these sacred dead, because they served us well in simple obedience to a nation that they loved and respected. A nation that they supported when the die was cast. Greater love hath no man. These were imperfect men who fought for the imperfect causes of an imperfect republic. They had enough common sense and faith to realize that the nation at least was headed in the right direction. As a result of their faith, common sense, and sacrifice, many countries and millions of people are free today who might otherwise have been enslaved for centuries.

Because of the simple trust and obedience of these men, our nation has enjoyed unparalleled progress and freedom—so much freedom in fact that conceivably we are free enough today to commit national suicide a thousand years before our time.

We owe a special debt of gratitude to these dead because they conquered fear, self pity and selfishness. They were no more anxious to die than you or I or any other citizen. They must have been haunted occasionally by the same loneliness, doubts, and questions that have assailed every generation of Americans at one time or another. Yet, they had the strength of character to overcome their trepidations and any inate pettiness. They did not demand an exhaustive accounting from the nation each time they crossed the line into battle.

Of these dead that we honor, relatively few in recent times fought on American soil. In furtherance of a higher responsibility, a brighter ideal, they carried the flag to distant islands, jungles, plains, mountains, and deserts. Yet, no foreign nation has ever lived in subservience to the United States as a result of their far-flung campaigns. On the contrary, and in full justification of their faith, their government has extended to friends and enemies alike a degree of compassion and generosity never before exhibited in the annals of war. So, while these honorable men were victors—and they had every right to expect victory in return for their sacrifice—they were not conquerors in the classic sense. Their most vicious enemies of a generation ago are now thriving and respected in the community of nations. This fact is a great tribute to the republic in which these honored dead had such unbounded faith.

UTTER DISMAY

If these men who lie at rest around us could rise up today, they assuredly would look around in utter dismay. No, they would not be shocked by dissent; there was enough dissent in their day too. But they indeed would be appalled at the manifestations of dissent: the defiling of our flag, the frenzied reviling of our president and sacred institutions, the disintegration of a moral code that is 4,000 years old, the almost capricious defiance of law and order.

A typical cross-section of these American dead that we honor were officers and noncommissioned officers. If they could awaken and rejoin us, they would hear themselves taunted and branded publicly as pigs of the establishment. They would be unable to set foot on many campuses without being subjected to the most virulent abuse.

Fellow Americans, if you and I saw this great host rise up from this hallowed ground and approach us, what would we say to them in the light of today's new left philosophy? Would we say that their lives and sacrifices have been a horrible mistake? That the republic has outlived its usefulness? That America indeed has made no significant progress or contribution? That for almost two hundred years the United States has in actuality been a gigantic fraud? That there is no standard of decency, dignity, respect and obedience that a Democracy can expect of its people? That Communist tyranny is right because America is irrevocably wrong? Would we tell the risen dead that this nation's policy is not, after all, inextricably rooted in history and justice but is only an arbitrary, brutal exercise in wealth and power?

If the republic for which these men fought is manifestly so evil and repugnant that we could say such things to the assembled dead, then perhaps we as people should continue our breastbeating until we sink into oblivion—or are pushed into it. If, with a clear conscience we could now stand over others and desecrate American flags, if over still others we could unfurl and venerate enemy flags—if indeed the United States is so foul that we could commit such abominations with a clear conscience and not out of sheer idiocy—then we as a nation would have to admit to a complete inversion of values: which is to say that the evolution of this great republic has been a blight on mankind.

Now, if we do not have the conviction and stomach to so profane the dead, then neither should we profane the living. It is essentially indecent and irrational by any standards to call a man a pig while he lives, then immediately canonize him when he dies. It is grossly inconsistent and unfair to divorce the causes for which these men died from a national policy that was born out of these causes. It is a monumental perversion of justice to expect one generation to die for the nag and allow another to drag it through the gutter.

In years gone by, it was always the custom, when a friend died, to send a remembrance of flowers. In recent years, many bereaved families have requested instead that donations be made to noble institutions such as the Heart Fund, Cancer Fund, hospitals, or cultural centers. Perhaps on the solemn occasion of Memorial Day, 1970, we, as a nation could make a practical request of ourselves. We could remember our dead not merely with flowers and ceremony, but with the visible contribution of a life of selfishness, patriotism, and faith. We could thus vindicate the deaths of these great men and the high purpose of this republic. We can begin today by silently reaffirming our allegiance, so that tomorrow we can move forward once again with traditional unity, pride, and courage If we owe anything at all to America's dead, we owe them at least this much.

HON. JOHN C. KUNKEL

HON. JAMES A. BYRNE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 27, 1970

Mr. BYRNE of Pennsylvania. Mr. Speaker, it was with deep personal regret and a sense of loss that I learned of the

death of a long-time Member of this House and an old and dear personal friend, John C. Kunkel.

For nine terms—18 years—John Kunkel ably and actively represented the old 16th District of Pennsylvania until 1966, when reapportionment wiped out and divided his constituency.

I met John Kunkel when I was elected to the 83d Congress. He was already a veteran by then; but despite his heavy schedule, he was always ready with advice or assistance for a freshman congressman.

Although we sat across the aisle from each other, and indeed we did differ on many issues—we worked long and hard together for specific projects destined to aid our Nation and our Commonwealth.

I am sure this body joins me in extending the sincerest condolences to his bereaved family.

HELPING BOOST SMALL BUSINESS

HON. SILVIO O. CONTE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 29, 1970

Mr. CONTE. Mr. Speaker, critics of the Small Business Administration have never been in short supply. They are still busy nitpicking and complaining about what must surely be one of the most constructive efforts this Government has ever undertaken to help the so-called little fellow share the benefits of the free enterprise system. That is what the Small Business Administration is all about. I submit for publication in the RECORD, therefore, an interview with SBA's Administrator Hilary Sandoval, Jr., in the current issue of the Republican Congressional Committee's weekly newsletter, which sets forth the facts:

HELPING BOOST SMALL BUSINESS—AND THE AMERICAN DREAM

Mr. Sandoval, what role is SBA playing in the President's efforts to promote business opportunity for disadvantaged Americans?

SBA is on the front line when it comes to minority enterprise and expanded opportunities. After a decade of attempted political and sociological solutions to poverty and social ills, the people—and the Government—are finally realizing that perhaps the surest way of getting disadvantaged groups into the American mainstream is through the free-enterprise system.

Following presidential directives, we have stepped up our assistance programs in the field of minority enterprise.

For example, in 1969 we nearly doubled our volume of minority loans. This doesn't mean that SBA has become a purely minority-oriented agency. Far from it. However, we are convinced that we can and should do our share in taking disadvantaged people off the relief rolls and getting them back into the free marketplace.

How will you reach this goal?

By striving for greater economic parity—equality of opportunity. The identifiable minorities of this country run to about 15 or 20 percent of the population, depending on which estimate you use. Yet this 15 to 20 percent of the population owns only 2.9 percent of the businesses and holds less than one half of 1 percent of the assets. These figures are not precise. But even allowing for a wide margin of error, it is obvious that our economic system is not living up to its promise in this important area.

What are some of SBA's specific programs for minority enterprise?

They take many forms. There are, of course, the standard loan and assistance programs, and management training to help develop skill and efficiency once a business is begun. We have also begun a series of Minority Enterprise Small Business Investment Corporations.

These private corporations, working in cooperation with SBA, help to fund, counsel and develop new businesses around the country. Leading big businesses, such as General Motors, have joined with us in establishing these corporations to provide the disadvantaged entrepreneur with the know-how and the investment capital it takes to get ahead.

How about Government contracts—about channeling them to minority firms?

We have been given authority to choose eligible subcontractors for select Government contracts for goods and service. Since our business development program was started in June of 1969, we have awarded over $28 million in Federal subcontracts to minority-oriented businesses.

As Administrator, you have stressed the importance of non-financial aid to small business. Have you been able to put this into practice?

Two of the programs I am proudest of fall into this category.

SCORE stands for Service Corps of Retired Executives. Its members are retired men and women who have been successful in their fields and who are now willing to help others help themselves.

They have pulled many struggling small firms out of the red by introducing basic, professional techniques and know-how. Their services are free. SCORE has been so successful that I recently authorized doubling its size from 3,400 to 6,800 volunteers.

ACE stands for Active Corps of Executives. It's a new program we came up with after SCORE proved so successful. There's one major difference: ACE volunteers are all active executives in private industry, who take time off to participate. We have already recruited 1,400 of these successful, dynamic businessmen.

You've been in office for over a year now. What was the most serious problem you had to face as a newcomer taking control of a Federal agency?

Shortly after I took the oath of office, I discovered that some Mafia-linked firms had obtained SBA loans under past regimes. I was shocked to learn that at least four previous Administrators knew about these loans but did nothing.

How deep was the involvement?

Percentagewise, it was microscopic. Only a small number of Mafia-linked loans were made. But as far as I'm concerned, one dollar of taxpayers' money in underworld hands is too much.

We have rooted them out wherever this was possible under the law. Already, two loans have been shut down and collected in full in New York and another two in Chicago—all with interest.

We have also made over 40 reforms in loan procedures to avoid any backsliding.

What's the future for small business? Isn't it slowly but surely losing its place in the economy?

I don't believe so. I see a great future for small business in this country. But like all vital, growing things, small business must keep in step with the times and maintain a keen, competitive edge.

I know the heartaches and the satisfaction that can come with running a small business. Every small business is someone's personal version of the American Dream. It is a dream full of vigor and promise for our country's future.

MYLAI INVESTIGATION

HON. JOHN BUCHANAN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 29, 1970

Mr. BUCHANAN. Mr. Speaker, the report of the House Armed Services Investigating Subcommittee of the Committee on Armed Services on the investigation of the Mylai incident has received considerable attention and created great interest since the subcommittee released its report 2 weeks ago.

Our colleagues assigned to the Special Armed Services Subcommittee are to be commended for the manner in which they handled their tough assignment. The final determination of blame was studiously avoided by the subcommittee in order not to prejudice the findings of duly constituted courts martial and other legal proceedings.

Those of us in Alabama are particularly proud of the active participation and leadership in this important matter of our distinguished colleague, Mr. DICKINSON.

He has, once again, demonstrated his value not only to the people of his district and our State, but to the Nation as well.

I think you will find the following reprint from the RECORD, plus other articles and editorials highly interesting, as I did. I commend the text of these editorials and articles to my colleagues, and I respectfully urge you to read them. At this time, Mr. Speaker, I would like to insert these materials:

REPORT OF SPECIAL SUBCOMMITTEE ON MYLAI INVESTIGATION

(Mr. DICKINSON asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include an editorial.)

Mr. DICKINSON. Mr. Speaker, just last week the special subcommittee on the Mylai investigation made its report. Once again, it proved to be very newsworthy and was carried by the wire services across the country.

Mr. Speaker, I am very proud to have served on this committee because I feel we have performed a very valuable function.

Mr. Speaker, I cannot help but be concerned that the American people will view the United States as "the bad guy" in this instance, but it was one instance, it was news because it was unique, because it was different. A tragedy of this nature is not the policy of this country, and it has not been our policy in the past. Yet it seems that the news media and the public in general are either unaware or unconcerned about the atrocities committed by the North Vietnamese regularly.

Just prior to the Mylai incident, in a place called Hue, over 4,000 South Vietnamese were systematically slaughtered, many of them buried in mass graves, their hands tied behind them. Whole families were eradicated. The fact that over 4,000 human beings were slaughtered, was not even deemed particularly newsworthy by the media around the world.

In 1 month, in a South Vietnam village, the Vietcong went in with flamethrowers and burned to death every man, woman, and child in that village, over 200. Bodies were stacked like cordwood. These things did not get play in the press, and they did not hit the conscience of the public for some strange reason. I am tired of the Americans always being picked as the heavy-handed boy in Vietnam when it is the practice of the North Vietnamese and the Vietcong to commit these atrocities with premeditated regularity. At this time I would like to include an editorial from the Sunday, June 28, 1970, issue of the Birmingham News. I urge my colleagues to read the editorial opinion of James E. Jacobson. It will be well worth the few minutes it takes.

[From the Birmingham (Ala.) News, June 28, 1970]

THE LESSON OF HUE

Uncounted columns of words have been written and uncounted feet of television film have been devoted to the alleged massacre of Vietnamese villagers at My Lai.

But one is hard to find a mention of the grisly story of Hue, where the bodies of more than 6,000 victims of Communist "liberation" have been recovered from mass graves.

The story of Hue is recounted in detail in a study written some months ago by Douglas Pike, a career official of the U.S. Information Agency and the author of books which have established him as perhaps this country's top expert on the Viet Cong.

Even more chilling than the story of what happened at Hue when the city was captured by the North Vietnamese in the 1968 Tet offensive is Pike's conclusion that as many as three million people might suffer a similar fate if the Communists are permitted to win a decisive victory in South Vietnam.

Those in this country who have urged a U.S. pull-out have tried to dismiss the suggestion that a bloodbath would follow a Communist victory as propaganda by the "hawks" to keep us in the war.

Hue is uncomfortable proof that the fears have a basis in reality. Maybe that's why it's so studiously ignored.

When the Communists took the city, Pike wrote, they began a systematic liquidation of those considered unfriendly. They were rounded up and machine-gunned—the more fortunate ones. Some were tortured and buried alive.

After the elimination of individuals whose names were on their death list, the Viet Cong assassination squads which surfaced after the North Vietnamese took the city began to move against "social negatives"—that is, those who were deemed potentially dangerous not because of who they were, individually, but because of the places they held in the community.

". . . Killing in some instances was done by family unit," Pike wrote. "In one well documented case during this period, a squad with a death order entered the home of a prominent community leader and shot him, his wife, his married son and daughter-in-law, his young unmarried daughter, a male and female servant and their baby. The family cat was strangled; the family fish scooped out of the fishbowl and tossed on the floor. When the Communists left, no life remained in the house. A 'social unit' had been eliminated."

Multiply that by the times it would happen in every town and village and hamlet in South Vietnam if the Communists prevail.

But Americans might never know about it, and thus their consciences need not bother them—or so some seem to think.

One of the Communists' first acts, Pike said, would be to clear all foreigners, especially the Western reporters, out of South Vietnam: "A curtain of ignorance would descend. Then would begin a night of long knives . . . But little of this would be known abroad. The Communists in Vietnam would create a silence.

"The world would call it peace."

The Communists *won't* prevail, if they must depend upon a military victory to do so. But in South Vietnam and in Cambodia their capacity for waging big unit war has been drastically reduced. This, Pike predicts, will motivate them to turn more to the strategy of terror, with an eye on the impact they can have on wavering public opinion in America, in the hope that the American people will lose their stomach for going on.

Vietnamization *can* succeed, giving the people of South Vietnam a fighting chance to survive the Communists' attempt to impose their rule, and thus to escape the fate of the 6,000 at Hue. Then, perhaps, peace can be achieved.

Are Americans really prepared to live with the other kind of "peace" which Hue forebodes?

Douglas Pike wrote:

"Apparently (the massacre at Hue) made no impact on the world's mind or conscience. For there was no agonized outcry. No demonstrations at North Vietnamese embassies around the world. Lord Russell did not send his 'war crimes tribunal' to Hue to take evidence and indict. In a tone beyond bitterness, the people there will tell you that the world does not know what happened in Hue, or if it does, does not care."

We believe some do care.

[From the Birmingham (Ala.) News, July 16, 1970]

MYLAI

The final determination of what exactly happened at My Lai and who is to blame for it will be made by duly constituted courts martial, and we would not presume to make prejudgments.

Neither did the House subcommittee—including Rep. William Dickinson of Alabama—which has been investigating My Lai make any such prejudgments. It studiously avoided them in order not to prejudice later legal proceedings.

But the subcommittee did issue a grim report that "a tragedy of major proportions" did, indeed, occur; and that furthermore the events of that day were the object of a calculated cover-up attempt by the Army at many levels.

Both findings are disturbing. But the subcommittee members are due commendation for accepting what most assuredly has been an unhappy responsibility, doing their job conscientiously and reporting their findings unflinchingly.

Anything resembling a whitewash job or another stab at the kind of cover-up the subcommittee says the Army attempted earlier would have been a disservice if the facts pointed in the opposite direction, as the report says they do. The soft-pedaling itself would be used by anti-war and anti-American propagandists to magnify the story even larger.

These men are not fluttery doves; if anything, they line up on the hawkish side. Coming from them, the report assumes particular impact.

At the same time—precisely because it *does* ring honestly—the report might give circulation to some balancing points which those who have seized on the tragedy to discredit America and try to force an American withdrawal from Vietnam conveniently ignore.

For the subcommittee took careful pains to say that while My Lai cannot and must not be condoned, what happened there still is the exception to the general rule of American conduct.

The committee noted that what happened was "wrong and . . . foreign to the normal character and actions of our military forces"—so much so, in fact, that it raises a question as to the legal sanity at the time of the men involved. The point being raised is whether, under certain circumstances under combat conditions, soldiers could suffer behavioral lapses for which they cannot be held responsible.

The report made it clear that not all American GIs, not all the men in the units involved, and not even all the men who were members of the fateful mission that day can be blamed for what took place.

That is a key point: That while tragedies like the one which apparently did occur at My Lai are sickening, they represent only a fraction of the story of American men in Vietnam. Far more men serve honorably and bravely, many of them going far beyond the call of duty to contribute personally to efforts to help the Vietnamese people improve their lives. But their side of the story is seldom told.

[From the Montgomery Alabama Journal, July 17, 1970]

WERE THE MEN AT MYLAI INSANE?

It seems that every government agency, military or otherwise, which conducts an inquiry into the My Lai affair comes up with the sad conclusion that a horrible spectacle took place in that small South Vietnamese village on the fateful day of March 16, 1968.

The Army itself long ago faced this unpleasant fact. During the past few days, a subcommittee of the House Armed Services Committee came to the same conclusion. The committee is headed by South Carolina's Rep. L. Mendel Rivers, one who could hardly be characterized as antimilitary.

Only general conclusions of the investigation have been released so far, but Congressmen who heard some 50 or more witnesses leave little doubt as to their state of shock. Montgomery's Rep. Bill Dickinson, a member of the committee, told a news conference that he is convinced that 100 civilians were herded together and killed deliberately and without regard to age or sex.

Anyone faintly aware of Congressman Dickinson's record knows full well he would not make such an observation based on scant or dubious evidence.

Despite such findings, we see continuing evidence that the general public can't believe or won't believe, that My Lai occurred or that if it did occur, our boys can't be held responsible. Only within the past few days a small town in Texas, the hometown of one of those accused of the massacre, made plans to hold a hero's homecoming for its native son.

This is the sort of spastic reaction we could do without. It is no more proper to absolve without evidence than to convict without evidence.

Another subcommittee member, Louisiana's Rep. F. Edward Hébert—another congressional supporter of the military for many years—was so moved by what he heard at the secret hearings that he feels the only recourse for the accused soldiers would be a plea of mass insanity, claiming that they were so intoxicated by war influence that they cannot be held accountable for what they did.

Some may find Hébert's suggestion as setting the groundwork for a national cop-out and whitewash of My Lai. But there is nevertheless an element of truth in what Hebert says.

The history of the company principally involved in the alleged massacre is not a pretty one. Several of its officers were the type people who would ordinarily be called "misfits." Further, the company had endured

many weeks of bitter frustration as they pursued an elusive foe. Several popular members of the company had been killed. A sense of rage and desire for vengence clearly pervaded the company when it descended upon the village on the fateful day.

Throughout legal history, a definition of sanity has been elusive and subject to continuing change. But legal questions aside, there is clearly something wrong with our definition of sanity if the acts said to have been committed at My Lai were committed by "sane" men.

It is important that the country not lose its sanity as well as we get on with the messy job of dealing with the accused of My Lai.

[From the Congressional Quarterly Weekly Report, July 17, 1970]

HOUSE PANEL CHARGES "COVER-UP" OF MYLAI MASSACRE

A special four-man House Armed Services Subcommittee which investigated the My Lai incident for seven months charged July 15 that a massive and planned "cover-up" had suppressed information about the killing of Vietnamese civilians by U.S. forces in 1968.

In its 53-page report, the panel also raised a question about the sanity of the U.S. servicemen involved and was highly critical of what it called a lack of Army cooperation during the investigation.

Concerning the alleged killing of civilians by U.S. soldiers, the panel observed the incident "was so wrong and so foreign to the normal character and actions of our military forces as to immediately raise a question as to the legal sanity at that time of those men involved." More than 20 U.S. Army enlisted men and officers have been charged with various offenses arising out of the My Lai incident.

The Subcommittee report made recommendations to require a test of sanity in military capital offenses, prevent dissemination of pre-court-martial publicity or information, permit the prosecution of former servicemen for military offenses and to require independent investigations of atrocity charges. The members of the Sub-committee, Representatives F. Edward Hebert (D-La.), Samuel S. Stratton (D-N.Y.), Charles S. Gubser (R-Calif.) and William L. Dickinson (D-Ala.), said they would press for legislation to implement their recommendations.

References.—Weekly Report p. 1218, 1110, 779, 397, 287, 190, 57: 1969 Weekly Report p. 2648, 2585, 2546, 2464, 2383.

Following is a partial transcript of the Subcommittee's findings and recommendations.

FINDINGS AND CONCLUSIONS

There is no question but that a tragedy of major proportions involving unarmed Vietnamese, not in uniform, occurred at My Lai 4 on March 16, 1968, as a result of military operations of units of the Americal Division.

This matter was promptly reported, at least in part, to the Task Force Commander, the Commander of the 11th Brigade, the Commander of "B" Company, 123rd Aero Scouts, the Commander of the 123rd Aviation Battalion, the Division Artillery Chaplain, the Division Chaplain, the Division S—5, the Division Chief of Staff, an Assistant Division Commander, and the Commander of the Americal Division. There is also testimony that the Third Marine Amphibious Force (III MAF) received sufficient information about this incident to have reported it to the Military Assistance Command Vietnam (MACV).

The matter was also reported to the U.S. Intelligence Community, composed of civilian and military advisers, to the South Vietnamese Son Tinh District Chief, and to the Province Chief of Quang Ngai Province.

Although there were three reporting channels that should have brought the My Lai allegations to the attention of III MAF, there is no evidence that two of these channels did so, and the third channel functioned inadequately.

There is no evidence that the My Lai allegations were reported to MACV, although directives in effect at that time made such reporting mandatory on the part of all military and staff personnel having knowledge of, or receiving a report of, such an incident. Commanders and MACV staff sections had a special obligation in this respect.

It could reasonably be concluded that responsible officers of the Americal Division and 11th Brigade failed to make adequate, timely investigation and report of the My Lai allegations.

An Army photographer and an Army reporter, both assigned to the Brigade Public Information Office, were designated to accompany the Task Force Barker operation at My Lai on March 16, 1968. Although both men have been quoted extensively on the My Lai incident since leaving the service, the Subcommittee has found no evidence that either man, while serving in uniform, made any report of atrocities, or that the photographer turned in to the Army any pictures of atrocities.

On the afternoon of March 16, 1968, an order was given by radio to the Commander of "C" Company of Task Force Barker to return to My Lai 4 that day to determine the sex, age and cause of death of those civilians killed. That order was immediately countermanded by the Commander of the Americal Division, who was monitoring the frequency on which the order was transmitted. He testified that he did so for tactical reasons. However, there is no evidence that American troops ever returned to My Lai 4 for the above purpose, although the Situation Reports for March 17, 1968, indicate that elements of both "A" and "C" Companies were in the immediate vicinity of My Lai 4 on that date and apparently could have easily made such an investigation.

It can reasonably be concluded that the My Lai matter was "covered up" within the Americal Division and by the District and Province Advisory Teams.

To keep the My Lai matter bottled up within the Americal Division and the District and Province Advisory teams required the concerted action or inaction on the part of so many individuals that it would be unreasonable to conclude that this dereliction of duty was without plan or direction.

A number of witnesses testified under oath with respect to the existence of investigative reports, statements, affidavits, correspondence and other documents relative to the My Lai incident. If they ever existed, virtually all such records have now disappeared. Only one copy of the so-called "Henderson Report" has been found. It had not been kept in the files, but was hidden in the desk drawer of the Brigade Intelligence Sergeant on instructions of his immediate superior.

There is evidence that officers and enlisted men of the Americal Division and 11th Brigade were informed, directly or indirectly, that the My Lai operation was being investigated, and, therefore, were instructed that they should not speculate on, or discuss the matter, pending completion of that investigation. While normally this might be considered proper procedure, this warning, coupled with the failure of the Division or Brigade to conduct any meaningful investigation, tends to substantiate the charge of "cover up."

Although the Intelligence Community at all times during 1968–69 had numerous individuals, both civilian and military, stationed in close proximity to My Lai 4, they deny having learned anything in more than a year and a half which would have caused them to believe that anything untoward had happened in that hamlet on March 16, 1968. Documentary evidence, however, established that one organization attached to an intelligence agency had a report as early as March 18th, alleging the killing of civilians at Son My.

Our Intelligence personnel, whom one might reasonably expect to be able to detect or verify an incident of such magnitude, apparently saw fit to dismiss all allegations concerning it as communist propaganda, although most of these allegations, which came to them through the South Vietnamese officials, were specific as to time, place and units involved. Failure to fully investigate and report these allegations to high authority raises a serious question as to the reliability and usefulness of our intelligence activities in this area.

There was a surprising and almost unbelievable lack of recollection on the part of many of the Subcommittee witnesses whose responsibility to investigate the original My Lai allegations should have caused a more lasting impression on their minds as to the incidents and events involved.

The ground troops involved in the action at My Lai 4 had been in Vietnam less than four months, but during that time had received many casualties as a result of mines, booby traps and sniper fire. "C" Company had suffered 42 casualties since it had been assigned to Task Force Barker on January 26, 1968, thereby reducing its strength by about one-fourth. . . .

The units involved in the My Lai operation had minimal training with respect to the handling of civilians under the Rules of Engagement and the Geneva Conventions.

At the company briefing the day prior to the My Lai 4 action, the troops were advised that all civilians were expected to be gone from the hamlet at the time set for the assault. The troops were advised that they were to destroy the hamlet and make it unusable as a base camp for the Viet Cong 48th Battalion. No specific instructions were given as to the handling of civilians in the event any were encountered.

The Subcommittee finds that, based upon the testimony it has received, it would be unfair to attribute misconduct to all members of Task Force Barker. Those who may have violated the Rules of Engagement were the exception.

As a part of the March 16th operation, the actual insertion of troops was to be preceded by artillery fire. Although this was to be directed at the western side and edge of the hamlet, some of the shells impacted within the hamlet itself. Gunships were also used in connection with the operation. It appears that the artillery and gunships accounted for some civilian casualties. At the conclusion of the artillery fire, several hundred villagers left the area and proceeded down the road to Quang Ngai unharmed. Later that day, approximately 80 residents of the Son My areas were directed by troops of "C" Company to leave the combat area and to go a refugee camp.

The helicopter pilot who first reported on civilian casualties at My Lai 4 and his two crew members were given military decorations for actions on March 16, 1968, at My Lai 4 on the basis of statements which were at substantial variance with the truth.

According to the aforesaid helicopter pilot, there was no "armed confrontation" between the U.S. helicopter crew and U.S. ground forces at My Lai 4, as widely reported by the news media. The sworn testimony of the pilot categorically denies that such an incident ever took place.

The Army overreacted by recommending charges in several cases where there was insufficient evidence to warrant such action.

RECOMMENDATIONS

1. Consideration should be given to the amending of the Uniform Code of Military Justice to provide:

(a) that no person subject to the Code shall make public release of any information respecting any investigation or the pendency of any charge until after the convening authority has referred such charge to trial by court-martial; and

(b) that no charge involving an alleged capital offense, committed during a military action against an enemy, shall be referred to trial by court-martial until a duly appointed competent authority has determined the mental responsibility of the prospective accused at the time of the alleged crime.

2. Consideration should be given to amending Section 803(a), Title 10 of United States Code to provide for trial in the United States District Courts, of persons charged with having committed offenses while on active military duty, who are no longer subject to military jurisdiction as a result of having been discharged.

3. The Secretary of the Army should:

(a) require all commanders to submit reports at specified regular intervals attesting that all personnel have had adequate refresher training with respect to the Geneva Conventions and the Rules of Engagements, with particular reference to war crimes;

(b) issue or cause to be issued such regulations as may be necessary to insure that all investigations of allegations of possible war crimes be conducted by competent, trained investigators who shall be independent of the immediate command involved in the alleged incident. The record of all such investigations shall be maintained in writing and copies forwarded to the Secretary of the Army;

(c) require official Army photographers to submit to their superiors all photographs taken while on assignment whether taken with personal equipment or that issued by the Army;

(d) require all Army photographers to receive such training as may be necessary to insure that the Army obtains the most complete pictorial coverage possible of all military operations to which photographers are assigned; and

(e) review the practices and procedures in awarding medals and decorations with particular reference to: (1) requiring that all supporting statements be dated and be in affidavit form, and (2) requiring special scrutiny of reciprocal recommendations for awards.

4. The Secretary of Defense should apply the recommendations directed to the Secretary of the Army, *supra*, to all military departments.

[From the Birmingham (Ala.) News, July 26, 1970]

FOR DICKINSON, RIVERS AND OTHERS—PROBE OF MY LAI STILL DRAWS COMPLIMENTS

(By James Free)

WASHINGTON.—Rep. William L. Dickinson, R.-Montgomery, and other members of the Special Armed Services Subcommittee—which recently took the hide off the Army for the My Lai mass killing of civilians and later attempts to suppress reports about it—are still getting compliments for the way they handled this tough assignment.

It is noteworthy that one of those who speaks highly of the report is Rep. Mendel Rivers, D-S.C., chairman of the full Armed Services Committee. As was noted by this newspaper, Chairman Rivers held up the printing of the report for about two weeks in a vain attempt to persuade the subcommittee to soften its bare knuckle language at several points.

But any differences Rivers may have had with the four-member group he appointed last December should not obscure the fact that Chairman Rivers deserves a major share of the credit for starting this My Lai probe over strong Pentagon opposition.

Rivers' critics often charge that he works hand-in-glove with the Defense Department, that in his eyes the military can do no wrong. Such a view hardly squares with the fact that within three days after he received on April 4, 1969, a mimeographed letter from an ex-GI, Ron Ridenhour, detailing charges of the My Lai, or Pinkville, killings, Rivers sent a copy of the letter to the Army and asked for an investigation.

The record shows that Rivers later gave the Army several forceful prods to take the investigation more seriously.

On Nov. 24, 1969, Rivers announced that his investigating subcommittee had asked the Army to furnish all information on the incident at Pinkville. That same day the Army announced appointment of Lt. Gen. William R. Peers "to explore the nature and scope of the original Army investigation . . ."

On Dec. 30, 1969, Rivers' subcommittee requested Sgt. David Mitchell and another witnes be made available to testify on Dec. 31. On the 31st the Army announced that Sgt. Mitchell would be tried by a general court-martial.

It is characteristic of the Armed Services Committee under Rivers' leadership that the subcommittee report was unanimous. Two Democrats and two Republicans resolved whatever minor differences of opinion they had and got together without a minority report.

This is typical of the bi-partisan approach the full committee has taken under Rivers. The South Carolinian is not as brusque with witnesses or as arbitrary with the gavel as was his predecessor as chairman, Rep. Carl Vinson, D.-Ga. But the committee functions a lot more democratically and minority members—in party and in opinion—have more chance to be heard.

Rivers is not a popular hero in the House. His strictly-from-Dixie accent, his flowing white hair, and his sometimes biting remarks in debate stir occasional strong resentment. But he has the staunch loyalty of fellow members of the Armed Services Committee, Democratic and Republican.

ALL NOT GUILTY

Along with its burning criticism of Army handling of the My Lai incident at all levels, the subcommittee stressed that by no means all of the task force in Pinkville that day were guilty of misconduct—that, in fact, most of the men did not appear to be guilty.

And, without excusing those who did kill civilians, the subcommittee made these comments about conditions prevailing at the time:

"In a war such as that in Vietnam, our forces in the field must live for extended periods of time in the shadow of violent death and in constant fear of being crippled or maimed by booby traps and mines. And added to this is the fact that this is not war in the conventional sense. The enemy is often not in uniform. A farmer or a housewife or a child by day may well be the enemy by night, fashioning or setting mines and booby traps, or giving aid, comfort, and assistance to the uniformed enemy troops.

"Under such circumstances, one can understand how it might become increasingly difficult for our troops to accept the idea that many of those who kill them by night somehow become 'innocent civilians' by day. Understandbly, such conditions can warp attitudes and mental processes causing temporary deviation from normality of action, reason, or sense of values."

And—

". . . It is reasonable to conclude that those 'civilians' present in the hamlet of My Lai 4, except those too young to do so, were there to aid the enemy or his cause. They had been previously removed from the village to the safety of a refugee camp but subsequently returned. They had been repeatedly warned to leave the area because of the likelihood of military action . . . the village of Son My, of which My Lai 4 was a part, was a hard-core Viet Cong area and had been for more than 20 years. The hamlets were fortified by camoflaged fighting bunkers and used as base and supply camps for the Viet Cong and North Vietnamese."

MYLAI SUBCOMMITTEE: WHERE THE BUCK STOPPED

(By Brooke Nihart)

The House Armed Services Committee report on the My Lai tragedy, released on 14 July, is a sad, historic, and uncommonly blunt report. But out of it fall two particularly important and constructive recommendations:

That the Uniform Code of Military Justice be changed to prohibit pre-investigation release of charges being preferred against Servicemen, because the inevitable result of the release of charges is that "for all intents and purposes [their] professional military careers . . . are ended regardless of the outcome of the [pre-trial] investigations"; and

That the U.S. Code be amended to permit trial of persons separated from the Services for offenses committed while on active duty.

We can't avoid the thought of how heavily his investigation and its gut-wrenching findings must have weighed on Subcommittee Chairman F. Edward Hebert (D.-La.), long a champion of the Armed Services. Hebert and his colleagues—Congressmen Samuel S. Stratton (D-N.Y.), and Charles S. Gubser (R-Calif.), and W. L. Dickinson (R-Ala.)—heard 152 witnesses, held 16 days of hearings, took 1,812 pages of sworn testimony, and produced or combed through 3,045 pages of witness statements. Their report, which many editorial writers last December said would be a "cover-up," speaks well of our government's system of checks and balances—and of the integrity of HASC Chairman L. Mendel Rivers. On his own initiative, Chairman Rivers elected to investigate a matter which could—and did—make an institution and a cause that he loves look very bad. And he gave uncompromising support to the Hebert Subcommittee, even when it concluded that indeed there had been a cover-up of the My Lai tragedy and charged that the Army had seriously impeded and delayed the Subcommittee's investigation.

President Harry S. Truman, referring to the ultimate responsibilities of his office, once said: "The buck stops here." At a critical juncture in America's agony, Mr. Rivers and Mr. Hebert chose to "stop the buck" themselves in what has to be one of Congress' finest hours—albeit a sad one—in its investigative role.

But the Hebert report triggered rather nominal news stories, and virtually no editorial comment. Thus, we can't help wondering: Where are the editorial writers who are usually so critical of both the Vietnam War and the House Armed Services Committee? Where are those who said last December that the Hebert investigation itself would be "another My Lai whitewash"? Our ears are straining to catch their comments on the Hebert Subcommittee's My Lai report.

SGT. WILLIAM C. RAY

HON. M. G. (GENE) SNYDER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 29, 1970

Mr. SNYDER. Mr. Speaker, I rise today to pay tribute to Sgt. William Clayton Ray, who was killed by the shattering

blast of a land mine in Vietnam on July 4, 1970.

Bill was the 114th northern Kentucky fighting man to give his life for his country in Southeast Asia.

Sgt. Ray of Kenton County, had been married barely 16 months when he made the highest sacrifice for his country and for those of us whom he died defending. I know I speak for the people of the Fourth District of Kentucky—and for all Americans—when I convey my deep sense of loss and sympathy to his young widow and the Ray family.

William Ray's heroic service, in a time when the loyalty of American youth is often brought into question, serves as an example for all patriotic Americans.

An editorial concerning the loss of Sergeant Ray in the Kentucky Post, July 10, follows:

SGT. WILLIAM C. RAY

Sgt. William Clayton Ray was doing a job he didn't like, but he was doing his duty as a soldier when his life ended with the shattering blast of a land mine in Vietnam.

The handsome, athletic, former honor student thus became Kenton County's 44th casualty and northern Kentucky's 114th of this war. His name is added to a bitter list of heroes.

And the pain is all the more poignant in that this young man and his bride of barely 16 months had suffered separation almost from their wedding date, when he was drafted, sent to camp for training, and then last January shipped out to Asia.

Our profound sympathy goes to his young widow and to his remaining family.

CHILDREN'S HOSPITAL OF THE DISTRICT OF COLUMBIA

HON. ANCHER NELSEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 29, 1970

Mr. NELSEN. Mr. Speaker, a fine old institution which is doing a big job in the modern era of child health care, the Children's Hospital of the District of Columbia, is marking its hundredth year of service to sick children in the Metropolitan Washington area and in the regions beyond.

Because of my longstanding interest in improving the quality of medical service available to the children in my district, my State, and the Nation as a whole, I have watched the efforts being made by the Children's Hospital of the District of Columbia to develop a national medical center whose teaching and research programs contribute to the improvement of pediatric health care for children everywhere.

For this reason, I was associated with enactment of the District of Columbia medical facilities authorization statute of 1968 which provides a Federal grant-loan program under which the Children's Hospital of the District of Columbia can replace its outdated, inefficient, and overcrowded facility for the care of sick children and for teaching and research in pediatrics.

This authorization statute, enacted almost 2 years ago, is in line with current national thinking on construction of hospital facilities because it is limited to modernization and replacement of existing bed capacity and calls for a 50–50 Government loan-grant program to achieve its objectives.

Also, the facilities of Children's Hospital make a major contribution to providing health care for the children of the so-called inner city. Its charity work, even in an era of increased Government programs, is reflected in its $1½ million annual deficit which is covered in large part by annual contributions from warmhearted members of the Metropolitan Washington community.

Last April 10, the Children's Hospital family held its centennial dinner as a prelude to the regular meeting of the American Academy of Pediatrics which was held in Washington to mark the hundredth anniversary of this fine institution. The academy consists of pediatricians from all parts of the country who treat sick children in all States.

I am offering for the RECORD the brief remarks made at the centennial dinner by two of the volunteer citizens of the Washington area who contribute their time and effort—along with many other dedicated people—to the development of a Children's Hospital National Medical Center for the benefit of sick children everywhere.

From these remarks, I learn of two very interesting developments: First, that Children's Hospital is planning to start the first phase of construction October 1, on land adjacent to the Washington Hospital Center, and is trying to raise money from private contributions to supplement the Federal aid indicated in the authorization statute; and, second, I am pleased to note that the physicians on the medical staff of Children's have given a big boost to the fundraising by making their own commitment for a $1 million contribution. This certainly demonstrates their dedication to the hospital and to child health care generally.

The remarks referred to above, follow:

REMARKS BY MR. RUDOLPH KAUFFMANN II

This is a family affair. The family concerned is what we at Children's Hospital refer to as The Children's Hospital Family—Corporate Members, Directors, Doctors, Nurses, Staff, Alumni, members of kindred organizations with which we're affiliated, friends, supporters, well wishers.

On December 5 of this year, our hospital will be 100 years old. We shall no doubt discover some appropriate way of observing our actual birth date. But what could be more appropriate than to share our birthday with our alumni here for the annual convention of the American Academy of Pediatrics. For it is to the medical profession, particularly those men saw the need for specialization in the care of children, that we owe our existence.

Let me take you back to the City of Washington of 1870.

The Civil War had been over only 5 years. The city still bore the scars of war, not the least of which were the human scars—poverty, ignorance, disorientation and consequent diseases and congenital defects. The condition of many children here, especially, if it were to confront us today, would be reminiscent of the sort of thing one finds in so-called underdeveloped nations.

Unfortunately some of these scars are still visible today. How much worse they would have remained if it had not been for Children's Hospital we have no way of knowing. But I know in my heart that they would be worse, much worse.

Fortunately, in 1870, there were dedicated physicians here who refused to view this condition of the city's children with indifference. They sought out civic-minded men of some substance and reputation in the community, men who had the vision of a city worthy of the honored name of Washington. The results: On December 5, 1870, a small group of such individuals appeared before the city's commissioner of corporations and pledged themselves to:

". . . establish a charitable institution in said District of Columbia to be used as a hospital and dispensary for the treatment of the medical and surgical diseases of children, where all such may be treated gratuitously. . . ."

And in 1884 they amended this to state that:

". . . the particular business and object of said corporation is to establish and maintain a hospital and dispensary for the gratuitous medical and surgical treatment of indigent children . . . without distinction of race, sex or creed . . ."

The incorporators added, as an afterthought, that fees for care could, at the hospital's discretion, be collected from parents who could pay.

We hear a lot today about voluntary "nonprofit" hospitals. We are a voluntary charitable hospital. There's a difference. We have lived by the words of our founders. We intend to continue to give them meaning. We have operated at substantial deficits and have relied on the financial support of our "family" and the community to make up the difference. We shall continue to do so.

In its early years the hospital was primarily a "care" institution. But the medical staff and directors came to realize that medication, surgical procedures and nursing were not enough. The hospital's mission was gradually broadened to include the education of young doctors and nurses, later research into the causes and cures for children's diseases.

Beginning about 15 years ago we began tailoring the organization to give the fullest possible meaning to this evolution, even though handicapped by an inability to expand and modernize in a truly meaningful way the physical plant of the Hospital. What has finally evolved is a center of pediatric excellence—actually, it would be difficult to justify the Hospital's existence as anything else.

Today, we've converted our last broom closet to serve the work professionals preeminent in a broad spectrum of pediatric specialties. And, having moved in 1879 to our present location (it was the edge of town then) we have no alternative but to move again.

This is not a "fund-raising" dinner. It's a party. However, what we must do will cost a very great deal of money; and we are preparing to seek it. The "family" will be hearing from us.

REMARKS BY MR. WALLACE WERBLE

In the broad sweep of history, a hundred years is only a measure of time, and a second hundred years is only twice the measure.

But in the span of a lifetime, a hundred years is a significant milestone for any institution, and a second hundred years represents the dreams and aspirations of all those committed to the present and the future.

On behalf of the Hospital Board, which serves, in a sense, as the trustee for the well-being of all sick children in the Metropolitan Washington Area, it is a privilege to express gratitude to all of you who have joined with the "family" at this important moment in the history of the Hospital.

We hope that all of you will consider yourselves, henceforth, as members of our Children's Hospital "family" and we welcome the addition of the distinguished guests from Greece, from Philadelphia, from the District of Columbia "City Hall," from the new leadership in our own Health Department, and from all the parts of the nation represented by the officers and governing body of the American Academy of Pediatrics.

To the Academy of Pediatrics, we acknowledge a great debt for the fact that it scheduled one of its all-important meetings in Washington to serve as the highlight of our program for marking a hundred years of service to sick children. The Academy, in the broadest sense, is the custodian of the quality of health care made available to all children in the entire nation.

In an era when government and other interested groups—including the Academy and our own Hospital—have focused attention properly on the pressing need for heroic expansion in the quantity of health care available to children, it is still reassuring—as parents and grandparents, uncles or aunts—to know that the Academy continues as the stern and influential guardian over standards of quality.

All of us, as we strive to achieve our dreams of a Children's Hospital National Medical Center, hope that our dedication to maintaining standards of quality, at the same time that we provide community leadership to the expansion of available quantity in child health care, will make the Academy of Pediatrics forever proud of its decision to meet this spring in Washington in tribute to our hundredth year.

It would be presumptious for me, as an individual, to attempt an expression of thanks to the members of the Hospital "family" for their presence here and for their past, present and future commitment to the support of Children's Hospital and its objectives.

I do want to express appreciation, however, to Dr. and Mrs. Elliott for joining us. Dr. Elliott is president of George Washington University, which will soon celebrate its 150th anniversary. We have recently entered an agreement for a closer affiliation in matters of pediatric education with this university.

But we also will continue to offer our Hospital for the training in pediatrics of all medical students from all medical schools in our area that wish to use our facilities for this purpose. We are particularly happy to have Dean Parks of the George Washington Medical School and Dean Rose of the Georgetown Medical School with us.

All of us in the Children's Hospital "family" are committed to serve. To us, it is an opportunity to demonstrate that we care in a world which sadly has begun to doubt whether people care for people. The members of our family do care—and they care a little bit more than most people.

Thus, in the name of all sick children, thanks and gratitude are due all of you who serve as annual members of the Hospital, as members of the newly formed Committee of 100 to mark the hundredth anniversary and as members of our Medical Board and staff, the Board of Lady Visitors, and the Child Health Center Board, which is taking over the important "outreach" responsibility in our new pattern of child health care.

Our thanks also to our affiliated Hearing and Speech Center Board, and to the Board of the Hillcrest Center for Mental Health, with whom we are working to achieve a closer and truly meaningful relationship in this vital area of child health care.

And gratitude is due also to everyone who works at this Hospital in a medical, administrative or other capacity to insure day-in-and-day-out service for sick children.

Probably no other institution in the Washington area has ever undertaken goals of the size and scope to which the Board of Children's is committed.

We are embarking on a capital fund drive designed to raise the $15 million in private money which, with federal funds, will finance construction of a new Children's Medical Center adjacent to the Washington Hospital Center.

At its March meeting, the Board of Children's voted to start a phased-construction program for the new Center on next October 1, providing the capital fund drive could raise $6 million, primarily from local resources, by the end of August.

If this sub-goal can be achieved, fourteen months can be cut from the time it takes to construct a new Children's medical center. At the current rate of escalation, the cost of the new construction increases an estimated $400,000 a month, or approximately $5 million a year.

At the same time, our annual fund drive is committed to raising at least a million dollars a year to make up the operating deficit of the Hospital. In time, this figure will increase to a million and a half dollars.

This year, our annual fund drive—money contributed from all sources and benefits to operating expenses—will reach the million dollar mark for the first time.

These are the kind of figures to cause a sinking sensation in the pit of the stomach, but it took the doctors, fittingly enough, to cure the uneasiness experienced by all of us.

The cure, I am privileged to disclose for the first time tonight, is a commitment by the Medical Staff of our Hospital to provide at least $1 million of the $15 million we need to build the new medical center.

No one can conceive of a greater birthday present to Children's Hospital than this commitment. I would like to ask all the laymen in the room to rise and join with me in applauding our doctors—who by this and by their many other dedicated actions and deeds demonstrate every day that they care very deeply for all aspects of child health care.

Motivated by the inspiration from the doctors, I can assure you that the active, committed and dedicated laymen in our family approach their money-raising job with greater confidence. The movers-and-shakers in our midst don't seem to be scared by the numbers, and committees to raise the money for capital expansion and sustaining operations are hard at work—each confident it will achieve its goal so vital to the next hundred years of our institution.

The plans for our new hospital are breathtaking. Our architects and planners have devised the most modern kind of facility, the most unhospital-like hospital in the country, virtually enveloped in glass to provide maximum light and bright atmosphere.

For the doctors who are visiting with us, let me tell you of an exciting concept—we will have no out-patient department, as such. The patients described by you as clinic patients will not crowd and wait on hard benches, but will go to locations throughout the medical center, adjacent to the regular office of the physicians and specialists who treat them.

Essentially, we are engaged in a life-and-death "business" if you will pardon the word. We hope to bring children's care closer to where they live, and develop our medical center as the referral specialist in life-and-death cases. Our Board is forever aware of the question—What is the life of a single child worth? Your child, my child, a ghetto child, any child!

By your presence here tonight, you have affirmed a continuing commitment to the great ideal on which this institution was founded—that is, that people do care what happens to other people, particularly children..

Dedication to this ideal has kept our institution alive during many dark days over the past hundred years—some of the darkest have been experienced during the past 10 or 15 years.

For the future of our institution—and perhaps for the future of a civilized society—it is more important than ever before for people who care to demonstrate this fact because it is being questioned in unprecedented ways in the wake of the complex and often disheartening sociological, medical, generational and other revolutions through which we are now struggling.

The future of everything we cherish may well depend on the efforts from all of us to demonstrate a care for people and to prove the ability of our institutions to cope with the vastly increased size and the expanded new dimensions of the health and other problems confronting us.

The next hundred years will be most interesting.

PAULA ECHEVERRIA OF PLANNERS, INC., DISCUSSES ADMINISTRATION POLICIES IN LETTER TO HUD UNDER SECRETARY VAN DUSEN

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 29, 1970

Mr. REUSS. Mr. Speaker, on June 9, 1970, a delegation of architects and planners under the leadership of David Todd, past president of the New York chapter of the American Institute of Architects, visited HUD Under Secretary Richard C. Van Dusen to protest the administration's war and domestic policies.

Among the group was Mrs. Paula Echeverria of Planners, Inc., who sent the following letter to Under Secretary Van Dusen on July 10, 1970, as a result of that meeting:

PLANNERS, INC.,
July 10, 1970.

Mr. RICHARD C. VAN DUSEN,
Under Secretary of Housing and Urban Development, Washington, D.C.

DEAR MR. VAN DUSEN: I wish to add my thanks to these of David Todd for meeting with our group of architects and planners on June 9th.

I was horrified to read that your office applied pressures threatening to withhold housing allocations to Congressional Districts voting against the Cooper-Church Amendment.

Furthermore, I note, in my June 29 issue of I. F. Stone's weekly, quotations from the Baltimore Evening Sun of June 16 and Bernard Nossiter in the Washington Post of the same date rebutting your comments to us concerning the Administration's eagerness to pass the Emergency Housing Financing Act of 1970. In fact, Mr. Patman and White House Staff both corroborate the fact that no such pressures were exerted—until the President made his speech on Economic Policy.

The purpose my colleague had in coming to you was to warn you of our profound

misgivings on the course of U.S. Domestic Policy. We cannot distinguish its clear and close interrelationship with foreign policy committments that we believe are directly contrary to the best interests of this Country. Further cause for such misgivings are seen in today's Post, when Defense Secretary Laird states that we will have to increase military aid to South Korea, to compensate for withdrawal of American troops from that country! I do not see any realistic promise of reduction in the American military role in the world, despite your statement that Human Resources Appropriations will exceed military appropriations this year.

In short, we are still confronting the wide gap between statements of policy and performance. Citizens have witnessed this gross inconsistency in government for some time now and it appears to make little difference if the Party in power is Democratic or Republican. As we said to you, behaviour like this makes it increasingly difficult for us to sustain any faith in the good intentions of those of you now responsible for leading the country. Forbearance is out of the question.

Your own splendid description of metropolitan problems is hollow indeed without immediate constructive measures to implement the policies you correctly cited: merging of the metropolitan tax base; improvement and diversity in the quality and texture of existing old centres to reestablish them as heterogenous activity centers for citizens of all races and incomes; construction of new housing in the suburbs; improvements in the full range of services, education and day care, health and job training. But these are all empty statements without the assurance of jobs, without the assurance of adequate funding for services.

In Washington, this means a major development plan for the 2,200 acres of the Anacostia Basin to provide alternate housing resources that will speed urban renewal now moving at a snail's pace because of the lack of adequate relocation resources. Recent action on Fort Lincoln, I am happy to see, is one small step in the right direction. It further means adopting a regional housing and employment policy with an acknowledged objective of an even spread of its 25 percent Black population throughout the Metropolitan area. It means a conscious Federal Employment Policy to meet this goal. Federal site selection for both rental and owned space should be directed toward providing the necessary range of housing and urban services in conjunction with the bonanza of construction and leasing of millions of square feet of office space for Federal agencies.

I am enclosing a position paper of the Washington Planning and Housing Association, prepared under my chairmanship of its Committee on Planning and Economic Development. This demonstrates the problems of Washington as we see them—and lays out a strategy for their solution. The paper was initially prepared by me as Consultant to the Board of the Washington Urban League. It has been adopted as the joint thinking of both citizen organizations.

Each member of the Cabinet, I believe, must impress upon the President the need to plan now for conversion of the economy from war to peace time activities. The increasing unemployment due to moderate aero-space cutbacks demonstrates further the need for affirmative tools for government to initiate the conversion. Construction and new services in our cities is the obvious place to take up the slack.

This is why we are interested in an Urban Growth policy Act that not only establishes a mechanism for making urban settlement policy but also creates the necessary institutions to carry it out. There is no alternative to strong federal leadership in this regard.

Sam Jackson's Assistant, Carlos Campbell, addressed a meeting of Washington Council of Governments on June 16th. His speech was a rather ludicrous indictment of white racism as the major constraint on the solution of urban and metropolitan problems. When a representative of HUD has *no policy* to present and no program tools with which to implement such policies, he only starts a fruitless cycle of speculation on causes and effects. This is a weak and foolish role for a Federal official, for which I can hardly blame an earnest young man coping with an impossible public role. Your own obvious grasp of the problem was most impressive. I urge you to use your skills to redirect Federal Policy with the same passion that you summoned for that pointless political indictment of the House Banking and Currency Committee.

There is no point in the Administration's new tolerant stance vis-a-vis dissent unless it denotes a readiness to do more than dialogue with the opposition. The way to deal with dissent is to meet on its own ground and respond concretely to the gaps and deficiencies that generate such opposition.

I urge you to bring these matters to the attention of Mr. Romney and Mr. Nixon.

Sincerely yours,

PAULA D. ECHEVERRIA.

LEGISLATIVE REORGANIZATION ACT OF 1970

HON. GARNER E. SHRIVER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 29, 1970

Mr. SHRIVER. Mr. Speaker, the legislative reorganization bill under current consideration goes a long way in correcting some of the structural problems facing Congress today. Many issues remain which the reported bill does not begin to deal with, nor could we reasonably expect it to. The issue is far too complex to be dealt with in a single bill. I wholeheartedly support the current measure as indicated, but I hope that this will not represent the end of legislative reform.

I fully support efforts being made to help bring an end to the secrecy surrounding a number of House procedures. As a cosponsor of an amendment to allow for the recording of teller votes, the passage by the House on Monday of a similar amendment was most gratifying. It is important that the public have available a record of votes on major amendments while the House sits in the Committee of the Whole. The recording of teller votes, upon demand of at least 20 members, would allow for such consideration the public deserves. If this procedure is unworkable, provision should be made for recorded votes of both winning amendments and losing amendments.

The following editorial that appeared in this morning's Washington Post applauding the adoption of this much needed reform amendment is one which I commend for reading by my colleagues:

OPEN HOUSE

Those cheers that echoed in the House of Representatives on Monday may have violated Cannon's Rules but they were nevertheless very much in order. They were cheers for democracy, for the basic idea of representative government, for the concept of government by the consent of the governed. They came in response to a historic House decision to put an end, at long last, to its ancient practice of voting in secret on amendments to pending legislation. By an almost unanimous voice vote, the members of the House approved an amendment to the congressional reorganization bill providing that in the future they shall be recorded by name as they pass up the aisle to vote on amendments.

The House, at the same time, approved some other exceedingly salutary changes in its procedures. It agreed to permit at least 10 minutes of debate on any amendment printed in advance in the Congressional Record. And it approved the installation of electronic voting equipment to speed up roll calls—provided that later on the House decides that it wishes to tally its divisions in this modern, efficient and sensible fashion. More's the pity that it did not decide also to make committee meetings open to the public as a general rule. All these changes are simply devices for transacting the public business in public. They will serve at once to help the representatives themselves to know what they are doing and to help their constituents to know what they have done.

Because in their present form the changes are amendments to a bill which must have the concurrence of the Senate before it can become law, one cannot yet regard them as *faits accomplis*. But the support for them in the House was so strong, so healthy and so overwhelming that one can reasonably suppose the House would adopt them as rules of its own if the Senate should fail to translate them into an act of Congress. They reflect great credit on the House and will surely enhance the confidence of the country in its government.

Secrecy in the House is one of those curious folkways perpetuated as tradition long after the purpose for which it was originally contrived has been forgotten. The House of Commons in England undertook to keep its proceedings secret in order to protect its members from reprisals by James I and Charles I in the 17th century. The practice, designed to offset despotism, soon proved itself despotic. It led to all sorts of abuses difficult to unmask and to rebuke because responsibility for them could not be discerned. "Next to the existence of open constituencies, and a fair mode of election," the historian Lecky wrote, "the best security a nation can possess for the fidelity of its representatives is to be found in the system of parliamentary reporting. But this was also wanting. The theory of the statesmen of the first half of the 18th century was that the electors had no right to know the proceedings of their representatives, and it was only after a long and dangerous struggle, which was not terminated until the reign of George III, that the right of printing debates was virtually conceded."

The right of a free people to know how their elected representatives vote is a right without which elections can be considered neither free nor meaningful. The House of Commons recognized this long ago. The House of Representatives honors its best values in joining them now as a genuinely representative body.

We need to maintain an on-going review of Congress and its institutions. The time is long past that we can sit idly by and ignore the increasing complexity of the legislative process without modifying our procedures accordingly. The action we take now is a first step, but I certainly hope it is not the last.

URGENT NEEDS FOR H.R. 18185 MASS TRANSPORTATION FINANCING

HON. WILLIAM B. WIDNALL

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 29, 1970

Mr. WIDNALL. Mr. Speaker, a recent major poll indicates that American businessmen are very anxious to get on with developement of adequate mass transportation facilities. The Chamber of Commerce of the United States released the results of its urban transportation survey in which 152 chambers in 44 States responded.

It is noted that 41 percent of the respondents reported urban transportation activities in their communities as either critical or getting progressively worse.

Only a slight majority foresee minor improvement over the next 5 years. Most chambers believe that improvement depends primarily on additional financing.

H.R. 18185, which would provide needed Federal assistance, was introduced by 26 members of the Banking and Currency Committee including myself, and was approved by the Committee on June 30.

To date it appears that the Rules Committee has not held a hearing on the bill, because there has been no reported request for a hearing by the Chairman of the Banking and Currency Committee.

This is an urgent national need and should have prompt action. I include a report on the chamber survey which further indicates the demand for attention:

URBAN TRANSPORTATION SURVEY

These findings are based on responses from 152 chambers of commerce (out of 332 queried) in 44 states.

The significance of this survey stems, in part, from the fact that greatly increased Federal assistance will probably soon be available to aid states and communities in improving their urban mass transportation systems.

In February, 1970, the Senate passed the Urban Mass Transportation Assistance Act of 1970 (S. 3154) which provides a Federal commitment of $10 billion over a 12-year period and gives the Secretary of Transportation authority to obligate up to $3.1 billion immediately upon the bill becoming law.

For the first time, Federal assistance would become available over a time span sufficient to accomplish the planning, decision-making and financing necessary to the orderly development of mass transportation systems.

Similar legislation (H.R. 18185) was introduced in the House on June 23. Legislation, perhaps representing a dollar compromise between the Senate and House bills, seems certain to be passed during the current Congressional session.

These survey results should be useful to local chambers in their cooperative efforts with state and local authorities to improve their urban mass transportation systems.

SURVEY HIGHLIGHTS

Sixty-three (41%) report urban transportation problems either critical or getting progressively worse.

Factors causing transit problems:

Lack of patronage	95
Increasing urbanization	79
Increasing wages and operating costs	60
Failure to provide adequate, comfortable, convenient, frequent and low cost service	54
Inadequate equipment and facilities	44
Fragmented political jurisdictions	41

Five-year changes expected:

Slight improvement	77
Great improvement	25
Deterioration	23

Improvement depends on:

Additional financing	78
Better roads/highways	57
Political developments	49
Better equipment	48
Fringe parking areas	39
Additional equipment	37

Problem solving most needed through:

City planning/action	69
State planning/action	34

Efforts to ease congestion being made through:

Establishing one way streets	122
Staggering traffic lights	80
Eliminating parking on main thoroughfares	80
Providing fringe parking areas	60

Ninety-three communities have utilized federal assistance in planning/financing.

(NOTE.—Because not all respondents answered all questions and because some respondents in question with multiple answers checked more than one, totals frequently are not consistent.)

SURVEY RESULTS

Number of chambers responding by population represented

Under 50,000	15
50,000–100,000	42
100,000–200,000	38
200,000–300,000	9
300,000–500,000	15
500,000–1,000,000	14
1,000,000–2,000,000	12
Over 2,000,000	7
Total	152

1. Are transportation projects included in work program?

Yes	124
No	12

2. Does your chamber have a transportation (or similar) department?

Yes	70
No	70

Principal functions are:

Liaison with officials	70
Participation in regulatory proceedings	70
Transportation of people	69
Highways and airport access roads	67
Legislation	66
Transportation of goods	64
Planning	56
Parking facilities	34

3. Urban transportation responsibilities are assigned:

As sole responsibility of a particular committee	59
To a committee having other responsibilities	47
Not specifically to any committee	21

4. Separate transportation committee maintained for:

Air	96
Highways	84
Parking	45
Inland Waterways	32
Freight Traffic	31
Motor	30
Rail	26
Safety	17
Ocean	7

5. Special local transit authority/agency established for your area:

Yes	55
No	89

If no, is one necessary or desirable?

Yes	33
No	40

6. Has a multistate or regional transportation compact or agreement been established in your area?

Yes	43
No	82

In progress, 17.

If no, is one necessary or desirable?

Yes	28
No	32

7. Do your state constitution and statutory provisions require amendment, particularly with reference to application of available funds, in order to achieve a proper balance between highway and other modes of transportation?

Yes	51
No	63

If yes, necessary action is:

Being taken	16
Planned	20
Receiving no attention	9

8. Has your community utilized Federal assistance for mass transit facilities?

Yes	93
No	50

What for?

Planning grants	69
Capital grants	47
Loans	8
Training	5

9. State provides financial assistance in meeting community transit problems?

Yes	55
No	83

a. Community has utilized this assistance?

Yes	53
No	1

b. What for?

System improvement	20
Equipment	15
Subsidies	7

10. Specific plans have been developed for meeting urban transportation requirements over:

More than 10 years	36
5 to 10 years	21
3 to 5 years	10
One year	10
One to three years	8

11. Efforts have been made to ease congestion by:

Establishing one-way streets	122
Eliminating parking on main thoroughfares	80
Staggering traffic lights	80
Providing fringe parking areas	60
Adding more traffic police during rush hours	59
Staggering working hours	49
Improving transit services	48
Providing express bus lanes	12

12. How do you rate the urban transportation situation in your community?

Difficult and getting progressively worse	48
Difficult but progress being made toward solution	43
Minor problem	30
Crisis stage	15
No problem	1

13. Factors causing urban transit problem:

Lack of patronage	95
Increasing urbanization	79
Increases in wages and operating costs	60
Failure to provide acceptable service	54
Failure to modernize equipment and facilities	44
Fragmented political jurisdictions	41
Failure of local/state authorities to take action	40
Poor planning	32
Outdated local/state regulatory procedures	10

14. Over the period of the next five years, urban transit facilities will show:

Some but not much improvement	77

Great improvement 25
Deterioration 23
No change 17

15. Improvement depends most upon:
Additional financing 78
Better roads-highways 57
Political developments 49
Better equipment 48
Fringe parking areas 39
Additional equipment 37
Additional transit systems 26
Technical improvements 23

16. Problem solving emphasis is most needed in:
City planning 69
State activities 34
Private enterprise 14
Federal policies and action 12

17. Would like additional information on:
Case studies covering successful actions by chambers of similar size 84
Meeting transportation needs of low-income residents 69
Responsibilities that have been assigned to and actions taken by transportation or urban transit committees of other chambers 63
How other chambers go about involving businessmen in mass transit problem 62
Reducing congestion in the central business district 56
Experience of cities that have established express bus lanes 35
Transportation of people within the central city 34
Legislation/city ordnances that require apartments and businesses to provide off-street parking 24
Transit services within the framework of overall community development 10

RESPONSES TO SELECTED QUESTIONS BY POPULATION GROUPS

	Under 50,000	50,000 to 100,000	100,000 to 200,000	200,000 to 300,000	300,000 to 500,000	500,000 to 1,000,000	1,000,000 to 2,000,000	Over 2,000,000
1. Has a special local transit authority/agency been established in your metropolitan area?								
(a) Yes	2	6	14	1	8	6	11	7
(b) No	12	30	26	7	5	8	1	
If no, is one necessary?								
(a) Yes	3	13	9	2	3	2	1	
(b) No	4	17	13	3	1	2		
2. Has a multistate or regional transportation compact or agreement been signed for your area?								
(a) Yes	3	6	14	3	2	3	8	4
(b) No	10	27	21	2	9	8	4	1
(c) In progress		7	3	2	2	2		1
If no, is one necessary or desirable?								
(a) Yes	4	11	6		2	3	1	1
(b) No	2	10	12	1	3	3	2	
3. Has your community utilized Federal assistance in planning and financing mass transit facilities?								
(a) Yes	4	22	23	8	10	8	12	6
(b) No	10	20	12	2	3	3		
If yes, what for?								
(a) Loans		1		1	2	2		2
(b) Capital grants	8	16	2	8	3		4	6
(c) Planning grants	4	13	16	3	8	9	10	6
(d) Training			2		1		1	1
(e) Other	1	2		2		2	2	1
4. Specific plans have been developed for meeting urban transportation requirements over:								
(a) More than 10 years	2	8	10	1	5	4	3	3
(b) 5 to 10 years	3	5	5	1	2	2	3	
(c) 3 to 5 years	1	4	3		1		1	
(d) 1 to 3 years		1	3	2	2		2	
(e) 1 year	1	1	2		2	1		1
5. Efforts have been made to ease congestion by:								
(a) Establishing 1-way streets	8	32	36	7	11	12	10	6
(b) Staggering traffic lights	5	19	23	5	9	7	6	6
(c) Eliminating parking on main thoroughfares	4	16	23	5	10	7	10	5
(d) Providing fringe parking areas	6	14	13	6	4	5	8	4
(e) Adding more traffic police during working hours	2	11	19	5	6	5	6	5
(f) Staggering working hours	2	9	13	3	3	10	4	5
(g) Improving transit service	2	9	18	2	3	2	7	5
(h) Providing express bus lanes			4		3	2	2	1
6. How do you rate the urban transportation situation in your community?								
(a) Difficult and getting worse	1	11	14	5	2	7	4	4
(b) Difficult but progress being made toward solution	6	11	12		7	2	2	3
(c) Minor problem	5	12	7	2	1	2	1	
(d) Crisis stage	2	3	2		4	1	3	
(e) No problem		2	2		1			
7. Problem solving emphasis is most needed in:								
(a) City planning	6	25	18	4	8	4	3	1
(b) State activities	4	5	8	2	3	5	5	2
(c) Private enterprise	3	6	4	1				
(d) Federal policies and action		1	2	1	2	3	2	

CHAMBERS PARTICIPATING IN SURVEY

Alabama: Mobile, Montgomery.
Arkansas: Fort Smith, Pine Bluff.
California: Fresno, Los Angeles, Modesto, Sacramento, San Bernardino, San Diego, San Jose, Santa Ana, Stockton, Vallejo.
Connecticut: Hartford.
Colorado: Colorado Springs, Denver.
Delaware: Wilmington.
District of Columbia: Washington.
Florida: Daytona Beach, Hollywood, Jacksonville, Lakeland, Orlando, Tampa.
Georgia: Atlanta, Macon.
Hawaii: Honolulu.
Illinois: Chicago, Decatur, Peoria, Quincy.
Indiana: Elkart, Gary, Kokomo, Muncie, South Bend.
Iowa: Cedar Rapids, Des Moines, Dubuque, Waterloo.
Kansas: Kansas City.
Kentucky: Lexington, Louisville, Owensboro.
Louisiana: Baton Rouge, Lake Charles, Monroe.
Maryland: Baltimore.

TAX FREEDOM DAY

HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 29, 1970

Mr. SCHWENGEL. Mr. Speaker, June 11 was designated "Tax Freedom Day" because that is the day on which the average taxpayer has worked long enough to pay his various taxes for the year. While that date has passed, I feel it is most appropriate to keep this fact in mind as we consider the Congressional Reorganization Act of 1970. Hopefully, the effect of this legislation will be to make the Congress more effective, and by virtue of a more effective Congress, we should be able to cut Government spending.

Most Americans have no idea how much of their income goes to taxes. Too many have never even thought about it, except to grumble at income tax filing time. Yet taxes take a massive toll of total income, a fact that should be understood by all Americans.

In 1970, with the economy stumbling through a period of recession and inflation, a sound estimate is that 44 percent of all private income will be spent involuntarily for taxes and other Government-necessitated expenditures. The reference used for this derivation—preliminary, until the July issue, or "National Income Number," is available—is the March "Survey of Current Business," U.S. Department of Commerce, pages 8, 10, and 11. Later references used, include the "Economic Report to the President" and the "Economic Almanac" of the National Industrial Conference Board. Total expenditures of all branches of government minus Federal grants-in-aid to State and local units totaled $315.6 billions in the year 1969. The total of all personal income before taxes was $747.2 billions. Thus, the loss of free choice in the spending of incomes was at least 42.2 percent. Yet, even this does not account for all involuntary expenditures, some of which are not billed directly to the treasury of any government, but are nevertheless required by law. This includes the maintenance of records and bookkeeping by individual citizens on behalf of government agencies. When the total of all these involuntary expenditures is calculated, it comes to at least 44 percent. Using this figure, it can be said that the average person works from the 1st of January until the 11th of June each year just in order to make enough money to pay all of his government burdens.

Needless to say, the costs of these burdens are quite high, both in terms of the smothering of individual initiative, and in increasing the price of goods and services. This is one of the major causes of poverty. This is a situation which spreads disillusionment and misery, believing the great hopes raised by government leaders. The National Taxpayers Union believes that every legislator and administrator whose decisions affect the tax rate should be aware of this situation and act to reduce taxes now.

These figures are frightening, and represent a totally unacceptable loss of freedom in the choice of how we spend our personal income.

REPEAL OF HOUSE CONCURRENT RESOLUTION 108—INDIAN RESERVATION TERMINATION POLICY

HON. WILLIAM D. FORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 29, 1970

Mr. WILLIAM D. FORD. Mr. Speaker, the deplorable situation of the Indian peoples in the United States is one for which we, as Members of Congress, must accept a good deal of the responsibility. For too long we have allowed substandard conditions to exist on virtually all Indian reservations throughout the Nation.

In 1953 the 83d Congress enacted a piece of legislation, House Concurrent Resolution 108, which instead of providing benefits, has wrought hardship and misery on numerous tribes in all parts of the country. This bill expressed what has come to be known as the termination policy, which in effect ends the Government's responsibility in administering Indian affairs.

Though intended to reduce Federal dependence and bring the Indian peoples into the mainstream of American life, this bill has often ended desperately needed assistance programs. Also, the process of turning reservation land over to private ownership has victimized Indians who, lacking prior experience in business matters, fall prey to ruthless profiteers. Certainly the Indian people should be brought into the mainstream of American life, but not at the expense of their own heritage and traditions, and not with the loss of Government programs which are vital to their health, well-being, and progress.

Rather than disown our responsibilities, we should make an effort to share them and involve the Indian people with the administration of their own affairs. Too often Federal officials have been ignorant of and unresponsive to the needs of the people they are supposedly serving. But Indian citizens, administering to the needs of their own, would help end the image of the cold, impersonal Federal complex. These individuals would also have the advantage of much more detailed knowledge of local situations than administrative personnel usually possess.

In 1968 President Johnson stated that the policy of his administration was one of "self-determination" rather than termination. Recently, Secretary of the Interior Walter Hickel also rejected termination as a policy of the present administration. It is time for Congress to declare its opposition to this doctrine, and to take firm steps to better the conditions for all Indian peoples of the United States. The first step toward this goal is the repeal of House Concurrent Resolution 108.

AGE-OLD DREAM REALIZED

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 29, 1970

Mr. BOGGS. Mr. Speaker, 1 year ago, three Americans realized an age-old human dream by landing on the surface of the moon.

Today I do not believe we have begun to comprehend the full significance of that achievement or of the other achievements of this country's space program.

A recent advertisement in the Wall Street Journal provides a clear statement of the purpose and byproducts of this country's space program. I am inserting it in the RECORD for the benefit of my colleagues:

THERE ARE MANY REASONS TO CELEBRATE—MOST ARE NOT OBVIOUS

As we look back to the early morning hours of 12 short months ago and the dramatic words, "Houston, Tranquility Base here. The Eagle has landed," followed by ghost-like images bounding across our TV screens, we recall an enormous sigh of relief and a swelling of national pride.

Perhaps obscured by the magnitude of the landing on the moon lay a veritable windfall of technology which, according to one estimate, is already returning four dollars of value for every dollar invested. NASA has cataloged more than 2,500 technological innovations from its space program alone.

Although experience has shown that it takes years to transfer new technology and knowledge to other fields, the commercial "spin-off" from space has come quickly and dramatically in communications, weather forecasting, medicine, materials and electronics, to name a few.

Communications satellites today link 50 nations with telephone, TV and data transmission service, augmenting earth-bound radio and cable systems that had been clogged with international communication traffic.

Weather satellite systems provide worldwide observation of the atmosphere, early detection and tracking of storms, typhoons and hurricanes. The resultant savings in lives is beyond calculation. When Beulah hit in September, 1967, leaving some 300,000 homeless, only 41 lives were lost, thanks to a weather satellite. Besides the obvious benefits to farmers from long-range weather prediction, prevention of crop losses alone is estimated to be worth $1.6 billion a year.

Other earth orbiting satellites track fish schools, monitor fresh water supplies, prospect for gas and oil, and search out new mineral deposits. There have been two spectacular finds in Canada.

In medicine the spin-off has been substantial with many devices already in general practice. A portable electrocardiogram unit transmits data over a standard telephone. A tiny radio transmitter about the size of a pin head monitors and reports the physiological reactions of a patient to the nurse's station. A computer program, created to solve rocket engine vibration, ignition and combustion problems, works at brain and heart research.

New materials developed for space have made a significant impact on our economy. From rocket case production came a new kind of pipe, built of plastic mortar, reinforced with fiberglass. It's lightweight, thin-walled, noncorrosive and practically unbreakable, making it perfect for water, sewage and irrigation systems.

A space sandwich material of aluminum and plastic foam is now being used for walls of prefab houses and strong, lightweight skis.

Composites, bonded laminates and other new combinations of substances have freed designers, engineers and architects from their dependence on traditional materials.

In the field of electronics the sensing, calculating and controlling "brain centers" of space systems have given birth to microminiaturized devices that herald a whole new generation of products from clocks to computers.

For example, tiny semiconductors, about 3/16" diameter and twice the thickness of a sheet of writing paper, contain more than 1,000 circuits. They're used in portable calculators that weigh only three pounds.

Computer programs developed for space have found many applications. Two of them are instant flight and reservations information for airlines, and swift handling of stock transactions for Wall Street.

But possibly the most unexpected and important spin-off of all is the management techniques that were evolved to conquer space. The systems approach—with its marshaling of government, science, industry and education—has shown us a better way to get things done.

Recently, a noted scientist described space as "only the tip of the iceberg." Beneath lies a vast base of industrial, technological and scientific excellence.

We explore space because we need its potential. The problem today is how to eliminate starvation and low living standards for two-thirds of mankind without ruining our planet's ecological balance. In the years ahead a larger world population, demanding higher living standards, must somehow be also accommodated. Earth Services from space will provide the information to properly manage the task.

Space orbits, indeed, are the new lands of our time, lands to be shared, lands on which we can build structures unlike man has ever built before. Space stations are the modest first step on the journey.

MISS CHRISTINE CAMPBELL, A HOOSIER FAR FROM HOME, WRITES OF HER COUNTRY

HON. WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 29, 1970

Mr. BRAY. Mr. Speaker, the following letter came to me recently from a young Indiana girl who is presently living with her parents in the Philippines, where her father is employed by the U.S. Government. I was deeply touched and moved by her remarks, and I wish to include them at this time:

MAY 26, 1970.

DEAR CONGRESSMAN BRAY: I'm a fourteen year old girl overseas with her family in Manila, Philippines. I had lived in Indiana all my life and I never fully realized just how great the United States is. The strange thing is that it's not only me, but it's other kids (and even adults) that haven't been away from our country, that haven't realized the greatness of the rights granted to us.

I back the Republic in its decisions. I can only do so by voice—not votes, yet I have a marvelous country and I'm proud to be an American. I'm sorry the demonstrations are run as they are. Who's going to look at this noise and say, "These guys have some good ideas; they're smart," when they kill in the same stroke!!?

I love and respect life, mine, yours, and everybody else's, too much to want to destroy it by taking away the power of the president or by having my rights taken away.

Maybe before long, you'll have enough Silent Majority speaking out to conquer these demonstrators. President Nixon is doing a great job. I saw him when he visited the Philippines. Just about 3 weeks ago we spoke to Governor Whitcomb and his wife here on business for the Indiana Trade Commission. They were on Corregidor Island that day and he looked all over for the "Campbell family." We also got to talk to Mr. Forrest Gerig of the same committee.

And another fellow Hoosier doing a great job is the ambassador to the Philippine Islands from the U.S., Ambassador Henry Byroade.

If you look into the *Muncie Star* (Muncie, Ind.) you will see a column by Dick Green that speaks well of him.

Congressman Bray, I wish you continued luck. May God be with you.

Sincere compliments,

CHRISTINE CAMPBELL.

TEXAS PETROLEUM INDUSTRY

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 29, 1970

Mr. TEAGUE of Texas. Mr. Speaker, with the question of imports being foremost in many people's minds these days, and one of the leading commodities heading the import list being oil, I think it appropriate to insert in the RECORD an editorial which appeared in the Dallas Times Herald, Sunday, July 12, relative to the Texas oil industry. The facts contained in this editorial are interesting and indicates the tremendous part played in our economy by Texas oil:

PETROLEUM INDUSTRY: A SOLID 104 YEARS

(By Felix R. McKnight)

On a crisp fall day of 1866 a man named Lyne Taliaferro Barret of Melrose, down in Nacogdoches County, stood expectantly with his neighbors around a 106-foot hole in the ground.

A mule plodded the circle, drawing out an eight-foot auger crudely fastened to a joint of pipe that was rotated by a steam engine.

There was a rumbling from the hole and oil, water and gas started gushing to the heavens. Barret and his friends whooped—and oil had been discovered in Texas.

It has been a productive 104 years since that afternoon. More than 500,000 wells have been drilled in search of Texas oil and gas. A state, a nation and even a world has been served from Texas' black underground treasure.

The Texas Mid-Continent Oil and Gas Association, with researchers Charles Simons and John Wagner digging the records, has produced a barrel of facts about the industry. It is fascinating information about a giant that too often is politically maligned; too seldom recognized for accomplishment.

1—Texas has produced in its petroleum lifetime, 33.1 billion barrels of oil, or 36% of the U.S. total.

2—The State of Texas has derived $76.6 billion from crude oil sales.

3—Texas oil and gas provide 26% of the fuel energy produced in the U.S.

4—Texas produced 1,151,799,000 barrels of crude oil (record high) in 1969—34.2% of U.S. production.

5—Texas has 198,000 producing oil wells in 8,500 fields located in 209 counties.

6—Each day, in their continuing fight against pollution, Texas oilmen put over six million barrels of oil field salt water back into the ground.

7—In 1950, Texas produced 22% of the world oil. In 1960, it was 12% and in 1969, 7.6%.

8—Texas has 44% of all U.S. oil reserves.

9—Texas has 16.7 billion barrels of oil reserves—13.1 in crude oil; 3.6 billion from natural gas liquids.

10—And Texas engineers estimate that an additional 2.8 billion barrels could be recovered through "water flooding" and other special recovery methods.

11—Texas oil men drilled 9,233 wells in 1969—or 29% of U.S. drilling. It all totaled 44.6 million feet of hole.

12—The same Texas oil operators spent $671 million drilling in 1969—and lost $235 million in dry holes. More than one-fourth of the wells drilled in 1969 were wildcat wells which seek new fields. Only 21.8% found oil or gas. (It is this risk—the quest for new fields to service the nation—that creates the oil depletion allowance periodically challenged by lawmakers.)

13—Texas royalty owners received $589 million from oil and gas production in 1969.

14—The world's deepest producer is a Pecos County gas well at 22,340 feet.

15—And the deepest well ever drilled in the world was also a Pecos County effort—that ended in a dry hole. Operators got down to 25,340 feet before giving up.

16—Of all Texas wells drilled in 1969, about 37.9% were dry.

17—Texas had 112.4 trillion cubic feet of natural gas reserves at the end of 1969—40.9% of the U.S. total.

18—And Texas produced 38% of all U.S. natural gas in 1969.

19—The State of Texas gets back $500 million per year for gas sold to other states. And Texas itself uses more natural gas than any other state—more than half the gas it produces.

20—More than one out of every four gallons of U.S. major oil products is made in Texas refineries.

21—Texas petroleum industry taxes account for 18.7% of all state taxes. In 1969, the Texas industry tax payments to the state government totaled $286.5 million—while the 5c-per-gallon tax brought in another $294 million.

22—One fourth of the gasoline tax is used for public education; the balance for roads.

23—Finally, the Texas Permanent School Fund in 1969 received $40.1 million from the petroleum industry for lease rentals bonuses and royalty payments. Since 1932, the total has been a staggering $734 million. The University of Texas Permanent Fund also received $21 million in lease rentals, bonuses and royalties in 1969—a $534.4 million total since 1924.

Not a bad track record for a Texas industry that still has a long life ahead.

THE HONORABLE CLIFF DAVIS

HON. JOHN J. RHODES

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 29, 1970

Mr. RHODES. Mr. Speaker, I was saddened by the death last month of Clifford Davis—he was a fine man and a true friend. It was my privilege to serve

with Cliff for 11 years. I knew and admired his integrity, ability, and dedicated service in the Congress. All of Cliff's colleagues were benefited by knowing him and will long remember and value their association with him. Certainly, Cliff was a true patriot who gave his best to his State and country. My heartfelt sympathy goes to Carrie Davis in her loss—a loss which is shared by all who were privileged to know Cliff.

AN OKLAHOMA NEWSMAN WRITES ABOUT OKLAHOMA'S JIM LUCAS

HON. ED EDMONDSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1970

Mr. EDMONDSON. Mr. Speaker, several days ago I placed in the RECORD the eloquent remarks of Gen. Lew Walt at memorial services in Washington for Jim G. Lucas, famed war correspondent.

Today I read for the first time the moving, personal tribute to Jim Lucas written by C. Allan Mathews, editor and publisher of the Tri-State Tribune of Picher, Okla.

Allan Mathews has captured the spirit and personality of Oklahoma's best known reporter in the words which follow.

I believe all who knew and respected Jim will appreciate the opportunity to read Allan's tribute. The text, as it appeared in the Tri-State Tribune for July 23, 1970, follows:

"THE" WAR CORRESPONDENT

(By C. Allan Mathews)

He eluded death at Tarawa. His was the first story to the outside world of that bloody battle. It gave him world-wide recognition and the first step to fame. A battlefield promotion to second lieutenant was handed the young combat correspondent.

He out-maneuvered death again at Saipan. He avoided the grim reaper's clutches in the steaming jungles of Guadalcanal. And again on the hell that was Iwo Jima. Thousands gave their lives in eight Pacific Island campaigns in World War II. He was reported missing in action. He was decorated, but he came through.

He went to the South Pole. He was with Admiral Byrd at the North Pole in 1945–46. He covered the Bikini atomic bomb test.

He "lived" the Korean war. He made the Inchon landing with General MacArthur. He was at the peace table. He flew seventeen bombing raids over North Korea. He was numb and cold and scared with the GI's on Porkchop Hill and Heartbreak Ridge.

He covered the wars in Goa and Lebanon and what was to be the predecessor of Vietnam—the French Viet Minh war, when France lost control of the Indochinese peninsula.

Approaching fifty, he battled the front office for the right to report Vietnam. He spent more time there than any other newsman.

He said he was lucky. He had flirted with death for almost 25 years in every global hotspot.

He was Jim Lucas, the world's best known war correspondent.

Jim Griffing Lucas died this week. He died in bed.

What sniper bullets, machine guns, bombs, ambushes, bayonets, artillery, failed to do . . . cancer did.

Somehow I can see Jim now, exploding into an ear-to-ear grin saying, "Now, ain't that something?"

Jim was already famous when I met him several years ago. He returned to Picher, as he termed it, "I'm trying to go back." He claimed Picher as his "home town." His father was president of the bank here and Jim's years as a youngster and schoolboy had left its impression.

Although he was the first to admit, "you can never go back", I think Jim Lucas felt he had regained something in his Picher visits. Perhaps a hometown.

He was an unusual man. He never married. His family was two generations of fighting men, lonely men, men away from home.

He said in 1965: "At my age I can't look forward with any sense of anticipation to living on the field. I detest being shot at. But, at the risk of sounding corny, if I have a mission in life, this seems to be it."

A couple of years later he said: "Americans are dying every day in Vietnam. It makes it a little easier if they know their sacrifices is noted and appreciated."

Jim reported in the Ernie Pyle tradition. History will rank Lucas even above the great Pyle. He wrote of the boy-men, the individual, the human side, in combat, their dreams, their nightmares, their fears, their hopes, their lives . . . yes and too many of their deaths. "His boys", as he referred to them, loved him, respected him, trusted him. They knew the "old man" was on their side.

He could well have covered Vietnam from an air conditioned hotel room in Saigon (as many did). But the fierce pride that was a part of Jim, made him choose the rice paddies.

He was equally at home with the mighty. His opinions and experience, his grasp of situations, were respected by those formulating policy. He gave an unprecedented briefing to President Lyndon Johnson and over a hundred congressmen on the problems in Vietnam.

He was sought after as a speaker. He was acknowledged as America's best. He defended our "need" to be in Vietnam. Over and over he declared, "we've got to stop them there." At the same time he was impatient with "slow-down" war.

Still his first love was the American G.I. . . . on the field, on patrol, in the bunkers. For where the action was, there Jim was.

Jim might have shattered your impression of a war correspondent. He wasn't the trenchcoat wearing, swashbuckling, swaggering type. A quiet man and perhaps Gen. Samuel T. (Hanging Sam) Williams best summed it up. Spending a couple of weeks with the 25th division in Korea, Jim filed his copy over division teletype back to Seoul, where it was relayed to Tokyo and then to Washington. As division commander, Gen. Williams read everything that went out over the teletype, including the Lucas dispatches. One evening one of the staff officers remarked, "this fellow Lucas doesn't talk a great deal, does he?" Gen. Williams replied, "no, but he sure as the dickens listens."

You had to be alert, or often his sense of humor would escape you. He enjoyed a joke slanted toward Lucas. Perhaps his favorite was: At Ca Mau, he was in a helicopter disabled by enemy gunfire. It was able to make a rough but safe landing. Another helicopter came in behind them and others flew overhead firing to keep the Viet Cong at a respectable distance. As Jim broke and ran for the chopper which was to fly the downed crew out, a friend overhead remarked: "That's the fastest I ever saw a fat man run."

Over the years awards aplenty came to Jim Lucas. Born in Checotah, he attended Picher High School. He won the coveted Pulitzer Prize. He was awarded the National Headliners Awards; he was the only man ever to win two Ernie Pyle Awards. He was presented the VFW Omar Bradley Gold Medal, the American Legion's 4th Estate Award, Long Island University George Polk Memorial Award, the Marine Corps "Not for self, but for country" Award. And these were only a few of the honors that came to one man in one lifetime.

He was author of "Combat Correspondent," "Dateline: Vietnam" and a biography of Vice President Spiro T. Agnew, scheduled to come off the presses this week. He coauthored "Betio Beachhead" and "The Story of the U.S. Marines on Iwo Jima."

He was a living legend in our time. As long as wars are fought, and men cover them, Jim Lucas' style will be imitated. Somehow, I believe he would say now, "Shed no tears for me. I'm off for my biggest assignment yet."

CAPTIVE NATIONS WEEK

HON. JOHN WOLD

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 29, 1970

Mr. WOLD. Mr. Speaker, the third week in July has been set aside so that we might articulate our sympathy and respect for presently one-third of the world's population that dwells behind the Iron and Bamboo Curtains. Over the last half century, Communist regimes have taken over 17 countries. During Captive Nations Week we serve notice to the world and to those nations in particular, that we will not forget the enslaved of this earth.

The people of Eastern Europe and of an increasing portion of Asia have been thrice enslaved. As nations, their independence has been consumed by the neocolonialism of Russia and of China. As peoples, their right of self-determination has been destroyed by a system which places all power in the hands of a few. And, as individuals, their liberties have vanished in the face of a philosophy which disdains the value of the individual and declares the state to be paramount.

The brutality, intolerance, and unpopularity of the Communist regimes have been demonstrated time and again over the years. The purges of the thirties, the slaughter in the Katyn Forest, the murders of millions of Kulaks in the Ukraine, the invasions of Hungary and of Czechoslovakia, the instances are legion. The Communist bloc in 1970 has acquired a patina of subtlety which provides some protective camouflage to a regime which has not changed in substance from what it was in the 1930's.

I am concerned that the false air of legitimacy assumed by the puppet governments of Eastern Europe may cause the U.S. Government to miscalculate in its course of action toward this area.

A case in point is illustrated by an article in the April 19, 1970, issue of the New York Times concerning the national treasure of Hungary, the Crown of St. Stephen which came to the United States in the waning days of World War II.

According to the article the U.S. Government is considering returning the crown to Budapest.

In my judgment, it would be a fearful mistake to make any such action until the time comes when the Hungarian

Government is truly representative of the Hungarian people, and when Hungary is free of Soviet dominators.

The Crown of St. Stephen is a highly visible symbol of Hungarian independence and nationhood. It is a weapon for freedom. It keeps alive the hopes and dreams of a free Hungary. To return it to the present Communist government of Hungary would be to dash the hopes of millions of Hungarians at home and in exile who long for a truly free government. It would greatly strengthen the present Russian-controlled government's claim to legitimacy in the eyes of the world.

Because of my concern over this matter I have been in touch with the Department of State. I include the correspondence and the Times article to be inserted at this point:

APRIL 28, 1970.

Hon. WILLIAM P. ROGERS,
Secretary, Department of State,
Washington, D.C.

DEAR MR. SECRETARY: A recent article in the New York Times referred to the possibility that the United States may be considering the return of Hungary's national treasure, the Crown of St. Stephen, to Budapest.

This letter is to inquire whether such plans are under consideration and if they are, what the rational for such action might be.

As you know, the Crown of St. Stephen is much more than an artifact. It is the best known of the European national crowns and was for centuries regarded as the National Palladium. It became an essential element in the composition of the Hungarian state.

The Crown is unique among European regalia. For centuries it was regarded as the absolute sine qua non without which a King of Hungary could not be crowned.

The Crown has been taken by Hungarian exiles as a symbol of the freedom denied their country by Communist exploitation. Its return to Budapest, while Hungary remains under Communist domination would be a cruel blow to all free Hungarians.

With kindest regards

Sincerely,

JOHN S. WOLD,
Member of Congress.

DEPARTMENT OF STATE,
Washington, May 8, 1970.

Hon. JOHN S. WOLD,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN WOLD: The Secretary has asked me to reply to your letter of April 28 concerning the Crown of St. Stephen of Hungary. The comments in the recent news article referring to the possibility of the early return of the Crown to Hungary were, of course, speculative.

The Crown is the property of the Hungarian nation and a Hungarian national treasure. It came into United States custody toward the end of World War II. Unsettled conditions within Hungary and chronic strains in United States-Hungarian relations made consideration of the Crown's return to Hungary inappropriate and inopportune over a long period of years. It has therefore remained in United States trust and safekeeping.

We are fully aware that our prolonged custody of the Crown and the question of its ultimate return to Hungary have many delicate aspects. We are mindful not only of the unique character of the Crown as an historic relic of great symbolic and constitutional significance to the Hungarian people but also of the political and emotional sensibilities with which Hungarian emigres and many Hungarian-Americans regard the Crown. Clearly, these and other sensitive factors must be taken into careful consideration.

The Hungarian Government has raised the matter of the Crown's return in recent years as relations have gradually improved between the United States and Hungary and discussions have been carried on looking toward the settlement of various longstanding bilateral problems. Although we have no present plans for the return of the Crown, the subject will continue to be a matter of interest to both Governments. We are properly concerned that any such eventual action should serve the objective of general goodwill rather than discord and should take place in circumstances and at a time appropriately marked by some further substantial improvement in the atmosphere and course of our relations with Hungary.

Please continue to call on us whenever you believe we can be helpful.

Sincerely yours,

DAVID M. ABSHIRE,
Assistant Secretary for
Congressional Relations.

In Czechoslovakia twenty years ago, a Dubcek would have disappeared overnight, probably never to be seen again unless at a public trial which would stage a confessional. Today, however, we are dealing with a "liberalized" regime and the destruction of Mr. Dubcek has been carried out in minuscle steps over a period of two years. Today, of course, he has been stripped of all posts, expelled from the Communist Party, and locked up in a sanitarium. The message to those in Eastern Europe who would dissent is no less clear for its having been delivered in a manner calculated to provoke the least public outcry.

Mr. Dubcek is not alone in being punished for Czechoslovakia's attempts at liberalization and independence. In the New York Times of June 28, 1970, we are informed that a purge of the Communist Party of Czechoslovakia is under way and that, in all probability, nearly one-half of the Party will be ejected. While it is difficult to find cause for dissatisfaction in the declining membership of a communist party, one cannot but prefer a system such as our own which allows anyone to join a political party, or to leave it, as he chooses. The difference is still more vital in a country where the Communist Party is the only open channel for political expression. In Czechoslovakia men often lose their jobs with their Party membership cards. The sociology and history departments of the universities have lost large portions of their staffs in this way and some 18,000 members of regional, local, and municipal assemblies have been removed from office; seven members of the Supreme Court have lost their seats because they held "rightist, opportunist, anti-Socialist and anti-Soviet views;" and the entire presidium and secretariat of the national Trade Union Council were deprived of their posts at the end of May. All of this has been attended by little publicity, but it serves ample notice upon all that while the iron fist may have donned a velvet glove, it has not thereby ceased to be iron.

The lack of respect for human life and individuality which Communist leadership have demonstrated toward its own peoples, has also been shown over the past few years in their handling of American prisoners, both in North Viet Nam and in North Korea. At least 1500 American prisoners are held in North Viet Nam alone, where the Hanoi Government refuses to treat them in accordance with the provisions of the Geneva Convention despite the fact that it was a signatory to that agreement. The brotherhood of man—enshrined though it is in Communist theory—is patently false generally, but certainly does not extend to prisoners. Nor does it extend to the thousands of Vietnamese village chiefs who have been slaughtered as part of a conscious policy of terror; nor to those whose bodies line the mass graves of Hue even as the bodies of Polish officers lined mass graves in the Katyn Forest thirty years ago; and the citizens of countries within the Communist orbit are all too well aware that it does not apply to them either.

Captive Nations Week also affords us a welcome opportunity to re-assess our own institutions, to place ourselves in perspective. There are voices abroad in the land today which tell us that our government is not responsive, that our foreign policy is imperialistic, and that governors and other officials behave as fascists. It takes but little wit to realize the absurdity of these charges as we review the plight of Eastern Europe. Our government, for nearly two centuries, has accurately reflected the views and served the will of the American people. When some take to the streets crying that the government does not respond, that "the system does not work," what they really mean is that the government does not obey *them*. The only desirable responsiveness, insofar as policy—as distinct from individual rights—is concerned, is responsiveness to majority will. Responsiveness to a minority is precisely that which the Sino-Soviet Bloc practices, but it is hardly desirable. Far from being an imperialistic aggressor, we have acquired an overseas empire which is as close to non-existent as any in history. On the other hand, we stand ranged today against two communist powers which together control far more than 1,000,000 square miles outside of their own boundaries and are constantly striving to increase that total. Finally, our government, rather than being fascist protects the rights of individuals to an extent unparalleled elsewhere in the world, let alone within the Communist Bloc. Those in America who cry the loudest against the "repressive American society" and attend adulatory movies of the career of Che Guevara are perhaps unaware, to cite an example, that the penalty in Cuba for free speech and open demonstrations against Castro can be the firing squad. So, in declaring our sympathy this week for the people of the captive nations, let us at the same time reaffirm the greatness of America.

In his inaugural address in 1801, President Jefferson said, "Error of opinion may be tolerated where reason is left free to combat it." Today reason is threatened everywhere. There are those who attack it indirectly by refusing to allow others to speak and there are those who openly question the value of reason and postulate instead the supremacy of emotion. The duty to defend peaceable and open debate is upon us all and the result of our failure to fulfill that duty is amply demonstrated in the unhappy fate of the captive nations which we honor this week. To them, to the rest of the globe, and to ourselves, we reiterate our commitment to assist in the defense of free institutions wherever they may be imperiled and in the restoration of liberty wherever it has been banished.

UNITED STATES AND HUNGARY PLEASED BY IMPROVING RELATIONS

(By David Binder)

BUDAPEST, April 14.—A perceptible improvement in diplomatic and commercial relations between the United States and Hungary is prompting officials in Washington and Budapest to view the future with optimism.

According to reliable sources proving at the pace maintained in the last seven months, the day may be close when Washing-

ton finds an occasion to return Hungary's national treasure, the Crown of St. Stephen, to Budapest.

The jeweled crown is nearly 10 centuries old. It was given to St. Stephen, who was King of Hungary from 1000 to 1038, by Pope Silvester II.

PROPERTY OF HUNGARY

Hungarian soldiers serving in Hitler Germany's wehrmacht removed it from the Budapest Castle just 25 years ago as the Red army tightened its grip on the capital. The Hungarians took it to Salzburg, Austria, where they handed it over to a United States Army unit for safekeeping. It has been locked up in Washington in a secret place ever since.

However, the United States Government has regarded it as Hungarian property.

The recent improvement in relations has occurred in two areas—diplomatic courtesies and commerce.

Last August, for example, the Hungarians lifted travel restrictions for Ambassador Alfred Puhan, only two months after he had arrived. For 13 years previously the United States ambassador had been denied access to many major cities. Washington responded with a similar removal of restrictions on the Hungarian ambassador.

The United States Information Agency has been allowed more leeway in presenting exhibitions in Hungary. A recent display of a moon rock at the National Museum was given public notice in the party organ, Nepszabadsag. More than 35,000 Hungarians went to view the rock in its two days on exhibition.

For a visitor familiar with Hungary since 1964 these changes represent a notable departure from the cold war attitudes that dominated relations in the past.

U.S. CONCERNS HAVE TIES

In the commercial field, three American concerns are developing cooperation with Hungarian counterparts. Corning Glass has a $7-million operation here, making light bulbs together with the Hungarian Tungsram concern. The Hilton chain is participating in the building of a hotel on Castle Hill in Buda, the Budapest section on the west bank of the Danube. The * * * also planning a joint undertaking here.

One topic in which both the United States and Hungarian governments are interested is a consular convention that would allow Hungary to open consulates in New York and Cleveland, both of which have sizable Hungarian minorities.

While there is no need for American consulates in Hungary, Washington is interested in a consular convention as a means of providing added protection for American travelers in distress.

A long-standing issue between Budapest and Washington is United States claims on American properties confiscated or nationalized by Hungary after World War II. The two sides have made several unsuccessful attempts to negotiate this issue and still remain far apart. But another round of negotiations, the first in five years, is in the offing.

MAN'S INHUMANITY TO MAN—HOW LONG?

HON. WILLIAM J. SCHERLE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 29, 1970

Mr. SCHERLE. Mr. Speaker, a child asks: "Where is daddy?" A mother asks: "How is my son?" A wife asks: "Is my husband alive or dead?"

Communist North Vietnam is sadistically practicing spiritual and mental genocide on over 1,500 American prisoners of war and their families.

How long?

THE LATE HONORABLE THOMAS B. STANLEY

HON. DAVID E. SATTERFIELD III

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 29, 1970

Mr. SATTERFIELD. Mr. Speaker, on July 10 the many friends of Thomas B. Stanley were saddened to learn of his death just 5 days before he would have celebrated his 80th birthday. His quiet departure from life, following a brief illness, was typical of the soft-spoken and gentle manner in which he lived.

It was my high privilege to know him personally and to witness firsthand his dignity and his hospitality. I knew him as a gracious man to whom the title "gentleman" was well suited, as a successful businessman, industrialist, statesman and a devoted father and husband.

This man devoted the major portion of his life to the service of the people of his beloved Henry County, of his State, and of his Nation. He served as a member of the Virginia General Assembly for 16 years during which he rendered distinguished service as Speaker of the Virginia House of Delegates for 6 years. He served for 7 years as a Member of the U.S. Congress. His years of outstanding service gained for him the respect of all who came to know him. His devotion to public service was rewarded by his election to the office of Governor of the State of Virginia in which capacity he rendered able service during the demanding and trying days of the mid-1950's.

Tom Stanley, Bahnse, as he was known to his friends, will be missed and the service he performed throughout his life will be long remembered. The Richmond News Leader, on July 13, and the Richmond Times-Dispatch, on July 14, published editorials dedicated to him which I feel are worthy of inclusion as a part of my remarks. I include each of them at this point in the RECORD:

THOMAS B. STANLEY

Virginia was in a period of relative calm, with no real crises impending, at the time Thomas B. Stanley assumed the governorship of the state in January, 1954. But the driving rainstorm that marred the inauguration may have been an omen of rough weather ahead.

Four months later the U.S. Supreme Court handed down its momentous school desegregation decision, posing for the Stanley administration its greatest crisis.

Under Stanley, Virginia first took a moderate course, accepting as inevitable the idea of some racial mixing in the classrooms but at the same time providing means whereby no child would be forced to attend an integrated school. Virginia traveled only a short distance down that road, however, before abruptly changing directions and taking the path of "massive resistance" to any desegregation at all.

In retrospect, total and unyielding opposition to any school integration has been strongly criticized in some quarters. But throughout the four years of Tom Stanley's administration schools remained segregated, and they remained open. And that situation was what a majority of the citizens of the Old Dominion apparently wanted.

Stanley's successor, J. Lindsay Almond Jr., was occupying the governor's office when the roof figuratively fell in, with the court-administered death of massive resistance and the temporary closing of schools in some communities. And the solution to the school problem is not in sight, 16 years after the epoch-making ruling from the high tribunal early in the Stanley days at the Virginia Capitol.

The school crisis drew the spotlight, but, in general, the Stanley administration provided four years of continuing, if not spectacular, progress for the Old Dominion. In the tradition of the Byrd Democratic organization, of which he was a longtime loyal member, Stanley conducted the state's affairs in a sound, conservative, businesslike manner. The achievement which he himself labeled as No. 1 of his administration was the strengthening of the mental hospital system, with the addition of 1,000 employes and the appropriation of funds for badly needed new facilities.

Although he never lost an election and had served for 17 years in the House of Delegates and seven years in Congress before becoming governor, Stanley was not a colorful campaigner or an eloquent speaker. But he was patient, hardworking and effective in personal campaigning.

With Tom Stanley's death last week, at the age of 79, Virginia has lost a man who deeply loved his state and who gave it 28 years of dedicated public service.

THOMAS BAHNSON STANLEY

Thomas Bahnson Stanley, who died Saturday in Martinsville, was the last of Virginia's Governors to have a free ride on integration. Only five months after his inauguration the Supreme Court hit the South between the eyes with *Brown* v. *Board of Education*, a decision holding that public schools should be desegregated with all "deliberate speed." The decision was revolutionary; its effects still are being felt throughout the land. Governor Stanley held firm against the tides that it unleashed. He took to heart the "deliberate" aspect of the order, and was as deliberate as he could possibly be in moving Virginia toward integration—which is to say, he moved it practically not at all. During the critical years of his administration, 1954–1958, the force built up in the pressure cooker of integration: No sooner had he departed the Governor's Mansion than the top blew off.

He was a man determined to be Governor. Long before his victory over Republican Ted Dalton in 1953, Tom Stanley began working his way toward the Governor's chair. Prior to his election he served 17 years in the House of Delegates, including three terms as Speaker, and seven years in the House of Representatives. He was utterly loyal to the Byrd organization. He was dutiful, decorous, and composed. He was quiet, cautious, and amiable. He was an advocate of highway safety, industrial development, and agriculture. But above all, he was resolutely patient and calm about integration. He held on desperately to the policies of the past, and he got out before the roof fell in. Perhaps it is just as well that he did not attempt to innovate during that difficult period. For when one is unsure of the course to steer, it is prudent to go slowly. Governor Stanley did. He was deliberate when deliberation was required.

DR. JOSEPH L. SUTTON, PRESIDENT OF INDIANA UNIVERSITY, REVIEWS PAST 150 YEARS OF UNIVERSITY'S EXISTENCE

HON. WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 29, 1970

Mr. BRAY. Mr. Speaker, the following statement by Dr. Joseph L. Sutton, president of Indiana University, was prepared on the occasion of IU's Sesquicentennial Anniversary.

It is an eloquent tribute to a century and a half of achievement and accomplishment, and to the dedicated men and women who made it possible:

STATEMENT OF DR. JOSEPH L. SUTTON ON THE OCCASION OF THE UNIVERSITY'S CELEBRATION OF HER SESQUICENTENNIAL ANNIVERSARY

On one of the coldest days of this year, elected officials and legislators of the State of Indiana joined representatives of all the constituencies of Indiana University to inaugurate a year-long celebration of the University's Sesquicentennial Anniversary. It was January 20, 1970, and the site was Bloomington, the first home and still the main campus of Indiana University.

Precisely one hundred fifty years earlier to the day, the then Governor of the four-year-old State of Indiana, Jonathan Jennings, signed the Act creating the Indiana Seminary which was later to become Indiana University.

In 1820, Indiana was largely forest land. Indian tribes roamed over its northern two-thirds. Most of the settlers in southern Indiana sought little more than to clear sufficient land for a dwelling and for plantings that would yield enough food to sustain a family. These pioneers had moved southwest from Ohio, had come down the Ohio River or crossed it from Kentucky to try their fortunes in the Indiana Territory. Most were uneducated, enured to hardship and pietistic. Their sallies of wit and song were homespun. The few who were educated—men like John Badollet, John Boone, James Noble, David Maxwell and Benjamin Parke—recognized that widespread public education was a prime need if this region were to progress. Through their influence, the first Constitution of the State of Indiana included a provision that, "it shall be the duty of the general assembly, as soon as circumstances will permit, to provide by law for a general system of education, ascending in a regular gradation from township schools to a State University, wherein tuition shall be gratis and equally open to all."

The act of Congress admitting Indiana to the Union in 1816 offered to donate to the new State a township of land, to be designated by the President, for the use of a seminary of learning. The official acceptance of this offer and the selection of the township by President Monroe in the county that thenceforth bore his name was crucial in the determination of the Indiana Seminary's site. Great as have been the pressures from time to time to remove the University to a more populous and accessible spot, the original location—if not campus, for after a disastrous fire in 1883, the campus was relocated about a mile east and north of its initial site—remains the seat of its vastly-enlarged operation, geared to providing the teaching, research and public service which its constitutionally-prescribed role in the State and its responsibility to society demand.

It is interesting, but not unusual in the development of an educational system, that Indiana's State Seminary opened its doors to students before a system of common schools had been established within the state. A former Indiana University president, David Starr Jordan, noted, "the growth in educational systems is from above, downwards. In historical sequence Oxford must precede Rugby, and the German university must come before the gymnasium." To most of the settlers in the forest-covered lands of southern Indiana, the initiation of a few young people into the mysteries of "larnin'" at the State Seminary was all right, so long as their own backwoods children were not exposed to this "corrupting" influence.

It was four to five years (historians disagree) after the signing of the enabling Act before the Indiana Seminary began enrolling students on the first day of May in 1824 or 1825. From that beginning in a simple brick building with a lone professor, Baynard Rush Hall, offering a curriculum wholly in Latin and Greek to the dozen or more applicants, Indiana University has grown to an enrollment of 54,200, 10th in size among all colleges and universities in the nation, with a faculty of approximately 3000 members, curricula in almost all of the major professions and academic fields—save agriculture and engineering—and associated campuses in six metropolitan areas, including that of the state capital, where instruction in the health professions is concentrated and both undergraduate degree programs and professional programs in the Schools of Law and Social Service are offered.

The progress of the University in the intervening years had been in no sense steady. Even though the Indiana Seminary took on the "name and style of" Indiana College in 1828 and of Indiana University in 1838, by modern standards the curriculum was at a preparatory school level until the decade of the 1870's; the institution's financial support from the State did not begin until 1867; the unvarying tradition of electing clerics to the presidency was limiting and provocative of denominational attack; and the burden of convincing the state's citizenry that the progress of Indiana University was vital to their interests still rested largely upon the University's spokesmen.

Yet from the very first graduating class had gone forth men who spearheaded advances in their communities and the state. Later classes produced graduates who held high posts in the federal government, governed the state, founded industries and fostered commerce, guided the progress of the legal and educational professions in the state or served productively as educational envoys in newly developing areas of both hemispheres. To the average Hoosier of that era, however, these various evidences of the University's usefulness and demonstrated ability to generate the needed leadership for the states were little understood.

With the election of David Starr Jordan to the presidency at the start of 1885, a significant turning point occurred. President Jordan was a scientist, the first chief administrator in the University's history without the credentials of a clergyman. Moreover, his training and temperament were such that he became an evangel for state acceptance of remodeling the University to reflect national developments in higher education and the sciences. He sought to attract the best available academics in every field, and he campaigned personally and tirelessly for the new scientific concepts, among them the Darwinian theory, which he felt vital to the survival of the University as a citadel of the search for truth. The glimmer of a state university's responsibility to lead intellectual thought as well as to educate youth was planted during his remarkable six years as Indiana University's president.

Eleven years after the resignation of President Jordan to assume the presidency of Stanford University, William Lowe Bryan was elected president of Indiana University. A native of Bloomington and longtime University faculty member with a background in the disciplines of education and psychology, he was destined to guide the University's fortunes from 1902 to 1937. By choice a diligent scholar and by practice an elegant orator as well, he provided sound, yet inspirational leadership during a determinative period of the University's development. One of his most significant contributions, essential to the University's progress, was the creation of academic divisions within the University and the incorporation of private medical and dental schools in the University's structure. Under his aegis, the School of Medicine, the Graduate School, the Extension Division (now, Division of University Extension), the Training School for Nurses (now, School of Nursing), the School of Commerce and Finance (now, School of Business), the School of Music, and the School of Education were successively established and the Indiana Dental College (now, School of Dentistry) was acquired. Officially autonomous neither with regard to their admissions nor in certifying the candidates for their degrees, these divisions nevertheless served a vital function, preliminary to their emergence as recognized administrative autonomies within the concept of a university.

During President Bryan's administration, the expansion of Indiana University's physical facilities kept pace with curricular and enrollment growth. On the Bloomington campus, five classroom buildings were erected and a sixth started; a men's dormitory and two women's dormitories were built and a private dormitory was acquired; and the Library, the Administration Building, the Printing Plant, Indiana Memorial Union, The Student Building, the Men's Gymnasium and Fieldhouse, the Memorial Stadium and the President's House were all begun and completed. At Indianapolis, a building to house the School of Medicine and another to accommodate the School of Dentistry were constructed in this period, as were Long, Coleman and Riley Hospitals and a nurses' home.

Beyond these substantive additions, the special quality of President Bryan's regime added lustre to the University's prestige in the state for he was the enviably articulate and highly persuasive protagonist for the values that would accrue to the student and to Indiana generally from the successful pursuit of higher education by Hoosier youth. His 35-year administration, longest in the history of the institution, served to lift the University above the irrelevant and reactionary opposition which had plagued its struggle for survival during virtually the whole of its existence. From such pettiness and provincialism he turned the question of University support to the fundamental issue of the state's faith in higher education as the means to secure the trained leaders who could foster the economic, educational and cultural advance of the state.

Named acting president in 1937 and elected President Bryan's successor in 1938, Herman B. Wells brought to the presidency a proven talent for leadership, wide acquaintance in his native state, and a professional background in business and finance that was to prove him the right man at a providential time. With a determination born of conviction, he set out to strengthen the faculty, facilitate research, encourage and protect the humanities and fine arts in an age of science, and make Indiana University a peer of the best state universities in the land. He succeeded in every respect, but more than that, he gave the University an unusual stamp. One of the first university administrators in the nation to recognize the need for nurturing and paying a debt to our historic inter-

national roots, he built a solid foundation for the international educational service which Indiana among other American universities has been called upon to perform. As a direct consequence of his leadership in this regard, Indiana University is cosmopolitan in its faculty, its student body, its curricula and its public service commitments.

There are numerous visible evidences on the Bloomington campus and elsewhere in the University system of the encouragement he gave and is still giving to the creative and performing arts—in part, for their own sake—but equally as an amenity of the community and state.

Foresighted and dynamic in his provision for the University's growth and change, he greatly expanded the physical facilities on all campuses and the residence hall system, and prompted the acquisition of land in Bloomington and Indianapolis for the University's orderly campus development. Characteristically, he also spearheaded the cooperative movement of Indiana's total higher educational system, private and public, to accommodate the returning veterans from World War II. The organization formed at that time, the Indiana Conference of Higher Education, is unique among states in the nation and still serves the valuable function of facilitating the cooperative endeavors of its members, all of Indiana's accredited colleges and universities, both private and public.

Remarkably personal in his approach, President Wells welded the constituencies of the University into a common body supportive of the University's successful strivings and aspirations to become a leading public institution in the United States. At the same time he carefully preserved a sense of the University's history through the maintenance and reenforcement of traditions.

When President Wells retired from the presidency in 1962, he was named Chancellor of the University and Dr. Elvis J. Stahr, jr., was elected to succeed him. The six-year administration of President Stahr was shaped largely by the meteoric influx of students (more than a sixty percent increase in five years), requiring rapid expansion of physical facilities, faculty and staff. The competition for faculty nationwide made recruitment and retention of an excellent instructional staff a persistent budgetary problem, yet the level of academic distinction was nevertheless maintained.

Under President Stahr's direction, a reorganization of the University was planned, providing an administrative structure which would add strength to and permit individualization of the University's satellite campus centers.

He met, as had his predecessor, every challenge to academic freedom and, in a time of growing public awareness of the need to provide equal educational opportunity for young Black Americans, he instituted University-wide efforts to develop programs and projects contributory to such a goal.

In an entirely different area, his regime will also be remembered for a historical "first": the first visit of an Indiana University football team to the Rose Bowl.

On December 1, 1968, my own tenure as President of the University began, which has had as its most pressing task the reorganization of the administrative structure to accomplish the purposes envisioned during the early planning under Dr. Stahr. The reorganization and the staffing associated with it have been completed and each of the University's seven campuses now functions in many respects as a semi-autonomous unit of the University, typified by the granting of degrees in individual (and peaceful) Commencement ceremonies on each campus this year.

In addition, steady progress has been made toward the goal of making educational opportunities real for Black youth and toward providing viable means for students to work constructively for the changes they advocate.

Special efforts have also been extended to observe Indiana University's Sesquicentennial Anniversary suitably and memorably and, through a fund drive, to furnish the financial resources necessary to sustain a margin of excellence. Already, a large Assembly Hall, a Musical Arts Center, and a Hoosier Heritage Hall—all, Sesquicentennial projects—are in the construction stage, and a new teaching hospital has been completed and dedicated. The months have been filled with special convocations, symposia, concerts and similar events, in part paying tribute to the past, in part looking to the future.

The more than 54,000 students enrolled in the University, the faculty of approximately 3,000, the buildings and 6,500 acres of grounds which represent a value of nearly $385 million offer a tangible measure of the University's development since its origin. Remarkable as this growth has been, many of the sources for pride and satisfaction in the University's present stature are intangible. Among these might be mentioned the international reputation of the School of Music; the prestige of the Graduate School of Business; the high national rankings accorded in several studies to our graduate programs in anthropology, astronomy, botany, chemistry, geography, microbiology, zoology, history, German, Russian, Spanish, and linguistics; the recognized distinction of the School of Dentistry; the cultural influence of the University, evidenced by the audiences attracted to presentations of the creative and performing arts; the many recognitions in various forms awarded to individual faculty members and students; and accolades such as Dr. Clark Kerr's reference in a lecture here last year to Indiana University as one of four universities which were moving forward more rapidly than any others in the nation.

At this significant point in the institution's history, we take pardonable pride in Indiana University's contributions to the state, nation and international education. Approximately 65 percent of Indiana's practicing physicians, 74 percent of Indiana dentists, 52 percent of Indiana lawyers, and a major proportion of the state's accountants, business executives, teachers and community leaders were educated at Indiana University. These percentages result directly from identifiable factors; for instance, the School of Medicine has the largest medical school enrollment in the United States; the School of Education ranks first in the country in the number of persons initially certified as teachers and in production of high school teachers, and third nationally in the number of graduate education degrees awarded; and, according to a National Academy of Sciences survey, Indiana University ranks twelfth nationally in the number of doctorates awarded in the past decade—first in fine arts and music, second in business administration and education, third in modern foreign languages and literatures, sixth in political science and international relations, and seventh in ecology and hydrobiology.

A commendable share of the sponsored basic and applied research being conducted in State universities is taking place at Indiana University. Particularly well known are research programs in genetics, the development of a mechanical heart, the use of fluorides to prevent tooth decay, highway safety, sexual behavior, and properties of lunar rock.

In addition to the comprehensive consulting service offered to business and industry by the School of Business and the continuing education programs made available by divisions of the university, there are fifty-nine bureaus, centers, clinics, institutes and similar organizational units within the university providing direct services to the public.

Although in a midland state, the University has recognized a responsibility toward the developing nations and international education generally. Through contract projects, consultative assistance has been undertaken in East and West Pakistan, Thailand, Afghanistan, Indonesia, Korea, Yugoslavia, the Philippines, Chile, Peru, Venezuela, Brazil, Nigeria, and Sierra Leone. Programs are currently underway in several of these countries, further contributing to the identification of Indiana University as one of the leaders in international educational service.

For the more than 200,000 alumni, reflecting on their Alma Mater's Sesquicentennial in each of the fifty states and 127 foreign countries, and for the faculty, students and friends of Indiana University, the achievements of the past have taken on new significance and the survey of the present will surely elicit renewed pride.

I present this review by way of honoring all of the men and women throughout Indiana University's long life who have advanced her purposes and enhanced her distinction.

U.S. MIDEAST PEACE PROPOSAL

HON. BENJAMIN S. ROSENTHAL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 29, 1970

Mr. ROSENTHAL. Mr. Speaker, we all hope that the U.S. peace proposal will lead to negotiations and a permanent cessation of hostilities in the Middle East. Nowhere is there a greater danger of a full scale war erupting. Nowhere is there a situation in which the United States and the Soviet Union are closer to a major military confrontation that could have fearful consequences for all mankind.

One of the great tragedies of the Middle East, Mr. Speaker, is that so many people seem trapped by events. The vast majority of Arabs and Jews would opt for a peaceful solution if they could envision it, but politics, propagandistic rhetoric, and national pride make such a concept difficult for them to conceive.

Certainly, no one is more eager for peace than the Israelis. They have lived under seige as long as their state has existed, and though they unflinchingly face the prospect of defending their land to the death, they do not like burying their sons any more than people of other nations. Anyone who thinks Israel considers itself "sitting pretty" is deluding himself. Let us not mistake determination for contentment, pride for elation, self-confidence for complacency.

Israel has shown it is aware of the grave threat to its existence and that time may not be unquestionably on its side. On the other hand, the country is resigned to be destroyed rather than compromise with its sovereignty.

Although the Israelis have coalesced into a magnificent fighting force when their state's very existence has been jeopardized, they cannot, dare not, turn their back on the hope for peace. Israel

wants peace in the Middle East, not only so it can survive, but so it can grow, prosper, enrich the surrounding cultures and in turn, be enriched by them.

We in the United States seek peace in the Middle East for the benefit of both the Israelis and Arabs. But we have our selfish motives as well; namely, the neutralization of a major military confrontation with the Soviet Union and an atmosphere in which we can peacefully compete against the Russians for economic spheres of influence in the Arab world.

The stakes are high. But a word of caution is warranted. In our zeal to bring a peaceful solution to a part of the world on the brink of war, we must not compromise the security of Israel.

There will be no end to the shooting—and certainly no peace of mind for the United States if the proposed cease-fire is merely used by the Arabs and Russians to prepare for a military offensive.

Israel should be encouraged to seize upon any straw which could lead to some dialog with the Arab world. But at the same time, we must be certain that the Israelis, if they accept a cease-fire, can act against terrorist violations or an Egyptian-Soviet military buildup without losing face—and, even more important, strategic advantages.

This means some form of international inspection should police the cease-fire and we should publicly declare our support of Israel's right to respond to any violations of the spirit of the truce.

It must be made clear that any Arab country should be held accountable for control of the guerrillas in its territory. Otherwise, what would prevent the guerrillas from utilizing Arab army posts to continue harassment of Israel's borders. The Israel Government would derive little solace from Arab governments shrugging their shoulders and disclaiming responsibility for Fedayeen terrorist acts.

Mr. Speaker, we must exhort and persuade all parties in the Middle East to settle their dispute at the council table. But we should never be party to an agreement which undermines the future of any one nation before discussions even begin.

YOUNG PEN PALS LEAP NATIONAL BARRIERS WITH ESPERANTO—"UNIVERSAL LANGUAGE" TAUGHT AT ELEMENTARY-SCHOOL LEVEL

HON. JAMES J. DELANEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 29, 1970

Mr. DELANEY. Mr. Speaker, the need for understanding and tolerance among the peoples of the world is widely recognized. Perhaps the greatest hindrance to mutual understanding is the inability of differing nationalities to communicate effectively with each other. One promising step in remedying this situation is the growing popularity of the Esperanto language, and I would like to share with my colleagues the following article on this subject by Mr. Kenneth G. Gehret, education editor of the Christian Science Monitor:

[From the Christian Science Monitor, June 13, 1970]

YOUNG PEN PALS LEAP NATIONAL BARRIERS WITH ESPERANTO—"UNIVERSAL LANGUAGE" TAUGHT AT ELEMENTARY-SCHOOL LEVEL

(By Kenneth G. Gehret)

SAN MATEO, CALIF.—Eight-year-old Will Mitchell recently sent a picture postcard to a boy in Poland. The message was penned neither in English nor Polish, but in Esperanto.

Will and his classmates at Highlands School here carry on weekly correspondence with Polish schoolchildren as part of their study of Esperanto, sometimes referred to as the universal language.

Other students in the three San Mateo schools that offer the subject write to pen pals in the "sister city" of Toyonaka, Japan, and receive in return directions for making origami (folded-paper designs), or exchange weather charts and other science projects with students in France, Sweden, and Spain.

"We want to open up avenues to children, all over the world," explains Philip Vandor, principal at Highlands School. "Esperanto serves as an auxiliary language for them and a contact point. It broadens their outlook."

Dr. Edwin Feldman, principal of the Lawrence School in the district, views the language as a tool for world peace and brotherhood.

"We offer Esperanto in the curriculum to promote international understanding and friendship, to promote communication between peoples," he declares. "By starting at the elementary ages, we can hope eventually to live in a more peaceful world.

"If one of the most important tasks in resolving the issues of peace and war is understanding, then a language which facilitates communication among peoples all over the world should help bring about such understanding."

Dr. Feldman finds in Esperanto a strictly educational advantage as well. He claims it is an ideal initial nonnative tongue for a child to learn because it is easy to grasp and thus helps to build positive attitudes toward language study.

There is a spillover into the learning of English, too, according to Mrs. Doris Vallon, an Esperanto specialist who teaches the subject in San Mateo schools.

"Because they can learn Esperanto quickly, they are more confident of making English work," she maintains.

Mrs. Vallon describes Esperanto as "a model language" because children soon see how it works; therefore they do not view it as a threat.

"I've seen children afraid to use the English dictionary," she says. "They often can't find a word they want since they can't spell it. But this isn't true with the Esperanto dictionary because the language is phonetic. If you can pronounce it, you can find it."

Although one needs five years of study to master Esperanto, enough of the basics can be gained in one school year to enable an individual to use the language, Mrs. Vallon claims. To illustrate, she points out that in Spanish classes the future tense is not introduced until the second year, while in Esperanto, students are very soon familiar with this tense since it means simply adding the "os" ending to the verb.

"And because of their achievement in Esperanto, there is a definite 'I can succeed' attitude evident among the pupils," the teacher declares.

The teaching of Esperanto in the San Mateo area can be traced back to 1962, when Mrs. William Schulze conducted a course in the language for principals and teachers. The group met two evenings a week for three months. Among those attending were Dr. Feldman, Mr. Vandor, and Mrs. Vallon, all of whom immediately felt that the subject should be introduced into the classroom. One elementary school was selected as a beginning.

Dr. Feldman calls this the first "major effort" at teaching Esperanto in United States schools.

After a successful northern California conference on Esperanto that same year, an extension course for teachers was given in 1963. Instructors were the three San Mateo educators and Mrs. Schulze. Of the 15 teachers attending, six came from local schools. They provided the necessary staffing for expanding the San Mateo program to additional schools at grade levels 4, 5, and 6.

However, the program has suffered in recent years for lack of sufficient teachers. The number of periods of instruction varies from school to school, and study is now restricted to one full year at best.

But Mr. Vandor looks for a breakthrough. He has drawn up a three-year program of Esperanto study, which will go into effect at Highlands School in the fall. Its length will provide additional opportunity for students to communicate and become better acquainted with young people in other countries and to gain a better understanding of their cultures.

An adequate supply of books is available in the Esperanto language, published in the United States and overseas. The staff is making its own tape recordings to aid in the instruction.

Further help in staffing may come through an intensive three-week workshop to be held at San Francisco State College next month. The emphasis will be on learning the language and developing the ability to teach it to others.

SCIENTIFIC BREAKTHROUGH: NON-POLLUTING PESTICIDES

HON. J. J. PICKLE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 29, 1970

Mr. PICKLE. Mr. Speaker, thanks to the scientific endeavors of two Texas scientists, we may soon be able to use agricultural chemicals for crop control with negligible danger of pollution and perhaps, simultaneously, with even greater efficiency.

Most pollution for agricultural chemicals comes in the runoff of drainage water which carries the chemicals into surface and subsurface water supplies, polluting the water itself and damaging other vegetation it comes in contact with. Drs. M. L. Beasley and R. I. Collins, of the Austin Research Institute, Austin, Tex., acting on an accidental find of Dr. Beasley's, believe they have found a way to keep the chemicals from being washed away to areas where they may do harm. They tie the chemicals up in water-degradable polymers, and the upshot is simply that the chemicals do not wash away. This also means, of course, that the quantity of chemical needed for any one area is significantly reduced.

For example, the common herbicide 2,4-d is readily polymerized with iron. This polymer releases minute amounts of 2,4-d over an entire growing season for

protection of grassland from weeds, ending the current need for repeated applications in a single growing season. Moreover, even in bar ditches, weeds are killed at the point of application but not downstream from that point.

Tests conducted with 2,4-d on a bank incline of 30 degrees attest to the absence of chemical migration when polymers are used. The herbicide effectively controlled the weeds in the field at the top of the incline, but no trace of 2,4-d was found is a second test crop just below it on the slope. Nor was any 2,4-d found in the surface water at the bottom of the incline.

The 2,4-d iron polymer does the same work chemically as 2,4-d acid, but at a much slower and safer rate. Department of Agriculture standards limit herbicide absorption in plant foliage during the first few days of plant growth to 10 parts per million to insure that the herbicide will not build up in animals that consume the weeds during this time when they are palatable—2,4-d acid normally does not meet this standard. It is absorbed too easily by the plant. The first Department of Agriculture tests of 2,4-d polymer in these young plants, however, showed an absorption of zero parts per million.

Beasley and Collins are optimistic, too, about the use of 2,4-d polymer as a solid. Being solid, it does not stick to the leaves, as do normal herbicides, but sifts to the ground, reducing the chance of consumption.

The discovery is not limited to herbicides. Nematocides, slimicides, fungicides, rodenticides, and defoliants can be polymerized for agricultural uses. Stearic copper polymer may be useful to prevent barnacle growth on marine equipment. We may also be able to construct self-destructible containers out of polymerized degradable chemicals.

I find it most heartening that top-flight scientists such as Dr. Beasley and Dr. Collins have been directing their efforts to this complex and difficult problem. Whether they succeed or not, their efforts are to be commended. These two believe they are on the track of a viable solution. Let us hope that, as further data is gathered, their beliefs prove true.

POWER DRIVE—PRISONER OF WAR EFFECTIVE RELEASE

HON. ED FOREMAN

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 29, 1970

Mr. FOREMAN. Mr. Speaker, in our continuing effort to secure reasonable treatment of American prisoners of war in Communist prison camps, I should like to bring the following article from the Enchanted News, a publication of the inmates of the Penitentiary of New Mexico, to the attention of my colleagues:

POWER DRIVE—PRISONERS OF WAR EFFECTIVE RELEASE

The stereotype image of a convict is a variable thing. It seems to depend upon the immediate purpose of its use. The image can be frightening, comical, or even pathetic. But it remains exactly that only—an image.

In fact, convicts are people . . . human beings . . . individuals. And it may come as a surprise to find that they possess the same emotions and capacities as their free-world counterparts. Convicts think, worry and regret. They get hungry, cold, sick, happy and lonesome. They work, play, laugh, and even cry. In other words they feel every single emotion that nonconvicts do. Maybe they feel some things even deeper.

Recently, Mrs. James L. Hughes met with Warden Felix Rodriguez and Deputy Warden H. O. Herera at the Penitentiary of New Mexico to discuss the possibilities of having the penitentiary art department design and layout art work concerning release and humane treatment of prisoners of war. Mrs. Hughes' husband is a prisoner of war in North Viet Nam.

Mrs. Hughes told of many fruitless efforts to find out about her husband's status and welfare, including a trip to Thailand to visit the North Viet Nam Embassy in Bangkok. She heard from her husband only after purchasing a full-page ad in the *Bangkok Post* to appeal her situation. She has heard nothing since.

It became apparent to Mrs Hughes, and many other families who have men held as a prisoner of war, that appeals through paid advertisements in neutral countries would be their greatest hope in securing word about their men. As a result, Rescue-Line was established toward that aim. The creation of Rescue-Line was a sort of last resort to effect the release—or at the very least, some news—of these men. The organization has been attempting to raise the funds necessary to accomplish their goal, but these efforts have not met with the success of which such a campaign is worthy. As an example, an advertisement soliciting funds was run in an Albuquerque newspaper at a cost of more than one hundred dollars. The ad drew some thirty dollars in contributions! This, and other experiences, moved Mrs. Hughes to seek assistance in other—some might say peculiar—places. With the idea of prisoners helping prisoners, Mrs. Hughes sought assistance at the Penitentiary of New Mexico. She felt that men at the penitentiary, being prisoners themselves and locked away from their families and loved ones, might be able to offer some suggestions in art and other ideas that would bring the situation concerning the men held as prisoners of war to the attention of the world.

Mrs. Hughes pointed out that some 1,406 families—including some 4,000 children—await anxiously some news, day by day, that their husbands or fathers are safe. But that word never comes. The men are held without even the privilege of communication.

Well, now! What would you expect a bunch of "cons" to do? After all, they are convicts, aren't they? Well here is what they did. Are doing!

With the approval of Warden Felix Rodriguez and Deputy Warden H. O. Herrera, a committee was formed to organize ideas for a concentrated campaign. The name POWER DRIVE was coined—standing for Prisoners Of War Effective Release Drive—and to prevent anyone from taking part through the hope of personal gain or recognition, an agreement was made that there would be no names involved. All work would be performed anonymously. With this understanding, the planning got underway. Special art work was done and posters prepared. These have been designed for use anywhere in the world. Publicity and advertising ideas were worked out. Service clubs and other inmate groups were contacted and told the story. Ideas for an effective campaign began to take shape. And money started to come in, money from convicts.

Needless to say, convicts aren't among the nation's high income groups, but contributions ranging from $1.00 to $10.00 have been received. And through the combined cooperation of the administration and officials of the blood plasma program, arrangements have been made whereby inmates without money can give blood and have $5.00 deposited to the account of Rescue-Line. At the time of this writing well over $300.00 has been received, and money continues to come in.

Those inmates active in POWER DRIVE hope to spread the campaign from the Penitentiary of New Mexico to other penal institutions, and through inside service clubs, to the outside. It is their hope that enough money can be raised, enough publicity generated, to aid in the release of—or at least the establishment of communications with—those Americans held as Prisoners of War.

One of the interesting aspects of the POWER DRIVE campaign is that personal feelings about American involvement in the Viet Nam conflict seem to have little effect on the willingness of inmates to help. One of the men summed up the general feeling when he said, "No matter why a man is locked up, he should be treated like a human." That seems to be the whole idea. Humanity. And right now, at this moment, for the first and probably only time, many of the inmates of the Penitentiary of New Mexico can say, "I'm proud to be a convict."

INDIANAPOLIS CITIZENS FORUM "TELLS IT LIKE IT IS"—AND GETS IT DONE LIKE IT SHOULD BE

HON. WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 29, 1970

Mr. BRAY. Mr. Speaker, it is said our country, and our society, is drifting apart, or being driven apart. We have many indeed who are quick to assign blame, and many who seek to use this theory as a vehicle to pursue their own selfish interests.

But we have few indeed, very few, who are actively working to refute this theory and are showing, by their imagination, skill, and dedication, that it is not so, that it need not be so, and that any such dangers can be headed off well before they begin to grow serious.

Let us consider two of the prime problems that face our cities. The first is their physical appearance; this is generally conceded. It is true that much that must be done has to be done on a large scale, involving a great deal of time and money. But it is also true that individual citizens, banded together in block or neighborhood groups, can make a tremendous difference and contribute so very much to their city merely by noting what is to be done, right in their own backyards and in their own streets. It is said that charity begins at home. So, it must be added, does keeping a neighborhood or a yard beautiful. One neighborhood or one yard, alone, might not mean much in a major city. But put a series of them together, and much of so-called urban blight is not only stopped but pushed back.

The second is police/community relations. Law and order is the cornerstone of any society. Those who enforce and uphold law and order must have community trust and respect, or their role is severely crippled, and sometimes almost beyond repair. This trust and respect, it must be added, is a two-way street. Public officials and authorities in all agencies, on all levels, must of necessity get closer

to the people they serve. This can only enhance the welfare of the community as a whole. Each must understand the role and problems of the other, and, more important, have a very real hand in sharing, feeling and working to overcome these problems, many of which are mutual and common.

The Indianapolis Citizens Forum is an organization of nationwide renown, and quite deservedly so. Under the direction and guidance of Mrs. Mattie Coney, it has become a hallmark and a watchword for constructive, hard-working, dedicated community improvement. And it has accomplished so much with the relative outlay of so little except commonsense, some sound organization, and hard work on the part of those who have taken part.

Community spirit in America is something as old as our Republic's history. It has always existed and always will. No divisive force can really tear it apart; it can grow rusty and stiff through neglect, but once mobilized and utilized, it is capable of accomplishing wonders. This is what Mrs. Coney has done with large sections of a city that is now the 10th or 11th largest in the United States, and her efforts have been recognized and rewarded at the highest levels of the Federal Government.

Citizens' Forum has taught another major lesson, too, that should be copied in all other cities in addition to their fine examples of what community spirit can do. That is, what can be accomplished by simple reliance on common sense, and thrift. There is no need in many instances for large transfusions of State, city or Federal funds. People, suitably motivated, can and will do for themselves what no one else could possibly do for them, although, regrettably enough, this is an overlooked and neglected lesson.

Neither does a community plan for civic betterment have to be put forth in high-sounding and noble—but sometimes totally incomprehensible—phrases. Simple phrases, stressing and exemplifying the simplest, yet seemingly most neglected, human virtues and values; this is all it takes.

The following is one program sponsored by the Citizens' Forum that is successfully bringing the youth and the neighborhood policeman together as a team, for a better, cleaner, safer, happier and more wholesome neighborhood and city:

LITTER PREVENTION AND NEIGHBORHOOD YOUTH SAFETY PROGRAM

The 1970 Citizens Forum, Inc. Greater Indianapolis Beautification Committee and the Indianapolis Police Department are cosponsoring a Litter Prevention and Neighborhood Youth Safety Program.

We feel that this is one step that can ultimately involve all school students and their parents. Out of an involvement with anti-litter and safety activities, there is the growth of an awareness of beautification and Individual Responsibility. With anti-litter forces providing the basic thrust, the development of a critical eye . . . and mind . . . toward beauty and the safety of our neighborhoods will naturally follow.

A challenge and an opportunity for each person to accept his individual responsibility as an Indianapolis citizen. An opportunity for the city of Indianapolis to be No. 1. We can be the first city to conquer its land pollution. It can be a coordinated effort of citizens (youth and adults) and local government supported by the private sector.

Indianapolis citizens will inspire one another through activity and recognition. Individual pride begets civic pride.

We can truly have a meaningful celebration of the 200th anniversary of America here in Indianapolis in 1976.

A SUGGESTED APPROACH TO SPREAD GOOD WILL AND TO CLEAN UP INDIANAPOLIS

Activity outline: Joint Press conference by Police Department and Citizens Forum, Inc. as soon as possible, encouraging all Indianapolis School pupils to clean their front and back yards including the alley, sidewalk and curbs. This will show cooperation with the Governor's State-Wide Operation Clean Sweep and the Greater Indianapolis Beautification Program.

We are able to accelerate and motivate our anti-litter and safety program by encouraging all pupils to make a *safe play* space in their *back yards.*

Every pupil is encouraged to develop a game area in the confines of their *back* yard *only.*

Suggested games that require small areas are: Horseshoes, checkers, jacks, hopscotch, chess, marbles, badminton, drawing, sculpturing, gardening, handicraft, etc.

When the yard is ready for activity call Citizens Forum, Inc.

A member of the nearest Block Club will go check the home for cleanliness and safe play. They will suggest improvement or approval.

When the yard has been approved, the Indianapolis Police Department will send an invitation to each family to appear for a reception. A short program orienting the guest on the good intentions of the Police Department and Citizens Forum, Inc., the presentation of certificates, a tour of the Police Department and refreshments.

All pupils encouraging others to participate may return as a "recruiter" with their candidate, receive a star on their certificate and a pass to a movie. The pupil that excels as a recruiter will be recognized at the Citizens Forum, Inc. 6th Annual Banquet, Saturday, September 5th, 1970, at the Indianapolis Hilton.

The weekly receptions at the Police Department will begin the week following school closing.

Weekly mass media announcements will tell who has been approved, invited to a reception and their location in the city, etc.

All citizens (youth & adults) are encouraged to display flags on Patriotic Days.

All citizens will be visiting the "Oasis of Beauty" in over 2000 blocks during "Visit Your Neighbor Month" in the month of August.

"Be Prepared" with your Guest Book as company arrives.

Youth Groups and Block Clubs are beautifying traffic islands and unsightly spots along our waterways and highways.

All oil companies are being asked to keep their premises including sidewalk and curbs clean. Shell Oil Company of Indianapolis is the first to respond to our appeal. We are alerting all customers to speak to managers or proprietors about the cleanliness of their Service Stations.

Mr. Speaker, the Citizens' Forum has combined all these things to attack the combined problems of urban residential blight and the invisible but still crippling barrier that often comes between citizens and local police. But let us look, briefly, at a most important side effect which has future implications that cannot possibly be measured.

Let us consider what sort of an example Citizens' Forum is setting for young people in the areas where it operates. It is instilling in them a sense of pride and belonging where their neighborhood is concerned. They are being taught, by word, deed, and example, in their youth, one of the most important lessons of all: they are being taught to care.

And, in learning this lesson, they are learning another of equal importance: that the policeman is their friend; that the man in blue who walks the beat or patrols their community in a squad car is there because he, too, cares. He cares, as do they, that their streets are safe; that their homes are not broken into; that their neighborhoods are peaceful, quiet, happy, and clean places. He wants to know them, the people he moves among; he wants them to know him. He wants to be free to come to them, and he wants them to be equally free to come to him.

Hundreds, perhaps thousands of Indianapolis youth are being encouraged to take part in this program, and to participate to the fullest extent possible. The net result is going to be a new generation, taking their place in the world as adults, who have known and met their responsibilities as children, and who are superbly equipped to carry them out as they assume their role of our Republic's leaders and builders.

SURVEY RESULTS PUBLISHED

HON. CHARLES E. WIGGINS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 29, 1970

Mr. WIGGINS. Mr. Speaker, as is my practice twice each year. I mailed in May a questionnaire to the residents of the 25th Congressional District of California. Today I would like to report the results of that mailing.

The survey dealt with labor-management issues. I selected this topic because employee strikes, threatened strikes, and management lockouts are so much in the news and are of great concern to the people of this Nation.

To assist me in analyzing the survey results, I also asked respondents to classify themselves in the political spectrum. You should also know that the 25th District includes part of northern Orange County and a portion of San Gabriel Valley in eastern Los Angeles County.

The questionnaire follows:

QUESTIONNAIRE RESULTS

Here are some facts:

In the Orange County portion of the 25th Congressional District:

There are more Republicans than Democrats;

There is relatively low union membership;

There is relatively high per capita income; and

The political label "conservative" is worn openly and with pride.

In the Los Angeles County portion of the 25th District:

There are more Democrats than Republicans;

There is relatively high union membership;

There is relatively low per capita income; and

The "conservative" label is carefully avoided by office seekers for fear of offending the electorate.

In summary, these two areas would appear to be miles apart politically as well as geographically. But they are not. Every successive questionnaire which I have distributed as your Congressman reaffirms the conclusion that on political *issues* (although not always on political *personalities*) the people of my District tend to think alike. This unity of political thought most probably reflects the fact that we are all parents, home owners, consumers, taxpayers—in short, concerned citizens of this country—before we are Republicans, Democrats, or union members; and these common concerns tend to mold and unify our thinking on issues.

My most recent questionnaire distributed in May dealt exclusively with labor-management issues. Because of the factual differences noted between the counties, one would expect wide differences of opinion to prevail on these controversial and often emotional questions. Once again, however, it was demonstrated that we all tend to think substantially alike.

Here are the results of the survey:

1. *Should the "right to strike" be guaranteed to all employees, public and private, regardless of the national consequences of the strike?*

Yes, 16.5%; no, 81%; not sure, 2.5%.

The unlimited right to strike (or to lock out) must be renounced, in my opinion, if we are to abandon the law-of-the-jungle philosophy, which permeates so much of our labor legislation. We have rejected the primitive view that "might makes right" in all civilized disputes between private parties, except in the labor relations field. It is encouraging to me to find a decisive majority in each county of both men and women respondents opposed to an unrestricted right to strike, regardless of the consequences of that action.

2. *If the "right to strike" is denied to some employees and an illegal strike nevertheless occurs, the striking employees should:*

(a) *be fired*—36%.

(b) *be retained but lose seniority or other employee rights*—20%.

(c) *be reinstated without penalty*—10%.

(d) *Not sure*—34%.

This is a difficult question, yet it faces governmental leaders regularly. In general, public employees are denied the right to strike. In recent months, however, we have seen teachers, postmen, firemen, sanitation workers, and hospital employees, to mention only a few, walk off the job. In 1968 alone, over 200,000 government employees were involved in 254 strikes, and preliminary figures in 1969 are showing significantly higher totals. When one considers that there are approximately 12.5 million public employees in the United States, the magnitude of this problem is readily apparent.

If masses of public employees should illegally leave their work either in a formal strike or an informal "sick-in," should they be fired for doing so? The Mayor of Atlanta, Georgia, recently attempted to discharge a substantial group of municipal employees who had participated in an illegal strike and he quickly discovered that the essential functions of government collapsed as the result of his reaction. Although the outright firing of an employee participating in an illegal strike may be practically impossible, it is clear that some penalty must be attached to either the employee or the offending union, for such an illegal act, if similar outlaw strikes are to be avoided in the future.

Several suggestions have been discussed, such as imposing substantial fines and the loss of exclusive bargaining rights against unions, or the loss of certain benefits to employees participating in illegal strikes. But as yet, no legislation is in process which would impose these penalties. At the present time, the influence of unions in the legislative process is so great that any such reform legislation would doubtless be characterized as repressive by organized labor, and its chances of passage would be remote.

3. *Do you approve of compulsory arbitration as a alternative to the strike or lockout?*

(a) *for all employers and employees?*—47%.

(b) *for public employers and employees only?*—12%.

(c) *I disapprove in all cases*—10%.

(d) *Not sure*—31%.

For many years, the idea that labor disputes should be resolved by arbitration has been opposed by both management and labor. Each felt that it was a denial of their fundamental right to bargain collectively and to strike, or lock out, if the parties were unsuccessful in reaching an agreement. In recent years, however, there has been a gradual recognition that the public interest requires protection and that management and labor cannot be permitted the unrestricted power to inflict irreparable damage to vast sections of the economy and innocent bystanders who may be affected by a strike or lock out. Arbitration is now required under the Railway Labor Act and under the postal reform bill recently passed by the House of Representatives. The use of binding arbitration agreements is becoming more common in private union contracts.

This is a wholesome trend and I am pleased to note the general support of this trend as reflected in the answers to this question.

4. *Unions are now exempt from anti-trust laws. Should they be?*

Yes, 9%; no, 84%; not sure, 7%.

Much of the legislation which exists regulating the conduct of unions and the relationship of employers and the government toward unions was written in the 1930's. The Norris-La Guardia Act, for example, was written in the early 1930's and prohibits Federal courts from issuing injunctions against certain union activities. The Wagner Act also was enacted during the 1930's and was described as the "Magna Carta" of labor, since it firmly recognized the right of employees to organize into unions and imposed upon employers the duty of bargaining collectively with employee organizations. Much of this legislation was clearly needed since employers, often in concert with government, had suppressed union activities for many years. It was in this spirit of providing needed protection to the union movement that national unions were granted exemption from the anti-trust laws, thereby permitting agreements tending to restrain trade which would be illegal if made by employer groups.

The weakness of the union movement during the 1930's has been replaced by the politically and economically strong unions of today. Many employers complain that they are unable to cope with these strong unions, and collective bargaining becomes a farce. Some employers are presented contracts on a "take it or leave it" basis and the give and take of bargaining, so essential if the individual needs of separate employers are to be recognized, is entirely absent.

Subjecting unions to the limitations of anti-trust legislation would seriously curtail their activities and doubtless would be opposed bitterly by the national union leadership, but the continued misuse of union power makes a consideration of legislation to subject unions to anti-trust laws a clear possibility.

5. *Should industry-wide bargaining and strikes be permitted?*

Yes, 30%; no, 59%; undecided, 11%.

The process of collective bargaining between major corporations and national unions often gives the appearance of a polite seminar between economists, lawyers, and accountants. But the superficial appearance is deceiving.

The results of any bargaining session—whether in the Paris "peace talks," on a used car sales lot, or between management and labor—reflects the relative power of the bargainer.

The power to shut down an entire industry gives both management and labor a tremendous bargaining lever against the other. The public, of course, is caught in the middle as are many union members who have no real grievance with their immediate employer.

Because of the bargaining power afforded by the threat of industry-wide shut downs, neither management nor labor will eagerly surrender it. Reform will be difficult, but we must work toward a system which tends to limit a dispute to the immediately affected parties and does not involve innocent workers and employers in someone else's controversy.

6. *Are you a union member or the spouse of a union member?*

Yes, 21%; no, 79%.

This question was asked in order to determine whether the respondents were truly representative of the actual union membership in the district. Since union members comprise approximately 24% of the work force in Los Angeles County and 20% in Orange County, I am satisfied that the views of both union and non-union members are truly reflected in the answers to this questionnaire.

7. *In political matters, do you regard yourself as:*

(a) Conservative—35%.

(b) Liberal—4%.

(c) Moderate—30%.

(d) No opinion—31%.

These replies are real shockers. I would have assumed that most people would describe themselves as political moderates with a minority dividing the Liberal and Conservative labels between them in approximately equal proportions. But the facts are otherwise.

The most probable explanation for these answers is that a growing number of citizens of both parties do not wish to identify themselves with the irresponsible antics of a few who are self-styled "Liberals".

It is especially interesting to note that the above percentages held for all parts of my district. "Conservative" Orange County, therefore, is a misnomer. It should more properly be described as "Republican" Orange County since the Los Angeles County portion of my district matches its "Conservatism".

Local union members apparently do not agree with the liberal badge prominently displayed by their national officers. In both Orange and Los Angeles Counties, a higher percentage of union members describe themselves as Conservative than the district averages for all respondents.

It is my practice to invite seniors from those high schools in the district willing to participate to answer the questionnaire. Since the number of returns is too small to draw accurate conclusions therefrom, the responses of these 17 and 18 years olds is reported without comment.

1. *Unlimited right to strike?* Yes, 30%; no, 50%; not sure, 20%.

2. *If illegal, should illegal strikers be:*

(a) Fired—30%; (b) punished—33%; (c) reinstated without punishment—34%.

3. *Approve of compulsory arbitration:* (a) for all—50%; (b) public employees only—30%; (c) for none—20%.

4. *Should unions be exempt from anti-trust laws?*

Yes, 27%; no, 48%; undecided, 25%.

5. *Industry-wide bargaining permitted:*

Yes, 35%; no, 42%; undecided, 23%.

6. Do you regard yourself as:

(a) Conservative—20%; (b) Liberal—24%; (c) Moderate—30%.

Thank you very much for assisting me with this important survey.

Sincerely yours,

CHARLES E. WIGGINS,
Member of Congress.
